Waste Stream Comments:
CORB Waste Sequence Number: 149508
Comments: The baghouse dust fines waste was generated over a period of four months, and was shipped out on 10/9/14.
Waste Sequence Number: 3339284
Sequence Number: 1

Comments: Waste is managed by first recovering the solvents (approximately 50% of the waste), and then incinerating the remaining paint solids.
Waste Sequence Number: 3339344
Sequence Number: 1

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each

WES CRAFT RV & MARINE SVCS (Continued) **1001600447**

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

NFA Reason: NFA-Voluntary Cleanup Program Review
Site Status: NFA
Region: Southwest
Contaminant Name: Petroleum-Other
Ground Water: Not reported
Surface Water: Not reported
Soil: Confirmed Above Cleanup Levels
Sediment: Not reported
Air: Not reported
Bedrock: Not reported
Latitude: 47.24334
Longitude: -122.39353

NC MACHINERY COMPANY (Continued) **1005445367**

SPILLS:

Name:	NC MACHINERY
Address:	2603 PACIFIC HWY E
City,State,Zip:	FIFE, WA
Facility ID:	559408
Medium:	Not reported
Material Desc:	PETROLEUM - LUBE OIL
Material Qty:	100
Material Units:	GALLON
Date Received:	12/13/2006
Contact Name:	Not reported
Incident Date:	Not reported

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United

VENEER CHIP TRANSPORT (Continued) **1004794011**

States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
HAZARDOUS WASTE BIENNIAL REPORTER

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	D002
Waste Description:	CORROSIVE WASTE
Waste Code:	D003
Waste Description:	REACTIVE WASTE
Waste Code:	D005
Waste Description:	BARIUM
Waste Code:	D006
Waste Description:	CADMIUM
Waste Code:	D007
Waste Description:	CHROMIUM
Waste Code:	D008
Waste Description:	LEAD
Waste Code:	D011
Waste Description:	SILVER
Waste Code:	D018
Waste Description:	BENZENE
Waste Code:	D019
Waste Description:	CARBON TETRACHLORIDE
Waste Code:	D021
Waste Description:	CHLOROBENZENE
Waste Code:	D023
Waste Description:	O-CRESOL
Waste Code:	D035
Waste Description:	METHYL ETHYL KETONE
Waste Code:	D039
Waste Description:	TETRACHLOROETHYLENE
Waste Code:	P075
Waste Description:	NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS
Waste Code:	P105
Waste Description:	SODIUM AZIDE
Waste Code:	P119

UPS TACOMA (Continued) **1001969495**

Waste Description: AMMONIUM VANADATE (OR) VANADIC ACID, AMMONIUM SALT

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U031
Waste Description: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

Waste Code: U122
Waste Description: FORMALDEHYDE

Waste Code: U134
Waste Description: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U239
Waste Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington

UPS TACOMA (Continued) **1001969495**

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

PTAP: PTAP Site Listing
A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

Date of Government Version: 05/12/2020

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing
A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Date of Government Version: 07/13/2020

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

TACOMA/PIERCE COUNTY:

LF TACOMA/PIERCE: Closed Landfill Survey
Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center Listing
Source: Department of Social & Health Services
Telephone: 253-383-1735

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below (selected maps only*). The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Project Description

Our request is to build a free standing sign on parcel 032002480/ Although it is off-premise, we have been given a sign easement by the Econolodge to build a free standing sign depending on the out come of the hearing. Econolodge also has confirmed it s consent to build on the easement site. The easement site is approximately 50 feet from the center of the highway and about 25 feet from the center of the drive way.

Richards Studio D152628-1C ...

Item Description

Title
Richards Studio D152628-1C

Description
February 24, 1969, aerial view of Holiday Inn, Fife. The large hotel, 3518 Pacific Hwy. E., was located on Pacific Hwy. across the street from Buck & Son Tractor. It provided plenty of parking for its guests and a rectangular swimming pool nestled between the hotel buildings. Swimmers and those relaxing under the table umbrellas could experience a sense of privacy from busy highway traffic. A large grassy area was available for guests - and small children - to stretch their legs. Photograph ordered by Sherwood & Roberts, Inc.

Subjects

Richards Studio D152628-A

Description
Holiday Inn swimming pool area. Most rooms in the Fife-area Holiday Inn, built in 1964, had patios and balconies facing poolside. The rectangular in-ground swimming pool was bounded by cement walkways; the hotel had a large grassy area, a portion pictured above, for umbrealla-mounted tables. Photograph ordered by Sherwood & Roberts, Inc.

Description
Holiday Inn swimming pool. This is the outdoor swimming pool located on the premises of a Holiday Inn, possibly at 3518 Pacific Hwy. E., Fife. An open-rail fence was used to enclose the swimming area. A water slide, lounging chairs, and trash cans were provided for the inn's customers. A landscaped area of shrubs, rocks, and small trees was next to the swimming pool with at least one lamp pole in view. Photograph ordered by the law firm of Reed, McClure and Moceri, Seattle.

Re: Subsurface Investigation
3520 Pacific Highway East, Fife, Washington 98424 (Hometel Inn Motel)

Dear Kevin,

Environmental Hazards Control (EHC) is pleased to submit this *Subsurface Investigation* on the referenced property. The site work was performed in the parking areas and adjacent vegetation strips on the property. It is our understanding you may purchase the referenced property and our *Subsurface Investigation* will assist in determining adverse environmental liability on the site.

1.0 Purpose

The purpose of our services was to evaluate shallow soils and/or groundwater (GW) and offer recommendations for further investigation, if warranted. Based upon the history of the site (motel) and nearby activity (leaking underground storage tanks) reported in a previously published Phase I – Environmental Assessment, EHC was to advance borings and perform sampling to assist in determining if contaminants typically associated with petroleum hydrocarbons and heavy metals were present. The sampling was intended to assess potential contamination around the perimeter of the property.

The following is an outline of the critical elements of the sampling:

- Review previously published reports on subject;
- Outline the work with the Client;
- Develop a *Sampling Plan* in accordance with standard protocols and previous report data;
- Advance borings and collect soil and/or GW samples;
- Field screen suspect soils for the presence of petroleum hydrocarbons with a photo-ionizing detector (PID);
- Document conditions found;
- Submit samples to an approved laboratory for analysis;
- Provide a written report of findings with recommendations.

Re: Termination of VCP Agreement for the following Site:

- **Site Name:** Hometel Inn
- **Site Address:** 33520 Pacific Highway E., Fife
- **Facility/Site No.:** 6088860
- **VCP Project No.:** SW0601

Dear Mr. Singh:

The Department of Ecology (Ecology) is terminating the VCP Agreement governing Project No. SW0601. The project involved the cleanup of the Hometel Inn facility (Site). The effective date of termination is the date of this letter. We are providing this notice in accordance with the terms of the Agreement.

Reason

Ecology is terminating the Agreement because we understand that you are not actively cleaning up the Site. On January 11, 2011, we sent you a letter requesting an update on the status of your cleanup and your plan for completing the cleanup. You did not respond to that request. In addition, the last opinion letter that Ecology sent indicated that only arsenic remained in the ground water and was perhaps an area-wide issue. Since we have not heard from you, we have decided to terminate the Agreement.

Next Steps

Based on this decision, Ecology may take one or more of the following steps:

1. Send you an invoice for any costs remaining on your account. In accordance with the terms of the Agreement, you remain responsible for any costs incurred by us before the effective date of termination. *Presently, there are no costs pending.*

2. Conduct a site hazard assessment (SHA) and rank the Site for further action.

You may apply to reenter the VCP if you decide to conduct further action at the Site.

Contact Information

Ecology is committed to working with you to accomplish the prompt and effective cleanup of the Site. If you have any questions about this notice, please contact the Site Manager, Chuck Cline at (360) 407-6267 or via email at chuck.cline@ecy.wa.gov .

Re: Request for Information on Status of VCP Project for the following Site:

- **Site Name:** Hometel Inn
- **Site Address:** 33520 Pacific Highway E., Fife
- **Facility/Site No.:** 6088860
- **VCP Project No.:** SW0601

Dear Mr. Singh:

The Department of Ecology (Ecology) appreciates your decision to clean up the Hometel Inn Facility (Site) independently. However, our records indicate that you have not conducted any remedial actions during the past year at the Site. Apparently, no action has occurred since 2005 when Ecology submitted its last opinion letter. This letter requests information on the status of your cleanup and your continued interest in the Voluntary Cleanup Program (VCP).

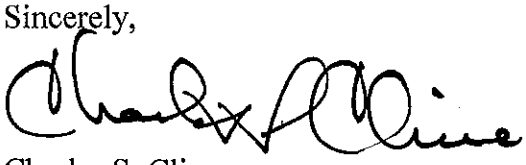
Request for Information

Please submit the following information to Ecology within 30 days of the date of this letter:

1. Cleanup status report.

2. Any reports documenting the cleanup.

3. Plan and schedule for completing the cleanup.



Next Steps

Based on your response, Ecology will decide whether to continue providing you services under the VCP. We will notify you of our decision in writing. Please note that we will terminate the Agreement governing this Project if you do not respond to this request.

Contact Information

We are committed to working with you to accomplish the prompt and effective cleanup of the Site. If you have any questions about this request, please contact me at (360) 407-6267 or via email at CHCL461@ecy.wa.gov .

Sincerely,

Dear Mr. Giffels:

RE: The Hometel Motor Inn Site, Located at 3520 Pacific Highway East, Fife, Washington

This letter is written in response to your request to provide a no-further-action (NFA) letter for the Hometel Motor Inn site, located at 3520 Pacific Hwy East, Fife, Washington. The Department of Ecology (Ecology) appreciates your initiative in pursuing this administrative option under the Model Toxics Control Act (MTCA). Ecology's Toxics Cleanup Program has completed a review of the following information regarding the Hometel Motor Inn site to provide the opinion in this letter:

- NVL Laboratories, Inc., **Phase I Environmental Site Assessment, Hometel Inn Motel, 3520 Pacific Highway East, Fife, Washington,** June 25, 2002.
- Robinson & Noble, Inc. and Saltbush Environmental Services, **Fife, Washington, Phase I and Limited Phase II, Environmental Site Assessment,** pril 2004.
- Environmental Hazards Control, **Subsurface Investigation, 3520 Pacific Highway East, Fife, Washington 98024 (Hometel Inn Motel),** June 25, 2004.
- Environmental Hazards Control, **Subsurface Investigation, 3520 Pacific Highway East, Fife, Washington 98024 (Hometel Inn Motel),** November 4, 2004.
- Environmental Hazards Control, **Groundwater Well Installation and Monitoring, 3520 Pacific Highway East, Fife, Washington 98024 (Hometel Inn Motel),** December 29, 2004.
- City of Fife, "Facsimile Transmittal Sheet", December 6, 2004.

Your reports will be kept in the Central Files of the Southwest Regional Office (SWRO) of Ecology for review by appointment only. Appointments can be made by calling Sherri Greenup at (360) 407-6365.

Besides the Phase I Site Assessment, Four studies have been conducted on this site; the original two, the first by Robinson & Noble/Saltbush Environmental Services in April 2004 (**Fife, Washington Phase I and Limited Phase II Environmental Site Assessment**), and the second by Environmental Hazards Control (EHC) [**Subsurface Investigation, 3520 Pacific Highway East, Fife, Washington 98424 (Hometel Inn Motel)**] in June 2004. The Robinson & Noble study was initiated by the Puyallup Indian Tribe to evaluate both the Hometel and adjacent casino properties. Petroleum hydrocarbons were

detected on the casino property, but not on the Hometel site. Neither study found petroleum hydrocarbons on the Hometel property. However, metals were detected in the ground water above the Model Toxics Control Act (MTCA) Method A cleanup levels. Arsenic, chromium and lead were found in the ground water in the first study and arsenic in the second study. Ground water was encountered at a depth of between 2.5 ft and 4.5 ft below ground surface (bgs). In October 2004, a study was conducted by EHC that characterized the soils above the water table (vadose zone). The October 2004 study could not detect arsenic in the vadose zone soils. In December 2004, ground water was sampled in the locations of the previous samples. Total arsenic concentrations ranged from 9.05 ug/l to 79.1 ug/l. Dissolved arsenic was not detected in any of the ground-water samples analyzed. Indications are that the vadose zone probably does not contain arsenic. Arsenic is in the ground water and may be coming onto the property from off-property source(s).

Based upon the above listed information, Ecology has determined that, at this time, total petroleum and other organic hydrocarbons has not been released into the soil or ground water and does not pose a threat to human health or the environment. Therefore, the substantive requirements have been met for petroleum hydrocarbon contamination associated with this property. Ecology's determination is made only with respect to the releases and contamination identified in the documentation for the Hometel Motor Inn site listed above. The substantive requirements apply only to the petroleum hydrocarbons in the soils and ground water at 3520 Pacific Highway East, Fife, Washington, as identified in the reports. It does not apply to any other release or potential release at the property, any other areas on the property, nor any other properties owned or operated by Star Lodging of the Northwest, Mr. Amrit Pal Singh or their representatives.

Because the ground water beneath the Hometel Motor Inn property has been impacted by arsenic contamination, Ecology cannot issue an NFA for the Hometel Motor Inn property. Should you wish to pursue an NFA determination it will be necessary to further characterize the ground water to determine whether the arsenic is isolated to the property proper or is part of a larger site or an area-wide contamination problem. To determine an area-wide problem will require that the full extent of contamination has been delineated to define the "site". Ecology may not require individual property owners to establish the full extent of the area-wide contamination at this time. Ecology may do so in the future if it is determined that individual property owners are contributing to the bigger "site". However, no NFA can be issued for the larger site or area-wide contamination until the ground- water extent of contamination has been defined and remediated. A final NFA letter could be issued once it is shown that ground water beneath the "site" is no longer contaminated, whether as contamination defined and isolated to the property or as a result of area-wide contamination. Any ground-water testing must demonstrate that the ground water concentration for arsenic is below MTCA regulatory levels for four (4) consecutive quarters. A final NFA determination for this site is dependent upon the additional ground-water testing.

Please note that because your actions were not, or will not be conducted under a consent decree with Ecology, this letter is written pursuant to RCW 70.105D.030(1)(i) and does not constitute a settlement by the state under RCW 70.105D.040(4) and is not binding on Ecology.

The opinions presented by Ecology in this letter are made with respect to the information provided in the documents listed above. This opinion is only applicable to the specified site (or portion of the site) and may not be used to justify action at any other site (or portion of the site) nor any other properties owned or operated by Star Lodging of the Northwest, Mr. Amrit Pal Singh or their representatives.

The State, Ecology, and its officers and employees are immune from all liability and no cause of action of any nature may arise from any act or omission in providing this determination.

If you have any questions about any of the information presented in this letter, please contact me at (360) 407-6267.

Sincerely,

Charles S. Cline

SWRO
VCP SITE REVIEW SUMMARY #2

Part I: Site Checklist

Site Name: Hometel Inn Motel site, Fife **VCP Number: SW0601**

Priority: ☒ **High** (pending property transaction, bank loan, etc.)
☐ **Normal**

☐ **Final NFA** (attach draft NFA/opinion letter and previous interim NFA letter and/or opinion letter(s))

☒ **Interim NFA** ☐ **Opinion Letter** ☐ **Other** This property cannot be given a final NFA without an area-wide study conducted. It is possible to give an NFA for the petroleum hydrocarbons in vicinity.

Was technical assistance provided?
☐ **No (received VCP application/cleanup report after cleanup completed)**
☒ **Yes (If yes, then check box(s) below that apply)**
☒ **before cleanup activities**
☐ **during cleanup activities**
☐ **after cleanup activities**

☐ Yes ☒ No **Is this an UST/LUST site?**

☐ Yes ☒ No **If so, has the LUST database manager been notified?**

☐ Yes ☒ No **Is the site ranked? If yes, what is its rank: (1-5)?**

☐ **EEOS notified of pending delisting (only if site is ranked)?**
☐ **Public notice completed for delisting?**

☒ Yes ☐ No **Coordination with Local Government/County Health Department?**

☒ Yes ☐ No **Is this site in the Tacoma Smelter Plume area?** This site would be considered to be at the edge of the Tacoma Smelter Plume area, since Interstate Highway I-5 defines the boundary of the plume.

☒ Yes ☐ No **Has Site owner been notified of potential for arsenic/lead contamination?**
Potential contamination is metals (As, Pb, etc.)

☐ Yes ☒ No **Does the cleanup meet substantive requirements of MTCA?** Example: Required reports (e.g., RI/FS, CAP, Sampling and Analysis plan, etc..)need not be the same in title or format; however, the documents must still contain sufficient information to serve the same purpose. The scope and level of detail in these documents may vary from site to site depending on the site specific conditions and the complexity. **The site has not been fully characterized to determine the full extent impacted with metals contamination in the ground water. This could be a area-wide issue, not necessarily as a result of the Asarco Plume/Tacoma Smelter Plume. An opinion letter has already been sent that addresses the options that are possible to obtain an NFA for this site and the restrictions that may be placed on the property. The PLP has further characterized the soil and gronnd water for arsenic contamination.**

☐ Yes ☒ No **Has site (anywhere contamination has come to be located) been fully characterized (all media)?** The ground water will need to be evaluated to determine the full extent of arsenic metal contamination in the area. If this is an area-wide issue, there may not be anything that can be done to remediate the ground water by only managing this property.

Additional area-wide investigation will be necessary. A restrictive covenant would be necessary for the ground water.

☒ Yes ☐ No **Does contamination remain on-site (definition of "site/facility") after cleanup?** Arsenic concentrations remain above MTCA regulatory levels in the ground water, However, the arsenic could be considered to be an area-wide issue, since other properties also contain this arsenic in the ground water and no source could be located on the subject property.

☒ Yes ☐ No **Restrictive covenants/deed restrictions /institutional controls required?** This would be one of options. However, not at this time.

☐ Yes ☒ No **Has a filed restrictive covenant been received and entered into database?**

☒ Yes ☐ No **Site logs submitted to VCP data manager?**

Part II: Cleanup/Decision Summary

1. **Site Description (include site address (street, city, county), physical description, current and historical uses of site, etc.):** The Hometel Inn Motel site is located at 3520 Pacific Highway E., Fife, Washington in Pierce County. It is located within the city limits of Fife, in the Commencement Bay/Port of Tacoma neighborhood in the NE ¼ of Section 11, Township 20 North, Range 3 East; Parcel number 0320111049. The site is bounded by the Econo Lodge and Pacific Hwy East on the north, and Interstate 5 Freeway on the south, and commercial establishments to the east and west, including Freddie's Casino immediately to the west and Trans-Pacific Trade Center office building and Lindal Homes and model log houses to the east. There are three separate structures, referred to as the North Wing, East Wing and South Wing, at the site. A large portion of the site is covered by asphalt paved parking, courtyard, landscape areas and planters. Aerial photos that were used for the Phase I review indicated that in 1946 land use was primarily agricultural. The 1969 and 1979 photos indicate that the structures were similar to that shown today and by 1969 Interstate 5 was also apparent. By 1985, the Econo Lodge structure was also apparent. Prior to 1980, the Hometel Inn Motel site was occupied by the Holiday Inn Motel. The nearest natural water bodies are the Puyallup River, located to the south and west of the site, and Commencement Bay, located to the north of the site. Ground water was encountered at between 2.5 and 4 ft bgs. Four studies were conducted on the site: the initial two studies were Robinson & Noble/Saltbush Environmental Services in April 2004 and Environmental Hazards Control (EHC) in June 2004. The Robinson and Noble study was initiated by the Puyallup Indian Tribe to evaluate both the Hometel and Casino properties. Petroleum hydrocarbons were found on the Casino site but not the Hometel site. Neither study found petroleum hydrocarbons on the Hometel Inn Motel site. However, metals were detected in the ground water above Method A cleanup levels. Arsenic, chromium and lead in the earlier study and arsenic in the last study. The metals contamination may be a site wide problem, but this will need to be determined. The final two studies were conducted by EHC to determine arsenic concentrations in the vadose zone (above the water table) and later to determine arsenic concentrations in the ground water. No arsenic was detected in the vadose zone. However, concentrations were found in the ground water to range from 9.05 to 79.1 ug/l.

2. **Describe affected media (soil, groundwater, surface water, sediment, air):** Ground water is contaminated with arsenic above Method A ground-water cleanup levels. Apparently, from characterization that was conducted, soils are not contaminated. Ground water samples filtered and demonstrating dissolved conditions indicates non-detect for arsenic. Ground water is within 1 ft of ground surface in at least one well.

3. **Cleanup method used:**

☒ **Method A**
☐ **Method B**
☐ **Method C**

4. **Describe cleanup activities (for each media) and if contamination remains on-site (including confirmational sampling/analysis, points of compliance, etc...):** Although arsenic remains at the site in the ground water, it is Ecology's position that the PLP cannot affect a cleanup of the "site" until ground water has been fully characterized. The ground-water data and information from other properties adjacent the Hometel property indicates that ground water may contain arsenic above MTCA cleanup levels throughout the area. Dissolved arsenic may not be an issue. However, a restrictive covenant could be placed on the property for the ground water. It may be possible to provide a no further action for the site for petroleum hydrocarbons, but not for arsenic in the ground water, if it can be shown that arsenic is from an area-wide site. An NFA letter can be provided that stipulates that substantive requirements have been met for petroleum hydrocarbons with contamination still remaining in the ground water as an area-wide issue; and, if the restrictive covenant for ground water is placed on the property.

5. **Describe restrictive covenant (e.g., contamination remains under structure, groundwater restrictions, 5-year review):** Arsenic remains in the ground water and a restrictive covenant is required, if the "site" is area wide.

SWRO
VCP SITE REVIEW SUMMARY #2

Part I: Site Checklist

Site Name: Hometel Inn Motel site, Fife **VCP Number: SW0601**

Priority: ☒ **High** (pending property transaction, bank loan, etc.)
☐ **Normal**

☐ **Final NFA** (attach draft NFA/opinion letter and previous interim NFA letter and/or opinion letter(s))

☒ **Interim NFA** ☐ **Opinion Letter** ☐ **Other** This property cannot be given a final NFA without an area-wide study conducted. It is possible to give an NFA for the petroleum hydrocarbons in vicinity.

Was technical assistance provided?
☐ **No (received VCP application/cleanup report after cleanup completed)**
☒ **Yes (If yes, then check box(s) below that apply)**
☒ **before cleanup activities**
☐ **during cleanup activities**
☐ **after cleanup activities**

☐ Yes ☒ No **Is this an UST/LUST site?**

☐ Yes ☒ No **If so, has the LUST database manager been notified?**

☐ Yes ☒ No **Is the site ranked? If yes, what is its rank: (1-5)?**

☐ **EEOS notified of pending delisting (only if site is ranked)?**
☐ **Public notice completed for delisting?**

☒ Yes ☐ No **Coordination with Local Government/County Health Department?**

☒ Yes ☐ No **Is this site in the Tacoma Smelter Plume area?** This site would be considered to be at the edge of the Tacoma Smelter Plume area, since Interstate Highway I-5 defines the boundary of the plume.

☒ Yes ☐ No **Has Site owner been notified of potential for arsenic/lead contamination?** Potential contamination is metals (As, Pb, etc.)

☐ Yes ☒ No **Does the cleanup meet substantive requirements of MTCA?** Example: Required reports (e.g., RI/FS, CAP, Sampling and Analysis plan, etc..)need not be the same in title or format; however, the documents must still contain sufficient information to serve the same purpose. The scope and level of detail in these documents may vary from site to site depending on the site specific conditions and the complexity. **The site has not been fully characterized to determine the full extent impacted with metals contamination in the ground water. This could be a area-wide issue, not necessarily as a result of the Asarco Plume/Tacoma Smelter Plume. An opinion letter has already been sent that addresses the options that are possible to obtain an NFA for this site and the restrictions that may be placed on the property. The PLP has further characterized the soil and ground water for arsenic contamination.**

☐ Yes ☒ No **Has site (anywhere contamination has come to be located) been fully characterized (all media)?** The ground water will need to be evaluated to determine the full extent of arsenic metal contamination in the area. If this is an area-wide issue, there may not be anything that can be done to remediate the ground water by only managing this property.

Additional area-wide investigation will be necessary. A restrictive covenant would be necessary for the ground water.

☒ Yes ☐ No **Does contamination remain on-site (definition of "site/facility") after cleanup?** Arsenic concentrations remain above MTCA regulatory levels in the ground water, However, the arsenic could be considered to be an area-wide issue, since other properties also contain this arsenic in the ground water and no source could be located on the subject property.

☒ Yes ☐ No **Restrictive covenants/deed restrictions /institutional controls required?** This would be one of options. NOT AT THIS TIME

☐ Yes ☒ No **Has a filed restrictive covenant been received and entered into database?**

☒ Yes ☐ No **Site logs submitted to VCP data manager?**

Part II: Cleanup/Decision Summary

1. **Site Description (include site address (street, city, county), physical description, current and historical uses of site, etc.):** The Hometel Inn Motel site is located at 3520 Pacific Highway E., Fife, Washington in Pierce County. It is located within the city limits of Fife, in the Commencement Bay/Port of Tacoma neighborhood in the NE ¼ of Section 11, Township 20 North, Range 3 East; Parcel number 0320111049. The site is bounded by the Econo Lodge and Pacific Hwy East on the north, and Interstate 5 Freeway on the south, and commercial establishments to the east and west, including Freddie's Casino immediately to the west and Trans-Pacific Trade Center office building and Lindal Homes and model log houses to the east. There are three separate structures, referred to as the North Wing, East Wing and South Wing, at the site. A large portion of the site is covered by asphalt paved parking, courtyard, landscape areas and planters. Aerial photos that were used for the Phase I review indicated that in 1946 land use was primarily agricultural. The 1969 and 1979 photos indicate that the structures were similar to that shown today and by 1969 Interstate 5 was also apparent. By 1985, the Econo Lodge structure was also apparent. Prior to 1980, the Hometel Inn Motel site was occupied by the Holiday Inn Motel. The nearest natural water bodies are the Puyallup River, located to the south and west of the site, and Commencement Bay, located to the north of the site. Ground water was encountered at between 2.5 and 4 ft bgs. Four studies were conducted on the site: the initial two studies were Robinson & Noble/Saltbush Environmental Services in April 2004 and Environmental Hazards Control (EHC) in June 2004. The Robinson and Noble study was initiated by the Puyallup Indian Tribe to evaluate both the Hometel and Casino properties. Re: Groundwater Well Installation and Monitoring
3520 Pacific Highway East, Fife, Washington 98424 (Hometel Inn Motel)

Dear Kevin,

Environmental Hazards Control (EHC) is pleased to submit three (3) signed and numbered copies of the *Groundwater Well Installation and Monitoring* report on the referenced property. The report outlines the installation of 4 shallow groundwater wells and the subsequent testing for the heavy metal arsenic in accordance with discussions with Chuck Cline at the Washington State, Department of Ecology. The report outlines the analytical results for "total" and "dissolved" arsenic in groundwater. Based upon laboratory results, "total" arsenic ranged from about 9 micrograms per liter (ug/L) to 71 ug/L. Based upon laboratory results, "dissolved" arsenic was not detected. The current MTCA, Method A Cleanup Level for arsenic in groundwater is 5 ug/L.

We recommend the report be forwarded to Chuck Cline for his/their assessment and comments prior to proceeding any further with this project. Please contact me if you have any questions.

Sincerely,

Steven J. Salter
Environmental Consultant

Enc.

Note: The work and laboratory analysis were completed on "rush" basis to accommodate your purchase and sale agreement schedule. Rush charges will be assessed.

SUBJECT: Hometel Inn Motel Site
3520 Pacific Highway East, Fife, WA

Dear Mr. Carl:

On November 9, 2004, city staff met with yourself, your real estate agent, and Steven Salter, Environmental Consultant for Environmental Hazards Control. Mr. Salter explained that site work was performed on the referenced property to determine if the heavy metal arsenic was present in shallow groundwater. The sampling was intended to assess potential contamination across the property by advancing borings and sampling soils near the 5 previous boring locations and 1 additional boring location. The result of the borings showed that arsenic and chromium were not detected in any of the soil samples submitted.

City staff reviewed this subsurface investigation in relationship to the property at 3520 Pacific Highway East. It has been determined that the property will be subject to the standard requirements for development within the City of Fife. Any future development of this site will be reviewed under normal State Environmental Protection Agency (SEPA) requirements.

Should you have further questions, please contact me at (253) 922-9625, Ext. 15.

Sincerely,

Beverly J. Boyle

Re: 3520 Pacific Highway East, Fife, Washington 98424 (Hometel Inn Motel)

Dear Kevin,

Based upon our meeting with the City of Fife last week, here is the type of letter we propose they draft to you:

The City of Fife, Building and Land-Use Divisions have reviewed the soil and groundwater studies published to date on the referenced properties. It is our understanding shallow groundwater contains the heavy metal arsenic above the current Model Toxics Control Act (MTCA), Method A Cleanup Level for Groundwater of 5 microgram per liter. Based upon the study information, the source of the arsenic in groundwater does not appear to be from an on site source and may vary well be a problem in the general area. And, we understand the Washington State, Department of Ecology - Southwest Region, has been notified of the condition.

Given the conditions outlined, and your proposed use of the site as a parking lot for the sale of recreational vehicles and/or automobiles, we do not foresee any restrictions concerning the future development and/or use of the property as it pertains to environmental issues. Additionally, we do not see any issues of concerns that would hinder the redevelopment of the referenced property. Therefore, we anticipate a standard permit and review process that is customary to all commercial projects located within the City of Fife.

Sincerely,

City of Fife Official, Title
City of Fife, Washington

Please contact me if you have questions.

Sincerely,

Steven J. Salter

August 13, 2004

Mr. Rod Giffels
GVA Kidder Mathews
1201 Pacific Avenue, #1400
Tacoma, WA 98402

Dear Mr. Giffels:

RE: The Hometel Motor Inn Site, located at 3520 Pacific Highway E., Fife, Washington

This letter is written in response to your request to provide a no-further-action (NFA) letter for the Hometel Motor Inn site, located at 3520 Pacific Hwy E., Fife, Washington. Besides a **Phase I Environmental Site Assessment** (NVL Laboratories, June 25, 2002), two studies have been conducted on this site; one by Robinson & Noble/Saltbush Environmental Services in April 2004 (**Fife, Washington Phase I and Limited Phase II Environmental Site Assessment**), and one by Environmental Hazards Control (EHC) [**Subsurface Investigation, 3520 Pacific Highway East, Fife, Washington 98424 (Hometel Inn Motel)**] in June 2004. The Robinson & Noble study was initiated by the Puyallup Indian Tribe to evaluate both the Hometel and adjacent casino properties. Petroleum hydrocarbons were detected on the casino property, but not on the Hometel site. Neither study found petroleum hydrocarbons on the Hometel property. However, metals were detected in the ground water above the Model Toxics Control Act (MTCA) Method A cleanup levels. Arsenic, chromium and lead were found in the ground water in the earlier study and arsenic in the last study. Ground water was encountered at a depth of between 2.5 ft and 4.5 ft below ground surface (bgs). Unfortunately, because these metals have been found in the ground water above the MTCA cleanup levels, it is not possible to provide an NFA letter for the Hometel Motor Inn site, at this time. However, it could be possible to obtain an NFA letter for this site if certain additional work is conducted at this site. The following options are available to you and your clients:

1. Documentation should be provided for the soils located in the vadose zone (above the water table) to determine that the site is or is not a source for the metals contamination detected in the ground water. The fill material for this site may be

a source of metals and it should be characterized as completely as possible.

2. The ground water should be sampled to obtain analyses for metals (including arsenic, chromium and lead). Both dissolved and total fractions samples should be obtained. Wells should be constructed to determine whether elevated levels of metals are entering the property from off property and/or leaving the property down gradient. Depending on whether contaminants of concern are detected, additional samples may be required. If constituents are detected in the ground water, monitoring will be necessary to provide assurance that the concentrations remain below model toxics control act (MTCA) regulatory levels for four continuous quarters. An NFA letter could be issued once it is determined that ground water and soils is not causing harm to human health or the environment.

3. If it is possible to determine that the metals contamination in the ground water is an area wide issue, it may be possible to place a restrictive covenant on the ground water. However, because your property may be part of an area-wide site, Ecology may not be able to provide an NFA letter, but rather would provide an opinion letter. The property would be defined as part of a greater area defined by the arsenic ground-water plume and resolution would not occur until all of the greater area had been addressed as a formal cleanup (Agreed Order or Consent Decree). Generally, the criteria to placing a restrictive covenant on ground water are that the water is not being consumed on site and concentrations above MTCA regulatory cleanup levels are not leaving the property. However, should an area-wide contamination problem be determined, as part of the remedy selection, Ecology may approve an area-wide conditional point of compliance. "The area-wide conditional point(s) of compliance shall be as close as practicable to each source of hazardous substances, not to exceed the extent of ground water contamination at the time the department approves an area-wide conditional point of compliance. This provision may be applied only at areas that are affected by hazardous substances released from multiple sources that have resulted in commingled plumes of contaminated ground water that are not practicable to address separately. A site may have more than one area-wide conditional point of compliance to address multiple sources and types of contaminants. An area-wide conditional point of compliance may be approved under this provision only if all of the following conditions have been met:

   (A) The person conducting the cleanup action has complied with WAC 173-340-350 through 173-340-390, including a demonstration that it is not practicable to meet a point of compliance throughout the ground water contamination within a reasonable restoration time frame.

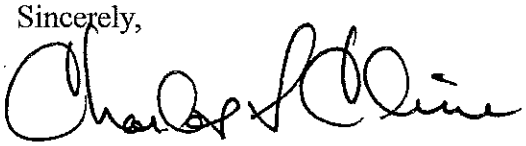
   (B) A plan has been developed for implementation of the cleanup action,

including a description of how any necessary access to the affected properties will be obtained.

(C) If the contaminated ground water is considered to be potable under WAC 173-340-720(2), current developments in the area encompassed by the area-wide conditional point of compliance and any other areas potentially affected by the ground water contamination are served by a public water system that obtains its water from an offsite source and it can be demonstrated that the water system has sufficient capacity to serve future development in these areas. This demonstration may be made by obtaining a written statement to this effect from the water system operator.

(D) All property owners, tribes, local governments, and water purveyors with jurisdiction in the area potentially affected by the ground water contamination, have been mailed a notice of the proposal to establish an area-wide conditional point of compliance and provided an opportunity to comment. The notice shall specifically ask for information on existing and planned uses of the ground water. The notice shall be in addition to any notice provided under WAC 173-340-600. The department will give greater weight to information based on an adopted or pending plan or similar preexisting document. When the department is providing technical assistance under WAC 173-340-515, the department shall also provide an opportunity to comment to the public through the *Site Register* before issuing a written opinion.

(E) Other conditions as determined by the department on a case-by-case basis. [WAC 173-340-720(8)(d)(iii)]



Please note that because your actions were not, or will not be conducted under a consent decree with Ecology, this letter is written pursuant to RCW 70.105D.030(1)(i) and does not constitute a settlement by the state under RCW 70.105D.040(4) and is not binding on Ecology.

The opinions presented by Ecology in this letter are made with respect to the information provided in the documents listed above. This opinion is only applicable to the specified site (or portion of the site) and may not be used to justify action at any other site (or portion of the site) nor any other properties owned or operated by Star Lodging of the Northwest, Mr. Amrit Pal Singh or their representatives.

The State, Ecology, and its officers and employees are immune from all liability and no cause of action of any nature may arise from any act or omission in providing this determination.

If you have any questions about any of the information presented in this letter, please contact me at (360) 407-6267.

Sincerely,

Charles S. Cline

SWRO
VCP SITE REVIEW SUMMARY

Part I: Site Checklist

Site Name: Hometel Inn Motel site, Fife **VCP Number: SW0601**

Priority: ☒ **High** (pending property transaction, bank loan, etc.)
☐ **Normal**

☐ **Final NFA** (attach draft NFA/opinion letter and previous interim NFA letter and/or opinion letter(s))

☐ **Interim NFA** ☒ **Opinion Letter** ☐ **Other**

Was technical assistance provided?
☐ **No (received VCP application/cleanup report after cleanup completed)**
☒ **Yes (If yes, then check box(s) below that apply)**
☒ **before cleanup activities**
☐ **during cleanup activities**
☐ **after cleanup activities**

☐ Yes ☒ No **Is this an UST/LUST site?**

☐ Yes ☒ No **If so, has the LUST database manager been notified?**

☐ Yes ☒ No **Is the site ranked? If yes, what is its rank: (1-5)?**

☐ **EEOS notified of pending delisting (only if site is ranked)?**
☐ **Public notice completed for delisting?**

☒ Yes ☐ No **Coordination with Local Government/County Health Department?**

☒ Yes ☐ No **Is this site in the Tacoma Smelter Plume area?**

☒ Yes ☐ No **Has Site owner been notified of potential for arsenic/lead contamination?**
This site is adjacent to Atlas Foundry site. Potential contamination is metals (As, Pb, etc.)

☐ Yes ☒ No **Does the cleanup meet substantive requirements of MTCA?** Example: Required reports (e.g., RI/FS, CAP, Sampling and Analysis plan, etc..)need not be the same in title or format; however, the documents must still contain sufficient information to serve the same purpose. The scope and level of detail in these documents may vary from site to site depending on the site specific conditions and the complexity. **The site has not been fully characterized and has been determined to be possibly impacted with metals contamination, primarily in the ground water. This could be a sitewide issue, not necessarily as a result of the Asarco Plume/Tacoma Smelter Plume. The opinion letter will be necessary to address the options that are possible to obtain an NFA for this site and the restrictions that may be placed on the property.**

☐ Yes ☒ No **Has site (anywhere contamination has come to be located) been fully characterized (all media)?** The soils will need to be evaluated to determine that the metals in the ground water are not a localized problem stemming from the site, either from the fill materials or some other anthropogenic localized source. The ground water will need to be evaluated to determine that dissolved metal contamination is not coming onsite. If this is a sitewide issue, there may not be anything that can be done to remediate the ground water. A restrictive covenant would be necessary for the ground water.

☐ Yes ☐ No **Does contamination remain on-site (definition of "site/facility") after cleannp?**

☒ Yes ☐ No **Restrictive covenants/deed restrictions /institutional controls required?** This would be one of options.

☐ Yes ☒ No **Has a filed restrictive covenant been received and entered into database?**

☒ Yes ☐ No **Site logs submitted to VCP data manager?**

Part II: Cleanup/Decision Summary

1. **Site Description (include site address (street, city, county), physical description, current and historical uses of site, etc.):** The Hometel Inn Motel site is located at 3520 Pacific Highway E., Fife, Washington in Pierce County. It is located within the city limits of Fife, in the Commencement Bay/Port of Tacoma neighborhood in the NE ¼ of Section 11, Township 20 North, Range 3 East; Parcel number 0320111049. The site is bounded by the Econo Lodge and Pacific Hwy East on the north, and Interstate 5 Freeway on the south, and commercial establishments to the east and west, including Freddie's Casino immediately to the west and Trans-Pacific Trade Center office building and Lindal Homes and model log houses to the east. There are three separate structures, referred to as the North Wing, East Wing and South Wing, at the site. A large portion of the site is covered by asphalt paved parking, courtyard, landscape areas and planters. Aerial photos that were used for the Phase I review indicated that in 1946 land use was primarily agricultural. The 1969 and 1979 photos indicate that the structures were similar to that shown today and by 1969 Interstate 5 was also apparent. By 1985, the Econo Lodge structure was also apparent. Prior to 1980, the Hometel Inn Motel site was occupied by the Holiday Inn Motel. The nearest natural water bodies are the Puyallup River, located to the south and west of the site, and Commencement Bay, located to the north of the site. Ground water was encountered at between 2.5 and 4 ft bgs. Two studies were conducted on the site: Robinson & Noble/Saltbush Environmental Services in April 2004 and Environmental Hazards Control (EHC) in June 2004. The Robinson and Noble study was initiated by the Puyallup Indian Tribe to evaluate both the Hometel and Casino properties. Petroleum hydrocarbons were found on the Casino site but not the Hometel site. Neither study found petroleum hydrocarbons on the Hometel Inn Motel site. However, metals were detected in the ground water above Method A cleanup levels. Arsenic, chromium and lead in the earlier study and arsenic in the last study. The metals contamination may be a site wide problem, but this will need to be determined.

2. **Describe affected media (soil, groundwater, surface water, sediment, air):** Ground water is apparently contaminated with chromium, arsenic and lead above Method A ground-water cleanup levels. Soils may not be contaminated. However, this may need to be investigated further.

3. **Cleanup method used:**

   ☒ **Method A**
   ☐ **Method B**
   ☐ **Method C**

4. **Describe cleanup activities (for each media) and if contamination remains on-site (including confirmational sampling/analysis, points of compliance, etc...):** Ground water will need to BE addressed, either by characterization or remediation. It is possible that a restrictive covenant may be required for the ground water.

5. **Describe restrictive covenant (e.g., contamination remains under structure, groundwater restrictions, 5-year review):**

Re: Subsurface Investigation
Hometel Inn Motel
3520 Pacific Hwy. East
Fife, WA.
TCP ID# SW 0601

Dear Mr. Cline:

As per the original cover letter, the owner is asking for a NFA letter, based on the conclusions reached in the report issued by Environmental Hazards Control. We have included all available reports, as detailed on page two (documentation) of your Voluntary Cleanup Program Form. Some information requested in your forms does not apply to our situation. Information requested on page four is covered in detail in the EHC report.

I did find two typographical errors on the first page of the EHC report (correct date of report is June 25, 2004 and the correct address is 3520 Pacific Hwy East). I requested a corrected page from EHC, which I am including along with the forms provided by you.

Mr. Singh, the managing partner of Star Lodging has asked me to fill out the paperwork and serve as the contact person. If visits to the site are required, please contact me so we can manage the times (the manager is not aware of the sale and ownership wishes to keep it that way until we know that the sale will be finalized). Thanks for your help and cooperation.

Sincerely,

Rod Giffels
Sales Representative

In Situ Chemical Oxidation						
Natural Attenuation (dilution, volatilization, biodegradation, adsorption)						
Permeable Reactive Barriers						
Phytoremediation						
Soil Flushing						
Soil Vapor Extraction						
Thermal Desorption						
Other (please specify)						

AFFECTED MEDIA & CONTAMINANTS AFTER CLEANUP

Please list the contaminants from the . on page 4 and list their status after clean. Mark the appropriate medium (such as soil) with "C" (confirmed and above Model Toxics Control Act (MTCA) cleanup standards but contained), "B" (confirmed but below MTCA standards), "R" (remediated and below MTCA standards), "N/A" (not applicable), "O" (tested and not present), "U" (unknown) to reflect the status after cleanup.

CONTAMINANT	SOIL	GROUND WATER	SURFACE WATER	AIR	SEDIMENT	DRINKING WATER
Example: Lead	**R**	**O**	**B**	**U**	**B**	**O**

DRINKING WATER & AQUATICS INFORMATION

Are there any drinking wells within ½ mile of the site? If yes, how many?
Was a drinking water system affected? If yes, was an alternate drinking water source provided?
Was the affected drinking water system public, private, or both?
Are there any creeks, streams, ponds, wetlands, or shorelands on or adjacent to the site? Within ¼ mile of the site?
If yes, where are they located?
Were they impacted by the contamination from the site?

INSTITUTIONAL CONTROLS (E.G. RESTRICTIVE COVENANT, ENGINEERED CONTROLS, FENCING)

Were institutional controls used at the site? If yes, please specify. Pls refer to EHC report

OWNER/OPERATOR HISTORY

Please complete as many of the below boxes as possible. For type of owner/operator, please use the following codes: (1) Private, (2) Municipal, (3) County, (4) Federal, (5) State, (6) Tribal, (7) Mixed, (8) Other, (9) Unknown, (10) Public Entitle Acquisition via Bankruptcy.

WASHINGTON STATE DEPARTMENT OF ECOLOGY

TERRESTRIAL ECOLOGICAL EVALUATION EXCLUSION

Some contaminated sites are excluded from conducting a Terrestrial Ecological Evaluation. If your site meets the criteria for exclusion as described in WAC 173-340-7491, please complete this form.

SITE NAME_____

SITE ADDRESS_____

REASONS FOR EXCLUSION:

A site is eligible for exclusion if it meets any of the following criteria:

1. POINT OF COMPLIANCE WAC 173-340-7491(1)(A)

- All contamination is below 15 feet. ☐
- All contamination is below six feet and an institutional control has been implemented, as required by WAC 173-340-440. ☐
- All contamination is below a site-specific point of compliance established in compliance with WAC 173-340-7490(4)(b) with an institutional control implemented as required by WAC 173-340-440. ☐

  Please provide documentation that describes the rational for setting a site-specific point of compliance.

2. BARRIERS TO EXPOSURE WAC 173-340-7491(1)(B)

- All contaminated soil is or will be covered by physical barriers that prevent exposure to plants and wildlife and an institutional control has been implemented, as required by WAC 173-340-440. ☐

  An exclusion based on future land use must have a completion date for future development that is acceptable to Ecology.

3. UNDEVELOPED LAND WAC 173-340-7491 (1)(C)

- There is less than one-quarter acre of contiguous undeveloped land on or within 500 feet of any area of the site and any of the following chemicals is present: chlorinated dioxins or furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, heptachlor epoxide, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, or pentachlorobenzene. ☐

- For sites not containing any of the chemicals mentioned above, there is less than one-and-a-half acres of contiguous undeveloped land on or within 500 feet of any area of the site. ☐

[redacted]

4. BACKGROUND CONCENETRATIONS WAC 173-340-7491 (1) (D)

- Concentrations of hazardous substances in soil do not exceed background levels as described in WAC 173-340-709. ☐

* Refer to June, 2004 Report

APPLICATION TO REQUEST ASSISTANCE

This application is for individuals requesting assistance from the Voluntary Cleanup Program to plan, conduct, or evaluate an independent cleanup. The applicant may be a site owner, former site owner, site operator, or consultant on behalf of the owner or operator.

FS#: 6088860 Cline

Please answer the following questions to the best of your knowledge.

Have you discussed this site with an Ecology representative? Yes

If yes, what is that person's name? Chuck Cline

What is the approximate date? 7/13/04

Has Ecology already received reports or records pertaining to this site? Phase I + Phase II reports

If yes, what do they pertain to? _____

Is this a leaking underground storage tank site? No

Is this site a Brownsfield? No

(Brownfields are properties that are abandoned or underused because of environmental contamination from past industrial or commercial practices).

Washington State Department of Ecology – Toxics Cleanup Program

ECOLOGY

Site Summary

This form is a required component of your request for assistance under the Voluntary Cleanup Program. Please include it with your application, consultation fee, and terrestrial ecological evaluation form (if applicable).

WHICH OF THE FOLLOWING APPLY TO YOUR SITE?

☐ You are requesting assistance on a planned cleanup. * We are requesting a VFA

☐ You are requesting assistance on an ongoing cleanup.

☐ You are requesting review of a completed cleanup.

PERSON/ORGANIZATION MAKING REQUEST FOR ASSISTANCE

Name:	Star Lodging of The Northwest/ Managing partner
Firm:	Amrit Pal Singh
Mailing address:	1656 Kirkland Court SE
City: Renton	State: WA Zip code: 98057
Telephone number: 206 941-7766	Fax number: 425 204-7766 E-mail address:

WHICH BEST DESCRIBES YOUR INVOLVEMENT AT THIS SITE (CHECK AS MANY THAT APPLY)

✓								

If other, please specify:

SITE IDENTIFICATION

Name of site:	3520 Pacific Hwy E
Alternative name(s) for site:	Hometel Inn
Site address:	3520 Pacific Hwy E
City: Fife	State: WA Zip code: 98424 County: Pierce UBI Number:

Township:	Range:	Section:	Quarter-Quarter:
Latitude:	Degrees:	Minutes:	Seconds:
Longitude:	Degrees:	Minutes:	Seconds:

What method did you use to calculate latitude and longitude?

How many acres is the site? 5.22 Acres

Property type? Commercial ☑ Industrial ☐ Residential ☐ Other ☐ Please specify:

Is the property currently being used? Yes

Are there plans for change in use? Not at This time If yes, please specify:

STANDARD INDUSTRIAL CLASSIFICATION (SIC) CODES

Please list all that apply. If you do not know the SIC code(s), list the activities conducted at the site (i.e. automotive repair and maintenance, construction equipment storage, etc.)

Motel

TANK INFORMATION

Please complete the table below for all above ground tanks (AST) and underground storage tanks (UST) existing or formerly existing on the property, including unregulated tanks.

** Unleaded, leaded diesel, bunker-C, waste oil, heating oil, aviation fuel, other (please identify)*
*** Left in-place, removed, closed-in-place*

SITE MAPS

Please include an area map that shows the general location of the site (mark the site location) and a site diagram that shows sampling and well locations. Pls refer to EHC Report C Maps and Drawings)

DANGEROUS WASTE FACILITIES

Does the facility have a dangerous waste identification (WAD) number? Not to our knowledge

If yes, please specify.

SITE ASSESSMENT OR SITE MEDIATION WORK COMPLETED DATE

Has site assessment work been completed at the site? Yes

If yes, when? 6/25/04 Were the results reported to Ecology? Yes

Has site cleanup work been conducted at the site? No

If yes, when? Were the results reported to Ecology?

Does contamination remain on-site after cleanup? U

If yes, please describe the contamination?

DOCUMENTATION

Please list all known assessment and/or cleanup reports completed for the site. Include the title of the report, the name of the consulting firm that did the work, and the year it was completed.

Phase I Environmental Site Assessment	NVL Laboratories	June 25, 2002
* Phase I and Limited Phase II Environmental Site Assessment	Robinson Noble and Saltbush Environmental Services	April, 2004
* Third party reports not available to owner, phase II report has been included in Subsurface Investigation	E.H.C.	A portion of the the EHC report. June 25, 2004
Wetlands Report Included in E.H.C. report.	Russell & Associates	May 12, 2003 No wetlands reported.

AFFECTED MEDIA & CONTAMINANTS

Please list the known or suspected contaminants at the site prior to cleanup. Mark the appropriate medium (such as soil) with "C" (confirmed and above Model Toxics Control Act (MTCA) cleanup standards), "B" (confirmed but below MTCA standards), "S" (suspected), "N/A" (not applicable), "O" (tested and not present), "U" (unknown).

Example: Lead	C	S	S	U	S	S	1967-82
Please refer to		EHC report					

METHODS & TREATMENT TECHNOLOGIES USED AT SITE

Please check all applicable boxes that apply to your site.

Method A						
Method B						
Method C						
Air Sparging/Air Stripping						
Bioventing						
Capping (asphalt, concrete, topsoil, RCRA cover, soil-clay, synthetic membrane)						
Carbon Adsorption						
Containment On-Site						
Containment Off-Site						
Free-product Recovery						
In Situ Chemical Oxidation						
Natural Attenuation (dilution, volatilization, biodegradation, adsorption)						
Permeable Reactive Barriers						
Phytoremediation						
Soil Flushing						
Soil Vapor Extraction						
Thermal Desorption						
Other (please specify)						

AFFECTED MEDIA & CONTAMINANTS AFTER CLEANUP

Please list the contaminants from the box on page 4 and list their status after cleanup. Mark the appropriate medium (such as soil) with "C" (confirmed and above Model Toxics Control Act (MTCA) cleanup standards but contained), "B" (confirmed but below MTCA standards), "R" (remediated and below MTCA standards), "N/A" (not applicable), "O" (tested and not present), "U" (unknown) to reflect the status after cleanup.

Example: Lead	**R**	**O**	**B**	**U**	**B**	**O**

DRINKING WATER & AQUATICS INFORMATION

Are there any drinking wells within ½ mile of the site? If yes, how many?

Was a drinking water system affected? If yes, was an alternate drinking water source provided?

Was the affected drinking water system public, private, or both?

Are there any creeks, streams, ponds, wetlands, or shorelands on or adjacent to the site? Within ¼ mile of the site?

If yes, where are they located?

Were they impacted by the contamination from the site?

INSTITUTIONAL CONTROLS (I.E. RESTRICTIVE COVENANT, ENGINEERED CONTROLS, FENCING)

Were institutional controls used at the site? If yes, please specify. Pls refer to EHC report

OWNER/OPERATOR HISTORY

Please complete as many of the below boxes as possible. For type of owner/operator, please use the following codes: (1) Private, (2) Municipal, (3) County, (4) Federal, (5) State, (6) Tribal, (7) Mixed, (8) Other, (9) Unknown, (10) Public Entitle Acquisition via Bankruptcy.

TERRESTRIAL ECOLOGICAL EVALUATION EXCLUSION

Some contaminated sites are excluded from conducting a Terrestrial Ecological Evaluation. If your site meets the criteria for exclusion as described in WAC 173-340-7491, please complete this form.

SITE NAME _____

SITE ADDRESS _____

REASONS FOR EXCLUSION:

A site is eligible for exclusion if it meets any of the following criteria:

1. POINT OF COMPLIANCE WAC 173-340-7491(1)(A)

- All contamination is below 15 feet. ☐
- All contamination is below six feet and an institutional control has been implemented, as required by WAC 173-340-440. ☐
- All contamination is below a site-specific point of compliance established in compliance with WAC 173-340-7490(4)(b) with an institutional control implemented as required by WAC 173-340-440. ☐

  Please provide documentation that describes the rational for setting a site-specific point of compliance.

2. BARRIERS TO EXPOSURE WAC 173-340-7491(1)(B)

- All contaminated soil is or will be covered by physical barriers that prevent exposure to plants and wildlife and an institutional control has been implemented, as required by WAC 173-340-440. ☐

  An exclusion based on future land use must have a completion date for future development that is acceptable to Ecology.

3. UNDEVELOPED LAND WAC 173-340-7491 (1)(C)

- There is less than one-quarter acre of contiguous undeveloped land on or within 500 feet of any area of the site and any of the following chemicals is present: chlorinated dioxins or furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, heptachlor epoxide, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, or pentachlorobenzene. ☐

- For sites not containing any of the chemicals mentioned above, there is less than one-and-a-half acres of contiguous undeveloped land on or within 500 feet of any area of the site. ☐

[redacted]

4. BACKGROUND CONCENETRATIONS WAC 173-340-7491 (1) (b)

- Concentrations of hazardous substances in soil do not exceed background levels as described in WAC 173-340-709. ☐

Kevin Carl
Korum Ford of Fife
1701 Alexander Avenue
Fife, Washington 98242

Re: Subsurface Investigation
3520 Pacific Highway East, Fife, Washington 98424 (Hometel Inn Motel)

Dear Kevin,

Environmental Hazards Control (EHC) is pleased to submit this *Subsurface Investigation* on the referenced property. The site work was performed in the parking areas and adjacent vegetation strips on the property. It is our understanding you may purchase the referenced property and our *Subsurface Investigation* will assist in determining adverse environmental liability on the site.

1.0 Purpose

The purpose of our services was to evaluate shallow soils and/or groundwater (GW) and offer recommendations for further investigation, if warranted. Based upon the history of the site (motel) and nearby activity (leaking underground storage tanks) reported in a previously published Phase I – Environmental Assessment, EHC was to advance borings and perform sampling to assist in determining if contaminants typically associated with petroleum hydrocarbons and heavy metals were present. The sampling was intended to assess potential contamination around the perimeter of the property.

The following is an outline of the critical elements of the sampling:

- Review previously published reports on subject;
- Outline the work with the Client;
- Develop a *Sampling Plan* in accordance with standard protocols and previous report data;
- Advance borings and collect soil and/or GW samples;
- Field screen suspect soils for the presence of petroleum hydrocarbons with a photo-ionizing detector (PID);
- Document conditions found;
- Submit samples to an approved laboratory for analysis;
- Provide a written report of findings with recommendations.

Re: Subsurface Investigation
Hometel Inn Motel
3520 Pacific hwy. East
Fife, WA.

Dear Mr. Cline:

Included is the Phase I Report and the recently completed Phase II Report as well as the cover letter from the attorney for the owners of 3520 Pacific Hwy. East.

As discussed in our phone conversation today, there is a pending real estate transaction, with a scheduled closing date at the end of July. If you need any additional information on the property, please contact either the owner's attorney or myself.

Sincerely,

Rod Giffels
Sales Representative

Re: Subsurface Investigation
Hometel Inn Motel
3520 Pacific Hwy East, Fife, Washington

Dear Mr. Cline:

This office represents Star Lodging Lodging of the Northwest, LLC. Pursuant to the recommendations in Environmental Hazards Control's inspection of their above-referenced property, I am forwarding their report on to you for review and possible issuance of a "No Further Action Letter" or a "Non-Restrictive NFA."

Also enclosed is a $500 deposit check.

If you need anything further, please let me know.

Very Truly Yours,

Brian Wichmann

EHC

June 25, ~~2003~~ 2004

Kevin Carl
Korum Ford of Fife
1701 Alexander Avenue
Fife, Washington 98242

Re: Subsurface Investigation
3520 ~~Alexander Avenue~~, PACIFIC HIGHWAY EAST Fife, Washington 98424 (Hometel Inn Motel)

Dear Kevin,

Environmental Hazards Control (EHC) is pleased to submit this *Subsurface Investigation* on the referenced property. The site work was performed in the parking areas and adjacent vegetation strips on the property. It is our understanding you may purchase the referenced property and our *Subsurface Investigation* will assist in determining adverse environmental liability on the site.

1.0 Purpose

The purpose of our services was to evaluate shallow soils and/or groundwater (GW) and offer recommendations for further investigation, if warranted. Based upon the history of the site (motel) and nearby activity (leaking underground storage tanks) reported in a previously published Phase I – Environmental Assessment, EHC was to advance borings and perform sampling to assist in determining if contaminants typically associated with petroleum hydrocarbons and heavy metals were present. The sampling was intended to assess potential contamination around the perimeter of the property.

The following is an outline of the critical elements of the sampling:

- Review previously published reports on subject;
- Outline the work with the Client;
- Develop a *Sampling Plan* in accordance with standard protocols and previous report data;
- Advance borings and collect soil and/or GW samples;
- Field screen suspect soils for the presence of petroleum hydrocarbons with a photo-ionizing detector (PID);
- Document conditions found;
- Submit samples to an approved laboratory for analysis;
- Provide a written report of findings with recommendations.

2.0 Services

The following services were provided by EHC:

- Conducted a site review following review of a *Phase I – Environmental Assessment;*
- Discussed site conditions with Client and Client's realtor over the telephone;
- Documented the visible location of pipe penetrations in catch basins;
- Developed a *Sampling Plan* to advance borings near previous boring locations;
- Developed a *Health and Safety Plan (HASP)*;
- Reviewed *Sampling Plan* and *HASP* with driller from Environmental Services Network, Northwest (ESN);
- Starting the morning of June 17, 2004, a total of 5 borings were advanced in the Parking Areas and adjacent vegetation strips on the property. The boring work involved advancing borings near the 4 corners of the property with an additional boring near the center of the North Parking Area;
- All borings were advanced with a truck-mounted direct push hydraulic auger (Strataprobe) to a depth of 7.5' below ground surface (bgs);
- Groundwater was encountered in all 5 borings (B1A through B5A) ranging between 2.5' and 4.0';
- Documented subsurface conditions on Boring Logs;
- Drew numerous soil samples from borings B1A through B5A. All samples were field screened with a PID for volatile organics;
- All field screening with a PID was performed on suspect soils by containing soils sealed in plastic bags, waiting for possible hydrocarbon molecules to warm (excite) and release inside the sealed bag. A micro-tip probe, attached to a PID, was inserted in to the bag and head-space gases were analyzed for hydrocarbons;
- Drew a total of 13 soil samples and 5 GW samples from the borings;
- All GW samples included 1 - ½ liter glass amber bottle for oil range petroleum hydrocarbon, 3 glass VOAs for gasoline range petroleum hydrocarbons and 1 plastic bottle for heavy metal;
- All soil samples were contained within 4 ounce glass jars with Teflon line lids;
- All sample containers were labeled with the necessary information (sample #, date, time);
- Samples were stored in a cooler with ice/chiller packs (maintained at approximately 4 degrees centigrade) during field operations;
- A chain-of-custody was completed the afternoon of June 17, 2004. Based upon the *Sampling Plan* and the Client's requirements, 12 of the 13 soil samples drawn and all of the GW samples drawn were requested analyzed on a standard turn-around basis;
- All samples, including the chain-of-custody, were turned over to an ESN representative and the samples were transferred to an ESN cooler with ice packs;
- The GW samples requiring metals analysis were transferred to STL Laboratories in Fife, Washington the afternoon of June 17, 2004;
- All other samples were transported to ESN's laboratory in Lacey, Washington the afternoon of June 17, 2004;
- Requested analysis on 2 of the 13 soil samples and all 5 GW samples:
  1. NWTPH-D extended (Identification of the heavy range petroleum hydrocarbons, i.e., diesel, oil and mineral oil).

- Requested analysis on all 5 of the GW samples:
  1. EPA Method 8021B Gasoline BTEX (Identification of petroleum hydrocarbons from gasoline including benzene, toluene, ethyl benzene and xylene).
- Request analysis on all 5 of the GW samples:
  1. USEPA Method 6020 and 7470 (Heavy metals in soil...MTCA 5 metals: arsenic, cadmium, chromium, lead and mercury).
- Requested analysis on 10 of the 13 soil samples:
  NWTPH - HCID (Identification of petroleum hydrocarbons in the gasoline, diesel, heavy oil and Mineral oil range).
- Contacted Client and discussed preliminary analytical results;
- Contacted Washington State, Department of Ecology, Voluntary Cleanup Program lead and discussed option concerning reporting on site conditions without identifying subject.
- Summarized the data in a written report with attachments.

3.0 Background

The subject property was a commercial zoned parcel of land occupied by the Hometel Inn Motel. The property was located in the 3500 block of Fife, Washington between Pacific Highway East and Interstate 5. The subject was utilized as farmland up to the early 1960s. The subject was developed as a motel/hotel in the early to mid-1960s and has been in operation as such to present day.

A *Phase I and Limited Phase II Environmental Site Assessment* performed by Robinson & Noble, Inc. and Saltbush Environmental Services in April 2004 confirmed the presence of the heavy metals arsenic, chromium and lead above the MTCA, Method A Cleanup Levels for Groundwater on the subject. The report data was presented along with data generated on the property adjacent the west side of the subject (Freddie's Casino at 3402 Pacific Highway East, Fife, Washington). A summary of the analytical results of soil and GW samples from the *Phase I and Limited Phase II Environmental Site Assessment* has been presented in Tables 3-1 and 4-1.

Table 3-1
Phase I and Limited Phase II Environmental Site Assessment
Summary of Analytical Results of Soil (April 2004)
3520 Pacific Highway East, Fife, Washington

Sample Number	Sample Depth	Sample Date	Analysis Date	Gas	Diesel	Heavy Oil	Mineral Oil	Metals	Gas BTEX
B6	?	?	?	NA	ND	ND	ND	Pb: 4.6	NA
B7	?	?	?	ND	ND	ND	ND	ND	NA
B8	?	?	?	NA	ND	ND	ND	Pb: 13 Cr: 5.5	NA
B9	?	?	?	ND	ND	ND	ND	Cr: 3	NA
MTCA A				30	2,000	2,000	4,000	2-2,000	0.03-9

Soil values reported in milligrams per kilogram (mg/kg).
ND = None detected.
NA = Not analyzed.
MTCA A = MTCA, Method A Cleanup Levels for Unrestricted Land Use
Metals = MTCA 5 metals analyzed but, EHC reported only those metals found above detection levels.

Table 4-1
Phase I and Limited Phase II Environmental Site Assessment
Summary of Analytical Results of Soil (April 2004)
3520 Pacific Highway East, Fife, Washington

Sample Number	Sample Depth	Sample Date	Analysis Date	Gas	Diesel	Heavy Oil	Mineral Oil	Metals	Gas BTEX
B6	?	?	?	NA	ND	ND	ND	ND	ND
B7	?	?	?	ND	ND	ND	ND	**As: 0.041 Cr: 0.10** Pb: 0.009	ND
B8	?	?	?	NA	ND	ND	ND	**As: 0.015 Cr: 0.40** Pb: 0.005	ND
B9	?	?	?	ND	ND	ND	ND	**As: 0.046 Cr: 0.20 Pb: 0.050**	ND
MTCA A Reported levels in April 2004 Report.				800	500	500	500	As: 0.005 Ca: 0.005 Cr: 0.05 Pb: 0.015 Hg: 0.002	5 – 1,000
MTCA A Metals analysis listed in ug/L.				800	500	500	500	As: 5 Ca: 5 Cr: 50 Pb: 15 Hg: 2	5 – 1,000

Groundwater values for petroleum hydrocarbons reported in milligrams per kilogram (mg/L).
*Groundwater values for heavy metals reported in micrograms per liter (ug/L)
ND = None detected.
NA = Not analyzed.
Metals: MTCA 5 metals analyzed but EHC reported only those metals found above detection levels.
MTCA, Method A Cleanup Levels for Unrestricted Land Use
*Note: The GW analysis for heavy metals reported in the April 2004 Report appears to have been mislabeled and was reported in milligrams per liter (mg/L) as opposed to the stated micrograms per liter (ug/L). Typically, GW analysis reported by a laboratory in mg/L is converted to ug/L by the consultant for comparison with MTCA, Method A Cleanup Levels for Groundwater.
*Note: The MTCA, Method A Cleanup Level for Mercury (Hg) in Groundwater was reported incorrectly in the April 2004 Report at 0.015 mg/L versus the actual Cleanup Level of 0.002 mg/L or 2 ug/L.

3.1 Property Reports

- *Phase I and Limited Phase II Environmental Site Assessment*, Robinson & Noble, Inc. and Saltbush Environmental Services, #1757-004A, April 2004 (EHC was provided the cover page along with pages 8, 9 10, 11, a Vicinity Map and poor copy of the Boring Location Map).
- *Wetlands Review of Hometel Inn Property, City of Fife, 3520 Pacific Highway East, Pierce County Parcel #0320111049*, Russell & Associates, May 12, 2003
- *Phase I Environmental Site Assessment*, Hometel Inn Motel, NVL Laboratories, Inc. June 25, 2002
- *Asbestos-Containing Materials Survey*, 3518 Pacific Highway, Fife, WA, Project #2002-285, NVL Laboratories, Inc., June 20, 2002 (Partial report included pages 1 – 9).

4.0 Field Work

4.1 Utilities Locate

Based upon the previous site work performed by another consulting firm, and given EHC's *Sampling Plan* dictated sampling adjacent previous borings advanced around the subject, EHC did not contact the Utilities Underground Location Center (UULC) prior to commencing the subsurface work at the referenced property. Although, all visible utilities, stormwater piping and asphalt patches relating to subsurface systems (electrical and plumbing) were noted by EHC prior to commencing the work. A minimum distance of 5' was maintained from all apparent subsurface systems throughout the work. Additionally, a minimum distance of 10' was maintained from all overhead systems throughout the work.

4.2 Sampling Plan

A *Sampling Plan* was developed based upon the previous reports published on the site and site reconnaissance by EHC. The focus of the Sampling Plan was to confirm the results of the April 2004 subsurface sampling work perform by another consulting firm. See: SAMPLING PLAN.

4.3 Subsurface Investigation

The boring locations were chosen based upon prior boring locations and the need for additional data in the North Parking Area between the Travel Lodge and the Hometel Inn Motel. A description of each boring location and associated activity has been described in subsequent paragraphs. See: BORING LOGS.

Boring B1A was advanced to a depth of 7' bgs in the southwest corner of the property approximately 107' west and 63' north of the northwest corner of the site building. The boring location was chosen because it was west of the boring advanced in a previously referenced report and because it was within the drainage area for the parking stormwater. Groundwater was encountered at 2.5' bgs and sample B1A-W was drawn and submitted for laboratory analysis. Soil samples were field screened with a PID at various depths with following results:

- 0' - .5' 7.2 ppm
- 2' – 2.5' 4.1 ppm
- 4' – 4.5' 4.0 ppm
- 6 – 6.5' 7.6 ppm

Based upon soil conditions and PID results, it did not appear the soil samples contained volatile organics associated with petroleum hydrocarbons. Although, as a precaution, samples B1A-1, B1A-2, B1A-3 and B1A-4 were contained in 4-ounce glass jars and submitted for laboratory analysis.

