Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D008
Waste Description: LEAD

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D018
Waste Description: BENZENE

Waste Code: D026
Waste Description: CRESOL

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

OSHA ESTABLISHMENT

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting

requirements, and include other provisions to ensure that the discharge does not adversely affect water quality. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are

transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

AIR MAJOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Click Here:

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Capacity Range: 10,000 to 19,999 Gallons
Tank Permit Expiration Date: Not reported
Tank Upgrade Date: 09/30/1995
Tank Spill Prevention: Spill Bucket/Spill Box
Tank Overfill Prevention: Overfill Alarm
Tank Material: Dielectric Coated Steel
Tank Construction: Single Wall Tank
Tank Tightness Test: Annual
Tank Corrosion Protection: Sacrificial Anode
Tank Manifold: Not reported
Tank Release Detection: Manual Inventory Control (daily)
Tank SFC Type: Not reported
Pipe Material: Fiberglass
Pipe Construction: Single Wall Pipe
Pipe Primary Release Detection: Automatic Line Leak Detector (ALLD)
Pipe Second Release Detection: Not reported
Pipe Corrosion Protection: Corrosion Resistant
Pipe Pumping System: Gravity Delivery System (No Pump)
Responsible Unit: Southwest
Dispenser/Pump SFC Type: Not reported

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Form Comm:	Farallon re-activated the WAD number to remove drums of DW soil and groundwater generated in late 2007. Ecology is currently reviewing a contained-in request for a portion of the soils generated in 2007 that contain low concentrations of PCE and/orTCE. Once the contained-in determination is issued Farallon will manage all waste soil and water per Ecology's requirements. The waste disposal activities will be the subject of the 2008 DW reporting year since no waste has been removed.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: N/A
Date Made Active in Reports: 08/25/2020	Last EDR Contact: 10/01/2020
Number of Days to Update: 22	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: N/A
Date Made Active in Reports: 08/25/2020	Last EDR Contact: 10/02/2020
Number of Days to Update: 22	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/29/2020

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

PTAP: PTAP Site Listing

A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing

A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

TACOMA/PIERCE COUNTY:

LF TACOMA/PIERCE: Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center Listing

Source: Department of Social & Health Services

Telephone: 253-383-1735

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below (selected maps only*). The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

City of Tacoma Certificate of Occupancy

This is to certify that the CONSTRUCTION OF DRIVE-THRU ESPRESSO STAND

located at 716 PUYALLUP AVENUE - TACOMA, WASHINGTON

has been inspected for compliance with the requirements of the building code for the group and division of occupancy and the use for which the proposed occupancy is classified, the zoning code, and all other applicable regulations enforced by the City of Tacoma. Therefore, occupancy is hereby authorized.

This Certificate is to be posted on the premises.

Re: Further Action at the following Site:

- **Site Name:** Former Texaco Service Station
- **Site Address:** 704 Puyallup Avenue, Tacoma, WA
- **Facility/Site No.:** 78349
- **Cleanup Site ID No.:** 14432
- **VCP Project No.:** SW1633

Dear Mr. Carmen:

The Washington State Department of Ecology (Ecology) received your request for an opinion on your independent cleanup of the Former Texaco Service Station facility (Site).

This letter provides our opinion. We are providing this opinion under the authority of the Model Toxics Control Act (MTCA), Chapter 70.105D RCW.

Issue Presented and Opinion

Ecology has determined that further remedial action is necessary to clean up contamination at the Site.

This opinion is based on an analysis of whether the remedial action meets the substantive requirements of MTCA, Chapter 70.105D RCW, and its implementing regulations, Chapter 173-340 WAC (collectively "substantive requirements of MTCA"). The analysis is provided below.

Description of the Site

This opinion applies only to the Site described below. The Site is defined by the nature and extent of contamination associated with the following release(s):

- Total Petroleum Hydrocarbons-Diesel Range (TPH-Dx), Total Petroleum Hydrocarbons Heavy Oil-Range (TPH-HO), Total Petroleum Hydrocarbons-Gasoline Range (TPH-Gx), Total Arsenic, Chromium, & Lead into Groundwater.
- TPH-Gx, Total Chromium, Ethylbenzene, & Xylenes into Soil.

Enclosure A includes a detailed description and diagram of the Site, as currently known to Ecology.

Please note a parcel of real property can be affected by multiple sites. At this time, we have no information that the parcel(s) associated with this Site are affected by other sites.

Basis for the Opinion

This opinion is based on the information contained in the following documents:

Creative Environmental Technologies, Inc. (CETI), *Underground Storage Tanks Site Assessment/Site Characterization Spring Air Northwest*, August 24, 1998.

Sound Earth Strategies (SES), *Spring Air Investigation and Cleanup Report Summary*, April 19, 2001.

Environmental Management Services, LLC (EMS), *Subsurface Investigation 725 E. 25th Street, Tacoma, Washington*. October 8, 2006.

ECI Environmental Consulting (ECI), *Remedial Investigation Report – Former Texaco Service Station – 704 Puyallup Avenue, Tacoma Washington*. December 28, 2017.

Those documents are kept in the Central Files of the Southwest Regional Office of Ecology (SWRO) for review by appointment only. You can make an appointment by calling the SWRO resource contact at (360) 407-6365.

This opinion is void if any of the information contained in those documents is materially false or misleading.

Analysis of the Cleanup

Ecology has concluded that **further remedial action** is necessary to clean up contamination at the Site. That conclusion is based on the following analysis:

1. Characterization of the Site.

Ecology has determined your characterization of the Site is not sufficient to establish cleanup standards and select a cleanup action. The Site is described above and in detail in Enclosure A.

In 1998, Creative Environmental Technologies, Inc. (CETI) conducted a Phase One Environmental Site Assessment (PHI), identifying several recognized environmental conditions (RECs) per ASTM 1527E in connection with the former use of the Site as a gasoline & service station (EMS, October 2006). The RECs identified warranted further subsurface investigation.

The following characterization activities have commenced on the Site to date. A detailed description of the below-listed characterization activities is included in Enclosure A.

Characterization Activities:

In summary, EMS/ECI have determined soils in the western portion of the Site are impacted with TPH-Gx above the respective MTCA Cleanup Levels (CULs).

Figure 2 illustrates the estimated extent of petroleum-contaminated soil (PCS) in the west-central portion of the property parcel. A detailed rendition of the following characterization activities is presented in Enclosure A.

The following characterization activities have commenced on Site to date:

- In July 1998, Apollo Geophysics conducted a geophysical survey of the Site parcel, which identified three underground storage tanks (USTs) associated with the former gasoline & service station.
- In 1998, Environmental Tank Services (ETS) removed the three above-referenced USTs.
- In 2006 EMS advanced four soil borings, and sampled soil & groundwater.
- In 2017, ECI completed an additional eight soil borings, four of which were developed as monitoring wells (MWs).

Exposure Pathways:

Soil-Direct Contact:

This pathway is *complete*. EMS/ECI have identified residual petroleum-contaminated soil PCS (containing ethylbenzene & total-xylenes) and potentially chromium (*see comment no. 4 below*) above 15-feet below ground surface (bgs). As such, this pathway remains complete.

Soil-Leaching:

This pathway remains *complete*. Arsenic & chromium, and potentially lead are likely leaching out of the soil due to the on-Site reducing conditions, enhanced naturally and by the degradation of TPH in the subsurface. TPH degradation depletes oxygen, reduces the oxidation-reduction potential (ORP), increases the pH, thereby promoting reducing conditions, inclusive of arsenic and metals mobilization (Enclosure A).

Soil-Vapor:

This pathway is *incomplete*. No volatile constituents were detected in soil or groundwater at the Site, likely due to the age of the release (1930s to 1950s). In addition, the Site is capped with asphalt and is unimproved.

