

## Utility Relocation: the first step

Early U-Link construction activities begin in February 2009 with the relocation of utilities and concession stands near Husky Stadium. This phase of the project is expected to take seven months and include new storm drains under the parking lot south of the stadium, new water, power and communications lines in the landscaped area southwest of the stadium and demolition of two small ticket office, concession and restroom buildings.

## What to expect

While the work is underway, you can expect:

- The northern driveway to Husky Stadium will be temporarily reduced to one lane in either direction. This work will only impact drive lanes for a short time.
- Chain link fences will be installed around a portion of the parking lot and landscaped areas adjacent to the stadium. This fencing will remain in place for the entire seven-month phase.
- Temporary chain link fencing will be installed around the immediate work area when crews are working in the southern parking lot. These fences will be in place only a short time.
- A new gravel walkway will connect the parking areas with the pedestrian trail along the Montlake Cut.
- A small number of parking stalls will be unavailable during the construction work (UW parking services will contact permit holders to make alternative arrangements).

Please be cautious around construction sites.. When walking, biking or driving around a construction site always remember to be aware of your surroundings.. Stay on the sidewalks or designated paths. Slow down when driving near construction activities and watch for flaggers or detours. Be alert, and be safe.