Boring B2A was advanced to a depth of 7' bgs in the North Parking Area about 95' east and 38' north of the northwest corner of the site building. The boring location was chosen because no data had been collected between the site building and adjacent Travel Lodge in a previously published report. Groundwater was encountered at 3' bgs and sample B2A-W was drawn and submitted for laboratory analysis. Soil samples were field screened with a PID at various depths with the following results:

- 0 - .5' 9.2 ppm
- 2' – 2.5' 0.1 ppm
- 4' – 4.5' 8.9 ppm

Based upon soil conditions and PID results, samples B2A-1 and B2A-2 were contained in 4-ounce glass jars and submitted for laboratory analysis.

Boring B3A was advanced to a depth of 7' bgs in the northeast corner of the North Parking Area about 3' west and 65' north of the northeast corner of the site building. The boring location was chosen because it was adjacent a boring advanced in a previously referenced report. Groundwater was encountered at 4' bgs and sample B3A-W was drawn and submitted for laboratory analysis. Soil samples were field screened with a PID at various depths with the following results:

- 4' – 4.5' 4.0 ppm
- 6' – 6.5 5.7 ppm

Based upon soil conditions and PID results, samples B3A-1 and B3A-2 were contained in 4-ounce glass jars and submitted for laboratory analysis.

Boring B4A was advanced to a depth of 7' bgs near the southeast corner of the site approximately 43' east and 46' south of the southeast corner of the site building. The boring location was chosen because it was adjacent a boring advanced in a previously referenced report. Groundwater was encountered at 3.5' bgs and sample B4A-W was drawn and submitted for laboratory analysis. Soil samples were field screened with a PID at various depths with the following results:

- 2' – 2.5' 4.9 ppm
- 3.5' – 4' 8.0 ppm
- 6' – 6.5' 7.7 ppm

Based upon soil conditions and PID results, all samples B4A-1 and B4A-2 were contained in 4-ounce glass jars and submitted for laboratory analysis.
Boring B5A was advanced to a depth of 7' bgs near the northwest corner of the site approximately 104' west and 13' south of the southwest corner of the site building. The boring location was chosen because it was adjacent or near a boring advanced in a previously referenced report. Groundwater was encountered at 4' bgs and sample B5A-W was drawn and submitted for laboratory analysis. Soil samples were field screened with a PID at various depths with the following results:

- 1' to 1.5' 6.7 ppm
- 3' – 3.5' 9.4 ppm
- 5.5 – 6' 9.2 ppm

Based upon soil conditions and PID results, samples B5A-1, B5A-2 and B5A-3 ere contained in 4-ounce glass jars and submitted for laboratory analysis. Although, sample B5A-1 (0.5' to 1' bgs) was placed on "hold" or not analyzed pending the results of analysis of B5A-2 and B5A-3. Given no petroleum hydrocarbons in the gasoline, diesel and oil range were detected in B5A-2 and B5A-3, sample B5A-1 was not analyzed.

Note: Groundwater encountered across the site was found within a sandy layer and recharged at a moderate rate. All GW samples were drawn from within 5' sections of #10 slot PVC screen.

4.3.1 Work Procedures

Steven Salter of EHC donned protective non-latex gloves during the work and distilled water rinses were performed on all equipment prior to their use. Hearing and eye protection were worn by EHC throughout all drilling operations. And, EHC instructed the Driller to don hearing and eye protection throughout the work.

All borings were advanced with a truck-mounted 2" hydraulic auger owned and operated by ESN. The Strataprobe sampling system consisted of direct-push hydraulic unit. The rear-mounted, duel ram configuration, in conjunction with a hydraulic hammer, is capable of producing high-frequency impact energy that is suitable for shallow to moderate depth environmental sampling.

The Driller advanced each boring using a retractable piston sampler. All borings were advanced using a standard 4' x 2" steel sleeve and acrylic inserts. Upon reaching the desired depth, the piston was unlocked and the sampler advanced 1" into the soil as the piston retracted. See: BORING LOGS.

Samples were collected by EHC throughout the day of June 17, 2004. Samples were inventoried and then transferred to the driller for ESN on the afternoon of June 17, 2004. See: LABORATORY ANALYSIS and EQUIPMENT LIST.

4.3.2 Laboratory Analysis

Samples B2A-W, B3A-W B4A-W were found to contain arsenic above the Model Toxics Control Act (MTCA), Method A Cleanup Level for Groundwater of 5 micrograms per liter (ug/L). Samples

B2A-W, B3A-W B4A-W were found to contain chromium below the MTCA, Method A Cleanup Level for Groundwater of 50 ug/L. None of the soil or GW samples analyzed were found to contain detectable concentrations of petroleum hydrocarbons in the gasoline, diesel, heavy oil or mineral oil range. See: LABORATORY ANALYSIS.

A summary of the analytical results of soil and GW samples has been presented in Tables 8-1 and 9-1.

Note: The laboratory analysis for groundwater were reported in milligrams per liter (mg/L) and converted by EHC to ug/L for comparison with current MTCA standards.

Bold values indicate concentration exceed MTCA, Method A Cleanup Levels for Groundwater.

5.0 Summary of Conditions

- A total of 5 borings were advanced across the site to average depth of 7' bgs.
- Generally, site soils consisted of fine to medium sands over-layed in areas with 1' to 2' of fill consisting of coarse sands and crushed rock.
- Groundwater was encountered at 2.5' to 4' bgs.
- All borings were sealed with bentonite and asphalt surfaces patched with cold-process asphalt patch.
- Low concentrations of volatile organics were detected with the PID and averaged between 4 ppm and 9 ppm.
- Groundwater from all 5 borings was found to contain the heavy metal arsenic (6.9 to 34.3 ug/L) above the MTCA, Method A Cleanup Level of 5 ug/L.
- Groundwater from borings B1A, B2A, B3A and B4A were found to contain chromium (2.59 to 14.3 ug/L) below the MTCA, Method A Cleanup Level of 50 ug/L.
- None of the GW samples were found to contain detectable concentrations of the heavy metals cadmium, lead or mercury.
- None of the GW samples were found to contain detectable concentrations of gasoline constituents (benzene, ethyl benzene, toluene or xylenes)
- None of the GW samples were found to contain detectable concentrations of diesel, heavy oil or mineral oil range petroleum hydrocarbons.
- None of the soil samples were found to contain detectable concentrations of gasoline, diesel, heavy oil or mineral oil range petroleum hydrocarbons.

6.0 Conclusions

- Based upon laboratory results, it appears shallow GW across the site contains the heavy metal arsenic above the MTCA, Method A Cleanup Level for Groundwater.
- The arsenic in GW may be naturally occurring or caused by human activity.
- The source of the arsenic in GW could not be discerned.
- The *Phase I and Limited Phase II Environmental Site Assessment* in April 2004 reported the presence of chromium and lead in GW in excess of the MTCA, Method A Cleanup Levels but the analysis of samples submitted by EHC during this *Subsurface Investigation* did not confirm the previously reported results.
- Given the arsenic in soil concentrations reported in the April 2004, it is possible arsenic is stripping out of the soil as the GW table fluctuates seasonally.
- The *Area Wide Soil Contamination Task Force Report* published in June 2003 indicated a high likelihood of arsenic contamination of shallow soils in the Tacoma and Fife, Washington areas.
- The arsenic in GW may be area wide and the result of historical farming activities, historical airborne contamination from the closed Asarco Smelter in Ruston, Washington or another source. If so, a site-specific cleanup of GW would be impossible due to off-site GW migrating to the subject.

7.0 Recommendations

- As required by the MTCA, the property owner must submit this report to the Washington State, Department of Ecology, Southwest Regional Office within 90 days of publication.
- Submit this report, along with all other pertinent data, to the Washington State, Department of Ecology, Voluntary Cleanup Program for review and possible issuance of "No Further Action Letter" or a "Non-Restrictive NFA". A copy of the report should be forwarded to Chuck Cline at WDOE at 47775, Olympia, Washington 98504-7775 and a $500 deposit check must be enclosed with the request.

8.0 Limitations and Exceptions

EHC is providing data, information and recommendations for the express purpose of the Client. The information is offered for management decisions, considerations for further investigation and future removal, encapsulation, management or disposal of suspect hazardous materials or toxic substances.

The professional services provided by EHC and its personnel are for the benefit of and are limited to the Client only and to the fee actually received by EHC. Further, there is no accountability, obligation or liability to any third party. If an EHC report is placed in the hands of anyone other than the Client, the Client shall make such party aware of related discussions. EHC and its personnel are in no way to be responsible for any costs incurred to discover or correct physically, financially and/or legally environmental or health and safety conditions on a property. In the case of limited partnerships, syndication offering or stock offerings in real estate, the Client agrees that in case of a lawsuit brought by lender, partner or part Client in any form of Client and officers (ownership, tenant, or any other party), any and all awards, settlements of any type in such suits, regardless of the outcome), the Client will hold EHC and it's personnel completely harmless in any such action.

Possession of an EHC report or any copy thereof does not carry with it the right of publication, nor may it be used for other than its intended use; the physical report(s) remain the property of EHC for the use of the Client, the fee being for the analytical services only.

An EHC report is to be used only in its entirety, and no part is to be used without the whole report. All conclusions and opinions concerning the analysis as set forth in the report were prepared by EHC personnel whose signature(s) appear on the report unless otherwise indicated. No change of any item in the report shall be made by anyone other than EHC personnel. EHC and EHC personnel shall have no responsibility if any such unauthorized change is made.

EHC personnel may not divulge the material (evaluation) contents of the report, analytical findings or conclusions, or give a copy of the report to anyone other than the Client or his designee as specified in writing except as may be required by a court of law or body with the power of a subpoena.

An EHC report was obtained from EHC and consists of "trade secrets and environmental, commercial or financial information" which is privileged and confidential and exempted from disclosure. Notify EHC of any request(s) to reproduce this report in whole or in part.

No responsibility is assumed for accuracy of information furnished by work of others, the Client, his designee or public records. The comparable data relied upon in this report has been confirmed with one or more party familiar with the transaction or from affidavit or other sources thought reasonable; all are considered appropriate for inclusion to the best of our factual judgment and knowledge. An impractical and uneconomic expenditure of time would be required in attempting to furnish unimpeachable verification in all instances, particularly as to environmental condition, engineering and related information.
Any sketches and maps in an EHC report are included to assist the reader in visualizing the property and are not necessarily to scale. Photographs are included for the same purpose and represent conditions at the time of the inspection(s). Site plans are not always surveys unless shown from a separate surveyor.

No responsibility is assumed by EHC for matter(s) legal in character or nature, no matter of survey, nor any architectural, structural, mechanical, or engineering nature pertaining to the subject property.

Typically, a legal description is assumed to be correct as used an EHC report as furnished by the Client, his designee, or as derived by EHC.

EHC personnel have inspected as far as possible, by observation, the land and improvement(s); however, it was not possible to personally observe conditions beneath the soil or hidden structural components, or other components.

It is always possible that areas with undetected contamination may exist in portions of the site where no subsurface exploration was performed. Within the limitations of scope, schedule and budget, our services have been executed in accordance with generally accepted practices in this area at the time this report was prepared.

8.0 Special Terms and Conditions

We make no warranties, express or implied, including without limitation, warranties as to merchantability or fitness of a property for a particular purpose. In addition, the information provided to you in an EHC report is not to be construed as legal advice. All rights, warranties and information in the Professional Services Agreement, signed by the Client and EHC, are included.

9.0 Reliance

The Client only may rely on the report information unless written authorization is provided by EHC. EHC does not warranty and there is no accountability, obligation or liability to any third party.

Project #

12.0 Qualifications of Environmental Professional

Mr. Salter is the owner, founder and lead environmental consultant for Environmental Hazards Control (EHC). His experience includes over 18 years of consulting, planning and remediation in the environmental industry. He has an educational background in architecture, engineering and business. And, he has extensive experience in the investigation, testing, planning, permitting and remediation of hazardous materials.

Mr. Salter has been teaching about hazardous materials to Appraisal, Banking, Insurance, Real Estate and Development Professionals since the early 1990's. He wrote a manual on and started teaching about Environmental Assessment and Audits in 1991. And, he was the Environmental Expert for the Planning Commission of Tacoma, Washington from July 1993 to June 1995.

Mr. Salter maintains numerous certifications in the Environmental Industry including the identification and management of projects involved with Asbestos-Containing Materials, Lead-Based Paints and Hazardous Materials. He has successfully completed numerous courses on Construction Safety Management, Environmental Assessing and Auditing and the Identification of Occupational Hazards. And, he is a Certified Appraisal, Escrow and Real Estate Instructor.

Registrations and Certificates

➢ OSHA Construction Safety Manager	Certified 2000
➢ Environmental Expert, Planning Commission, Tacoma, WA	July 1993 – June 1995
➢ Certified Instructor, Washington Department of Licensing	Instructor #I0468
Real Estate, Escrow and Assessor	1991
➢ Environmental Auditor and Assessor	Certificate #1070
Property Assessments and Audits	1991
➢ AHERA Certified Asbestos Inspector	1988 – Present
USEPA Asbestos Program	
➢ AHERA Project Designer	1994 – 2001
USEPA Asbestos Program	
➢ AHERA Management Planner	1988 – 1996
USEPA Asbestos Program	
➢ Hazardous Waste Site Supervisor	1991 – Present
➢ Lead Inspector Training	Certified 1995
Health and safety training for the inspection and removal of lead	
➢ Sampling and Evaluating Airborne Asbestos Dust	Certificate 1053
NIOSH 582 Certified	1989

EHC

June 15, 2004

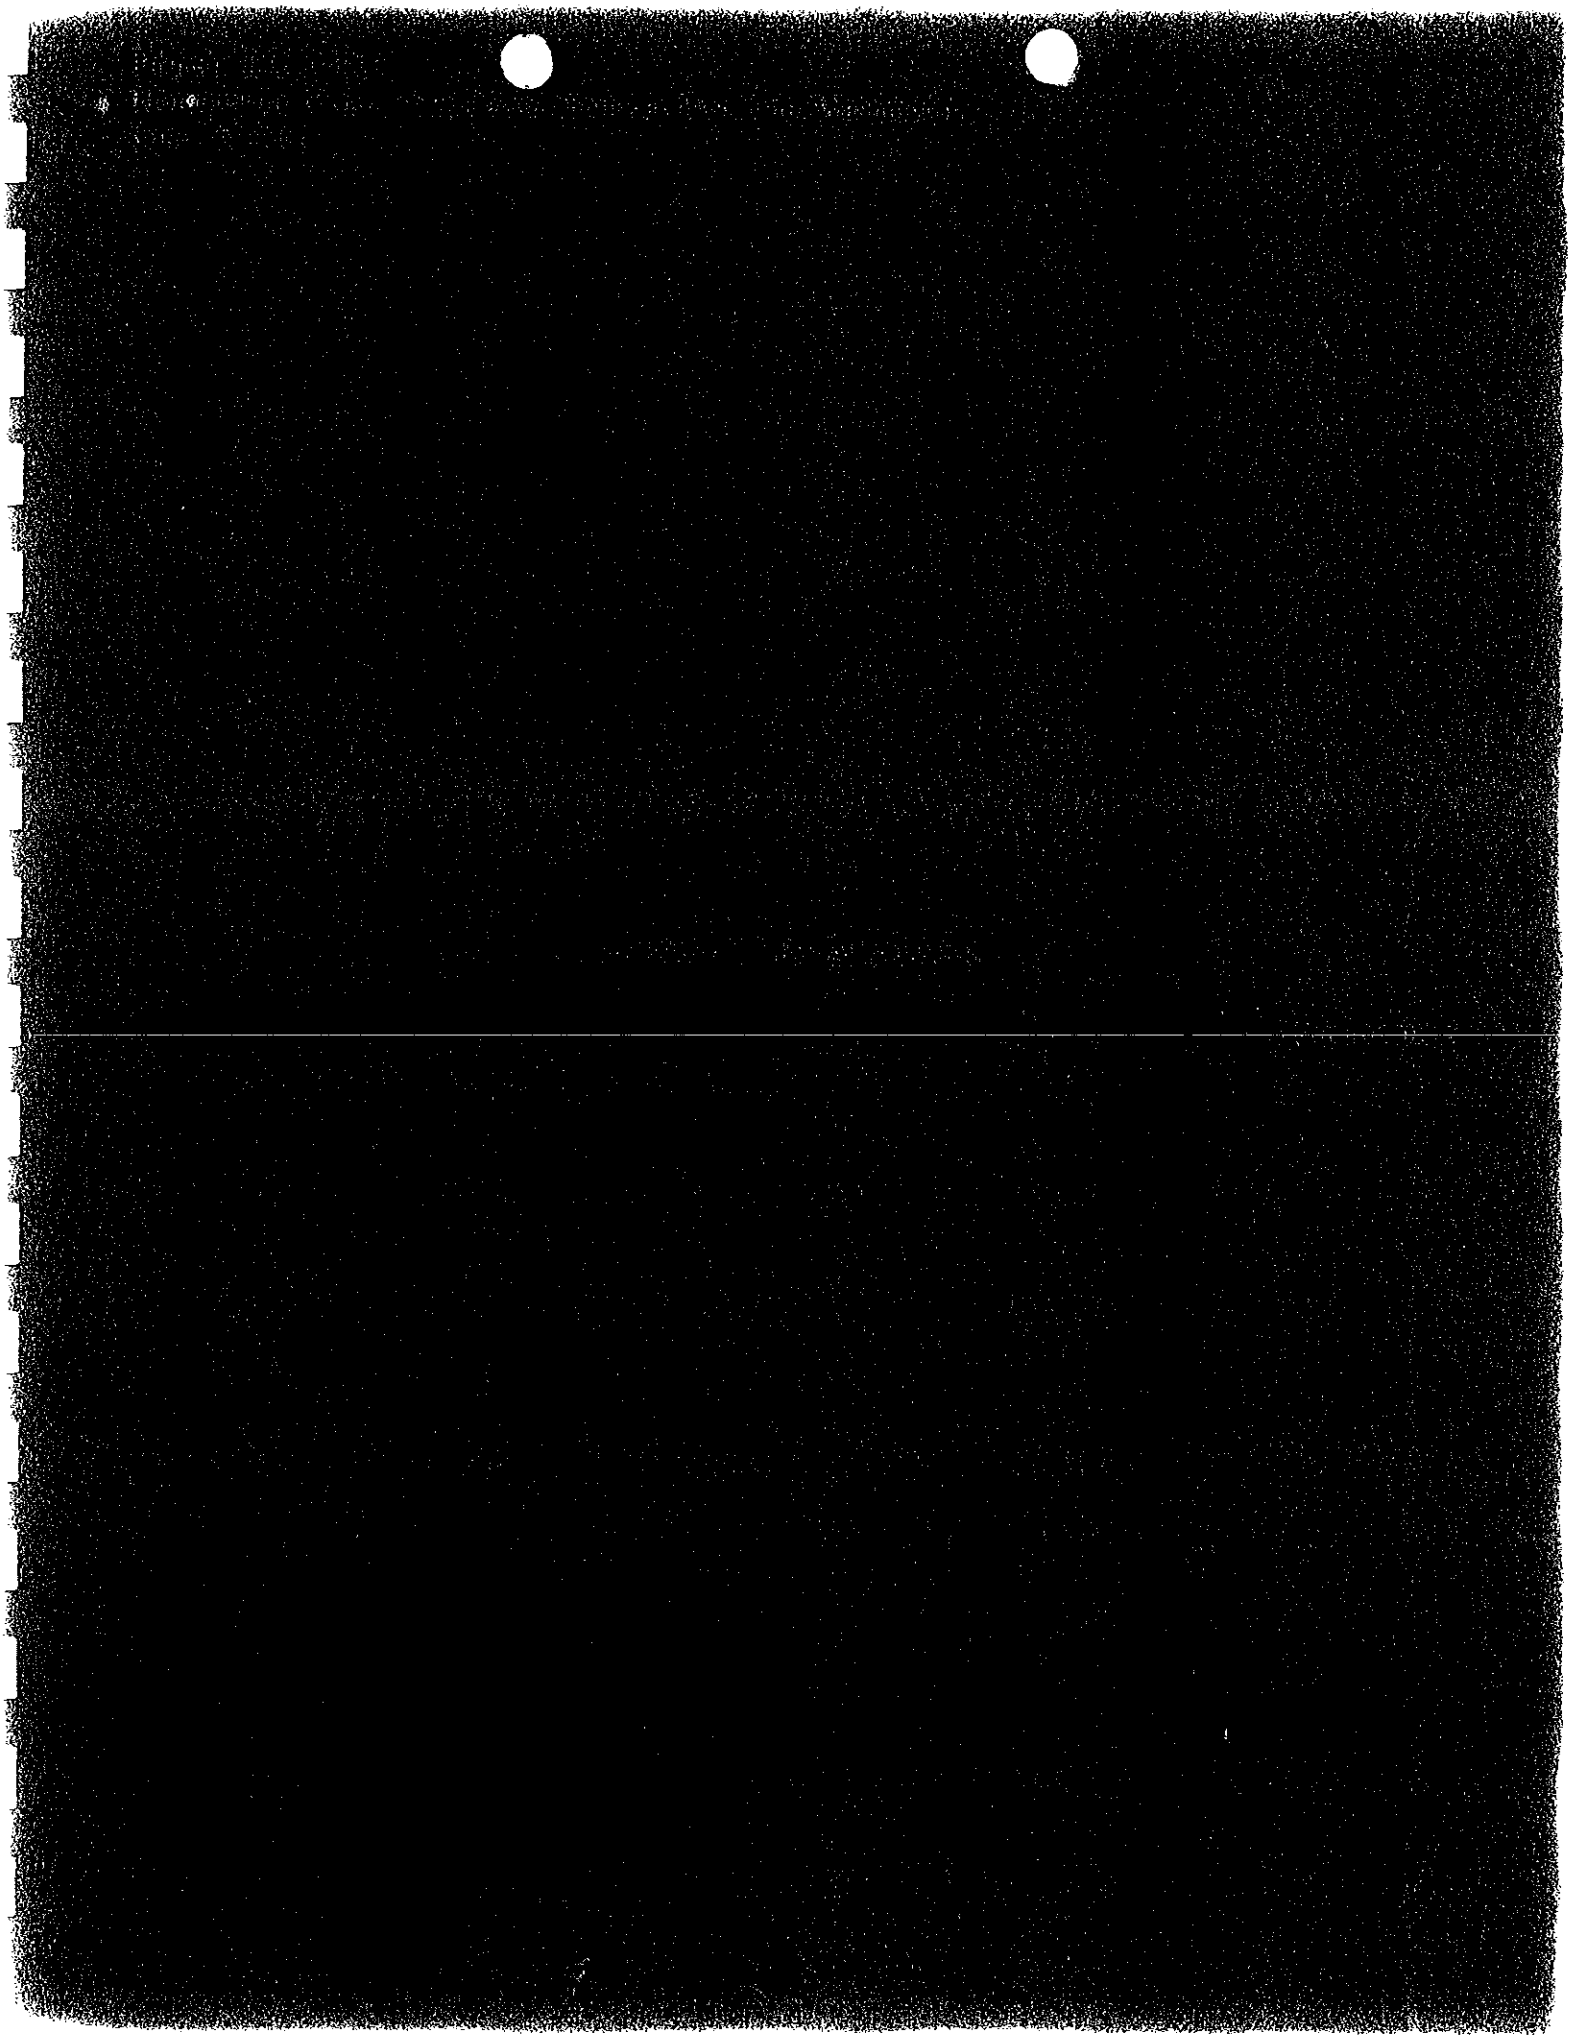
Project: **Hometel Inn Motel**
3520 Pacific Highway East, Fife, Washington
Project #: EHC04061
Title: Subsurface Investigation - Sampling Plan

Environmental Hazards Control (EHC) will perform a *Subsurface Investigation* on the referenced property to evaluate site soil and groundwater (GW) to offer recommendations for further investigation, if warranted. Based upon the history of the site (agriculture prior to 1960s and motel from 1960s to present and previous report data related to heavy metals in shallow GW), existing site conditions (site building surrounded by asphalt parking and drives and minor vegetation), EHC will advance a series of 4 - 6 borings to depths of less than 15' below ground surface (bgs). The subsurface work will assist in determining if petroleum hydrocarbons in the gasoline and oil ranges are present in soil and if gasoline and oil range petroleum hydrocarbon and heavy metals are present in GW.

Standard sampling protocols will be adhered to throughout the work. All work and conditions will be documented on Well Logs. Disposable gloves will be donned during the work and distilled water rinses will be performed on all equipment prior to and between uses.

The borings will be located in and around the perimeter of the subject property adjacent or near the location of borings reported in the *Phase I and Limited Phase II Environmental Site Assessment* by Robinson & Noble, Inc. and Saltbush Environmental Services in April 2004.

Soil and/or GW samples will be stored in chilled coolers during all fieldwork. A laboratory chain-of-custody form will be completed and the samples will be submitted to a qualified laboratory for analysis on a "standard" turn-around basis.



Soil and/or GW samples will be analyzed by the following methods:

- Soil and GW samples:
  1. NWTPH-D extended (Identification of the heavy range petroleum hydrocarbons, i.e., diesel, oil and mineral oil).
- Groundwater samples:
  1. EPA Method 8021B Gasoline BTEX (Identification of petroleum hydrocarbons from gasoline including benzene, toluene, ethyl benzene and xylene).
- Groundwater samples:
  1. USEPA Method 6020 and 7470 (Heavy metals in soil...MTCA 5 metals: arsenic, cadmium, chromium, lead and mercury).

- Soil samples:
  NWTPH - HCID (Identification of petroleum hydrocarbons in the gasoline, diesel, heavy oil and Mineral oil range).

Our proposed sampling locations have been plotted on the attached map. Final or actual sample locations will be determined by subsurface conditions, i.e. utilities, buries objects, etc. Following a telephone call to the Utilities Underground Locating Services, the various service providers identified their respective utilities by marking paved and un-paved surfaces with colored paint.

Gross Beta Particle Activity		4 mrem/yr[l]
Lead	7439-92-1	15 ug/liter[m]
Lindane	58-89-9	0.2 ug/liter[n]
Methylene chloride	75-09-2	5 ug/liter[o]
Mercury	7439-97-6	2 ug/liter[p]
MTBE	1634-04-4	20 ug/liter[q]
Naphthalenes	91-20-3	160 ug/liter[r]
PAHs (carcinogenic)		See benzo(a)pyrene[d]
PCB mixtures		0.1 ug/liter[s]
Radium 226 and 228		5 pCi/liter[t]
Radium 226		3 pCi/liter[u]
Tetrachloroethylene	127-18-4	5 ug/liter[v]
Toluene	108-88-3	1,000 ug/liter[w]
Total Petroleum Hydrocarbons[x] [Note: Must also test for and meet cleanup levels for other petroleum components--see footnotes!]		

Gasoline Range Organics		800 ug/liter
Benzene present in ground water		1,000 ug/liter
No detectable benzene in ground water		500 ug/liter
Diesel Range Organics		500 ug/liter
Heavy Oils		500 ug/liter
Mineral Oil		500 ug/liter
1,1,1 Trichloroethane	71-55-6	200 ug/liter[y]
Trichloroethylene	79-01-6	5 ug/liter[z]
Vinyl chloride	75-01-4	0.2 ug/liter[aa]
Xylenes	1330-20-7	1,000 ug/liter[bb]

Footnotes:

a **Caution on misusing this table.** This table has been developed for specific purposes. It is intended to provide conservative cleanup levels for drinking water beneficial uses at sites undergoing routine cleanup actions or those sites with relatively few hazardous substances. This table may not be appropriate for defining cleanup levels at other sites. For these reasons, the values in this table should not automatically be used to define cleanup levels that must be met for financial, real estate, insurance coverage or placement, or similar transactions or purposes. Exceedances of the values in this table do not necessarily mean the ground water must be restored to those levels at all sites. The level of restoration depends on the remedy selected under WAC 173-340-350 through 173-340-390.

b **Arsenic.** Cleanup level based on background concentrations for state of Washington.

c **Benzene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

d **Benzo(a)pyrene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61), adjusted to a 1×10^{-5} risk. If other carcinogenic PAHs are suspected of being present at the site, test for them and use this value as the total concentration that all carcinogenic PAHs must meet using the toxicity equivalency methodology in WAC 173-340-708(8).

e **Cadmium.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.62).

f **Chromium (Total).** Cleanup level based on concentration derived using Equation 720-1 for hexavalent chromium. This is a total value for chromium III and chromium VI. If just chromium III is present at the site, a cleanup level of 100 ug/l may be used (based on WAC 246-290-310 and 40 C.F.R. 141.62).

g **DDT (dichlorodiphenyltrichloroethane).** Cleanup levels based on concentration derived using Equation 720-2.

h **1,2 Dichloroethane (ethylene dichloride or EDC).** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

i **Ethylbenzene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

are #6 fuel oil, bunker C oil, hydraulic oil and waste oil. The cleanup level is based on protection from noncarcinogenic effects during drinking water use, assuming a product composition similar to diesel fuel. The ground water cleanup level for any carcinogenic components of the petroleum [such as benzene, PAHs and PCBs] and any noncarcinogenic components [such as ethylbenzene, toluene, xylenes and naphthalenes], if present at the site, must also be met. See Table 830-1 for the minimum testing requirements for heavy oil releases.

Mineral oil means non-PCB mineral oil, typically used as an insulator and coolant in electrical devices such as transformers and capacitors measured using NWTPH-Dx. The cleanup level is based on protection from noncarcinogenic effects during drinking water use. Sites using this cleanup level must analyze ground water samples for PCBs and meet the PCB cleanup level in this table unless it can be demonstrated that: (1) The release originated from an electrical device manufactured after July 1, 1979; or (2) oil containing PCBs was never used in the equipment suspected as the source of the release; or (3) it can be documented that the oil released was recently tested and did not contain PCBs. Method B (or Method C, if applicable) must be used for releases of oils containing greater than 50 ppm PCBs. See Table 830-1 for the minimum testing requirements for mineral oil releases.

y **1,1,1 Trichloroethane.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

z **Trichloroethylene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

aa **Vinyl chloride.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61), adjusted to a 1×10^{-5} risk.

bb **Xylenes.** Cleanup level based on xylene not exceeding the maximum allowed cleanup level in this table for total petroleum hydrocarbons and on prevention of adverse aesthetic characteristics. This is a total value for all xylenes.

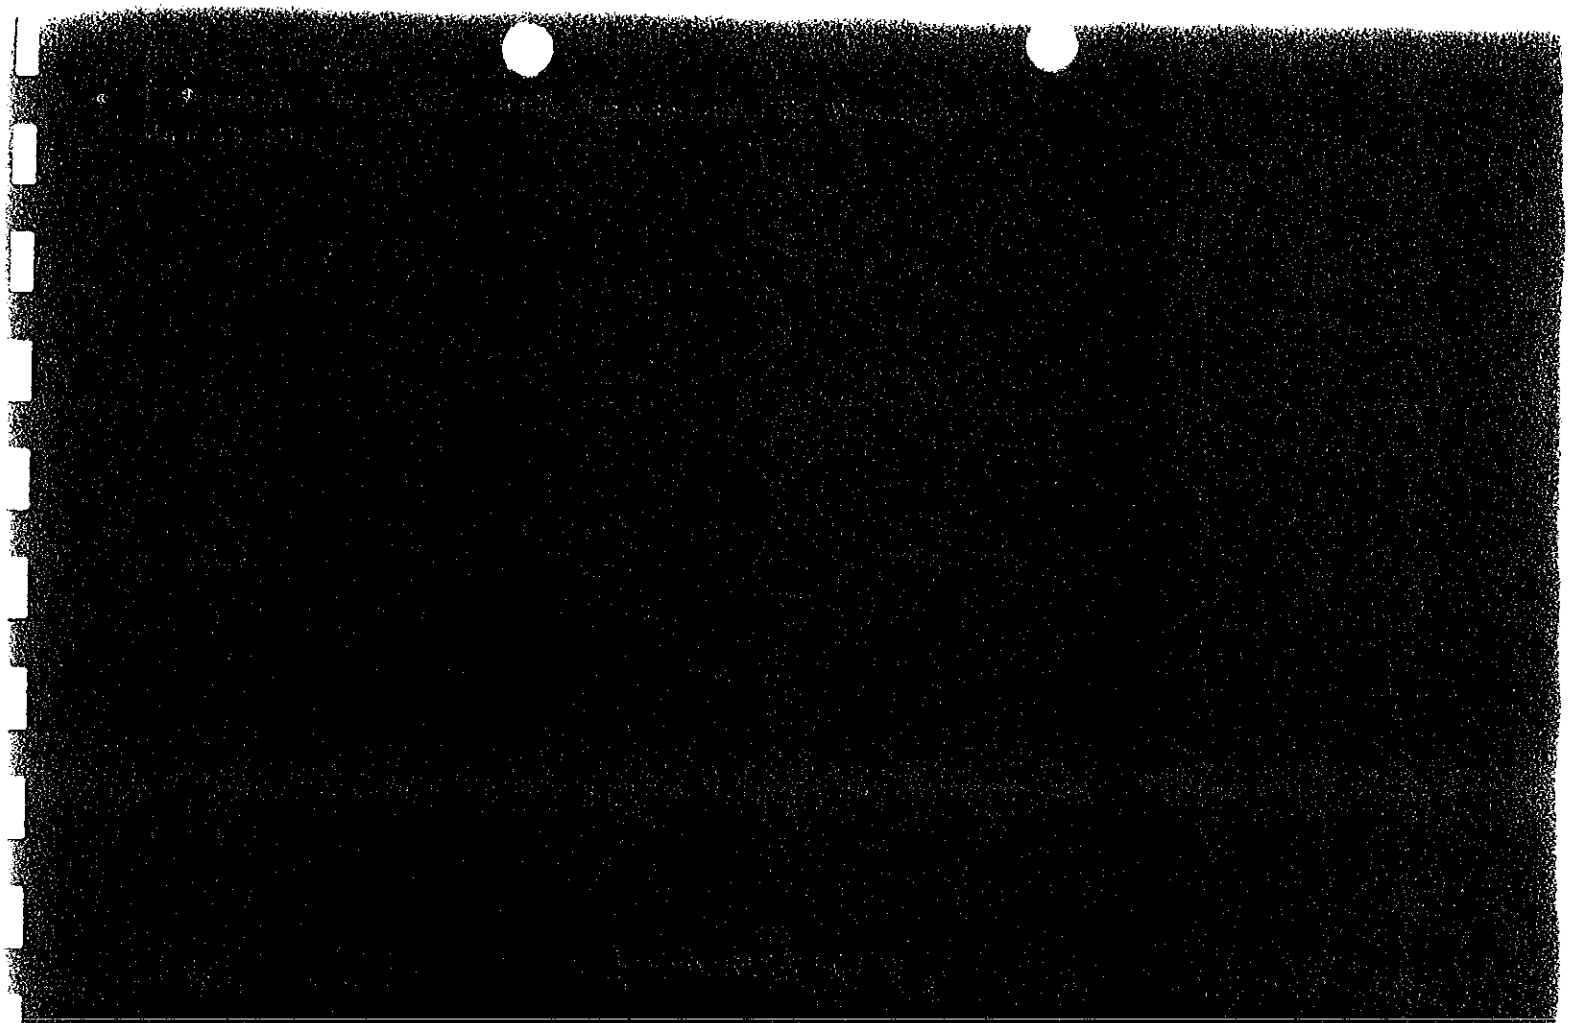

Table 740-1
Method A Soil Cleanup Levels for Unrestricted Land Uses.[a]

Hazardous Substance	CAS Number	Cleanup Level
Arsenic	7440-38-2	20 mg/kg[b]
Benzene	71-43-2	0.03 mg/kg[c]
Benzo(a)pyrene	50-32-8	0.1 mg/kg[d]
Cadmium	7440-43-9	2 mg/kg[e]
Chromium		
Chromium VI	18540-29-9	19 mg/kg[f1]
Chromium III	16065-83-1	2,000 mg/kg[f2]
DDT	50-29-3	3 mg/kg[g]
Ethylbenzene	100-41-4	6 mg/kg[h]
Ethylene dibromide (EDB)	106-93-4	0.005 mg/kg[i]
Lead	7439-92-1	250 mg/kg[j]

Lindane	58-89-9	0.01 mg/kg[k]
Methylene chloride	75-09-2	0.02 mg/kg[l]
Mercury (inorganic)	7439-97-6	2 mg/kg[m]
MTBE	1634-04-4	0.1 mg/kg[n]
Naphthalenes	91-20-3	5 mg/kg[o]
PAHs (carcinogenic)		See benzo(a)pyrene[d]
PCB Mixtures		1 mg/kg[p]
Tetrachloroethylene	127-18-4	0.05 mg/kg[q]
Toluene	108-88-3	7 mg/kg[r]
Total Petroleum Hydrocarbons[s] [Note: Must also test for and meet cleanup levels for other petroleum components--see footnotes!]		
Gasoline Range Organics		
Gasoline mixtures without benzene and the total of ethylbenzene, toluene and xylene are less than 1% of the gasoline mixture		100 mg/kg
All other gasoline mixtures		30 mg/kg
Diesel Range Organics		2,000 mg/kg
Heavy Oils		2,000 mg/kg
Mineral Oil		4,000 mg/kg
1,1,1 Trichloroethane	71-55-6	2 mg/kg[t]
Trichloroethylene	79-01-6	0.03 mg/kg[u]
Xylenes	1330-20-7	9 mg/kg[v]

Footnotes:

a **Caution on misusing this table.** This table has been developed for specific purposes. It is intended to provide conservative cleanup levels for sites undergoing routine cleanup actions or for sites with relatively few hazardous substances, and the site qualifies under WAC 173-340-7491 for an exclusion from conducting a simplified or site-specific terrestrial ecological evaluation, or it can be demonstrated using a terrestrial ecological evaluation under WAC 173-340-7492 or 173-340-7493 that the values in this table are ecologically protective for the site. This table may not be appropriate for defining cleanup levels at other sites. For these reasons, the values in this table

Equipment List

Attachment 6

The following is a list of equipment used by EHC during the *Subsurface Investigation* and related work at 3520 Pacific Highway East, Fife, Washington.

1. Photo ionizing detector with microtip (Photovac series 2020)
2. Disposable coveralls
3. Disposable latex gloves
4. Distilled/de-ionized water (2 gallons)
5. Trisodium phosphate
6. Paper towels
7. Sealable plastic bags
8. Utility knife
9. Measuring tape (25' and 300')
10. Flash light
11. Tools kit (ratchet, sockets, Allen wrenches, pliers, screw drivers, etc.)
12. 4 ounce glass jars
13. VOAs for volatile organic in groundwater
14. Amber bottles (1/2 liter)
15. Stainless steel trowel
16. Hand wipes (unscented)
17. Numerous orange cones for directing traffic and cordoning off work areas.
18. Department of Transportation approved sign indicating "Road Work Ahead".

MTCA A	250	2000	2	20	2

MTCA Method A Cleanup Levels
Bold type indicates level above MTCA Method A cleanup level for soils
ND indicates below the laboratory detection limit

Laboratory analysis of ground water collected from boring B1 indicated concentrations of gasoline (21,700 µg/L), benzene (3,100 µg/L) and ethylbenzene (1,730 µg/L) above the MTCA method A cleanup levels (gasoline: 800 µg/L, benzene: 5 µg/L, ethylbenzene: 700 µg/L) for ground water and ground water collected from boring B2 had concentrations of benzene (9.6 µg/L) above MTCA Method A cleanup levels. Groundwater samples collected were also analyzed for heavy metals, which included arsenic, cadmium, chromium, lead and mercury. Samples analyzed indicated concentrations of arsenic, chromium and lead above the MTCA Method A cleanup levels in all of the boring locations except for boring B6. The following tables summarize the laboratory analysis of ground water.

6.2 Limited Phase II Conclusion

This limited Phase II Environmental Site Assessment (sampling and analysis of ground water and soil) was conducted to determine if the subject site was impacted from conditions discovered during the Phase I investigation. These conditions include the historical presence of a gas station to the west of the subject, two current gas stations to the north of the subject, (which are currently involved in or have had cleanup operations due to leaking underground storage tanks), and the unknown disposition of approximately 3-5 feet of fill material residing on the subject site.

Analysis of soil and groundwater samples indicate that the northwestern portion of the site is impacted by gasoline-range petroleum hydrocarbons and benzene in soil and gasoline-range petroleum, benzene and ethylbenzene in ground water in concentrations above MTCA Method A cleanup levels for ground water and soil. It is unknown from the data collected to date as to where the source of this contamination is and additional investigation would be required to determine

the source. This additional investigation should include groundwater monitoring wells and additional soil borings and laboratory analysis. Also, it appears ground water is impacted with concentrations of arsenic, chromium and lead above MTCA Method A cleanup levels below the subject site. It is unknown whether an off-site condition or the resident fill material is the source of this groundwater contamination. Additional investigation of the soils can be conducted in conjunction with the investigation into the petroleum-impacted soils.

7.0 Findings, Conclusions and Recommendations

7.1 Findings and Conclusions

The subject property consists of two commercially zoned parcels of land. These parcels are currently used for commercial business operations. The surrounding properties are various commercial businesses including gas stations, office buildings, a motel, and a restaurant.

We have performed Phase I and Limited Phase II Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-00 of 3402 and 3520 Pacific Highway East, Fife, Washington 98424. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this document. This assessment has not revealed evidence of recognized environmental conditions except for the following:

- Approximately one to three feet of fill material is present on the subject parcels. The Limited Phase II investigation conducted did not reflect environmental impacted soils. However, ground water under the subject site is impacted with arsenic, chromium and lead above MTCA Method A cleanup levels for ground water. It is unknown at this time whether or not the ground water is impacted from the fill or an off-site source.
- A historical gas station was located adjacent to the west and two current gas stations with leaking underground storage tanks are located to the north of the subject. There was no information on the historical gas station but Washington Department of Ecology files were reviewed for this project for the two current stations. These reports indicated that the Sac's Chevron site located adjacent to the subject site (northwest of subject) was reported as cleaned up and a NFA was granted by Ecology. The other gas station site, Texaco (Shell) station, is located northwest and across Pacific Highway East from the subject. During the upgrade of their underground storage tanks, contaminated soil and ground water was encountered. A portion of the contaminated soil was removed and a vapor extraction system and groundwater monitoring wells were installed. A note in the file from Lynn Gooding, Department of Ecology, dated February 2002 indicated that quarterly monitoring is continuing and that the contamination plume is still not defined and may be off-site.

  A Limited Phase II investigation was conducted to determine if these sites might have impacted the subject site. Soil borings were placed along the northwestern boundary of the subject. Soil and groundwater samples collected and analyzed indicated the presence of gasoline-range petroleum hydrocarbons, benzene and ethylbenzene above the MTCA Method A cleanup levels for both soil and ground water. There is not enough data at this time to determine the likely source of contamination.

7.2 Recommendations

Additional study should be conducted to determine the aerial and lateral extent of petroleum contamination found in the northwest portion of the subject property. This investigation should also include steps to determine the impact of arsenic, chromium, and lead to ground water and whether the source is from on- or off-site sources. Recommended study includes the installation of

groundwater monitoring wells, additional soil borings and sampling and analysis of soil and groundwater samples. Groundwater monitoring wells will help to determine local ground water gradient to facilitate the determination of potential sources of contamination.

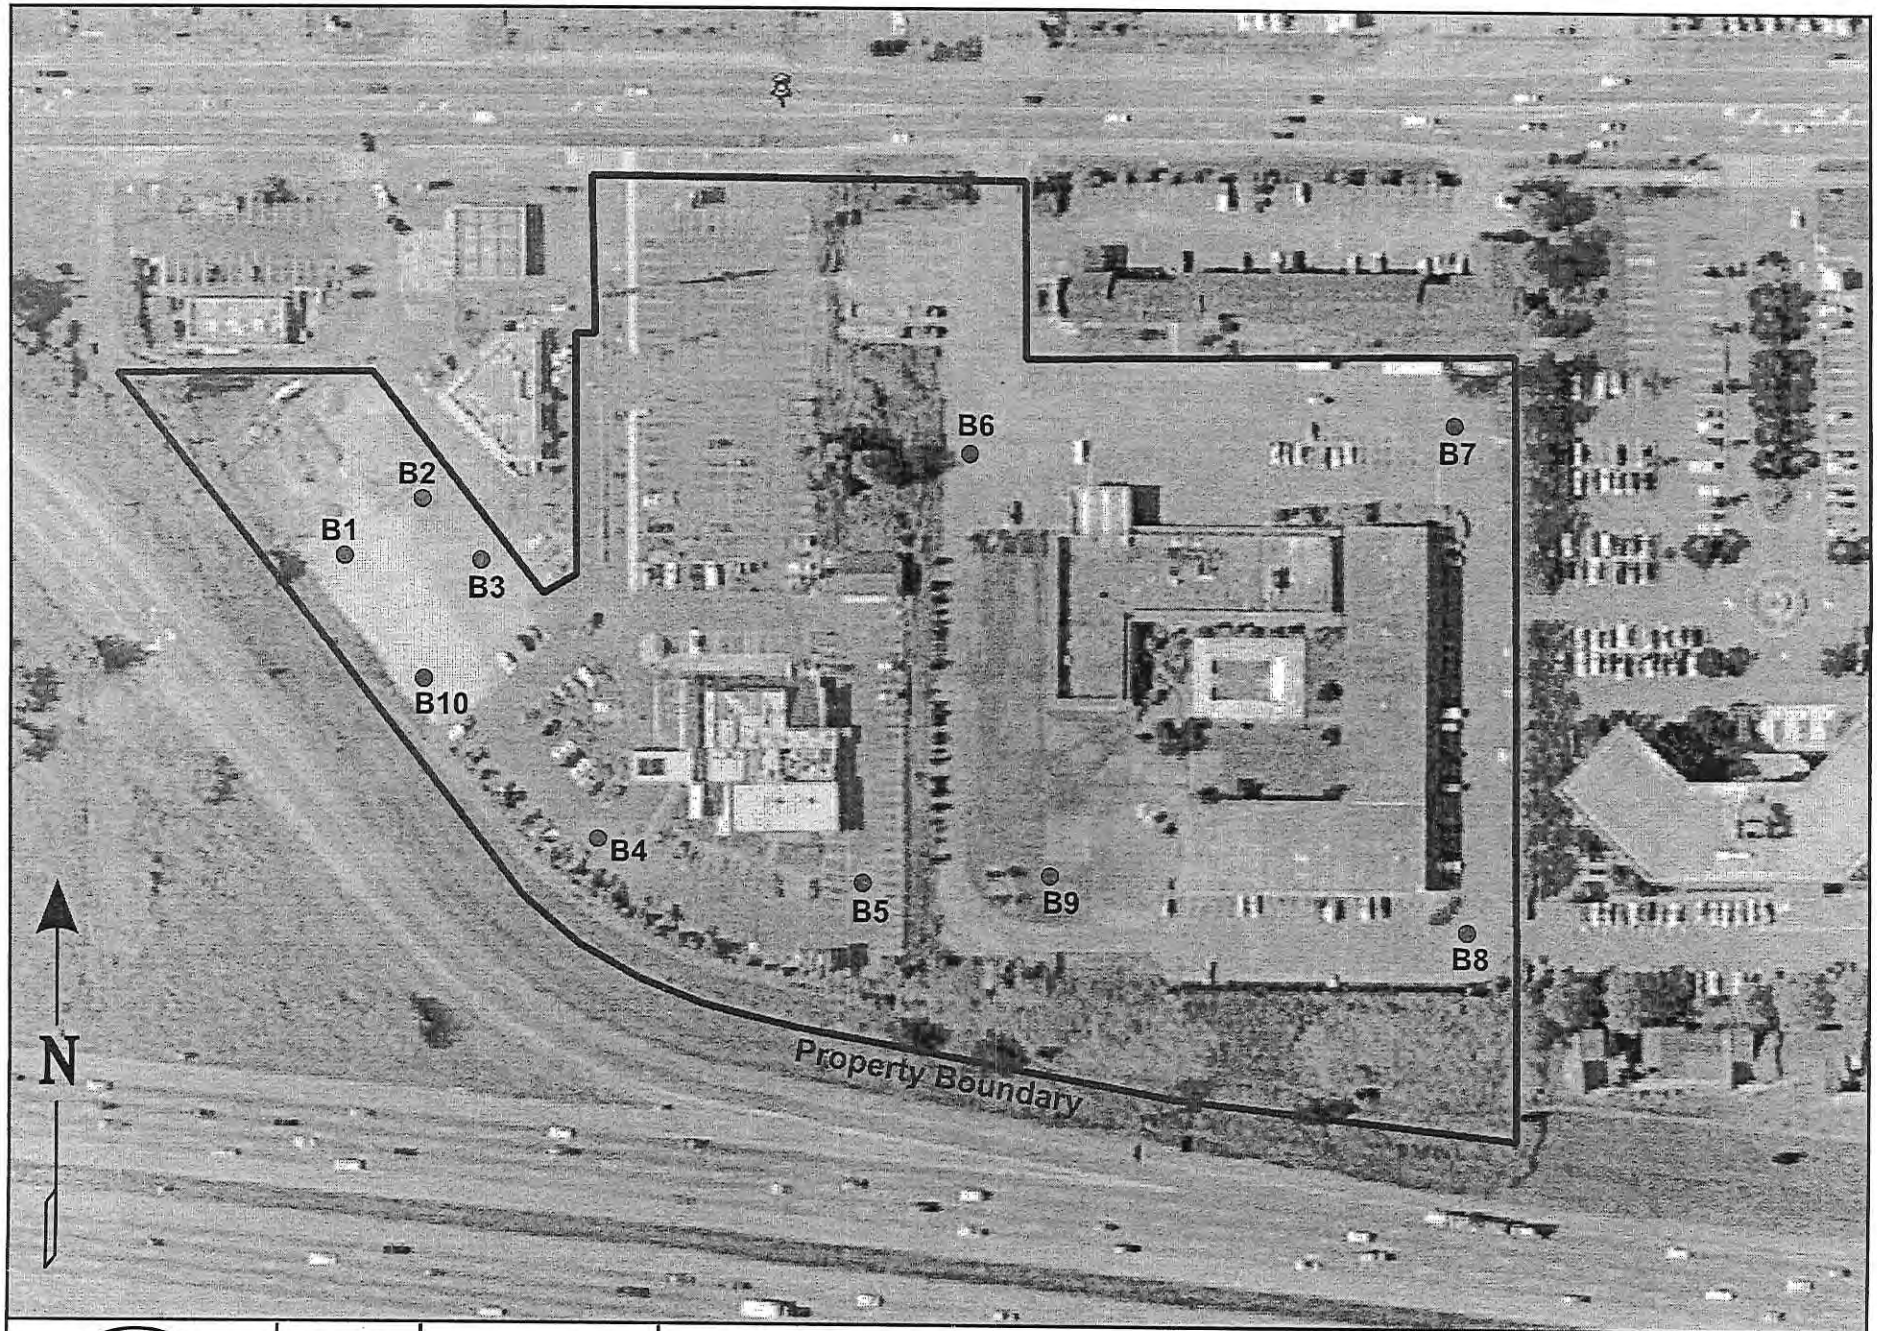
9.0 Closure



This concludes the Phase I and Limited Phase II Environmental Site Assessment of two parcels located in Pierce County Washington. Questions regarding the contents of this report should be addressed to the project manager. The professional qualifications of the preparers of the report are listed in Appendix E to this document.

The statements, conclusions, and recommendations provided in this report are to be used exclusively within the context of this document. They are based upon generally accepted environmental and hydrogeologic practices and are the result of analysis by Robinson, Noble & Saltbush, Inc. staff. This report, and any attachments to it, is for the exclusive use of the Puyallup Tribe of Indians and Mr. Eugene Mudarri. Unless specifically stated in the document, no warranty, expressed or implied, is made.

WETLANDS • WILDLIFE • SEPTIC DESIGNS

May 12, 2003

Star Lodging of the Northwest, c/o
Mr. Rod Giffels
Insignia Kidder Mathews
1201 Pacific Avenue, Suite 1400
Tacoma, Washington 98402

RE: Wetland review of Hometel Inn property, City of Fife, 3520 Pacific Highway East, Pierce County Parcel #0320111049

Dear Mr. Giffels:

This letter report discusses the wetland review completed at your request on a 5.22 acre parcel located north of SR 5, along Pacific Highway East, in the City of Fife, Pierce County, Washington (see attached vicinity map). The field review was completed during two site visits, in April of 2003.

The purpose of this wetland review is to determine if any wetlands are present on or within 150 feet of the project site which would be regulated by the City of Fife Critical Areas Ordinance, Title 17. This review was requested in conjunction with the possible future re-development of the project site, which is currently used as a motel lodging facility. Future development of the site may restructure development on the property, and expand parking and structural facilities. The City of Fife will require wetland review of this site in conjunction with the development review process.

Wetland determinations were made using observable vegetation, hydrology, and soils in accordance with the *Corps of Engineers 1987 Wetland Delineation Manual*, and the 1997 *Washington State Wetlands Delineation Manual.* A National Wetland Inventory Map (NWI) of the U.S. Fish and Wildlife Service was also evaluated, but showed no wetlands mapped within the bounds of the project area.

1414 McCorkle Rd SE • Olympia, Washington 98501 • Phone: (360) 352-1526 • Fax: (360) 352-1558

The project site is located in the northeast quarter of Section 11, Township 20 North, Range 3 East, W.M. The project area is made up of one parcel, Pierce County parcel #0320111049. The project area is a roughly square shaped parcel which abuts Pacific Highway East on the north, and SR 5 right of way on the south. A recently constructed commercial entertainment facility borders the site on the west, and a commercial business center on the east. There are several structures located on the site, with associated parking areas located around the perimeter of the property. The subject property totals approximately 5.22 acres in size.

General land use in the vicinity of the project site is mostly commercial development, with scattered residential uses scattered throughout the area. Large tracts of industrial development is located north of the project site, in the Port of Tacoma area. SR 5, the main north-south arterial along the West Coast, is located to the south of the project area. Topography of the site is flat.

Soils in the project vicinity were mainly formed in alluvium in the Puyallup River Valley. Soils on the project site are mapped as Sultan silt loam, 0-2% slopes, and Briscot loam, 0-2% slopes. The Sultan series is mapped over the western two thirds of the site, while the Briscot series is mapped over the eastern third of the site. The Sultan series is described by the Natural Resource Conservation Service in the Pierce County Soil Survey as being moderately well drained, having been formed in alluvium under deciduous and coniferous trees, and is extensive in the Puyallup Valley. In a typical profile, the surface layer is dark grayish brown silt loam about 14 inches thick. The underlying material to a depth of 34 inches is mottled, brown silt loam and dark yellowish brown very fine sandy loam. To a depth of more than 60 inches, is mottled, dark gray fine sandy loam, gray silty clay loam, very dark grayish brown fine sand, and dark yellowish brown silt loam.

The Briscot series is described as somewhat poorly drained. It formed in alluvium under hardwoods and conifers in the Puyallup River Valley. In a typical profile, the surface layer is dark brown loam about 11 inches thick. The underlying material, to a depth of 29 inches, is mottled, dark grayish brown fine sandy loam and silt loam, between depths of 29 and more than 60 inches, it is mottled very dark grayish brown sand and gray silty clay loam. Of these two soil series, the Briscot series is classified by the NRCS as a hydric soil.

The majority of the site is developed, and soils are not accessible for evaluation. The only exceptions to this are the areas along SR 5 in the southern end of the site, and along the west side of the property, adjacent to the casino property to the west. Soils along the west boundary of the site appear to mainly be fill material, and are sand or gravelly sand in texture. No wetland indicators were observed in soils along the west boundary of the site. Soils in the southern portion of the site appear to be disturbed, native soils that have not been filled. Soils in this portion of the site are varied, with some soils observed indicative of seasonal saturation, while other profiles appear to be moderately well drained, and somewhat consistent with the Sultan series description. A general profile observed is a 10YR 3/3 silt loam from 0-10 inches with no redoximporphic features.

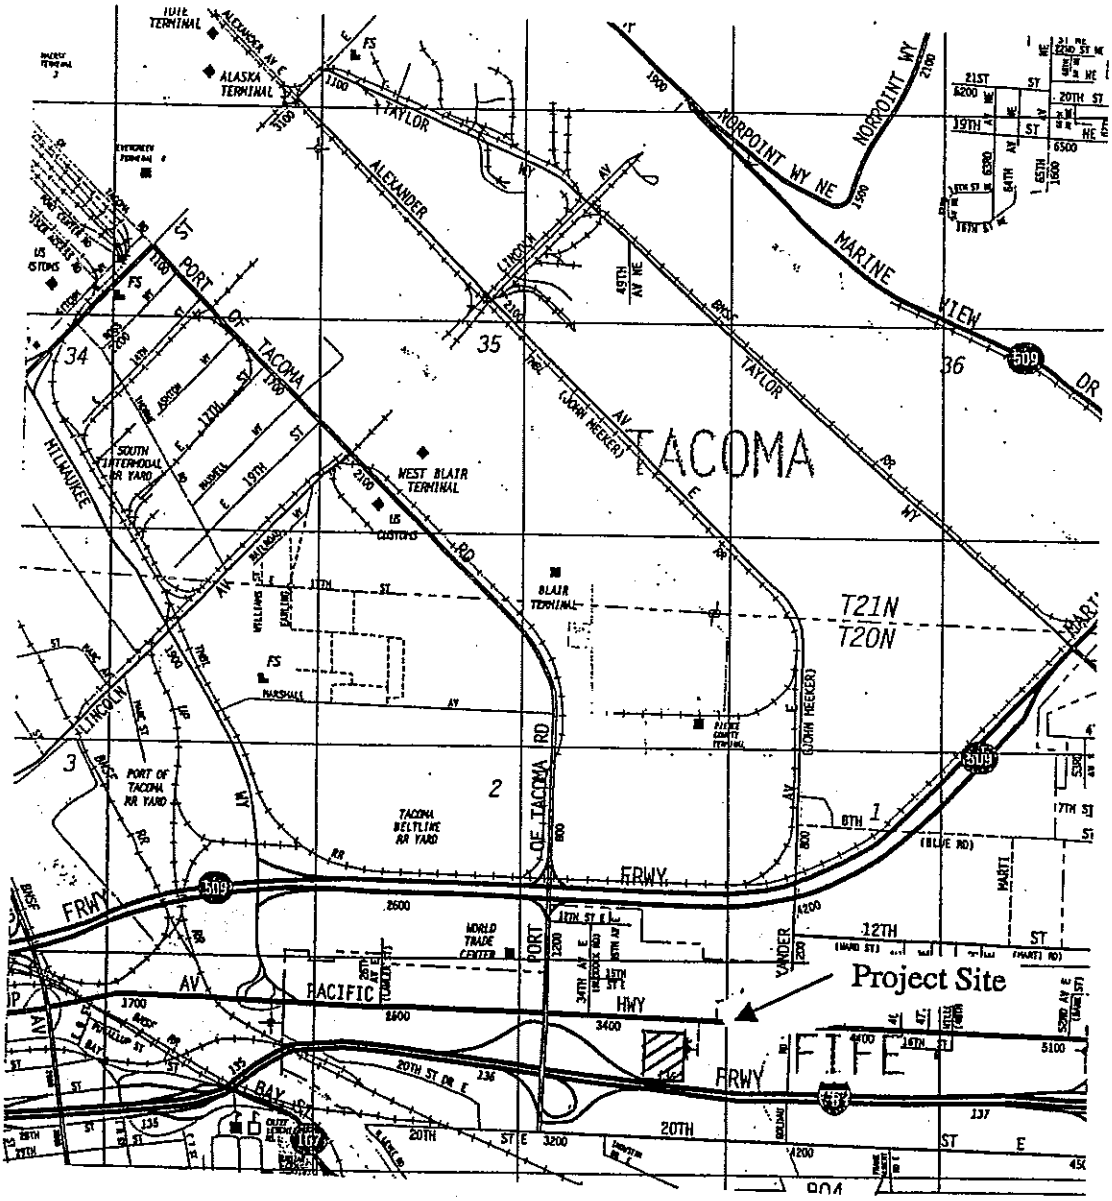
From 10-18 inches, the "B" horizon is generally 10YR 3/4 silt loam. Another general profile observed along the southern end of the site is a 10YR 3/2 silt loam from 0-9 inches, with 7.5YR 4/6 soft iron masses, and oxidized root zones. From 9-18 inches, soils are 10YR 4/1 silt loam with 5YR 4/4 iron soft masses. These profiles are scattered throughout the southern boundary of the site, which is approximately 50 feet wide from the edge of the paved parking area to the chain link fence along the SR 5 right of way.

While the majority of the site is dominated by development (paved parking areas and buildings), native vegetation was observed along the western and southern site boundaries. These areas are generally dominated by invasive species normally established in disturbed areas. Species observed in these areas include: reed canarygrass, Himalayan blackberry, Japanese knotweed, and horsetail. The western boundary of the site is mainly dominated by a monoculture of reed canarygrass. The southern site boundary is a mix of the species previously mentioned. Vegetation observed around the developed portion of the site mainly consists of lawn grasses, and ornamental landscaping species.

Hydrology or indicators of hydrology within 12 inches of the soil surface was observed in scattered locations along the southern portion of the site during April field work. Saturation ranging from 6-12 inches was observed in various locations in this area. However, it appears that these areas are isolated small depressions, and not connected to each other. There is also a ditch which bisects the southern portion of the site from east to west. Standing water was observed in the ditch during April field work. However, it appears that this ditch was generally dug in an upland area for the purpose of drainage, and would therefore not be classified as a jurisdictional wetland. Saturated soils were generally observed in the southeastern corner of the site.

As a result of the site evaluation, it does not appear that there are any wetlands on the site over which the City of Fife would assert jurisdiction. Under the City of Fife Critical Areas Ordinance, wetlands must be at least 2,500 square feet in size to be regulated. Although there are a few areas in the southern portion of the site which meet wetland criteria, these areas are under 2,500 square feet in size and are not connected to larger wetland areas.

Although the City of Fife has final authority in determination of wetland categories and boundaries, I believe this report accurately reflects current conditions on the project site. I have attached field data forms taken along the southern portion of the site to justify my findings.



Should you have any questions, please feel free to call me at (360) 789-3607.

Sincerely,

Eric Russell

1.0 EXECUTIVE SUMMARY

June 25, 2002

NVL Laboratories, Inc., is pleased to present this Phase I Environmental Site Assessment for the site located at 3520 Pacific Highway East, Fife, Washington. Mr. Fred Roberson of Roberson Building Company commissioned the assessment. The site is located in a mixed commercial/industrial district that also has scattering of single-family residences.

1.1 FINDINGS

The Pierce County, City of Fife and Polk city directory records indicate the property was undeveloped land as late as 1963, then developed as a hotel. The land use of the site has been for hotel/motel since then.

The site is listed in the Ecology database as small quantity generator. Several contaminated sites, including Commencement Bay Superfund site, and sites regulated under RCRA were identified within a 1 mile radius of the site, however, these sites are not located in the adjoining structures. There is a potential for environmental impacts to the subject property.

1.2 CONCLUSIONS

The information gained through the investigation described in this report has revealed a low potential for environmental impacts to soils and groundwater below the property from on-site sources. However, there is potential for environmental impacts to soils and groundwater below the property from off-site sources. Therefore, a Phase II is recommended.

2.0 INTRODUCTION

NVL Laboratories, Inc. was retained by Mr. Fred Roberson to conduct a Phase I Environmental Site Assessment (ESA) for the property located at 3520 Pacific Highway East, Fife, Washington (Figure 1, Site Location Map). The subject site is located in a mixed commercial and industrial neighborhood with scattering of residences.

The property consist three separate buildings that are part of the Hometel Inn Motel.

2.1 PURPOSE

The purpose of this study is to assess environmental impacts from past uses of the property, conducted in accordance with the degree of skill and care required by ASTM standard.

2.2 SCOPE OF WORK

This Phase I Environmental Site Assessment included the following activities:

- A site visit, including a general characterization of the property with a visual survey of the property and adjoining properties. Business activities of adjoining properties were noted for further evaluation regarding potential impact to the subject site.

- Review of federal, state, and local records and permits concerning the subject site and adjoining properties. Such records included registered underground storage tank (UST) locations, leaking underground storage tank (LUST) sites, and state-listed hazardous waste sites. A computer search of regulatory records was provided by Environmental Data Resources, Inc. (EDR) and reviewed by NVL. For the purpose of this assessment, the record search included the following regulated environmental sites, with the search radius indicated.

- Review of the following U.S. EPA databases to determine the location of hazardous waste generators and present or potential hazardous waste sites within defined radii of the subject site. These listings include:

  –National Priorities List (NPL), for sites within a one-mile radius of the subject site;

–U.S. EPA CERCLIS Listing, for sites within a one-half mile radius of the subject site;

–Resource Conservation and Recovery Act (RCRA) treatment, storage and disposal (TSD) facilities for sites within a one mile radius of the subject site; and,

–U.S. EPA Region 10 RCRA Notifier's List, for the subject site and adjoining sites.

- Review of geologic, hydrogeologic, hydrologic and topographic conditions of the subject property.
- Evaluate the historical use of the property and immediate vicinity. Historical uses were evaluated by reviewing readily available information sources such as aerial photographs, city directories, property tax assessor's records, Sanborn Maps ™ and other readily available records to determine past land use. Historical records were searched back to the first documented development or 1940, whichever is earlier.
- Preparation of this report, which describes the results of all tasks, and which evaluates the need to investigate in more detail potential contamination and related liabilities.
- Interviews

3.0 SITE VISIT

NVL personnel visited the subject site on June 11, 2002. During the site visit, the property was inspected to determine present uses and to identify possible environmental impacts. In particular, the site was carefully inspected for areas of discolored or stained soil, drums, areas of open dumping, vent lines and/or fill lids associated with USTs. The results of the site visit are presented below.

3.1 SITE DESCRIPTION

The subject property is located within the city limits of Fife, in the Commencement Bay/Port of Tacoma neighborhood in Pierce County, Washington (Figure 1, Site Location Map). The subject site is located in NE-Section 11, Township 20 North, Range 3 East; Parcel number 0320111049. The site is bounded by Pacific Highway East on the north, and Interstate 5 Freeway on the south, and commercial establishments to the east and west. The property is relatively flat lying.

Figure 2 shows the general layout and features of the property. There are three separate structures, herein referred to as the North Wing, East wing and South Wing, at the site. Photographs of the site (in Appendix A) show the general appearance of the site as observed during the site reconnaissance. Pierce County records indicate the property consists of a rectangular commercial property serviced by public water and sewer. Three structures cover a portion of the site with a relatively larger portion covered by asphalt paved parking, courtyard, landscape areas and planters. The construction details of these structures were not available in the city/county records.

The reception area and office of the Hometel Inn Motel is located in the north wing building (Photographs 1, 2, and 10). This wing has an unused restaurant, laundry room and boiler room. The concrete block structure has tarred roof.

The east wing of the Hometel Inn Motel is a two-story structure facing an office building (Photograph 3).

The south wing of the Hometel Inn Motel has two floors and the building faces Interstate 5 Freeway (Photographs 4 and 5).

An unused swimming pool (Photograph 10) is located in the courtyard of the motel. It is partially filled with brownish water. Photograph 7 shows the garbage area with wooden debris, cardboard, glass, and metal pieces strewn across this area. Two containers are present at this location and used as

storage space. A shed (Photograph 7) is also used as a storage and tool room.

The boiler room uses gas/electricity and there were six small containers of Chlorodifluoro methan located in the room along with two, approximately 5-gallon containers of caustic alkali.

In front of the boiler room area, an unused cooking oil container with stained asphalt (Photograph 11) was located. The stains, however, looked relatively old.

A concrete pad exists in the west central portion of the site near the property boundary (Photograph 12) in the landscape/over grown area. Metal covers or manhole-like structure were not readily apparent on this concrete pad. According to the information provided by Mr. Hardeep Singh, the concrete pad may have been used to support posts of a billboard. No other easily available information was obtained on the existence of the concrete pad. Mr. Singh also stated that five small diameter pipes located on the east side of the reception area, are part for sprinkler system.

3.1.1 UNDERGROUND STORAGE TANKS (USTs)

No fill ports or other access ports were observed at this location during the site visit.