Groundwater:

This pathway is currently *complete*. As indicated above and in detail in Enclosure A, TPH-Gx, -Dx, -HO, total arsenic, chromium, & lead are present in groundwater at concentrations above their respective MTCA CULs.

Surface Water:

This pathway is *incomplete*. No surface water features are located within the immediate vicinity of the Site.

Ecological:

This pathway is *incomplete*. ECI completed a terrestrial ecological evaluation. The Site qualifies for an exclusion (ECI, Nov. 2017).

Based on a review of the above-listed reports and investigations, Ecology has the following comments:

1. Ecology concurs with the data gaps and further recommendations outlined in Section 5.0 of the November 15, 2017 ECI *Remedial Investigation Report*, which includes the following:
 - Further characterization of impacted soil and groundwater to the west of the property into the G Street ROW into the sidewalk.
 - Further definition of impacted soil and groundwater between B-4 and GSMW-1 (Figure 2).

- Sampling groundwater quarterly to determine contamination concentration trends seasonally over time.

Ecology has the following additional recommendations to further achieve cleanup standards in accordance with MTCA, which are outlined below.

2. Additional soil and groundwater sampling to the east between the presumed eastern extent of PCS depicted in Figure 2, and MW-3, B-3, B-6, & B-8.
3. To further define the extent of contamination, it may be necessary to extend further westward onto the G Street, beyond the sidewalk. Depending on the analytical results from soil and groundwater samples collected west of the depicted extent of contamination (Figure 2), it would be prudent for ECI to alert the City of Tacoma in the event contamination is found in the right-of-way (ROW) to protect future and potential utility or excavation workers.
4. When sampling soil and groundwater, please speciate chromium samples to determine the precise concentrations of trivalent and hexavalent chromium. Total chromium exhibited the highest detection at B-3 (Figure 3), as such chromium should be sampled and speciated in both soil & groundwater from this location.
5. Once ECI has completed complete characterization activities, please depict the extent of soil and groundwater concentrations for each contaminants of concern (CoC) in an aerial diagram. Also, provide a cross-section through the delineated plume to demonstrate the vertical extent of impacts. In addition, place the approximate location of all sampling locations, the former Site improvements, including USTs, service station footprint, pump-islands, etc.
6. Measure standard groundwater parameters (dissolved oxygen, ORP, pH, etc.), to determine the geochemical subsurface conditions on-Site, as some metals are mobilized under certain potentially-reducing conditions. Once a discernable trend in groundwater parameters is tabulated, please provide Ecology with data-based assessment of subsurface conditions and how it may affect metals mobilization.
7. The Site is within the Tacoma Smelter Plume. According to the Everett and Tacoma Smelter Plume Interactive Map¹, the Site is located in an area where soil arsenic concentrations are below 20 mg/Kg, which is in compliance with the respective MTCA Method A CUL.

¹ <https://fortress.wa.gov/ecy/smeltersearch/>

8. Prior to issuance of a No Further Action (NFA) determination, please be aware that all on-Site MWs must be properly decommissioned², as MWs serve a potential conduit to the subsurface, posing a potential risk to human health and the environment.
9. In accordance with WAC 173-340-840(5) and Ecology Toxics Cleanup Program Policy 840 (Data Submittal Requirements), data generated for Independent Remedial Actions shall be submitted **simultaneously** in both a written and electronic format. For additional information regarding electronic format requirements, see the website <http://www.ecy.wa.gov/eim>. Be advised that according to the policy, any reports containing sampling data that are submitted for Ecology review are considered incomplete until the electronic data has been entered. Please ensure that data generated during on-site activities is submitted pursuant to this policy. **Data must be submitted to Ecology in this format for Ecology to issue a No Further Action determination.**

Please be sure to submit all soil and groundwater data collected to date, as well as any future data, in this format. Data collected prior to August 2005 (effective date of this policy) is not required to be submitted; however, you are encouraged to do so if it is available. Be advised that Ecology requires up to two weeks to process the data once it is received.

2. Establishment of cleanup standards.

Ecology has determined the cleanup levels and standard points of compliance (POCs) you established for the Site meet the substantive requirements of MTCA, once the Site is fully characterized.

In 1998, the source of contamination (three USTs associated with a former gasoline & service station) were removed (Enclosure A).

The Groundwater MTCA Method A CULs are:

TPH-Dx	500 µg/L
TPH-HO	500 µg/L
TPH-Gx	100 µg/L
Arsenic	5 µg/L
Chromium (Total)	50 µg/L
Lead	15 µg/L

² <http://apps.leg.wa.gov/WAC/default.aspx?cite=173-160-381>

The Soil MTCA Method A CULs are:

TPH-Gx	100 mg/Kg
Chromium III	2,000 mg/Kg
Chromium VI	19 mg/Kg
Ethylbenzene	6.0 mg/Kg
Total-Xylenes	9.0 mg/Kg

Ecology determined the following standard POCs apply to the Site:

- Soil-Direct Contact: Based on human exposure via direct contact, the point of compliance is: "...*throughout the Site from ground surface to 15 feet below the ground surface.*"
- Soil - Leaching: For sites where soil cleanup levels are based on the protection of groundwater: "...*the point of compliance is throughout the Site.*"
- Groundwater: For groundwater, the standard point of compliance as established under WAC 173-340-720(8) is: "...*throughout the site from the uppermost level of the saturated zone extending vertically to the lowest most depth which could potentially be affected by the Site.*"

3. Selection of cleanup action.

Ecology has determined the cleanup action you selected for the Site does not meet the substantive requirements of MTCA because the Site requires additional cleanup action(s) to meet the requirements in WAC 173-340-360(2).

As referenced above, Ecology is in concurrence with the additional cleanup actions identified in Section 5.0 of the ECI November 2017 *Remedial Investigation Report*. Additional recommendations and requirements to meet MTCA standards are referenced in Section 2 of this letter.

4. Cleanup.

Ecology has determined the cleanup actions do not meet cleanup standards at this time, as the Site requires additional soil and groundwater characterization.

EMS/ECI determined the source of soil and groundwater contamination was leakage from the USTs associated with the former gasoline & service station.

To date, on-Site cleanup actions have included the following:

- Geophysical survey of the property in 1998 by Apollo Geophysics.
- Removal of three USTs and associated ancillary equipment in July 1998 by Environmental Tank Services.
- Excavation and disposal of approximately 43-tons of impacted soil in the former UST vicinity in 1998.
- Installation of four permanent groundwater MWs.
- Collection and laboratory analysis of both soil and groundwater samples by EMS in 2006 and ECI in 2017.

Limitations of the Opinion

1. Opinion does not settle liability with the state.

Liable persons are strictly liable, jointly and severally, for all remedial action costs and for all natural resource damages resulting from the release or releases of hazardous substances at the Site. This opinion **does not**:

- Resolve or alter a person's liability to the state.
- Protect liable persons from contribution claims by third parties.

To settle liability with the state and obtain protection from contribution claims, a person must enter into a consent decree with Ecology under RCW 70.105D.040(4).

2. Opinion does not constitute a determination of substantial equivalence.

To recover remedial action costs from other liable persons under MTCA, one must demonstrate that the action is the substantial equivalent of an Ecology-conducted or Ecology-supervised action.

This opinion does not determine whether the action you performed is substantially equivalent. Courts make that determination. *See* RCW 70.105D.080 and WAC 173-340-545.

3. State is immune from liability.

The state, Ecology, and its officers and employees are immune from all liability, and no cause of action of any nature may arise from any act or omission in providing this opinion. See RCW 70.105D.030(1)(i).

Contact Information

Thank you for choosing to clean up the Site under the Voluntary Cleanup Program (VCP). After you have addressed our concerns, you may request another review of your cleanup. Please do not hesitate to request additional services as your cleanup progresses. We look forward to working with you.

For more information about the VCP and the cleanup process, please visit our web site: www.ecy.wa.gov/programs/tcp/vcp/vcpmain.htm. If you have any questions about this opinion, please contact me by phone at (360) 407-6834 or e-mail at jason.cook@ecy.wa.gov.

Sincerely,

J.G. Cook, LG

Enclosure A

Description and Diagrams of the Site

Site Description

Site:

The Site currently consists of a single Pierce County parcel no. 2074280010, totaling 0.28-acre acres. The Site is located at 704 Puyallup Avenue, Tacoma, and is currently unimproved. To date, the Site has yet to be fully defined. Soil and groundwater impacts likely extend onto the City of Tacoma ROW along East G Street and potentially Puyallup Avenue.

The Site, identified as the *Former Texaco Service Station*, is located at the southeast corner of the intersection of East G Street & Puyallup Avenue.

Property Historical and Current Use:

The Site is currently utilized as a commercial parking lot, operated by Diamond Parking. The Site is paved with asphalt.

The Site was initially improved in the mid-1890s and was used for lumber storage and staging. A gasoline and service station occupied the Site from the late-1930s to the mid-1950s (Texaco). A restaurant occupied the Site from the mid-1950s to the late-1970s, when the former service station and restaurant building was demolished (SES, April 2001).

Surface/Storm Water System:

No surface water features are located on or within the vicinity of the Site. The Thea Foss Waterway is located approximately 0.50-miles to the northwest of the Site.

It is assumed stormwater is conveyed to the municipal separate storm sewer system operated and maintained under the NPDES Phase One Municipal Stormwater Permit.

Soils and Geology:

The Site and much of the Puget Sound Region is underlain by alluvial Quaternary sediments deposited during multiple glacial episodes. The sediments consist of interlayered alluvial clays, silts, sands, & gravels as well as intermittent peat layers. These alluvial sediments are typically situated over glacial till, primarily comprised of consolidated silts, sands & gravels.

Soils encountered at the Site generally consist of sandy-silts with trace gravel to cobble-sized material, to the maximum depth explored of 16-feet bgs.

Groundwater:

Groundwater at the Site is encountered between approximately 6- to 10-feet bgs. The groundwater gradient from the most recent sampling event (ECI, October 2017) show a gradient to the northwest at 0.035 ft/Ft (ECI, November 2017).

Source of Contamination & Contamination Extent:

The source of contamination reportedly originates from a former gasoline and service station which occupied the Site from the late-1930s to the mid-1950s (SES, April 2001).

In early-1998, Creative Environmental Technologies, Inc. (CETI) conducted a Phase One Environmental Site Assessment (PHI) to identify any recognized environmental conditions (RECs) associated with the current or past use of the Site. RECs identified included the past usage of the Site as a gasoline / service station and the presence of the three below-referenced USTs.

In July 1998, Apollo Geophysics (Apollo) conducted a geophysical survey of the Site parcel to identify any former residual features associated with the former gasoline station. The geophysical survey identified three USTs associated with the former gasoline/service station. The USTs were 550-, 1,000-, & 2,000-gallons in-size, two of which contained gasoline and once of which contained diesel fuel (EMS< October 2006).

Subsequently in 1998, Environmental Tank Services (ETS) removed the three USTs, and approximately 43-tons of PCS in the UST vicinity. Information pertaining to potential conformational sampling, including location, depth, analysis, result, etc.), was unavailable in the reports provided by the VCP applicant pertaining to SW1633. A Figure illustrating the location of the excavation in the immediate vicinity of B-1, as well as the former building footprint (EMS, October 2006). No figures depicting the former UST locations, pump-islands or hydraulic hoists was provided by EMS or ECI for review. As such, it is unknown where these pertinent former Site features were formally located.