Furnaces located in the boiler room appeared to be using natural gas/electricity.

4.0 SURROUNDING SITES SURVEY

A visual survey of adjacent and nearby properties was conducted at the time of the site visit on June 11, 2002. The subject site and surrounding properties are shown in Figure 3, Aerial Photo and Photographs in Appendix A. The subject site is bounded by Interstate 5 Freeway to the south and Pacific Highway to the north. Port of Tacoma road is located to the west of the site. A brief description of adjacent properties, organized by their direction relative to the site, follows:

NORTH:
The site is bounded to the north by Econo Lodge and Pacific Highway East. Diverse businesses are located along Pacific Hwy in the vicinity of the site. Familian NW, Ramada, Glacier Motel and Texaco are located along north side of the Pacific Hwy.

SOUTH:
Interstate 5 freeway is located to the south of the site. South of the freeway, a large complex of commercial, industrial and warehouse businesses are located along 20th Street East. Directly south of the site across from the freeway, Peterbuilt truck facility at 3443 20th St. E., United Furniture and PAPE Machinery at 3607 20th Ave. E. are located.

WEST:
A Casino (Freddie's Casino), Chevron gasoline service station and Jack In The Box are located along south the side of Pacific Hwy., west of the site.

EAST:
Trans-Pacific Trade Center office building is located to the east of the site. Lindal Homes and model log houses are located to the south of Trans-Pacific office building. Residential structures are located to the east of the Trans-Pacific office building. Red Oval Peterbuilt Truck Company and Sunshine Motel are located along the Pacific Hwy., northeast of the site.

5.0 PAST SITE USE

Historical site information was obtained during the preparation of this environmental site assessment. Potential environmental impacts resulting from past uses of the subject property were assessed using the information collected during review of the site history.

5.1 AERIAL PHOTOGRAPH REVIEW

NVL Laboratories, Inc., reviewed aerial photographs dated 1946, 1969, 1979, 1985, 1992, 1996 and 2000.

1946: The site appears fairly different from today. The site appears to be farmlands with three structures that appear similar to be single-family residences located along the present day Pacific Hwy. Land use in the vicinity appears mostly agricultural and the area appears sparsely built.

1969: Major differences are apparent in this aerial photograph from the 1946 photo. The site structures are apparent in the photograph. Interstate 5 freeway is also apparent in the photo. Structures that appear similar to single-family residences are located to the west and east of the site.

1979 : The site and the surrounding structures look similar to present day setting. The area appears to be fairly developed by the 70's.

1985: The site looks similar to the 1979 photograph but the Econo Lodge structure is present to the north of the Hometel Inn.

1992: The site looks similar to the 1985 photograph.

1996: The site looks the same as present day. To the east of the site, is a large area that looks like a parking lot and the office bldg. structure is apparent in the photo.

2000: The site looks similar to the present day setting.

5.2 DOCUMENTED SITE INFORMATION

5.2.1 CITY DIRECTORIES

Sanborn Fire Insurance maps were not available for the area.

Polk Directories were reviewed for information on both the subject property and neighboring properties. Not all businesses may be listed in the directories.

Polk 1994 directory lists the following addresses along Pacific Highway East from Port of Tacoma Road:
3251 Texaco gas stn.
3401 Glacier Motel
3402 Jack in the Box
3408 SAC's Deli & Groc. Gas station (Present day Chevron)
3410 La Casa Real Restaurant (present day Freddie's Casino)
3508 Sierra Tile Co. Inc. (now a parking lot of Freddie's Casino)
3517 Familian-Northwest Inc. Plumbing supply wholesale
3518 Econo Lodge motel
3520 Hometel Inn motel
Jewel of India Restaurant
3700 Trans-Pacific Trade Center office building
3701 Cummins Northwest truck repair
3718 C B Commercial Real Estate
3726 Lindal Cedar Homes
3801 Birds Motel (present day Sunshine Motel)
3812 Residence

Polk 1994 directory lists the following addresses along 20th Street East, located south of the Interstate 5 Freeway. Businesses located directly across the freeway are listed below:

3505 United Furniture Warehouse
3607 Smith Tractor and Equipment (now it is PAPE/John Deer Machinery)
3701 Standard Paper co. (now AWC Service collision Repair at the address)
3801 Cascade Trailways, Inc. (now Great American RV at the address)

Polk 1990 Directory lists the following addresses along Pacific Hwy:
3251 Texaco gas stn.
3401 Glacier Motel
3402 Jack in the Box
3408 SAC's Deli & Groc. Gas station
3410 La Casa Real Restaurant
3508 Sierra Tile Co. Inc.
3517 Familian-Northwest Inc. Plumbing supply wholesale
3518 Port of Tacoma Motor Inn (1985 directory lists Nendels Port of Tacoma Motel)
Walia's Restaurant
3700 Trans-Pacific Trade Center office building

3701 Cummins Northwest truck repair
3726 Lindal Cedar Homes
3801 Birds Motel
3812 Residence

Polk 1990 directory lists the following addresses along 20th Street East, located south of the Interstate 5 Freeway. Businesses located directly across the freeway are listed below:

3505 VIP Homes
3607 Smith Tractor and Equipment
3701 Standard Paper co.
3801 Cascade Trailways, Inc.(now Great American RV at the address)

Polk 1980 Directory lists the following addresses along Pacific Hwy:
3251 Lowell's Texaco gas stn.
3309 Residence
3401 Kelley Motel
3402 Gasamart Inc. serice station
3423 Residence
3505 Residence
3508 Vacant
3517 Familian-Northwest Inc. Plumbing supply wholesale
3518 Holiday Inn Motel
3701 Buck & Sons Tractor Co.
3718 Justus Custom Cedar Homes
3722 Residence
3725 Residence
3726 Justus Custom Cedar Homes
3801 Birds Motel
3812 Residence

Polk 1980 directory lists the following addresses along 20th Street East, located south of the Interstate 5 Freeway. Businesses located directly across the freeway are listed below:

3151 Turner's Machinery Inc.
3511 Residence
3603 Residence
3607 Smith Tractor and Equipment
3701 Standard Paper co.
3723 Residence
3725 Residence
3801 Gilchrist Kent GMC parts, sales & service

Polk 1975 Directory lists the following addresses along Pacific Hwy:
3251 Lowell's Texaco gas stn.
3309 Residence
3401 Kelley Motel
3402 Gasamart Inc. serice station
3423 Residence
3505 Residence
3508 Residence
3517 Osaka Landscaping & Nursery
3518 Holiday Inn Motel
3701 Buck & Sons Tractor Co.
3718 Justus Custom Cedar Homes
3722 Residence
3725 Residence
3726 Scofield Realty
3801 Birds Motel
3812 Residence

Polk 1975 directory lists the following addresses along 20th Street East, located south of the Interstate 5 Freeway. Businesses located directly across the freeway are listed below:

3511 Residence
3603 Residence
3607 Smith Tractor and Equipment
3701 Standard Paper co.
3721 Residence
3725 Residence
3723 Residence
3725 Residence
3801 Gilchrist Kent GMC parts, sales & service

Polk directories are only available through 1974 for the area. The subject site was initially listed as Holiday Inn Motel but there appears to be name changes over time to Nendel's, Port of Tacoma Motor Inn and Hometel Inn Motel.

The directory shows a gradual increase in commercial/industrial land use along 20th Street East from mostly residential in 1975. The name of 20th Street E. has changed from Stuck Valley Road to Milton Avenue and eventually to 20th Street E. Among other name changes of streets include Port of Tacoma road, as it was known in the past as Ruddock Road. Seattle-Tacoma Interurban Railroad occupied the Pacific Highway E.

The businesses located along the north side of 20th Street E., and directly south of the subject property, appear to be located in an upgradient direction from the subject site. Some of these businesses, such as Peterbuilt Truck sales and repair, PAPE/John Deer, AWC Service Collision Repair, and Great American RV Sales and Service, occupy a large portion of land and they appear to be repair facilities. These businesses have the potential for impacting subject site.

5.2.2 CITY OF FIFE RECORDS

The City of Fife record contains Fire code violations, mostly related to smoke alarms. However, the file contains record of an illegal methamphetamine lab in room 133 in February 15, 1997. The correspondence shows that the room was remediated and occupancy permit given by Tacoma-Pierce County Health Department.

Construction permit and drawings for the renovation in 1996 are documented in the file. Appendix B contains some of the records.

6.0 SITE PHYSICAL CHARACTERISTICS

6.1 TOPOGRAPHIC CHARACTERISTICS

A review of the United States Geological Survey (USGS) topographical map for Tacoma South, Washington, indicates that the site is situated in the Puyallup River valley in the Commencement Bay at an approximate elevation of 10 to 15-feet above mean sea level. The local topography is relatively flat (see Figure 1).

6.2 GEOLOGY

The site is situated in the lowlands of the Puget Sound basin in western Washington. Surficial geology of the Puget Sound lowland is dominated by Pleistocene glacial alluvium with Recent alluvium in river floodplains and mouths. Pleistocene glacial alluvium consists mostly of varied assortments of till, outwash sand and gravel, and glacial lake sediments deposited during glacial advancement and retreat. Outwash sand and gravel consist of all sizes of sand, gravel and some cobbles and boulders deposited by meltwater streams in front of the advancing or retreating glaciers. These deposits typically contain very few fines and tend to be increasingly well-sorted and stratified with increasing distance from the glacier. Glacial lake (lacustrine) deposits tend to be much finer and less permeable. Till is unsorted sediment of low permeability. This depositional system tends to create somewhat discontinuous strata of varying permeability with "lenses" of less permeable material that support perched ground water zones.

6.3 HYDROLOGY AND HYDROGEOLOGY

The nearest natural water bodies are Puyallup River, located just to the south and west of the site, and Commencement Bay, located to the north of the site.

Lenses of more permeable sand and gravel often exist in the soils beneath the site and formation and shallow unconfined aquifers are typical of these conditions with static water levels often within 15 feet of the ground surface. Ground water flow is likely to correspond with the Puyallup River and Commencement Bay flow regimes. The northwest-flowing Puyallup River may indicate northwesterly ground water flow.

7.0 REGULATORY RECORDS REVIEW

NVL contracted with EDR (Appendix C) to conduct a regulatory database review of federal and state environmental information pertaining to facilities located within a specified radius of the subject property. The database review included NPL sites, CERCLA sites, RCRA generators and TSD facilities, UST sites, LUST sites, and C & SCS sites.

7.1 STATE AND LOCAL GOVERNMENT AGENCIES RECORDS REVIEW

Washington Department of Ecology (WDOE) lists of information pertinent to the subject property have been reviewed and key information is summarized below. It is important that the appearance of a given property on such listings is not intrinsically a cause of concern. Conversely, a property not appearing on such listings may in fact be of significant concern. Information obtained from these agencies follows.

7.1.1 UNDERGROUND STORAGE TANKS (USTs)

There are five UST sites within a quarter mile of the subject property that are registered with the WDOE. They are:

SAC's Mart	3408B Pacific Hwy E.
Thermo King NW	3701 Pacific Hwy E.
Texaco	3251 Pacific Hwy E.
Flying J Travel Plaza	1501 33rd Ave. E.
Jet Truck Parts	3909 Pacific Hwy E.

A review of the UST list, as provided by EDR, and dated 3/13/2002, did not list the subject property within the WDOE database as having UST's.

7.1.2 LEAKING UNDERGROUND STORAGE TANKS (LUSTs)

There are two LUST site within a 0.5-mile radius of the subject property. They are:

Texaco	3251 Pacific Hwy E.
Flying J Travel Plaza	1501 33rd Ave. E.

A review of the LUST list, as provided by EDR, and dated 3/13/2002, did not list the subject property within the WDOE database as having UST's. These LUST sites might be further investigated to determine whether or not they pose an environmental threat to the site.

7.1.3 CONFIRMED AND SUSPECTED CONTAMINATED SITES (C & SCS) REPORT

WDOE C& SCS reports represents hazardous waste sites that are either under investigation or to be investigated by WDOE. Six sites are located within one mile of the subject property. However, only one is located up gradient of the site.

Union Pacific RR Fife	3330 20th St. E.

All of the other sites are located at elevations below the subject property elevation or at a distance from the subject property.

7.1.4 SOLID WASTE LANDFILLS

There are no landfills listed within the search radius.

7.2 FEDERAL DATABASE/ RECORDS REVIEW

CERCLIS is the U.S. EPA's comprehensive database and management system that inventories and tracks releases addressed or needing to be addressed by the federal Superfund program. The National Priorities List, or NPL, is a listing of sites from CERCLIS, which are in need of the most immediate attention. The RCRA Region X Notifier's List contains those businesses that produce hazardous waste and have registered with the U.S. EPA. RCRA TSD facilities are those that treat, store, or dispose of hazardous wastes. These databases were reviewed for the subject property, to identify potential for environmental liability.

NPL: Portions of Port of Tacoma/Commencement Bay is a superfund site, located to north of the site. Mr. Peter Contreras, EPA Region X, indicated that he does not think that there is a connection to the Commencement Bay Superfund Units with the subject site.

One site has been identified on The Resource Conservation and Recovery Information System (RCRIS-LQG) list within ¼ mile. This site is:

Sierra Sandblasting Painting	3402 12th St. SE.

Ten sites have been identified on The Resource Conservation and Recovery Information System (RCRIS-SQG) list within ¼ mile. Three of the closest sites are:

Tacoma Port Motor Inn	3518 Pacific Hwy E.
La Casa Real Drum	3410 Pacific Hwy E.

Glacier Motel Drug bust 3401 Pacific Hwy. E.

Sharon Bell of Tacoma-pierce County Health Dept. stated that the Tacoma Port Motor Inn removed 336 ponds of hazardous waste in 1989, comprising of hydrochloric acid, caustic and inorganic chemicals. It was a one-time permitted activity and the permit was withdrawn in 1992.

According to Mr. Robert Scott, Deputy Fire Marshal, City of Fife, Hometel Inn Motel was also remediated following a drug bust in 1997and he is not aware of any other hazardous waste incidence or UST's at the site.

8.0 LIMITATIONS

NVL Laboratories (NVL) is not engaged in environmental auditing and reporting for the purpose of advertising, sales promotion, or endorsement of any client's interests, including raising investment capital or recommending investment decisions, or other publicity purposes. The client acknowledges that any reports prepared by NVL are for the exclusive use of the client, and will not be used or reproduced in full or in part for such promotional purposes, and may not be used or relied upon in any prospective or offering circular. The client also agrees that none of its advertising, sales promotion, or other publicity matter containing information obtained from this audit and report will make reference to NVL's trade name.

The report is based upon the application of scientific principles and professional judgment to certain facts with resultant subjective interpretations. Professional judgments expressed herein are based on the facts currently available within the limits of the existing data, scope of work, budget and schedule. To the extent that more definitive conclusions are desired by the client than are warranted by the currently available facts, it is specifically NVL's intent that the conclusions and recommendations stated in our report will be intended as guidance and not necessarily a firm course of action except where explicitly stated as such. WE MAKE NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, WARRANTIES AS TO THE MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

NVL makes no claims or guarantees with regard to this environmental review. NVL does not represent that this Phase I work, in and of itself, constitutes "all appropriate inquiry into the previous ownership and the uses of the property," as this phrase is used in Section 101 (35) (B) of the Federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended through Public Law 99-499 (October 17, 1986).

Sincerely,
NVL Laboratories, Inc.

Ken Farris, C.E.O. (F.Y.I.)

From: Howard P. Schesser, Community Development Director & Deputy Fire Marshal

Re: Meth Lab at Hometel Inn - 3520 Pacific Highway E

Date: February 17, 1997

Saturday 2-15-97. Around 1:15 pm on Saturday 2-15-97 I was contacted by Sgt. Budzius regarding a reported meth lab at the Hometel Inn. I was requested to respond to the scene. I arrived around 2 pm at the scene and made contact with Sgt. Budzius. Tacoma Hazardous Materials Team and one engine was on site. The whole building facing the freeway had been evacuated on both sides and both floors. The meth lab was an active lab and the heat was around 325 degrees F. Red phosphorus, iodine, acetate, etc. as being used. Based on photos taken by the haz mat team that entered the room the lab was being exhausted out into the chase between the room. Water was being taken from the toilet tank with the use of an aquarium pump and the flapper was a jar so that a continual stream of fresh, cold water was entering the tank.

We waited for the P.C. drug team to arrive to evaluate the situation. Upon their arrival and review of the information known to date it was decided to let the meth continue to cook overnight but to turn off the source of heat. There was concern that if it cooled to quick it would explode. The water circulation system was left in place. The exhaust hose was removed from the chase and was exhausted into the room. The window above the door was opened.

P.C. Health made contact with me around 3:30pm and agreed with our position of evacuating the rooms and not allowing anyone in them for the next 24 hours. It was agreed that I would contact Health the next day after the material had been removed and DOE had responded. **P.C. Health contact was: Steve Marek 596-2955.**

The scene was secured with Fife P.D. providing security throughout the night. Police put a police line tape along all entrances to this wing. I posted UNSAFE TO OCCUPY SIGNS. The owner was notified that no one was to have access to the rooms for the next 24-72 hours. It was agreed to meet at the fire station at 8:30 am Sunday to plan the next move.

Sunday 2-16-97 All players involved met at 8:30 am to discuss the situation and review the video tape that the P.C. Drug team made when they entered the night before. A plan for removal and fingerprinting was developed. DOE was called to respond for removal of the material from the scene once the officers were done with it. Material was removed and transported by DOE.

I called Steve Marek at P.C. Health and it was agreed to error on the side of caution and to keep the building unoccupied until a certified contractor had approved occupancy. Neither Health nor DOE had the name of the certified contractor. There are only two, one in Seattle and one in Spokane. I was provided the name of the person at the **State Department of Health who could provide the names of the two contractors. The name is: Lew Kittle 360-753-3855.** I provided this name to Simon Lee who was representing the owners of the Hometel Inn.

Material was removed by DOE. P.C. Officers posted the room. Sgt. Budzius and I taped police line tape on the room where the lab was found.

Based on discussion with Health it was determined to allow tenants to remove their belongs from the rooms. We provided disposable gloves and advised them to wash all clothing prior to use.

1. Owners are to contact either Carl or myself once the contractor is on site. We will need certification from the contractor that it is safe to use the rooms prior to any occupancy and removal of the UNSAFE TO OCCUPY signs. 2. We will also need to contact State Health to find out who the certified contractors are.

Sgt. Budzius will have a full report a copy will be forwarded to us. Left the scene around 4:15pm.

RE: Clandestine Drug Laboratory Assessment - 3520 Pacific HWY E

Dear Kyung and Gil Lee:

This letter is to inform you that the Tacoma-Pierce County Health Department (TPCHD) has reviewed the initial assessment data submitted by Cascadian Crafts and Services, Inc. for the motel building containing unit 133 at the above referenced property.

Field screening for volatile organic compounds and corrosives was completed in the central chase way and many units in this building. The information provided indicates that these constituents are within acceptable levels. Samples for methamphetamine were not collected during the initial assessment. Based on the data presented, the TPCHD will allow occupancy of the units in this building, EXCEPT for unit 133.

Please note that the TPCHD may require additional investigations and sampling in the chase way and this building's units upon review of the decontamination and test result data for unit 133.

If you have any questions regarding this building or motel units, please contact me at 596-2849.

Sincerely,

Cynthia Ruggiero

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

RE: Clandestine Drug Laboratory Seizure at 3520 Pacific HWY E #131

Dear Kyung and Gil Lee:

This letter is to inform you that on February 15, 1997 a law enforcement action took place at the above referenced motel unit as a result of activities related to the illegal manufacture of controlled substances.

Preliminary information received from the Fife Police Department, Pierce County Sheriff Department and the Washington Department of Ecology indicates that chemicals removed from the property may include acetone, ether, red phosphorous, palladium black/iodine, alcohol and ephedrine. As a result, a Hazardous Chemical Warning Sign was posted at the unit on February 15th. This sign is to warn all persons against entry due to possible unsafe conditions. The chemicals removed from the premises are considered to be hazardous as per RCW 70.105D.020 and/or precursor substances according to RCW 69.43.010. Substances used in clandestine drug manufacturing can pose a serious health threat to anyone who may be exposed. Please find attached the Department of Health Toxic Substances Fact Sheet *Illegal Methamphetamine Labs* which provides information on potential health effects from clandestine drug lab chemical exposure.

The Tacoma-Pierce County Health Department (TPCHD) is conducting an investigation at this site to determine whether this unit is unfit for use and habitation in accordance with WAC 246-205, Decontamination of Illegal Drug Manufacturing or Storage Sites. The TPCHD will make a determination regarding this motel unit upon completion of its investigation. At this time the TPCHD requires that an investigation and decontamination be conducted in this unit prior to its usage. All contamination identified must be cleaned up by a Department of Health registered contractor.

The TPCHD recommends information about this unit be disclosed to any potential tenants or purchasers. If you have any questions regarding this situation, please contact me at 596-2849.

Sincerely,

Cynthia Ruggiero

RE: Clandestine Drug Laboratory Assessment - 3520 Pacific HWY E

Dear Kyung and Gil Lee:

This letter is to inform you that the Tacoma-Pierce County Health Department (TPCHD) has reviewed the initial assessment data submitted by Cascadian Crafts and Services, Inc. for the motel building containing unit 131 at the above referenced property.

Field screening for volatile organic compounds and corrosives was completed in the central chase way and many units in this building. The information provided indicates that these constituents are within acceptable levels. Samples for methamphetamine were not collected during the initial assessment. Based on the data presented, the TPCHD will allow occupancy of the units in this building, EXCEPT for unit 131.

Please note that the TPCHD may require additional investigations and sampling in the chase way and this building's units upon review of the decontamination and test result data for unit 131.

If you have any questions regarding this building or motel units, please contact me at 596-2849.

Sincerely,

Cynthia Ruggiero

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

SPILLS..... Reported Spills
EMI..... Washington Emissions Data System

EDR PROPRIETARY HISTORICAL DATABASES

Coal Gas..... Former Manufactured Gas (Coal Gas) Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 01/29/2002 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
US EPA COMMENCEMT BAY NEARSHOR	***TIDEFLATS INDUSTRIAL SE***	***0 - 1/8***	***0***	***5***

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).
CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/12/2002 has revealed that there are 2

CERCLIS sites within approximately 0.5 miles of the target property.

DAUPHIN SITE	*2911 PACIFIC HWY E*	*1/4 - 1/2W*	*F20*	*31*

CERCLIS-NFRAP: As of February 1995. CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/14/2002 has revealed that there is 1 CERC-NFRAP site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

STATE ASTM STANDARD

CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the CSCSL list, as provided by EDR, has revealed that there are 6 CSCSL sites within approximately 1 mile of the target property.

Site Description: SITE HAD HEAVY INDUSTRY SUCH AS ALUMINUM PROCESSING, CHEMICAL, PULP & PAPER, & PRIMARY SMELTING CONTAMINATION OF WATERWAYS & LAND AREAS OF TIDE FLATS. WAS ORIGINALLY PART OF ONE SITE CALLED COMMENCEMENT BAY, WHICH IS NOW 2 SITES.The Commen cement Bay Nearshore/Tideflats Superfund site is located on the western shore of Commencement Bay in Tacoma/Ruston, Washington. It consists of 67 acres of property owned by Asarco Inc., and a 23-acre slag peninsula. The site began operation as a le ad smelter in 1890. During the active industrial life of the smelter, the primary product was refined copper. By products of the copper smelting process included sulfur dioxide, arsenic trioxide, arsenic metal, and copper reverbatory slag. Copper smelting operations were discontinued in 1985, and the facility was taken completely out of production in 1986. Land use in the vicinity of the site is recreational and light residential. The general area of the former Asarco Smelter consists of steep slopes extending down to Commencement Bay producing bluffs along portions of the shoreline. The adjacent slag peninsula is composed of different forms of slag (molten or granulated) that were poured or placed on many occasions between 1930 and 1970. The Tacoma Yacht Club building, a paved access road, and paved parking areas are located on the slag peninsula. An estimated 15 million tons of slag exist at the smelter property and slag peninsula. Surface water features at the site includ e surface water in the cooling pond and south and east stack hill areas and a number of springs and seeps around the stack hill and arsenic kitchen areas. Surface water drains into one of four drain systems and then into outfalls at the site. A c omplex pattern of groundwater flows through or beneath the smelter property, including through the slag into Commencement Bay. Three primary groundwater aquifers have been identified; two shallow aquifers and one deep aquifer. Because of the h
igh degree of fractures in and porous nature of the slag, the tides bring seawater inland several hundred feet where it mixes with groundwater. The groundwater within each of the three aquifers is designated as either potential drinking water (Clas s IIB) or as non-potable water (Class III). Groundwater at or near the site is not

US EPA COMMENCEMT BAY NEARSHORE (Continued) **1000297462**

being used as a drinking water source. Several small areas of the site have been identified as potential wetlands and if these areas are confirmed as wetlands and if remediation occurs in these areas, the extent of mitigation will be determined during remedial design. As of fall 2001, the waterway areas (OUs 1-18 and OU 25), the Asarco property and surrounding Ruston area (OUs 19-22), and Tacoma Tar Pits (OU 23) are all in various stages of design and cleanup. The Blair and St. Paul waterways have been deleted from the NPL.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/29/02
Date Made Active at EDR: 02/25/02
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 02/04/02
Elapsed ASTM days: 21
Date of Last EDR Contact: 05/06/02

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/12/02
Date Made Active at EDR: 06/03/02
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 03/25/02
Elapsed ASTM days: 70
Date of Last EDR Contact: 03/25/02

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

CORRACTS: Corrective Action Report
Source: EPA
Telephone: 800-424-9346
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 11/14/01
Date Made Active at EDR: 01/14/02
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 11/14/01
Elapsed ASTM days: 61
Date of Last EDR Contact: 03/11/02

RCRIS: Resource Conservation and Recovery Information System
Source: EPA/NTIS
Telephone: 800-424-9346
Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Date of Government Version: 03/22/02
Date Made Active at EDR: 06/03/02
Database Release Frequency: Varies
Date of Data Arrival at EDR: 03/28/02
Elapsed ASTM days: 67
Date of Last EDR Contact: 03/04/02

ERNS: Emergency Response Notification System
Source: EPA/NTIS
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/00
Date Made Active at EDR: 06/03/02
Database Release Frequency: Varies
Date of Data Arrival at EDR: 03/05/02
Elapsed ASTM days: 90
Date of Last EDR Contact: 04/29/02

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/99
Database Release Frequency: Biennially
Date of Last EDR Contact: 03/18/02
Date of Next Scheduled EDR Contact: 06/17/02

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies
Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 09/30/01
Database Release Frequency: Annually

Date of Last EDR Contact: 04/09/02
Date of Next Scheduled EDR Contact: 07/08/02

DELISTED NPL: National Priority List Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 01/29/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 05/06/02
Date of Next Scheduled EDR Contact: 08/05/02

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 03/21/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 04/08/02
Date of Next Scheduled EDR Contact: 07/08/02

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4555
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 09/30/01
Database Release Frequency: Annually

Date of Last EDR Contact: 04/22/02
Date of Next Scheduled EDR Contact: 07/22/02

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/12/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 04/08/02
Date of Next Scheduled EDR Contact: 07/08/02

MINES: Mines Master Index File
Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-5959

Date of Government Version: 12/14/01
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 04/01/02
Date of Next Scheduled EDR Contact: 07/01/02

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 205-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 05/28/02
Date of Next Scheduled EDR Contact: 08/26/02

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-564-3887
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 12/01/01
Database Release Frequency: Annually

Date of Last EDR Contact: 05/14/02
Date of Next Scheduled EDR Contact: 08/12/02

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 03/11/02
Date of Next Scheduled EDR Contact: 06/10/02

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-260-1531
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/99
Database Release Frequency: Annually

Date of Last EDR Contact: 03/25/02
Date of Next Scheduled EDR Contact: 06/24/02

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-5521
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/98
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 03/11/02
Date of Next Scheduled EDR Contact: 06/10/02

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA
Telephone: 202-564-2501

Date of Government Version: 01/14/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 03/25/02
Date of Next Scheduled EDR Contact: 06/24/02

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Telephone: 202-564-2501
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 01/11/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 03/25/02
Date of Next Scheduled EDR Contact: 06/24/02

STATE OF WASHINGTON ASTM STANDARD RECORDS

CSCSL: Confirmed & Suspected Contaminated Sites List
Source: Department of Ecology
Telephone: 360-407-7200
State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 11/26/01
Date Made Active at EDR: 01/09/02
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 12/11/01
Elapsed ASTM days: 29
Date of Last EDR Contact: 05/21/02

HSL: Hazardous Sites List
Source: Department of Ecology
Telephone: 360-407-7200
The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

Date of Government Version: 02/26/02
Date Made Active at EDR: 04/10/02
Database Release Frequency: Semi-Annually
Date of Data Arrival at EDR: 03/11/02

Date of Last EDR Contact: 03/11/02

SWF/LF: Solid Waste Facility Database
Source: Department of Ecology
Telephone: 360-407-6132
Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 12/01/01
Date Made Active at EDR: 12/19/01
Database Release Frequency: Annually
Date of Data Arrival at EDR: 12/04/01
Elapsed ASTM days: 15
Date of Last EDR Contact: 04/09/02

LUST: Leaking Underground Storage Tanks Site List
Source: Department of Ecology
Telephone: 360-407-7200
Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 03/13/02
Date Made Active at EDR: 03/29/02
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/18/02
Elapsed ASTM days: 11
Date of Last EDR Contact: 03/18/02

UST: Underground Storage Tank Database
Source: Department of Ecology
Telephone: 360-407-7170
Registered Underground Storage Tanks. UST's are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program.

Date of Government Version: 03/13/02
Date Made Active at EDR: 04/08/02
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 03/18/02
Elapsed ASTM days: 21
Date of Last EDR Contact: 03/18/02

STATE OF WASHINGTON ASTM SUPPLEMENTAL RECORDS

CSCSL NFA: Confirmed & Contaminated Sites - No Further Action
Source: Department of Ecology
Telephone: 360-407-7170
The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

Date of Government Version: 11/26/01
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 02/11/02
Date of Next Scheduled EDR Contact: 02/18/02

ICR: Independent Cleanup Reports
Source: Department of Ecology
Telephone: 360-407-7200
These are remedial action reports Ecology has received from either the owner or operator of the sites. These actions have been conducted without department oversight or approval and are not under an order or decree.

Date of Government Version: 10/31/01
Database Release Frequency: Quarterly

Date of Last EDR Contact: 05/21/02
Date of Next Scheduled EDR Contact: 08/19/02

SPILLS: Reported Spills
Source: Department of Ecology
Telephone: 360-407-7450
Spills reported to the Spill Prevention, Preparedness and Response Division.

Date of Government Version: 04/17/02
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 04/10/02
Date of Next Scheduled EDR Contact: 07/08/02

LOCAL RECORDS

KING COUNTY:

Abandoned Landfill Study in King County
Source: Seattle-King County Department of Public Health
Telephone: 206-296-4785
The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department's Environmental Health Division at the request of the King County Council. The primary objective of the survey was to determine if any public health problems existed at the predetermined 24 sites.

Date of Government Version: 04/30/85
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 10/21/94
Date of Next Scheduled EDR Contact: N/A

SEATTLE COUNTY:

Abandoned Landfill Study in the City of Seattle
Source: Seattle - King County Department of Public Health
Telephone: 206-296-4785
The Seattle Abandoned Landfill Survey was conducted in June and July of 1984 by the Health Department's Environmental Health Division at the request of the Mayor's Office. The primary objective of the survey was to determine if any public health problems existed at the predetermined 12 sites.

Date of Government Version: 07/30/84
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 10/21/94
Date of Next Scheduled EDR Contact: N/A

SEATTLE/KING COUNTY:

Seattle - King County Abandoned Landfill Toxicity / Hazard Assessment Project
Source: Department of Public Health
Telephone: 206-296-4785
This report presents the Seattle-King County Health Department's follow-up investigation of two city owned and four county owned abandoned landfills which was conducted from February to December 1986.

Date of Government Version: 12/31/86
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 08/14/95

Date of Last EDR Contact: 04/24/02
Date of Next Scheduled EDR Contact: 07/22/02

TACOMA/PIERCE COUNTY:

Closed Landfill Survey
Source: Tacoma-Pierce County Health Department
Telephone: 206-591-6500
Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

Date of Government Version: 04/15/93
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 01/11/95
Date of Next Scheduled EDR Contact: N/A

EDR PROPRIETARY HISTORICAL DATABASES

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines/Electrical Transmission Lines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines and electrical transmission lines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 1999 from the U.S. Fish and Wildlife Service.

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

3520 PACIFIC HWY EAST
3520 PACIFIC HWY EAST
FIFE, WA 98424

TARGET PROPERTY COORDINATES

Latitude (North):	47.243099 - 47° 14' 35.2"
Longitude (West):	122.382004 - 122° 22' 55.2"
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	546771.6
UTM Y (Meters):	5232146.0

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

USGS TOPOGRAPHIC MAP ASSOCIATED WITH THIS SITE

Target Property: 2447122-B4 TACOMA SOUTH, WA
Source: USGS 7.5 min quad index

GENERAL TOPOGRAPHIC GRADIENT AT TARGET PROPERTY

Target Property: General North

Source: General Topographic Gradient has been determined from the USGS 1 Degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
PIERCE, WA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	5301400005B / CBPP
Additional Panels in search area:	5301480025B / CBPP 5301380169C / CBPP 5301380188C / CBPP 5301380326C / CBPP 5301380307C / CBPP

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
TACOMA SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Site-Specific Hydrogeological Data*:

Search Radius:	2.0 miles
Location Relative to TP:	0 - 1/8 Mile NNW
Site Name:	BREKKE ENTERPRISES
Site EPA ID Number:	WAD980664874
Groundwater Flow Direction:	NOT AVAILABLE
Inferred Depth to Water:	10 feet to 20 feet
Hydraulic Connection:	The near-surface aquifer is present in fill material of fine sands and silts. The underlying aquifer is present at a depth of 150 feet or more and is semi-confined.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 2.000 Miles.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
5	1 - 2 Miles East	S
A6	1 - 2 Miles ESE	Not Reported
A7	1 - 2 Miles ESE	NNE
A8	1 - 2 Miles ESE	NE
B9	1 - 2 Miles North	Varies
B10	1 - 2 Miles North	NE, SW

For additional site information, refer to Physical Setting Source Map Findings.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: PILCHUCK

Soil Surface Texture: loamy sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat excessive. Soils have high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	20 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COURSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 7.30 Min: 6.10
2	20 inches	38 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COURSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 20.00 Min: 6.00	Max: 7.30 Min: 5.60
3	38 inches	60 inches	gravelly - sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COURSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 20.00 Min: 20.00	Max: 7.30 Min: 6.10

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the national Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-260-2805

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-260-2805

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: In November 1971 the United States Geological Survey (USGS) implemented a national water resource information tracking system. This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on more than 900,000 wells, springs, and other sources of groundwater.

6.2 Limited Phase II Conclusion

This limited Phase II Environmental Site Assessment (sampling and analysis of ground water and soil) was conducted to determine if the subject site was impacted from conditions discovered during the Phase I investigation. These conditions include the historical presence of a gas station to the west of the subject, two current gas stations to the north of the subject, (which are currently involved in or have had cleanup operations due to leaking underground storage tanks), and the unknown disposition of approximately 3-5 feet of fill material residing on the subject site.

Analysis of soil and groundwater samples indicate that the northwestern portion of the site is impacted by gasoline-range petroleum hydrocarbons and benzene in soil and gasoline-range petroleum, benzene and ethylbenzene in ground water in concentrations above MTCA Method A cleanup levels for ground water and soil. It is unknown from the data collected to date as to where the source of this contamination is and additional investigation would be required to determine

the source. This additional investigation should include groundwater monitoring wells and additional soil borings and laboratory analysis. Also, it appears ground water is impacted with concentrations of arsenic, chromium and lead above MTCA Method A cleanup levels below the subject site. It is unknown whether an off-site condition or the resident fill material is the source of this groundwater contamination. Additional investigation of the soils can be conducted in conjunction with the investigation into the petroleum-impacted soils.

7.0 Findings, Conclusions and Recommendations

7.1 Findings and Conclusions

The subject property consists of two commercially zoned parcels of land. These parcels are currently used for commercial business operations. The surrounding properties are various commercial businesses including gas stations, office buildings, a motel, and a restaurant.

We have performed Phase I and Limited Phase II Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-00 of 3402 and 3520 Pacific Highway East, Fife, Washington 98424. Any exceptions to, or deletions from, this practice are described in Section 1.2 of this document. This assessment has not revealed evidence of recognized environmental conditions except for the following:

- Approximately one to three feet of fill material is present on the subject parcels. The Limited Phase II investigation conducted did not reflect environmental impacted soils. However, ground water under the subject site is impacted with arsenic, chromium and lead above MTCA Method A cleanup levels for ground water. It is unknown at this time whether or not the ground water is impacted from the fill or an off-site source.
- A historical gas station was located adjacent to the west and two current gas stations with leaking underground storage tanks are located to the north of the subject. There was no information on the historical gas station but Washington Department of Ecology files were reviewed for this project for the two current stations. These reports indicated that the Sac's Chevron site located adjacent to the subject site (northwest of subject) was reported as cleaned up and a NFA was granted by Ecology. The other gas station site, Texaco (Shell) station, is located northwest and across Pacific Highway East from the subject. During the upgrade of their underground storage tanks, contaminated soil and ground water was encountered. A portion of the contaminated soil was removed and a vapor extraction system and groundwater monitoring wells were installed. A note in the file from Lynn Gooding, Department of Ecology, dated February 2002 indicated that quarterly monitoring is continuing and that the contamination plume is still not defined and may be off-site.

  A Limited Phase II investigation was conducted to determine if these sites might have impacted the subject site. Soil borings were placed along the northwestern boundary of the subject. Soil and groundwater samples collected and analyzed indicated the presence of gasoline-range petroleum hydrocarbons, benzene and ethylbenzene above the MTCA Method A cleanup levels for both soil and ground water. There is not enough data at this time to determine the likely source of contamination.

7.2 Recommendations

Additional study should be conducted to determine the aerial and lateral extent of petroleum contamination found in the northwest portion of the subject property. This investigation should also include steps to determine the impact of arsenic, chromium, and lead to ground water and whether the source is from on- or off-site sources. Recommended study includes the installation of

groundwater monitoring wells, additional soil borings and sampling and analysis of soil and groundwater samples. Groundwater monitoring wells will help to determine local ground water gradient to facilitate the determination of potential sources of contamination.

Re: Subsurface Investigation
3520 Pacific Highway East, Fife, Washington 98424 (Hometel Inn Motel)

Dear Kevin,

Environmental Hazards Control (EHC) is pleased to submit this *Subsurface Investigation* on the referenced property. The site work was performed in the Parking Areas and adjacent vegetation strips on the property. And, this work was performed in conjunction with the *Subsurface Investigation* we performed on the referenced property in June 2004.

1.0 Purpose

The purpose of our services was to evaluate shallow soils in the vadose zone or soils above groundwater (GW) and offer recommendations for further investigation, if warranted. Based upon June 2004 report data which indicated the heavy metal arsenic was present in shallow GW, EHC was to advance borings and perform sampling to determine if heavy metals were present in soil layers above GW. The sampling was intended to assess potential contamination across the property by advancing boring and sampling soils near the 5 previous boring locations and 1 additional boring location.

The following is an outline of the critical elements of the sampling:

- Review previously published reports on subject;
- Outline the work with the Client;
- Updated the previously published *Sampling Plan* from June 2004 in accordance with standard protocols and previous report data;
- Advance borings down to GW and collect soil samples from various soil strata;
- Document conditions found;
- Submit samples to an approved laboratory for analysis;
- Review laboratory analysis upon receipt;
- Provide a written report of findings with recommendations.

2.0 Services

The following services were provided by EHC:

- Discussed site conditions with Client and Client's realtor over the telephone;
- Re-documented the visible location of pipe penetrations in catch basins prior to borings;
- Developed a new *Sampling Plan* to advance borings near previous boring locations;
- Utilized the *Health and Safety Plan (HASP)* written for June 2004 work;
- Reviewed *Sampling Plan* and *HASP* with driller from Environmental Services Network, Northwest (ESN);
- Starting the afternoon of October 21, 2004, a total of 6 borings were advanced in the Parking Areas and adjacent vegetation strips on the property. The work involved advancing borings near the 4 corners of the property with additional borings near the center of the North and South Parking Areas;
- All borings were advanced with a truck-mounted direct push hydraulic auger (Strataprobe) to a depth of 4' below ground surface (bgs);
- Groundwater was encountered in all 5 borings (B1B through B6B) ranging between 1' and 4.0';
- Documented subsurface conditions on Boring Logs;
- Drew a total of 20 soil samples from borings B1B through B6B;
- All soil samples were contained within 4 ounce glass jars with Teflon line lids;
- All sample containers were labeled with the necessary information (sample #, date, time);
- Samples were stored in a cooler with ice/chiller packs (maintained at approximately 4 degrees centigrade) during field operations;
- A chain-of-custody was completed the afternoon of October 21, 2004. Based upon the *Sampling Plan* and the Client's requirements, all of the samples drawn were requested analyzed on a standard turn-around basis;
- The afternoon of October 21, 2004, the samples and chain-of-custody were turned over to an ESN representative and transferred to an ESN cooler with ice packs;
- The afternoon of October 21, 2004, the samples and chain-of-custody were transported to ESN's laboratory in Lacey, Washington;
- Requested analysis on all of the soil samples:
  1. USEPA Method 7000 (Heavy metals in soil...arsenic, chromium and lead).
- Contacted Client and discussed preliminary analytical results;
- Summarized the data in a written report with attachments.

3.0 Background

The subject property was a commercial zoned parcel of land occupied by the Hometel Inn Motel. The property was located in the 3500 block of Fife, Washington between Pacific Highway East and Interstate 5. The subject was utilized as farmland up to the early 1960s. The subject was developed as a motel in the early to mid-1960s and has been in operation as such to present day.

3.1 April 2004

A *Phase I and Limited Phase II Environmental Site Assessment* performed by Robinson & Noble, Inc. and Saltbush Environmental Services in April 2004 confirmed the presence of the heavy metals arsenic,

chromium and lead above the Model Toxics Control Act (MTCA), Method A Cleanup Levels for Groundwater on the subject. EHC was provided portion of the report data and has presented it along with the data generated on the property adjacent the west side of the subject (Freddie's Casino at 3402 Pacific Highway East, Fife, Washington). A summary of the analysis of soil and GW samples from the *Phase I and Limited Phase II Environmental Site Assessment* has been presented in Tables 3-1 and 4-1.

Table 3-1
Phase I and Limited Phase II Environmental Site Assessment
Summary of Analytical Results of Soil (April 2004)
3520 Pacific Highway East, Fife, Washington

Sample Number	Sample Depth	Sample Date	Analysis Date	Gas	Diesel	Heavy Oil	Mineral Oil	Metals	Gas BTEX
B6	?	?	?	NA	ND	ND	ND	Pb: 4.6	NA
B7	?	?	?	ND	ND	ND	ND	ND	NA
B8	?	?	?	NA	ND	ND	ND	Pb: 13 Cr: 5.5	NA
B9	?	?	?	ND	ND	ND	ND	Cr: 3	NA
MTCA A				30	2,000	2,000	4,000	2-2,000	0.03-9

Soil values reported in milligrams per kilogram (mg/kg).
ND = None detected.
NA = Not analyzed.
MTCA A = MTCA, Method A Cleanup Levels for Unrestricted Land Use
Metals = MTCA 5 metals analyzed but, EHC reported only those metals found above detection levels.

Table 4-1
Phase I and Limited Phase II Environmental Site Assessment
Summary of Analytical Results of Groundwater (April 2004)
3520 Pacific Highway East, Fife, Washington

Sample Number	Sample Depth	Sample Date	Analysis Date	Gas	Diesel	Heavy Oil	Mineral Oil	Metals	Gas BTEX
B6	?	?	?	NA	ND	ND	ND	ND	ND
B7	?	?	?	ND	ND	ND	ND	**As: 0.041** **Cr: 0.10** Pb: 0.009	ND
B8	?	?	?	NA	ND	ND	ND	**As: 0.015** **Cr: 0.40** Pb: 0.005	ND
B9	?	?	?	ND	ND	ND	ND	**As: 0.046** **Cr: 0.20** **Pb: 0.050**	ND
MTCA A Reported levels in April 2004 Report.				800	500	500	500	As: 0.005 Ca: 0.005 Cr: 0.05 Pb: 0.015 Hg: 0.002	5 – 1,000
MTCA A Metals analysis listed in ug/L.				800	500	500	500	As: 5 Ca: 5 Cr: 50 Pb: 15 Hg: 2	5 – 1,000

Groundwater values for petroleum hydrocarbons reported in milligrams per kilogram (mg/L).
*Groundwater values for heavy metals reported in micrograms per liter (ug/L)
ND = None detected.
NA = Not analyzed.
Metals: MTCA 5 metals analyzed but EHC reported only those metals found above detection levels.
MTCA, Method A Cleanup Levels for Unrestricted Land Use
*Note: The GW analysis for heavy metals reported in the April 2004 Report appears to have been mislabeled and was reported in milligrams per liter (mg/L) as opposed to the stated micrograms per liter (ug/L). Typically, GW analysis reported by a laboratory in mg/L is converted to ug/L by the consultant for comparison with MTCA, Method A Cleanup Levels for Groundwater.
*Note: The MTCA, Method A Cleanup Level for Mercury (Hg) in Groundwater was reported incorrectly in the April 2004 Report at 0.015 mg/L versus the actual Cleanup Level of 0.002 mg/L or 2 ug/L.

3.2 June 2004

In June 2004, EHC performed a *Subsurface Investigation* of soil and GW. The soil and GW sampling was designed to coincide and confirm data generated in April 2004. The soil sampling and associated analysis confirmed petroleum hydrocarbons in the gasoline, diesel and heavy oil ranges were not present in site soils. Analysis for heavy metals in soil was not performed as part of the June 2004 work.

The June 2004 GW analysis confirmed the heavy metal arsenic was present above the Model Toxics Control Act (MTCA), Method A Cleanup Levels for Groundwater of 5 micrograms per liter (ug/l). A summary of the analytical results of soil and GW samples from the June 2004 *Subsurface Investigation* has been presented in Tables 5-1 and 6-1.

Table 5-1
Subsurface Investigation

4.0 Field Work

4.1 Utilities Locate

Based upon the previous site work performed by another consulting firm, and given EHC's *Sampling Plan* dictated sampling adjacent previous borings advanced around the subject, EHC did not contact the Utilities Underground Location Center (UULC) prior to commencing the subsurface work at the referenced property. Although, all visible utilities, stormwater piping and asphalt patches relating to subsurface systems (electrical and plumbing) were re-noted by EHC prior to commencing the work. A minimum distance of 5' was maintained from all apparent subsurface systems throughout the work. Additionally, a minimum distance of 10' was maintained from all overhead systems throughout the work.

4.2 Sampling Plan

The June 2004 *Sampling Plan* was updated based upon the previously published reports on the site and site reconnaissance by EHC. The focus of the *Sampling Plan* was to confirm whether vadose zone soils contained heavy metals that may be stripping off in to shallow GW. See: SAMPLING PLAN.

4.3 Subsurface Investigation – October 2004

In October 2004, EHC performed testing for specific heavy metals (arsenic, chromium and lead) identified as being a concern in the April and June 2004 reports. Based upon an August 2004 letter from Chuck Cline, Toxics Cleanup Program, Washington State, Department of Ecology, the soils tested were in the "vadose zone" or above GW. The sampling included soils from the various strata encountered including top soil or humus (when present), coarse sands and gravel under asphalt, various sands and the gravel fill identified in the April and June 2004 reports.

The boring locations were chosen based upon prior boring locations and the need for additional data in the South Parking Area. A description of each boring location and associated activity has been described in the subsequent paragraphs. See: BORING LOGS.

Boring B1B was advanced to a depth of 4' bgs in the northwest corner of the property approximately 10' north of B1A due to standing water in the general area. The boring was advanced near the edge of the asphalt parking lot and just north of the catch basin set along the west edge of the parking lot. The boring location was chosen because it was near previously advanced borings identified in April and June 2004 reports. GW was encountered at 1' bgs. A complete listing of the samples drawn from B1B were outlined in Table 9-1. See: MAPS AND DRAWINGS.

Boring B2B was advanced to a depth of 4' bgs near the center of the North Parking Area about 95' east and 38' north of the northwest corner of the site building (adjacent B2A). The boring location was chosen because it was adjacent a previously advance boring identified in our June 2004 report. GW was encountered at 3.25'. A complete listing of the samples drawn from B2B were outlined in Table 9-1. See: MAPS AND DRAWINGS.

Boring B3B was advanced to a depth of 4' bgs in the northeast corner of the North Parking Area about 3' west and 65' north of the northeast corner of the site building (adjacent B3A). The boring location was chosen because it was adjacent borings advanced in previously referenced reports. GW was encountered at 3' bgs. A complete listing of the samples drawn from B3B were outlined in Table 9-1. See: MAPS AND DRAWINGS.

Boring B4A was advanced to a depth of 4' bgs near the southeast corner of the site approximately 43' east and 46' south of the southeast corner of the site building (Adjacent B4A). The boring location was chosen because it was adjacent borings advanced in previously referenced reports. GW was encountered at 3' bgs. A complete listing of the samples drawn from B4B were outlined in Table 9-1. See: MAPS AND DRAWINGS.

Boring B5B was advanced to a depth of 4' bgs near the center of the South Parking Area about 49' east and 41.5' south of the southwest corner of the site building. The boring location was chosen because no previous data had been collected from the general area in the previously referenced reports. GW was encountered at 3.5' bgs. A complete listing of the samples drawn from B5B were outlined in Table 9-1. See: MAPS AND DRAWINGS.

Boring B6B was advanced near the northwest corner of the site approximately 104' west and 13' south of the southwest corner of the site building (adjacent B5A). The boring location was chosen because it was adjacent or near borings advanced in previously referenced reports. GW was encountered at 4' bgs. A complete listing of the samples drawn from B6B were outlined in Table 9-1. See: MAPS AND DRAWINGS.

4.3.1 Work Procedures

Steven Salter of EHC donned protective non-latex gloves during the work and distilled water rinses were performed on all equipment prior to their use. Hearing and eye protection were worn by EHC throughout all drilling operations. And, EHC instructed the Driller to don hearing and eye protection throughout the work.

All borings were advanced with a truck-mounted 2" hydraulic auger owned and operated by ESN. The Strataprobe sampling system consisted of direct-push hydraulic unit. The rear-mounted, duel ram configuration, in conjunction with a hydraulic hammer, is capable of producing high-frequency impact energy that is suitable for shallow to moderate depth environmental sampling.

The Driller advanced each boring using a retractable piston sampler. All borings were advanced using a standard 4' x 2" steel sleeve and acrylic inserts. Upon reaching the desired depth, the piston was unlocked and the sampler advanced 1" into the soil as the piston retracted. See: BORING LOGS.

Samples were collected by EHC throughout the afternoon of October 21, 2004. Samples were inventoried and then transferred to the driller for ESN on the afternoon of October 21, 2004. See: LABORATORY ANALYSIS and EQUIPMENT LIST.

4.3.2 Laboratory Analysis

Soil samples B1B-1 and B3B-3 were found to contain lead well below the Model Toxics Control Act (MTCA), Method A Cleanup Level for Unrestricted Land Use of 250 milligram per kilogram (mg/kg) at 60 and 36 mg/kg; respectively. None of the other samples were found to contain detectable concentrations of arsenic, chromium or lead. See: LABORATORY ANALYSIS.

A summary of the analytical results of soil samples has been presented in Table 9-1.

Table 9-1
Summary of Analytical Results of Soil
3520 Pacific Highway East, Fife, Washington

Sample Number	Sample Depth	Soil Type	Sample Date	Analysis Date	Arsenic	Chromium	Lead

Soil values reported in milligrams per kilogram (mg/kg).
ND = None detected.
NA = Not analyzed.
Dup. = Duplicate sample analyzed by laboratory for quality assurance.
Bold values indicate concentrations exceed MTCA, Method A Cleanup Levels for Unrestricted Land Use.

5.0 Summary of Conditions

- A total of 6 borings were advanced across the site to average depth of 4' bgs.
- Generally, site soils consisted of fine to medium sands over-layed in areas with 1' to 2' of fill consisting of coarse sands and crushed rock.
- Groundwater was encountered at 1' to 4' bgs.
- All borings were sealed with bentonite and asphalt surfaces patched with cold-process asphalt patch.

6.0 Conclusions

- The various strata of vadose zone soils were sampled and analyzed for the presence of the heavy metals arsenic, chromium and lead.
- Based upon laboratory analysis of vadose zone soils tested, neither arsenic, chromium or lead were found above the MTCA, Method A Cleanup Level for Unrestricted Land-Use.
- Arsenic and chromium were not detected in any of the soil samples submitted.
- Low levels of lead were detected in sample B1B-1 and B3B-3 at 60 and 36 mg/kg; respectively.
- The April 2004, published by another consulting firm, identified low concentrations of chromium (3 and 5.5 mg/kg) and lead (4.6 and 13 mg/k) in soil from borings B6, B7, B8 and B9.
- EHC sampled soils adjacent to the borings performed in April 2004 and laboratory analysis did not confirm the presence of chromium in soil. See: MAPS AND DRAWINGS.
- Based upon laboratory analysis, it does not appear site soils in the vadose zone are contributing to or stripping off arsenic in to GW.
- The *Area Wide Soil Contamination Task Force Report* published in June 2003 indicated a high likelihood of arsenic contamination of shallow soils in the Tacoma and Fife, Washington areas.
- The arsenic in GW may be area wide and the result of historical farming activities, historical airborne contamination from the closed Asarco Smelter in Ruston, Washington or an unidentified off-site or on-site source.
- Generally, GW in the area migrates to the north/northwest.
- A site-specific cleanup of GW may not be possible if arsenic contaminated GW is migrating on to the subject.

7.0 Recommendations

- As required by the MTCA, the property owner must submit this report to the Washington State, Department of Ecology, Southwest Regional Office within 90 days of publication.
- Submit this report, and reference all previously submitted data or reports, to the Washington State, Department of Ecology, Voluntary Cleanup Program for review and possible issuance of "No Further Action Letter" or a "Non-Restrictive NFA". A copy of the report should be forwarded to Chuck Cline at WDOE at 47775, Olympia, Washington 98504-7775 and a $500 deposit check must be enclosed with the request.

8.0 Limitations and Exceptions

EHC is providing data, information and recommendations for the express purpose of the Client. The information is offered for management decisions, considerations for further investigation and future removal, encapsulation, management or disposal of suspect hazardous materials or toxic substances.

The professional services provided by EHC and its personnel are for the benefit of and are limited to the Client only and to the fee actually received by EHC. Further, there is no accountability, obligation or liability to any third party. If an EHC report is placed in the hands of anyone other than the Client, the Client shall make such party aware of related discussions. EHC and its personnel are in no way to be responsible for any costs incurred to discover or correct physically, financially and/or legally environmental or health and safety conditions on a property. In the case of limited partnerships, syndication offering or stock offerings in real estate, the Client agrees that in case of a lawsuit brought by lender, partner or part Client in any form of Client and officers (ownership, tenant, or any other party), any and all awards, settlements of any type in such suits, regardless of the outcome), the Client will hold EHC and it's personnel completely harmless in any such action.

Possession of an EHC report or any copy thereof does not carry with it the right of publication, nor may it be used for other than its intended use; the physical report(s) remain the property of EHC for the use of the Client, the fee being for the analytical services only.

An EHC report is to be used only in its entirety, and no part is to be used without the whole report. All conclusions and opinions concerning the analysis as set forth in the report were prepared by EHC personnel whose signature(s) appear on the report unless otherwise indicated. No change of any item in the report shall be made by anyone other than EHC personnel. EHC and EHC personnel shall have no responsibility if any such unauthorized change is made.

EHC personnel may not divulge the material (evaluation) contents of the report, analytical findings or conclusions, or give a copy of the report to anyone other than the Client or his designee as specified in writing except as may be required by a court of law or body with the power of a subpoena.

An EHC report was obtained from EHC and consists of "trade secrets and environmental, commercial or financial information" which is privileged and confidential and exempted from disclosure. Notify EHC of any request(s) to reproduce this report in whole or in part.

No responsibility is assumed for accuracy of information furnished by work of others, the Client, his designee or public records. The comparable data relied upon in this report has been confirmed with one or more party familiar with the transaction or from affidavit or other sources thought reasonable; all are considered appropriate for inclusion to the best of our factual judgment and knowledge. An impractical and uneconomic expenditure of time would be required in attempting to furnish unimpeachable verification in all instances, particularly as to environmental condition, engineering and related information..
Any sketches and maps in an EHC report are included to assist the reader in visualizing the property and are not necessarily to scale. Photographs are included for the same purpose and represent conditions at the time of the inspection(s). Site plans are not always surveys unless shown from a separate surveyor.

No responsibility is assumed by EHC for matter(s) legal in character or nature, no matter of survey, nor any architectural, structural, mechanical, or engineering nature pertaining to the subject property.

Typically, a legal description is assumed to be correct as used an EHC report as furnished by the Client, his designee, or as derived by EHC.

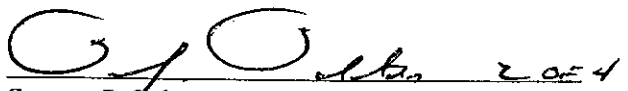
EHC personnel have inspected as far as possible, by observation, the land and improvement(s); however, it was not possible to personally observe conditions beneath the soil or hidden structural components, or other components.

It is always possible that areas with undetected contamination may exist in portions of the site where no subsurface exploration was performed. Within the limitations of scope, schedule and budget, our services have been executed in accordance with generally accepted practices in this area at the time this report was prepared.

9.0 Special Terms and Conditions

We make no warranties, express or implied, including without limitation, warranties as to merchantability or fitness of a property for a particular purpose. In addition, the information provided to you in an EHC report is not to be construed as legal advice. All rights, warranties and information in the Professional Services Agreement, signed by the Client and EHC, are included.

10.0 Reliance



The Client only may rely on the report information unless written authorization is provided by EHC. EHC does not warranty and there is no accountability, obligation or liability to any third party.

11.0 References

13.0 Qualifications of Environmental Professional

Mr. Salter is the owner, founder and lead environmental consultant for Environmental Hazards Control (EHC). His experience includes over 18 years of consulting, planning and remediation in the environmental industry. He has an educational background in architecture, engineering and business. And, he has extensive experience in the investigation, testing, planning, permitting and remediation of hazardous materials.

Mr. Salter has been teaching about hazardous materials to Appraisal, Banking, Insurance, Real Estate and Development Professionals since the early 1990's. He wrote a manual on and started teaching about Environmental Assessment and Audits in 1991. And, he was the Environmental Expert for the Planning Commission of Tacoma, Washington from July 1993 to June 1995.

Mr. Salter maintains numerous certifications in the Environmental Industry including the identification and management of projects involved with Asbestos-Containing Materials, Lead-Based Paints and Hazardous Materials. He has successfully completed numerous courses on Construction Safety Management, Environmental Assessing and Auditing and the Identification of Occupational Hazards. And, he is a Certified Appraisal, Escrow and Real Estate Instructor.

Registrations and Certificates

➢ OSHA Construction Safety Manager	Certified 2000
➢ Environmental Expert, Planning Commission, Tacoma, WA	July 1993 – June 1995
➢ Certified Instructor, Washington Department of Licensing	Instructor #I0468
Real Estate, Escrow and Assessor	1991
➢ Environmental Auditor and Assessor	Certificate #1070
Property Assessments and Audits	1991
➢ AHERA Certified Asbestos Inspector	1988 – Present
USEPA Asbestos Program	
➢ AHERA Project Designer	1994 – 2001
USEPA Asbestos Program	
➢ AHERA Management Planner	1988 – 1996
USEPA Asbestos Program	
➢ Hazardous Waste Site Supervisor	1991 – Present
➢ Lead Inspector Training	Certified 1995
Health and safety training for the inspection and removal of lead	
➢ Sampling and Evaluating Airborne Asbestos Dust	Certificate 1053
NIOSH 582 Certified	1989

EHC

October 19, 2004

Project: **Hometel Inn Motel**
3520 Pacific Highway East, Fife, Washington
Project #: EHC04061A
Title: Subsurface Investigation - Sampling Plan

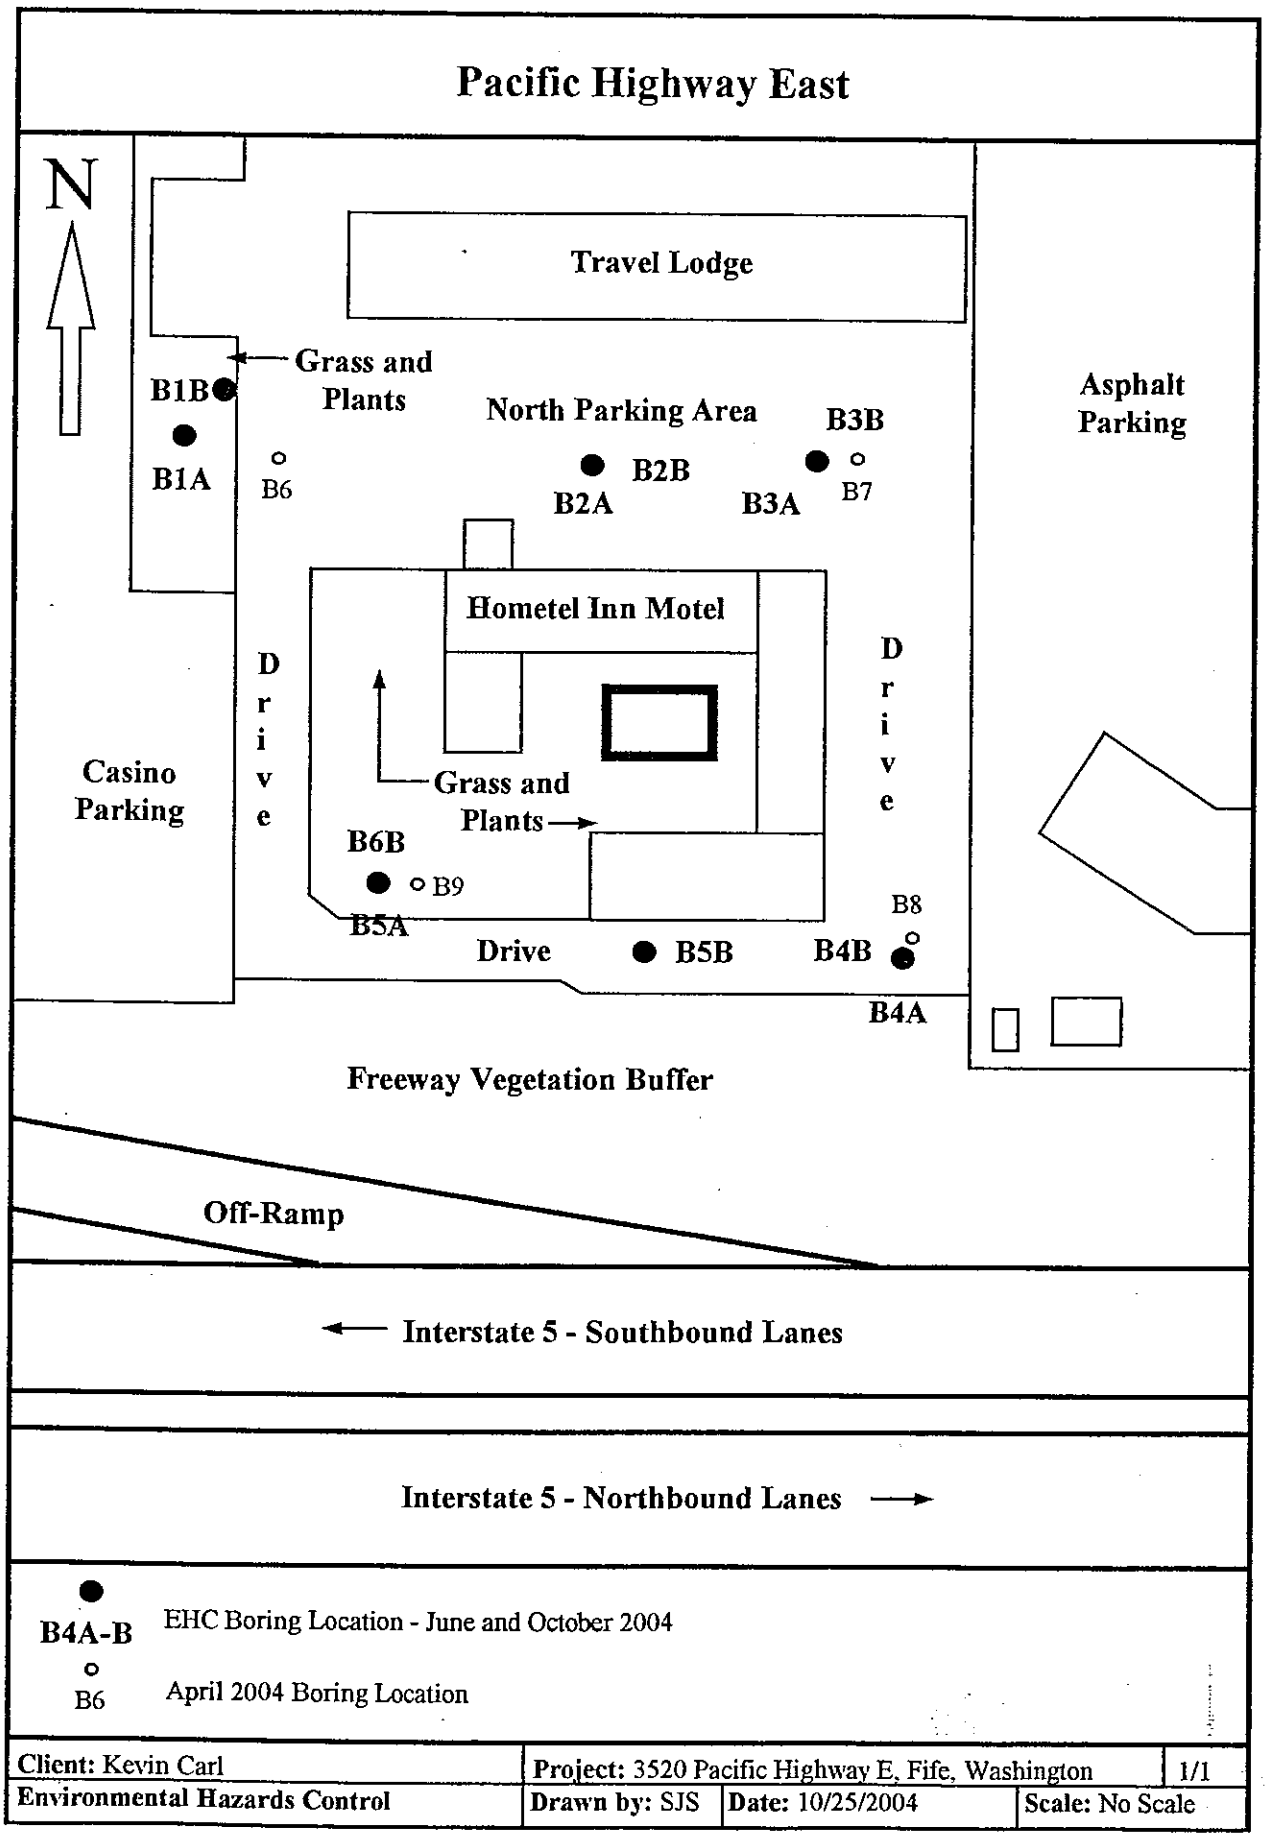
Environmental Hazards Control (EHC) will perform a *Subsurface Investigation* on the referenced property to evaluate site soils and to offer recommendations for further investigation, if warranted. Based upon the history of the site (agriculture prior to 1960s and motel from 1960s to present and previous report data related to heavy metals in shallow GW), existing site conditions (site building surrounded by asphalt parking and drives and minor vegetation), EHC will advance a series of 6 borings to depths of about 4' below ground surface (bgs). The subsurface work will assist in determining if heavy metals in vadose zone soils (above GW) may be contaminating GW.