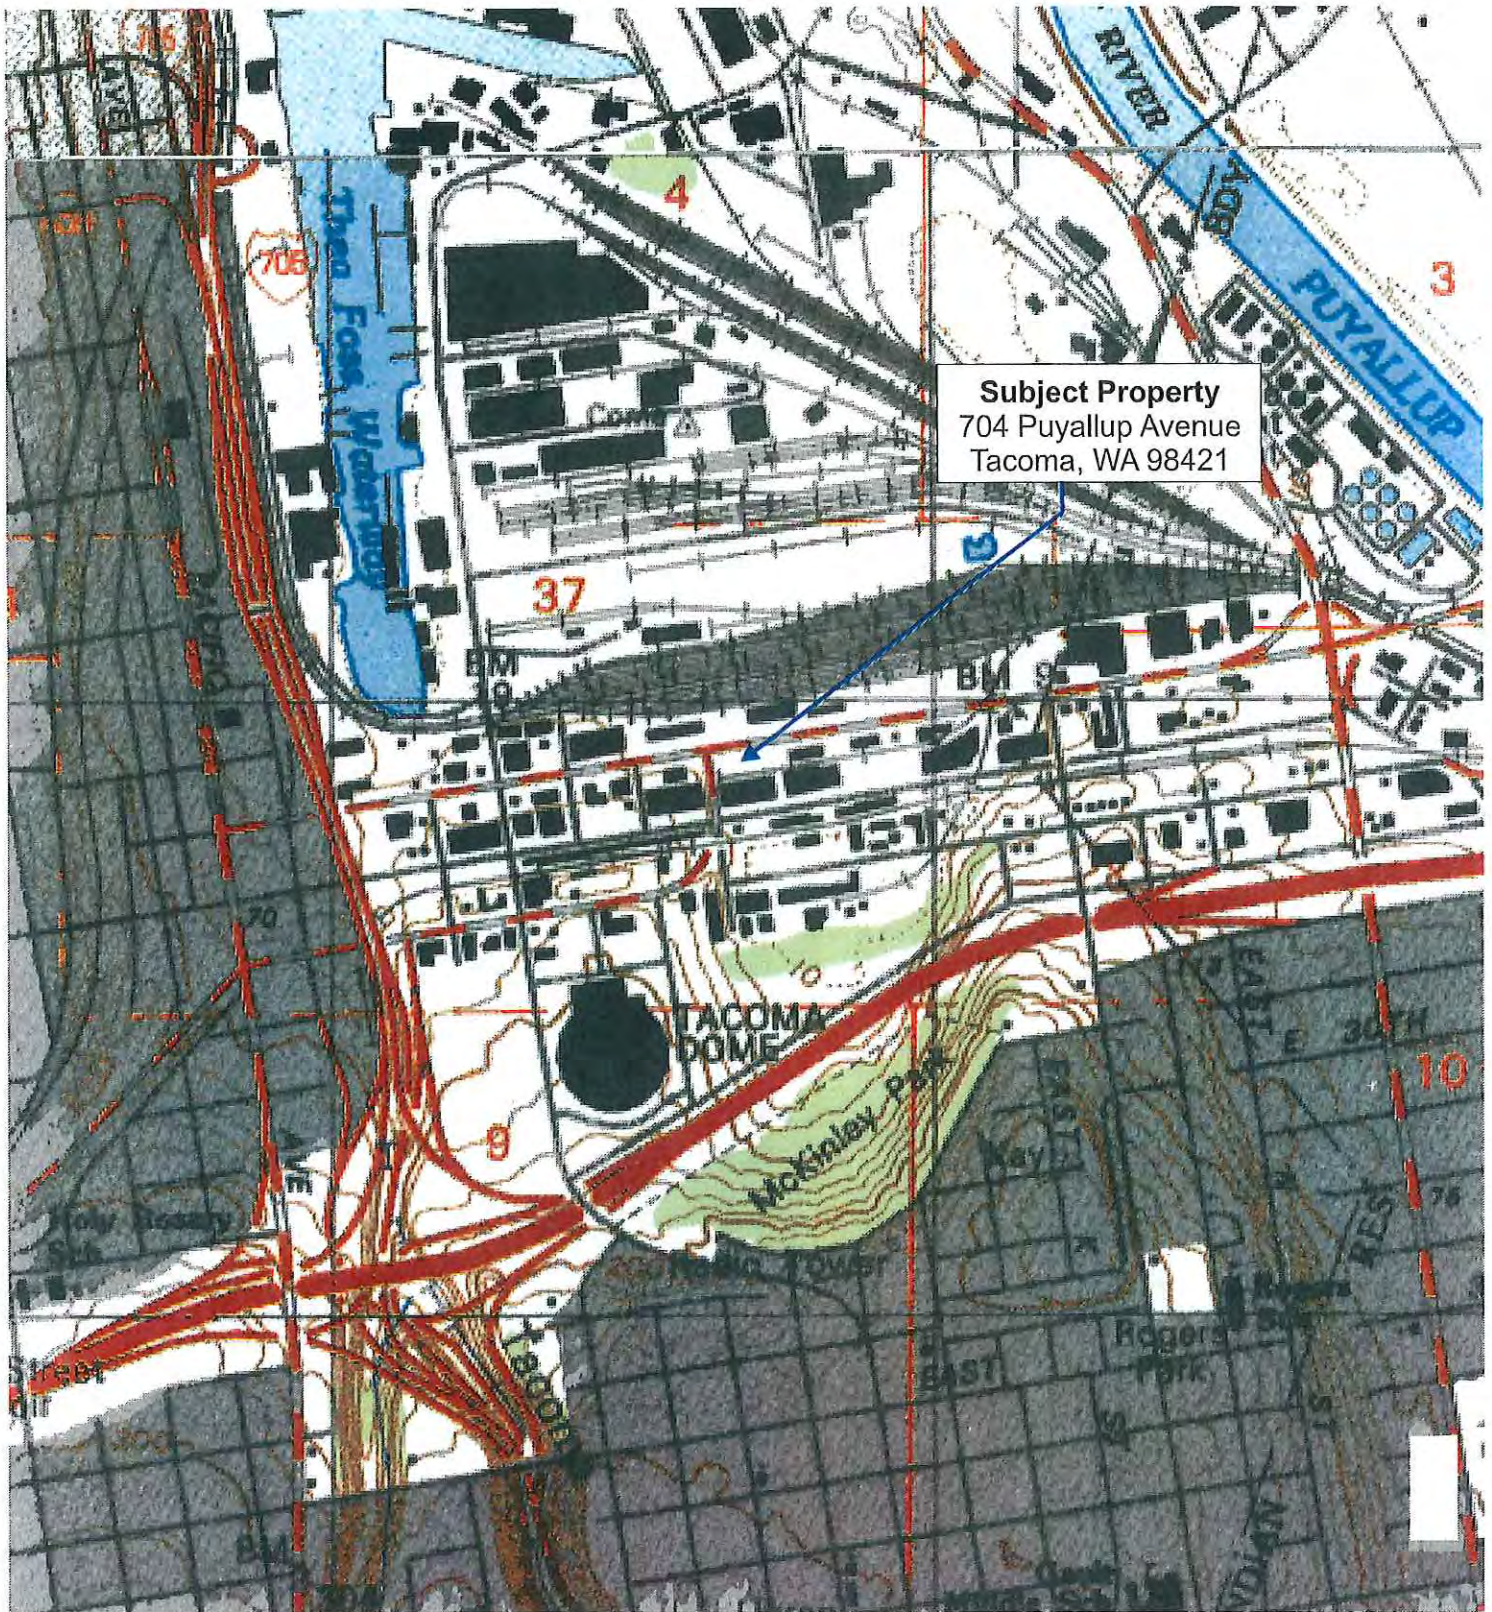

In 2006, Environmental Management Services (EMS) advanced four soil borings to approximately 12-feet bgs. EMS sampled for benzene, toluene, ethyl-benzene, total-xylenes (BTEX), chlorinated volatile organic compounds (CVOCs), including tetrachloroethylene (PCE) & trichloroethylene (TCE), carcinogenic polycyclic aromatic hydrocarbons (cPAHs), priority pollutant metals (Ar, Cd, Cr³, Pb, & Hg), & polychlorinated biphenyls (PCBs), all of which did not exhibit detections above the respective CULs or laboratory method detection limits (MDLs).

In October 2017, ECI Environmental Services (ECI) performed an additional subsurface investigation, including the advancement of eight soil borings (GSMW-1 to -4 & B-5 to -6), four of which were developed as MWs. ECI advanced each boring to approximately 12-feet bgs. ECI collected a total of 16 soil samples. ECI reportedly encountered groundwater at approximately 6- to 9-feet bgs (ECI, November 2017). ECI determined concentrations of TPH-Gx, ethyl-benzene, & total-xylenes were above their respective MTCA Method A CULs at sample location B-5-5. Groundwater concentrations of TPH-Gx exceeded the respective MTCA Method A CUL of 100 µg/L at GSMW-3 & -4, at concentrations of 230 & 130 µg/L, respectively. Total arsenic and total chromium exceeded their respective groundwater CULs at both GSMW-1 & -2. ECI & EMS did not speciate any of the soil & groundwater total chromium samples, as such quantities of hexavalent and trivalent chromium are unknown and concentrations of this constituent are considered out of compliance with MTCA at this time.

³ Chromium was not differentiated / speciated during analysis, as such the specific concentrations of trivalent and hexavalent Chromium are unknown at this time.

In summary, additional soil and groundwater characterization is necessary to the west of the property onto the right-of-way along G Street and potentially Puyallup Avenue, as indicated in Section 5.0 in the ECI *Remedial Investigation Report* (November 15, 2017). Sampling shall include TPH-Gx, -Dx, -HO, BTEX, total lead, arsenic and chromium (III & VI). EMS sampled for chlorinated solvents, PCBs, & PAHs in 2006, exhibiting detections below the respective laboratory method detection limits (MRLs), and are not considered CoCs at this time (EMS, October 2006).

1.0 INTRODUCTION

EcoCon, Inc. (ECI) has prepared this Remedial Investigation (RI) Report for the former Texaco service station property at 704 Puyallup Avenue in Tacoma, Washington (the Property Site) (Figures 1 and 2; Appendix A). This report details field activities and observations, sampling activities, chemical analysis, conducted for the characterization of petroleum hydrocarbon contamination in the soil and groundwater at the Property. This report also provides ECI's conclusions and recommendations.

As established in WAC 173-340-200, the "Site" is defined by the full lateral and vertical extent of contamination that has resulted from Underground Storage Tanks (UST) associated with a former Texaco service station on the Property. Based on the findings of environmental investigations discussed within this report, the Site has been defined as the nature and extent of the following contaminants in the soils and groundwater as defined by Ecology:

- Total petroleum hydrocarbons (TPH) in the diesel range (DRO),
- TPH in the oil range (ORO),
- TPH in the gasoline range (GRO),
- Benzene, toluene, ethylbenzene, xylenes (BTEX), and
- Select metals (arsenic, chromium III, chromium VI, mercury and lead)

1.1 Property Description/Location

The Property addressed at 704 Puyallup Avenue consists of a single 0.28 acre tax parcel (Pierce County Parcel #2074280010) (Figure 3, Appendix A), currently improved with a parking lot in the upland edge of the industrial Tacoma Tideflats area. The Property is zoned industrial and the land use in the vicinity includes rail yards, a transit station, train station, and industrial and commercial businesses. The Property boundaries are:

- Puyallup Avenue to the north,
- a parking lot on an adjacent parcel to the east,
- warehouse that was formerly Spring Air Mattress Company and currently used for loft type small manufacturing businesses to the south, and
- East G Street to the west.

The Property is currently utilized for parking and was developed by at least 1896. Former uses of the property have included lumber/wood storage, part of a sawmill and engine shop, a Texaco service station, and a restaurant. The warehouse on the adjacent property to the south was constructed in 1891 and has included manufacturing (furniture and mattress), a warehouse company, and a heating and boiling company.

The Property is relatively flat and is located at an elevation of approximately 15 feet. The area to the south of the Property rises steeply. The remainder of the area is relatively flat with a slight slope to the north and northeast.

1.2 Site Geology and Hydrogeology

1.2.1 Regional Geology

The Site is located in the Puget Lowland geologic region, an elongated topographic and structural depression filled with complex sequences of glacial and non-glacial sediments that overlie bedrock. Continental ice sheets up to 3,000 feet thick covered portions of the Puget Lowland several times during the Quaternary period. Retreating ice carved new landscapes, rechanneled rivers, drained or formed lakes, and deposited glacial drift including till and outwash (WA DNR, 2002).

1.2.2 Regional Hydrogeology

The primary aquifers in the Puget Sound region are typically overlain by relatively impermeable glacial till deposits that are present at or near the ground surface. Within these till deposits are localized areas or lenses of water-bearing sands and gravels that may result in a shallow, perched water table. Lateral and vertical migration of shallow groundwater may be impeded by the relatively impermeable nature of the till and by the sometimes-discontinuous nature of the perched water-bearing sands and gravel. Perched and discontinuous zones of shallow groundwater may be seasonally or perennially present, depending on site-specific conditions. Shallow groundwater flow directions fluctuate and tend to follow topographic gradient but are also affected by seasonal high-water tables and variable soil characteristics.

1.2.3 Site Geology

Property-specific geologic information was not available for review. According to the Washington State Department of Natural Resources online Geologic Portal the Site is underlain by glacial drift deposited during the Vashon Stade of the Upper Pleistocene Fraser Glaciation. This consists of till and outwash clay, silt, sand, gravel, cobbles, and boulders deposited by or originating from the continental glaciers. It can locally include peat, non-glacial sediments, modified land, and artificial fill. The underlying formation is The Natural Resource Conservation Service (NRCS) web Soil Survey does not list a soil type for this area. This is typical of urban and city area because much of the area has been cleared of the native soils. Older soil surveys for Pierce County have classified the soil as belonging to the Alderwood Series. These soils are considered gravelly sandy loam with slow infiltration rates.

Soils underlying the Property generally consist of silty sand with either gravel or cobble to approximately 16 feet below ground surface (bgs). The topographic elevation of the Subject Property is approximately 13 feet above mean sea level.

1.2.4 Site Hydrogeology

Perched and discontinuous zones of shallow groundwater may be seasonally or perennially present, depending on site-specific conditions. Shallow groundwater flow directions fluctuate and tend to follow topographic gradient but are also affected by seasonal high-water tables and variable soil characteristics. Groundwater migration pathways may also follow underground conduits.

According to Washington State Department of Ecology well logs, and groundwater sampling events at the Property, shallow groundwater in the vicinity of the Subject Property is located at approximately 6 to 10 feet bgs. Based on groundwater elevations obtained from wells installed at the Site, the direction of groundwater flow is to the northwest toward the Thea Foss Waterway approximately 0.3 miles to the northwest. A groundwater contour map is presented in Figure 4.

1.3 Previous Site Investigations / Remedial Actions

1.3.1 Geophysical Survey and Underground Storage Tank Removal - 1998

In July 1998, as part of a Level I Site Assessment conducted by CETI in 1998 on the adjacent property to the south, Apollo Geophysics conducted a geophysical survey on the Property. The geophysical survey identified three USTs: one 550-gallon, one 1,000-gallon, and one 2,000-gallon tank. The USTs were removed by Environmental Tank Services (ETS) under the direction of CETI in July 1998. During the UST closure, approximately 43 tons of petroleum contaminated soil was excavated and transported off-site for disposal. After excavation, confirmation soil samples from the UST basin excavation indicated concentrations of all analytes below laboratory reporting limits and, therefore, below the Model Toxics Control Act (MTCA) Method A cleanup levels (CULs).

1.3.2 Subsurface Investigation – Environmental Management Services (EMS), 2006

In an effort to further characterize the release identified in the area of the former Texaco service station, Environmental Management Services (EMS) advanced four borings (B1 through B4) to twelve feet bgs on the Property. Soil and groundwater samples were collected and analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX), GRO, DRO, and ORO. Selected samples were also analyzed for the presence of Chlorinated Solvents (CVOs), Polycyclic Aromatic Hydrocarbons (PAHs), Polychlorinated Biphenyls (PCBs), and metals (arsenic, cadmium, chromium, lead, and mercury).

CVOs, PCBs and PAHs were not detected above the laboratory reporting limits in the soil and groundwater samples analyzed. GRO was detected at a concentration exceeding the MTCA Method A CUL in the soil samples collected from boring B4. Groundwater collected from B4 also contained concentrations of DRO and ORO exceeding MTCA Method A CUL. Groundwater collected from B1, B3, and B4 contained concentrations of lead in excess of the MTCA Method A CUL of 15 ug/L and the groundwater sample collected from B3 contained concentrations of chromium exceeding the MTCA Method A CUL. A summary of this data is presented in Appendix C.

1.3.3 Opinion Letter - Ecology, 2007

On June 15, 2007 Ecology provided an opinion on the completed remedial actions for the Site, which concluded that further characterization was necessary to adequately define the contamination associated with the former service station. Specifically:

- Petroleum hydrocarbon contamination in soil;
- Metals in soil;
- Petroleum hydrocarbons in groundwater;
- Volatile organic compounds in groundwater; and,
- Metals in groundwater.

Ecology suggested that groundwater monitoring wells should be installed in order to define the extent of this contamination.

2.0 SITE CHARACTERIZATION

2.1 Purpose

The purpose of the RI was to define the extent of soil and groundwater contamination associated with a former gasoline service station that was located on the Property and to provide sufficient information to develop remedial options for achieving closure at the Site.

2.2 Regulatory Compliance

Regulatory compliance for this project is based on the Model Toxics Control Act (Revised Code of Washington [RCW] Chapter 70.105D implemented by Ecology. Pursuant to RCW Chapter 70.105D, Ecology has established cleanup standards and requirements for the cleanup actions (Washington Administrative Code [WAC] 173-340).

The rules establishing these standards and requirements were developed by Ecology in consultation with a Science Advisory Board (established under the Act) and with representatives from local government, citizen, environmental, and business groups. The rules were first published in February 1991, with amendments in January 1996, February 2001, and October 2007.

2.3 Limited Geophysical Survey

Prior to subsurface work at the Site the "call before you dig service" (811) was called 48 hours in advance of site activities to identify public underground utilities. Additionally, Mountain View Locating Services of Bonney Lake, WA, completed a private subsurface utility sweep to locate any potential buried utilities.

2.4 Contaminants of Concern (COCs) and Cleanup Levels

Based on previous investigations and requirements outlined in Ecology's June 15, 2007 opinion letter, the contaminants of concern (COCs) at the Site are identified as: GRO; DRO; ORO; BTEX; and select metals including arsenic, chromium, lead, and mercury.

The concentrations of these contaminants in the samples that were collected for this RI were compared to the MTCA Method-A Soil CUL for Unrestricted Land Use and the Method-A Groundwater CUL, (WAC 173-340-900, Tables 740-1 [Soil] and 720-1 [Groundwater]). These cleanup levels are presented below.