Standard sampling protocols will be adhered to throughout the work. All work and conditions will be documented on Well Logs. Disposable gloves will be donned during the work and distilled water rinses will be performed on all equipment prior to and between uses.

A total of 5 borings will be located in and around the perimeter of the subject property adjacent or near the location of borings reported in the following:

- Subsurface Investigation, Environmental Hazards Control, June 2004
- *Phase I and Limited Phase II Environmental Site Assessment* by Robinson & Noble, Inc. and Saltbush Environmental Services, April 2004.

Additionally, a single sample will be drawn near the center of the South Parking Area to better profile existing soils.



Soil samples will be stored in chilled coolers during all fieldwork. A laboratory chain-of-custody form will be completed and the samples will be submitted to a qualified laboratory for analysis on a "standard" turn-around basis.

Soil samples will be analyzed by the following method:

- USEPA Method 7000 (Heavy metals in soil...arsenic, chromium and lead).

Our proposed sampling locations have been plotted on the attached map. Final or actual sample locations will be determined by subsurface conditions, i.e. utilities, buries objects, etc.

Federal Way, WA 98023-7330

Dear Mr. Salter:

Please find enclosed the analytical data report for the Hometel Inn Motel Project located in Fife, Washington. Direct Push services were conducted on October 21, 2004. Soil samples were analyzed for Pb, Cr, and As by Method 7000 series on October 22, 2004.

The results of these analyses are summarized in the attached table. All soil values are reported on a dry weight basis. Applicable detection limits and QA/QC data are included. An invoice for this analytical work is also enclosed.

ESN Northwest appreciates the opportunity to have provided analytical services to Environmental Hazards Control for this project. If you have any further questions about the data report, please give me a call. It was a pleasure working with you on this project, and we are looking forward to the next opportunity to work together.

Sincerely,

Michael A Korosec

CERTIFIED MAIL

August 13, 2004

Mr. Rod Giffels
GVA Kidder Mathews
1201 Pacific Avenue, #1400
Tacoma, WA 98402

Dear Mr. Giffels:

RE: The Hometel Motor Inn Site, located at 3520 Pacific Highway E., Fife, Washington

This letter is written in response to your request to provide a no-further-action (NFA) letter for the Hometel Motor Inn site, located at 3520 Pacific Hwy E., Fife, Washington. Besides a **Phase I Environmental Site Assessment** (NVL Laboratories, June 25, 2002), two studies have been conducted on this site; one by Robinson & Noble/Saltbush Environmental Services in April 2004 (**Fife, Washington Phase I and Limited Phase II Environmental Site Assessment**), and one by Environmental Hazards Control (EHC) [**Subsurface Investigation, 3520 Pacific Highway East, Fife, Washington 98424 (Hometel Inn Motel)**] in June 2004. The Robinson & Noble study was initiated by the Puyallup Indian Tribe to evaluate both the Hometel and adjacent casino properties. Petroleum hydrocarbons were detected on the casino property, but not on the Hometel site. Neither study found petroleum hydrocarbons on the Hometel property. However, metals were detected in the ground water above the Model Toxics Control Act (MTCA) Method A cleanup levels. Arsenic, chromium and lead were found in the ground water in the earlier study and arsenic in the last study. Ground water was encountered at a depth of between 2.5 ft and 4.5 ft below ground surface (bgs). Unfortunately, because these metals have been found in the ground water above the MTCA cleanup levels, it is not possible to provide an NFA letter for the Hometel Motor Inn site, at this time. However, it could be possible to obtain an NFA letter for this site if certain additional work is conducted at this site. The following options are available to you and your clients:

1. Documentation should be provided for the soils located in the vadose zone (above the water table) to determine that the site is or is not a source for the metals contamination detected in the ground water. The fill material for this site may be

a source of metals and it should be characterized as completely as possible.

2. The ground water should be sampled to obtain analyses for metals (including arsenic, chromium and lead). Both dissolved and total fractions samples should be obtained. Wells should be constructed to determine whether elevated levels of metals are entering the property from off property and/or leaving the property down gradient. Depending on whether contaminants of concern are detected, additional samples may be required. If constituents are detected in the ground water, monitoring will be necessary to provide assurance that the concentrations remain below model toxics control act (MTCA) regulatory levels for four continuous quarters. An NFA letter could be issued once it is determined that ground water and soils is not causing harm to human health or the environment.

3. If it is possible to determine that the metals contamination in the ground water is an area wide issue, it may be possible to place a restrictive covenant on the ground water. However, because your property may be part of an area-wide site, Ecology may not be able to provide an NFA letter, but rather would provide an opinion letter. The property would be defined as part of a greater area defined by the arsenic ground-water plume and resolution would not occur until all of the greater area had been addressed as a formal cleanup (Agreed Order or Consent Decree). Generally, the criteria to placing a restrictive covenant on ground water are that the water is not being consumed on site and concentrations above MTCA regulatory cleanup levels are not leaving the property. However, should an area-wide contamination problem be determined, as part of the remedy selection, Ecology may approve an area-wide conditional point of compliance. "The area-wide conditional point(s) of compliance shall be as close as practicable to each source of hazardous substances, not to exceed the extent of ground water contamination at the time the department approves an area-wide conditional point of compliance. This provision may be applied only at areas that are affected by hazardous substances released from multiple sources that have resulted in commingled plumes of contaminated ground water that are not practicable to address separately. A site may have more than one area-wide conditional point of compliance to address multiple sources and types of contaminants. An area-wide conditional point of compliance may be approved under this provision only if all of the following conditions have been met:

   (A) The person conducting the cleanup action has complied with WAC 173-340-350 through 173-340-390, including a demonstration that it is not practicable to meet a point of compliance throughout the ground water contamination within a reasonable restoration time frame.

   (B) A plan has been developed for implementation of the cleanup action,

including a description of how any necessary access to the affected properties will be obtained.

(C) If the contaminated ground water is considered to be potable under WAC 173-340-720(2), current developments in the area encompassed by the area-wide conditional point of compliance and any other areas potentially affected by the ground water contamination are served by a public water system that obtains its water from an offsite source and it can be demonstrated that the water system has sufficient capacity to serve future development in these areas. This demonstration may be made by obtaining a written statement to this effect from the water system operator.

(D) All property owners, tribes, local governments, and water purveyors with jurisdiction in the area potentially affected by the ground water contamination have been mailed a notice of the proposal to establish an area-wide conditional point of compliance and provided an opportunity to comment. The notice shall specifically ask for information on existing and planned uses of the ground water. The notice shall be in addition to any notice provided under WAC 173-340-600. The department will give greater weight to information based on an adopted or pending plan or similar preexisting document. When the department is providing technical assistance under WAC 173-340-515, the department shall also provide an opportunity to comment to the public through the *Site Register* before issuing a written opinion.

(E) Other conditions as determined by the department on a case-by-case basis. [WAC 173-340-720(8)(d)(iii)]

Please note that because your actions were not, or will not be conducted under a consent decree with Ecology, this letter is written pursuant to RCW 70.105D.030(1)(i) and does not constitute a settlement by the state under RCW 70.105D.040(4) and is not binding on Ecology.

The opinions presented by Ecology in this letter are made with respect to the information provided in the documents listed above. This opinion is only applicable to the specified site (or portion of the site) and may not be used to justify action at any other site (or portion of the site) nor any other properties owned or operated by Star Lodging of the Northwest, Mr. Amrit Pal Singh or their representatives.

The State, Ecology, and its officers and employees are immune from all liability and no cause of action of any nature may arise from any act or omission in providing this determination.

If you have any questions about any of the information presented in this letter, please contact me at (360) 407-6267.

Sincerely,

Charles S. Cline

Xylenes	1330-20-7	1,000 ug/liter[bb]

Footnotes:

a **Caution on misusing this table.** This table has been developed for specific purposes. It is intended to provide conservative cleanup levels for drinking water beneficial uses at sites undergoing routine cleanup actions or those sites with relatively few hazardous substances. This table may not be appropriate for defining cleanup levels at other sites. For these reasons, the values in this table should not automatically be used to define cleanup levels that must be met for financial, real estate, insurance coverage or placement, or similar transactions or purposes. Exceedances of the values in this table do not necessarily mean the ground water must be restored to those levels at all sites. The level of restoration depends on the remedy selected under WAC 173-340-350 through 173-340-390.

b **Arsenic.** Cleanup level based on background concentrations for state of Washington.

c **Benzene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

d **Benzo(a)pyrene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61), adjusted to a 1×10^{-5} risk. If other carcinogenic PAHs are suspected of being present at the site, test for them and use this value as the total concentration that all carcinogenic PAHs must meet using the toxicity equivalency methodology in WAC 173-340-708(8).

e **Cadmium.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.62).

f **Chromium (Total).** Cleanup level based on concentration derived using Equation 720-1 for hexavalent chromium. This is a total value for chromium III and chromium VI. If just chromium III is present at the site, a cleanup level of 100 ug/l may be used (based on WAC 246-290-310 and 40 C.F.R. 141.62).

g **DDT (dichlorodiphenyltrichloroethane).** Cleanup levels based on concentration derived using Equation 720-2.

h **1,2 Dichloroethane (ethylene dichloride or EDC).** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

i **Ethylbenzene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

are #6 fuel oil, bunker C oil, hydraulic oil and waste oil. The cleanup level is based on protection from noncarcinogenic effects during drinking water use, assuming a product composition similar to diesel fuel. The ground water cleanup level for any carcinogenic components of the petroleum [such as benzene, PAHs and PCBs] and any noncarcinogenic components [such as ethylbenzene, toluene, xylenes and naphthalenes], if present at the site, must also be met. See Table 830-1 for the minimum testing requirements for heavy oil releases.

Mineral oil means non-PCB mineral oil, typically used as an insulator and coolant in electrical devices such as transformers and capacitors measured using NWTPH-Dx. The cleanup level is based on protection from noncarcinogenic effects during drinking water use. Sites using this cleanup level must analyze ground water samples for PCBs and meet the PCB cleanup level in this table unless it can be demonstrated that: (1) The release originated from an electrical device manufactured after July 1, 1979; or (2) oil containing PCBs was never used in the equipment suspected as the source of the release; or (3) it can be documented that the oil released was recently tested and did not contain PCBs. Method B (or Method C, if applicable) must be used for releases of oils containing greater than 50 ppm PCBs. See Table 830-1 for the minimum testing requirements for mineral oil releases.

y **1,1,1 Trichloroethane.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

z **Trichloroethylene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

aa **Vinyl chloride.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61), adjusted to a 1 x 10^{-5} risk.

bb **Xylenes.** Cleanup level based on xylene not exceeding the maximum allowed cleanup level in this table for total petroleum hydrocarbons and on prevention of adverse aesthetic characteristics. This is a total value for all xylenes.

Table 740-1
Method A Soil Cleanup Levels for Unrestricted Land Uses.[a]

Hazardous Substance	CAS Number	Cleanup Level
Arsenic	7440-38-2	20 mg/kg[b]
Benzene	71-43-2	0.03 mg/kg[c]
Benzo(a)pyrene	50-32-8	0.1 mg/kg[d]
Cadmium	7440-43-9	2 mg/kg[e]
Chromium		
Chromium VI	18540-29-9	19 mg/kg[f1]
Chromium III	16065-83-1	2,000 mg/kg[f2]
DDT	50-29-3	3 mg/kg[g]
Ethylbenzene	100-41-4	6 mg/kg[h]
Ethylene dibromide (EDB)	106-93-4	0.005 mg/kg[i]
Lead	7439-92-1	250 mg/kg[j]

Lindane	58-89-9	0.01 mg/kg[k]
Methylene chloride	75-09-2	0.02 mg/kg[l]
Mercury (inorganic)	7439-97-6	2 mg/kg[m]
MTBE	1634-04-4	0.1 mg/kg[n]
Naphthalenes	91-20-3	5 mg/kg[o]
PAHs (carcinogenic)		See benzo(a)pyrene[d]
PCB Mixtures		1 mg/kg[p]
Tetrachloroethylene	127-18-4	0.05 mg/kg[q]
Toluene	108-88-3	7 mg/kg[r]
Total Petroleum Hydrocarbons[s] [Note: Must also test for and meet cleanup levels for other petroleum components--see footnotes!]		
Gasoline Range Organics		100 mg/kg
Gasoline mixtures without benzene and the total of ethylbenzene, toluene and xylene are less than 1% of the gasoline mixture		30 mg/kg
All other gasoline mixtures		
Diesel Range Organics		2,000 mg/kg
Heavy Oils		2,000 mg/kg
Mineral Oil		4,000 mg/kg
1,1,1 Trichloroethane	71-55-6	2 mg/kg[t]
Trichloroethylene	79-01-6	0.03 mg/kg[u]
Xylenes	1330-20-7	9 mg/kg[v]

Footnotes:

a **Caution on misusing this table.** This table has been developed for specific purposes. It is intended to provide conservative cleanup levels for sites undergoing routine cleanup actions or for sites with relatively few hazardous substances, and the site qualifies under WAC 173-340-7491 for an exclusion from conducting a simplified or site-specific terrestrial ecological evaluation, or it can be demonstrated using a terrestrial ecological evaluation under WAC 173-340-7492 or 173-340-7493 that the values in this table are ecologically protective for the site. This table may not be appropriate for defining cleanup levels at other sites. For these reasons, the values in this table

Equipment List

Attachment 6

The following is a list of equipment used by EHC during the *Subsurface Investigation* and related work at 3520 Pacific Highway East, Fife, Washington.

1. Disposable coveralls
2. Disposable latex gloves
3. Distilled/de-ionized water (2 gallons)
4. Trisodium phosphate
5. Paper towels
6. Sealable plastic bags
7. Utility knife
8. Measuring tapes (25' and 300')
9. Flash light
10. Tools kit (ratchet, sockets, Allen wrenches, pliers, screw drivers, etc.)
11. 4 ounce glass jars
12. Poly bottles
13. Stainless steel trowel
14. Hand wipes (unscented)
15. Numerous orange cones for directing traffic and cordoning off work areas.
16. Department of Transportation approved sign indicating "Road Work Ahead".

Re: Groundwater Well Installation and Monitoring
3520 Pacific Highway East, Fife, Washington 98424 (Hometel Inn Motel)

Dear Kevin,

Environmental Hazards Control (EHC) is pleased to submit this *Groundwater Well Installation and Monitoring* report on the referenced property. The site work was performed adjacent previous sampling locations in the parking areas and vegetation strips near the four (4) corners of the property.

1.0 Purpose

The purpose of our services was to evaluate shallow groundwater (GW) and offer recommendations for further investigation, if warranted. Based upon previous sample data and discussions with Chuck Cline, Section Manager for the Washington State, Department of Ecology (WDOE), Southwest Region, it was determined GW wells would be installed on site to sample for the heavy metal arsenic. The sampling was to be performed on the south and north sides of the property in an attempt to profile total and dissolved concentrations of the heavy metal arsenic as it lensed across the site in a northerly direction.

The following is an outline of the critical elements of the sampling:

- Review previously published reports on subject;
- Review WDOE letters concerning the site;
- Discuss the project status with Chuck Cline at WDOE;
- Install GW wells near the 4 corners of the subject and sample for the heavy metal arsenic;
- Document conditions found;
- Submit samples to an approved laboratory for analysis;
- Provide a written report of findings with recommendations.

2.0 Services

The following services were provided by EHC:

- Reviewed previously published reports on subject;
- Reviewed WDOE letters concerning the site and possible "No Further Action Letters";
- Discussed the project status with Chuck Cline at WDOE and arrived at a sampling protocol;
- Developed a *Sampling Plan* to install GW wells near previous boring locations;
- Revised the existing *Health and Safety Plan (HASP)*;
- Reviewed *Sampling Plan* and *HASP* with driller from Environmental Services Network, Northwest (ESN);
- On December 17, 2004, a total of 4 - ¾" diameter GW wells were installed near the 4 corners of the subject;
- The GW wells were installed using a truck-mounted direct push hydraulic auger (Strataprobe) and set to depths of 6' to 8' below ground surface (bgs);
- Groundwater was encountered in all 4 GW wells (W1 – W4) ranging between about 1' and 3' bgs;
- EHC recorded the depth of each well, along with screen size, length of screen, etc. on Boring Logs;
- On December 18, 2004, EHC developed and/or purged the wells by evacuating about 1 gallon of GW and recorded the pH and temperature prior to and throughout the purging process on Groundwater Sampling Logs;
- On December 18, 2004, EHC drew 2 separate samples of GW from each well with a gravity pump or a bearing and tube sampler;
- All sample containers were labeled with the necessary information (sample #, date, time, analysis);
- Samples were stored in a cooler with ice/chiller packs (maintained at approximately 4 degrees centigrade) during field operations;
- The afternoon of December 18, 2004, a proper chain-of-custody was completed;
- The afternoon of December 18, 2004, EHC submitted 8 samples to STL Laboratories in Fife, Washington for analysis of total and dissolved arsenic;
- The laboratory was instructed to filter the 4 dissolved samples prior to analysis;
- The laboratory was informed the samples were contained in plastic or poly bottles with no preservative (H2SO4);
- Requested analysis on all 8 GW samples:
  1. USEPA Method 6020 (Heavy metal arsenic in GW…4 Total and 4 Dissolved);
- Received preliminary analysis via facsimile the morning of December 22, 2004 and reviewed the data;
- Contacted Client and left a voice mail describing preliminary analytical results;
- Summarized the data in a written report with attachments.

3.0 Background

The subject property was a commercial zoned parcel of land occupied by the Hometel Inn Motel. The property was located in the 3500 block of Fife, Washington between Pacific Highway East and

Interstate 5. The subject was utilized as farmland up to the early 1960s. The subject was developed as a motel/hotel in the early to mid-1960s and has been in operation as such to present day.

3.1 Property Reports

- *Subsurface Investigation*, Environmental Hazards Control, EHC04061A, November 4, 2004.
- *Subsurface Investigation*, Environmental Hazards Control, EHC04061, June 25, 2004.
- *Phase I and Limited Phase II Environmental Site Assessment*, Robinson & Noble, Inc. and Saltbush Environmental Services, #1757-004A, April 2004 (EHC was provided the cover page along with pages 8, 9 10, 11, a Vicinity Map and poor copy of the Boring Location Map).
- *Wetlands Review of Hometel Inn Property, City of Fife, 3520 Pacific Highway East, Pierce County Parcel #0320111049*, Russell & Associates, May 12, 2003.
- *Phase I Environmental Site Assessment*, Hometel Inn Motel, NVL Laboratories, Inc. June 25, 2002.
- *Asbestos-Containing Materials Survey*, 3518 Pacific Highway, Fife, WA, Project #2002-285, NVL Laboratories, Inc., June 20, 2002 (Partial report included pages 1 – 9).

4.0 Field Work

4.1 Utilities Locate

Based upon the previous site work performed by another consulting firm, and given EHC's *Sampling Plan* dictated GW wells be installed adjacent previous borings, EHC did not contact the Utilities Underground Location Center (UULC) prior to commencing the subsurface work at the referenced property. Although, all visible utilities, stormwater piping and asphalt patches relating to subsurface systems (electrical and plumbing) were noted by EHC prior to commencing the work. A minimum distance of 5' was maintained from all apparent subsurface systems throughout the work. Additionally, a minimum distance of 10' was maintained from all overhead systems throughout the work.

4.2 Sampling Plan

The October 2004 *Sampling Plan* was updated based upon the previously published reports on the site and site reconnaissance by EHC. The focus of the *Sampling Plan* was to install GW wells and draw representative samples of GW for the presence of the heavy metal arsenic. See: SAMPLING PLAN.

4.3 Groundwater Well Installation

The GW well locations were chosen based upon the general flow of GW across the site from south to north and because previous soil and GW data had been gathered in the direct area. A description of each installed GW well has been described in subsequent paragraphs. See: BORING LOGS and GROUNDWATER SAMPLING LOGS.

Well W1 was installed to a depth of 6' below ground surface (bgs) near the northwest corner of the property in a vegetation strip approximately 107' west and 70' north of the northwest corner of the site building. The well location was chosen because it was near borings advanced in a previously referenced reports and because it was near the drainage area for the parking stormwater. A ¾" 10 slot PVC screen

was installed from 1' to 6' bgs and connected to capped section of ¾" PVC pipe. The well was completed by surrounding the wellhead with a properly cemented monument. Groundwater was encountered at 0.80 at the time of well installation.

Well W2 was installed to a depth 8' bgs in the northeast corner of the property in the North Parking Area about 3' west and 65' north of the northeast corner of the site building. The well location was chosen because it was adjacent borings advanced in previously referenced reports. A ¾" 10 slot PVC screen was installed from 3' to 8' bgs and connected to capped section of ¾" PVC pipe. The well was completed by surrounding the wellhead with a properly cemented monument. Groundwater was encountered at 1.9 at the time of well installation.

Well W3 was installed to a depth of 7' bgs near the southeast corner of the property in the South Parking Area approximately 43' east and 46' south of the southeast corner of the site building. The well location was chosen because it was adjacent borings advanced in previously referenced reports. A ¾" 10 slot PVC screen was installed from 2' to 7' bgs and connected to capped section of ¾" PVC pipe. The well was completed by surrounding the wellhead with a properly cemented monument. Groundwater was encountered at 2.8' at the time of well installation.

Well W4 was installed to a depth of 8' bgs near the southwest corner of the property in a vegetation strip approximately 104' west and 13' south of the southwest corner of the site building. The well location was chosen because it was adjacent or near borings advanced in previously referenced reports. A ¾" 10 slot PVC screen was installed from 3' to 8' bgs and connected to capped section of ¾" PVC pipe. The well was completed by surrounding the wellhead with a properly cemented monument. Groundwater was encountered at 2.2' at the time of well installation.

4.3.1 Work Procedures

On December 17, 2004, Steven Salter of EHC donned protective non-latex gloves during the work and distilled water rinses were performed on all equipment prior to their use and between samples. Proper personal protective equipment was donned including hearing protection, hard hat and rubber boots prior to commencing with the work.

All wells were installed using a truck-mounted 2" hydraulic auger owned and operated by ESN. The Strataprobe sampling system consisted of direct-push hydraulic unit. The rear-mounted, duel ram configuration, in conjunction with a hydraulic hammer, is capable of producing high-frequency impact energy that is suitable for shallow to moderate depth environmental sampling and well installation.

The Driller (Kevin M. Vandehey) advanced each boring using a standard punch that was extracted prior to installation of ¾' PVC well screen (capped on the bottom) and associated ¾' PVC piping (capped on top). A clean sand filter pack was poured around the well screen and the well was then sealed with bentonite. A standard metal well monument was cemented in place and WDOE Well Number Tag attached to each well. See: BORING LOGS.

On December 18, 2004, Steven Salter donned protective non-latex gloves during the work and distilled water rinses were performed on all equipment prior to their use. Samples were collected by EHC using a gravity pump consisting of new 3/8' plastic tubing, a retained bearing and brass tubing connector.

Groundwater was pumped from the wells by shaking the tubing in a vertical motion whereby the movement of the bearing created a simple vacuum or pumping action and drew water in to the tubing.

A total of a gallon of GW, far greater than 3 casing volumes, was drawn from each of the wells prior to sampling. The GW temperature and pH were recorded prior to and during well purging. All purge water was stored in a mini-drum during sampling operations and dumped near the southwest corner of the proper following all sampling activities. EHC tested the temperature and pH prior to and during the purging process for a total of 4 separate tests prior to sampling.

All samples were stored in a cooler with ice/chiller packs (maintained at approximately 4 degrees centigrade) during field operations. The afternoon of December 18, 2004, a proper chain-of-custody was completed and 8 samples were submitted to STL Laboratories in Fife, Washington for total and dissolved analysis of arsenic. The laboratory was instructed to filter the 4 dissolved samples prior to analysis. And, the laboratory was informed the samples were contained in plastic or poly bottles with no preservative (H2SO4). See: LABORATORY ANALYSIS and EQUIPMENT LIST.

4.3.2 Laboratory Analysis

Samples W1-1, W2-1, W3-1 and W4-1 were found to contain "total" arsenic above the Model Toxics Control Act (MTCA), Method A Cleanup Level for Groundwater of 5 micrograms per liter (ug/L). Samples W1-1, W2-1, W3-1 and W4-1 were found not to contain detectable concentrations of "dissolved" arsenic. See: LABORATORY ANALYSIS.

A summary of the analytical results of the GW samples has been presented in Table 5-1.

Table 5-1
Summary of Analytical Results of Groundwater
3520 Pacific Highway East, Fife, Washington

Sample Number	Well Location	GW Depth	Sample Date	Analysis Date	Arsenic "Total"	Arsenic "Dissolved"
W1-1	NW Corner	0.85'	12-18-04	12-20-04	**79.1**	ND
W2-1	NE Corner	1.95'	12-18-04	12-20-04	**61.1**	ND
W3-1	SE Corner	1.6'	12-18-04	12-20-04	**23.3**	ND
W4-1	SW Corner	2.5'	12-18-04	12-20-04	**9.05**	ND
Method Blank	-	-	-	12-20-04	ND	ND
Lab Detection Limit (Metals by ECP-MS – USEPA Method 6020)					0.0005	0.0005
MTCA, Method A Soil Cleanup Levels for Unrestricted Land Use					5 ug/L	5 ug/L

GW values reported in milligrams per Liter (mg/L) and converted to ug/L (ug/L).
Bold values indicate concentration exceed MTCA, Method A Cleanup Levels for GW.
ND = None detected.
Method Blank = Sample analyzed by laboratory for quality assurance.
Well Location: General location of the well on the subject property to assist the reader.

5.0 Summary of Conditions

- A total of 4 GW wells were installed near the 4 corners of the subject at depths ranging from 6' to 8' bgs.
- Generally, site soils consisted of fine to medium sands over-laid in areas with 1' to 2' of fill consisting of coarse sands and crushed rock.
- All wells were packed with clean sand, sealed with bentonite and capped with a standard metal monument properly cemented in place.
- At the time of well installation, GW was encountered at 0.8' to 2.8'bgs.
- At the time of GW sampling, GW was encountered at 0.85 to 2.2'
- A total of a gallon of GW, or more than 3 well casings volumes, were purged from each well prior to sampling.
- Groundwater from all 4 borings was found to contain "total" concentrations of the heavy metal arsenic (9.05 to 79.1 ug/L) above the MTCA, Method A Cleanup Level of 5 ug/L.
- Groundwater from all 4 borings had no detectable "dissolved" concentrations of the heavy metal arsenic.

6.0 Conclusions

- Based upon "total" metals analysis, it appears shallow GW across the site contains the heavy metal arsenic above the MTCA, Method A Cleanup Level for Groundwater of 5 ug/L.
- Based upon "dissolved" metals analysis, GW sampled did not contain the heavy metal arsenic above the MTCA, Method A Cleanup Level for Groundwater of 5 ug/L.
- Total arsenic in W1 and W2 was 79.1 to 61.1 ug/L; respectively.
- Total arsenic in W3 and W4 was 23.3 to 9.05 ug/L; respectively.
- The arsenic in GW may be naturally occurring or caused by human activity.
- The source of the arsenic in GW could not be discerned.

7.0 Recommendations

- As required by the MTCA, the property owner must submit this report to the Washington State, Department of Ecology, Southwest Regional Office within 90 days of publication.
- Submit this report, along with all other pertinent data, to the Washington State, Department of Ecology, Voluntary Cleanup Program for review, comment and/or possible issuance of "No Further Action Letter" or a "Non-Restrictive NFA". A copy of the report should be forwarded to Chuck Cline at WDOE at 47775, Olympia, Washington 98504-7775.

8.0 Limitations and Exceptions

EHC is providing data, information and recommendations for the express purpose of the Client. The information is offered for management decisions, considerations for further investigation and future removal, encapsulation, management or disposal of suspect hazardous materials or toxic substances.

The professional services provided by EHC and its personnel are for the benefit of and are limited to the Client only and to the fee actually received by EHC. Further, there is no accountability, obligation or liability to any third party. If an EHC report is placed in the hands of anyone other than the Client, the

Client shall make such party aware of related discussions. EHC and its personnel are in no way to be responsible for any costs incurred to discover or correct physically, financially and/or legally environmental or health and safety conditions on a property. In the case of limited partnerships, syndication offering or stock offerings in real estate, the Client agrees that in case of a lawsuit brought by lender, partner or part Client in any form of Client and officers (ownership, tenant, or any other party), any and all awards, settlements of any type in such suits, regardless of the outcome), the Client will hold EHC and it's personnel completely harmless in any such action.

Possession of an EHC report or any copy thereof does not carry with it the right of publication, nor may it be used for other than its intended use; the physical report(s) remain the property of EHC for the use of the Client, the fee being for the analytical services only.

An EHC report is to be used only in its entirety, and no part is to be used without the whole report. All conclusions and opinions concerning the analysis as set forth in the report were prepared by EHC personnel whose signature(s) appear on the report unless otherwise indicated. No change of any item in the report shall be made by anyone other than EHC personnel. EHC and EHC personnel shall have no responsibility if any such unauthorized change is made.

EHC personnel may not divulge the material (evaluation) contents of the report, analytical findings or conclusions, or give a copy of the report to anyone other than the Client or his designee as specified in writing except as may be required by a court of law or body with the power of a subpoena.

An EHC report was obtained from EHC and consists of "trade secrets and environmental, commercial or financial information" which is privileged and confidential and exempted from disclosure. Notify EHC of any request(s) to reproduce this report in whole or in part.

No responsibility is assumed for accuracy of information furnished by work of others, the Client, his designee or public records. The comparable data relied upon in this report has been confirmed with one or more party familiar with the transaction or from affidavit or other sources thought reasonable; all are considered appropriate for inclusion to the best of our factual judgment and knowledge. An impractical and uneconomic expenditure of time would be required in attempting to furnish unimpeachable verification in all instances, particularly as to environmental condition, engineering and related information.
Any sketches and maps in an EHC report are included to assist the reader in visualizing the property and are not necessarily to scale. Photographs are included for the same purpose and represent conditions at the time of the inspection(s). Site plans are not always surveys unless shown from a separate surveyor.

No responsibility is assumed by EHC for matter(s) legal in character or nature, no matter of survey, nor any architectural, structural, mechanical, or engineering nature pertaining to the subject property.

Typically, a legal description is assumed to be correct as used an EHC report as furnished by the Client, his designee, or as derived by EHC.

EHC personnel have inspected as far as possible, by observation, the land and improvement(s); however, it was not possible to personally observe conditions beneath the soil or hidden structural components, or other components.

It is always possible that areas with undetected contamination may exist in portions of the site where no subsurface exploration was performed. Within the limitations of scope, schedule and budget, our services have been executed in accordance with generally accepted practices in this area at the time this report was prepared.

8.0 Special Terms and Conditions

We make no warranties, express or implied, including without limitation, warranties as to merchantability or fitness of a property for a particular purpose. In addition, the information provided to you in an EHC report is not to be construed as legal advice. All rights, warranties and information in the Professional Services Agreement, signed by the Client and EHC, are included.

9.0 Reliance

The Client only may rely on the report information unless written authorization is provided by EHC. EHC does not warranty and there is no accountability, obligation or liability to any third party.

Project #

12.0 Qualifications of Environmental Professional

Mr. Salter is the owner, founder and lead environmental consultant for Environmental Hazards Control (EHC). His experience includes over 18 years of consulting, planning and remediation in the environmental industry. He has an educational background in architecture, engineering and business. And, he has extensive experience in the investigation, testing, planning, permitting and remediation of hazardous materials.

Mr. Salter has been teaching about hazardous materials to Appraisal, Banking, Insurance, Real Estate and Development Professionals since the early 1990's. He wrote a manual on and started teaching about Environmental Assessment and Audits in 1991. And, he was the Environmental Expert for the Planning Commission of Tacoma, Washington from July 1993 to June 1995.

Mr. Salter maintains numerous certifications in the Environmental Industry including the identification and management of projects involved with Asbestos-Containing Materials, Lead-Based Paints and Hazardous Materials. He has successfully completed numerous courses on Construction Safety Management, Environmental Assessing and Auditing and the Identification of Occupational Hazards. And, he is a Certified Appraisal, Escrow and Real Estate Instructor.

Registrations and Certificates

➢ OSHA Construction Safety Manager	Certified 2000
➢ Environmental Expert, Planning Commission, Tacoma, WA	July 1993 – June 1995
➢ Certified Instructor, Washington Department of Licensing Real Estate, Escrow and Assessor	Instructor #I0468 1991
➢ Environmental Auditor and Assessor Property Assessments and Audits	Certificate #1070 1991
➢ AHERA Certified Asbestos Inspector USEPA Asbestos Program	1988 – Present
➢ AHERA Project Designer USEPA Asbestos Program	1994 – 2001
➢ AHERA Management Planner USEPA Asbestos Program	1988 – 1996
➢ Hazardous Waste Site Supervisor	1991 – Present
➢ Lead Inspector Training Health and safety training for the inspection and removal of lead	Certified 1995
➢ Sampling and Evaluating Airborne Asbestos Dust NIOSH 582 Certified	Certificate 1053 1989

EHC

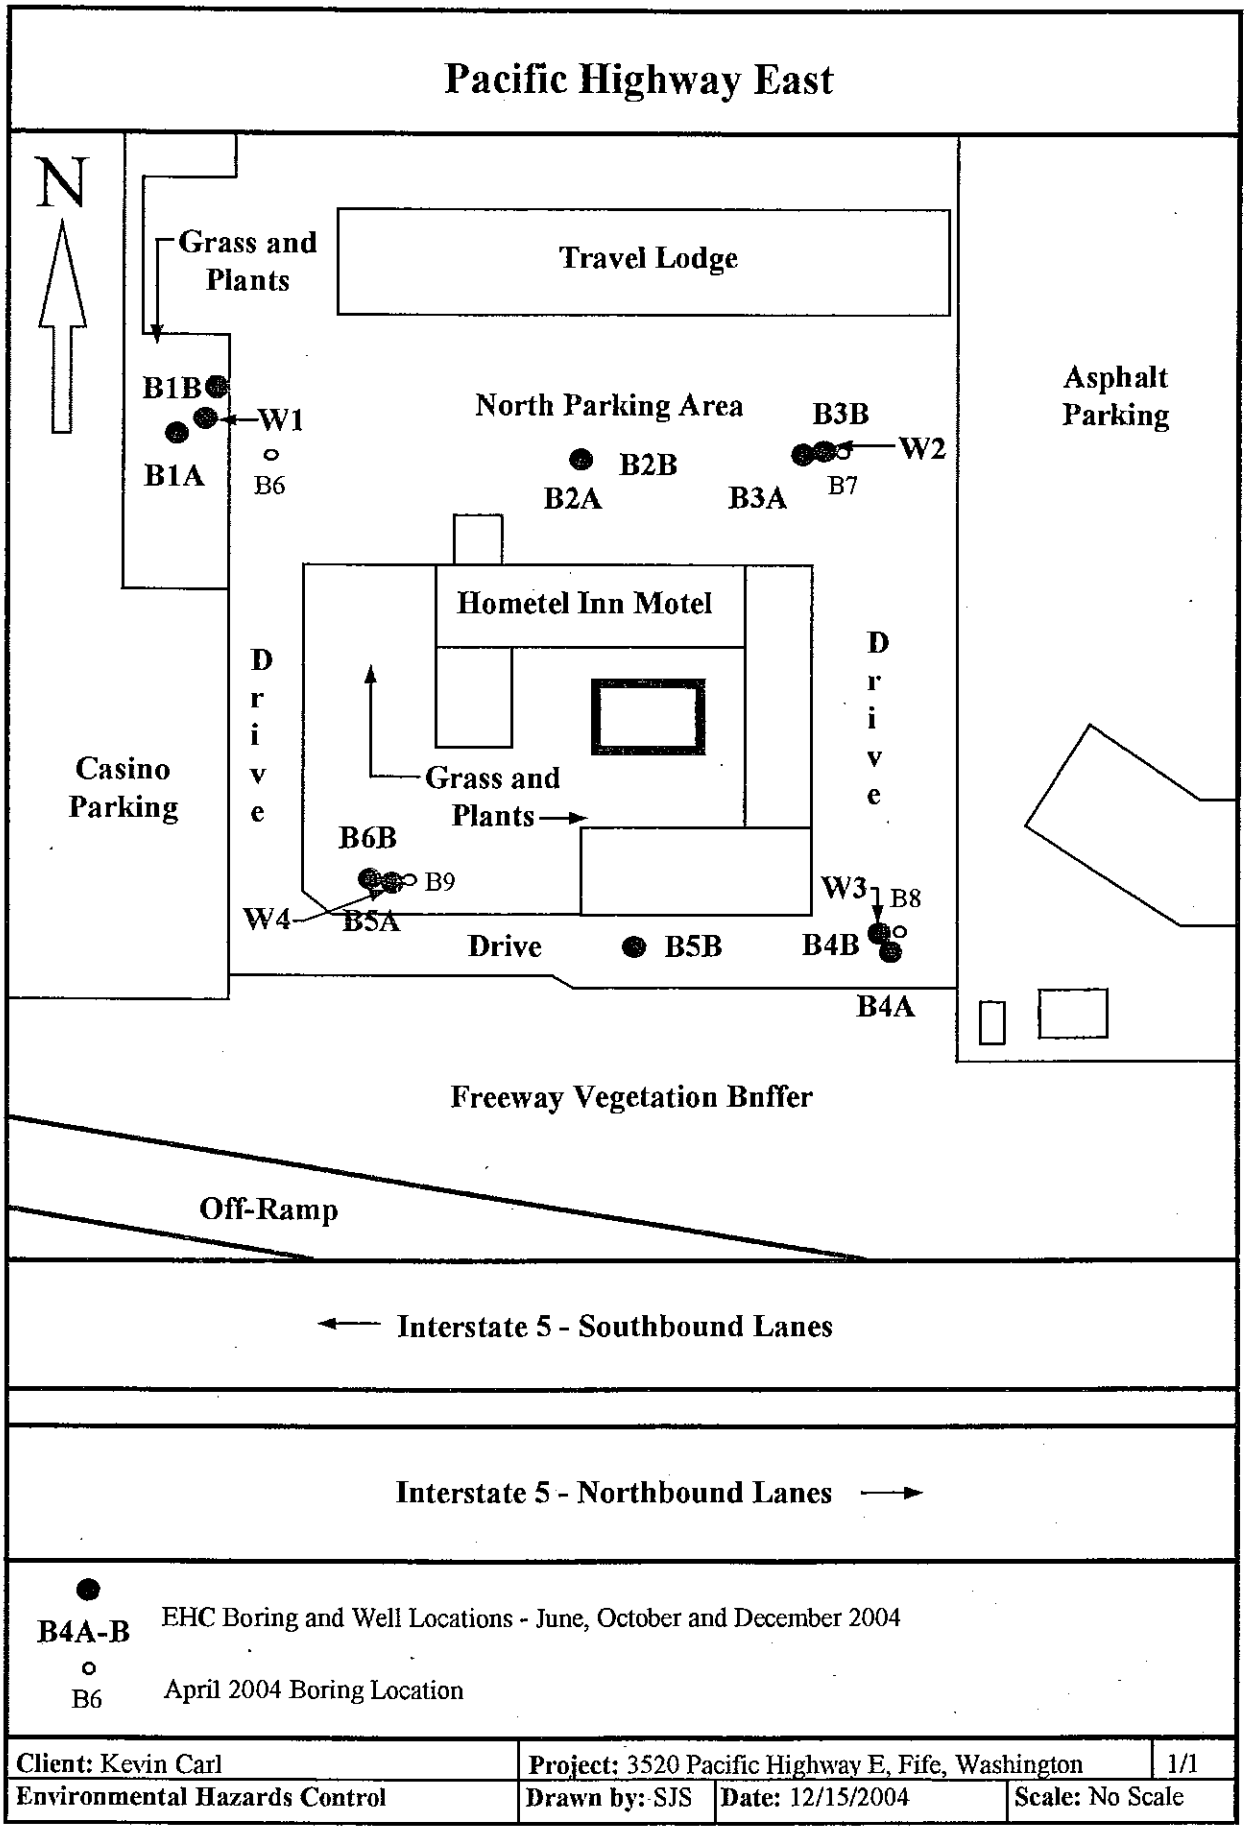
December 15, 2004

Project: **Hometel Inn Motel**
3520 Pacific Highway East, Fife, Washington
Project #: EHC04061B
Title: Groundwater Well Installation and Monitoring

Environmental Hazards Control (EHC) will perform *Groundwater Well Installation and Monitoring* on the referenced property to evaluate site groundwater (GW) to offer recommendations for further investigation, if warranted. Based upon the history of the site (agriculture prior to 1960s and motel from 1960s to present and previous report data related to heavy metals in shallow GW), existing site conditions (site building surrounded by asphalt parking and drives and minor vegetation), EHC will install 4 wells to depth up to 8' below ground surface (bgs). The GW sampling will assist in determining at what the total and dissolved concentrations of the heavy metal arsenic are in GW.

Standard sampling protocols will be adhered to throughout the work. All well installation work and conditions will be documented on Well Logs. All GW monitoring will be documented on Groundwater Sampling Logs. Proper personal protective equipment will be donned, including disposable gloves, rubber boots, hearing protection and eye protection during the work. And, distilled water rinses will be performed on all equipment prior to and between uses.

The wells will be located in and around the perimeter (4 corners) of the subject property adjacent or near the location of previous borings



Groundwater samples will be stored in chilled coolers during all fieldwork. A laboratory chain-of-custody form will be completed and the samples will be submitted to a qualified laboratory for analysis on a "standard" turn-around basis.

Groundwater samples will be analyzed by the following methods:

- Groundwater samples:
  1. USEPA Method 6020 (Heavy metals arsenic – total and dissolved)

Our well locations have been plotted on the attached map. Final or actual well locations will be determined by subsurface conditions, i.e. utilities, buried objects, etc. Following a call to the Utilities Underground Locating Service, the various service providers will identify their respective utilities by marking paved and un-paved surface with the appropriate colored paint.

TRANSMITTAL MEMORANDUM

DATE: December 21, 2004

TO: Steven Salter
Environmental Hazards Control
36526-3rd Avenue S.W, Suite 101
Federal Way, WA 98023-7330

PROJECT: Hometel Inn EHC0406CB

REPORT NUMBER: 125498

TOTAL NUMBER OF PAGES: 18

Enclosed are the test results for four samples received at STL Seattle on December 17, 2004.

The report consists of this transmittal memo, analytical results, quality control reports, a copy of the chain-of-custody, a list of data qualifiers and analytical narrative when applicable, and a copy of any requested raw data.

Should there be any questions regarding this report, please contact me at (253) 922-2310.

Sincerely,

Katie Downie
Project Manager

DATA QUALIFIERS AND ABBREVIATIONS

B1: This analyte was detected in the associated method blank. The analyte concentration was determined not to be significantly higher than the associated method blank (less than ten times the concentration reported in the blank).

B2: This analyte was detected in the associated method blank. The analyte concentration in the sample was determined to be significantly higher than the method blank (greater than ten times the concentration reported in the blank).

C1: Second column confirmation was performed. The relative percent difference value (RPD) between the results on the two columns was evaluated and determined to be < 40%.

C2: Second column confirmation was performed. The RPD between the results on the two columns was evaluated and determined to be > 40%. The higher result was reported unless anomalies were noted.

C3: Second analysis confirmation was performed. The relative percent difference value (RPD) between the results on the two columns was evaluated and determined to be $\leq$ 30%.

C4: Second analysis confirmation was performed. The RPD between the results on the two columns was evaluated and determined to be > 30%. The original analysis was reported unless anomalies were noted.

M: GC/MS confirmation was performed. The result derived from the original analysis was reported.

D: The reported result for this analyte was calculated based on a secondary dilution factor.

E: The concentration of this analyte exceeded the instrument calibration range and should be considered an estimated quantity.

J: The analyte was analyzed for and positively identified, but the associated numerical value is an estimated quantity.

MCL: Maximum Contaminant Level

MDL: Method Detection Limit

RL: Reporting Limit

N: See analytical narrative

ND: Not Detected

X1: Contaminant does not appear to be "typical" product. Elution pattern suggests it may be _____.

X2: Contaminant does not appear to be "typical" product.

X3: Identification and quantitation of the analyte or surrogate was complicated by matrix interference.

X4: RPD for duplicates was outside advisory QC limits. The sample was re-analyzed with similar results. The sample matrix may be nonhomogeneous.

X4a: RPD for duplicates outside advisory QC limits due to analyte concentration near the method practical quantitation limit/detection limit.

X5: Matrix spike recovery was not determined due to the required dilution.

X6: Recovery and/or RPD values for matrix spike(/matrix spike duplicate) outside advisory QC limits. Sample was re-analyzed with similar results.

X7: Recovery and/or RPD values for matrix spike(/matrix spike duplicate) outside advisory QC limits. Matrix interference may be indicated based on acceptable blank spike recovery and/or RPD.

X7a: Recovery and/or RPD values for this spiked analyte outside advisory QC limits due to high concentration of the analyte in the original sample.

X8: Surrogate recovery was not determined due to the required dilution.

X9: Surrogate recovery outside advisory QC limits due to matrix interference.

1,1,1 Trichloroethane	71-55-6	200 ug/liter[y]
Trichloroethylene	79-01-6	5 ug/liter[z]
Vinyl chloride	75-01-4	0.2 ug/liter[aa]
Xylenes	1330-20-7	1,000 ug/liter[bb]

Footnotes:

a **Caution on misusing this table.** This table has been developed for specific purposes. It is intended to provide conservative cleanup levels for drinking water beneficial uses at sites undergoing routine cleanup actions or those sites with relatively few hazardous substances. This table may not be appropriate for defining cleanup levels at other sites. For these reasons, the values in this table should not automatically be used to define cleanup levels that must be met for financial, real estate, insurance coverage or placement, or similar transactions or purposes. Exceedances of the values in this table do not necessarily mean the ground water must be restored to those levels at all sites. The level of restoration depends on the remedy selected under WAC 173-340-350 through 173-340-390.

b **Arsenic.** Cleanup level based on background concentrations for state of Washington.

c **Benzene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

d **Benzo(a)pyrene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61), adjusted to a 1×10^{-5} risk. If other carcinogenic PAHs are suspected of being present at the site, test for them and use this value as the total concentration that all carcinogenic PAHs must meet using the toxicity equivalency methodology in WAC 173-340-708(8).

e **Cadmium.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.62).

f **Chromium (Total).** Cleanup level based on concentration derived using Equation 720-1 for hexavalent chromium. This is a total value for chromium III and chromium VI. If just chromium III is present at the site, a cleanup level of 100 ug/l may be used (based on WAC 246-290-310 and 40 C.F.R. 141.62).

g **DDT (dichlorodiphenyltrichloroethane).** Cleanup levels based on concentration derived using Equation 720-2.

h **1,2 Dichloroethane (ethylene dichloride or EDC).** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

i **Ethylbenzene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

are #6 fuel oil, bunker C oil, hydraulic oil and waste oil. The cleanup level is based on protection from noncarcinogenic effects during drinking water use, assuming a product composition similar to diesel fuel. The ground water cleanup level for any carcinogenic components of the petroleum [such as benzene, PAHs and PCBs] and any noncarcinogenic components [such as ethylbenzene, toluene, xylenes and naphthalenes], if present at the site, must also be met. See Table 830-1 for the minimum testing requirements for heavy oil releases.

Mineral oil means non-PCB mineral oil, typically used as an insulator and coolant in electrical devices such as transformers and capacitors measured using NWTPH-Dx. The cleanup level is based on protection from noncarcinogenic effects during drinking water use. Sites using this cleanup level must analyze ground water samples for PCBs and meet the PCB cleanup level in this table unless it can be demonstrated that: (1) The release originated from an electrical device manufactured after July 1, 1979; or (2) oil containing PCBs was never used in the equipment suspected as the source of the release; or (3) it can be documented that the oil released was recently tested and did not contain PCBs. Method B (or Method C, if applicable) must be used for releases of oils containing greater than 50 ppm PCBs. See Table 830-1 for the minimum testing requirements for mineral oil releases.

y **1,1,1 Trichloroethane.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

z **Trichloroethylene.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61).

aa **Vinyl chloride.** Cleanup level based on applicable state and federal law (WAC 246-290-310 and 40 C.F.R. 141.61), adjusted to a 1 x 10^{-5} risk.

bb **Xylenes.** Cleanup level based on xylene not exceeding the maximum allowed cleanup level in this table for total petroleum hydrocarbons and on prevention of adverse aesthetic characteristics. This is a total value for all xylenes.

Table 740-1
Method A Soil Cleanup Levels for Unrestricted Land Uses.[a]

Hazardous Substance	CAS Number	Cleanup Level
Arsenic	7440-38-2	20 mg/kg[b]
Benzene	71-43-2	0.03 mg/kg[c]
Benzo(a)pyrene	50-32-8	0.1 mg/kg[d]
Cadmium	7440-43-9	2 mg/kg[e]
Chromium		
Chromium VI	18540-29-9	19 mg/kg[f1]
Chromium III	16065-83-1	2,000 mg/kg[f2]
DDT	50-29-3	3 mg/kg[g]
Ethylbenzene	100-41-4	6 mg/kg[h]
Ethylene dibromide (EDB)	106-93-4	0.005 mg/kg[i]
Lead	7439-92-1	250 mg/kg[j]

Lindane	58-89-9	0.01 mg/kg[k]
Methylene chloride	75-09-2	0.02 mg/kg[l]
Mercury (inorganic)	7439-97-6	2 mg/kg[m]
MTBE	1634-04-4	0.1 mg/kg[n]
Naphthalenes	91-20-3	5 mg/kg[o]
PAHs (carcinogenic)		See benzo(a)pyrene[d]
PCB Mixtures		1 mg/kg[p]
Tetrachloroethylene	127-18-4	0.05 mg/kg[q]
Toluene	108-88-3	7 mg/kg[r]
Total Petroleum Hydrocarbons[s] [Note: Must also test for and meet cleanup levels for other petroleum components--see footnotes!]		
Gasoline Range Organics		
Gasoline mixtures without benzene and the total of ethylbenzene, toluene and xylene are less than 1% of the gasoline mixture		100 mg/kg
All other gasoline mixtures		30 mg/kg
Diesel Range Organics		2,000 mg/kg
Heavy Oils		2,000 mg/kg
Mineral Oil		4,000 mg/kg
1,1,1 Trichloroethane	71-55-6	2 mg/kg[t]
Trichloroethylene	79-01-6	0.03 mg/kg[u]
Xylenes	1330-20-7	9 mg/kg[v]

Footnotes:

a **Caution on misusing this table.** This table has been developed for specific purposes. It is intended to provide conservative cleanup levels for sites undergoing routine cleanup actions or for sites with relatively few hazardous substances, and the site qualifies under WAC 173-340-7491 for an exclusion from conducting a simplified or site-specific terrestrial ecological evaluation, or it can be demonstrated using a terrestrial ecological evaluation under WAC 173-340-7492 or 173-340-7493 that the values in this table are ecologically protective for the site. This table may not be appropriate for defining cleanup levels at other sites. For these reasons, the values in this table

EQUIPMENT LIST

Attachment 6

Hometel Inn Motel @ 3520 Pacific Highway East, Fife, Washington
Project #: EHC04061B

Equipment List

Attachment 6

The following is a list of equipment used by EHC during the *Groundwater Well Installation and Monitoring* work at 3520 Pacific Highway East, Fife, Washington.

1. Orion Model 230A pH and Temperature Meter (calibrated prior to use)
2. Disposable coveralls
3. Disposable latex gloves
4. Rubber boots
5. Hearing protection (ear plugs)
6. Distilled/de-ionized water (2 gallons)
7. Trisodium phosphate
8. Paper towels
9. Utility knife
10. Measuring tapes (25' and 300')
11. Flash light
12. Tools kit (ratchet, sockets, Allen wrenches, pliers, screw drivers, etc.)
13. 4 ounce glass jars
14. Poly bottles (non-preserved)
15. Cooler with chill packs
16. Temperature gauge for cooler
17. Hand wipes (unscented)
18. Numerous orange cones for directing traffic and cordoning off work areas
19. Department of Transportation approved sign indicating "Road Work Ahead"

SUBJECT **Remedial Investigation Report**
Fife RV Center
3410 Pacific Highway East
Fife, Washington 98424

VCP Coordinator,

At the request of Chris LaVerdiere, Aerotech Environmental Consulting, Inc. ("Aerotech") has prepared the enclosed *Remedial Investigation* which summarizes environmental investigation activities to date. As described in the enclosed report, Aerotech plans to use this report to facilitate access with adjacent parcels and requests an opinion from the Washington State Department of Ecology regarding the investigations completed to characterize the historical release according to the substantive requirements of the MTCA.

Aerotech and Mr. Chris LaVerdiere, appreciate your assistance in the matter. Please do not hesitate to contact me or Nick Gerkin at 206-257-4211 with any questions regarding the Site.

Sincerely,

Justin Foslien
Licensed Geologist WA #2504
Email: justin@dirtydirt.us

EXECUTIVE SUMMARY

The subject Property consists of one irregularly-shaped 3.76-acre Parcel of commercial land located on the south side of Pacific Highway East in Fife, Washington. One approximately 10,763 square foot, 2-story structure, occupied by *Fife RV Center,* is situated near the southeastern corner of the Property. Asphalt parking areas surround the structure on all sides and are utilized to display RVs. A 0.77-acre gravel parking lot utilized to store RVs, and the subject of this investigation, is situated on the west side of the Property.

Adjoining to the south is a drainage ditch that appear to discharge to the east, followed by Interstate 5. The neighboring Parcel to the east includes approximately 5.24 acres, currently leased by the Fife RV Center for use as additional storage. The Puyallup River approaches the Site within 3,000 feet to the southwest, and the Blair Waterway and Commencement Bay are located over 4,000 feet to the north.

Formerly included within the same Parcel, and now adjoining to the north, is a Tahoma Express Gas Station and a Jack in the Box restaurant followed by Pacific Highway East and an *Econolodge.* The Tahoma Express Gas Station was listed on Ecology's Site Cleanup List as Site No. 5015. Petroleum hydrocarbons were documented at the Tahoma site prior to remediation, at concentrations above the State Cleanup Levels in soil and groundwater. Ecology issued a No Further Action determination for that site in 1993.

From the mid 1960's to the late l980's a *Gasamet Gasoline Station* occupied the western portion of the western gravel paved lot on the Subject Property and the southern portion of the Jack in the Box Property. Fuel dispenser islands were located south and east of the eastern terminus of the current restaurant drive-thru, with Underground Storage Tank Basins situated both to the east and west, and a building farther south. A triangular-shaped wooded water retention area (Bio-Swale) is located at the west side of the Site. In 2014, *Associated Earth Sciences,* Inc. conducted a *Supplemental Phase II Environmental Site Assessment* at the subject Property. Petroleum hydrocarbons were detected at concentrations above the Model Toxic Control Act ("MTCA") Method A Clean-up Levels (CULs) in soil and groundwater samples in the vicinity of the former *Gasamet* pump islands and UST Basins. Based on these results, Mr. Chris LaVerdiere, requested *Langseth Environmental* ("Langseth") *and Aerotech Environmental Consulting, Inc.* ("Aerotech") initiate site remedial excavation and environmental consulting services to address petroleum impacted soils.

In 2014, *Associated Earth Sciences,* Inc. conducted a *Supplemental Phase II Environmental Site Assessment* at the subject Property. Petroleum hydrocarbons were detected at concentrations above the MTCA Method A CULs in soil and groundwater samples in the vicinity of the former *Gasamet* pump islands and UST Basins. Based on these results, Mr. Chris LaVerdiere, requested *Langseth Environmental* ("Langseth") *and Aerotech Environmental Consulting, Inc.* ("Aerotech") initiate site remedial excavation and environmental consulting services to address petroleum impacted soils.

1,685.24 tons of petroleum impacted soil were removed in late 2016. The first six groundwater monitoring wells were installed immediately thereafter, followed by monitoring wells (MW7, MW8, and MW9) in July of 2017.

Soil and Groundwater:

Analytical data collected during the July 2018 site assessment indicate that groundwater and soil contain concentrations above MTCA Method A CULs exist along the northern Fife RV Center property shared with Jack in the Box. Soil borings B6-B9 advanced along the fenced property line indicated the extent of soil and groundwater impacted by petroleum related hydrocarbons extends into the Jack in the Box parcel immediately to the north.

A soil sample collected from soil boring B3 at the southwestern property boundary also contained concentrations of TPHg and benzene above MTCA Method A CULs. Groundwater samples collected from monitoring well MW12 have also contained concentrations of benzene above MTCA Method A CULs. Additional investigation in necessary to define the Site toward the WSDOT right of way associated with the Interstate 5 Off-Ramp.

1. INTRODUCTION

The purpose of this Remedial Investigation ("RI") is to characterize the nature and extent of contamination at the Site. Aerotech Environmental Technology, Inc ("Aerotech") was retained by Mr. Chris LaVerdiere of Fife RV Center to summarize the work completed at the Site and obtain an opinion from the VCP regarding the substantive requirements of the MTCA.

Under MTCA, 173-340-200 Washington Administrative Code ("WAC") the Site is defined by the nature and extent of contamination associated with one or more releases of hazardous substances prior to any cleanup of the contamination. Aerotech has completed several investigations to define the Site based on previous release of petroleum hydrocarbons; however, the data indicates petroleum related compounds exist beyond the parcel boundaries. Furthermore, it appears more than one source may be contributing to the existing plume with soil and groundwater from an adjacent property parcel, as historically the parcel was subdivided from a larger parcel when the release occurred. It is Aerotech's intent to utilize the information summarized in this report to facilitate access on adjacent properties to ultimately define the nature and extent of the Site.

1.1. GENERAL SITE INFORMATION

Site Name:	Fife RV Center
Site Address:	3410 Pacific Highway East Fife, Washington 98424

Property Owner:	Chris LaVerdiere 3410 Pacific Highway East Fife, Washington 98424 (253) 284-6608 chrisl@fifervcenter.com

1.2. SITE LOCATION/DEFINITION

The subject Property (3410 Pacific Highway East; Parcel # 0320111067) is comprised of one irregularly-shaped 3.76-acre Parcel, located on the south side of Pacific Highway East in Fife, Washington (Figures 1 & 2). One building, occupied by Fife RV Center, is situated on the southeastern comer of the Property. It is an approximately 10,763 square foot, 2-story structure with the main entrance to the north. An approximately 1,000 square foot, one-story structure is situated northeast of the main building along the eastern property boundary. Asphalt parking areas surround the structure on

all sides and are utilized for the storage and showing of the RV inventory. On the west side of the parcel lies an approximately 0.77-acre vacant gravel parking lot, used to store recreational vehicle ("RV") inventory.

The Property is situated between Blair Waterway (leading to Commencement Bay), which is approximately 4,000 feet to the north and the Puyallup River, which is located 3,000 feet to the southwest and flows to the northwest into Commencement Bay.

The MTCA site (Site) is defined by the extent of release to soil as petroleum related hydrocarbons associated with the former *Gasamet Gasoline Station* previously located on the *Fife RV Center* and *Jack in the Box* parcels. The entire extent of the MTCA Site Boundary is unknown currently. The boundary at least extends to the parcel boundary on the west along the I-5 off ramp and to the north, where based on existing soil data extends north into the parcel currently occupied by *Jack in the Box*.

1.2.1. SURROUNDING AREA DESCRIPTION:

Surrounding areas include a drainage area to the south with Interstate 5 adjoining beyond (Figure 3). The neighboring Parcel to the east (3520 Pacific Highway East; Parcel # 0320111049) includes approximately 5.24 acres which is leased by *Fife RV Center* for use as additional storage. Formerly included with this Parcel before being subdivided in 2004, situated along Pacific Highway East to the north, is a Travelodge (3518 Pacific Highway East; Parcel # 0320024106). This Parcel is listed on Washington State Department of Ecology ("Ecology") Voluntary Cleanup Program List as Site No. SW0601 and is known as *Homotel*. It has been confirmed to contain petroleum products and metals at concentrations above the State Cleanup Levels in soil and in groundwater.

Pacific Highway East, followed by an *Econolodge*, are adjoining the subject Property to the north (Figure 3). Formerly included within the same Parcel as the subject Property is a *Tahoma Express Gas Station* (3408 Pacific Highway East; Parcel # 0320024105) and a *Jack in the Box* (3402 Pacific Highway East; Parcel # 0320024104) adjoin to the west (north of excavation area) followed by the Port of Tacoma Road. The *Tahoma Express Gas Station* was listed on Ecology's Site Cleanup List as Site No. 5015. The Ecology Database lists the site as formerly having petroleum hydrocarbons at concentrations above the State Cleanup Levels in soil and groundwater. The site received a No Further Action determination from Ecology in 1993. A drainage area is located off-Property to the southwest with Interstate 5 beyond.

1.2.2. PHYSIOGRAPHIC SETTING/TOPOGRAPHY

The precise Property location is N 47° 14' 34.44" / W 122° 22' 58.80" as determined by Delorme mapping data. The Site elevation is approximately 9 to 12 feet above mean sea level ("AMSL"). As observed during Site visits and confirmed on the USGS topographic map, the subject Property is relatively flat (Figure 4). As is commonly the case in low-lying areas near sea level, many roads and properties appear to be elevated several feet above the original grade. Evidence of the original grade may be seen in the decrease in elevation evident north of Pacific Highway East, north of the subject Property. A ditch is located a few tens of feet south of the Property adjoining to the south. A second ditch is located east of the property adjoining to the east. The field west of the subject Property slopes markedly to the level of the ditch to the south. Pacific Avenue East is elevated approximately two feet above the Site.

Slopes in the vicinity of the Site descend to the southwest towards the Puyallup River. The elevation of the parcel north of Pacific Highway East (*Econolodge*) is approximately that of the subject Parcel, 11 feet above mean sea level ("MSL"), however, Pacific Highway East itself is approximately 4 feet above that. The topography slopes steadily in a southerly direction from Pacific highway East towards the subject Parcel until the local topographic low, 4 feet above MSL at the drainage area southwest of the Site.

The regional topography within the Commencement Bay tidal flats is that of the nearly planar surface generated by the placement of artificial fill material in the later decades of the nineteenth century and the early years of the twentieth century. Elevations on ridges over one mile to the south increase to more than 200 feet AMSL, at the northernmost margins of the south Tacoma upland area.

1.3. SITE HISTORY

The subject Property was originally developed prior to 1940 for agricultural use on deltaic and alluvial plains near the margins of the Commencement Bay. A private residence and a barn or garage structure were present on the property to the south, property once a part of a larger parcel of land including the Site. A *Gasamet Gasoline Station* and store were constructed in 1964 and appear to have been located on both the current *Fife RV Center* and *Jack in the Box* properties. The gasoline station operated until 1987 and then was demolished and replaced in 1987 and 1988 by the existing structures, leased by Unocal and Sac's Deli, then Shell, Chevron and now the *Tahoma Express Gas Station*.

Four 8,000-gallon underground fuel storage tanks were reportedly removed from the former *Gasamet Gasoline Station* property to the south, and two 12,000-gallon underground fuel storage tanks were installed beneath a concrete pad west of the new fuel pump islands on the *Tahoma Express Gas Station*. Petroleum impacted soil was discovered in 1990, after which the service station was closed for two years while Unocal performed investigations and remediation of both soil and groundwater. Two existing tanks were removed, clean soil closure samples were collected, and two double walled steel-clad fiberglass replacement tanks were installed. In a letter issued by the State of Washington Department of Ecology, dated August 16, 1993, cleanup was characterized as complete; the letter states that no further action is required with regard to Unocal's participation in the state Independent Remedial Action Program, and that this opinion applied solely to the documented release associated with the tank system operated by Unocal between 1987 and 1990. The service station was reopened as a Shell branded gasoline retail facility in 1994, and Chevron in 1996.

The historical petroleum hydrocarbon release of focus in this RI, is associated with a Gasamet gasoline station occupied the western portion of the western gravel paved lot from the mid 1960's to the late 1980's on the *Fife RV Center* and *Jack in the Box* properties. Fuel dispenser islands were located south and southeast of the eastern terminus of the current restaurant drive-thru, with Underground Storage Tank Basins situated both to the east and west, and a building farther south. A triangular-shaped wooded water retention area ("Bio-Swale") is located to the west. Test pit exploration conducted in 2000 indicated strong petroleum odor in soil both south and southeast of the current *Jack in the Box* restaurant location, the bio-swale area, and the adjoining gravel lot.

1.4. PREVIOUS SITE ASSESSMENT

In October 2013, Associated Earth Sciences, Inc. ("AESI") conducted a Phase I Environmental Site Assessment at the subject Property, now called Fife RV Center, located at 3410 Pacific Highway East in Fife, Washington. Within the Phase I, they state that a *Gasamet Gasoline Station* operated at the northwest corner of the Property from the 1960s through the 1980s, and that the Property was listed on the Washington State Department of Ecology ("Ecology") CSCSL list for a petroleum release and arsenic release in the groundwater. Arsenic was determined not to be a contaminant of concern. A separate, remediated release was discovered at the northeast adjoining Chevron fueling station (which received a No Further Action designation from Ecology in 1993) (AESI, 2014).

In December 2013, AESI observed a geophysical survey consisting of electromagnetism and ground-penetrating radar. No abandoned underground storage tanks ("USTs") or former UST basins were discovered from the survey.

The following day, AESI observed the advancement of ten direct push borings: nine to a depth of 10 feet bgs, with EB6 to 15 feet bgs. Soil samples were collected at every borehole, and analyzed for TPHg, TPHd, TPHo, and BTEX. The samples were passed through a silica-gel column prior to analyses of TPHd and TPHo. Select samples from EB4 through EB6 (near the former pump islands) were additionally analyzed for total lead. Concentrations of TPHg and BTEX were detected above MTCA Method A screening levels in EB4 at 5 feet bgs. Concentrations of TPHg, benzene, ethylbenzene, and total xylenes were detected above screening levels in EB5. Concentrations of benzene, toluene, and ethylbenzene were detected above screening levels in EB6. No other analytes were detected above the MTCA Method A screening levels (AESI, 2014).

One groundwater grab sample was collected from the screened interval at the base of each of the ten

temporary borings: nine at a depth of 10 feet bgs, while EB6 was at a depth of 15 feet bgs. All samples were analyzed for TPHg and BTEX. EB3W through EB7W, as well as EB10W, were additionally analyzed for TPHd and TPHo after passing through a silica-gel column prior to analyses. EB5W through EB7W were also analyzed volatile organic compounds by EPA Method 8260C. Concentrations of TPHg and benzene were detected above screening levels in EB4W though EB7W (i.e. within and immediately southeast of the fueling area.) Concentrations of TPHd were detected above screening levels in EB4W and EB6W, for which AESI states, "The sample chromatographic pattern does not resemble the fuel standard used for quantitation." Concentrations of ethylbenzene was detected above Cleanup Levels in EB4W and EB6W, while total xylenes were detected above Cleanup Levels in EB4W and EB5W. Naphthalene was detected above Cleanup Levels in EB6W. Methylene chloride was detected above screening level in EB5W, however AESI attributed this to laboratory contamination. Aerotech can confirm that the lab results from Friedman & Bruya, Inc. provided within the report, indicate a separate analysis of EPA Method 8260C for this sample does not detect methylene chloride above detection limits. Concentrations of 1,3,5-trimethylbenzene were detected above MTCA Method B Non-carcinogen Standard Values in EB5W. No Method A or Method B Carcinogen values are set for this compound. No other analytes were detected above the MTCA Method A screening levels. Further information may be found in AESI's *Supplemental Phase II Environmental Assessment*, *Freddie's Casino* dated January 24, 2014.

After the interim excavation activity where 1685.24 tons of impacted soil were removed, Aerotech installed six 2-inch PVC Groundwater Monitoring Wells, north, west and southwest of the former Gasamet pump island and UST areas. Two wells, MW-1 and MW-2, were installed to the north of the excavated area, and three wells, MW-4, MW-5, and MW-6, were installed south and west of the excavated area. Well screens were placed between 4 and 15 feet bgs, in order to accommodate potential water level fluctuations related to daily tides and Puyallup River water level variations, as well as local recharge. One well, MW-3, was installed at a "hot spot" near the center of the excavated area (Aerotech, 2016b).