Method-A Cleanup Levels (MTCA-A) for Soil and Groundwater (MTCA Cleanup Regulation 173-340-900: Tables 720-1 and 740-1)		
Contaminant of Concern (COCs)	Soil Cleanup Levels - mg/kg	Groundwater Cleanup Levels - µg/l
Gasoline Range Organics (GRO)	100/30 ¹	1,000/800 ²
Diesel Range Organics (DRO)	2,000	500
Oil Range Organics (ORO)	2,000	500
Benzene	0.03	5
Toluene	7	1,000
Ethylbenzene	6	700
Xylenes	9	1,000
Arsenic	20	5
Chromium VI	19	50
Chromium III	2,000	
Total Lead	250	15
Mercury	2	2

2.5 Subsurface Investigation Activities

On October 25th, 2017, Standard Environmental Probe, of Tumwater, Washington, advanced eight (8) borings (GSMW1 through GSMW4, and B5 through B8) to a depth of 12 feet bgs, using direct push drilling techniques under the supervision of an ECI environmental professional. The borings were advanced in strategic locations, in the areas identified by previous environmental activities to have been in the vicinity of the former gasoline service station USTs (Figure 3, Appendix A).

Prior to sample collection, the soil was field-screened utilizing a handheld photoionization detector (PID), olfactory techniques and physical observations, such as soil staining and sheen presence. Field-screening techniques revealed the presence of hydrocarbons within borings GSMW2, GSMW3, GSMW4, and B5.

¹ Gasoline Range Organics: Gasoline mixtures without benzene and the total of ethylbenzene, toluene and xylene are less than 1% of the gasoline mixture has a soil CUL = 100 mg/kg. All other gasoline mixtures have a soil CUL = 30 mg/kg. For groundwater, the CUL is 1,000 µg/l for gasoline mixtures without benzene and 800 µg/l for all other gasoline mixtures.

Sixteen (16) soil samples were collected from borings GSMW1 through GSMW4 and B5 through B8. Two (2) soil samples from each boring were collected at depths between approximately five (5) feet bgs and the soil-groundwater interface, which was identified as approximately ten (10) feet bgs.

Relatively undisturbed soil samples were collected directly from the macro-core samplers extracted from the borings. Samples were transferred into new laboratory-provided analyte specific sample containers and assigned a unique sample ID; those collected for volatile organic compounds (VOCs) were collected using the EPA Method 5035 sampling procedures.

Groundwater was encountered at approximately ten (10) feet bgs on the Property. Groundwater monitoring wells were installed in four (4) of the borings (GSMW1 – GSMW4). The wells were constructed of 1-inch diameter PVC and screened from approximately fifteen (15) feet bgs to five (5) feet bgs. Boring logs and well construction details are provided in Appendix D. Upon installation of the monitoring wells, ECI developed the newly installed groundwater monitoring wells by pumping water from them until it was relatively clear.

2.6 Groundwater Sampling Activities

On November 1, 2017, ECI returned to the Property to collect groundwater samples from the four recently constructed groundwater monitoring wells (GSMW1 – GSMW4). Purging and sampling was conducted in accordance with American Society of Testing and Materials (ASTM) *Guideline D6771-02 "Standard Practice for Low-Flow Purging and Sampling for Wells and Devices Used for Ground-Water Quality Investigations"*.

ECI field staff followed the procedures described below when collecting groundwater samples:

- The cap from the monitoring well was removed and the groundwater level was allowed to equilibrate to atmospheric pressure for a minimum of 20 minutes.
- The depth to groundwater in the monitoring well was measured relative to the top of the well casing using an electronic water-level meter.
- Each monitoring well was purged at a low-flow rate (100 to 300 milliliters per minute) using a peristaltic pump and dedicated polyethylene tubing. Field parameters of temperature, pH, turbidity, dissolved oxygen and specific conductivity were monitored during purging using a water quality meter to determine when these parameters stabilized. Following stabilization of the field parameters, samples of the groundwater were obtained.

2.7 Sample Collection

During sample collection of the groundwater and soil, each discrete sample was placed in new, laboratory provided containers and assigned unique sample identification numbers (e.g. B1-5', GSMW1). Volatile Organic Compounds (VOC) soil samples were collected using the Washington State Department of Ecology

(Ecology) -required Environmental Protection Agency (EPA) 5035 sampling collection method. Samples were then placed into a container maintained at 4° Celsius until delivered to the laboratory.

2.8 Soil and Groundwater Conditions

2.8.1 Soil Conditions

The surface of the Site is paved with approximately three (3) to four (4) inches of asphalt. Below the asphalt pavement the soil conditions were fairly consistent consisting of loose brown coarse silty sand with gravel. Some cobbles were encountered during the drilling. It is assumed that the soil is fill material from when the Puyallup River delta and flood plain were filled in the early-1900s.

2.8.2 Groundwater Conditions

Groundwater levels for all four of the monitoring wells were measured on November 1, 2017. The depth to groundwater ranged from 6.13 feet to 9.18 feet below the top of the monitoring well casings. During drilling, groundwater at the Site was encountered at a depth of approximately 10 feet bgs and is most likely perched with an upward gradient.

Based on groundwater elevations obtained from the wells installed at the Site, the direction of groundwater flow is to the northwest toward the Thea Foss Waterway approximately 0.3 miles to the northwest with a gradient of 0.035 feet per foot (ft./ft.). A groundwater contour map is presented in Figure 4.

2.9 Analytical Results

2.9.1 Soil Analytical Results

Sixteen (16) soil samples were submitted to Friedman and Bruya of Seattle, Washington, and analyzed for the identified site specific COCs. The analytical results show that the soil sample collected from boring B5 at approximately five (5) feet bgs (B5-5'), exceeded the MTCA Method A CUL for GRO, ethylbenzene and xylenes at 1,500 mg/kg, 11 mg/kg, and 14 mg/kg respectively.

ORO was detected below the MTCA CUL in samples GSMW3-10 (820 mg/kg) and GSMW4-10 (1,100 mg/kg) from a depth of 10 feet bgs and in sample B8-5 (460mg/kg) from a depth of 5 feet bgs. DRO was detected below the MTCA CULs in sample B5-5 (500 mg/kg) and in sample B8-5 (240 mg/kg). Both of these analytical results were flagged by the laboratory saying that *"The sample chromatographic pattern does not resemble the fuel standard used for quantitation"*. This may be a result of what was quantified as DRO being actually ORO. It may also represent that the diesel found is heavily weathered and the standard used was a fresh diesel.

Arsenic, lead and chromium were detected above the laboratory reporting limits in the samples analyzed. Both the arsenic and lead results were significantly below the MTCA Method A CULs. Chromium was

analyzed as total chromium and was reported as being above the MTCA Method A CUL of 19 mg/kg for combined chromium III and chromium IV in all samples except for sample B8-5.

Chromium is generally found in two valences, chromium +3 (trivalent chromium) and chromium +6 (hexavalent chromium). Of the two valences, hexavalent chromium is the most toxic and therefore when present, it has a lower clean up level. It also has a shorter residence time in the environment and relatively quickly reduces into trivalent chromium. The MTCA Method A tables (WAC 173-340-900: Tables 720-1 and 740-1) use hexavalent chromium for determining the cleanup levels. If the chromium can be shown by analysis to be all trivalent chromium then the cleanup levels are raised to 2,000 mg/kg. Because hexavalent chromium has a short residence time in the environment and because it generally has a distinctive yellow-green color that was not observed in the samples, ECI is assuming that the chromium report is trivalent chromium. Using the assumption that the chromium is trivalent chromium, the reported values in the samples analyzed are significantly below the MTCA CUL.

A summary of the laboratory analytical results is provided in Table 1 in Appendix B. The laboratory analytical datasheets are presented in Appendix F.