Total Petroleum Hydrocarbons - Gasoline were detected above MTCA Method A screening levels for soil at MW-2, MW-4, and MW-5, at concentrations between 34 and 250 mg/kg (benzene at 0.061 to 0.530 mg/kg), and at MW-3 at 13,000 mg/kg (benzene at 9.3 mg/kg) Further information may be found in Aerotech's *Groundwater Monitoring Well Installation Report*, *Fife RV Center* dated November 17, 2016.

On July 14, 2017, Aerotech installed three 1-inch PVC Groundwater Monitoring Wells south and east of the former Gasamet Pump island and UST areas. Two wells, MW-7 and MW-8, were installed in the cross-gradient groundwater flow direction to the south, and one well, MW9, was installed in the upgradient groundwater flow direction to the east. Screens were placed from 4 to 14 feet bgs (Aerotech, 2017d).

Four soil samples collected during well installation operations were analyzed. Lead, gasoline, diesel, and oil constituents were not detected. One additional borehole (B-1) was advanced in the unexcavated water main hot zone northwest of MW-3 in order to document additional MCTA Table 830-1 parameters; PCBs, cPAHs, and fuel additives were not detected or were below screening levels, while methylene chloride and trichloroethylene (TCE) exceedances were documented in soil at B-1. Further information may be found in Aerotech's *Groundwater Monitoring Well Installation Report*, *Fife RV Center* dated August 17, 2017.

On February 23, 2018, BoreTec Drilling, Inc., along with Aerotech Environmental Consulting, Inc. installed three 2-inch diameter PVC Groundwater Monitoring Wells west and southwest of the former Gasamet-related station features. Two wells, MW11 and MW12, were installed on the southside of the Bio-Swale pond, downgradient groundwater flow direction to the west and southwest. The other well, MW10, was installed downgradient groundwater flow direction from groundwater monitoring well MW2. Groundwater Monitoring Wells MW10 and MW12 were screened from 4 to 14 feet bgs. MW11 was screened from 2 to 9 feet bgs. Wells were developed by surge block and pump method on February 28, 2018 (Aerotech, 2018).

Nine soil samples collected during well installation operations were analyzed. petroleum constituents,

lead, PCBs and VOCs were not detected above the MTCA Method A screening levels except for MW12(7), which contained gasoline concentrations above. Further information may be found in Aerotech's *Downgradient Groundwater Monitoring Well Installation Report, Fife RV Center* dated April 27, 2018.

1.5. SITE USE

1.5.1. CURRENT PROPERTY USES AND FACILITIES

The Property consists of a RV Storage lot which is unpaved with compacted gravel and (Figure 3). The western portions of the Parcel are paved with asphalt and include the Fife RV Center office building.

1.5.2. PROPOSED OR POTENTIAL FUTURE SITE USES

Planned use for the Property is to continue as parking and storage for Fife RV Center. There are no Plans for redevelopment currently. The parcel is zoned as regional commercial use (Figure 5).

1.5.3. REGULATORY STATUS

Aerotech entered the Site as "Fife RV Center" into the VCP under Ecology in January 2017. Adam Harris of the Southwest Regional Office Toxics Cleanup Program has been assigned as the Ecology Project Manager.

The latest opinion letter dated May 31, 2017 issued from Ecology determined additional remedial actions are necessary to clean up contamination at the Site.

1.5.4. TRANSPORTATION/ROADS

The Property is located south of the Pacific Highway East and north of Interstate 5. Access is obtained through an easement between Jack In The Box and Tahoma Express Gas Station as well as the entrance to Fife RV Center at 3410 Pacific Highway East. Port of Tacoma Road is the north south arterial and interchanges with Interstate 5. Interstate 5 that connects Canada to Mexico lies immediately to the south (Figure 3).

1.5.5. UTILITIES AND WATER SUPPLY

During the interim excavation activity, the layout of the subsurface utilities were identified and mapped (Figure 6). A storm sewer is located on the south-central portion of the Property and trends east west draining toward the west and the Bio-Swale Pond. A buried electric line crosses the parcel forming a polygon surrounding the former *Gasamet Gasoline Station* features. A main utility corridor with gas, electrical and storm sewer lines trends southeast to northwest along the northeast section of the parcel. A fire hydrant is connected to a northwest-southeast rending water line that bisects the middle of the parcel.

The City of Tacoma supplies potable water within the city limits. The City of Tacoma reports its water source as the upper eastern sections of the Green River watershed along the western flanks of the Cascade Mountains; the city also maintains groundwater production wells within the same area, in the vicinity of the Eagle Gorge Reservoir and the Howard Hanson Dam, some twenty miles east of the subject Property. A municipal well field, utilized during high demand periods, is located near Interstate 5 in south Tacoma, over three miles west of the subject Property.

1.6. POTENTIAL SOURCES OF HYDROCARBONS

The potential sources of hydrocarbons include the former USTs located in the center of the Property and the former fuel conveyance system including the fuel dispensers (Figure 6)

Facilities associated with the *Gasamet Gasoline Station* that operated from until 1964-1987 included at least three pump islands and four 8,000-gallon USTs. All former UST contents remain unknown.

Tank Type & Volume	Content	Date Installed	Date Decommissioned
8,000-gallon UST	Unknown	1964	1987
8,000-gallon UST	Unknown	1964	1987
8,000-gallon UST	Unknown	1964	1987
8,000-gallon UST	Unknown	1964	1987

2. FIELD INVESTIGATIONS

2.1. PREVIOUS ENVIRONMENTAL INVESTIGATIONS

A total of 12 groundwater monitoring wells have been completed on-Property to date. Monitoring of the groundwater wells has occurred quarterly since 2016 (Aerotech 2016c; 2017a; 2017b; 2017c; 2017e; 2017f; 2017g).

A total of 5 investigations have been completed at the Fife RV Center Property are summarized in the following reports:

- Associated Earth Sciences. August 16, 2014. *Supplemental Phase II Site Assessment,*
- Aerotech. November 1, 2016. *Site Remedial Excavation Report.*
- Aerotech. November 17, 2016. *Groundwater Monitoring Well Installation Report.*
- Aerotech. August 16, 2017. *Groundwater Monitoring Well Installation Report.*
- Aerotech. April 27, 2018. *Downgradient Well Installation Report.*

A chronological summary of work completed at Fife RV Center during the investigations listed above can be found in Appendix B. These data include investigations completed on the Fife RV Parcel only. A summary of historical soil analytical data and historical groundwater analytical data can be found in Tables 1 and 2, respectively. All historical boring logs are included in Appendix C. Boring logs for work completed in Aerotech's July 2018 site assessment are included in Appendix D. Laboratory analytical reports for soil and groundwater samples collected during the July 2018 site assessment are included in Appendix E. All currently existing wells and soil boring locations are shown on Figure 7. Other pertinent investigations completed in the immediate vicinity of the Fife RV Center property are also summarized in Appendix B and differentiated by parcel. All activities completed by Aerotech were in accordance with Aerotech Field Protocols (Appendix F) and selected photos from the investigation may be found in Appendix G.

2.2. ENVIRONMENTAL INVESTIGTION SUMMARY

A total 31 soil borings have been advanced at the Site (MW-1 through MW12). The soil analytical results can be found in Table 1 and Figure 7. Surface water analytical results are summarized in Table 2, groundwater analytical results and grab groundwater results are summarized in Tables 3 and 4 respectively.

2.2.1. CONSTITUENTS OF POTENTIAL CONCERN

Constituents of potential concern ("COPCs") based on current and past uses of the Property include the compounds listed in WAC Chapter 173-340-900 Table 830-1 Required Testing for Petroleum Releases. The following table lists COPCs for the Site:

Potential Source	COPCs
Former Gasoline Service Station Tanks and Fuel Conveyance System	• TPHg • TPHd • TPHo • BTEX • HVOCs • PAHs • PCBs • Total Lead

Based on the laboratory analytical results from environmental activities conducted at the Site, concentrations of TPHg and BTEX have been detected above MTCA Method A screening levels in

groundwater and soil samples.

2.2.2.SOIL

Locations of soil samples are depicted on Figure 7. Soil samples have been analyzed for TPHg, TPHd, TPHo BTEX, HVOCs, PCBs and lead. Laboratory analytical results indicated TPHg and BTEX above the MTCA Method A screening levels. The depths of the soil samples range from 2.5 to 14.5 feet bgs. A summary of laboratory analytical results, sample depth, and sample date for each soil sample submitted for analysis is presented in Table 1.

2.2.3.SURFACE WATER

Two samples of surface water were collected on February 26, 2018 from the Bio-Swale utilizing a teflon bailer (Table 2). One was collected from the northeast corner of the Bio Swale, down the bank from MW10 (POND-NE) and the other at the outfall exit from the pond (POND-EXIT; Figure 8). Each sample was analyzed for TPHg and BTEX, POND-NE contained concentrations of TPHg at 140 ug/L and the POND-EXIT was below all laboratory detection limits.

2.2.4.GROUNDWATER

Twelve groundwater monitoring wells (MW1 through MW12; Figure 8) have been installed at the Site since 2016.

Aerotech installed six 2-inch PVC groundwater monitoring wells, north, west and southwest of the former *Gasamet* pump island and UST areas. Two wells, MW-1 and MW-2, were installed to the north of the excavation, and three wells, MW-4, MW-5, and MW-6, were installed south and west of the interim excavation. One well, MW-3, was installed at a "hot spot" near the center of the excavated area.

On July 14, 2017, Aerotech installed three 1-inch PVC groundwater monitoring wells south and east of the former *Gasamet* pump island and UST areas. Two wells, MW-7 and MW-8, were installed in the cross-gradient groundwater flow direction to the south, and one well, MW9, was installed in the upgradient groundwater flow direction to the east.

Groundwater monitoring wells MW10-MW12 were installed in February 2018 to define extent of impacted groundwater in the west and southwest directions.

A summary of laboratory analytical results, and sample date for each groundwater sample submitted for analysis is presented in Tables 3 and 4.

2.2.5.SEDIMENT

Sediment has not been evaluated on the Property.

2.2.6.AIR/SOIL VAPOR

Air/Soil vapor concentrations have not been evaluated on the Property.

2.2.7.NATURAL RESOURCES/WILDLIFE

A Terrestrial Ecological Evaluation ("TEE") form has been completed as part of the previously submitted VCP Application.

2.2.8.CULTURAL HISTORY/ARCHEOLOGY

No information or reports of historical investigations have indicated a need for additional research of Property history or archaeology.

2.2.9.INTERIM ACTIONS

Aerotech, along with Langseth Environmental Services Inc. ("Langseth"), performed a Remedial Excavation in two phases during the month of October 2016. Analytical results from the Supplemental

Phase II Environmental Site Assessment were used to guide the initial stages of the excavation. Analytical results from samples collected during the Site Remedial Excavation and during Test Pit activities were used to determine the final extents. Major subsurface utilities were identified at several locations on the Property and limited the removal of soil containing petroleum hydrocarbons at concentration above the MTCA Method A screening levels at these locations. TPHg, Benzene, Toluene, Ethylbenzene, and Xylenes remain Constituents of Concern at the Site. Chlorinated Volatile Organic Compounds, TPHd, and TPHo not detected above laboratory Minimum Reporting Limits. Lead was detected, but at concentrations well below the MTCA Method A screening level for soil. A saturated, wooded. Bio-Swale is located on-Property to the Northwest of the Site Remedial Excavation and limited soil removal in that direction. Southwest of the Property, the topography slopes downward into a water retaining drainage area, which also limited soil removal. Former fueling station conveyance system remnants along with 1,685.24 tons of potentially contaminated soil to the LRI Landfill located at 30919 Meridian Street East, Graham, Washington. A total of 84 soil samples were collected from the sidewalls and bottom of the excavation in the vicinity of the former fuel pump and former UST basin. Groundwater was encountered on Site at levels ranging from 3 to 10 feet bgs (Aerotech, 2016a). Figure 7 illustrates the sample locations and extent of excavation completed during this action.

2.3. SITE CHARACTERIZATION - JULY 2018

Aerotech completed Soil Borings B2–B9 to determine the current soil and groundwater conditions along the Fife RV Center property boundary north and southwest of the former *Gasamet Gasoline Station* (Figures 7 & 8).

2.3.1. NOTIFICATIONS – "PUBLIC UTILITIES"

A public utility locate notification was performed prior to the start of work. Aerotech performed the "public" utilities notification on June 26, 2018 and was issued Ticket Number 18273696 by the Utilities Underground Location Center.

According to the Utilities Underground Location Center the utilities necessary for notification included:

District	Company	Marking	Customer Service	Repair
CC7711	COMCAST CABLE	(800)762-0592	(800)266-2278	(855)537-6296

2.3.2. PRIVATE UTILITIES LOCATION:

Additionally, Aerotech engaged personnel of Mountain View Locating Services of Bonney Lake, Washington to locate building and site utilities on July 3, 2018, prior to the start of the on Site drilling activities. No unanticipated or unexpected situations were discovered or encountered during the "private" locating activities.

Based in part upon pavement markings made by utility location technicians; the location of utility fixtures such as water, electrical, or manholes, and the presence of anomalies detected by induction or ground radar methodologies, monitoring well soil boring locations were chosen.

2.3.3. GROUND PENETRATING RADAR SURVEY:

A Ground Penetrating Radar ("GPR") Survey conducted by Mountain View Locating Services staff on July 3, 2018 in order to augment the induced current methodology, and to verify the presence of utility trenches such as sewer and water main trenches. Mr. Dave Schaff of Mountain View Locating Services, LLC employed Radar equipment utilizing Dual Frequency Antennae (300 MHz/800 MHz) manufactured by Geophysical Survey Systems. The locations of the water main and storm sewers were confirmed by means of GPR activities.

2.3.4. SITE ACTIVITIES:

Eight soil borings were advanced on July 3, 2018, under contract with Aerotech Environmental Consulting, Inc. All the work was performed during normal business hours. No unusual or unforeseen circumstances occurred during the Site activities.

2.3.5. DRILLING ACTIVITIES:

Drilling operations utilized a Jackhammer-mounted Limited Access Direct Push Rig, equipped with 2-inch diameter, four-foot long stainless-steel sampling rods.

The subsurface soil borings were performed by equipment owned and operated by a Licensed Driller from Standard Environmental Probe (“Standard”) of Tacoma, Washington. The on-Site drilling equipment was operated by personnel employed by Standard, Mr. Russell Vaughn (State of Washington Department of Ecology Well Drillers License No. 3143). All subsurface work was overseen by State of Washington Licensed Geologist, Mr. Justin Foslien (State of Washington License No. 2320). The laboratory analytical services were performed by a State of Washington licensed lab, Advanced Analytical Labs located in Redmond, Washington.

2.3.6. SOIL BORINGS:

A total of four soil borings were advanced on the southern and southwestern Property Boundary adjacent to the Interstate ROW, south and southwest of the former *Gasamet Gasoline Station*. An additional four borings were advanced in the gravel lot situated south of the Jack-in-the-Box building, north of one pair of former gasoline USTs and in the midst of the former pump island (which straddled the current Property Line) associated with the former *Gasamet Gasoline Station* (Figure 7).

2.3.7. SOIL SAMPLE COLLECTION:

A total of 17 discrete soil samples were collected on July 3, 2018 at eight soil boring locations.

Soils collected from each location were visually inspected for color quality and evidence of discoloration, and physically observed for the purpose of recording composition and noting odor, where distinctive. Each sample was handled with a fresh pair of clean nitrile gloves. Samples were placed in sterile four-ounce glass jars and 40cc glass vials preserved with 5ml methanol in accordance with procedures specified for USEPA Method 5035A.

Each sample was given a unique identifier number and placed in an iced cooler for sample preservation. Samples were held in the custody of the project manager, Nicholas Gerkin, and ice was checked and replenished while samples were held in the evening and maintained to the time of delivery to the lab. A Chain of Custody was maintained to record details associated with the collection and handling of each sample. The remaining soil samples were retained by the laboratory for analysis if the soil samples selected for laboratory analysis revealed elevated levels of constituents. Following the production of the initial Site sample results for soil, no follow-up laboratory analyses were requested for the subject Site, as of the date of this report.

2.3.8. GRAB GROUNDWATER SAMPLE COLLECTION:

A total of three (3) groundwater 'grab' samples were collected on July 3, 2018. The groundwater samples were collected through temporary well casings inserted in Soil Borings B6, B7, and B9. The groundwater samples were submitted for analyses based on the Scope of work discussed in the previous section.

The groundwater samples were extracted from the temporary well casings using a peristaltic pump. Each groundwater sample was extracted using new disposable polyethylene tubing with a fresh pair of clean nitrile gloves. Samples were then placed into laboratory supplied containers.

Each sample was given a unique identifier number and placed into an iced cooler for preservation. Samples were kept on ice until delivery to Advance Analytical Laboratory of Redmond, Washington.

2.3.9. EQUIPMENT DECONTAMINATION:

All sample acquisition equipment was decontaminated before and after the completion of each borehole to eliminate the potential for cross-contamination between borings, as required. All reusable sampling equipment for soil sampling, drive rods, and probes were decontaminated after each sampling point by washing with an Alconox-distilled water solution and rinsing with distilled water.

2.3.10. SITE RESTORATION:

Each borehole was complete with bentonite chips and gravel to match the surrounding surfaces. No landscape restoration was necessary.

2.3.11. RESULTS:

SUMMARY OF SAMPLE ACQUISITION

A total of eight soil borings were advanced in the Area of Concern to a maximum depth of 12 feet bgs. A total of seventeen soil samples were collected of which 15 were analyzed and three grab groundwater samples were collected of which all were analyzed. Detailed descriptions of each soil boring location, observations made during the acquisition, sampling information, and the field screening process are documented in soil boring logs attached to this report.

Total Petroleum Hydrocarbons – Gasoline and other Petroleum Constituents:

Gasoline and Benzene were detected above the MTCA Method A screening levels completed in nine of fifteen soil samples. Gasoline and Benzene were detected above the MTCA Method A screening levels in three of three grab groundwater samples. A summary of the remaining results may be found in Tables 1 & 3, including results from the previous investigations.

APPLICABLE ANALYTICAL METHODOLOGIES AND PARAMETERS

The analytical parameters were chosen based upon the results of previous investigations to provide a comprehensive characterization of the subsurface soils and groundwater present at the Site Areas of Concern and to comply with State of Washington recommendations.

Analytical Methodology:

Soil: **Gasoline Range Organics & Benzene, Ethylbenzene, Toluene, and Xylenes**

State of Washington NWTPH-Gx (TPHg)

USEPA 8021B (BTEX)

Laboratory Analysis:

Laboratory analysis was provided by:

3. NATURAL CONDITIONS

3.1. SITE GEOLOGY

The Puget Sound lies within a tectonic trough situated between the Olympic Mountains to the west, and the northern Cascade Mountains to the east. This trough is characterized by fault zones accommodating north-south compressional rotation, commonly resulting in predominant north-south and northwest-southeast oriented faults and fault zones. Elliott Bay lies north of the Seattle Fault Zone, while Tacoma's Commencement Bay lies south of the northernmost Tacoma Fault zone rupture. A major fault is mapped below the bluffs on which central Tacoma was developed, along the western margin of Commencement Bay. Commencement Bay and the Puyallup River Basin lie on the down dropped side of the fault. The uppermost soils are dominated by alluvial sediments and occasionally volcanic mud flows originating on the slopes of Mount Rainier. Deep borehole data indicate approximately 1,800 feet of unconsolidated glacial and interglacial sediments in the former tidal flats in the vicinity of the subject Property.

The subject Site and vicinity, south of the Blair Waterway, are mapped as Quaternary Alluvium. These soils are characterized as:

"Gravel, sand, silt, and clay. Deposited chiefly by modern streams, but includes some swamp deposits. Includes marine deposits near the mouth of the Puyallup river.... thickness ranges from a few feet to as much as 600 feet. Yield small to moderate quantities of water to wells. Locally capable of large yields."

(Walters and Kimmel, 1968; Booth et al, 2004; Smith, 1977; Jones et el, 1999)

Unconsolidated sediments documented in soil borings advanced at the subject Property include: 1) Gravel at depths between the ground surface and a depth of 3 feet, and 2) Sandy silt at depths between 3 feet and 8 feet. A Washington Department of Transportation test boring advanced near the intersection of the Port of Tacoma Road and Interstate 5, documents the presence of gravel with sand and sand to a depth of 8 feet, underlain by at least 12 feet of silt or silt with sand. The shallow gravels may represent fill material placed atop natural fluvially and alluvially deposited silts and sandy silts. These fill materials may be expected underneath roadways and developed properties. They are often designed to elevate the surface above shallow groundwater and reduce susceptibility to flooding due to groundwater flooding during wet periods; and flooding due to heavy precipitation or breaches and overtopping of the levee system or the associated ditch systems.

A Northwest-Southeast and Southwest-Northeast geologic cross section illustrating subsurface conditions observed at the Property can be found on Figure 8.

3.2. SITE HYDROGEOLOGY

The principal aquifers in the Puget Sound Region occur in glacial drift, that along with finer grained interglacial sediments, underlie the basin lowland to depths often exceeding 1,000 feet. Sand and gravel units within the glacial drift form the principle aquifers. These aquifers receive ample recharge from the typically heavy precipitation characteristic of western Washington. The glacial drift in the Puget Sound region varies greatly in composition and water yielding capacity. Typically, wells in glacial drift that tap silt, clay, or till in the region at approximately 75 to 100 feet below ground surface may have yields of 100 gallons or more per minute. Deeper wells tapping thick, saturated layers of highly permeable gravel and coarse sand, typically at depths greater than 250 feet below ground surface, can yield more than 1,000 gallons per minute.

The calculated groundwater flow direction at the Site is to the west and west southwest toward the bioswale to the west and the ditch to the west-southwest (Figure, Pot Map and Rose Diagram). Groundwater gradients increased markedly in close proximity to the ditch and bioswale areas, within a few tens of feet of the southwest corner of the Site.

Static water levels north and east of the subject Property have been recorded by other consultants between depths of three to six feet bgs. During the AESI Phase II, water levels were reported to range from three to seven feet bgs on the subject Property. Ditches in the vicinity are estimated to be as much

as four to five feet deep. Groundwater flow direction has been documented at the property to the north as flowing to the south-southwest; to the west and southwest at the current Travelodge property, adjacent to the east; and at the former Unocal/Texaco/Chevron Station and current Tahoma Express station, adjacent to the northwest, as flowing to the west-southwest, or to the south or southwest.

A groundwater divide, north of which groundwater flow may be expected to flow toward Commencement Bay, is likely present perhaps as near as a few hundred feet to the north of the Site; this groundwater divide may migrate considerable. The straightened and levee-bound Lower Puyallup River channel is located approximately 3,000 feet south west of the subject Property. Groundwater in the vicinity of the Site, based upon water level data may flow predominantly in the direction of the Puyallup River channel, but may also flow to the west or northwest where the groundwater system is influence by elevated Puyallup River water levels during flood stage or the wet winter seasons.

Components of an extensive ditch system are visible south of the Site, along the northern and southern margins of Interstate 5, and north of Pacific Highway East. Portions of the ditch system to the north may discharge to Wapato Creek to the east. Ditches to the south do not appear to be connected to the system to the north. The ditch adjoining the Site appears to discharge to the east, and then to the south via pipe underneath Interstate 5. When the water table is low, during dry summer months, water entering ditches may, in part, infiltrate vertically to a seasonally low water table; when the water table is higher, during wet winter periods, groundwater may discharge to deeper drainage ditches.

Because tidal fluctuations approach 15 or more feet in the Tacoma area, rhythmic fluctuations in ground water levels twice daily and flow direction may occur within some low-lying areas near Commencement Bay. Under some conditions, tidal fluctuations may potentially influence groundwater flow at the subject Property, given its location approximately 4,000 feet from the Blair Waterway and approximately 3,000 feet northeast of the Puyallup River channel. Groundwater flow direction at low tide may potentially be diverted somewhat to the west or even northwest. The predominant groundwater flow direction south of this nearby section of Pacific Highway appears to be to the west-southwest or west. Tidal influence is negligible based on no change in elevations on the Site for up to 9 hours in one day. .The Puyallup River in the area has been straightened and is protected by a levy system. Aside from the immediate influence of the designed ditch system at and near the Site, it is at this time expected to represent the primary boundary condition likely to influence overall groundwater flow near the Site.

Jones, Orr and Ebbert depict the shallow alluvial aquifer of Commencement Bay as hydraulically connected to adjoining glacial aquifers above; in general groundwater is expected to flow from the bluffs above, toward Commencement Bay and the Puyallup River, with a significant flow component in the direction of river flow, toward Commencement Bay.

The upper alluvial aquifer is characterized as a distinct hydrogeologic unit, hydraulically connected to more permeable sandy or gravelly units along the valley margins, often lying underneath glacial till

"Aquifer Qcl [Jones et al, 1999] is generally a confined aquifer except where it is exposed at the surface, where it is unconfined, or not completely saturated beneath Qvt (Vashon Till). It consists largely of sand and gravel deposits but does contain silt and clay within the sand and gravel matrix.... The altitude of the top of this aquifer ranges from 50 feet below sea level to 509 feet above sea level."

3.2.1. GROUNDWATER CONDITIONS

Groundwater occurs in the shallow saturated zone beneath the Site comprised of poorly graded fill sand as well as silty sand or sandy silt. The water table depth typically ranges between approximately 1 and 5.5 feet bgs (Table 3). Previous maps summarize in a rose diagram depict the local flow of groundwater is toward the southwest and the Puyallup River (Figure 12).

Recent dewatering associated with DOT construction project that is updating the Interstate 5 interchange with Port of Tacoma Road have depressed the water elevation as much as 8.39 feet at MW6 along the southwestern parcel boundary. This depression has also resulted in the increase of gradient and change in direction toward the southeast compared to previous events. Photographs of the ongoing construction activities are included in Appendix G.

3.3. SURFACE WATER

The Site is currently covered with compacted gravel, concrete and asphalt. In the event of a storm water overflow at the Property, stormwater surface runoff is collected via catch basins and conveyed via storm sewer located on the south-central portion of the Property and trends east west draining toward the west and the Bio-Swale Pond. The Bio-Swale then discharges to the west via 36-inch perforated pipe. This pipe flows under the I5 southbound off-ramp to additional drainage swale and ultimately to an outfall in the Puyallup River.

Currently there is no water present in the Bio-Swale due to the pumping and construction activity previously mentioned.

The nearest surface water body is the Puyallup River located approximately ½ mile southwest of the *Fife RV Center*. The Puyallup River flows west into Puget Sound approximately 2.75 miles northwest of the Site (Google Earth, 2018).

3.4. ECOLOGICAL RECEPTORS

3.4.1. SENSITIVE RECEPTOR SURVEY ANALYSIS

The nearest surface water body is the Puyallup River located approximately ½ mile southeast of the Property (Google Earth, 2018). Based on: 1) the previous interim removal of source areas of hydrocarbon concentrations above the MTCA Method A screening levels on the Property; 2) the presence of a bioswale on the northwest corner of the property; and future surface water drainage construction to include additional stormwater runoff controls it is unlikely that groundwater or soil beneath the subject property would pose a future risk to surface waters.

The nearest potable water well is located approximately 0.75 mile upgradient to the south of the Site on the western side of the Puyallup River (Health, 2018). The Property is not located within any groundwater well protection areas.

3.4.2. TERRESTRIAL ECOLOGICAL EVALUATION

A Terrestrial Ecological Evaluation (TEE) Form was completed for the Property as part of the VCP Application based on data at that time. A Simplified TEE was completed based on approximately 2.0 acres of contiguous undeveloped land on or within 500 feet of the subject site. An aerial map with a 500-foot radius encompassing the Property can be found in Appendix H along with a completed Simplified TEE exposure analyses procedure (Table 749-1). No further evaluation was necessary because according to WAC 173-340-7492(2)(a), the area of soil contamination is less than 350 square feet.

The TEE will be updated to reflect the area of delineated impacts once the final extent of the MTCA Site boundary is determined.

4. CONCEPTUAL SITE MODEL

The conceptual site model is a "conceptual understanding of a site that identifies potential or suspected sources of hazardous substances, types and concentrations of hazardous substances, potentially contaminated media, and actual and potential exposure pathways and receptors." As defined by MTCA WAC 173-340-200 (WAC, 2017). This report has provided details regarding how COPCs were released, the types and extent of constituents detected at the Site, and actual and potential receptors. This section provides a conceptual summary of the detailed information described in the previous sections. Figure 13 presents a graphical representation of the conceptual model for the Site.

4.1. SOURCES OF CONSTITUENTS OF CONCERN

The sources of hydrocarbons on the Site are the releases to soil of COPCs that were stored and distributed by the Former *Gasamet Gasoline Station*. These COPCs occurred via releases from USTs, pipes, and dispensers. These releases were focused in the vicinity of the first generation of UST basin and the former pump islandsThe COPCs were released to soil; the hydrocarbons then spread by vapor transport into the vadose zone, by partitioning from soil vapor into groundwater, and by direct leaching to groundwater from saturated soils. The Property is currently utilized as parking for recreation vehicles and the surface cover is compacted gravel.

4.2. FATE AND TRANSPORT

The sources of hydrocarbons on the Site are the releases to soil of COPCs that were stored and distributed by the former *Gasamet Gasoline Station*. These COPCs occurred via releases from USTs, pipes, and dispensers. These releases were focused in the vicinity of the first generation of UST basin and the former pump islands.

The COPCs were released to soil; the hydrocarbons then spread by vapor transport into the vadose zone, by partitioning from soil vapor into groundwater, and by direct leaching to groundwater from saturated soils. The presence of shallow groundwater beneath the Site also likely enabled some of the COPCs to be released directly to groundwater. The Property is currently unpaved with compacted gravel and vegetation around the Bio-Swale pond. Therefore, the potential of infiltration of rainwater that could leach COPCs from the soil or entrain soil vapors from chemicals and carry them downward to the water table is high.

4.3. EXPOSURE PATHWAYS AND RECEPTORS

The Property is within a regional commercial use area that includes public streets, businesses, and other industrial activities. The streets and parking lots are covered with asphalt or concrete. There is some terrestrial habitat in the area, associated with the Bio-Swale and buffers around Interstate 5. A municipal well field, utilized during high demand periods, is located over 3 miles west of the site (Aerotech, 2016). Current exposure pathways and receptors are limited to the following:

- Incidental ingestion of surface soils;
- Incidental ingestion of groundwater from leaching of soil:
- Inhalation of indoor air from volatilization of soil;
- Inhalation of outdoor air from volatilization of soil;
- Inhalation of indoor air from volatilization of groundwater; and
- Inhalation of outdoor air from volatilization of groundwater

The property surface is compacted gravel and no redevelopment is currently planned. However, a structure erected over the area of soil containing residual hydrocarbons could trap vapor containing COPCs. The soil and groundwater containing hydrocarbons remaining at the Site is the source of these vapors. Cleanup levels will be developed for indoor air based on the vapor intrusion pathway. based on recent guidance and planned confirmation sample data.

There is a potential for a future direct contact exposure pathway whereby construction workers digging in subsurface soil may be exposed to COPCs. Cleanup levels will be developed based on industrial worker exposure cleanup levels.

4.4. POTENTIAL FUTURE EXPOSURE PATHWAYS AND RECEPTORS

Future land use in the area is expected to remain general commercial, therefore the MTCA Method A and B Cleanup Levels are applicable to this Site. No significant changes in zoning are expected in the foreseeable future.

4.5. SOIL CLEANUP STANDARDS

The following pathways are considered for the establishment of soil cleanup levels at the Site:

- Protection of human health via direct exposure using the MTCA Method A Cleanup Levels;
- Protection of ecological receptors, an ecological evaluation is required under MTCA;
- Protection of groundwater resources from COCs leaching from soil; and
- Protection of indoor air from vapor intrusion from soil containing hydrocarbon concentrations exceeding the MTCA Method A Cleanup Levels.

In developing cleanup levels, the following Site-specific information is relevant:

- The Site and the adjacent properties are currently zoned for regional commercial use;
- Soil containing residual COPCs remains near buried water and electrical lines on the *Fife RV Center* parcel; and
- Soil containing residual COPCs remains along the property boundary with *Jack in the Box* and likely extends beyond the property boundary

Although definition of the release to soil has not been achieved, Aerotech selected MTCA A Cleanup Levels based on the current data.

4.6. GROUNDWATER CLEANUP STANDARDS

The following pathways are considered for the establishment of groundwater cleanup levels at the Site:

- Protection of human health via direct exposure using the MTCA Method A Cleanup Levels;
- Protection of ecological receptors, an ecological evaluation is required under MTCA;
- Protection of groundwater resources from COCs leaching from soil; and
- Protection of indoor air from vapor intrusion from soil containing hydrocarbon concentrations exceeding the MTCA Method A Cleanup Levels.

In developing cleanup levels, the following Site-specific information is relevant:

- The Site and the adjacent properties are currently zoned for regional commercial use; and
- Groundwater containing residual COPCs is present at the Site (Tables 3 & 4).
- Groundwater containing residual COPCs at the Property has not been defined and at least extends to the northern Property boundary shared with *Jack in the Box* from the area surrounding the former USTs in the central portion of the Property.

4.7. CLEANUP STANDARDS FOR INDOOR/AMBIENT AIR, SOIL GAS, SUB-SLAB SOIL GAS

In developing cleanup levels for indoor air, the following Site-specific information is relevant:

- Soil containing residual COPCs at the Property has not been defined and at least extends to the norther Property boundary shared with *Jack in the Box* from the area surrounding the former USTs in the central portion of the Property. Additionally, toward the southwest and the Property boundary shared with the Interstate 5 off ramp.
- Vapor intrusion from soil containing residual has not been evaluated.

4.8. CLEANUP LEVELS

CULs will be updated as additional data is collected from investigations. Based on the current conditions present at the Site, MTCA Method A is the appropriate CUL for both soil and groundwater.

	MTCA Cleanup Levels			
COPC	**Soil – Method A (mg/kg)**	**Soil – Method B Direct Contact (µg/kg)**	**Groundwater (µg/L)**	**Indoor Air (µg/m3)**
Benzene	0.030	N/A	5	N/A
Toluene	7	N/A	1,000	N/A
Ethylbenzene	6	N/A	700	N/A
Xylenes	9	N/A	1,000	N/A
TPHg	100a/30b	N/A	800a/1,000b	N/A
TPHd	2000	N/A	500	N/A
TPHo	2000	N/A	500	N/A
Lead	250	N/A	15	N/A

a = TPHg soil cleanup level is 30 mg/kg, unless benzene is not detected in the sample, or if toluene, ethylbenzene, and total xylenes constitute less than 1% of the TPHg present in the sample. If these conditions are met, the cleanup level for TPHg may be elevated to 100 mg/kg.
b = 800 mg/L if benzene is present in groundwater; 1,000 mg/L if no detectable benzene in groundwater

5. SUMMARY, CONCLUSIONS, AND RECOMMENDATIONS

5.1. SUMMARY AND CONCLUSIONS

From the mid 1960's to the late l980's a *Gasamet Gasoline Station* occupied the western portion of the western gravel paved lot on the Subject Property and the southern portion of the Jack in the Box Property. Fuel dispenser islands were located south and east of the eastern terminus of the current restaurant drive-thru, with UST Basins situated both to the east and west, and a building farther south. A triangular-shaped wooded water retention area (Bio-Swale) is located at the west side of the Site.

In 1987, Rittenhouse-Zeman & Associates (RZA) completed a geotechnical investigation where, hydrocarbon odors were encountered at soil boring B-1 (located beneath the present restaurant building) between 5 and 10 feet bgs. Samples collected from B-1; S-5 (11-12.5 feet), contained TPH in above the current MTCA Method A CULs") (RZA, 1988). RZA advanced four soil borings at the corners of the property (B-1A, B-2, B-3, B-4) in January 1998. No petroleum odor was observed in any of the four soil borings. Soil Sample S-4 collected from B-2 at 10-11.5 feet bgs contained TPH above the CUL (RZA, 1988). The location of this boring corresponded to the northwest corner of the *Jack in the Box* parcel.

In 2014, *Associated Earth Sciences,* Inc. conducted a *Supplemental Phase II Environmental Site Assessment* at the subject Property. Petroleum hydrocarbons were detected at concentrations above the Model Toxic Control Act ("MTCA") Method A Cleanup Levels in soil and groundwater samples in the vicinity of the former *Gasamet* pump islands and UST Basins. Based on these results, Mr. Chris LaVerdiere, requested *Langseth Environmental* ("Langseth") *and Aerotech Environmental Consulting, Inc.* ("Aerotech") initiate site remedial excavation and environmental consulting services to address petroleum impacted soils.

1,685.24 tons of petroleum impacted soil were removed in late 2016. The first six groundwater monitoring wells were installed immediately thereafter, followed by upgradient wells (MW7, MW8, and MW9) in July of 2017.

Analytical data collected during the July 2018 site assessment indicate that groundwater and soil contain concentrations above MTCA Method A CULs exist along the northern Fife RV Center property shared with *Jack in the Box*. Soil borings B7-B9 advanced along the fenced property line indicated the extent of soil and groundwater impacted by petroleum related hydrocarbons extends into the *Jack in the Box* parcel immediately to the north.

Soil and water samples collected from soil boring B3 at the southwestern property boundary also contained concentrations above MTCA Method A Cleanup Levels. Groundwater samples collected from monitoring well MW12 have also contained concentrations of benzene above MTCA Method A CULs. Additional investigation in necessary to define the Site toward the WSDOT right of way associated with the Interstate 5 Off-Ramp.

5.2. RECOMMENDATIONS

Based on the existing information collected from the *Fife RV Center* property, further action will be required to delineate the extent of petroleum- related contamination associated with the former *Gasamet Gasoline Station*. Aerotech recommends submitting this report to the Ecology with a request for opinion on the activities completed to date; and to help facilitate the negotiation of access to complete definition of the MTCA Site boundary.

6. LIMITATIONS

For any documents cited that were not generated by Aerotech, the data taken from those documents is used "as is" and is assumed to be accurate. Aerotech does not guarantee the accuracy of this data and makes no warranties for the referenced work performed nor the inferences or conclusions stated in these documents.

This report and the works performed have been undertaken in good faith, with due diligence and with the expertise, experience capability and specialized knowledge necessary to perform the Work in a good and workmanlike manner and within all accepted standards pertaining to providers of environmental services, in Washington at the time of investigation. No soil engineering or geotechnical references are implied or should be inferred. The evaluation of the geologic conditions at the site for this investigation is made from a limited number of data points. Subsurface conditions may vary away from these data points.

EXPLANATION

MTCA = Model Toxic Control Act Cleanup Level (WAC173-340-900)
BGS = Below Ground Surface mg/kg = milligram of analyte per kilogram of soil j
< = not detected at indicated Laboratory Detection Limits -- = not analyzed
Benzene , Toluene, Ethylbenzene, Xylenes by EPA Method 8021B
TPHg - Total Petroleum Hydrocarbons - Gasoline by NWTPH-Gx
TPHd - Total Petroleum Hydrocarbons - Diesel by NWTPH-Dx
TPHo - Total Petroleum Hydrocarbons - Motor Oil by NWTPH-Dx extended
MTBE = Methyl-tert-butyl-ether EDC = 1,2-Dichloroethane EDB = 1,2-Dibromoethane TCE = Trichloroethene Methylene Chloride; by EPA Method 8260B
Lead by EPA Method 7010
ND = Not Detected (minimum detection limit unknown)
Bolded numbers and red-shaded cells denote concentrations above the MTCA Method A Cleanup Levels for soil
* = Method B Cleanup Level, Ecology does not have a Method A Cleanup Level designated for EDC
1 = Soil from which this sample originated was removed during the Remedial Excavation
2 = Unidentifiable petroleum product in diesel range, possibly creosote (see lab report for further detail and chromatograph)
3 = The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
4 = The sample was received in a container not approved by the method. The value reported should be considered an estimate.
5 = The sample extract was passed through a silica gel column prior to analyses.
^ = Effective concentration using Toxic Equivalency Factor per WAC 173-340-708{e}: SUM(Benzo(a)pyrene (x1), Benzo(a)anthracine (x0.1), Benzo(b)fluoranthene (x0.1), Benzo(k)fluoranthene (x0.1), Chrysene (x0.01), Dibenz(a,h)anthracene (x0.1), Indeno(1,2,3-cd)pyrene (x0.1)

EXPLANATION
MTCA = Model Toxic Control Act Cleanup Level (WAC173-340-900)
BGS = Below Ground Surface µg/L = microgram of analyte per liter of water
< = not detected at indicated Laboratory Detection Limits -- = not analyzed
Benzene, Toluene, Ethylbenzene, and Total Xylenes
TPHg - Total Petroleum Hydrocarbons - Gasoline by NWTPH-Gx
TPHd - Total Petroleum Hydrocarbons - Diesel by NWTPH-Dx
TPHo - Total Petroleum Hydrocarbons - Motor Oil by NWTPH-Dx extended
Bolded numbers and red-shaded cells denote concentrations above the MTCA Method A Cleanup Levels for surface Water.

EXPLANATION

MTCA = Model Toxic Control Act Cleanup Level (WAC173-340-900)

TOC = Top of Casing MSL = Mean Sea Level

< = not detected at indicated Laboratory Detection Limits -- not analyzed NM = Not Measured

TPHg - Total Petroleum Hydrocarbons - Gasoline by Method NWTPH-Gx

TPHd - Total Petroleum Hydrocarbons - Diesel by Method NWTPH-Dx TPHmo - Total Petroleum Hydrocarbons - Motor Oil by Method NWTPH-Dx extended

Benzene, Toluene, Ethylbenzene and Xylenes by EPA Method 8021B

MTBE = Methyl-tert-butyl-ether EDC = 1,2-Dichloroethane EDB = 1,2-Dibromoethane HVOCs = Halogenated Volatile Organic Compounds; by EPA Method 8260B

PAHs (including Naphthalene) by EPA Method 8270

Total and Dissolved Lead by EPA Method 7010

* = Effective concentration using Toxic Equivalency Factor per WAC 173-340-708{e}: SUM(Benzo(a)pyrene (x1), Benzo(a)anthracine (x0.1), Benzo(b)fluoranthene (x0.1), Benzo(k)fluoranthene (x0.1), Chrysene (x0.01), Dibenz(a,h)anthracene (x0.1), Indeno(1,2,3-cd)pyrene (x0.1)

1 = Wells surveyed/resurveyed on 02/28/18

ND = Not Detected above Laboratory Minimum Reporting Limits or applicable cleanup levels (see laboratory report for further detail)

Bolded numbers and red-shaded cells denote concentrations above the MTCA Cleanup Levels for groundwater

EXPLANATION

MTCA = Model Toxic Control Act Cleanup Level (WAC173-340-900)
BGS = Below Ground Surface µg/L = microgram of analyte per liter of water
< = not detected at indicated Laboratory Detection Limits -- = not analyzed
Volatile Organic Compounds of Samples EB 5 W though EB 7 W by EPA Method 8260C
Benzene, Toluene, Ethylbenzene, and Total Xylenes of Samples EB 1 W though EB 4 W and EB 8 W through EB 10 W by EPA Method 8021B
TPHg - Total Petroleum Hydrocarbons - Gasoline by NWTPH-Gx
TPHd - Total Petroleum Hydrocarbons - Diesel by NWTPH-Dx
TPHo - Total Petroleum Hydrocarbons - Motor Oil by NWTPH-Dx extended
Naphthalene; 1,3,5-Trimethylbenzene; Methylene Chloride; by EPA Method 8260B
ND = Not Detected (minimum detection limit unknown)
Bolded numbers and red-shaded cells denote concentrations above the MTCA Method A Cleanup Levels for groundwater
1 = The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
2 = Estimated concentration. A dilution is required to obtain an accurate quantification of the analyte.
3 = The presence of the compound indicated is likely due to laboratory contamination.
4 = The current Method B Non-carcinogen Standard Value was used in the table. No Method A or Method B carcinogen values have been established for this parameter.

Summary of Previous Investigations

APPENEDIX B

Summary of Previous Investigations
Fife RV Center
3410 Pacific Highway East
Fife, Washington

Site Assessment
Jack In The Box (Parcel 0320024104)

In December 1987, Rittenhouse-Zeman & Associates ("RZA") completed a soil and foundation survey for Foodmaker Inc. While completing the geotechnical investigation, hydrocarbon odors were encountered at soil boring B-1 between 5 and 10 feet below ground surface ("bgs"). Samples collected from B-1; S-5 (11.0 -12.5 feet), contained TPH in above the current MTCA Method A screening levels ("screening levels") (RZA, 1988).

In January 1988, RZA completed additional investigation to further evaluate hydrocarbon previously noted. RZA advanced four soil borings at the corners of the property (B-1A, B-2, B-3, B-4) on January 5, 1988. No petroleum odor was observed in any of the four soil borings. Soil Sample S-4 collected from B-2 at 10-11.5 feet bgs contained TPH above the screening level (RZA, 1988).

Tahoma Express (Parcel 0320024105)

GeoEngineers explored subsurface soil conditions at the Unocal Service Station 7473 in 1990. Three test borings were advanced and constructed at groundwater monitoring wells MW-1, MW-2 and MW-3. The flow of groundwater was generally flat but toward the northwest. The study concluded that petroleum related contamination in subsurface soil and groundwater beneath the service station based on concentrations of benzene above drinking water standards in samples collected from MW-1 and MW-2. The wells were located adjacent to the UST basin (GeoEngineers, 1990).

GeoEngineers completed an additional investigation to evaluate the potential of groundwater contamination detected beneath the property was generated by the former Gasamet service station or an another of property source. Aerial photographs reviewed indicated the Gasamet station was previously located approximately 100 feet to the southwest of the Unocal Service Station 7343 and cross gradient to the groundwater flow direction beneath the parcel. A soil sample collected via hand auger in the UST backfill (HA-3) contained benzene at 1.7 mg/kg well above the screening levels. A review of the analytical results and the location of the service stations relative to the groundwater flow measured lead GeoEngineers to determine the source of the petroleum related contamination at the parcel was the result of releases from the Unocal station (GeoEngineers, 1991).

Fife RV (Parcel 0320111067)

In October 2013, Associated Earth Sciences, Inc. ("AESI") conducted a Phase I Environmental Site Assessment at the subject Property, now called Fife RV Center, located at 2410 Pacific Highway East in Fife, Washington. Within the Phase I, they state that a *Gasamet* fueling station operated at the northwest corner of the Property from the 1960s through the 1980s, and that the Property was listed on the Washington State Department of Ecology ("Ecology") CSCSL list for a petroleum release and arsenic release in the groundwater. Arsenic was determined not to be a contaminant of concern. A separate, remediated release was discovered at the northeast adjoining Chevron fueling station (which received a No Further Action designation from Ecology in 1993) (AESI, 2014).

Within the Phase I, AESI also stated that a third party conducted a Phase II investigation in 2004, finding that the soil and groundwater were impacted. Aerotech Environmental Consulting, Inc. ("Aerotech") tried to locate this document, but without success (AESI, 2014).

In December 2013, AESI observed a geophysical survey consisting of electromagnetism and ground-penetrating radar. No abandoned underground storage tanks ("USTs") or former UST basins were discovered from the survey.

The following day, AESI observed the advancement of ten direct push borings: nine to a depth of 10 feet bgs, with EB6 to 15 feet bgs. Soil samples were collected at every borehole, and analyzed for TPHg, TPHd, TPHo, and BTEX. Select samples from EB4 through EB6 (near the former pump islands) were additionally analyzed for total lead. Concentrations of TPHg and BTEX were detected above screening levels in EB4 at 5 feet bgs. Concentrations of TPHg, benzene, ethylbenzene, and total xylenes were detected above screening levels in EB5. Concentrations of benzene, toluene, and ethylbenzene were detected above screening levels in EB6. No other analytes were detected above the screening levels (AESI, 2014).

One groundwater grab sample was collected from the screened interval at the base of each of the ten temporary borings: nine at a depth of 10 feet bgs, while EB6 was at a depth of 15 feet bgs. All samples were analyzed for TPHg and BTEX. EB3W through EB7W, as well as EB10W, were additionally analyzed for TPHd and TPHo. EB5W through EB7W were also analyzed volatile organic compounds by EPA Method 8260C. Concentrations of TPHg and benzene were detected above screening levels for groundwater in EB4W though EB7W (i.e. within and immediately southeast of the fueling area.) Concentrations of TPHd were detected above screening levels in EB4W and EB6W, for which AESI states, "The sample chromatographic pattern does not resemble the fuel standard used for quantitation." Concentrations of ethylbenzene was detected above screening levels in EB4W and EB6W, while total xylenes were detected above screening levels in EB4W and EB5W. Naphthalene was detected above the groundwater screening levels in EB6W. Methylene chloride was detected above screening levels in EB5W, however AESI attributed this to laboratory contamination.

Aerotech can confirm that the lab results from Friedman & Bruya, Inc. provided within the report, indicate a separate analysis of EPA Method 8260C for this sample does not detect methylene chloride above detection limits. Concentrations of 1,3,5-trimethylbenzene were detected above MTCA Method B Non-carcinogen Standard Values in EB5W. No Method A or Method B Carcinogen values are set for this compound. No other analytes were detected above the MTCA Method A screening levels (AESI, 2014).

Aerotech installed six 2-inch PVC Groundwater Monitoring Wells, north, west and southwest of the former *Gasamet* Pump island and UST areas. Two wells, MW-1 and MW-2, were installed in the probable upgradient groundwater flow direction to the north, and three wells, MW-4, MW-5, and MW-6, were installed in the probable downgradient direction, south and west. Well screens were placed between 4 and 15 feet bgs, in order to accommodate water level fluctuations related to daily tides and Puyallup River water level variations, as well as local recharge. One well, MW-3, was installed at a "hot spot" near the center of the excavated area (Aerotech, 2016b).

Total Petroleum Hydrocarbons-Gasoline were detected above MTCA Method A screening levels for soil at MW-2, MW-4, and MW-5, at concentrations between 34 and 250 mg/kg (benzene at 0.061 to 0.530 mg/kg), and at MW-3 at 13,000 mg/kg (benzene at 9.3 mg/kg) (Aerotech, 2016b).

On July 14, 2017, Aerotech installed three 1-inch PVC Groundwater Monitoring Wells south and east of the former *Gasamet* Pump island and UST areas. Two wells, MW-7 and MW-8, were installed in the cross-gradient groundwater flow direction to the south, and one well, MW9, was installed in the upgradient groundwater flow direction to the east. Screens were placed at 14 feet bgs (Aerotech, 2017).

Four soil samples collected during well installation operations were analyzed. Lead, gasoline, diesel, and oil constituents were not detected. One additional borehole (B-1) was advanced in the unexcavated water main *hot zone* northwest of MW-3 in order to document additional MCTA Table 830 parameters; PCBs, cPAHs, and fuel additives were not detected or were below CULs, while methylene chloride and trichloroethylene (TCE) exceedances were documented in soil at B-1 (Aerotech, 2017).

On February 23, 2018, BoreTec Drilling, Inc., along with Aerotech Environmental Consulting, Inc. installed three 2-inch diameter PVC Groundwater Monitoring Wells west and southwest of the former *Gasamet*-related station features. Two wells, MW11 and MW12, were installed on the southside of the Bio-Swale pond, downgradient groundwater flow direction to the west and southwest. The other well, MW10, was installed downgradient groundwater flow direction from groundwater monitoring well MW2. Groundwater Monitoring Wells MW10 and MW12 were screened from 4 to 14 feet bgs. MW11 was screened from 2 to 9 feet bgs. Wells were developed by surge block and pump method on February 28, 2018 (Aerotech, 2018).

Nine soil samples collected during well installation operations were analyzed. petroleum constituents, lead, PCBs and VOCs were not detected above the MTCA Method A screening levels except for MW12(7), which contained gasoline concentrations above (Aerotech, 2018).

Historical Remediation Activities

Tahoma Express (Parcel 0320024105)

GeoEngineers monitored the UST removal and remedial activities at the Unocal Service Station 7343. Joe Hall Construction removed two 12,000-gallon USTs and associated product lines on August 18, September 2 and September 3. Two groundwater monitoring wells (MW-1 and MW-2 were removed during the excavation activities. No evidence of pits or holes were observed on the exterior surfaces of the tanks (GeoEngineers, 1992).

The gasoline tank excavation measured approximately 70 by 40 feet and extended to a depth of approximately 15.5 feet bgs. Field screening indicated the presence of gasoline impacted soil and pea gravel within the western portion of the excavation, primarily along the west wall and the base. Approximately 700 cubic yards of pea gravel and backfill material were removed from the excavation (GeoEngineers, 1992).

Groundwater was observed at 8 feet bgs and a sheen was noted on the groundwater seeping in from the west sidewall. A 22,000-gallon capacity Baker tank was used to store approximately 15,000 gallons of water removed from the excavation. Waste Disposal disposed of the water on September 2, 1992 (GeoEngineers, 1992).

Product lines associated with the USTs were removed by Joe Hall Construction from excavations that were approximately 40 by 4 feet and extending to a depth of 3.6 to 5 feet bgs. Approximately 50 cubic yards of soil were removed from the excavation. In total approximately 750 cubic yards were disposed at the Coal Creek Landfill from the UST and product line excavations (GeoEngineers, 1992).

A temporary groundwater recovery system and treatment system was installed at the Unocal service station on February 11, 1993 by GeoEngineers. The systems purpose was to remediate impacted groundwater detected in the pore spaces of the backfill surrounding the USTs. GeoEngineers concluded the gasoline impacted soil adjacent to the leaking turbine pump on the former easternmost UST appeared to be the source of the groundwater contamination. After operating for two weeks samples collected from effluent and the surrounding monitoring wells indicated remediation associated with the turbine release had been achieved (GeoEngineers, 1993).

Fife RV (Parcel 0320111067)

No known remediation activities occurred between the 1960s and December 19, 2013 (AESI, 2014).

Aerotech, along with Langseth Environmental Services Inc. (“Langseth”) excavate, performed a Remedial Excavation in two phases during the month of October 2016. Analytical results from the Phase II Supplemental Phase II Environmental Site Assessment were used to guide the initial stages of the excavation. Analytical results

from samples collected during the Site Remedial Excavation and during Test Pit activities were used to determine the final extents. Major subsurface utilities were identified at several locations on the Property and limited the removal of soil containing petroleum hydrocarbons at concentration above the MTCA Method A screening levels at these locations. TPHg, Benzene, Toluene, Ethylbenzene, and Xylenes remain Constituents of Concern at the Site. Chlorinated Volatile Organic Compounds, TPHd, and TPHo not detected above laboratory Minimum Reporting Limits. Lead was detected, but at concentrations well below the MTCA Method A screening level for Soil. A saturated, wooded Bio-Swale is located on-Property to the Northwest of the subject Property Remedial Excavation and limited soil removal in that direction. Southwest of the Property, the topography slopes downward into a water retaining drainage area, which also limited soil removal. Former fueling station conveyance system remnants along with 1,685.24 tons of potentially contaminated soil to the LRI Landfill located at 30919 Meridian Street East, Graham, Washington. A total of 84 soil samples were collected from the sidewalls and bottom of the excavation in the vicinity of the former fuel pump and former UST basin. Groundwater was encountered on Site at levels ranging from 3 to 10 feet bgs (Aerotech, 2016a).

Groundwater Monitoring Activities

Tahoma Express (Parcel 0320024105)

GeoEngineers conducted groundwater monitoring at the Unocal station from March 1990 until May 1993. Gasoline-range hydrocarbons were not detected in the May 1993 groundwater samples. The remediation of the subsurface soil and groundwater appeared to be achieved. GeoEngineers recommended Unocal to request closure from Ecology and the Tacoma Pierce County Health Department and to abandon groundwater monitoring wells MW-1A, MW2A, MW3, MW4, RW-1 and RW-2 in accordance with WAC Chapter 173-160.

Fife RV (Parcel 0320111067

Nine monitoring wells (MW-1 to MW-9) were sampled on August 1, 2017. Gasoline constituent exceedances were documented at only two wells, MW-2 and MW-4. Diesel fuel, VOCs, naphthalene, and lead were not detected in groundwater. Refer to the July 2017 quarterly groundwater monitoring report for details (Aerotech, 2017).

Depth (ft)	Groundwater		Visual or Olfactory Evidence	Blow Counts	Recovery		**USCS** Classification	Soil Classification/ Description **UNIFIED SOIL CLASSIFICATION SYSTEM EXPLANATION**	Well Construction		
							GW	**GRAVELS**, well-graded* OR Gravel+Sand mix, little-no fines			
							GP	**GRAVELS**, poorly-graded* OR Gravel+Sand mix, little-no fines			
							GM	**GRAVELS**, silty OR Gravel-sand-silt mix			
							GC	**GRAVELS**, clayey OR Gravel-sand-clay mix			
							SW	**SAND**, well-graded OR **Gravelly Sands**, little-no fines			
							SP	**SAND**, poorly-graded OR **Gravelly Sands**, little-no fines			
							SM	**SAND**, silty OR Sand-silt mix			
							SC	**SAND**, clayey OR Sand-clay mix			
							ML	**SILT**, inorganic (very fine sands, rock flour, silty or clayey fine			
								sands) OR Clayey silts with slight plasticity			
							CL	**CLAY**, inorganic, low-med plasticity (gravelly, sandy, silty, lean)			
							OL	**SILT**, organic, AND **SILT-CLAY**, organic, low plasticity			
							MH	**SILT**, inorganic (micaceous or diatomaceous fn sndy/silty soils)			
								OR SILTY SOILS, elastic SILTS			
							CH	**CLAY**, inorganic, high plasticity, fat clays			
							OH	**CLAY**, organic, med-high plasticity OR Organic SILTS			
							PT	**PEAT** and other highly organic SOILS			
								Glacial Till - High density, USCS/color indicates grain size			
								* **Terminology clarification**: The term "**Well graded**" is a synonym for "**Poorly sorted**," both meaning that a wide range of particle sizes are present. The former term is employed in geotechnical descriptions, while the latter is preferred by the USDA in characterizing topsoils and subsoils.			

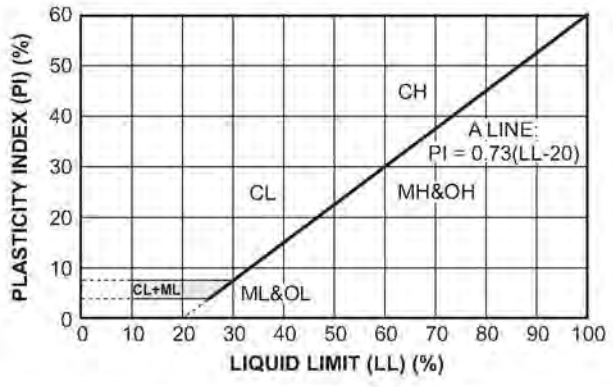
US Geological Survey

CALIFORNIA DEPARTMENT OF TRANSPORTATION (CALTRANS)

UNIFIED SOIL CLASSIFICATION SYSTEM

UNIFIED SOIL CLASSIFICATION AND SYMBOL CHART

COARSE-GRAINED SOILS (more than 50% of material is larger than No. 200 sieve size.)			
GRAVELS More than 50% of coarse fraction larger than No. 4 sieve size	Clean Gravels (Less than 5% fines)	GW	Well-graded gravels, gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
	Gravels with fines (More than 12% fines)	GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
SANDS 50% or more of coarse fraction smaller than No. 4 sieve size	Clean Sands (Less than 5% fines)	SW	Well-graded sands, gravelly sands, little or no fines
		SP	Poorly graded sands, gravelly sands, little or no fines
	Sands with fines (More than 12% fines)	SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS (50% or more of material is smaller than No. 200 sieve size.)			
SILTS AND CLAYS Liquid limit less than 50%		ML	Inorganic silts and very fine sands, rock flour, silty of clayey fine sands or clayey silts with slight plasticity
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
		OL	Organic silts and organic silty clays of low plasticity
SILTS AND CLAYS Liquid limit 50% or greater		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic clays of medium to high plasticity, organic silts
HIGHLY ORGANIC SOILS		PT	Peat and other highly organic soils



LABORATORY CLASSIFICATION CRITERIA

GW	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3	
GP	Not meeting all gradation requirements for GW	
GM	Atterberg limits below "A" line or P.I. less than 4	Above "A" line with P.I. between 4 and 7 are borderline cases requiring use of dual symbols
GC	Atterberg limits above "A" line with P.I. greater than 7	
SW	$C_u = \frac{D_{60}}{D_{10}}$ greater than 4; $C_c = \frac{D_{30}}{D_{10} \times D_{60}}$ between 1 and 3	
SP	Not meeting all gradation requirements for GW	
SM	Atterberg limits below "A" line or P.I. less than 4	Limits plotting in shaded zone with P.I. between 4 and 7 are borderline cases requiring use of dual symbols.
SC	Atterberg limits above "A" line with P.I. greater than 7	

Determine percentages of sand and gravel from grain-size curve. Depending on percentage of fines (fraction smaller than No. 200 sieve size), coarse-grained soils are classified as follows:

Less than 5 percent ..... GW, GP, SW, SP
More than 12 percent ..... GM, GC, SM, SC
5 to 12 percent ..... Borderline cases requiring dual symbols

15								**WELL CONSTRUCTION DETAIL:**	
								Excavated a limited terrace on the slope SW of gravel lot	
16								2 inch Sched 40 PVC - 10 ft No 10 slot PVC screen at 4-14ft bgs	
								5 x 50 lbs bags of No. 10-20 Silica Sand + 1bag grout (3ft thick)	
17								Finished with 2 sq ft concrete 'base' and above-ground steel	
								monument protected by four bollards	
18								All wellheads were sealed with twist-lock compression caps	
								Bottom of borehole at 14.5 feet	
19								Groundwater encountered at 5 feet. Well installed at14.5 ft bgs.	
								Borehole completed with bentonite chips.

Though exempt per WAC per shallow depth (- 9.5 ft below constructed mound) / - 8.3 ft bgs), the objective was to meet or exceed the seal requirements for wells extending more than - 10 ft bgs in order to adhere to the 'spirit' of the code'. An additional objective was to place at least one downgradient well (on property) at which the top of screen would be present above the water table at those times at which water levels were present at the rim of the steel riser drain pipe controlling maximum bioswale water levels.

So, in order to achieve this, as the pipe rim was estimated at or slightly less than 18 inches below the - 0.0 bgs (at well location):

+1.2 to + 2.0 ft bgs Concrete Pad
+0.0 to +1.2 ft bgs Earthen mound - compacted
+0.3 to - 1.1 ft bgs Bentonite pellets
'Geo-barrier': 6 folded layers of 0.7mm thick plastic sheeting
- 1.1 to - 2.1 ft bgs Riser pipe with annular sand pack
- 2.1 to - 9.6 ft bgs Screened interval with annular sand pack

Depth (ft)	Groundwater		Visual or Olfactory Evidence	Blow Counts	Recovery		USCS Classification	Soil Classification/ Description **UNIFIED SOIL CLASSIFICATION SYSTEM EXPLANATION**	Well Construction		
							GW	**GRAVELS**, well-graded* OR Gravel+Sand mix, little-no fines			
							GP	**GRAVELS**, poorly-graded* OR Gravel+Sand mix, little-no fines			
							GM	**GRAVELS**, silty OR Gravel-sand-silt mix			
							GC	**GRAVELS**, clayey OR Gravel-sand-clay mix			
							SW	**SAND**, well-graded OR **Gravelly Sands**, little-no fines			
							SP	**SAND**, poorly-graded OR **Gravelly Sands**, little-no fines			
							SM	**SAND**, silty OR Sand-silt mix			
							SC	**SAND**, clayey OR Sand-clay mix			
							ML	**SILT**, inorganic (very fine sands, rock flour, silty or clayey fine			
								sands) OR Clayey silts with slight plasticity			
							CL	**CLAY**, inorganic, low-med plasticity (gravelly, sandy, silty, lean)			
							OL	**SILT**, organic, AND **SILT-CLAY**, organic, low plasticity			
							MH	**SILT**, inorganic (micaceous or diatomaceous fn sndy/silty soils)			
								OR SILTY SOILS, elastic SILTS			
							CH	**CLAY**, inorganic, high plasticity, fat clays			
							OH	**CLAY**, organic, med-high plasticity OR Organic SILTS			
							PT	**PEAT** and other highly organic SOILS			
								**** Terminology clarification:*** *The term "**Well graded**" is a synonym for "**Poorly sorted**," both meaning that a wide range of particle sizes are present. The former term is employed in geotechnical descriptions, while the latter is preferred by the USDA in characterizing topsoils and subsoils.*

SOIL BORING AND WELL INSTALLATION STANDARD OPERATING PROCEDURE

EQUIPMENT *(Items in italic provided by drilling subcontractor, verify according to the site sampling plan they bring the appropriate equipment and material.)*

- Sampling and Analyses Plan (SAP)
- Site-specific sampling plan
- Sample location map
- Sample table
- Safety equipment, as specified in the Health and Safety Plan
- Permanent pens/marker (e.g. Sharpies®)
- Site logbook, boring log and/or sampling form
- Camera
- Candlestick/cones/barricade
- Caution tape
- Trash bags/plastic sheeting
- Assorted tools (e.g. shovels, wrenches, etc.)
- *Annular materials: silica sand, bentonite pellets and chips, grout*
- *Monitoring well materials: 2-inch schedule 40 PVC riser, well screen and end caps*
- *Completion materials: posts or traffic rated steel monuments, concrete mix, concrete forms*
- *Drilling rig (e.g. hollow stem auger, air/mud rotary, direct push, or sonic)*
- *Disposable acetate liners for direct push*
- *Decontamination equipment such as pressure washer to decontaminate rig and bucket with water and phosphate-free soap (e.g. Alconox®, Liquinox®) for split spoon samplers*

Preliminary Activities

Prior to the onset of field activities at the site, Aerotech obtains the appropriate permit(s) from the governing agency(s). Advance notification is made as required by the agency(s) prior to the start of work. Aerotech marks the borehole locations and contacts the local one call utility locating service at least 2 full business days prior to the start of work to mark buried utilities. Borehole locations may also be checked for buried utilities by a private geophysical surveyor. Additionally, borehole locations may be cleared via air-knife and vacuum operations where proposed locations are in close proximity of buried utilities. Fieldwork is conducted under the advisement of a state registered professional geologist. Monitoring well construction will

comply with Monitoring Well Construction: General, 690-240-100 through Well Seals, WAC 173-160.

Drilling

Aerotech contracts a licensed driller to advance each boring and collect soil samples. The specific drilling method (e.g., hollow-stem auger, direct push method, or sonic drilling), sampling method [e.g., core barrel or California-modified split spoon sampler (CMSSS)] and sampling depths are documented on the boring log and may be specified in a work plan. Soil samples are typically collected at the capillary fringe and at 5-foot intervals to the total depth of the boring. To determine the depth of the capillary fringe prior to drilling, the static groundwater level is measured with a water level indicator in the closest monitoring well to the boring location, if available.

The borehole is advanced to just above the desired sampling depth. For CMSSSs, the sampler is placed inside the auger and driven to a depth of 18 inches past the bit of the auger. The sampler is driven into the soil with a standard 140-pound hammer repeatedly dropped from a height of 30 inches onto the sampler. The number of blows required to drive the sampler each 6-inch increment is recorded on the boring log. For core samplers (e.g., direct push), the core is driven 18 inches using the rig apparatus.

Soil Sampling

Soil is collected according to Aerotech's SOIL SAMPLING STANDARD OPERATING PROCEDURE.

Grab Groundwater Sampling from Soil Boring

In the event that undeveloped grab-groundwater samples are necessary for the scope of work, a temporary well screen is placed across the desired interval of the soil boring. The sample can be collected via disposable bailer or peristaltic pump and disposable tubing. Additionally if direct push technology has been utilized for advancing the soil boring, a groundwater sample, is collected from the boring by using HydropunchTM sampling technology. In the case of using HydropunchTM technology, after collecting the capillary fringe soil sample, the boring is advanced to the top of the soil/groundwater interface and a sampling probe is pushed to approximately 2 feet below the top of the static water level. The probe is opened by partially withdrawing it and thereby exposing the screen. New polyethylene tubing with a peristaltic pump or decontaminated bailer is used to collect a water sample from the probe. The water sample is then emptied into laboratory-supplied containers constructed of the correct material and with the correct volume and preservative to comply with the proposed laboratory test. The container is slowly filled with the retrieved water sample until no headspace remains and then promptly sealed with a Teflon-lined cap, checked for the presence of bubbles, labeled, entered onto a COC record and placed in chilled storage at 4° Celsius. Laboratory-supplied trip blanks accompany the water samples as a quality assurance/quality control procedure. Equipment blanks may be collected as required. The samples are kept in chilled storage and transported under COC protocol to a client-approved, state-certified laboratory for analysis.