2.9.2 Groundwater Analytical Results

Four (4) groundwater samples were submitted to Friedman and Bruya of Seattle, Washington and analyzed for the identified site specific COCs. The analytical results indicate that the groundwater samples collected from GSMW1 – GSMW4 exceeded the MTCA Method A CUL for total arsenic and samples from GSMW1 and GSMW2 exceeded the MTCA Method A CUL for total lead. The sample from well GSMW2 also contained total chromium at 56 µg/l which is slightly above the MTCA Method A CUL of 50 µg/l.

Because there was silt in the samples collected and that metals can be present in the silt, the groundwater samples from wells GSMW1 and GSMW2 were analyzed for dissolved lead. The analytical results for dissolved lead indicated that dissolved lead was below the laboratory method reporting limits.

Although total arsenic is above the MTCA Method A CUL in all four (4) groundwater samples, the analytical results for dissolved lead indicate that dissolved arsenic may also be below the laboratory method reporting limits as well. For the total chromium result in the sample from well GSMW2, it is assumed that the total chromium is a result of sediment in the sample. As discussed above with the soil results, it is assumed that the chromium found in the sample from GSMW2 is trivalent chromium in which case the MTCA CUL is 100 µg/L.

For the remaining COCs, the groundwater samples contained concentrations either below the laboratory method reporting limits or below their respective MTCA Method A CULs. A summary of the laboratory analytical results is provided in Table 2 in Appendix B. The laboratory analytical datasheets are presented in Appendix F.

2.10 Extent of Contamination

2.10.1 Soil Contamination

Based on the analytical results of the samples collected and analyzed in 2006 and the samples collected and analyzed during this RI, it is believed that the extent of soil contaminated with gasoline and its related constituents has been defined except for in one area of the Site. The soil contamination appears to be located in the area of borings B4 and B5. This is the area of the former USTs and one of the former dispenser islands at the Site. The limits of the contamination are defined by borings B1, B6, B7, B8, and well GSMW2.

The soil samples from well GSMW1 did not reveal petroleum contamination above the MTCA CULs and defines the potential southernmost boundary of the contamination. However, the limit of contamination is more likely closer to boring B4 than it is well GSMW1. The extent of contamination to the west has not been defined and is potentially off-site beneath the City of Tacoma right-of-way containing the sidewalk. Figure 5 in Appendix A shows the estimated extent of contamination.

Because there does not appear to be a correlation of the concentrations of the metals observed at the Site and the concentration of hydrocarbons and because the concentrations of metals observed are fairly consistent Site-wide, it is believed that the metals observed at the Site are a result of materials used to fill the entire area. The metals observed at the Site are a result of background concentrations and are not related to the petroleum releases at the Site.

2.10.2 Groundwater Contamination

During the Subsurface Investigation conducted in 2006 groundwater grab samples were collected from borings B1 through B4. With the exception of boring B4, petroleum contamination was not detected in the analyzed groundwater grab samples. The sample from boring B4 contained DRO and ORO above the respective MTCA Method A CULs.

Monitoring wells installed during this RI near the perimeter of the Property and sampled once have not shown contamination petroleum products. Therefore, it is believed that the DRO and ORO contaminated groundwater observed in boring B4 is an isolated occurrence related to the "pit water" collected in the former UST excavation. However, monitoring wells have not been installed east of the Site in the City of Tacoma right-of-way containing the sidewalk. Also, additional quarterly groundwater sampling will be needed to confirm that the groundwater near the perimeter of the Site remains unaffected.

As mentioned above when discussing the extent of soil contamination, it is believed that the arsenic and chromium contamination observed in the groundwater samples are background concentrations resulting from the materials used to fill the area near the site. Figure 6 in Appendix A presents the groundwater analytical results.

3.0 CONCEPTUAL SITE MODEL

Ecology requires that an RI provide information:

“...to determine the impact or potential impact of the hazardous substance from the facility on natural resources and ecological receptors, including any information needed to conduct a terrestrial ecological evaluation, under WAC 173-340-7492 or 173-340-7493, or to establish an exclusion under WAC 173-340-7491.” (WAC173-340-350(7)(c)(iii)(F)

To determine an impact or potential impact a Conceptual Site Model (CSM) is developed. The CSM summarizes the potentially complete exposure pathways by which receptors may be exposed to contaminants at the Site under current or anticipated future conditions. A complete pathway from the contaminant source to a receptor is necessary in order for contaminant exposure to occur. A discussion of physical setting, potential contaminant sources, the potential receptors, and the potential exposure pathways are presented in the following sections. Figure 7 in Appendix A presents a graphical representation of the CSM.

3.1 Physical Setting

The Property is currently utilized for parking and was developed by at least 1896. Former uses of the property have included lumber/wood storage, part of a sawmill and engine shop, a Texaco service station, and a restaurant. The warehouse on the adjacent property to the south was constructed in 1891 and has included manufacturing (furniture and mattress), a warehouse company, and a heating and boiling company. The Property is zoned industrial and the land use in the vicinity includes rail yards, a transit station, train station, and industrial and commercial businesses.

Shallow groundwater is present at the Site within approximately 8 to 10 feet of the ground surface and is anticipated to flow to the northeast.

3.2 Contaminant Sources

Based on the information gathered in previous investigations on the Property and during this RI, it is believed that the petroleum contamination found on the Property is a result from the past use of the Property as a Texaco service station. It appears that the petroleum was released from underground storage tanks and piping associated with the station. It also appears that metals observed in samples from the Site are a result materials used for regional filling of the area in the early 1900s.

3.3 Potential Receptors and Exposure Pathways

Potential receptors are those individuals and natural resources that may be exposed to contaminants under the current and reasonable likely future land and water use scenarios. Natural resource receptors include land-based plants and animals, as well as water-based plants and animals, wetlands, or sediments.

Based on the location of the Site, Natural resources are not considered as receptors for this Site. Potential human receptors include the following: residents, occupational workers, construction workers and excavation workers.

The following human exposure pathways to contaminants in soil and sediment could be complete based on our understanding of current and future land use, water quality, and the magnitude and extent of contamination at the Site:

- Exposure to contaminants in soil (0 to 15 feet bgs) via incidental ingestion, dermal contact and inhalation of fugitive dust (occupational receptors and construction/excavation workers); and
- Potential Exposure to contaminants in soil via volatilization to outdoor air (occupational receptors).

The following exposure pathway to contaminants in groundwater is potentially complete:

- Exposure to groundwater via direct contact in excavations.

The following exposure pathway to contaminants in groundwater is currently incomplete; however, it is possible that this pathway could become complete in the future:

- Potential Exposure to contaminants in soil via vapor intrusion to indoor air (residential and occupational receptors)

3.4 Terrestrial Ecological Evaluation

As required by WAC 173-340-7492, ECI has completed a Terrestrial Ecological Evaluation (TEE). The Site is located in an urban area and there is less than 1½ acres of contiguous undeveloped land on or within 500 feet of any area of the Site. In addition, the metals found at the Site appear to exceed natural background levels. Based on this, it has been determined that the Site qualifies for an exclusion from further terrestrial ecological evaluation. A copy of the TEE form and documentation form are attached in Appendix E.

4.0 SUMMARY AND CONCLUSIONS

ECI has completed a remedial investigation at the former Texaco service Station located at 704 Puyallup Avenue in Tacoma, Washington. This RI relied on previous work conducted at the site between 1998 and 2007 as well as an investigation conducted in October 2017 and November 2017. The October and November 2017 investigations were to determine the lateral and vertical extent of petroleum contamination previously identified on the Property. The contamination consisted of gasoline and diesel related petroleum hydrocarbons that appeared to be released from a former UST system on the Property.

On October 25, 2017, ECI advanced eight borings on the Property and installed four groundwater monitoring wells. Sixteen soil samples were collected, from the eight borings, to assess the potential

environmental impacts due to the presence of the former gasoline service station on the Property. The analytical results showed that the soil sample collected from one boring (boring B5) at approximately five (5) feet bgs exceeded the MTCA Method A CUL for GRO, ethylbenzene and xylenes. The results also showed that DRO and ORO were either not present above the laboratory reporting limits or were not above the MTCA Method A CULs.