Field Screening Procedures

Aerotech staff place the soil from the middle of the sampling interval into a plastic re-sealable bag. The bag is then labeled with the sample number. The tip of a photoionization detector (PID) or similar device is inserted through the plastic bag to measure organic vapor concentrations in the headspace. The highest sustained PID measurement is recorded on the boring log. At a minimum, the PID or organic vapor monitoring device is calibrated on a daily basis in accordance with manufacturer's specifications using a hexane or isobutylene standard. The calibration gas and concentration are recorded on a calibration log. Instruments such as the PID are useful for evaluating relative concentrations of volatilized hydrocarbons, but they do not measure the concentration of petroleum hydrocarbons in the soil matrix with the same precision as laboratory analysis. Aerotech trained personnel describe the soil in the bag according to the Unified Soil Classification System and record the description on the boring log, which is included in the final report.

Backfilling of Soil Boring

If a well is not installed, the boring is backfilled from total depth to approximately 5 feet below ground surface (bgs) with either neat cement or bentonite grout using a tremie pipe. The boring is backfilled from 5 feet bgs to approximately 1 foot bgs with hydrated bentonite chips. The borehole is completed from 1 foot bgs to surface grade with material that best matches existing surface conditions and meets local agency requirements. Site-specific backfilling details are shown on the respective boring log.

Monitoring Well Construction

A well (if constructed) is completed using materials documented on the boring log or specified in a work plan. The well is constructed with slotted casing across the desired groundwater sampling depth(s) and completed with blank casing to within 6 inches of surface grade. No further construction is conducted on temporary wells. For permanent wells, the annular space of the well is backfilled with Monterey sand from the total depth to approximately 2 feet above the top of the screened casing. A hydrated granular bentonite seal is placed on top of the sand filter pack. Grout may be placed on top of the bentonite seal to the desired depth using a tremie pipe. The well may be completed to surface grade with a 1-foot thick concrete pad. A traffic-rated well vault and locking cap for the well casing may be installed to protect against surface-water infiltration and unauthorized entry. Site-specific well construction details including type of well, well depth, casing diameter, slot size, length of screen interval and sand size are documented on the boring log or specified in the work plan.

Monitoring Well Development

Following well construction, each monitoring well is developed and surveyed according to Aerotech's MONITORING WELL DEVELOPMENT AND SURVEYING STANDARD OPERATING PROCEDURE.

Well Sampling

Following development, groundwater is collected according to Aerotech's LOW-FLOW GROUNDWATER SAMPLING STANDARD OPERATING PROCEDURE.

Decontamination Procedures

Aerotech and/or the contracted driller decontaminate soil and water sampling equipment between each sampling event with a non-phosphate solution, followed by a minimum of two tap water rinses. Deionized water may be used for the final rinse. Downhole drilling equipment is steam-cleaned prior to drilling the borehole and at completion of the borehole.

Waste Treatment and Soil Disposal

Soil cuttings and decontamination fluids generated from the drilling or sampling are stored on site in labeled, Department of Transportation-approved, 55-gallon drums or other appropriate storage container. Unless otherwise specified in the contract with Aerotech, the client is responsible for disposal of investigation derived waste. Should Aerotech be contracted to complete disposal for the client, drums containing investigation derived waste are subsequently transported under manifest to a client- and regulatory-approved facility for disposal.

SOIL SAMPLING STANDARD OPERATING PROCEDURE

EQUIPMENT

- Sampling and Analyses Plan (SAP)
- Site-specific sampling plan
- Sample location map
- Sample table
- Safety equipment, as specified in the Health and Safety Plan
- Permanent pens/marker (e.g. Sharpies®)
- Site logbook and/or sampling form
- Camera
- Screening equipment (e.g. Photoionization detector (PID))
- Survey stakes or flags
- Tape measure or measuring wheel
- Plastic sheet
- Soil collection device, heavy equipment (e.g. spoons spade shovel, hand auger, hollow stem auger – split spoon sampler, direct push rig – macro core, shelby tube, backhoe)
- Syringes for EPA Method 5035
- Syringe tool for EPA Method 5035 (e.g. En Core® sampler)
- Pre-weighed and preserved sample vials for EPA Method 5035
- Stainless steel and/or plastic bowls (only if homogenizing composite samples)
- Sample containers, precleaned (e.g., I-Chem)
- Chain-of-custody forms, custody seals, sample labels
- Ziploc® Bags
- Insulated cooler
- Ice
- Plastic bags for sample containers and ice
- Decontamination equipment including tap water and/or deionized water and phosphate-free soap (e.g. Alconox®, Liquinox®)

Soil Sampling

Soil samples are preserved in the metal or plastic sleeve used with the California-modified split spoon sampler (CMSSS) or core sampler, in glass jars or other containers according to the test method and regulatory guidelines (e.g., Environmental Protection Agency Method 5035). Sleeves are removed from the sample barrel, and the lowermost sample sleeve is labeled. Soil is collected from the split spoon sample or direct push core sample into appropriate containers based on the planned test method. Besides the use of a drilling rig, soil may also be collected via hand auger or with a scoop or spoon from the surface or a selected interval from an excavation, trench or test pit.

Soil Sample Collection

Aerotech field personnel are to review the SAP for sample locations and analysis as well as obtain photograph(s) of the material before sampling. If the soil sample is to be a discrete sample, collect soil using a clean/decontaminated stainless-steel (organic analyses) or plastic (inorganic analyses) spoon. If the soil sample is to be a composite, collect soil from all locations to be sampled into one stainless-steel (organic analyses) or plastic (inorganic analyses) bowl and homogenize the soil. If the soil sample is to be a discrete sample for volatile analyses, collect soil using a syringe and place into appropriate pre-weighed sample vial (Volatiles samples may not be composited.).

Next, use the syringe, stainless-steel or plastic spoon to transfer soil sample as appropriate into sample container as specified by the analytical test method. Label and manage sample containers. Decontaminate sampling equipment between each sampling event with a non-phosphate solution, followed by a minimum of two tap water rinses. Deionized water may be used for the final rinse. Ensure activities are well documented in the site logbook or on a designated sampling form. (i.e. collection method, presence of sheen or odor and PID measurement.

Field Screening Procedures

Aerotech field staff place soil from sampling interval into a plastic re-sealable bag. The bag is then labeled with the sample number. The tip of a photoionization detector (PID) or similar device is inserted through the plastic bag to measure organic vapor concentrations in the headspace. The highest sustained PID measurement is recorded on the boring log. At a minimum, the PID or organic vapor monitoring device is calibrated on a daily basis in accordance with manufacturer's specifications using a hexane or isobutylene standard. The calibration gas and concentration are recorded on a calibration log. Instruments such as the PID are useful for evaluating relative concentrations of volatilized hydrocarbons, but they do not measure the concentration of petroleum hydrocarbons in the soil matrix with the same precision as laboratory analysis. Aerotech trained personnel describe the soil in the bag according to the Unified Soil Classification System and record the description on the boring log, sampling form or logbook. Selected soil samples for analysis are then placed Samples are placed in a cooler chilled to 4º Celsius and transported to a state-certified laboratory under chain-of custody (COC) protocol.

Extractable Petroleum Hydrocarbons (EPH)/Volatile Petroleum Hydrocarbons (VPH)

To evaluate the potential utilization of site specific cleanup levels (e.g. Ecology's Method B or Method C cleanup levels), Aerotech field personnel will collect additional sample volume to complete EPH/VPH analysis. This test will be completed on samples that are containing petroleum hydrocarbons only, utilizing the previously discussed field screening procedures as well as contaminant source data from previous investigation work.

MONITORING WELL DEVELOPMENT AND SURVEYING

EQUIPMENT

- Well location map
- Safety equipment, as specified in the Health and Safety Plan
- Permanent pens and markers (e.g. Sharpies®)
- Field notebook and/or sampling form
- Survey equipment
- Surge Block
- 55-Gallon Drums
- 5-Gallon Buckets
- 3/8" Tubing
- DC Power Source
- Whale® Pump
- Water Level Indicator
- Hand Tools (e.g. socket set, screw drivers)
- Watch
- Decontamination equipment including tap water and/or deionized water and phosphate-free soap (e.g. Alconox®, Liquinox®)

Preliminary Activities

Prior to the onset of field activities at the site, Aerotech obtains permission from the client to perform activities and obtains any appropriate permit(s) from potential governing agencies. Aerotech field personnel acquires surge block, tubing, down well pump, water quality monitoring equipment, containers for storing purge water and decontamination fluids and survey equipment, and verifies all are in operating condition. Fieldwork is conducted under the advisement of a state registered professional geologist.

Monitoring Well Development

When a permanent groundwater monitoring well is installed, proper well development is necessary to ensure that complete hydraulic connection is made and maintained between the well and the aquifer material surrounding the well screen and filter pack. Well development should

begin no sooner than 48 to 72 hours after well installation to allow grout to cure prior to improvement.

A surge block is used to move sediments from the filter pack into the well casing. A surge block consists of a rubber and metal plunger attached to Schedule 80 PVC sections of sufficient length to reach the bottom of the well. The surge block is constructed of materials that will not introduce contamination into the well. The surge block is moved up and down the well screen interval and then removed, followed by pumping with a downwell pump to remove any sand and silt brought into the well by the surging action. Care is taken to not surge too strongly with subsequent casing deformation or collapse. Surging will be followed by additional pumping to remove fine materials that may have entered the well during the surging effort.

After surging has been completed and the sand content of the pumped water has decreased, a submersible pump is used to continue well development. The pump should be moved up and down the well screen interval until the obtained water is relatively clear. Well development will continue until the water in the well clarifies. It should be noted that where very fine-grained formations are opposite the screened interval, continued well development until clear water is obtained might be impossible. Decisions regarding when to cease development where silty conditions exist will be made between amongst Aerotech personnel.

During well development, the primary criteria used to evaluate whether the well has been completely developed is water clarity. As mentioned above, clear water can often be impossible to obtain with environmental monitoring wells.

The minimum volume of water purged from the well during development will be approximately a minimum of 3 borehole volumes (wells will typically not reach stabilization of water quality parameters before this condition is achieved and may not have reached stability even after this threshold has been achieved). The above is a general guideline for difficult well development. Development water will be stored in 55-gallon Department of Transportation (DOT) -approved drums.

Surveying

If required, wells are surveyed relative to an established benchmark of known elevation above mean sea level to an accuracy of +/- 0.005 foot. The casing is notched or marked on one side to identify a consistent surveying and measuring point.

Decontamination Procedures

Aerotech personnel completing the monitoring well development equipment will also decontaminate between each monitoring well. The decontamination procedure will consist of washing with a non-phosphate solution, followed by a minimum of two tap water rinses. Deionized water may be used for the final rinse.

Waste Storage and Disposal

Decontamination fluids and purge water from well development and sampling activities are stored on site in labeled, DOT-approved storage containers. No containers will be left on-site

without a label indicating the material matric, accumulation date, project name, project address and Aerotech contact information. Unless otherwise specified in the contract with Aerotech, the client is responsible for disposal of investigation derived waste. Should Aerotech be contracted to complete disposal for the client, drums containing investigation derived waste are subsequently transported under manifest to a client- and regulatory-approved facility for disposal.

- Paper towels
- Watch
- Decontamination equipment including tap water and/or deionized water and phosphate-free soap (e.g. Alconox®, Liquinox®)
- Chain-of-custody forms, custody seals, sample labels
- Ziploc® Bags
- Insulated cooler
- Ice
- Plastic bags for sample containers and ice

The following protocol and sampling procedures were designed to meet or exceed standards for groundwater monitoring well sampling, as specified by the State of Washington Department of Ecology *"Standard Operating Procedures for Purging and Sampling Monitoring Wells, Version 1.0,"* dated and approved on October 4, 2011. These procedures are strictly adhered to by Aerotech field staff:

Cross-Contamination Mitigation Protocol

A sampling table is set up adjacent to the well head in order to protect field equipment from contact with the ground, to prevent or minimize the possible introduction of foreign materials into the wells, and in general in order to mitigate the possibility of cross-contamination. Where previous laboratory data is available, or where visual of olfactory indicators provide initial evidence, well sampling order is arranged to proceed with the least contaminated well, often the upgradient groundwater monitoring wells, and sampling order proceeds by sampling wells associated with successively higher contamination levels. Thus, the wells exhibiting the highest contamination levels are sampled last, in order to minimize the possibility of cross contamination.

A fresh pair of disposable Nitrile gloves is worn at each well. Equipment neither disposable nor dedicated to wells, is washed in a dedicated container prepared with non-phosphate detergent and triple rinsed in a second container prepared with distilled and/or deionized water. Surfaces that cannot be readily submerged for the purpose of decontamination, are sprayed with wash water followed by rinse water, and wiped with a fresh disposable paper towel. For shallow wells that require a peristaltic pump, dedicated tubing is left in each well after sampling, however, for deeper wells that require a submersible pump, dedicated tubing is recovered from wells after each use, and deployed to a designated dedicated clean plastic bag, bearing a label indicating well identification information.

Water Level Measurement

Prior to the well purge process and the collection of groundwater samples, groundwater levels are measured at the north side of the ("TOC") with a piezometer/water level indicator, by slowly lowering the sensor into wells prior to purging, in order to minimize disturbances. The water levels are measured twice, with tape a marked in 0.01 foot increments, in order to reduce possible reading error. Where appropriate, free product thickness is measured with gas level indicator paste or an interface indicator. Upon arrival, each well is visual inspected and the condition of the well and well head are noted.

Groundwater Monitoring Well Purge and Sampling Methodologies

Prior to groundwater sample collection, A dedicated length of high density polyethylene tubing is lowered into each well to a level near the middle of the screened interval. A dedicated length of clean silicone tubing is utilized within the pump mechanism. The wells are purged by means of low flow techniques, during which time groundwater is monitored for physical parameters, including temperature, pH, specific conductivity, dissolved oxygen (DO), and oxidation-reduction potential (ORP), by means of a multi-parameter device mounted upon a flow cell, until such time as values recorded have stabilized and equilibrium conditions are verified according to State guidelines. This protocol ensures that collected groundwater samples are

representative of in-situ groundwater conditions. Readings are recorded once every 2 to 5 minutes, including water level measurement. The pumping rate shall remain below 1 L/min during monitoring and sampling procedures. This is verified by periodically filling a one-Liter graduated cylinder and recording the rate, adjusting the pump as necessary. The water column within the well should remain within 5% of the static height during the purge and sample process, if this cannot be achieved, the pump rate will be reduced until the water level stabilizes. The following conditions must be met in three consecutive readings prior to sampling:

• pH	+/- 0.1 standard units
• Specific Conductivity	+/- 10.0 mS/cm for values < 1,000 mS/cm
	+/- 20.0 mS/cm for values > 1,000 mS/cm
• DO	+/- 0.05 mg/L for values < 1 mg/L
	+/- 0.2 mg/L for values > 1 mg/L
• Temperature	+/- 0.1 degrees Celcius
• ORP	+/- 10 mV

Groundwater samples are collected in containers specified by the laboratory for the analyses established at the Site, and in accordance with State of Washington regulations or guidelines. Sample containers are labeled with site name, well identification, and date of collection information. Each sample is documented on a *Chain of Custody* (“”COC”) form, and immediately placed in an iced cooler (maintained at 4 degrees Celcius or less) for transport to a certified laboratory for analysis. Please note that any purge water suspected or confirmed to contain concentrations above the MTCA Cleanup Levels is drummed and left on Site.

Terrestrial Ecological Evaluation

DEPARTMENT OF ECOLOGY
State of Washington

Voluntary Cleanup Program

Washington State Department of Ecology
Toxics Cleanup Program

TERRESTRIAL ECOLOGICAL EVALUATION FORM

Under the Model Toxics Control Act (MTCA), a terrestrial ecological evaluation is necessary if hazardous substances are released into the soils at a Site. In the event of such a release, you must take one of the following three actions as part of your investigation and cleanup of the Site:

1. Document an exclusion from further evaluation using the criteria in WAC 173-340-7491.
2. Conduct a simplified evaluation as set forth in WAC 173-340-7492.
3. Conduct a site-specific evaluation as set forth in WAC 173-340-7493.

When requesting a written opinion under the Voluntary Cleanup Program (VCP), you must complete this form and submit it to the Department of Ecology (Ecology). The form documents the type and results of your evaluation.

Completion of this form is not sufficient to document your evaluation. You still need to document your analysis and the basis for your conclusion in your cleanup plan or report.

If you have questions about how to conduct a terrestrial ecological evaluation, please contact the Ecology site manager assigned to your Site. For additional guidance, please refer to www.ecy.wa.gov/programs/tcp/policies/terrestrial/TEEHome.htm.

Step 1: IDENTIFY HAZARDOUS WASTE SITE	
Please identify below the hazardous waste site for which you are documenting an evaluation.	
Facility/Site Name: Fife RV Center.	
Facility/Site Address: 3410 Pacific Highway East, Fife, Washington 98424	
Facility/Site No:	VCP Project No.:

Step 2: IDENTIFY EVALUATOR			
Please identify below the person who conducted the evaluation and their contact information.			
Name: Justin Foslien			Title: Licensed Geologist
Organization: Aerotech Environmental			
Mailing address: 13925 Interurban Avenue South #210			
City: Tukwila		State: WA	Zip code: 98168
Phone: 206 257 4211	Fax: 206 402 3872	E-mail: justin@dirtydirt.us	

Step 3: DOCUMENT EVALUATION TYPE AND RESULTS

A. Exclusion from further evaluation.

1. Does the Site qualify for an exclusion from further evaluation?

☐ Yes *If you answered **"YES,"** then answer **Question 2**.*

☒ No or Unknown *If you answered **"NO" or "UKNOWN,"** then skip to **Step 3B** of this form.*

2. What is the basis for the exclusion? *Check all that apply. Then skip to **Step 4** of this form.*

Point of Compliance: WAC 173-340-7491(1)(a)

☐ All soil contamination is, or will be,* at least 15 feet below the surface.

☐ All soil contamination is, or will be,* at least 6 feet below the surface (or alternative depth if approved by Ecology), and institutional controls are used to manage remaining contamination.

Barriers to Exposure: WAC 173-340-7491(1)(b)

☐ All contaminated soil, is or will be,* covered by physical barriers (such as buildings or paved roads) that prevent exposure to plants and wildlife, and institutional controls are used to manage remaining contamination.

Undeveloped Land: WAC 173-340-7491(1)(c)

☐ There is less than 0.25 acres of contiguous[#] undeveloped[‡] land on or within 500 feet of any area of the Site and any of the following chemicals is present: chlorinated dioxins or furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, heptachlor epoxide, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, or pentachlorobenzene.

☒ For sites not containing any of the chemicals mentioned above, there is less than 1.5 acres of contiguous[#] undeveloped[‡] land on or within 500 feet of any area of the Site.

Background Concentrations: WAC 173-340-7491(1)(d)

☐ Concentrations of hazardous substances in soil do not exceed natural background levels as described in WAC 173-340-200 and 173-340-709.

* An exclusion based on future land use must have a completion date for future development that is acceptable to Ecology.

‡ "Undeveloped land" is land that is not covered by building, roads, paved areas, or other barriers that would prevent wildlife from feeding on plants, earthworms, insects, or other food in or on the soil.

"Contiguous" undeveloped land is an area of undeveloped land that is not divided into smaller areas of highways, extensive paving, or similar structures that are likely to reduce the potential use of the overall area by wildlife.

B. Simplified evaluation.

1. Does the Site qualify for a simplified evaluation?

☒ Yes *If you answered **"YES,"** then answer **Question 2** below.*

☐ No or Unknown *If you answered **"NO"** or **"UNKNOWN,"** then skip to **Step 3C** of this form.*

2. Did you conduct a simplified evaluation?

☒ Yes *If you answered **"YES,"** then answer **Question 3** below.*

☐ No *If you answered **"NO,"** then skip to **Step 3C** of this form.*

3. Was further evaluation necessary?

☐ Yes *If you answered **"YES,"** then answer **Question 4** below.*

☒ No *If you answered **"NO,"** then answer **Question 5** below.*

4. If further evaluation was necessary, what did you do?

☐ Used the concentrations listed in Table 749-2 as cleanup levels. *If so, then skip to **Step 4** of this form.*

☐ Conducted a site-specific evaluation. *If so, then skip to **Step 3C** of this form.*

5. If no further evaluation was necessary, what was the reason? *Check all that apply. Then skip to **Step 4** of this form.*

Exposure Analysis: WAC 173-340-7492(2)(a)

☐ Area of soil contamination at the Site is not more than 350 square feet.

☒ Current or planned land use makes wildlife exposure unlikely. Used Table 749-1.

Pathway Analysis: WAC 173-340-7492(2)(b)

☐ No potential exposure pathways from soil contamination to ecological receptors.

Contaminant Analysis: WAC 173-340-7492(2)(c)

☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 15 feet at concentrations that exceed the values listed in Table 749-2.

☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 6 feet (or alternative depth if approved by Ecology) at concentrations that exceed the values listed in Table 749-2, and institutional controls are used to manage remaining contamination.

☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 15 feet at concentrations likely to be toxic or have the potential to bioaccumulate as determined using Ecology-approved bioassays.

☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 6 feet (or alternative depth if approved by Ecology) at concentrations likely to be toxic or have the potential to bioaccumulate as determined using Ecology-approved bioassays, and institutional controls are used to manage remaining contamination.

C. Site-specific evaluation. A site-specific evaluation process consists of two parts: (1) formulating the problem, and (2) selecting the methods for addressing the identified problem. Both steps require consultation with and approval by Ecology. *See* WAC 173-340-7493(1)(c).

1. Was there a problem? *See* WAC 173-340-7493(2).

☐ Yes *If you answered **"YES,"** then answer **Question 2** below.*

☐ No *If you answered **"NO,"** then identify the reason here and then skip to **Question 5** below:*

- ☐ No issues were identified during the problem formulation step.
- ☐ While issues were identified, those issues were addressed by the cleanup actions for protecting human health.

2. What did you do to resolve the problem? *See* WAC 173-340-7493(3).

☐ Used the concentrations listed in Table 749-3 as cleanup levels. *If so, then skip to **Question 5** below.*

☐ Used one or more of the methods listed in WAC 173-340-7493(3) to evaluate and address the identified problem. *If so, then answer **Questions 3 and 4** below.*

3. If you conducted further site-specific evaluations, what methods did you use? *Check all that apply. See* WAC 173-340-7493(3).

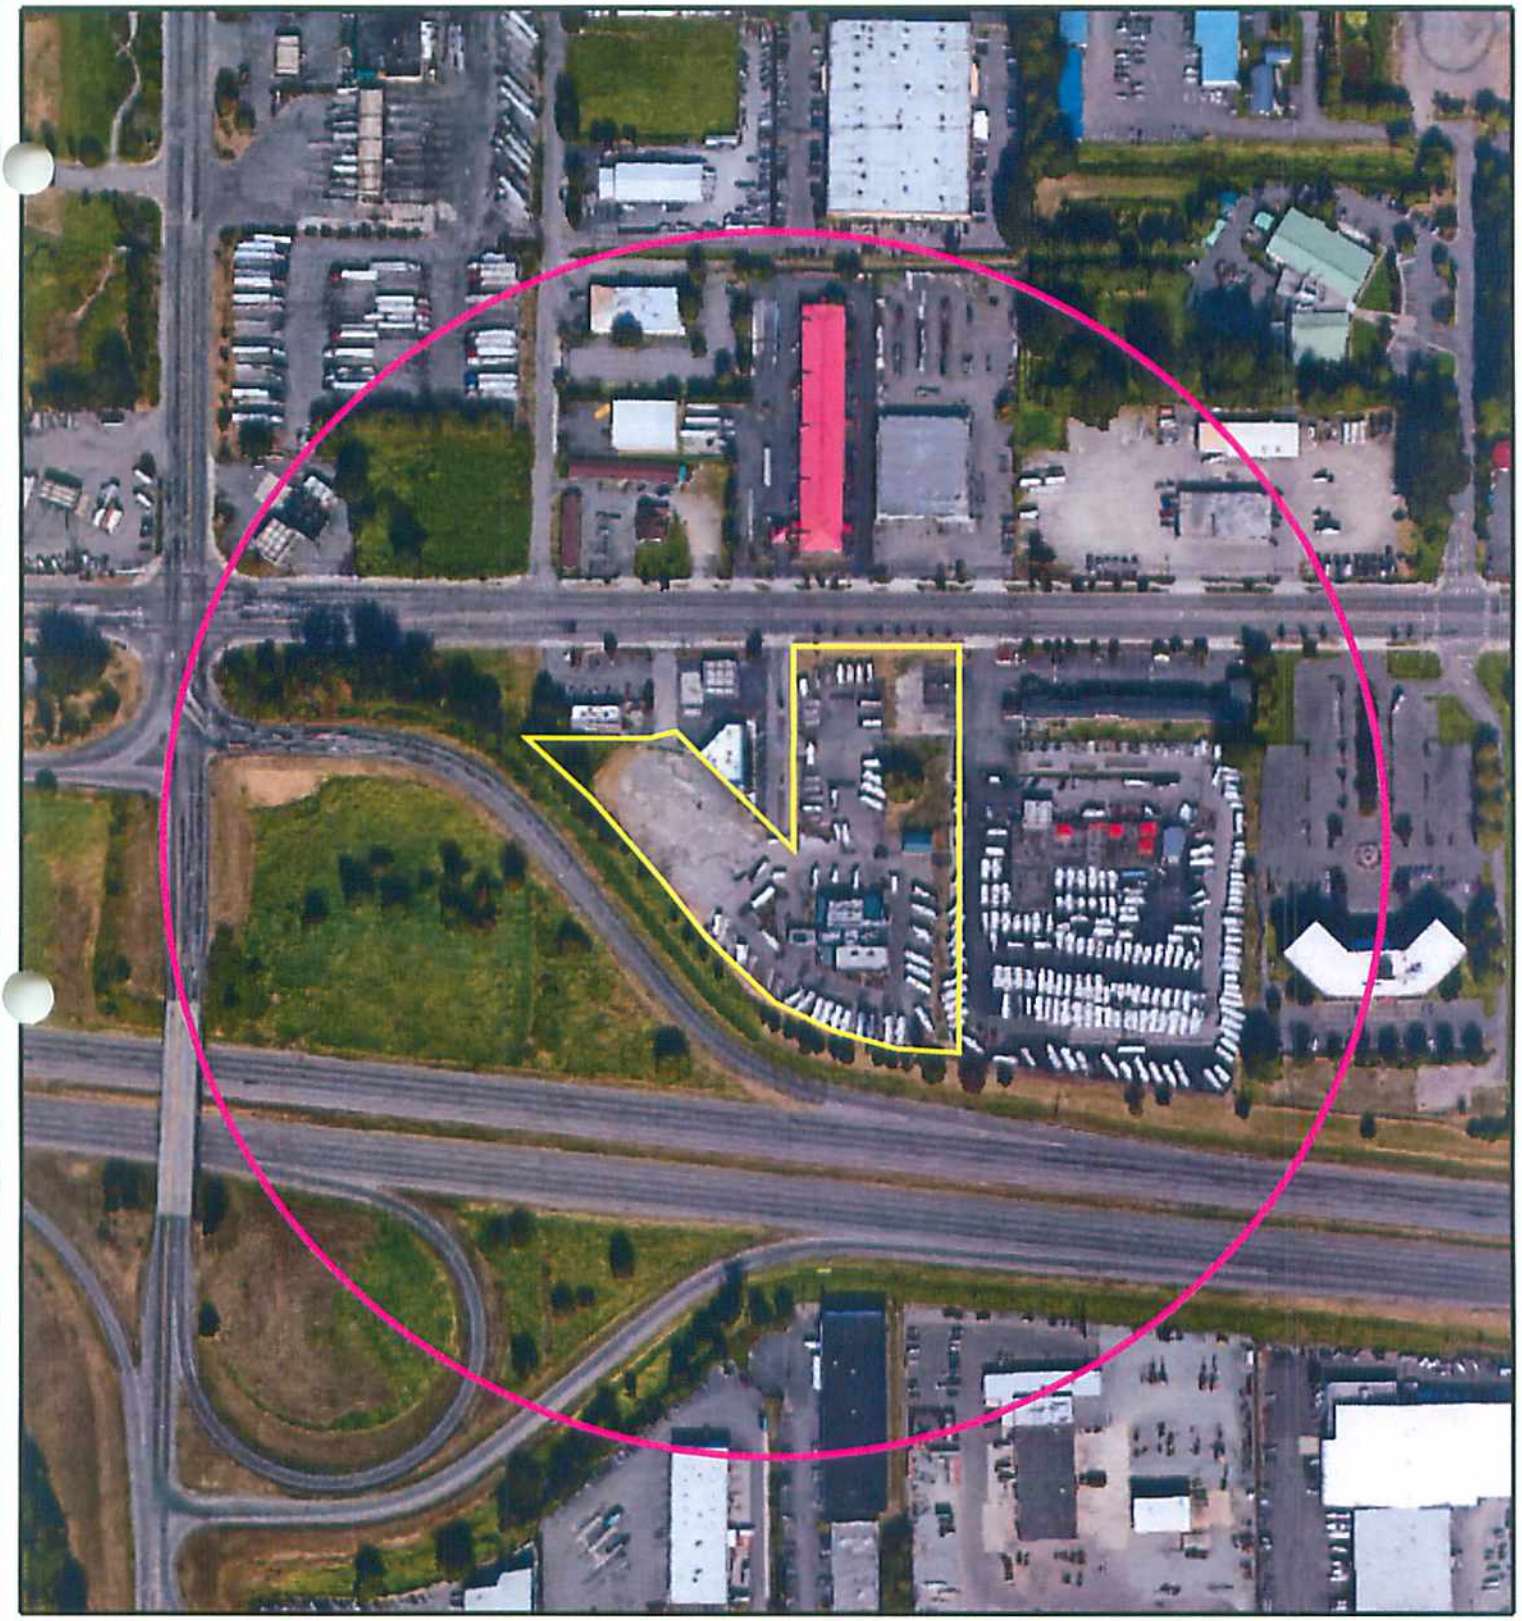
- ☐ Literature surveys.
- ☐ Soil bioassays.
- ☐ Wildlife exposure model.
- ☐ Biomarkers.
- ☐ Site-specific field studies.
- ☐ Weight of evidence.
- ☐ Other methods approved by Ecology. If so, please specify:

4. What was the result of those evaluations?

- ☐ Confirmed there was no problem.
- ☐ Confirmed there was a problem and established site-specific cleanup levels.

5. Have you already obtained Ecology's approval of both your problem formulation and problem resolution steps?

☐ Yes If so, please identify the Ecology staff who approved those steps:



☐ No

Step 4: SUBMITTAL

Please mail your completed form to the Ecology site manager assigned to your Site. If a site manager has not yet been assigned, please mail your completed form to the Ecology regional office for the County in which your Site is located.

Table 749-1

Simplified Terrestrial Ecological Evaluation-Exposure Analysis Procedure

Estimate the area of contiguous (connected) undeveloped land on the site or within 500 feet of any area of the site to the nearest 1/2 acre (1/4 acre if the area is less than 0.5 acre).	
1) From the table below, find the number of points corresponding to the area and enter this number in the field to the right.	~ 2.0
Area (acres) / Points 0.25 or less / 4 0.5 / 5 1.0 / 6 1.5 / 7 2.0 / 8 2.5 / 9 3.0 / 10 3.5 / 11 4.0 or more / 12	8
2) Is this an industrial or commercial property? If yes, enter a score of 3. If no, enter a score of 1	3
3)[a] Enter a score in the box to the right for the habitat quality of the site, using the following rating system[b]. High=1, Intermediate=2, Low=3	1
4) Is the undeveloped land likely to attract wildlife? If yes, enter a score of 1 in the box to the right. If no, enter a score of 2.[c]	1
5) Are there any of the following soil contaminants present: Chlorinated dioxins/furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, pentachlorobenzene? If yes, enter a score of 1 in the box to the right. If no, enter a score of 4.	4
6) Add the numbers in the boxes on lines 2-5 and enter this number in the box to the right. If this number is larger than the number in the box on line 1, the simplified evaluation may be ended.	9

Notes for Table 749-1

[a] It is expected that this habitat evaluation will be undertaken by an experienced field biologist. If this is not the case, enter a conservative score of (1) for questions 3 and 4.

[b] **Habitat rating system.** Rate the quality of the habitat as high, intermediate or low based on your professional judgment as a field biologist. The following are suggested factors to consider in making this evaluation:

> **Low:** Early successional vegetative stands; vegetation predominantly noxious, nonnative, exotic plant species or weeds. Areas severely disturbed by human activity, including intensively cultivated croplands. Areas isolated from other habitat used by wildlife.

High: Area is ecologically significant for one or more of the following reasons: Late-successional native plant communities present; relatively high species diversity; used by an uncommon or rare species; priority habitat (as defined by the Washington Department of fish and Wildlife); part of a larger area of habitat where size or fragmentation may be important for the retention of some species.

Intermediate: Area does not rate as either high or low.

[c] Indicate "yes" if the area attracts wildlife or is likely to do so. Examples: Birds frequently visit the area to feed; evidence of high use b mammals (tracks, scat, etc.); habitat "island" in an industrial area; unusual features of an area that make it important for feeding animals; heavy use during seasonal migrations.

Benzene hexachloride (including lindane)	10 mg/kg	10 mg/kg

Carbofuran	See Note [d]	See Note [d]
Chlordane	1 mg/kg	7 mg/kg
Chlorpyrifos/chlorpyrifos-methal (total)	See Note [d]	See Note [d]
DDT/DDD/DDE	1 mg/kg	1 mg/kg
Dieldrin	0.17 mg/kg	0.17 mg/kg
Endosulfan	See Note [d]	See Note [d]
Endrin	0.4 mg/kg	0.4 mg/kg
Heptachlor/heptachlor epoxide (total)	0.6 mg/kg	0.6 mg/kg
Hexachlorobenzene	31 mg/kg	31 mg/kg
Parathion/methyl parathion (total)	See Note [d]	See Note [d]
Pentachlorophenol	11 mg/kg	11 mg/kg
Toxaphene	See Note [d]	See Note [d]
OTHER CHLORINATED ORGANICS		
Chlorinated dibenzofurans (total)	3E-06 mg/kg	3E-06 mg/kg
Dioxins	5E-06 mg/kg	5E-06 mg/kg
Hexchlorophene	See Note [d]	See Note [d]
PCB mixtures (total)	2 mg/kg	2 mg/kg
Pentachlorobenzene	168 mg/kg	See Note [d]
OTHER NONCHLORINATED ORGANICS		
Acenaphthene	See Note [d]	See Note [d]
Benzo(a)pyrene	30 mg/kg	300 mg/kg
Bis (2-ethylhexyl) phthalate	See Note [d]	See Note [d]
Di-n-butyl phthalate	200 mg/kg	See Note [d]
PETROLEUM		
Gasoline Range Organics	200 mg/kg	12,000 mg/kg except that the concentration shall not exceed residual saturation at the soil surface.
Diesel Range Organics Common examples of diesel range organics include: Diesel #2, Fuel Oil #2, and light oil including some bunker oils. Refer to Table 830-1	460 mg/kg	15,000 mg/kg except that the concentration shall not exceed residual saturation at the soil surface.

Table 749-2 Notes

[a] Caution on misusing these chemical concentration numbers. These values have been developed for use at sites where a site-specific terrestrial ecological evaluation is not required. They are not intended to be protective of terrestrial ecological receptors at every site. Exceedances of the values in this table do not necessarily trigger requirements for cleanup action under this chapter. The table is not intended for purposes such as evaluating sludges or wastes.

This list does not imply that sampling must be conducted for each of these chemicals at every site. Sampling should be conducted for those chemicals that might be present based on available information, such as current and past uses of chemicals at the site.

[b] Applies to any site that does not meet the definition of industrial or commercial.

[c] For arsenic, use the valence state most likely to be appropriate for site conditions, unless laboratory information is available. Where soil conditions alternate between saturated, anaerobic and unsaturated, aerobic states, resulting in the alternating presence of arsenic III and arsenic V, the arsenic III concentrations shall apply.

[d] Safe concentration has not yet been established.

Attention: Mr. Chris Smith

Subject: Subsurface Exploration and Geotechnical Engineering Report
Proposed Jack-In-The-Box Restaurant
Pacific Highway South and Port of Tacoma Road
Fife, Washington

Gentlemen:

We are pleased to present herein a copy of the above referenced report. This report presents the results of our subsurface exploration and geotechnical engineering study relative to the foundation and construction considerations for the proposed project. Authorization to proceed with this study was provided verbally from Chris Smith of Foodmaker, Inc. on 2 November 1987. This report has been completed in general accordance with our preliminary findings and Proposal for Supplemental Geotechnical Services in a letter dated 30 October 1987.

We appreciate this opportunity to be of service to you and will be pleased to discuss the contents of this report or other aspects of the project with you at your convenience.

Respectfully submitted,

RITTENHOUSE-ZEMAN & ASSOCIATES, INC.

James S. Dransfield, P.E.
Senior Project Engineer

SUBSURFACE EXPLORATION AND
GEOTECHNICAL ENGINEERING REPORT
PROPOSED JACK-IN-THE-BOX RESTAURANT
PACIFIC HIGHWAY SOUTH AND PORT OF TACOMA ROAD
FIFE, WASHINGTON

1.0 SUMMARY

The proposed project construction is considered feasible with respect to the subsurface conditions encountered at the subject site. A brief summary of the main project geotechnical considerations is presented below:

- Our subsurface exploration program at the site consisted of two backhoe test pits and one hollow-stem auger boring.
- Subsurface conditions disclosed in our explorations generally consisted of 5 to 6 feet of medium dense to very dense gravelly sand fill overlying roughly 14 feet of soft to medium stiff silt with interbedded loose sand, underlain by denser sands with interbedded silts to the bottom of our deepest exploration at 59 feet the ground surface. The groundwater table was encountered approximately 17 feet below the ground surface.
- In our opinion, shallow spread footings founded upon either a preloaded fill or a prerolled subgrade would perform satisfactorily with respect to bearing capacity. However, long-term settlements of footings founded on existing site conditions are anticipated to be on the order of 2 inches. A short-term preload could reduce the anticipated total long-term settlements to 1 inch or less. If the owner cannot allow time to surcharge the site, and cannot tolerate the risk of settlement associated with "floating" the foundation, consideration should be given to a pile foundation.
- The risk of settlement of the floor slab constructed on the existing site grade is moderate. Again, the amount of settlement could be reduced by a site preload. Alternatively, only minimal settlements would be likely with a structurally supported floor in conjunction with a pile foundation.

This summary is presented for introductory purposes and should be used in conjunction with the full text of this report. The project description, site

conditions and our detailed design recommendations are presented in the text of this report. The exploration procedures and logs are presented in Appendix A.

2.0 PROJECT DESCRIPTION

The site is a rectangular shaped lot located roughly 100 feet east of the southeast corner of the intersection of Pacific Highway South and Port of Tacoma Road in Fife, Washington. The parcel has about 150 feet of frontage along Pacific Highway South, and is roughly 130 feet deep in a north-south direction.

The proposed project would consist of the construction of a single-story restaurant, with slab-on-grade floors. We understand footing loads will be moderately light. Major portions of the north side of the site are already asphalt paved and will serve as future parking areas. The portion of the site immediately surrounding the restaurant is to be developed for drive-thru lanes and dumpster aprons with rigid concrete pavement. We understand that the new building and surrounding pavement will be at approximately the same elevation as existing site grade. The location of the proposed structure and the approximate locations of the explorations accomplished for this study are shown on the Site and Exploration Plan, Figure 1.

The purpose of this study was to establish general subsurface conditions at the site, from which conclusions and recommendations for foundation design and construction for the project could be formulated. The scope of work consisted of field explorations, geotechnical engineering analyses and report preparation. In the event of any changes in the nature, design or location of the structures, the conclusions and recommendations contained in this report should be reviewed and modified, if necessary, to reflect the changes. This report has been prepared for the exclusive use of Foodmaker, Inc. and their agents, for specific application to this project in accordance with generally accepted geotechnical engineering practices.

3.0 SITE CONDITIONS

The site conditions were evaluated for this study in October and November 1987. The surface and subsurface conditions are described below, while the exploration

procedures and interpretive logs of the explorations are apresented in Appendix A. The proposed site development and approximate locations of the explorations accomplished for this study are indicated on the Site and Exploration Plan, Figure 1.

3.1 SURFACE CONDITIONS

The topography across the parcel was observed to be fairly flat-lying, with the exception of a triangular-shaped detention pond roughly 6 feet deep and about 50 feet on each side in dimension. The detention pond was located immediately south of the building pad. The southeast corner of the building pad, and areas to the east and north were mostly asphalt paved. The majority of the building pad and portions of the site to the west were non-paved. Only sparse vegetation was noted on the non-paved portions of the site at the time of our study. No surface water was noted at the time of our site visit. However, the low area on the site reportedly serves as a storm water detention basin.

3.2 SUBSURFACE CONDITIONS

The subsurface conditions encountered in our explorations across the site consisted of a 5 to 6 foot layer of relatively dense sand fill over interbedded softer alluvial deposits. The two test pits and one boring were advanced within the building pad area and encountered 5 to 6 feet of medium dense to very dense, gravelly sand (fill), with one interbedded silt layer at 3 to 3-1/2 feet in test pit TP-2. Intermixed construction debris was noted in the lower portions of the fill in both test pits. Beneath the sand fill, soft to medium stiff, wet to saturated brownish-gray silt with some intermixed peat was encountered which extended to 19 feet below the ground surface. An interbedded silty, fine sand layer was encountered at 12 to 14 feet below the ground surface in our test boring. Beneath the soft to medium stiff silt layer, medium dense to dense dark gray to black, silty, fine sand was encountered to 41-1/2 feet below the ground surface. A 4-1/2 foot layer of soft silt was encountered below the medium dense to dense sand. The test boring bottomed in a layer of dense silty, sand interbedded with very stiff to hard fine sandy silt, to the full depth of our exploration at 59 feet below the ground surface.

Groundwater was measured in an observation well (installed during drilling) at roughly 17 feet below the ground surface twelve days after completion of the drilling. Slight seepage was noted in our test pits at 10.5 feet below the ground surface. It should be noted that the groundwater level and subsurface seepage volumes may fluctuate due to variations in rainfall, season, the level of the adjacent detention pond, changes in site utilization and other factors.

4.0 CONCLUSIONS AND RECOMMENDATIONS

The project site is to be developed for a single-story restaurant with slab-on-grade floors, surrounded by asphalt-paved parking and driveways. In addition to asphalt-paved areas, we understand a concrete drive-thru lane is to be constructed and a concrete pad will be installed in front of the trash enclosure. We understand grades will remain at roughly the same elevation, to match the level of the existing parking area to the north.

Based on our understanding of construction of nearby buildings, and reported site history, we understand the site was filled with the 5 to 6 feet of fill to its present level at least two to three years ago. We understand the nearby light structures including a high single-story restaurant and a single-story deli were "floated" on the upper sand fill with no mitigative site pretreatment. Based upon our explorations, laboratory testing, and our understanding of site history, the parcel appears adequate for the proposed development, utilizing shallow foundation support and slab-on-grade floors without pretreatment, assuming that your structure can tolerate some differential settlement. The risk of somewhat greater settlements should be anticipated over the long-term (say 10 to 20 years) if the structure is floated on the existing site soils. If the structure is not settlement tolerant, it would be necessary to surcharge or use piles. Surcharging is often more economical but does add a time constraint to construction. A pile foundation and a structural floor would provide more positive assurance with regard to settlement and can be installed rapidly.

We estimate long-term settlements of as much as 2 inches may occur if the building is "floated" on existing site grade. Settlements could be reduced to 1 inch or

less if a surcharge of 5 feet is placed on the site for roughly 45 to 60 days. Based upon our previous discussions with the owner, we assume that settlements exceeding 1 inch would not be acceptable. The following recommendations in this report therefore, are based on our recommended alternative of surcharging the building pad, and then removing that surcharge prior to construction of a slab-on-grade and shallow foundation system. We can provide more detailed information for the pile foundation option if desired.

If the owner elects to "float" the structure, the following recommendations would apply (excluding, of course, the preloading discussion). Where the fill is penetrated, or structures or utilities are installed more than 18 inches below grade, we recommend overexcavating 2 feet lower and backfilling with "structural fill" (as described subsequently).

4.1 Site Preparation

All vegetation, fill mounds, topsoil and other debris on the surface of the site should be removed from building and pavement areas as a first step in site preparation and prior to preloading. The subgrade surface should then be compacted to a minimum of 90 percent density, using ASTM:D 1557 as the standard. The preload fill below slab or pavement grade should be then be placed as "structural fill" (as described in the subsequent section), compacted to 90 percent density at least up to finished floor subgrade elevation. Fill placed above finished grades need only be nominally compacted to allow for equipment traffic and easy passage. Settlement plates roughly 18 inches square should be placed at the base of the fill prior to fill placement, fitted with pipes extending up through the fill to serve as survey monuments to monitor site settlement response with time.

With increasing thickness of preload fill and longer duration for the preload, future settlements would be reduced and site densification would increase. We have performed a consolidation test on a sample of the compressible silts obtained at roughly 10 feet below the ground surface. The results of this test are attached as Appendix B at the end of this report. We would recommend placement of about

5 feet of fill for about 45 to 60 days as a minimum preloading duration for the site. The settlement plates should be monitored by survey twice weekly immediately after their installation, and weekly thereafter. We should be provided with the surveying results of the settlement plates during preloading, so that the progress of the preload can be evaluated, and so that the preload fill can be removed as soon as possible to accommodate the remaining construction activities.

4.2 Structural Fill

All fill placed beneath building areas, parking areas, drives and walkways, should be placed in accordance with the recommendations herein for structural fill. Prior to placement of structural fill, the surfaces to receive soil should be prepared as previously recommended. Structural fill should be placed in loose lifts not exceeding 8 inches in thickness. Individual lifts should be mechanically compacted to a density of at least 90 percent of the modified Proctor maximum density (ASTM:D 1557). We recommend that a representative of our firm be present during placement of structural fill to observe the work and perform a representative number of in place density tests. In this way, the adequacy of the earthwork may be evaluated as the grading progresses.

The suitability of soils for structural fill use depends primarily on the gradation and moisture of the soil when it is placed. As the amount of fines (that portion passing the U.S. No. 200 sieve) increases, the soils become increasingly sensitive to small changes in moisture content and adequate compaction becomes more difficult or impossible to achieve. Portions of the near surface soils we encountered on the site contained more than about 5 percent fines by weight, and could not be consistently compacted to a firm, non-yielding condition when the moisture content is more than about 2 percent above optimum. Therefore, at this site, earthwork should be scheduled during warm, dry weather, in order to use the onsite soils as structural fill. Even then, delays in grading are common due to inclement weather. If rain occurs while the subgrade is exposed or during placement of onsite silty materials (or any soil with over 5 percent fines), the wetted material must be allowed to dry prior to additional filling. It may be necessary to scarify the

upper layer, allow it to dry, and then recompact prior to additional filling. Over-excavation and removal of wet materials may be necessary if weather conditions preclude drying and recompaction.

If the site soils cannot be used for fill, due to their elevated silt and moisture content, it may be expedient to import a "clean" granular material for structural fill use. Similarly, only "clean" granular material should ideally be utilized for preload fill, since such material could be reused as structural fill during most weather conditions. In this case, the imported soils should contain no more than 5 percent (by weight) material passing the U.S. No. 200 sieve when measured on the minus No. 4 fraction. A material of this type may be successfully placed and compacted under a wide variety of weather conditions. Structural fill should be free of organics and other deleterious material with individual particles no greater than 6 inches in diameter.

4.3 Foundations

The proposed foundation may be supported by conventional spread or continuous footings. These foundation elements should be supported by the existing medium to very dense fill soils, or structural fill placed directly above these suitable bearing soils. We anticipate that footing loads will be light to moderate. Contingent on this condition, we recommend that the foundations be designed with an allowable bearing pressure of 2100 pounds per square foot (psf). This allowable bearing pressure may be increased by up to one-third to accommodate seismic or transient loads. Exterior footings should penetrate at least 18 inches below lowest surrounding ground surface for frost protection. Interior footings need only extend 12 inches below the surrounding ground or slab surfaces. All footings should have a minimum width of at least 12 inches. In all cases, footings must penetrate into the prescribed bearing stratum. Foundation elements should not be set in or above loose or disturbed soils or topsoil. For foundation elements on the site founded upon the preloaded sand fills, maximum future total settlements may be on the order of 1 inch with differential settlement equal to roughly one-half of the total observed. If loose, disturbed or soft materials are left within

the foundation area prior to concrete placement, the above settlements may be increased. Therefore, it would be appropriate to have the conditions of all footings observed by the geotechnical engineer or his representative immediately prior to concrete placement, in order to confirm bearing conditions are uniform and consistent with those assumed in design.

4.4 Slab-On-Grade Floors

The subgrade to support the ground level floor slab should be prepared in accordance with our previous site preparation recommendations. Slabs-on-grade should be founded on a preloaded fill with its surface compacted to at least 90 percent density (ASTM:D 1557). We recommend the uppermost 4 inches of fill beneath the slab consist of clean, sand and gravel, crushed rock or pea gravel, to serve as a capillary break and working surface. The fines content of the capillary break should be limited to 5 percent or less, and the capillary break should contain at least 40 percent gravel, by weight. Additionally, an impervious moisture barrier should be utilized to protect the slab from dampness. If the floor slab level is near or below adjacent exterior grades, perforated pipe perimeter drains should be installed around the buildings and footing trenches.

4.5 Drainage Considerations

Portions of the subsoils are silty and can result in the development of a temporarily perched groundwater condition. Additionally, traffic across the soils when they are wet will lead to the disturbance of otherwise firm strata. Therefore, prior to site work and construction, the contractor should be prepared to carry surface runoff around the exposed ground. This may be accomplished by the use of open ditches or other measures.

In planning, site grades should be set so that water does not collect adjacent to the building. Instead, the ground should be sloped away from the structures so that runoff may be carried to the storm drain system. All perimeter footings and retaining walls should be provided with a perforated pipe drain at the base. This drainpipe should be fully enveloped by at least 6 inches of pea gravel. The foundation drainage system should be routed via tight-line downslope by gravity to

a suitable discharge point. Roof and surface runoff should not discharge into the footing drain system. Instead, a separate tight-line drain or splashblocks should be used. In those areas where excavations are made, seepage zones may develop from cut faces. Such localized seepage areas should be blanketed by rock to control piping and erosion.

4.6 Pavement

We understand the existing asphalt-paved parking area to the north will be used for the facility. Some portions of the south half of the site will be asphalt-paved, and other areas will be developed to support rigid concrete pavement for drive-thru lanes and sidewalks, and dumpster apron. Pavement design, it must be recognized, is a compromise between high initial cost with little maintenance on one side and low initial cost coupled with the need for periodic repairs. As a result, the owner will need to take part in development of the appropriate pavement sections. Critical features which govern the durability of a surfacing include the stability of the subgrade, the presence or absence of moisture, free water and organics, the fines content of the subgrade soils, the traffic volume, and the frequency of use by heavy vehicles.

4.6.1 Asphalt Pavement

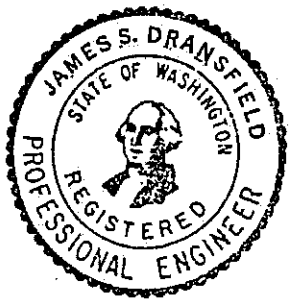
The on-site soils are relatively dense sands with some silt and exhibit moderate subgrade support characteristics. We would recommend the surface of the subgrade be compacted to 90 percent density (ASTM:D 1557). A recommended minimum pavement section for the parking areas and drive-thru lanes would have an asphaltic-concrete thickness of 3 inches underlain by a minimum of 4 inches of crushed aggregate.

If the risk of some cracking of the asphalt and the attendant need for periodic maintenance could be tolerated, a thinner pavement section could be considered. This may best be evaluated during construction, when the performance of the existing pavement under heavy truck traffic can be observed. A possible alternative section would be to construct a thicker pavement section in heavy traffic lanes such as main driveways, entrances, etc., and to use a thinner section for dedicated parking areas not subjected to truck or heavy traffic.

4.6.2 Rigid Concrete Pavement

For rigid pavment design, we recommend utilizing a modulus of vertical subgrade reaction of 200 pci (pounds per cubic inch), if the concrete roadway is underlain by free-draining granular backfill compacted to 90 percent density using ASTM:D 1557 as the standard. We have assumed a working stress (modulus of rupture) in the concrete of 335 psi. For design of concrete drive-thru lanes and dumpster areas, we assumed 100,000 equivalent 18 kip axle-loads occurring over the 20-year design life. Based on review of design charts ("Principles of Pavement Design", Yoder and Witzak (1975)), a minimum slab thickness of 6 inches would be recommended for both drive-thru lanes and the dumpster approach apron.

5.0 CLOSURE



The conclusions and recommendations presented in this report are based on the explorations accomplished for this study. The number, location and depth of the explorations were completed within the site and proposal constraints so as to yield the information used to formulate the design recommendations. The integrity of the foundation depends on proper site preparation and construction procedures. Because of the settlement sensitivity of the facility, geotechnical engineering decisions may be required in the event that localized variations become apparent during construction. It is recommended that we be retained to provide geotechnical engineering services during the site preparation, preload placement, and foundation construction phases of this project.

APPENDIX A

SUBSURFACE EXPLORATION PROCEDURES AND LOGS

App A

APPENDIX A

W-5435

SUBSURFACE EXPLORATION

The field exploration program conducted for this study consisted of advancing a series of 2 test pits and one deep test boring. The approximate exploration locations are illustrated on the Site and Exploration Plan, Figure 1. The locations were obtained in the field by pacing from existing site features.

Test Pit Excavations

The test pits were excavated with a rubber-tired backhoe on 22 October 1987, by a local excavating contractor. The test pits were observed and logged by an engineering geologist from our firm. Disturbed but representative samples of the soils in the test pits were retrieved, classified in the field and transported in plastic bags to our laboratory for detailed evaluation and classification. The test pit logs are presented in this appendix and are based on the inspection of the samples secured and the field logs. The relative soil densities indicated on the test pit logs are interpretative descriptions based on the conditions observed during the excavation.

Hollow Stem Auger Boring

The boring was drilled on 5 November 1987 by a local exploration drilling company under subcontract to our firm. The boring consisted of advancing a 4-inch inside diameter, hollow-stem auger with a truck-mounted drill rig. During the drilling process, samples were obtained at generally 2.5 or 5.0 foot depth intervals. The borings were continuously observed and logged by an engineering geologist from our firm.

Undisturbed samples were obtained by pushing a 3-inch outside diameter, seamless steel Shelby tube into the soil by the hydraulic system on the drill rig in accordance with ASTM:D 1587. Since the thin wall tube is pushed rather than driven,

continued

the sample obtained is considered relatively undisturbed. The samples were classifed in the field by examining each end prior to sealing with plastic caps. The samples were then transported to our laboratory where they were extruded for further classification and laboratory testing.

Disturbed samples were obtained by using the Standard Penetration Test Procedure as described in ASTM:D 1586. This test and sampling method consists of driving a standard 2-inch outside diameter split barrel sampler a distance of 18 inches into the soil with a 140 pound hammer free falling a distance of 30 inches. The number of blows for each 6 inch interval is recorded. The number of blows required to drive the sampler the final 12 inches is considered the Standard Penetration Resistance ("N") or blow count. The blow count is presented graphically on the boring logs in this appendix. If a total of 50 blows is recorded within one 6 inch interval, the blow count is recorded as 50 blows for the number of inches of penetration. The resistance, or "N" value, provides a measure of the relative density of granular soils or the relative consistency of cohesive soils.

The soil samples obtained from the split-barrel sampler were classified in the field and representative portions placed in watertight containers. The samples were then transported to our laboratory for further visual classification and laboratory testing. Samples are generally saved for a period of 30 days unless special arrangements are made.

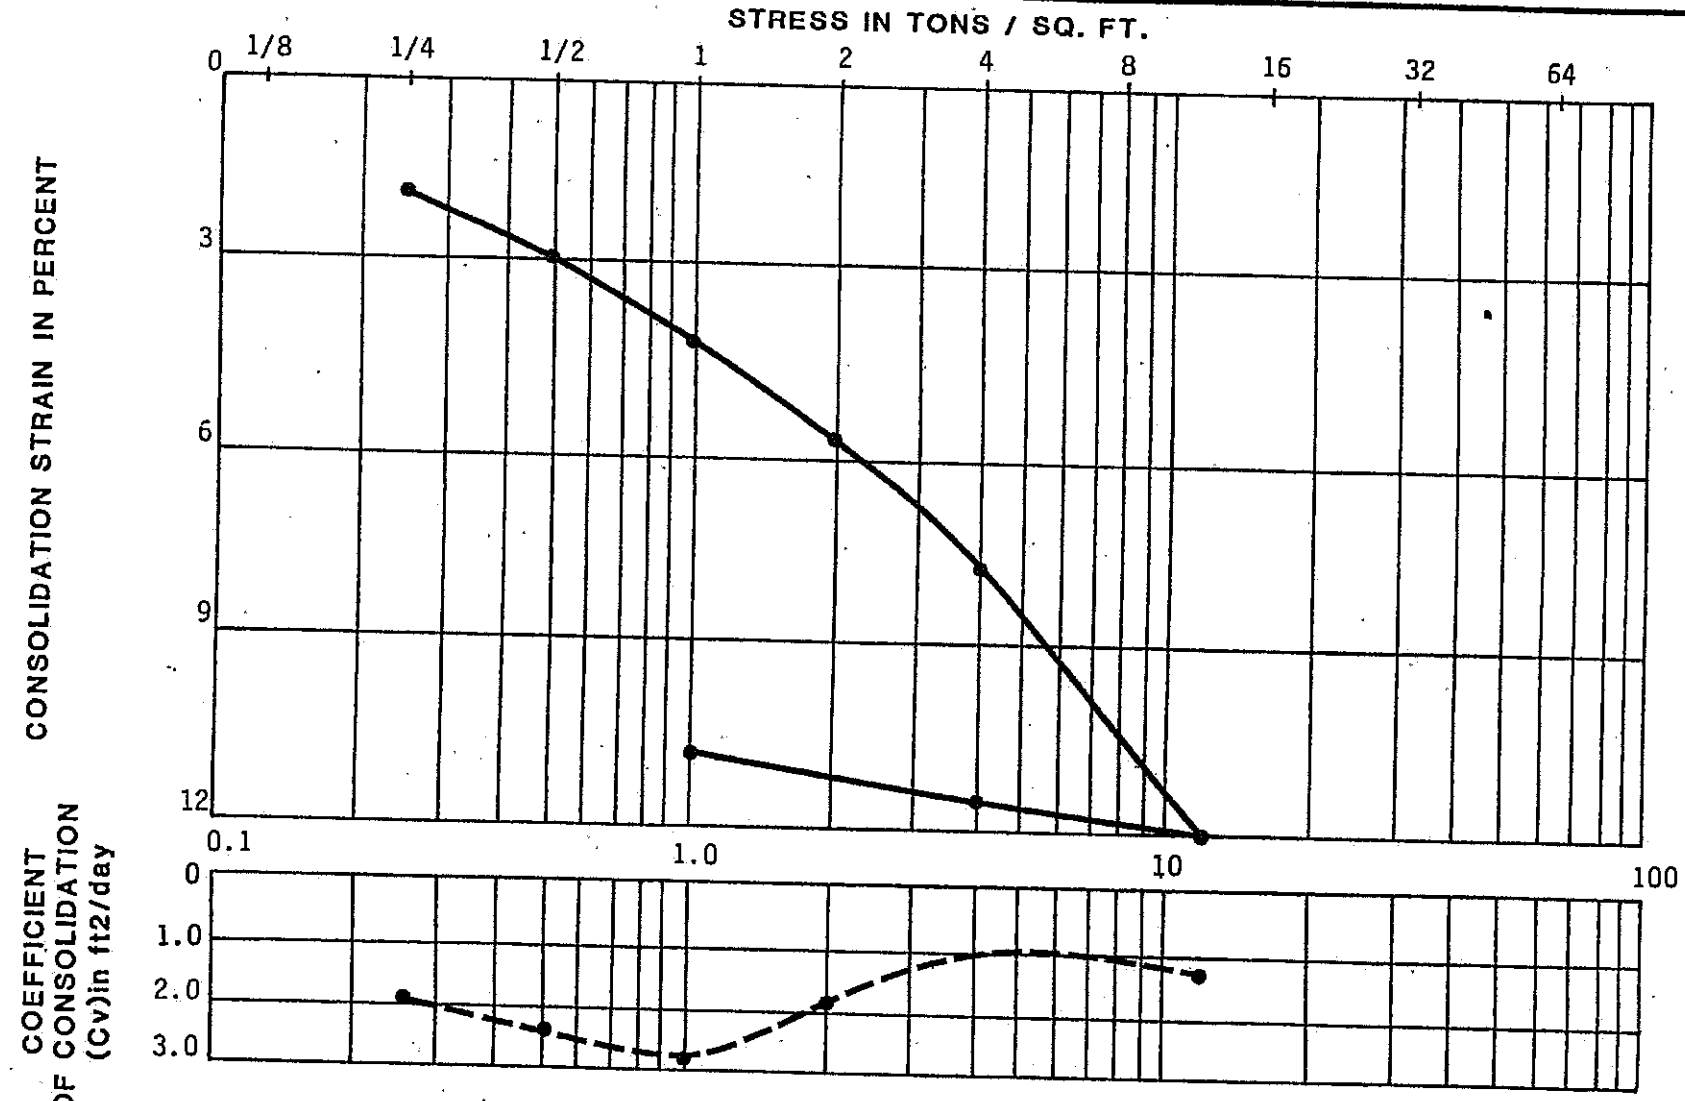
The boring logs presented in this appendix are based on the drilling action, inspection of the samples secured, laboratory results and field logs. The various types of soils are indicated as well as the depths where the soils or characteristics of the soils changed. It should be noted that these changes may have been gradual, and if the changes occured between sample intervals, they were interpreted.

The ground water conditions observed during the exploration program are indicated on the boring log and test pit logs. These subsurface water conditions were

continued

evaluated by observing the moisture condition of the samples, the free water on the sampling rods or the sidewalls of the excavation in the case of the test pits. The ground water level is indicated on the boring logs where appropriate by the water symbol. An observation well was installed in the boring to monitor ground water levels following drilling. The observation well consists of a 3/4-inch diameter slotted PVC pipe placed in the boring, which extended to the ground surface.

TEST PIT LOGS



Depth (feet)	Soil Classification	W-5435

Test Pit TP-1

0.0 - 2.5	Dense, moist to wet, brown, gravelly SAND with trace silt (Fill)
2.5 - 6.0	Dense, moist to wet, gray, gravelly SAND; miscellaneous debris including barbed wire, wood, etc. (Fill)
6.0 - 14.0	Soft, wet to saturated, brown-gray SILT with interbedded sandy layers and organics
	Slight seepage and caving below 10.5 feet
	Moisture content at 7 feet: 44.4%

Test Pit TP-2

0.0 - 3.0	Dense, moist to wet, brown, gravelly SAND with trace silt (Fill)
3.0 - 3.5	Medium stiff, wet, gray SILT with trace to some sand and some roots (Fill)
3.5 - 5.0	Dense, moist to wet, gray to brown-gray, gravelly, SAND with interbedded debris (Fill)
5.0 - 13.5	Soft, wet to saturated, brown-gray, SILT with trace sand and intermixed organics
	Moderate caving below 8 feet
	Slight seepage below 10.5 feet
	Moisture content at 12 feet: 48.4%

APPENDIX B

LABORATORY TEST PROCEDURES AND RESULTS

APPENDIX B

W-5435

LABORATORY TESTING PROCEDURES

A series of laboratory tests were performed during the course of this study to evaluate the index and geotechnical engineering properties of the subsurface soils. Descriptions of the types of tests performed are given below.

Visual Classification

Samples recovered from the exploration locations were visually classified in the field during the exploration program. Representative portions of the samples were carefully packaged in watertight containers and transported to our laboratory where the field classifications were verified or modified as required. Visual classification was done in general accordance with the Unified Soil Classification system. Visual soil classification includes color, relative moisture content, soil type based on grain size, and accessory soil types included in the sample. Soil classifications are presented on the exploration logs in Appendix A.

Moisture Content Determinations

Moisture content determinations were performed on representative samples obtained from the explorations in order to aid in identification and correlation of soil types. The determinations were made in general accordance with the test procedures described in ASTM:D 2216. The results of the tests are shown on the exploration logs in Appendix A.

Consolidation Test

A one-dimensional consolidation test was performed in general accordance with ASTM:D 2435 on a selected sample of the site soils to provide data for developing settlement estimates. The undisturbed soil sample was carefully trimmed and fit

continued

into a rigid ring. Porous stones were placed on both the top and bottom of the sample to allow drainage. Vertical loads were then applied to the sample incrementally in such a way that the sample was allowed to consolidate under each load increment. The rebound of the sample during unloading was also measured. The results of the consolidation test are presented in this appendix as a plot of percent consolidation (strain) versus applied load (stress).

Petroleum Hydrocarbon Oil and Grease Analyses

Petroleum odor was noted in our test boring, at 5 to 10 feet below the ground surface. Samples were obtained in plastic jars and returned to our laboratory. The samples from the test borings with the most notable odor were submitted to an analytical laboratory for further testing. The submitted samples are as follows:

Boring No.	Sample No.	Depth (feet)
B-1	S-3	5.0 - 6.5
B-1	S-4	7.5 - 9.0
B-1	S-5	11.0 - 12.5

The soil samples were recovered using standard geotechnical drilling procedures. The samples returned to the laboratory in plastic jars were then transferred to laboratory-treated glass jars and submitted to the chemical testing laboratory in accordance with RZA's chain-of-custody procedures. The petroleum hydrocarbon oil and grease analyses were subcontracted to AmTest, Inc. in Redmond, Washington. Samples were analyzed for total oil and grease concentrations, petroleum hydrocarbon oil and grease concentrations and volatile aromatic hydrocarbons (benzene, tolulene, and xylene). The total oil and grease values include the animal,

continued

vegetable, and petroleum oil and grease contained in the sample. The petroleum hydrocarbon oil and grease value is that amount of the total oil and grease that is petroleum-based. The volatile aromatic hydrocarbons (benzene, tolulene and xylene) are the mobile and toxic constiuents of petroleum products. The results were reported in micrograms per gram (µg/g) for oil and grease, and the BTX in micrograms per kilogram (µg/g). The results of the petroleum hydrocarbon testing are attached in this Appendix.

Attention: Mr. Greg Pace

Subject: Soil Quality Evaluation
Proposed Jack-In-The-Box Restaurant Site
Pacific Highway South and Port-of-Tacoma Road
Fife, Washington

Gentlemen:

This letter presents the results of our subsurface exploration and soil quality evaluation conducted for the above referenced project. This work was performed as additional work based on the results of our "Subsurface Exploration and Geotechnical Engineering Report" for the above referenced project dated 2 December 1987. The scope of work for this additional study was limited to four test borings on the site and submittal of selected samples for hydrocarbon testing. Verbal authorization to proceed with this study was granted by Mr. Greg Pace on 30 December 1987.

PROJECT BACKGROUND

A soils and foundation study entitled "Subsurface Exploration and Geotechnical Engineering Report" was performed by our firm for the above referenced project, dated 2 December 1987. Our field work consisted of advancing two backhoe test pits to 13.5 and 14.5 feet, and one test boring to 59 feet below the ground surface.

During the drilling of boring B-1, a petroleum product odor was noted at 5 to 10 feet below the ground surface. We informed Foodmaker, Inc. of our findings, and the samples obtained which exhibited odor were submitted at the request of Foodmaker, Inc. the next day for chemical testing.

The testing was performed by AmTest, Inc. of Redmond, Washington. The measured concentrations of m plus p xylene in sample S-4, and the measured concentrations of total oil and grease and petroleum hydrocarbon in sample S-5 were higher than Washington Department of Ecology suggested minimums. However, it should be noted that these samples were obtained using standard geotechnical drilling procedures, and were not collected in accordance with our standard soil quality evaluation methods. Specifically, the augers were not steam cleaned and our sampler was not decontaminated prior to its use.

In order to further evaluate the site, Foodmaker, Inc. requested us to drill borings at each of the four corners of the site, and submit representative samples for chemical analysis.

SUBSURFACE EXPLORATION

Four borings (designated B-1A, B-2, B-3 and B-4) were drilled on 5 January 1988 by a local exploration drilling company under subcontract to our firm. The borings consisted of advancing 4-inch inside diameter, hollow-stem auger with a truck-mounted drill rig. During the drilling process, samples were obtained at generally 2.5 foot depth intervals. The borings were continuously observed and logged by an engineering geologist from our firm.

Soil samples delivered to the analytical laboratory were collected at the following locations:

Boring Number	Sample Number	Depth (Feet)
B-1A	S-2	5.0 - 6.5
B-1A	S-4	10.0 - 11.5
B-1A	S-7	17.5 - 19.0
B-2	S-1	2.5 - 4.0
B-2	S-4	10.0 - 11.5
B-2	S-6	15.0 - 16.5
B-3	S-2	5.0 - 6.5
B-3	S-3	7.5 - 9.0
B-3	S-6	17.5 - 19.0
B-4	S-1	2.5 - 4.0
B-4	S-3	10.0 - 11.5
B-4	S-5	17.5 - 19.0

No petroleum odor was noted in any of the samples from the four most recent borings. The samples collected from above 5 feet consisted of fill soils, while the remainder of the samples represented native sands and silts. The results of the laboratory tests are attached as Tables 1 and 2. The samples identified as B-1 on Tables 1 and 2 correspond to RZA boring B-1A.

The soil samples at each interval were recovered using procedures designed to minimize the risk of cross contamination. Prior to mobilizing to the site, the drilling equipment and sampling tools were steam cleaned. Between each sampling attempt, the sampling tools were scrubbed with a stiff brush and a detergent solution consisting of alconox and warm water, and then rinsed with potable water and liberal quantities of deionized water. The samples were classified in the field and immediately transferred to laboratory treated glass jars and tightly sealed with a foil-lined threaded cap. The samples were kept on ice with approximately $4^{o}C$ throughout the field program. Selected samples were subsequently transferred to the chemical testing laboratory in accordance with RZA's chain-of-custody procedures. The remaining samples were transported to our laboratory for further visual classification. Samples are generally saved for a period of 30 days unless special arrangements are made.

As requested in a 16 November 1987 letter from Mr. Charles Watson of Foodmaker, Inc., soil samples are to be tested to verify that they are "clean" in accordance with the Federal Safe Drinking Water Standard where there is no local standard. As we have discussed with you in the past, Washington Department of Ecology has not established an "official" standard for testing methods or acceptable levels at this time. Based on our discussions with local testing laboratories, the most extensive testing of soil samples for petroleum product commonly performed consists of measurement of BTEX, total petroleum hydrocarbon, total oil and grease, and total lead. As discussed, this is the level of testing we have performed for this study. These laboratory analyses were subcontracted to AmTest, Inc. in Redmond, Washington.

The samples were analyzed for total oil and grease concentrations, petroleum hydrocarbon oil and grease concentration, volatile aromatic hydrocarbons (benzene, toluene, ethyl-benzene and xylene), and total lead. The total oil and grease values include the animal, vegetable, and petroleum oil and grease contained in the sample. The petroleum hydrocarbon oil and grease value is that amount of the total and grease that is petroleum based. The volatile aromatic hydrocarbons (benzene, toluene, ethyl-benzene and xylene) are the more mobile and toxic

constituents of petroleum products. Measurement of total lead is made to determine if lead concentrations are above typical background levels for soils in the Pacific Northwest. It should be noted that lead content is expressed as total lead content including organo-lead (presumably derived from leaded fuel) and inorganic lead. We contacted Ms. Gail Culver of WDOE recently regarding the significance of these total lead results. She indicated the background levels vary depending on the soil type, however, total lead values of less than about 100 ppm would generally not be of concern. According to WDOE, it is not actually the total lead concentration that is of concern, but instead the leachable extractable portion of the lead (which is measured by EP toxicity testing). The total lead data may be useful for screening purposes where gross contamination exists. Total solids data presented has no significance with respect to soil quality, but must be computed in order to measure total lead. The results of the BTEX tests are reported in micrograms per kilogram (ug/kg), which is equivalent to parts per billion (ppb). Results for the other tests were reported in micrograms per gram (ug/g), which is equivalent to parts per million (ppm).

TEST RESULTS

The results of the laboratory testing are attached as Tables 1 and 2 at the end of this letter. The measured concentrations are below WDOE suggested minimums. Based upon recent discussions with Ms. Lynn Cashion of WDOE, concentrations of BTEX less than 666 ppb, or oil and grease plus petroleum less than 200 ppm would not be high enough to recommend remediation.

We trust this letter is sufficient for your current needs. If you have any questions, or we can be of further assistance, please call.

Respectfully submitted,

RITTENHOUSE-ZEMAN AND ASSOCIATES

EXECUTIVE SUMMARY

The subject Property of this Site Remedial Excavation is comprised of one irregularly-shaped 3.76-acre Parcel, located on the south side of Pacific Highway East in Fife, Washington. One building, occupied by *Fife RV Center*, is situated on the southeastern corner of the Property. It is an approximately 10,763 square foot, 2-story structure with the main entrance to the north. An approximately 1,000 square foot, 1-story structure is situated northeast of the main building along the eastern Property boundary. Asphalt parking areas surround the structure on all sides and are utilized for the storage and display of the RV inventory. On the west side of the Property lies an approximately 0.77 acre vacant gravel parking lot, occasionally used to store RV inventory.

Surrounding areas include a drainage ditch to the south followed by Interstate 5. The neighboring Parcel to the east includes approximately 5.24 acres which is leased by Fife RV Center for use as additional storage. Formerly included with this Parcel prior to subdivision in 2004, situated to th north along Pacific Highway East, is a *Travelodge*. This Parcel is listed on Washington State Department of Ecology ("Ecology") Voluntary Cleanup Program List as Site No. SW0601 and is known as *Homotel*. It has been confirmed to contain petroleum products and metals at concentrations above the State Cleanup Levels in soil and in groundwater.

Pacific Highway East, followed by an *Econolodge*, are adjoining the subject Property to the north. Formerly included within the same Parcel as the subject Property is a Tahoma Express Gas Station and a Jack in the Box adjoin to the west (north of excavation area) followed by the Port of Tacoma Road. The Tahoma Express Gas Station was listed on Ecology's Site Cleanup List as Site No. 5015. The Ecology Database lists the site as formerly having petroleum hydrocarbons at concentrations above the State Cleanup Levels in soil and groundwater. The site received a No Further Action determination from Ecology in 1993.

Based on historical research, from the mid 1960's until the late 1980's a *Gasamet* gas station occupied this portion of the Property with the pump islands situated along the northern Property boundary and partially onto the current Jack in the Box Property. The Underground Storage Tank ("UST") Basins were located to the east and west of the pump islands with the station building situated along the southwestern Property boundary. A wooded water retention area, known as a Bio-Swale, is located on the northwest corner of the Parcel. A qualitative record of test pit activities conducted in 2000 indicated strong petroleum odor in soil in the upper four feet of excavated soil in this area (Documentation included in Supplemental Documents section of Appendix).A drainage ditch is located off-Property to the southwest with Interstate 5 beyond.

In 2014, Associated Earth Sciences, Inc. conducted a *Supplemental Phase II Environmental Site Assessment* at the subject Property. Soil and groundwater samples collected from soil borings advanced in the current vacant gravel lot in the vicinity of the former Gasamet pump islands and UST Basin contained petroleum hydrocarbons at concentrations above the Model Toxic Control Act ("MTCA") Method A Cleanup Levels. Based on these results, Mr. Chris LaVerdiere requested Langseth Environmental ("Langseth") and Aerotech Environmental Consulting, Inc. ("Aerotech") to perform site remedial excavation and environmental consulting services to remove soil containing petroleum hydrocarbons at concentrations above the MTCA Method A Cleanup Levels at the areas identified in the *Supplemental Phase II Environmental Site Assessment* at the subject Property

Aerotech, along with Langseth, performed a Remedial Excavation in two phases during the month of October 2016. Analytical results from historical environmental investigations and samples collected during the Site Remedial Excavation and during Test Pit activities were used to determine the final extents of the excavation. Major subsurface utilities were identified at several locations on the Property and limited the removal of soil containing petroleum hydrocarbons at concentration above the MTCA Method A Cleanup Levels at these locations. A saturated, wooded bio-swale is located on-Property to the northwest of the Site Remedial Excavation, a downward topographic slope leading to a water drainage ditch to the southwest limited soil removal in these directions. Former fueling station conveyance system remnants along with 1,685.24 tons of potentially contaminated soil to the LRI Landfill located at 30919 Meridian Street East, Graham, Washington. A total of 84 soil samples were collected from the sidewalls and bottom of the excavation in the vicinity of the former fuel pump and former UST Basin . Groundwater levels within the excavations ranged from 5 feet in the Southwest to 10 feet in the Northeast.

APPENDIX 17

SECTION I.
INTRODUCTION

At the request of Mr. Chris LaVerdiere, on behalf of Fife RV Center, Aerotech Environmental Consulting, Inc. ("Aerotech") has prepared this report presenting the results of remedial excavation activities conducted at the above-referenced site. The purpose of the excavation was to evaluate the extent of and remove soil containing residual petroleum hydrocarbon concentrations above the MCTA Method A Cleanup Levels from the Site. Based on the *Supplemental Phase II Environmental Site Assessment* conducted by Associated Earth Sciences, Inc. ("AESI")the primary area of concern was the northwestern portion of the Property, which was occupied by a gas station, known *as Gasamet*. The station operated from the mid-1960's until the late 1980's, at which time most of the station features were removed. Soil boring locations (EB-4, EB-5, EB-6, and EB-7) were used as starting points and visual and olfactory indicators were used in the field to estimate the extent of the presence of petroleum hydrocarbons. Final extents were then verified with laboratory analytical analysis of delineation samples taken from the surrounding sidewalls and bottom of the excavation at the conclusion of each day.

SECTION II.
SITE DESCRIPTION

Site Description:

The subject Property of this Site Remedial Excavation is comprised of one irregularly-shaped 3.76-acre Parcel, located on the south side of Pacific Highway East in Fife, Washington. One building, occupied by *Fife RV Center*, is situated on the southeastern corner of the Property. It is an approximately 10,763 square foot, 2-story structure with the main entrance to the north. An approximately 1,000 square foot, 1-story structure is situated northeast of the main building along the eastern Property boundary. Asphalt parking areas surround the structure on all sides and are utilized for the storage and showing of the RV inventory. On the west side of the Property lies an approximately 0.77 acre vacant gravel parking lot, occasionally used to store RV inventory.

The Property is situated between Blair Waterway (leading to Commencement Bay), which is approximately 4,000 feet to the north and the Puyallup River, which is located 3,000 feet to the southwest and flows to the northwest into Commencement Bay. Slopes in the vicinity of the Site descend to the southwest towards the Puyallup River. The elevation of the parcel north of Pacific Highway East (Econolodge) is approximately that of the subject Parcel, 11 feet above mean sea level ("MSL"), however, Pacific Highway East itself is approximately 4 feet above that. The topography slopes steadily in a southerly direction from Pacific highway East towards the subject Parcel until the local topographic low, 4 feet above MSL at the drainage area southwest of the Site.

Surrounding Area Description:

Surrounding areas include a drainage area to the south with Interstate 5 adjoining beyond. The neighboring Parcel to the east includes approximately 5.24 acres which is leased by Fife RV Center for use as additional storage. Formerly included with this Parcel before being subdivided in 2004, situated along Pacific Highway East to the north, is a *Travelodge*. This Parcel is listed on Washington State Department of Ecology ("Ecology") Voluntary Cleanup Program List as Site No. SW0601 and is known as *Homotel*. It has been confirmed to contain petroleum products and metals at concentrations above the State Cleanup Levels in soil and in groundwater.

Pacific Highway East, followed by an *Econolodge*, are adjoining the subject Property to the north. Formerly included within the same Parcel as the subject Property is a Tahoma Express Gas Station and a Jack in the Box adjoin to the west (north of excavation area) followed by the Port of Tacoma Road. The Tahoma Express Gas Station was listed on Ecology's Site Cleanup List as Site No. 5015. The Ecology Database lists the site as formerly having petroleum hydrocarbons at concentrations above the State Cleanup Levels in soil and groundwater. The site received a No Further Action determination from Ecology in 1993. A drainage area is located off-Property to the southwest with Interstate 5 beyond.

Site Development Description:

Based on historical research, from the mid 1960's until the late 1980's a *Gasamet* gas station occupied this portion of the Property with the pump islands situated along the northern Property boundary and partially onto the current Jack in the Box Property. The Underground Storage Tank ("UST") Basins were located to the east and west of the pump islands with the station building situated along the southwestern Property boundary. A wooded water retention area, known as a Bio-Swale, is located on the northwest corner of the Parcel. A qualitative record of test pit activities conducted in 2000 indicated strong petroleum odor in soil in the upper four feet of excavated soil in this area (Documentation from the City of Fife permit office is included in the Supplemental Documents section of Appendix).

Previously Identified Contaminants of Concern:

AESI performed a *Supplemental Phase II Environmental Site Assessment* on December 18 and 19, 2014 in the Areas of Concern identified in their *Phase I Environmental Site Assessment* dated October 29, 2013. Petroleum compounds were identified as Contaminants of Potential Concern. Total Petroleum Hydrocarbons as Gasoline ("TPHg") along with Benzene, Toluene, Ethylbenzene, and Total Xylenes were present at concentrations above the MTCA Method A Cleanup Levels in soil and groundwater.

Site Observations and Reported Conditions:

With the exception of the above referenced environmental concern, there were no additional Recognized Environmental Conditions or concerns identified as potential impacts to the Property resulting from AESI's *Phase I Environmental Site Assessment* or the *Supplemental Phase II Environmental Site Assessment*..

SECTION III.
GEOLOGY AND HYDROGEOLOGY

Geologic Conditions:

The precise Property location is N 47° 14' 34.44" / W 122° 22' 58.80" as determined by DeLorme mapping data. The Site is located in Universal Transverse Mercator Zone 11. The Site elevation is approximately 9 to 12 feet above mean sea level. As observed during the Site visit and confirmed on the USGS topographic map, the subject Property is relatively flat. As is commonly the case in low-lying areas near sea level, many roads and properties appear to be elevated several feet above the original grade. Evidence of the original grade may be seen in the decrease in elevation evident north of Pacific Highway East, north of the subject Property. A ditch is located a few tens

of feet south of the Property adjoining to the south. A second ditch is located east of the property adjoining to the east. The field west of the subject Property slopes markedly to the level of the ditch to the south. Pacific Avenue East is elevated approximately two feet above the Site.

The regional topography within the Commencement Bay tidal flats is that of the nearly planar surface generated by the placement of artificial fill material in the later decades of the nineteenth century and the early years of the twentieth century. Elevations on ridges over one mile to the south increase to more than 200 feet MSL, at the northernmost margins of the south Tacoma upland area.

During the course of the on-site Reconnaissance, particular attention was directed towards (i) pools of liquid; (ii) roads and paths that might be used for unauthorized entry; (iii) drains and sumps; (iv) stressed vegetation; (v) pits, ponds, or lagoons; (vi) surface or soil staining; (vii) ditches, catch basins, or dry wells; (viii) unidentified substance containers; (ix) location of manholes, sewer grates, sewer outfalls; and (x) other subterranean accesses. All roads, driveways, paths, and other vehicular access areas were identified and evaluated for suspected use as an avenue for transport or disposal of hazardous materials, regulated substances, or petroleum products. Railroad tracks and previous right-of-ways are also identified if present on the subject Property.

Potential wetland area indicators were considered during the on-site activities. These indicators include: (i) wetland characteristic soil types; (ii) areas that appear permanently wet during most of the year; (iii) the presence of wetlands-related submergent or emergent plants; and (iv) wetland indicative wildlife. Suspected wetlands were not observed on the Site.

As observed during the Site visit and confirmed on the USGS topographic map, the subject Property lies several hundred feet north of the base of a steep bluff, nearly 80 feet in height, on a relatively planar surface perhaps sloping regionally to the north or northeast. The Site lies near the southwest extremity of the Tacoma tidal flats; the tidal flats in this area were filled in the late nineteenth century, very likely with a variety of soils and debris, but tend to be somewhat dominated by sandy materials.

During the course of the on-site observations, particular attention was directed towards (i) pools of liquid; (ii) roads and paths that might be used for unauthorized entry; (iii) drains and sumps; (iv) stressed vegetation; (v) pits, ponds, or lagoons; (vi) surface or soil staining; (vii) ditches, catch basins, or dry wells; (viii) unidentified substance containers; (ix) location of manholes, sewer grates, sewer outfalls; and (x) other subterranean accesses. All roads, driveways, paths, and other vehicular access areas were identified and evaluated for suspected use as an avenue for transport or disposal of hazardous materials, regulated substances, or petroleum products. Railroad tracks and previous right-of-ways are also identified if present on the subject Property.

Potential wetland area indicators were considered during the on-site activities. These indicators include: (i) wetland characteristic soil types; (ii) areas that appear permanently wet during most of the year; (iii) the presence of wetlands-related submergent or emergent plants; and (iv) wetland indicative wildlife. Suspected wetlands were not observed on the Site.

Subsurface Soils, Regional and Local Geology:

The Puget Sound lies within a tectonic trough situated between the Olympic Mountains to the west, and the northern Cascade Mountains to the east. This trough is characterized by fault zones accommodating north-south compressional rotation, commonly resulting in predominant north-south and northwest-southeast oriented faults and fault zones. Elliott Bay lies north of the Seattle Fault Zone, while Tacoma's Commencement Bay lies south of the northernmost Tacoma Fault zone rupture. A major fault is mapped below the bluffs on which central Tacoma was developed, along the western margin of Commencement Bay. Commencement Bay and the Puyallup River Basin lie on the down dropped side of the fault. The Commencement Bay intertidal zone has been elevated by the emplacement of fill throughout the early20th century. The uppermost soils in the Puyallup River Valley are dominated by alluvial and fluvial sediments and to the southeast, occasionally

volcanic mud flows originating below the slopes of the Mount Rainier volcano. Deep borehole data indicate approximately 1,800 feet of unconsolidated glacial and interglacial sediments in the former tidal flats in the vicinity of the subject Property.

The subject Property and vicinity, south of the Blair Waterway, are mapped as Quaternary Alluvium. These soils are characterized as:

> "Gravel, sand, silt, and clay. Deposited chiefly by modern streams, but includes some swamp deposits. Includes marine deposits near the mouth of the Puyallup river .... thickness ranges from a few feet to as much as 600 feet. Yields small to moderate quantities of water to wells. Locally capable of large yields."

Ground-Water Occurrence and Stratigraphy of Unconsolidated Deposits, Central Pierce County, Washington, Water Supply Bulletin No. 22, State of Washington, Department of Water Resources, Kenneth L. Walters and Grant E. Kimmel, 1968

Geologic Map of the Poverty Bay 7.5' Quadrangle, King and Pierce Counties, Washington, US Geological Survey, D.B. Booth, H.H. Waldron, and K.G. Trost, 2004, Open File Report OF 77-9. Washington State Department of Natural Resources,

Geologic Map of the Tacoma North 7.5' Quadrangle, King and Pierce Counties, Washington, US Geological Survey, unpublished draft.

Geologic Map of the City of Tacoma, Pierce County Washington, Mackey Smith, 1977, and unpublished maps on topographic base by Timothy J Walsh, Washington State Department of Natural Resources, circa 1987.

Groundwater Hydrology of the Tacoma-Puyallup Area, Pierce Country, Washington, USGS Water Resources Investigation 99-4013, M.A. Jones, L.A. Orr, J.C. Ebbert, and S.S. Sumioka, 1999.

Unconsolidated sediments documented during excavation activities at the subject Property include: Gravel (FILL) at depths between the ground surface and a depth of 1 foot, and Poorly Graded Sand (FILL) between depths of 1 and 3 feet near the Northern Property Boundary, grading to depths between 1 and 5 feet near the Southern Property Boundary. Beneath the Sand FILL, Sandy Silt was uniformly present at the Site. The exception to this General Description was the Possible Former UST Basins, which Contained Poorly Graded Sand (FILL) to a depth of approximately 9 feet below ground surface. The Basins were encountered in the Northeast, Central, and West Excavation Areas.

A Washington Department of Transportation test boring advanced near the intersection of the Port of Tacoma Road and Interstate 5, documents the presence of gravel with sand and sand to a depth of 8 feet, underlain by at least 12 feet of silt or silt with sand. The shallow gravels may represent fill material placed atop natural fluvially and alluvially deposited silts and sandy silts. These fill materials may be expected underneath roadways and developed properties, and are often designed to elevate the surface above shallow groundwater and reduce susceptibility to flooding due to groundwater flooding during wet periods, and flooding due to heavy precipitation or breaches and overtopping of the levee system or the associated ditch systems.

Subsurface and Hydrological Characteristics - Groundwater Flow:

The principal aquifers in the Puget Sound Region occur in glacial drift, that along with finer grained interglacial sediments, underlie the basin lowland to depths often exceeding 1,000 feet. Sand and gravel units within the glacial drift form the principle aquifers. These aquifers receive ample recharge from the typically heavy precipitation characteristic of western Washington. The glacial drift in the Puget Sound region varies greatly in composition and water yielding capacity. Typically, wells in glacial drift that tap silt, clay, or till in the region at approximately 75 to 100 feet below ground surface may have yields of 100 gallons or more per minute. Deeper wells tapping thick, saturated layers of highly permeable gravel and coarse sand, typically at depths greater than 250 feet below ground surface, can yield more than 1,000 gallons per minute.

Static water levels north and east of the subject Property have been recorded between depths of three to six feet bgs. During the AESI Phase II, water levels were reported to range from three to seven feet bgs on the subject Property. Ditches in the vicinity are estimated to be as much as four to five feet deep. Groundwater flow direction has been documented at the property to the north as flowing to the south-southwest; to the west and southwest at the current *Travelodge* property, adjacent to the east; and at the former Texaco Station, adjacent to the northwest, as flowing to the west-southwest, or to the south or southwest. Topography is not always a reliable basis for predicting groundwater flow direction, and flow may vary considerably from site to site, according to local influences such as the presence of production or irrigation wells and variations in geologic material and the geometry of distinct geologic units.

A groundwater divide, north of which groundwater flow may be expected to flow toward Commencement Bay, is likely present perhaps as near as a few hundred feet to the north of the Site; this groundwater divide may migrate considerable. The straightened and levi-bound Lower Puyallup River channel is located approximately 3,000 feet south west of the subject Property. Groundwater in the vicinity of the Site, based upon water level data may flow predominantly in the direction of the Puyallup River channel, but may also flow to the west or northwest where the groundwater system is influence by elevated Puyallup River water levels during flood stage or the wet winter seasons.

Components of an extensive ditch system are visible south of the Site, along the northern and southern margins of Interstate 5, and north of Pacific Highway East. Portions of the ditch system to the north may discharge to Wapato Creek to the east. Ditches to the south may not be connected to the system to the north. When the water table is low, during dry summer months, water entering ditches may, in part, infiltrate toward the water table; when the water table is higher, during wet winter periods, groundwater may discharge to deeper drainage ditches.

Because tidal fluctuations approach 15 or more feet in the Tacoma area, complex fluctuations in ground water levels and flow direction may occur within some low lying areas near Commencement Bay. Tidal fluctuations may potentially influence groundwater flow at the subject Property, given its location approximately 3,000 feet from the Blair Waterway and approximately 3,000 feet northeast of the Puyallup River channel. Groundwater flow direction at low tide may potentially be diverted somewhat to the west or even northwest.

Jones, Orr and Ebbert depict the shallow alluvial aquifer of Commencement Bay as hydraulically connected to adjoining glacial aquifers above; in general groundwater is expected to flow from the bluffs above, toward Commencement Bay and the Puyallup River, with a significant flow component in the direction of river flow, toward Commencement Bay.

> "Aquifer Qc1 [Jones 1999] is generally a confined aquifer except where it is exposed at the surface, where it is unconfined, or not completely saturated beneath Qvt [Vashon Till]. It consists largely of sand and gravel deposits but does contain silt and clay within the sand

and gravel matrix. ... The altitude of the top of this aquifer ranges from 50 feet below sea level to 509 feet above sea level."

Ground-Water Occurrence and Stratigraphy of Unconsolidated Deposits, Central Pierce County, Washington, Water Supply Bulletin No. 22, State of Washington, Department of Water Resources, Kenneth L. Walters and Grant E. Kimmel, 1968

Lower Duwamish Waterway, Phase I Remedial Investigation Report, Final, Lower Duwamish Waterway Group, and *Development of a Three-Dimensional, Numerical Groundwater Flow Model for the Duwamish River Basin*, Booth and Herman 1998.

Tidal Along-shore Groundwater Flow in a Coastal Aquifer, L. Li, D.A. Barry, F. Stagnitti, and J.Y. Parlange, Environmental Modeling and Assessment 4 (1999), pp 179-188.

The shallow gravel and sand fill is generally expected to readily transmit groundwater, and where present, groundwater contaminants, while the underlying silts and sandy silts are generally expected to impede both the vertical and horizontal flow of groundwater, and where present, groundwater contaminants. Where porous fill materials associated with utility trenches, such as those that may be present underneath Pacific Highway East, are present, these trenches may serve to intercept and divert shallow groundwater.

The presence of water during the *Site Remedial Excavation* varied greatly. Factors contributing to this variance included local rainfall, fill material thickness, and location on the Property. The source of much of the ground water onsite was from direct percolation of rainfall into the Gravel surface underlain by the Sand FILL on the Property. Additionally, surface runoff originating from the Jack in the Box Property to the Northwest, the Access Easement to the North, and the Tahoma Express Property to the northeast, flowed directly onto the subject Property. The lack of a curb on the north Property boundary coupled with poor grading as related to catch basins, allowed for surface runoff to free flow down an approximately 0.04 ft/ft grade onto the subject Property.

The Northeast Excavation, which was performed on a day with minimal precipitation, was to a total depth of 10 feet bgs. The north side revealed groundwater seepage above the Sandy SILT. In the northwestern corner, this was from a depth of approximately 3 feet, while in the northeastern corner, where FILL was present to a depth of 9 feet, groundwater seepage was recorded from depths ranging from 3 feet and 9 feet. The depth to groundwater in the bottom of the excavation at the end of the day was 10 feet bgs.

The Central Excavation, which was to a total depth of 10 feet bgs did not reveal groundwater seepage in the northern half. Only when excavating in the vicinity of the 12-inch storm sewer pipe trench, which contained gravel and cobbles, did groundwater flow into the open-hole. The water level was measured at 10 feet bgs before the Central Excavation was backfilled.

The West Excavation, which was performed in heavy precipitation, was also to a depth of 10 feet bgs. Severe sloughing of the saturated sidewalls was observed and the water level was measured to be 9 feet bgs. The Southwest Excavation, which was performed concurrently, was to be to a depth of at least 10 feet bgs, however, when the trench was exposed to the 12" storm sewer, groundwater flowed readily in to the open-hole. Groundwater was measured to be at a level of 5 feet bgs. The excavation was then abandoned. No water was encountered in the Southeast Excavation.

The lower Puyallup River levee system was constructed in the 1940s:

> "The Flood Control Act of June28, 1938 provided for the construction and maintenance of a channel conveyance project. The project provides for a channel with a capacity of 50,000 cfs between the East 11th Street bridge and the lower 2.2 miles at Commencement Bay, by straightening the channel, building levees, and making all necessary bridge changes. The East 11th Street bridge at the lower end of the project is 0.75 mile above the mouth of the Puyallup River. The project was completed in 1950."

During a period of record flooding in January 2009, Puyallup River flow peaked at 41,500 cfs; channel sedimentation during the last six decades is believed to have decreased the channel cross section and therefore capacity. The USACE estimates that, in the absence of flood control efforts imposed by the management of releases from the Mud Mountain Dam, "the peak flow in the Puyallup River at Puyallup would have exceeded 70,000 cfs" in January 2009.

> "The Puyallup River enters Commencement Bay in the City of Tacoma. The estuary historically covered an area approximately 5,800 acres in size. From 1877 to 1988, over 98 percent of the estuary was modified, leaving only 187 acres of mudflat, 90 acres of subtidal and intertidal vegetated shallows, and only 57 acres of the original tidal marsh. ... Additional alterations to the Commencement Bay contributed to the now degraded and filled delta region."

> "The lower Puyallup River levees are primarily constructed on fine-grained silt and clay, with deposits of clean sand to silty sand and gravelly sand. On a large scale, these soils are generally uniform .... the levees themselves are composed of a mixture of the existing native deposits with the embankments and nearby foundation soils containing cobbles, boulders, and wood pilings."

> "Sediment transport has been estimate to range from 440,000 to 1,400,000 tons annually, with the majority of these sediments characterized as fine sediments..."

Puyallup River Section 905(b) WRDA 86 Analysis, U.S. Army Corps of Engineers, Seattle District, March 18, 2009.

The City of Tacoma supplies potable water within the city limits. The City of Tacoma reports its water source as the upper eastern sections of the Green River watershed along the western flanks of the Cascade Mountains; the city also maintains groundwater production wells within the same area, in the vicinity of the Eagle Gorge Reservoir and the Howard Hanson Dam, some twenty miles east of the subject Property. A municipal well field, utilized during high demand periods, is located near Interstate 5 in south Tacoma, over three miles west of the subject Property.

SECTION IV.
FIELD WORK

Site Activities:

The *Site Remedial Excavation* activities were performed on October 3, 4, 5, 6, 7, 20, 21, and 24, 2016 under contract with Aerotech. The subsurface remedial excavation was performed by

equipment owned by and operated by Langseth. Dump trucks subcontracted by Langseth transported 1,685.24 tons of potentially contaminated soil to the Landfill and Recycling, Inc. ("LRI") Landfill located at 30919 Meridian Street East, Graham, Washington (see Weight Tickets in Appendix). All subsurface work was overseen by an experienced Certified Washington UST Site Assessor, Nicholas Gerkin. The laboratory analytical services were performed by a State of Washington Licensed Laboratory, Advanced Analytical Environmental Testing Laboratory, Inc. ("Advanced Analytical") in Redmond, Washington.

Notifications - "Public" Utilities:

Due to the age and nature of the Site, a "public" utilities notification was performed prior to the start of work. Aerotech Environmental Consulting, Inc.[1] performed the "public" utilities notification on September 28, 2016, and was issued Ticket Number 16314495 by the Utilities Underground Location Center.

According to the Utilities Underground Location Center the utilities, notification included:

ADTEL	INTEGRA TELECOM	(800)762-0592
CC7711	COMCAST CABLE	(800)762-0592
FIFE01	CITY OF FIFE	(253)922-9315
MCCHRD01	MCCHORD PIPELINE COMPANY	(253)383-1651
OLYPE01	BC/OLYMPIC PIPE LINE COMPANY	(425)981-2517
PUGE07	PUGET SOUND EVERGY ELECTRIC	(888)728-9343
PUGG07	PUGET SOUND ENERGY GAS	(888)728-9343
QLNWA24	CTLQL-CENTURYLINK	(800)778-9140
TACPWR01	TACOMA PWR & CLICK NETWORK	(253)502-8263

Notifications - Private Utilities Location:

Additionally, Aerotech Environmental Consulting, Inc engaged personnel of Mountain View Locating, LLC of Bonney Lake, Washington to locate on Site exterior utilities on September 30 and October 19, 2016, prior to the start of the on Site excavation activities. Mr. Dave Schaff was present representing Mountain View Locating, LLC. Mr. Nick Gerkin and Mr. Steve Fletcher, a Subsurface Utility Expert were present, representing Aerotech.

No unanticipated or unexpected situations were discovered or encountered during the "private" locating activities. Based upon pavement markings made by utility location technicians; the location of visible utility fixtures such as gas valves, electrical panels and manholes; the locations of patched pavement; and the presence of anomalies detected by induction methodologies, possible and probable locations of buried utilities were identified and marked, in order to safely guide the progress of the remedial excavation.

Ground Penetrating Radar Subsurface Investigation:

A Ground Penetrating Radar Study and magnetometer survey were performed in the Areas of Concern on September 30 and October 19, 2016 by Mr. Dave Schaff of Mountain View Locating, LLC, with special attention to planned borehole locations. Mr. Nick Gerkin representing Aerotech Environmental, was also present during the radar survey in order to guide the investigation and interpret results.

A Ground Penetrating Radar ("GPR") Study is a geophysical methodology which uses radar

---

[1] Aerotech Environmental Consulting, Inc., was previously issued a Contractor Identification Number by the non-profit Utilities Underground Location Center (www.callbeforeyoudig.com).

pulses to reflect off of subsurface structures and thus provide an image of the subsurface conditions and the possible presence of subsurface objects. The depth of GPR Survey is determined by the electrical conductivity of the ground and the survey equipment transmitting frequency, and is limited to eight to thirteen feet below ground surface. However, the presence of significant subsurface obstructions, concrete rebar, or surficial obstructions, may limit the depth of radar penetration, the accuracy or resolution of the radar data, and ultimately the ability to accurately interpret and identify possible buried objects, or natural subsurface interfaces.

Excavation Activities (Phase 1):

On October 3 and 4, 2016, Aerotech observed Langseth excavate an area, of approximately 1250 square feet to a depth of 10 feet bgs. The presence of an electrical conduit to the north, storm sewer conduit to the northeast, and the 6-inch water main to the southwest limited the Northeast Excavation in these directions. Conveyance system remnants including piping were discovered in the vicinity of the P5 locations at a depth of approximately 3 to 4 feet bgs. Samples were acquired at the P1 through P11 locations at depths ranging from 3 to 10 feet bgs. Groundwater level was measured to be at 10 feet bgs. 110 pounds of Regenesis Oxygen Release Compound Advanced ("ORC Advanced") was mixed in to the floor of the excavation using the excavator bucket. A 70-foot long by 10-foot wide Cool Guard HRL36 Liner was then installed on the north and northeast sidewalls of the excavation from ground surface to the total depth of 10 feet bgs. The excavation was then backfilled by Langseth.

On October 5 and 6, 2016, Aerotech observed Langseth excavate an area, of approximately 700 square feet to a depth of 10 feet bgs. The presence of an electrical conduit to the southwest and northwest and the 6-inch water main to the northeast limited the Central Excavation in these directions. The majority of conveyance system remnants including piping were discovered throughout the excavation at a depth of approximately 3 to 4 feet bgs. Samples were acquired at the P12 through P19 locations at depths ranging from 5 to 10 feet bgs. 110 pounds of ORC Advanced was mixed in to the floor of the excavation using the excavator bucket. A 30-foot long by 10-foot wide Cool Guard HRL36 Liner was then installed on the northwest sidewall of the excavation from ground surface to the total depth of 10 feet bgs. The excavation was then backfilled by Langseth.

Test Pit Activities:

On October 6, 2016, excavation activities were suspended to begin digging test pits. Samples were to be collected at various areas of the site to acsertain the extent of soil containing petroleum hydrocarbons at concentrations above the MTCA Method A Cleanup Levels. Aerotech observed Langseth excavate each test pit, each of which was approximately 10 feet long by 4 feet wide. After samples were collected, soil was replaced back in to each hole from which it originated.

Test pits were excavated during October 6 and October 7, 2016. Soil containing petroleum hydrocarbons at concentrations above the MTCA Method A Cleanup Levels in TP3, TP6, TP7, TP8, and TP9. The laboratory analytical results from test pit activities identified what was to become the West, Southwest, Southeast excavations along with the final southern half of the Central excavation.

Excavation Activities (Phase 2):

On October 20, 2016, in heavy precipitation, Aerotech observed Langseth excavate an area, of approximately 670 square feet to a depth of 10 feet bgs. The presence of a 12-inch storm sewer conduit to the south, electrical conduit to the east, and the bio-swale to the northwest limited the West Excavation in these directions. Samples were acquired at the P20 through P24 locations at depths ranging from 5 to 12 feet bgs. Extreme sloughing was observed from the eastern sidewall.

165 pounds of ORC Advanced was mixed in to the floor of the excavation using the excavator bucket. Groundwater was measured at 9 feet bgs. An area immediately to the south of approximately 170 square feet, the Southwest Excavation, was then excavated by Langseth. The exposure of the storm sewer trench to the north allowed water to readily flow into the open-hole which stabilized at 5 feet bgs. No additional samples were collected from this area. 22.5 pounds of ORC Advanced was mixed in to the floor of the excavation using the excavator bucket. The hole was abandoned due to the level of saturation. The excavation was then backfilled by Langseth.

On October 21, 2016, in heavy precipitation, Aerotech observed Langseth excavate an area, of approximately 600 square feet to a depth of 10 feet bgs. The presence of a 12-inch storm sewer conduit to the southeast, and the 6-inch water main to the northeast limited the extension of the Central Excavation in these directions. Samples were acquired at the P25 through P28 locations at depths ranging from 3 to 10 feet bgs. Extreme sloughing was observed from the eastern sidewall. 55 pounds ORC Advanced was mixed in to the floor of the excavation using the excavator bucket. The excavation was then backfilled by Langseth.

On October 24, 2016, Aerotech observed Langseth excavate an area adjoining the Northeast Excavation from sample point P11 to sample points TP1 and TP2, of approximately 250 square feet to a depth of 10 feet bgs. The presence of the 6-inch water main to the southwest, electrical conduit to the southeast, and a storm sewer conduit to the northeast limited the extension of the Northeast Excavation in these directions. A sample were acquired at the P29 location at a depth of 3 feet bgs. No groundwater was encountered. The excavation was then backfilled by Langseth.

On October 24, 2016, Aerotech observed Langseth excavate an area, of approximately 650 square feet to a depth of 10 feet bgs. The presence of a 12-inch storm sewer conduit to the south and electrical conduit to the west limited the second extension of the Central Excavation in these directions. Samples were acquired at the P30 through P31 locations at depths ranging from 5 to 10 feet bgs. Extreme sloughing was observed from the western sidewall. 22.5 pounds of ORC Advanced was mixed in to the floor of the excavation using the excavator bucket. The excavation was then backfilled by Langseth.

On October 24, 2016, Aerotech observed Langseth excavate an area, of approximately 310 square feet to a depth of 5 feet bgs. The presence of an electrical conduit to the northwest limited the Southeast Excavation in this direction. Samples were acquired at the P32 through P34 locations at depths of 3 feet bgs. The excavation was then backfilled by Langseth.

Soil Sample Collection:

A total of 84 discrete soil samples were collected and preserved in accordance with EPA Method 5035A on October 3, 4, 5, 6, 7, 20, 21 and 24, 2016 from test pits and the sidewalls and the floor of the excavations. Sample collection depths ranged from 3 to 12 feet bgs. Visual or olfactory evidence of petroleum impacted soil was observed between depths of 3 and 10 feet bgs in the vicinity of the former pump islands and UST Basins.

A Trimble GeoXH 2008 series Global Positioning System unit was used to collect latitudinal and longitudinal coordinates for each sample location. Each sample location, along with reference points onsite were recorded onsite by John Sidor, an Aerotech Georaphic Information Systems Professional to within one meter accuracy.

Samples were placed in unpreserved 40cc glass vials and/or unpreserved four-ounce glass jars. Select samples were placed into methanol-preserved 40cc glass vials if they were to arrive at the laboratory after greater than 24 hours. Each sample was given a unique identifier number and placed in an iced cooler for sample preservation. A Chain of Custody recorded the collection and handling of every sample. The soil samples were then submitted to Advanced Analytical. Soil samples were analyzed for TPHg in accordance with Method NWTPH-Gx and benzene, toluene, ethylbenzene, and total xylenes in accordance with EPA Method 8021B. Select soil samples were

analyzed for lead in accordance with EPA Method 7010 and Chlorinated Volatile Organic Compounds in accordance with EPA Method 8260B. Select samples from Northeast, Central, and West Excavation areas were also analyzed for diesel ("TPHd") and motor oil ("TPHo") in accordance with NWTPH-Dx extended for further verification that the two constituents were not contaminants of concern. Laboratory analytical reports and Chain of Custody Records are provided in the Appendix. Cumulative soil sample laboratory analytical results can be found in Table 1.

Site Restoration:

Upon completion of each section of the remedial excavation, the open-holes were backfilled with pit run - 1 1/4" crushed rock, sand, and quarry spalls to allow for improved compaction. Each excavation area was subsequently compacted every three to four vertical feet by Langseth using a backhoe-mounted tamper. The crushed rock was also spread evenly across the parking lot to restore any disturbed areas from excavation-related work.

SECTION V.
CONCLUSION

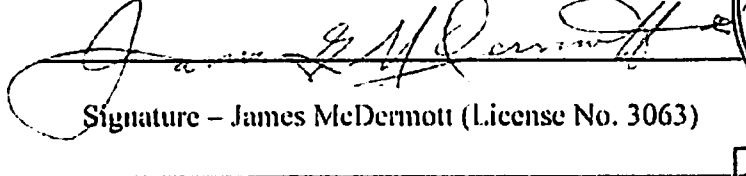
Aerotech, along with Langseth, performed a Remedial Excavation in two phases during the month of October 2016. Analytical results from the Phase II *Supplemental Phase II Environmental Site Assessment* were used to guide the initial stages of the excavation. Analytical results from samples collected during the Site Remedial Excavation and during Test Pit activities were used to determine the final extents. Major subsurface utilities were identified at several locations on the Property and limited the removal of soil containing petroleum hydrocarbons at concentration above the MTCA Method A Cleanup Levels at these locations. TPHg, Benzene, Toluene, Ethylbenzene, and Xylenes remain Constituents of Concern at the Site. Chlorinated Volatile Organic Compounds, TPHd, and TPHo not detected above laboratory Minimum Reporting Limits. Lead was detected, but at concentrations well below the MCAT method A Cleanup Level for Soil. A saturated, wooded. Bio-Swale is located on-Property to the Northwest of the Site Remedial Excavation and limited soil removal in that direction. Southwest of the Property, the topography slopes downward into a water retaining drainage area, which also limited soil removal. Former fueling station conveyance system remnants along with 1,685.24 tons of potentially contaminated soil to the LRI Landfill located at 30919 Meridian Street East, Graham, Washington. A total of 84 soil samples were collected from the sidewalls and bottom of the excavation in the vicinity of the former fuel pump and former UST basin. Groundwater was encountered on Site at levels ranging form 3 to 10 feet bgs.

STATEMENT OF THE WASHINGTON CERTIFIED UST SITE ASSESSOR

I have performed this Site Remedial Excavation in accordance with generally accepted environmental practices, procedures, and regulatory requirements, as of the date of this Report. I have employed the degree of care and skill ordinarily exercised under similar circumstances by reputable environmental professionals practicing in this area.

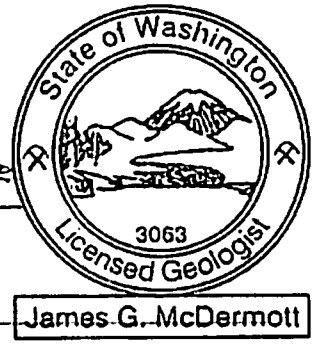
I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of this part. I have the specific qualifications based upon education, training, and experience necessary to plan and implement subsurface investigations.

Signature of the Washington Certified UST Site Assessor:



Signature – Nicholas Gerkin

STATEMENT OF THE LICENSED GEOLOGIST



As stipulated in the Regulatory Code of the State of Washington Title 18, Chapter 18.220, the undersigned is a licensed Geologist in the State of Washington, and has met the statutory requirements of RCW § 18.220.060 for such licensing including, but not limited to, educational requirements, work and field experience, examination proficiency, and acceptance by the State Licensing Board.

The undersigned Licensed Geologist has supervised the geological work performed as described in attached Report – a majority of said work being performed by employees of the firm which employs undersigned Licensed Geologist – as delineated in RCW Title 18, Chapter 18.220, Paragraph 190.

Signature of Licensed Washington Geologist:

Signature – James McDermott (License No. 3063)

MTCA Method A Cleanup Levels				30	2,000	2,000	0.03	7	6	6	250

MTCA = Model Toxic Control Act Cleanup Level (WAC173-340-900)
BGS = Below Ground Surface mg/kg = milligram of analyte per kilogram of soil
< = not detected at indicated Laboratory Detection Limits -- = not analyzed
Benzen , Toluene, Ethylbenzene, Xylenes by EPA Method 8021E
TPHg - Total Petroleum Hydrocarbons - Gasoline by NWTPH-Gx
TPHd - Total Petroleum Hydrocarbons - Diesel by NWTPH-Dx
TPHo - Total Petroleum Hydrocarbons - Motor Oil by NWTPH-Dx extended
Lead by EPA Method 7010
ND = Not Detected (minimum detection limit unknown)
Bolded numbers and red-shaded cells denote concentrations above the MTCA Method A Cleanup Levels for soil
* = Soil from which this sample originated was removed during the Remedial Excavation

ADVANCED ANALYTICAL

Environmental Testing Laboratory

October 10, 2016

Nick Gerkin
Aerotech Environmental, Inc.
13925 Interurban Avenue South, Suite 210
Seattle, WA 98168

Dear Mr. Gerkin:

Please find enclosed the analytical data report for the *Fife RV (C61004-1)* Project.

Samples were received on *October 04, 2016.* The results of the analyses are presented in the attached tables. Applicable reporting limits, QA/QC data and data qualifiers are included. A copy of the chain-of-custody and an invoice for the work is also enclosed.

ADVANCED ANALYTICAL LABORATORY appreciates the opportunity to provide analytical services for this project. Should there be any questions regarding this report, please contact me at (425) 702-8571.

It was a pleasure working with you, and we are looking forward to the next opportunity to work together.

Sincerely,

V. Ivanov

Val G. Ivanov, Ph.D.
Laboratory Manager

4078 148 Ave NE■ Redmond, WA 98052

ADVANCED ANALYTICAL

Environmental Testing Laboratory

October 10, 2016

Nick Gerkin
Aerotech Environmental, Inc.
13925 Interurban Avenue South, Suite 210
Seattle, WA 98168

Dear Mr. Gerkin:

Please find enclosed the analytical data report for the ***Fife RV (C61005-1)*** Project.

Samples were received on *October 05, 2016.* The results of the analyses are presented in the attached tables. Applicable reporting limits, QA/QC data and data qualifiers are included. A copy of the chain-of-custody and an invoice for the work is also enclosed.

ADVANCED ANALYTICAL LABORATORY appreciates the opportunity to provide analytical services for this project. Should there be any questions regarding this report, please contact me at (425) 702-8571.

It was a pleasure working with you, and we are looking forward to the next opportunity to work together.

Sincerely,

V. Ivanov

ADVANCED ANALYTICAL

Environmental Testing Laboratory

October 10, 2016

Nick Gerkin
Aerotech Environmental, Inc.
13925 Interurban Avenue South, Suite 210
Seattle, WA 98168

Dear Mr. Gerkin:

Please find enclosed the analytical data report for the *Fife RV (C61006-3)* Project.

Samples were received on *October 06, 2016.* The results of the analyses are presented in the attached tables. Applicable reporting limits, QA/QC data and data qualifiers are included. A copy of the chain-of-custody and an invoice for the work is also enclosed.

ADVANCED ANALYTICAL LABORATORY appreciates the opportunity to provide analytical services for this project. Should there be any questions regarding this report, please contact me at (425) 702-8571.

It was a pleasure working with you, and we are looking forward to the next opportunity to work together.

Sincerely,

V. Ivanov

ADVANCED ANALYTICAL

Environmental Testing Laboratory

October 10, 2016

Nick Gerkin
Aerotech Environmental, Inc.
13925 Interurban Avenue South, Suite 210
Seattle, WA 98168

Dear Mr. Gerkin:

Please find enclosed the analytical data report for the *Fife RV (C61007-1)* Project.

Samples were received on *October 07, 2016.* The results of the analyses are presented in the attached tables. Applicable reporting limits, QA/QC data and data qualifiers are included. A copy of the chain-of-custody and an invoice for the work is also enclosed.

ADVANCED ANALYTICAL LABORATORY appreciates the opportunity to provide analytical services for this project. Should there be any questions regarding this report, please contact me at (425) 702-8571.

It was a pleasure working with you, and we are looking forward to the next opportunity to work together.

Sincerely,

V. Ivanov

ADVANCED ANALYTICAL

Environmental Testing Laboratory

October 25, 2016

Nick Gerkin
Aerotech Environmental, Inc.
13925 Interurban Avenue South, Suite 210
Seattle, WA 98168

Dear Mr. Gerkin:

Please find enclosed the analytical data report for the *Fife RV (C61024-2)* Project.

Samples were received on *October 24, 2016.* The results of the analyses are presented in the attached tables. Applicable reporting limits, QA/QC data and data qualifiers are included. A copy of the chain-of-custody and an invoice for the work is also enclosed.

ADVANCED ANALYTICAL LABORATORY appreciates the opportunity to provide analytical services for this project. Should there be any questions regarding this report, please contact me at (425) 702-8571.

It was a pleasure working with you, and we are looking forward to the next opportunity to work together.

Sincerely,

V. Ivanov

Val G. Ivanov, Ph.D.
Laboratory Manager

4078 148 Ave NE■ Redmond, WA 98052

Subject: Supplemental Phase II Environmental Site Assessment
Freddie's Casino Property
3410 Pacific Highway East
Fife, Washington

Dear Mr. Coon:

Associated Earth Sciences, Inc. (AESI) is pleased to provide this letter-report presenting the results of our assessment of subsurface conditions at the above-referenced site. The subject property consists of a vacated casino building, associated outbuilding, and associated asphalt and gravel parking located on approximately 3.76 acres of land. The location of the property is shown on Figure 1, "Vicinity Map."

BACKGROUND

AESI issued a Phase I Environmental Site Assessment (ESA) for the subject property on October 29, 2013, for another party. The site layout is shown on the attached Figure 2. Based on our Phase I ESA findings, the identified recognized environmental conditions (RECs) included:

- A release of petroleum hydrocarbons was previously identified on the northwestern portion of the subject property. Additional investigation was recommended to determine the nature and extent of the release as well as whether it originates from an on-site or off-site source.

- The northwest corner of the subject property was occupied by a Gasamat gas station from approximately the late 1960s to the late 1980s (Figure 2). The full history and configuration of the former station, as well as the specifications and status of the former underground storage tank (UST) fuel system, are unknown. Additional investigation was recommended to determine if the Gasamat is the source of the above-mentioned petroleum

release or if other adverse subsurface conditions (e.g. abandoned USTs) are present beneath the subject property.

- A petroleum release was historically identified at the northwest adjoining Chevron station property. Based on the available regulatory records and the identified petroleum release on the subject property, additional investigation was recommended to determine if this off-site activity has adversely affected or contributed to adverse subsurface conditions beneath the subject property.

- The subject property is part of a cleanup "site" (CSCSL) defined by the Washington State Department of Ecology (Ecology) due to the above-mentioned petroleum release and elevated arsenic concentrations in ground water. Based on our recent correspondence with Ecology, the site would likely be delisted from the CSCSL if the petroleum release is remediated, regardless of the arsenic condition in ground water (which appears to be area-wide).

AESI's complete Phase I ESA findings and conclusions are provided under separate cover.

SOIL AND GROUND WATER SAMPLING

For this subsurface investigation, AESI oversaw a geophysical survey and completed exploration advancement on December 18 and 19, 2013, respectively. The purpose of the geophysical survey was to attempt to identify abandoned USTs or backfilled UST cavities at the subject property. The purpose of the explorations was to attempt to better define the nature and extent of the identified petroleum release at the site and to determine if any of the above-referenced RECs have led to other adverse environmental impacts to subsurface soil and/or ground water at the subject property. Figure 2 is a "Site and Exploration Plan" that indicates the approximate locations of the test probes. Analytical laboratory results and sample chain-of-custody forms are included as Appendix A and exploration logs are included as Appendix B.

Geophysical Survey

AESI oversaw a geophysical survey performed at the site by CNI Locates, Ltd. The accessible exterior areas of the northwestern, unpaved gravel area (i.e. the vicinity of the former Gasamat station and the previous detection of petroleum hydrocarbons) were examined with an electro magnetometer (EM) for metallic anomalies. Suspect anomalies and the estimated historical locations of the former Gasamat station and USTs (based on limited information obtained during our Phase I ESA) were subsequently traversed with ground-penetrating radar (GPR). Based on the findings of the geophysical survey, no abandoned USTs or definitive evidence of former, backfilled UST cavities were identified.

It should be noted that several factors can interfere with the effectiveness of the geophysical survey equipment, potentially resulting in subsurface features and/or objects (including USTs and associated backfilled cavities) not being identified. Regardless of these inherent limitations, geophysical survey techniques such as EM and GPR are generally considered the best available technology for identifying the presence and location of these potential subsurface features.

Exploration Borings

AESI completed ten Geoprobe explorations (EB-1 through EB-10) throughout the suspect areas of the subject property using a truck-mounted Geoprobe 7800 rig. The explorations were drilled to a maximum depth of 15 feet below ground surface (bgs).

The approximate locations of the explorations are depicted on Figure 2. Test probes EB-1 and EB-2 were advanced in the approximate, reported locations[1] of the two borings where the petroleum release was previously identified in 2004. Test probes EB-3 and EB-10 were advanced southwest and southeast of the existing Chevron fuel system, to help assess whether the off-site operations may be contributing to adverse subsurface conditions encountered on the subject property. Test probes EB-4 through EB-7 were advanced in the gravel lot at the approximate location of the former Gasamat gas station and USTs. Test probes EB-8 and EB-9 were advanced in locations meant to better delineate the previously identified petroleum release. Ground water was encountered in every exploration.

Soil Sampling

Soil sampling at all Geoprobe explorations was completed by driving a plastic-lined hollow probe tube with a truck-mounted, hydraulic impact hammer. The explorations are advanced in 5-foot increments. After each 5-foot driving interval the probe was removed from the exploration and the plastic sleeve containing a sample of the subsurface materials encountered during that driving interval was removed. The plastic liner was cut open to expose the soil sample, and laboratory-prepared sample containers were filled with soil for possible analytical testing.

A soil sample was also collected for field screening using a portable photoionization detector (PID) and visual and olfactory methods. PID readings were collected to determine field indications of volatile organic compounds (VOCs) in soils, measured in volumetric parts per million (vppm). PID readings and observations pertaining to suspect staining, and/or odors are noted on the exploration logs included in Appendix B. In summary, no suspect soil staining was noted; however, slight to strong petroleum odors were encountered in soils from explorations EB-4 through EB-7, EB-9, and EB-10. PID readings ranged from 0.0 vppm to 184 vppm (observed in EB-5 from 5.5 to 6.5 feet bgs). Suspect elevated PID readings were observed in soils from explorations EB-4 through EB-6, and EB-10.

1 The figures provided in the previous reports for the 2004 borings were not to scale. Therefore, the reported locations are approximated.

Ground Water Sampling

Ground water samples were collected for analytical testing from every exploration advanced at the site. The ground water sampling procedure consisted of installing a temporary well screen at the base of the completed exploration, and inserting a plastic tube extending from the screened interval to the ground surface. A peristaltic pump was used to draw water from the screened interval. The pump was run for approximately 15 minutes to clear the majority of the turbidity from the water flow, and the ground water sample was collected into laboratory-prepared sample containers after the development period. The tubing, temporary screen, and casing were then removed.

Sample Management

All soil and ground water samples collected for chemical analysis were placed in appropriate sample containers supplied by an Ecology-approved laboratory subcontracted to AESI. Soil samples intended for VOCs analysis were collected using the Ecology-approved 5035 method. However, soil sample EB-2-8.5, which was not originally intended for VOCs analysis, was collected in a 4-ounce glass jar with a Teflon-lid liner. Each container was labeled with the site name, date, time, exploration number, sample number, and sampling personnel. Sample containers were placed in a chilled cooler immediately after sampling, and subsequently transported to the analytical laboratory by AESI under strict chain-of-custody procedures.

Site Restoration

All Geoprobe exploration locations were abandoned with bentonite seals in accordance with Ecology guidelines. No permanent wells were installed.

Waste Management

Soil cuttings, purge water, and equipment cleaning water generated during the field activities were placed in a Washington State Department of Transportation (WSDOT)-approved, 35-gallon steel drum, closed, and appropriately labeled with project-specific information and initial accumulation date. One 35-gallon waste drum was generated during these field services and was left on-site for subsequent characterization and disposal. Disposal of drummed material is not included in this scope of work.

SUBSURFACE CONDITIONS

Subsurface conditions at the project site were inferred from the field explorations accomplished for this study and visual reconnaissance of the site. Soils encountered beneath the subject property generally consisted of approximately 3 to 8 feet of brown-gray, fine to coarse silty sand, with variable gravels, underlain by brown-gray sandy silt (alluvium) to the maximum depth explored (15 feet bgs).

An approximately 0.5- to 3-foot thick, perched water-bearing zone (moist to wet) was observed within the silt unit, occasionally within an interbedded sandy silt or silty sand layer, at approximate depths of 6 to 9 feet bgs. The partially-saturated zones abated with depth, except at exploration EB-6, where wet soils were observed to the maximum depth explored. In each exploration, the water level rose slightly from the initially encountered depth (a few inches to as much as 2 feet), indicating a partially-confined ground water condition.

As discussed in our Phase I ESA report, a review of previous reports for the subject and adjoining properties indicates that ground water flow direction appears to fluctuate and can range from north to south. The predominant ground water flow direction (based on multiple elevation measurements reported for the northwest adjoining Chevron property) is reportedly to the southwest, towards the Puyallup River.

LABORATORY ANALYSIS RESULTS

Soil samples were analyzed by Friedman & Bruya, Inc. of Seattle, Washington, for one or all of the following:

- Total petroleum hydrocarbons (TPH) identification by Method NWTPH-HCID.
- Gasoline-range TPH by Method NWTPH-G.
- Diesel- and oil-range TPH by Method NWTPH-Dx with silica gel cleanup[2].
- VOCs and/or benzene, toluene, ethylbenzene and total xylenes (BTEX) by Method 8260C or 8021B.
- Total lead by Method 200.8/1631E.

The soil and ground water analytical results are summarized in Table 1, "Laboratory Analysis Results for Soil Samples," and Table 2, "Laboratory Analysis Results for Ground Water," respectively, attached to this letter-report. Gasoline-range TPH and BTEX analytical results are also summarized in Figure 3, "Exploration Plan with Soil Analytical Summary," and Figure 4, "Exploration Plan with Ground Water Analytical Summary," both attached to this letter report.

Soil Analytical Results

Based on the laboratory analytical results, gasoline-range TPH (up to 2,000 milligrams per kilogram [mg/kg]), benzene (up to 1.8 mg/kg), toluene (up to 9.6 mg/kg), ethylbenzene (up to 41 mg/kg), and total xylenes (up to 120 mg/kg) were detected in the soil samples analyzed from

2 Silica gel cleanup mitigates organic interferences that can result in falsely elevated analytical results during NWTPH-Dx analysis.

the subject property, above their Model Toxics Control Act (MTCA) Method A soil cleanup levels for unrestricted land use (MTCA cleanup levels of 30, 0.03, 7, 6, and 9 mg/kg, respectively). The distribution of gasoline TPH and BTEX concentrations detected in site soils (considered herein to be the "indicator" contaminants of concern) is shown in Figure 3. The highest concentrations of gasoline TPH and BTEX were detected in soils collected from the vicinity of the reported, former Gasamat UST locations.

Diesel-range TPH concentrations (up to 660 mg/kg) were also detected in soil samples concurrently with significantly elevated gasoline-range TPH concentrations. However, a review of the individual sample chromatograms by the analytical laboratory indicated that these diesel detections are likely the result of overlap from the elevated gasoline TPH detections and are not indicative of diesel.

Oil-range TPH was not detected in any of the soil samples analyzed. The three soil samples with the highest detections of gasoline TPH were also analyzed for total lead content and found to contain lead concentrations up to 12.3 mg/kg, below the MTCA Method A soil cleanup level of 250 mg/kg and likely indicative of background conditions.

Ground Water Analytical Results

Based on the laboratory analytical results, gasoline-range TPH (up to 49,000 micrograms per Liter [ug/L]), benzene (up to 1,100 ug/L), toluene (up to 420 ug/L), ethylbenzene (up to 2,800 ug/L), total xylenes (up to 6,000 ug/L), and naphthalene (up to 540 ug/L), were detected in the ground water samples collected from the site above their MTCA Method A ground water cleanup levels (MTCA cleanup levels of 800, 5, 1,000, 700, 1,000, and 160, respectively). 1,3,5-trimethylbenzene (up to 210 ug/L) was also detected above its applicable MTCA Method B ground water cleanup level of 80 ug/L[3]. The distribution of gasoline TPH and BTEX concentrations detected in ground water at the site is shown in Figure 4. As with the detections in soil, the highest concentrations of gasoline TPH and BTEX were detected in ground water collected from the vicinity of the reported, former Gasamat UST locations.

Diesel-range TPH (up to 6,000 mg/kg) and methylene chloride were also detected in ground water samples with significantly elevated gasoline-range TPH concentrations. However, a review of the individual sample chromatograms by the analytical laboratory suggested that the diesel TPH detections are likely the result of overlap from the elevated gasoline TPH concentrations and not indicative of diesel. The laboratory also indicated that the methylene chloride detection was likely the result of laboratory contamination.

Oil-range TPH was detected in only one sample, EB-3-GW, at a concentration of 350 ug/L, below the MTCA Method A ground water cleanup level of 500 ug/L. Other petroleum-related VOCs were also detected in ground water at relatively low concentrations (see Table 2).

3 In lieu of an established MTCA Method A ground water cleanup level for 1,3,5-trimethylbenzene, the Method B cleanup value was used for comparison.

CONCLUSIONS AND RECOMMENDATIONS

A supplemental Phase II ESA subsurface investigation was conducted to attempt to better define the nature and extent of adverse subsurface conditions at the subject property.

Based on the geophysical survey findings, no suspect subsurface anomalies (e.g. USTs or backfilled UST cavities) were identified.

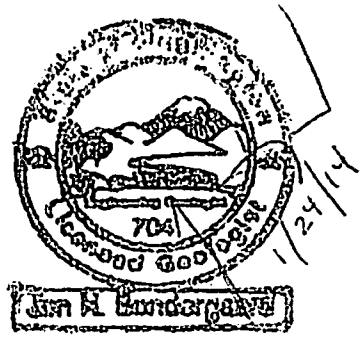
Based on the soil and ground water analytical results, a release of diesel- and oil-range TPH was not identified on the subject property. The eastern and southeastern extents of the previously identified gasoline-range TPH and BTEX release to soil and ground water have been adequately delineated. The extent of the release to soil and ground water, from the northwest to the southwest, has not yet been determined. Concentrations of naphthalene and 1,3,5-trimethylbenzene (likely associated with the gasoline TPH release) were also detected in ground water at the site above their respective MTCA Method A ground water cleanup levels. Also, the vertical extent of the identified contaminants of concern (COCs) appears to be limited to the observed, perched water-bearing zone and immediately adjacent, underlying soils.

The highest concentrations of the COCs were detected in the reported vicinity of the former Gasamat USTs. At this time, it is unclear if the adjoining Chevron station fuel system is contributing to the identified on-site release. The exploration closest to the off-site USTs (EB-3) did not contain significantly elevated concentrations of the COCs. However, due to the significantly elevated COC concentrations in soil and ground water from exploration EB-4 (also inferred directly downgradient of the off-site fuel UST nest), additional investigation would be necessary to exclude the adjacent Chevron facility as a source of COC contribution, especially given prior documented releases at the off-site property.

Additional investigation would be necessary to determine the full extent of the COCs plume in soil and ground water, particularly to the west. AESI recommends that a copy of this letter-report be submitted to Ecology as a status report of the remedial efforts being undertaken on the subject property. The client should also confer with legal counsel before taking any additional steps to address the on-site release.

LIMITATIONS AND EXCEPTIONS

Subsurface explorations cannot eliminate all uncertainty regarding the current extent of chemical contamination or the potential for future migration to soil or ground water. Given budget and time limitations, sampling is limited to a finite number of discrete locations and chemical analysis is limited to chemical constituents typically associated with the known environmental conditions. It is possible that higher chemical concentrations may be found in locations where sampling was not conducted and chemical constituents may be present that were not included in the analysis.



Judgments leading to the enclosed general conclusions are based on a reasonable amount of sampling and analysis and reflect site conditions as they existed at the time of our assessment. Other information on the subject property or adjacent surrounding properties may exist, and more extensive studies may reduce the uncertainties associated with this assessment.

CLOSURE

This letter-report was prepared for the exclusive use of Mr. Noel Coon, Hana Hou Wailea, LLC, and its agents for specific application to the subject site. AESI personnel performed this assessment in accordance with generally accepted standards of care that existed in the State of Washington at the time of this study. Our findings and conclusions have been prepared in accordance with generally accepted professional practice in the area at this time. We make no other warranty, either express or implied.

We appreciate this opportunity to provide these services. Please do not hesitate to call if you have any questions.

Sincerely,
ASSOCIATED EARTH SCIENCES, INC.

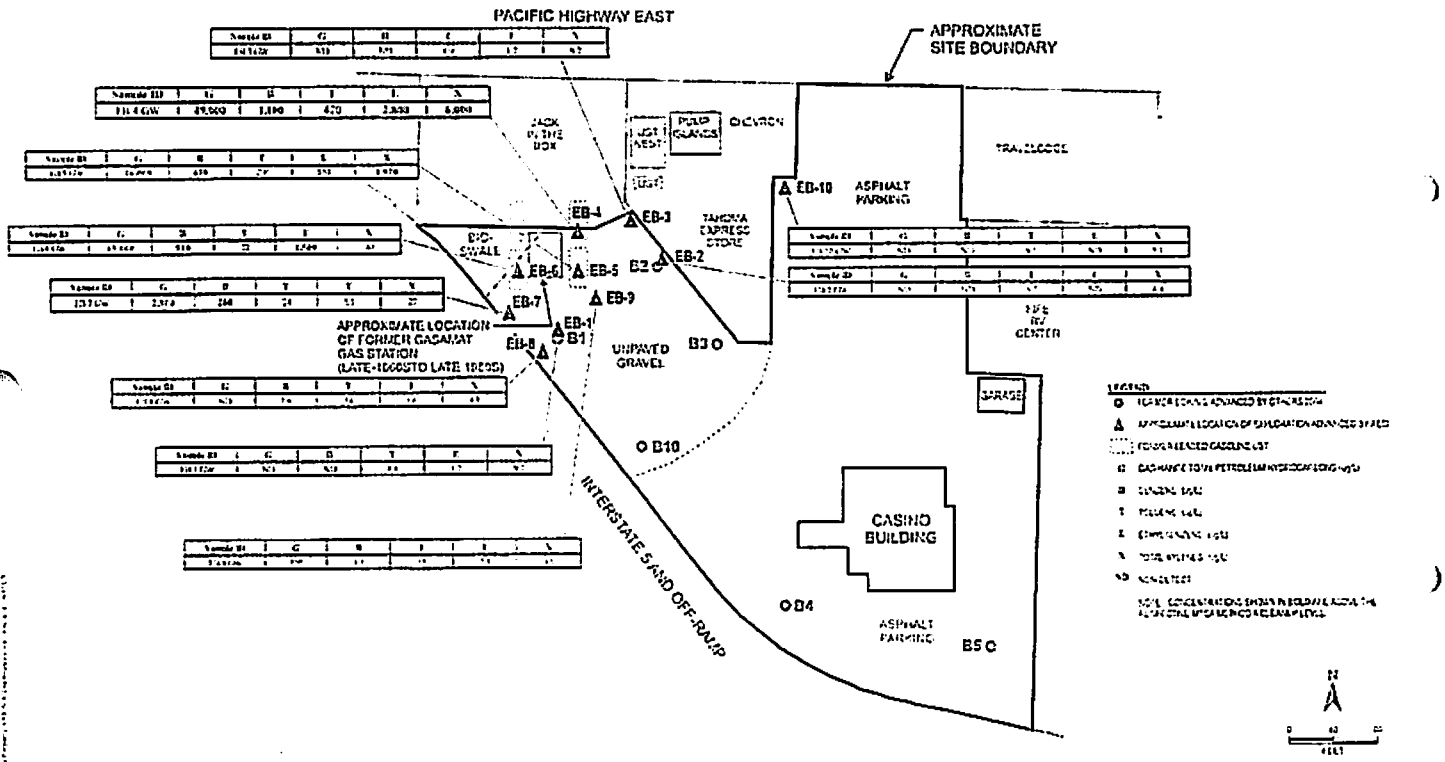
Dear Mr. Smith:

Included are the results from the testing of material submitted on December 20, 2013 from the TV130509B, F&BI 312348 project. There are 28 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.



Michael Erdahl
Project Manager

MTCA Method A Cleanup Levels			30 / 100 [1]	2,000	2,000	0.03	7	6	9	250

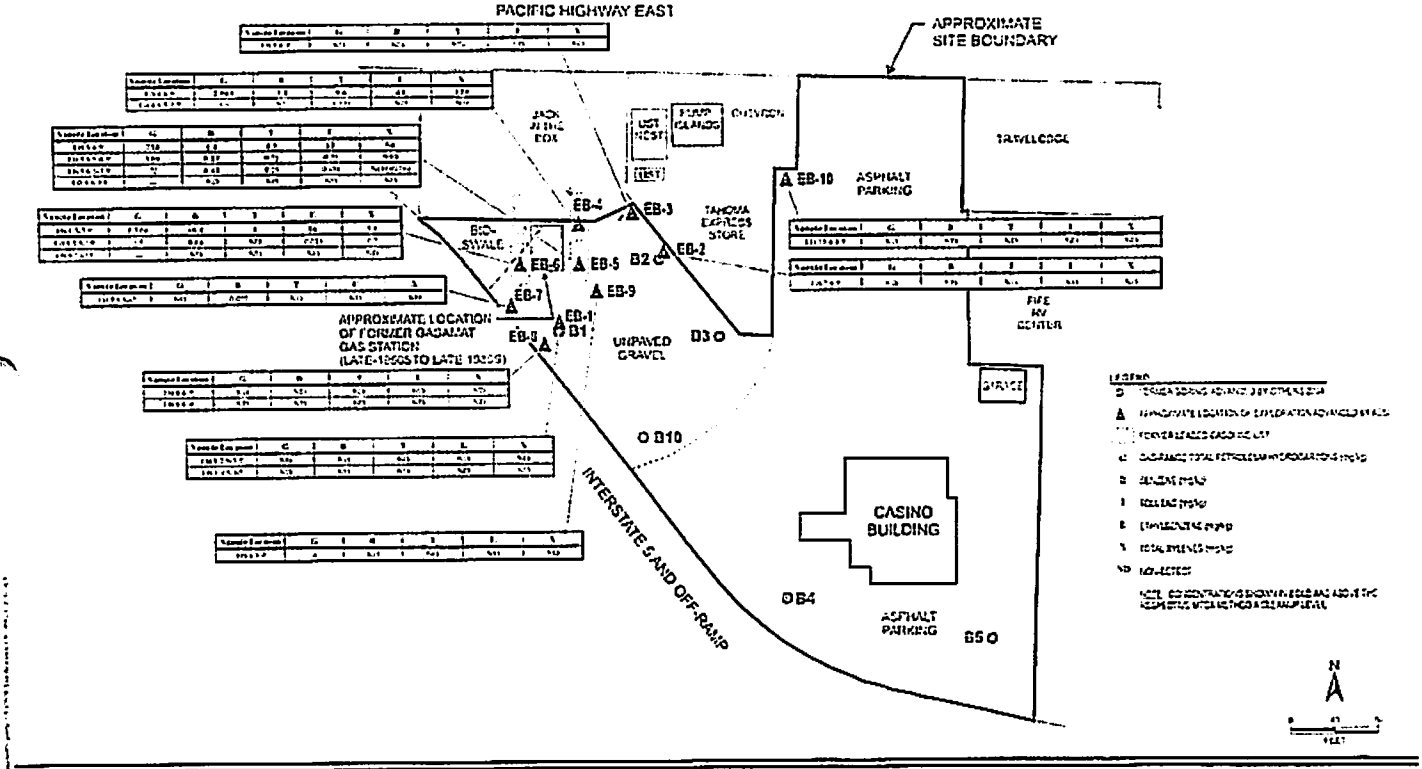
Notes: Results above the MTCA Method A Cleanup Level for Unrestricted Land Use, if any, in bold

ft bgs = feet below ground surface

mg/kg = milligrams per kilogram (equivalent to parts per million)

PID = Photoionization Detector

vppm = volumetric parts per million



--- = Not Analyzed

NR = No reading collected

[1] The cleanup level for gasoline-range total petroleum hydrocarbons is 100 mg/kg for mixtures without benzene and the total of ethylbenzene, toluene, and xylenes are less than 1% of the mixture. The cleanup level is 30 mg/kg for all other gasoline mixtures.

[2] The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

[3] The sample was received in a container not approved by the method. The value reported should be considered an estimate.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Test Pit Logs

TP-1:	0'-3'	Gray sandy gravel; no odor
	3'-6'	Gray, clayey silt; no odor, no
	Bop@6'	groundwater observed.
TP-2:	0'-4'	Sandy gravel; no odor
	4'-8'	Brown clayey silt; no odor, groundwater
	Bop@8'	seepage observed from 6' to 7' in depth.
TP-3:	0'-8'	Gray, sandy gravel; strong gasoline odor,
	Bop@8'	no groundwater observed, heavy caving to 6'.
TP-4:	0'-10'	Gray, sandy gravel; strong gasoline
	Bop@10'	odor throughout, no groundwater observed due to heavy caving to 6', soil from bottom of pit appeared wet.
TP-5:	0'-3'	Gray, sandy gravel; strong gas odor
	3'-5'	Brown, silty sand; strong gas odor,
	Bop@5'	no groundwater observed.
TP-6:	0'-4'	Gray/brown, sandy gravel; moderate gas odor
	4'-5'	Brown silty sand; mild gas odor, no
	Bop@5'	ground water observed.

2/3

TP-7:	0'-4'	Gray, silty sand, strong gas odor
	Bop@4'	to 3', becomes slight odor at 4',
		no ground water observed
TP-8:	0'-3'	Gray, sandy silt; strong gas odor
		to 2', mild odor to 3'
	3'-3.5'	Gray, fine to med. sand; slight gas odor,
	Bop@3.5'	groundwater seeping in from 3' (Sheen)
TP-9:	0'-1'	Gray silt; med. gas odor
	1'-3'	Gray, clayey silt, slight gas odor
	3'-4'	Gray, medium sand, no gas odor,
	Bop@4'	groundwater seeping in from 3' (sheen)
TP-10	0'-3'	Brown sandy gravel; no odor
	3'-4'	Gray sandy gravel; slight gas odor
	4'-12'	Gray, fine sandy silt; slight to no
	Bop@12'	gas odor, after sitting open ~1 hour,
		slight wetting of side wall observed at
		10'
TP-11:	0-3'	Brown sandy gravel; no odor
	3'-4'	Gray sandy gravel; no odor
	4'-8'	Gray, fine sandy silt no odor
	8'-10'	Gray, fine to med sand; no odor,
	Bop@10'	groundwater observed at 8.5' (no sheen)

3/3

TP-12: 0'-3' Brown sandy gravel; no odor
3'-4' Gray sandy gravel; no odor
4'-9' Gray, fine sandy silt; no odor
9'-10' Gray, fine to med. sand; no odor,
BOP@10' no groundwater observed but sand @ bottom appeared wet.

Contaminated Soils Removal
I-5 / Port of Tacoma Road Interchange Improvements
City of Fife

Dear Stacie,

On the I-5 / Port of Tacoma Rd. Interchange Improvements project site concentrations of contaminated soil above MTCA cleanup levels within a biofiltration swale/regulated wetland running along the northwest side of the I-5 South off ramp ditch, were found. The location of contamination is part of a biofiltration swale which dates back to the original Port of Tacoma Rd. interchange construction. The biofiltration swale is also in a wetland as of a November 10, 2008 WSDOT prepared wetland delineation, a delineation which has also been reconfirmed by Widener & Associates as of April 2016. The biofiltration swale/wetland was designed to treat stormwater runoff from the southbound I-5 prior to discharge from the highway right of way. Currently the biofiltration swale/wetland is regulated by Ecology and the U.S. Army Corp. Of the seven institute soil samples taken from the area on August 8, 2018, five of the results came back with high levels of diesel range organics and heavy oil. While this area does have soil sample concentrations below the MTCA Method A cleanup level, the five adjacent samples show levels above the 2000 mg/kg diesel range organics and heavy oils Method A clean up level for unrestricted land uses as listed in the MTCA Table 740-1. Therefore, on August 29, 2018, the Tacoma-Pierce County Health Department permitted the excavation and hauling of 1000 cubic tons of contaminated material to the LRI Landfill in Eatonville, WA (See Appendix A for WDA Authorization and Application Packet).

On August 23, 2018 the boundaries of contamination were staked out in the field and on September 18, 2018, excavation and hauling of the contaminated material began. A representative from Widener & Associates who is familiar with petroleum contamination was on-site during excavation activities. All soils showing visual or olfactory cues indicating potential petroleum contamination were pointed out to the contractor, excavated and hauled off to the LRI Landfill by Tunisia trucking.

Photo 1: Staking locations of contaminated soil boundaries.

Photo 2: Excavation of contaminated soil from the biofiltration swale/regulated wetland along the I-5 South off ramp.

After contaminated soil was excavated, approximately three to four feet down and removed, five additional soil samples were taken to verify that all contaminated material was hauled off. See Appendix B for the full-size non-detect soil sample locations map along with the Spectra report of the test results. These five soil samples were only analyzed for diesel range organics and heavy oil since these were the analysis which

originally tested above MTCA Method A cleanup standards (See Table 1 for summary of all the test result data). Photo 3 provides a location map for both sets of soil samples. The contaminated samples testing above MTCA Method A clean up standards and the second set of samples taken after the contaminated soil was removed.

Table 1: Soil Sample Test Results of Remaining Soil After Excavation of Contaminated Soil

Analyte	ED Clean 1	ED Clean 2	ED Clean 3	ED Clean 4	ED Clean 5
Diesel	<10 mg/Kg	<10 mg/Kg	<10 mg/Kg	<10 mg/Kg	<10 mg/Kg
Oil	<50 mg/Kg	<50 mg/Kg	<50 mg/Kg	<50 mg/Kg	<50 mg/Kg
Gasoline	<5 mg/Kg	<5 mg/Kg	<5 mg/Kg	<5 mg/Kg	<5 mg/Kg
HCID- Oil	<100 mg/Kg	<100 mg/Kg	<100 mg/Kg	<100 mg/Kg	<100 mg/Kg
HICD-Diesel	<50 mg/Kg	<50 mg/Kg	<50 mg/Kg	<50 mg/Kg	<50 mg/Kg

Photo 3: Soil sample locations for contaminated soils tested before and after removal.

The remaining exposed soils within the biofiltration swale/wetland were then covered with two to three feet of quarry spalls, for final stabilization and erosion control over the winter.

Photo 4: Backfilling the excavated contamination areas with quarry spalls.

Based on the best professional judgement of Widener and Associates, this memorandum documents the appropriate level of clean up necessary to have reasonably mitigated for the contamination found within the project site. If any additional information is needed please contact Jordan Widener at (510) 725-2291.

Sincerely,

Jordan Widener
Widener & Associates

Waste Disposal Authorization Application

Tacoma-Pierce County Health Department
Healthy People in Healthy Communities

We require the information below to determine if this waste is acceptable for disposal at the City of Tacoma Landfill, the LRI Landfill, the Wm Dickson Waller Road Landfill, or other permitted solid waste facilities. It is unlikely that you will be able to respond in the space provided. Feel free to modify the format or address the information on additional pages. Include all the information requested below and email, fax or mail to:

Date
08/27/18

Site/Generator Name
Port of Tacoma Road Interchange Project / WSDOT

Site Owner Name
WSDOT

Email ehsolidwaste@tpchd.org
Fax (253) 798-6498
Tacoma-Pierce County Health Department
3629 South D Street MS 1045
Waste Management
Tacoma, WA 98418-6813

Describe the location where the waste originated (site address, physical location, company name, project name, etc.)
The contaminated sediment is from a section of a biofiltration swale/regulated wetland, along the I-5 south bond off ramp adjacent to Jack-in-the Box along Pacific Hwy E

Transporter Name
Tunista

Technical Contact/Consultant Name
Jordan Widener

Proposed Solid Waste Disposal/Treatment Facility
LRI Landfill

Describe the site history (if applicable).
The site is part of a biofiltration swale which dates back to the original Interchange construction. The biofiltration swale is also in a wetland as of a Nov. 10th, 2008 WSDOT prepared wetland delineation, a delineation which has also been reconfirmed by Widener & Associates as of April, 2016. The biofiltration swale/wetland was designed to treat stormwater runoff from southbound I-5 prior to discharge from the highway right of way. Currently the biofiltration swale/wetland is regulated by Ecology and the U.S. Army Corp.

Describe the source of the waste, or how the waste is generated.
The source of the waste sediment is from a engineered biofiltration swale, which has also been classified as a wetland as of a Nov. 10th, 2008 WSDOT prepared wetland delineation. This delineation was reconfirmed by Widener & Associates April of 2016. Sediments from the biofiltration swale/wetland which have trapped contaminates, are being removed to decommission a portion of the biofiltration swale and replace it with a culverted conveyance to accommodate interchange reconstruction.

Projected Quantity or Volume of Waste (tons or cubic yards generated per month, quarter, year, once, etc.)
One time disposal of 500 or less cubic yards of soils.

Describe the sampling method(s) and/or submit a sampling plan.
Institute samples were taken according to the number of samples recommended by the table found in the WDA Required Analysis/Analysis Conducted form. See attached PDF graphics which provide an areal view of the sampled locations which tested below MTCA clean up standards and the samples which tested above MTCA clean up standards.

Waste Disposal Authorization Application

Tacoma-Pierce County Health Department
Healthy People in Healthy Communities

Describe and justify the number of samples per volume of waste. It is the number of samples dictated by the volume of waste found in the table on the WDA Required Analysis/Analysis Conducted form.
Describe and justify the parameters selected for analysis. It is the analysis listed on the WDA Required Analysis/Analysis Conducted form.

Please attach or enclose:

- analytical results
- chain of custody forms
- a sampling plan
- any other documents relevant to the review of the site, facility and/or waste being characterized

By my signature below, I certify that the information presented in this application is true and complete to the best of my knowledge.

Waste Disposal Authorization
Required Analysis/Analysis Conducted

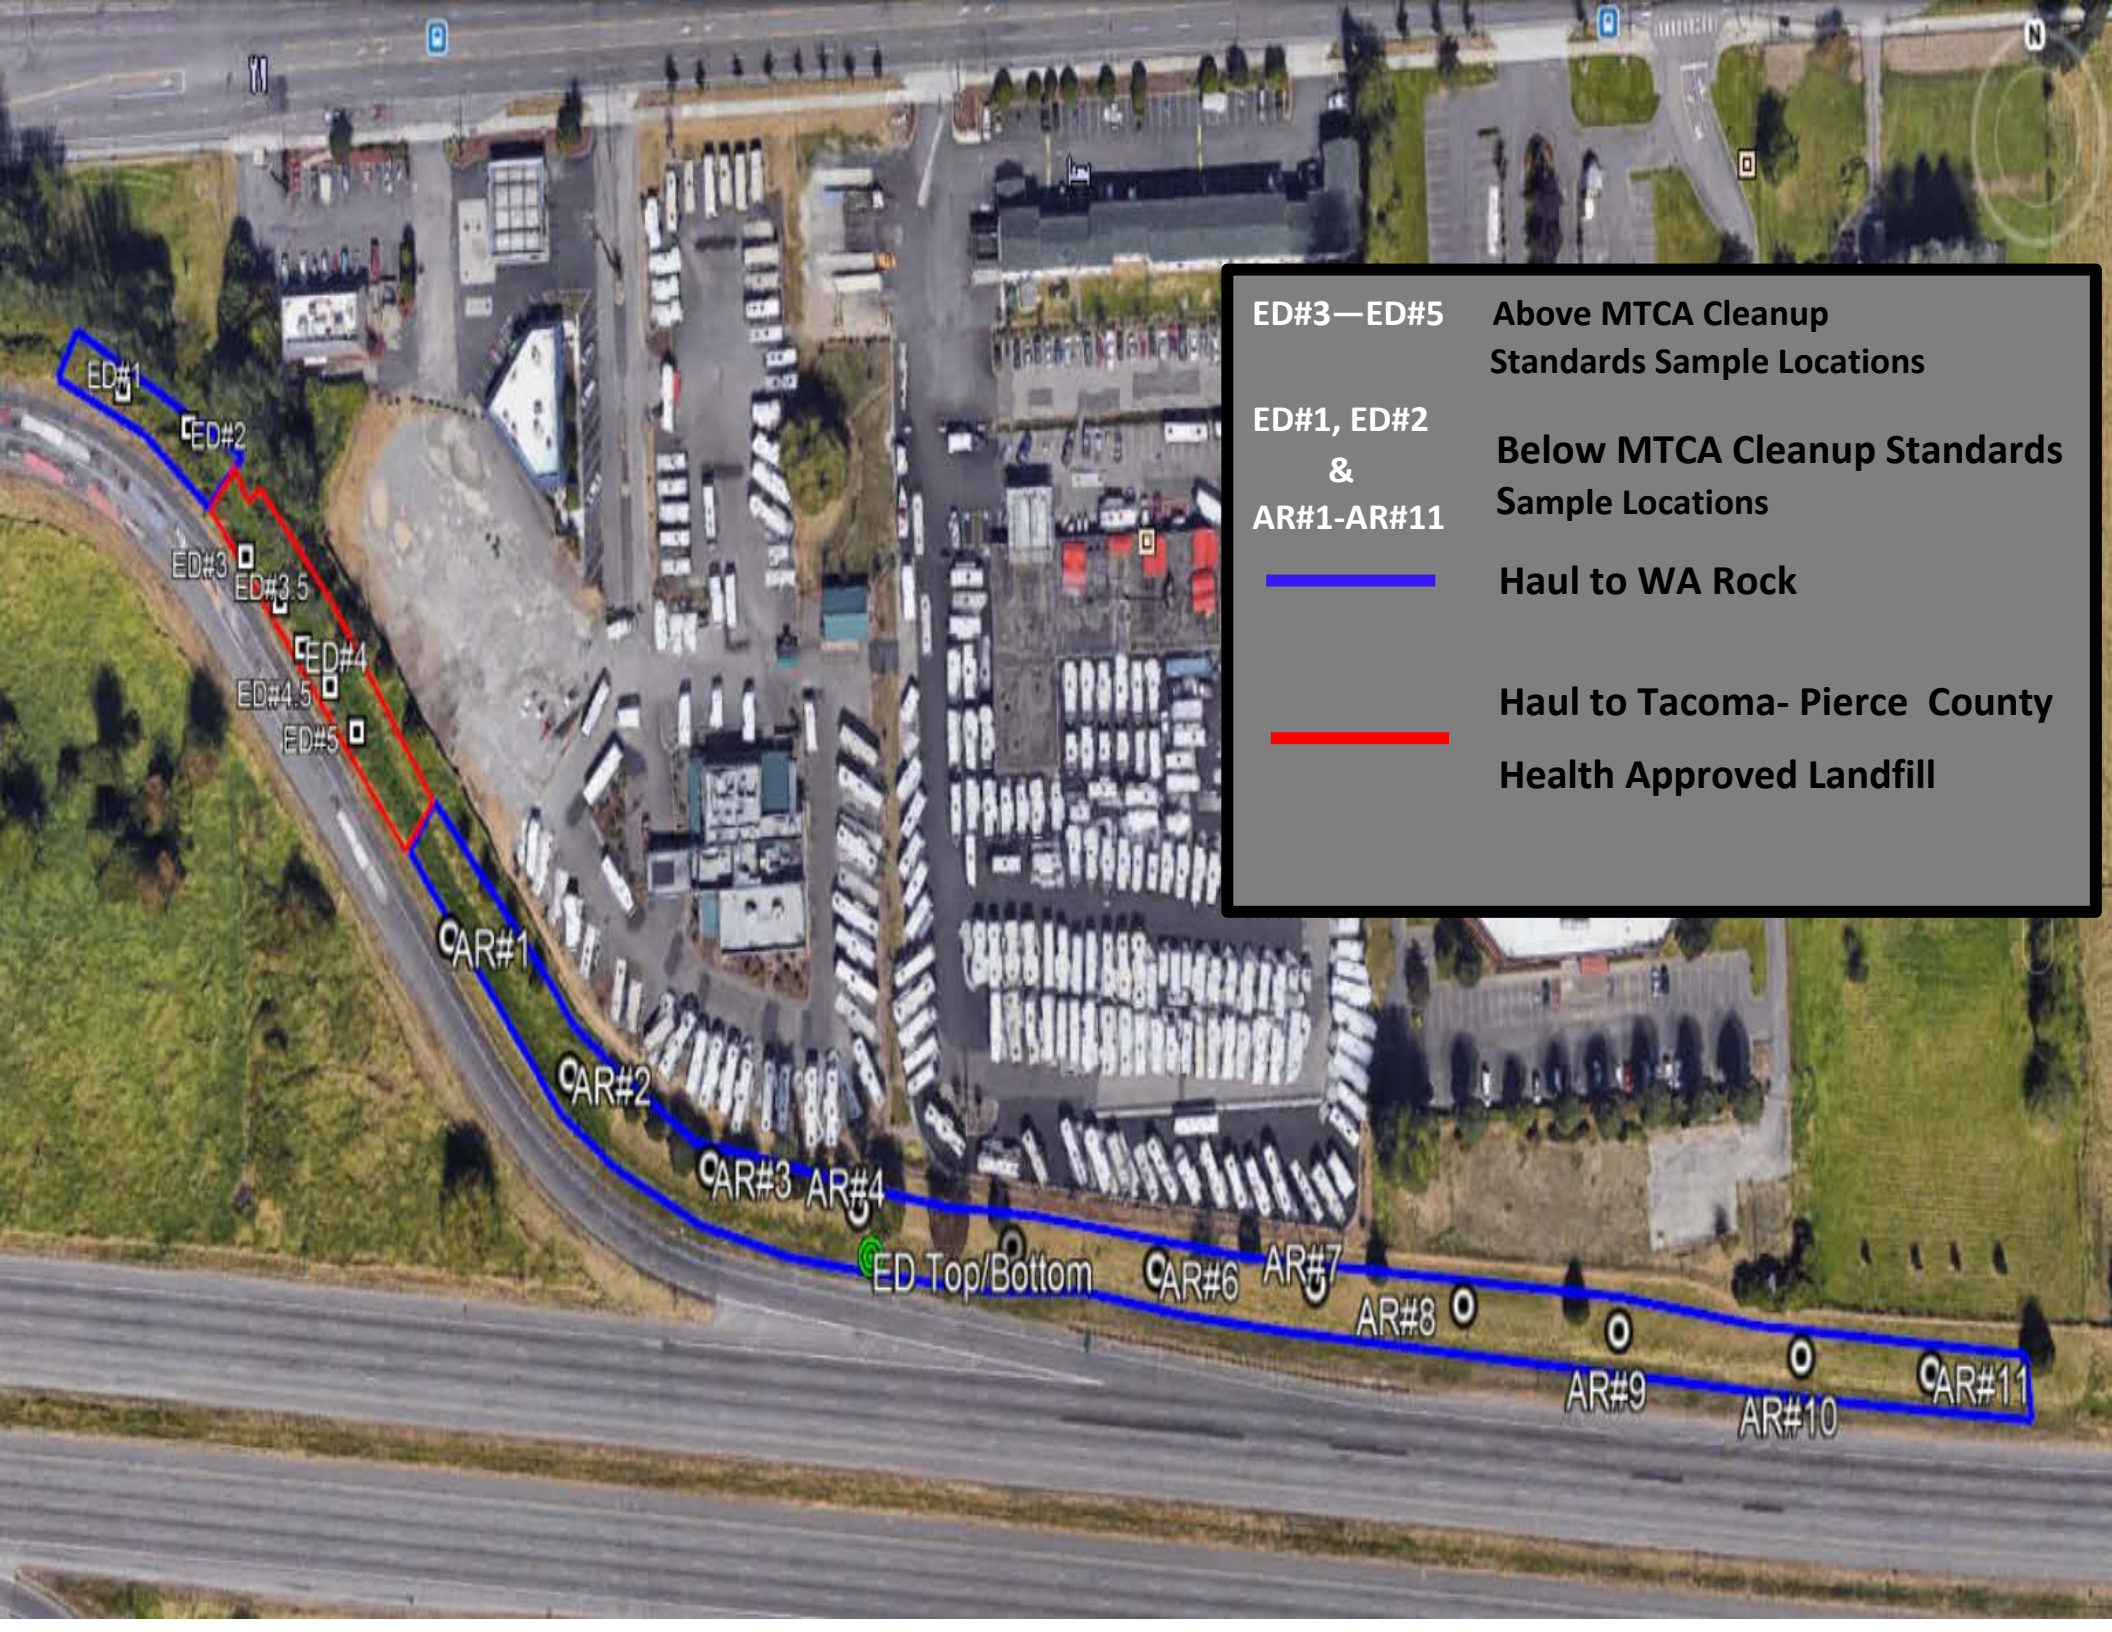
Tacoma-Pierce County Health Department
Healthy People in Healthy Communities

Date _08/21/18___ Site/Generator Name __Port of Tacoma Road Interchange Project / WSDOT_

Description of Waste ___Soil Matrix_____

Analytical results must be submitted to Tacoma-Pierce County Health Department's Waste Management Program prior to disposal of waste at a permitted solid waste facility located in Pierce County. The number of samples is dictated by the volume of waste and can be found in the table below.

VOLUME (cubic yards)	NUMBER OF SAMPLES
0 - 25	2
26 – 100	3
101 – 500	5
501 - 1000	7
1001 – 2000	10
One (1) additional sample for every 500 cubic yards of material over 2000 cubic yards.	



The parameter(s) and analytical method(s) indicated below are required.

PARAMETER	ANALYTICAL METHOD	YES/NO	SAMPLE TYPE
Total Metals (RCRA 8)	EPA #6010	Yes	soil
TCLP Metals (RCRA 8)	EPA #1311/6010	Yes	soil
Total Petroleum Hydrocarbons	WTPH-HCID, WTPH-G, WTPH-D, WTPH-418.1 Modified, WTPH-G or WTPH-D Extended	Yes	soil
Volatile Organics	EPA #8010 (Halogenated), 8020 (BTEX), 8240	Yes	soil
Semi-volatile Organics	EPA #8270, 8310 (PAH's)	Yes	soil
PCB's	EPA #8080, 8140	Yes	soil
TCLP Volatiles & Semi		No	
Paint Filter Test	EPA #9095	Yes	soil
pH	EPA #9040, 9045 (soil)	Yes	soil

August 20, 2018

Attention Jordan Widener:

Fremont Analytical, Inc. received 8 sample(s) on 8/9/2018 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.
Gasoline by NWTPH-Gx
Mercury (SW7470) with TCLP Extraction (EPA 1311)
Mercury by EPA Method 7471
Metals (EPA 200.8) with TCLP Extraction (EPA 1311)
Paint Filter by EPA Method 9095B
pH by EPA Method 9045
Polychlorinated Biphenyls (PCB) by EPA 8082
Sample Moisture (Percent Moisture)
Semi-Volatile Organic Compounds by EPA Method 8270
SVOC (SW8270) with TCLP Extraction (EPA 1311)
Total Metals by EPA Method 6020
Volatile Organic Compounds by EPA Method 8260C
Volatile Organic Compounds by SW8260/TCLP ZHE

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

I. SAMPLE RECEIPT:
Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:
Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:
Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.
Prep Comments for METHOD (PREP-PCB-S), SAMPLE (1808113-002A) required Florisil Cleanup Procedure (Using Method No 3620C).
Prep Comments for METHOD (PREP-PCB-S), SAMPLE (1808113-002A) required Acid Cleanup Procedure (Using Method No 3665A).

Qualifiers:

* - Flagged value is not within established control limits
B - Analyte detected in the associated Method Blank
D - Dilution was required
E - Value above quantitation range
H - Holding times for preparation or analysis exceeded
I - Analyte with an internal standard that does not meet established acceptance criteria
J - Analyte detected below Reporting Limit
N - Tentatively Identified Compound (TIC)
Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
S - Spike recovery outside accepted recovery limits
ND - Not detected at the Reporting Limit
R - High relative percent difference observed

Acronyms:

%Rec - Percent Recovery
CCB - Continued Calibration Blank
CCV - Continued Calibration Verification
DF - Dilution Factor
HEM - Hexane Extractable Material
ICV - Initial Calibration Verification
LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
MB or MBLANK - Method Blank
MDL - Method Detection Limit
MS/MSD - Matrix Spike / Matrix Spike Duplicate
PDS - Post Digestion Spike
Ref Val - Reference Value
RL - Reporting Limit
RPD - Relative Percent Difference
SD - Serial Dilution
SGT - Silica Gel Treatment
SPK - Spike
Surr - Surrogate

Surr: o-Terphenyl	34.6		35.72		96.8	50	150		0		

NOTES:
R - High RPD due to suspected sample inhomogeneity. The method is in control as indicated by the Laboratory Control Sample (LCS).
DRO - Indicates the presence of unresolved compounds eluting from dodecane through tetracosane (~C12-C24).

NOTES:
S - Outlying spike recovery(ies) observed. A duplicate analysis was performed and recovered within range.
R - High RPD due to suspected sample inhomogeneity. The method is in control as indicated by the Laboratory Control Sample (LCS).

Re: Early Notice Letter Regarding the Release of Hazardous Substances

- **Site Name:** Jack in the Box Fife
- **Location:** 3402 Pacific Hwy E, Fife, Pierce County, WA 98424
- **Facility Site ID Number:** 7907

To Whom It May Concern:

The Department of Ecology (Ecology) is required to conduct an Initial Investigation, under chapter 70.105 Revised Code of Washington (RCW), upon receiving a report of release or threatened release of hazardous substance that may pose a threat to human health or the environment.

The Model Toxics Control Act (MTCA),[1] chapter 70.105D RCW, mandates Ecology maintain a database of Confirmed or Suspected Contaminated Sites. As a result of the initial investigation conducted by Ecology, this property has been added to the database as a State Cleanup Site and assigned a Facility Site Identification number of 7907. Please note that inclusion in the database does not mean Ecology has determined you to be a potentially liable person.

During the investigation, Ecology found soil and groundwater suspected to be contaminated with non-halogenated organics, halogenated organics, metals and other substances above MTCA cleanup levels at the location listed above. In the future, Ecology may conduct a more detailed inspection of this property known as a site hazard assessment. At that time, Ecology will assess whether action will be needed and establish a priority for the work.

Ecology's policy is to work cooperatively with individuals to accomplish prompt and effective cleanups. However, due to limited resources we are not always able to provide requested assistance. Your cooperation with Ecology in planning or conducting a remedial action is not an admission of guilt or liability. Please be aware of state laws that must be adhered to if you decide to proceed with cleanup work on your own.

Enclosed is a Model Toxics Control Act Cleanup Regulation Focus Sheet. This provides a brief overview of the process for the cleanup of contaminated sites[2]. For additional information regarding each step in the cleanup process and Ecology's Voluntary Cleanup Program, feel free to contact me or Nick Acklam, the Southwest Regional Office Voluntary Cleanup Program Coordinator, at (360) 407-6347, or visit Ecology's Voluntary Cleanup Program website.[3]

Chapter 70.105D RCW and the implementing regulations, chapter 173-340 Washington Administrative Code (WAC) which detail these requirements, can be found at Ecology's Toxics Cleanup Program's statutes and regulations website.[4]

If you would like a hard copy of the MTCA regulations, or if you have any questions, please call me at (360) 407-6246. Thank you for your cooperation.

Sincerely,

Kirsten Wecker

INSPECTION INFORMATION

Inspection Conducted? Yes ☒ No ☐	Date/Time: 02.22.17; 1:30 pm	Entry Notice: Announced ☐	Unannounced ☒
Photographs taken?	Yes ☐	No ☒	
Samples collected?	Yes ☐	No ☒	If *Yes*, be sure to include a figure/sketch showing sample locations.

RECOMMENDATION

No Further Action (Check appropriate box below):		**LIST on Confirmed and Suspected Contaminated Sites List:** ☒
Release or threatened release does not pose a threat	☐	
No release or threatened release	☐	
Refer to program/agency (Name:_____)	☐	
Independent Cleanup Action Completed (i.e., contamination removed)	☐	

COMPLAINT (Brief Summary of ERTS Complaint):

Gasoline range organics, benzene, toluene, ethylbenzene, and total xylenes are present in soil and/or groundwater in concentrations exceeding cleanup levels.

CURRENT SITE STATUS (Brief Summary of why Site is recommended for Listing or NFA):

Site contamination has been documented in a Phase II Environmental Site Assessment. The site entered VCP on 01.06.17 (FSID 7907).

Investigator: S. Bell	Date Submitted: 02.22.17

OBSERVATIONS

Description (please be sure to include the following: site observations, site features and cover, chronology of events, sources/past practices likely responsible for contamination, presence of water supply wells and other potential exposure pathways, etc.):

Note: The county assessor's information for the subject parcel lists an incorrect address of 3402 Pacific Highway East. The correct address is 3410 Pacific Highway East, confirmed with the City of Fife.

This site came to our attention when Alan Blotch (AeroTech Environmental Consulting) filed an application to dispose of 1000 tons of petroleum contaminated soil at the LRI 304th St. Landfill. A Supplemental Phase II ESA, prepared by Associated Earth Sciences, Inc. and dated 01.24.14, was attached to the WDA application. Following is a summary of the information provided in the Phase II.

Recognized environmental conditions (RECs) were identified in a Phase I ESA and referenced in this Phase II document. The primary REC was a former gas station on the northwest part of the property, and a petroleum hydrocarbon release in the same area.

The Phase II describes 10 geoprobe borings, completed to a maximum depth of 15 feet. Soil and groundwater samples were collected from each boring and analyzed for petroleum hydrocarbons, volatile organic compounds, and lead. Not all samples were analyzed for all constituents.

Soil contamination was verified with gasoline, toluene, ethylbenzene, and total xylenes found in concentrations exceeding cleanup levels (CULs). Diesel and lead were also detected, but below applicable CULs.

Groundwater contamination was also detected with gasoline, benzene, toluene, ethylbenzene, and total xylenes found in concentrations exceeding CULs.

An attempt was made to locate any USTs on the site prior to the subsurface investigation. An electro magnetometer and GPR were used, but no USTs were deteeted.

No subsequent information has been submitted, and the site has entered VCP (effective date 01.06.17, FSID 7907). The TPCHD recommends including this site in the SIS database due to documented contamination of both soil and groundwater.

(fill in contaminant matrix below with appropriate status choice from the key below the table)

CONTAMINANT GROUP	CONTAMINANT	SOIL	GROUNDWATER	SURFACE WATER	AIR	BEDROCK	DESCRIPTION
Non-Halogenated Organics	Phenolic Compounds						Compounds containing phenols (Examples: phenol; 4-methylphenol; 2-methylphenol)
	Non-Halogenated Solvents						Organic solvents, typically volatile or semi-volatile, not containing any halogens. To determine if a product has halogens, search HSDB (http://toxnet.nlm.nih.gov/cgi-bin/sis/htmlgen?HSDB) and look at the Chemical/Physical Properties, and Molecular Formula. If there is not a Cl, I, Br, F in the formula, it's not halogenated. (Examples: acetone, benzene, toluene, xylenes, methyl ethyl ketone, ethyl acetate, methanol, ethanol, isopropranol, formic acid, acetic acid, stoddard solvent, Naptha). *Use this when TEX contaminants are present independently of gasoline.*
	Polynuclear Aromatic Hydrocarbons (PAH)						Hydrocarbons composed of two or more benzene rings.
	Tributyltin						The main active ingredients in biocides used to control a broad spectrum of organisms. Found in antifouling marine paint, antifungal action in textiles and industrial water systems. (Examples: Tributyltin; monobutyltin; dibutyltin)
	Methyl tertiary-butyl ether						MTBE is a volatile oxygen-containing organic compound that was formerly used as a gasoline additive to promote complete combustion and help reduce air pollution.
	Benzene		C				Benzene
	Other Non-Halogenated Organics	C	C				Other Non-Halogenated Organics (Example: Phthalates)
	Petroleum Diesel						Petroleum Diesel
	Petroleum Gasoline	C	C				Petroleum Gasoline
	Petroleum Other						Crude oil and any fraction thereof. Petroleum products that are not specifically Gasoline or Diesel.
Halogenated Organics (see notes at bottom)	**PBDE**						**Polybrominated di-phenyl ether**
	Other Halogenated Organics						**Other organic compounds with halogens (chlorine, fluorine, bromine, iodine). search HSDB (http://toxnet.nlm.nih.gov/cgi-bin/sis/htmlgen?HSDB) and look at the Chemical/Physical Properties, and Molecular Formula. If there is a Cl, I, Br, F in the formula, it is halogenated. (Examples: Hexachlorobutadiene; hexachlorobenzene; pentachlorophenol)**
	Halogenated solvents						**Solvents containing halogens (Halogen is typically chlorine, but can also be fluorine, bromine, iodine), and their breakdown products (Examples: Trichloroethylene; Tetrachloroethylene (aka Perchloroethylene); TCE; TCA; trans and cis 1,2 dichloroethylene; vinyl chloride)**
	Polychlorinated Biphenyls (PCB)						**Any of a family of industrial compounds produced by chlorination of biphenyl, noted primarily as an environmental pollutant that accumulates in animal tissue with resultant pathogenic and teratogenic effects**
	Dioxin/dibenzofuran compounds (see notes at bottom)						**A family of more than 70 compounds of chlorinated dioxins or furans. (Examples: Dioxin; Furan; Dioxin TEQ; PCDD; PCDF; TCDD; TCDF; OCDD; OCDF). *Do not use for 'dibenzofuran', which is a non-chlorinated compound that is detected using the semivolatile organics analysis 8270***
Metals	Metals - Other						Metals other than arsenic, lead, or mercury. (Examples: cadmium, antimony, zinc, copper, silver)
	Lead						Lead
	Mercury						Mercury

CONTAMINANT GROUP	CONTAMINANT	SOIL	GROUNDWATER	SURFACE WATER	AIR	BEDROCK	DESCRIPTION
	Arsenic						Arsenic
Pesticides	Non-halogenated pesticides						Pesticides without halogens (Examples: parathion, malathion, diazinon, phosmet, carbaryl (sevin), fenoxycarb, aldicarb)
	Halogenated pesticides						Pesticides with halogens (Examples: DDT; DDE; Chlordane; Heptachlor; alpha-beta and delta BHC; Aldrin; Endosulfan, dieldrin, endrin)
Other Contaminants	Radioactive Wastes						Wastes that emit more than background levels of radiation.
	Conventional Contaminants, Organic						Unspecified organic matter that imposes an oxygen demand during its decomposition (Example: Total Organic Carbon)
	Conventional Contaminants, Inorganic						Non-metallic inorganic substances or indicator parameters that may indicate the existence of contamination if present at unusual levels (Examples: Sulfides, ammonia)
	Asbestos						All forms of Asbestos. Asbestos fibers have been used in products such as building materials, friction products and heat-resistant materials.
	Other Deleterious Substances						Other contaminants or substances that cause subtle or unexpected harm to sediments (Examples: Wood debris; garbage (e.g., dumped in sediments))
	Benthic Failures						Failures of the benthic analysis standards from the Sediment Management Standards.
	Bioassay Failures						For sediments, a failure to meet bioassay criteria from the Sediment Management Standards. For soils, a failure to meet TEE bioassay criteria for plant, animal or soil biota toxicity.
Reactive Wastes	Unexploded Ordinance						Weapons that failed to detonate or discarded shells containing volatile material.
	Other Reactive Wastes						Other Reactive Wastes (Examples: phosphorous, lithium metal, sodium metal)
	Corrosive Wastes						Corrosive wastes are acidic or alkaline (basic) wastes that can readily corrode or dissolve materials they come into contact with. Wastes that are highly corrosive as defined by the Dangerous Waste Regulation (WAC 173-303-090(6)). (Examples: Hydrochloric acid; sulfuric acid; caustic soda)

Status choices for contaminants	
Contaminant Status	**Definition**
B - Below Cleanup Levels (Confirmed)	The contaminant was tested and found to be below cleanup levels. (Generally, we would not enter each and every contaminant that was tested; for example if an SVOC analysis was done we would not enter each SVOC with a status of "below". We would use this for contaminants that were believed likely to be present but were found to be below standards when tested
S - Suspected	The contaminant is suspected to be present; based on some knowledge about the history of the site, knowledge of regional contaminants, or based on other contaminants known to be present
C - Confirmed Above Cleanup Levels	The contaminant is confirmed to be present above any cleanup level. For example - above MTCA method A, B, or C; above Sediment Quality Standards; or above a presumed site-specific cleanup level (such as human health criteria for a sediment contaminant).
RA - Remediated - Above	The contaminant was remediated, but remains on site above the cleanup standards (for example - capped area).
RB - Remediated - Below	The contaminant was remediated, and no area of the site contains this contaminant above cleanup standards (for example - complete removal of contaminated soils).

Halogenated chemicals and solvents: Any chemical compound with chloro, bromo, iodo or fluoro is halogenated; those with eight or fewer carbons are generally solvents (e.g. halogenated methane, ethane, propane, butane, pentane, hexane, heptane or octane) and may also be used for or registered as pesticides or fumigants. Most are dangerous wastes, either listed or categorical. Organic compounds with more carbons are almost always halogenated pesticides or a contaminant or derivitive. Referral to the HSDB is recommended you are unfamiliar with a chemical name or compound, as it contains useful information about synonyms, uses, trade names, waste codes, and other regulatory information about most toxic or potentially toxic chemicals.

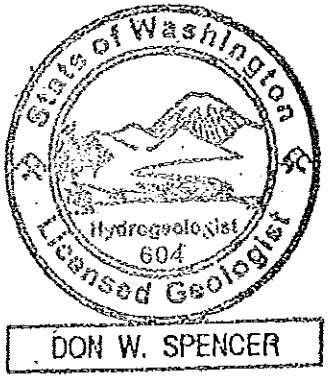
Parcels 708500-0420, -0440
3309 Pacific Highway East
Fife, Washington 98424

Dear Mr. Lee:



Environmental Associates, Inc. (EAI) has performed limited sampling and testing of subsurface soils, groundwater, and soil-vapor at selected localities on the subject property. The initial purpose of this work was to make a preliminary assessment of the potential for the presence of petroleum products, volatile organic compounds (VOCs), and metals including arsenic, cadmium, chromium, lead, and mercury. This report, prepared in accordance with the terms of our proposal dated July 26, 2017, summarizes our approach to the project along with results and conclusions.

The contents of this report are confidential and are intended solely for your use and the use of your representatives. No other distribution or discussion of this report will take place without your prior approval in writing.

We appreciate the opportunity to be of service on this assignment. If you have any questions or if we may be of additional service, please do not hesitate to contact us.

Respectfully submitted,
ENVIRONMENTAL ASSOCIATES, INC.

Laboratory Reports

INTRODUCTION/SCOPE OF WORK

SITE/PROJECT DESCRIPTION

The subject property is comprised of two (2) parcels (tax parcel numbers 708500-0420, -0440) covering approximately 0.93 acres of land. The property is currently vacant and unoccupied. The approximate location of the site is shown on the Vicinity/Topographic Map, Plate 1, appended herewith.

Background

On October 4, 2016, EAI presented the findings of a Phase 1 Environmental Site Assessment to H&H Northwest Companies LLC for the subject property. At that time, the eastern margin of the property extended to the right-of-way of 34th Avenue East. That reported identified the northern and western adjacent "leaking underground storage tank" (LUST) sites as recognized environmental conditions in relation to the property. EAI also provided a cautionary footnote acknowledging that due to historic occupancy of the site by pre-1941-vintage residences, that an underground heating oil storage tank may be located beneath the property and that such should be removed and appropriately sampled/tested if encountered.

Since the time of EAI's Phase 1 study, the Port of Tacoma appeared to purchase a portion of the site along 34th Avenue East in preparation to expand the right-of-way to Pacific Highway East.

EAI was provided a Hazardous Materials Exploration Plan drafted by Widener & Associates in March 2017 which proposed sampling and testing of soils and groundwater within various Port of Tacoma lands in preparation for proposed interchange improvement projects. That plan noted a sample location (Sample ID-5) would be installed in the right-of-way of 34th Avenue East, adjacent to the subject site. EAI staff subsequently observed a groundwater monitoring well in the approximate location proposed for Sample ID-5. Subsequent laboratory data provided by the client revealed that while no detections of diesel, heavy oil, gasoline, or volatile organic compounds (VOCs) were detected in the soil sample collected from that locality, several metals were detected in soils at either WDOE compliant or typical "background" concentrations for the area. Groundwater sampled from that location did not contain concentrations of gasoline or VOCs, however concentrations of diesel and heavy oil were detected at concentrations exceeding their MTCA Method-A cleanup level. Additionally, elevated total metal concentrations of arsenic and lead were noted in groundwater from the Sample ID-5 location (mapped on the attached Site Plan, Plate 2).

Current Study

Your expressed interests to conduct a preliminary evaluation of subsurface conditions to assess the potential for the presence of petroleum products, volatile organic compounds (VOCs), and metals including arsenic, cadmium, chromium, lead, and mercury as memorialized in EAI's proposal dated July 26, 2017, formed the basis for the following scope of work:

- Conduct geophysical survey on the accessible portions of the property in an effort to locate potential metallic geophysical "anomalies" of the type(s) commonly associated with/indicative of underground storage tanks (USTs) such as (if present) could be related to historic on-site residences.

- Drill and sample six (6) borings in accessible locations near the western, northern, and eastern property boundaries, adjacent to leaking underground storage tank sites to the north and west as well as off-site detections of petroleum contamination to the east. Soil and groundwater samples were obtained from each boring and a log of subsurface conditions encountered was prepared for each boring by the EAI project geologist. Additionally, a soil-vapor sample was collected from a single boring.

- Initial laboratory analysis of selected soil and/or groundwater samples for gasoline, diesel, oil, volatile organic compounds (VOCs), and MTCA-5 metals including arsenic, cadmium, chromium, lead, and mercury. The soil-vapor sample was tested for VOCs and petroleum.

- Preparation of this summary report documenting the methodology and results of the investigation.

FINDINGS

GEOPHYSICAL SURVEY

On October 5, 2017, EAI's technical team performed a geophysical survey on the accessible portions of the subject site. As the site was initially covered in heavy vegetation, site clearing occurred prior to the geophysical survey and included much of the site up to approximately 15 feet from the property northern property line. The geophysical survey utilized electromagnetic (EM) equipment as well as a magnetometer instrument to search the survey area for metallic "anomalies" or soil disturbances. Potential anomalies detected by the EM appeared to be surficial metallic or wood debris upon further inspection. A single magnetic geophysical "anomaly" measuring approximately two feet by two feet was encountered on the southwestern portion of the site (depicted on Plate 2, Site Plan). Due to the uneven topography of the property, ground penetrating radar (GPR) could not be utilized.

SUBSURFACE INVESTIGATION

Soil Boring Sampling

Six (6) soil borings were made on October 9, 2017 at the approximate locations noted as B-1, B-2, B-3, B-4, B-5, and B-6 on the Site Plan, Plate 2. The borings were placed around the northern, western, and eastern property lines except for B-4 which was placed adjacent to the magnetic anomaly encountered during the geophysical survey. The borings were extended to depths between 20 to 25 feet below ground surface (bgs).

Soil and Groundwater Sampling Proeedure

Under the observation of the EAI field geologist, a truek-mounted push probe drill rig was brought into position over each selected boring location. Following set-up preparations, the push-probe boring/sampling technique consisted of advancing a plastic lined sampler into the ground. The sampler was then withdrawn and the liner was removed and cut open for examination and transfer of the soil sample to laboratory prepared glassware by EPA Method 5035.

After soil sampling within the borings had been completed and as groundwater was observed in the borings, a temporary well screen was installed in an attempt to sample the groundwater. Small plastic tubing was extended from a peristaltic pump into each well to recover groundwater samples.

Soil and groundwater samples were transferred from the sampler directly to sterilized laboratory prepared glassware which were then stored in an iced chest maintained at approximately 4 degrees centigrade at the site and taken to the laboratory in this condition in an effort to preserve sample integrity.

Each sample container was clearly labeled as to boring and sample number/depth, date, time, project, etc. EPA-recommended sample-management protocol was observed at each stage of the project. During drilling, a field log was made by EAI for each boring. Information recorded versus corresponding depth included soil classification (Unified Soil Classification System), color, texture, rclative inoisture, odors (if present), etc.

Soil-Vapor Sampling Procedure

Upon reaching depths of between 4 to 5 feet below ground surface (bgs) at location B-6, a soil vapor sample was collected through a temporary screen and casing rod inserted into the ground by the drill rig. The bore hole was sealed around the upper casing rod to inhibit dilution from of atmospheric air in the soil vapor sample. A laboratory-prepared "summa canister" (vacuum cylinder) was then utilized to collect a sample of the subsurface soil-vapor at that locality. Utilizing a flow controller and gauge-vacuum provided by Friedman and Bruya Inc. of Seattle, soil-vapor was collected over a span of five minutes.

Subsurfaee Conditions

Soils encountered within the borings generally consisted of sands, silty sands, and wood debris. While moisture was observed within the borings at approximately 7 to 9 feet below ground surface (bgs), no recoverable groundwater was encountered until reaching depths of 20 feet bgs or greater. In borings B-3 through B-6, where borings were extended to 25 feet bgs, groundwater rose within the borings up to depths of approximately 5 feet bgs before stabilizing.

LABORATORY ANALYSIS

Laboratory analysis of soil and groundwater samples was conducted by Environmental Service Network (ESN), Olympia, Washington, a WDOE-accredited analytical laboratory. Select soil and groundwater samples were submitted for analysis of gasoline, diesel, and oil petroleum hydrocarbons along with fuel constituents benzene, toluene, ethylbenzene, and xylenes (BTEX). Soil samples selected for analysis were collected from depths where a field screening instrument (photo-ionization detector/PID) indicated detectable vapors. Select groundwater samples were analyzed for volatile organic compounds (VOCs) and MTCA-5 metals including arsenic, cadmium, chromium, lead, and mercury. Laboratory analysis of the soil-vapor sample was conducted by Friedman and Bruya, Inc. of Seattle, Washington. Laboratory analysis was performed on the soil vapor sample for VOCs by EPA Method TO-15 and petroleum (aromatic and aliphatic) hydrocarbons by EPA method MA-APH.

As summarized in Table 1 attached to this report, no petroleum hydrocarbons or BTEX constituents were detected in the soil samples analyzed.

As depicted in Table 2, attached to this report, no petroleum hydrocarbons or BTEX constituents were detected in the groundwater samples analyzed.

As documented in Table 3, of this report, no VOCs were detected in the groundwater samples collected from each boring.

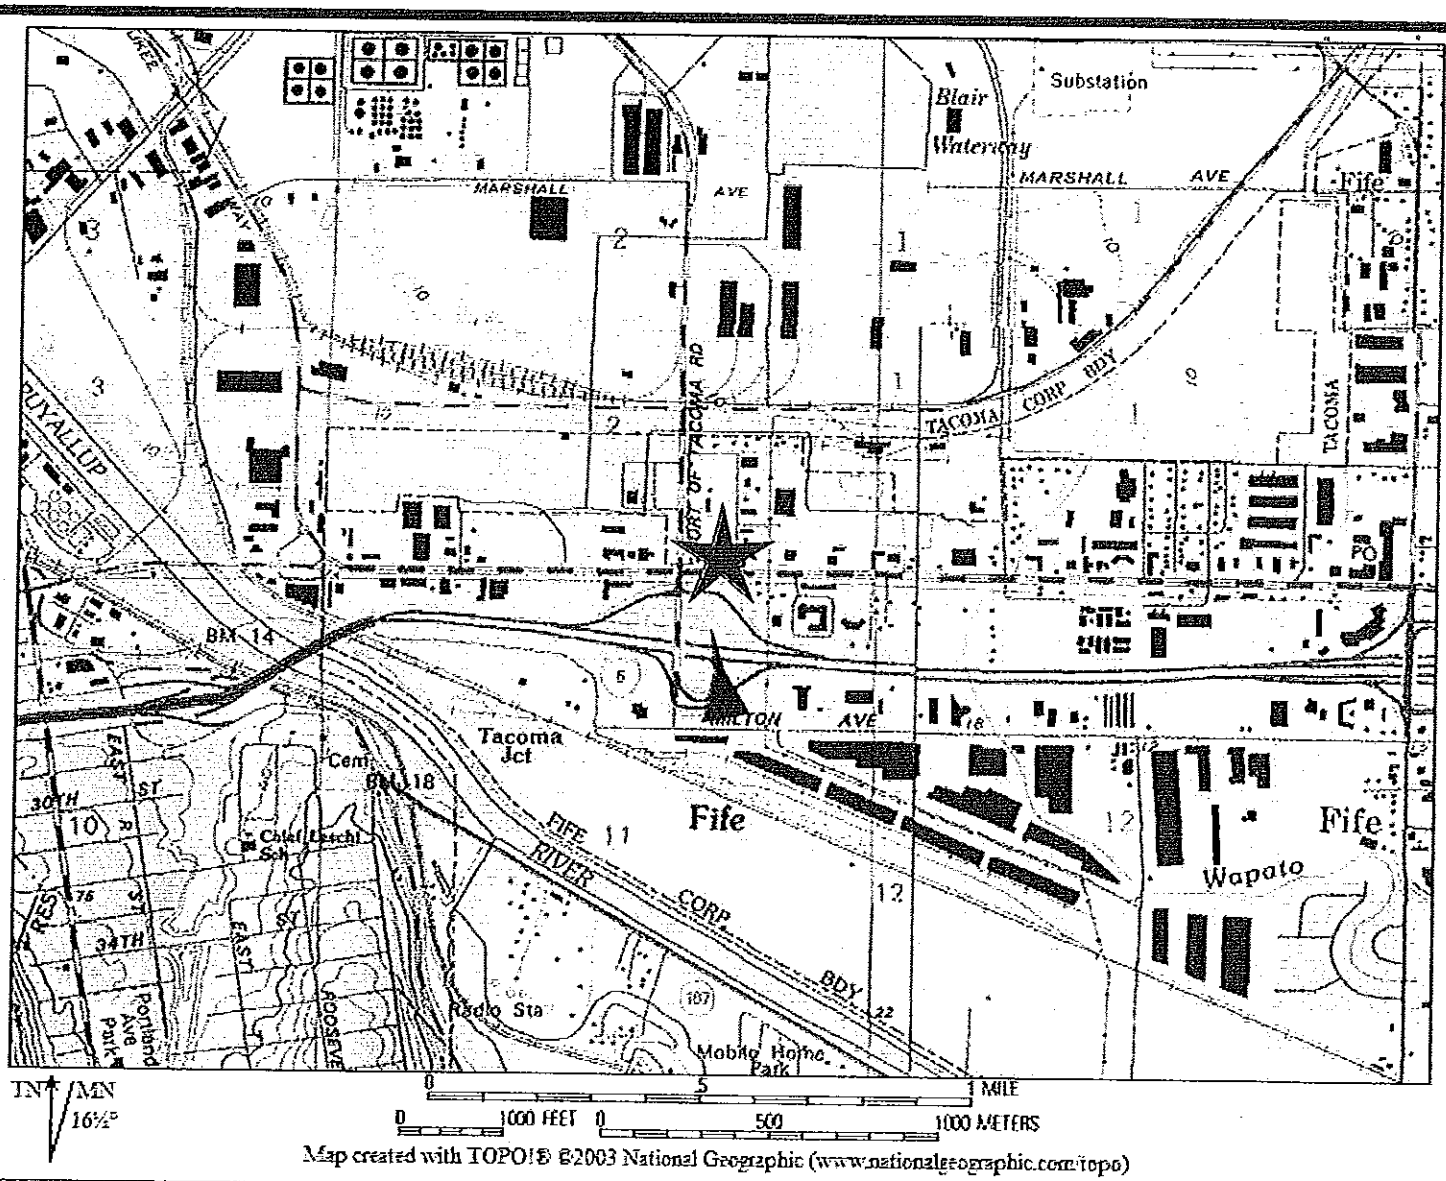
As depicted in Table 4, no detections of cadmium, chromium, lead, or mercury were noted in the groundwater samples analyzed. Dissolved arsenic was detected in each of the three groundwater samples tested with two of those detections at B1 and B5 (5.5 and 7.4 parts per billion/ppb respectively) being above the MTCA Method-A cleanup value for arsenic, currently established at 5 ppb.

Due to the detections of arsenic in groundwater noted above, EAI submitted three (3) soil samples from various depths across the site for analysis of arsenic. As shown in Table 5 attached to this report, no detections of arsenic were found in those samples.

As shown in Table 6 and in the attached laboratory data, various VOCs and APH (aliphatic/aromatic petroleum hydrocarbons) compounds were detected at concentrations below the published MTCA-Method-B screening levels.

CONCLUSIONS

Relying upon the results of limited sampling and laboratory testing documented in this preliminary effort, groundwater at two (2) locations (B1 and B5) contained concentrations (5.5 to 7.4 ppb) of arsenic above MTCA Method-A cleanup limits. No arsenic was detected in soils at those locations indicating that the arsenic may be attributed to a region-wide condition rather than a site specific source.



In attempting to provide some context regarding the arsenic detections in groundwater, information contained in recent publications of the Washington Department of Ecology (March, 2016: *Natural Background Groundwater Arsenic Concentration in Washington State. Ecology Publication No. 14-09-044*) clearly advises that for soils in the Puget Sound Basin (region of Washington in which the subject property is situated), **naturally occurring background** concentrations for arsenic in groundwater have been established at levels ranging from 0.8 to 76 ug/L (or parts per billion). Viewed in that perspective alone, it may be reasonable to consider that the detections of arsenic documented in groundwater beneath the subject property could in fact be a natural background condition not necessarily indicative of a contamination issue for that analyte. If further knowledge is desired by the client regarding these detections, sampling and testing from permanent monitoring wells might provide slightly more "accurate" arsenic concentrations, however no dramatic or substantive changes in results warranting such additional expenditures are presently anticipated.

While no detections of petroleum were found in the groundwater samples collected on-site, at this juncture, we (EAI) simply recommend that the property owner periodically acquire and review cleanup documents and other reports regarding the off-site facilities to the north and west as well as the development work to the east in an effort to learn if any changes in operation or WDOE status of these nearby properties occur.

As an administrative footnote, acknowledging the metallic geophyiscal "anomaly" found on the southwest portion of the property, if during the course of future site redevelopment activity, a tank not discovered during this survey due to such factors as signal loss, inaccessibility, etc., EAI would then simply recommend that such be removed and disposed of in a safe and lawful manner. In such a case, it would be our additional recommendation to collect and analyze selected samples of soils and groundwater to document that environmental conditions at the time of removal are compatible with WDOE cleanup guidelines.

LIMITATIONS

This report has been prepared for the exclusive use of Mr. Kyu Dae Lee along with David Sheean and Associates and their several representatives for specific application to this site. Our work for this project was conducted in a manner consistent with that levcl of care and skill normally exercised by members of the environmental science profession currently practicing under similar conditions in the area, and in accordance with the terms and conditions set forth in our proposal dated July 26, 2017. The findings and conclusions of this study are based upon the results of laboratory testing of selected samples obtained from separated boring localities and environmental conditions may vary between those locations or at other locations, media, depths, or calender date. No other warranty, expressed or implied, is made. If new information is developed in future site work which may include excavations, borings, studies, etc., Environmental Associates, Inc., must be retained to reevaluate the conclusions of this report and to provide amendments as required.

TABLE 1 - Petroleum Hydrocarbons and BTEX - Soil Sampling Results
All results and limits in parts per million (ppm)

Strataprobe Boring	Gasoline (TPH)	Diesel	Heavy Oil	Benzene	Toluene	Ethylbenzene	Total Xylenes
B1-8.5 @ 8.5' BGS	ND	ND	ND	ND	ND	ND	ND
B2-20 @ 20' BGS	ND	ND	ND	ND	ND	ND	ND
B3-5 @ 5' BGS	ND	ND	ND	ND	ND	ND	ND
B4-9 @ 9' BGS	ND	ND	ND	ND	ND	ND	ND
B5-13 @ 13' BGS	ND	ND	ND	ND	ND	ND	ND
B6-19 @ 19' BGS	ND	ND	ND	ND	ND	ND	ND
Reporting Limit [3]	10	50	100	0.02	0.05	0.05	0.15
WDOE Target Compliance Level[4]	**30 or 100 [5]**	***2000***	***2000***	***0.03***	***7***	***6***	***9***

Notes:
1 - "ND" denotes analyte not detected at or above listed Reporting Limit.
2- "NA" denotes sample not analyzed for specific analyte.
3- "Reporting Limit" represents the laboratory lower quantitation limit.
4- Soil samples were field screened using a GasTech combustible gas meter to measure the concentration of combustible gas, such as petroleum VOCs. Headspace VOC concentrations were measured after placing the soil sample in a sealed plastic bag and allowing soil and air inside the bag to equilibrate.
5- The MTCA gasoline TPH cleanup level is 30 ppm for soils with benzene otherwise it is 100 ppm.

Bold and Italics denotes concentrations above MTCA Method A soil cleanup levels.

BGS - Below ground surface.

TABLE 2- Petroleum Hydrocarbons and BTEX- Groundwater Sampling Results
All results and limits in parts per billion (ppb)

Strataprobe Boring	Gasoline (TPH)	Diesel (TPH)	Heavy Oil (TPH)	Benzene	Toluene	Ethylbenzene	Total Xylenes
B1-Water	ND	ND	ND	ND	ND	ND	ND
B2-Water	ND	ND	ND	ND	ND	ND	ND
B3-Water	ND	ND	ND	ND	ND	ND	ND
B4-Water	ND	ND	ND	ND	ND	ND	ND
B5-Water	ND	ND	ND	ND	ND	ND	ND
B6-Water	ND	ND	ND	ND	ND	ND	ND
Reporting Limit [3]	100	100	250	1	1	1	3
MTCA-Method-A Cleanup Levels[4]	800 or 1000[5]	500	500	5	1000	700	1000

Notes:
1 - "ND" denotes analyte not detected at or above listed Reporting Limit.
2- "NA" denotes sample not analyzed for specific analyte.
3- "Reporting Limit" represents the laboratory lower quantitation limit.
4- Method A groundwater cleanup levels as published in the Model Toxics Control Act (MTCA) 173-340-WAC.
5- The MTCA gasoline TPH cleanup level is 800 ppb for groundwater with benzene. Otherwise, the cleanup level is 1000 ppb.

Bold and Italics denotes concentrations above existing or proposed MTCA Method A groundwater cleanup levels.

TABLE 3- VOCs - Groundwater Sampling Results
All results and limits in parts per billion (ppb)

Boring	Tetrachloroethene (PCE)	Trichloroethene (TCE)	(cis) 1,2 Dichloroethene	(trans) 1,2 Dichloroethene	Vinyl Chloride
B1-Water	ND	ND	ND	ND	ND
B2-Water	ND	ND	ND	ND	ND
B3-Water	ND	ND	ND	ND	ND
B4-Water	ND	ND	ND	ND	ND
B5-Water	ND	ND	ND	ND	ND
B6-Water	ND	ND	ND	ND	ND
Reporting Limit [3]	1	1	1	1	0.2
Existing Cleanup Level[4]	5 (A)	5 (A)	16 (B)	160 (B)	0.2 (A)

Notes:
1 - "ND" denotes analyte not detected at or above listed Reporting Limit.
2- "NA" denotes sample not analyzed for specific analyte.
3- "Reporting Limit" represents the laboratory lower quantitation limit.
4- Method A or B groundwater cleanup levels as published in the Model Toxics Control Act (MTCA) 173-340-WAC, amended May 2014.

Bold and Italics denotes concentrations above existing MTCA Method A groundwater cleanup levels.

TABLE 4 - MTCA-5 Dissolved Metals - Groundwater Sampling Results
All results and limits in parts per billion (ppb)

Sample Location	Arsenic	Cadmium	Chromium	Lead	Mercury
B1-Water	***5.5***	ND	ND	ND	ND
B2-Water	3.2	ND	ND	ND	ND
B5-Water	***7.4***	ND	ND	ND	ND
Reporting Limit [3]	2	2	10	2	1
Existing Cleanup Level[4]	5 (A)	5 (A)	50 (A)	15 (A)	2 (A)

Notes:
1 - "ND" denotes analyte not detected at or above listed Reporting Limit.
2- "NA" denotes sample not analyzed for specific analyte.
3- "Reporting Limit" represents the laboratory lower quantitation limit.
4- Method A or B cleanup levels as published in the Model Toxics Control Act (MTCA) 173-340-WAC.

Bold and Italics denotes concentrations above existing MTCA Method A soil cleanup levels.

TABLE 5- Arsenic - Soil Sampling Results All results and limits in parts per million

Sample Name	Arsenic
B1-8.5 @ 8.5' BGS	ND
B2-20 @ 20' BGS	ND
B5-13 @ 13' BGS	ND
Reporting Limit [3]	5
WDOE-Method-A Cleanup Level (unrestricted land use)	20

Notes:
1 - "ND" denotes analyte not detected at or above listed Reporting Limit.
2- "NA" denotes sample not analyzed for specific analyte.
3- "Reporting Limit" represents the laboratory lower quantitation limit.
4- Method A or B cleanup levels as published in the Model Toxics Control Act (MTCA) 173-340-WAC.

Bold and Italics denotes concentrations above existing MTCA Method A soil cleanup levels.

TABLE 6 - Select VOCs and APH - Soil Vapor Sampling Results
All results and limits in micro-grams per cubic meter (ug/M³)

Sample Name	Location & Depth	Tetrachloroethene (PCE)	Trichloroethene (TCE)	Acetone	Propene	1,3-Butadiene	Benzene	Toluene	Ethylbenzene	Xylenes (m,p)	Xylenes (o)	Naphthalene	APH EC5-8 Aliphatics	APH EC9-12 Aliphatics	APH EC9-10 Aromatics
B-6	B-6 @ 5 foot below ground surface	<1.7	<1.3	1500.00	17.00	2.00	1.90	10	9.1	51	26	<1.3	1,100	600	<120
	WDOE - Soil Gas Screening Levels[4]	321	12.3	NA	NA	2.78	10.7	76,200	15,200	1,520	1,520	2.45	90,000	4,700	6,000

Notes:
1 - "ND" denotes analyte not detected at or above listed Reporting Limit.
2- "NA" Not applicable.
3- "Reporting Limit" represents the laboratory lower quantitation limit.
4 - Soil gas screening level that concentrations in the soil gas just beneath a building expected to not result in exceedance of the air cleanup level in the overlying structure, per the WDOE's Guidance For Evaluating Soil Vapor Intrusion - (April, 2015).

Bold and Italics indicate concentrations of soil vapor that exceed the WDOE soil gas screening level and/or concentrations that exceed the WDOE Standard Method-B Air Target Compliance Levels.

Bellevue, WA 98004

Dear Mr Zuern:

Included are the results from the testing of material submitted on October 11, 2017 from the Vacant Prop 3309 Pacific Hwy E Fife, PO 36173-2 , F&BI 710256 project. There are 9 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 11, 2017 by Friedman & Bruya, Inc. from the Environmental Associates Vacant Prop 3309 Pacific Hwy E Fife, PO 36173-2 , F&BI 710256 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Environmental Associates
710256 -01	B-6

All quality control requirements were acceptable.

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inbomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.