Arsenic, lead and chromium were detected above the laboratory reporting limits in the samples analyzed. However, both the arsenic and lead results were significantly below the MTCA Method A CULs. Chromium was detected above the MTCA Method A CUL for total chromium. However, it is believed that the chromium found is trivalent chromium and therefore the concentrations found are significantly below the MTCA Method A CUL for trivalent chromium.

Because the metal concentrations found did not appear to have a correlation with the petroleum concentrations and appeared to be consistent throughout the Site, it is believed that the metals are a result of materials used to fill the entire area. The metals observed at the Site are a result of background concentrations and are not related to the petroleum releases at the Site.

On November 1, 2017, collected groundwater samples from the four monitoring wells installed at the Property. The groundwater samples were collected to evaluate the groundwater quality beneath the Site.

The analytical results indicated that GRO, DRO, and ORO were not present above the laboratory reporting limits or were not present above the respective MTCA Method A CULs in the samples collected. The analytical results revealed that the groundwater samples collected exceeded the MTCA Method A CUL for total arsenic and two of the samples exceeded the MTCA Method A CUL for total lead. One sample also contained total chromium slightly above the MTCA Method A CUL.

Because there was silt in the samples collected two of the groundwater samples were analyzed for dissolved lead. The analytical results for dissolved lead indicated that dissolved lead was below the laboratory method reporting limits. Based on these results it is believed that the metals found in the groundwater samples are a result of silt and are not dissolved in the groundwater.

Based on the results of this RI, it appears that the contamination on this site is limited to the soil and is located near the former USTs. The extent of the contamination has been defined except to the west in the City of Tacoma right-of-way containing the sidewalk.

5.0 DATA GAPS AND RECOMMENDATIONS

Based on the information developed to date in this RI there appear to be four data gaps that need to be filled. The data gaps are:

- Determination of the extent of contaminated soils to the west in the City of Tacoma right-of-way containing the sidewalk,
- Determining if there is groundwater contamination in the City of Tacoma right-of-way containing the sidewalk,
- More closely defining the edge of contamination between boring B4 and well GSMW1, and
- Providing four (4) consecutive quarters of groundwater monitoring per Ecology requirements.

In order to fill the data gaps ECI recommends that:

- Additional soil borings be installed and sampled in the City of Tacoma right-of-way,
- If permitted, a groundwater monitoring well be installed in the City of Tacoma right-of-way,
- An additional soil boring be installed between boring B4 and well GSMW1, and
- Quarterly groundwater monitoring be conducted at the Site.

Appendix E Terrestrial Ecological Evaluation Forms

Providing Practical Environmental Compliance Solutions
CLIMATE | AIR QUALITY | TOXICS | POLLUTION

Voluntary Cleanup Program

Washington State Department of Ecology Toxics Cleanup Program

TERRESTRIAL ECOLOGICAL EVALUATION FORM

Under the Model Toxics Control Act (MTCA), a terrestrial ecological evaluation is necessary if hazardous substances are released into the soils at a Site. In the event of such a release, you must take one of the following three actions as part of your investigation and cleanup of the Site:

1. Document an exclusion from further evaluation using the criteria in WAC 173-340-7491.
2. Conduct a simplified evaluation as set forth in WAC 173-340-7492.
3. Conduct a site-specific evaluation as set forth in WAC 173-340-7493.

When requesting a written opinion under the Voluntary Cleanup Program (VCP), you must complete this form and submit it to the Department of Ecology (Ecology). The form documents the type and results of your evaluation.

Completion of this form is not sufficient to document your evaluation. You still need to document your analysis and the basis for your conclusion in your cleanup plan or report.

If you have questions about how to conduct a terrestrial ecological evaluation, please contact the Ecology site manager assigned to your Site. For additional guidance, please refer to www.ecy.wa.gov/programs/tcp/policies/terrestrial/TEEHome.htm.

Step 1: IDENTIFY HAZARDOUS WASTE SITE

Please identify below the hazardous waste site for which you are documenting an evaluation.

Facility/Site Name: Former Texaco Service Station

Facility/Site Address: 704 Puyallup Avenue

Facility/Site No:

VCP Project No.:

Step 2: IDENTIFY EVALUATOR

Please identify below the person who conducted the evaluation and their contact information.

Name: David Polivka

Title: Senior Hydrogeologist

Organization: ECI, Inc.

Mailing address: P.O. 153

City: Fox Island

State: WA

Zip code: 98333

Phone: 360-349-0851

Fax: 253-369-6228

E-mail: david @eci.us

Step 3: DOCUMENT EVALUATION TYPE AND RESULTS

A. Exclusion from further evaluation.

1. Does the Site qualify for an exclusion from further evaluation?

- ☒ Yes *If you answered "YES," then answer **Question 2**.*
- ☐ No or Unknown *If you answered "NO" or "UNKNOWN," then skip to **Step 3B** of this form.*

2. What is the basis for the exclusion? Check all that apply. Then skip to **Step 4** of this form.

Point of Compliance: WAC 173-340-7491(1)(a)

- ☐ All soil contamination is, or will be,* at least 15 feet below the surface.
- ☐ All soil contamination is, or will be,* at least 6 feet below the surface (or alternative depth if approved by Ecology), and institutional controls are used to manage remaining contamination.

Barriers to Exposure: WAC 173-340-7491(1)(b)

- ☐ All contaminated soil, is or will be,* covered by physical barriers (such as buildings or paved roads) that prevent exposure to plants and wildlife, and institutional controls are used to manage remaining contamination.

Undeveloped Land: WAC 173-340-7491(1)(c)

- ☐ There is less than 0.25 acres of contiguous[#] undeveloped[±] land on or within 500 feet of any area of the Site and any of the following chemicals is present: chlorinated dioxins or furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, heptachlor epoxide, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, or pentachlorobenzene.
- ☒ For sites not containing any of the chemicals mentioned above, there is less than 1.5 acres of contiguous[#] undeveloped[±] land on or within 500 feet of any area of the Site.

Background Concentrations: WAC 173-340-7491(1)(d)

- ☒ Concentrations of hazardous substances in soil do not exceed natural background levels as described in WAC 173-340-200 and 173-340-709.

* An exclusion based on future land use must have a completion date for future development that is acceptable to Ecology.

[±] "Undeveloped land" is land that is not covered by building, roads, paved areas, or other barriers that would prevent wildlife from feeding on plants, earthworms, insects, or other food in or on the soil.

[#] "Contiguous" undeveloped land is an area of undeveloped land that is not divided into smaller areas of highways, extensive paving, or similar structures that are likely to reduce the potential use of the overall area by wildlife.

B. Simplified evaluation.

1. Does the Site qualify for a simplified evaluation?

- ☐ Yes *If you answered "YES," then answer **Question 2** below.*
- ☐ No or Unknown *If you answered "NO" or "UNKNOWN," then skip to **Step 3C** of this form.*

2. Did you conduct a simplified evaluation?

- ☐ Yes *If you answered "YES," then answer **Question 3** below.*
- ☐ No *If you answered "NO," then skip to **Step 3C** of this form.*

3. Was further evaluation necessary?

- ☐ Yes *If you answered "YES," then answer **Question 4** below.*
- ☐ No *If you answered "NO," then answer **Question 5** below.*

4. If further evaluation was necessary, what did you do?

- ☐ Used the concentrations listed in Table 749-2 as cleanup levels. *If so, then skip to **Step 4** of this form.*
- ☐ Conducted a site-specific evaluation. *If so, then skip to **Step 3C** of this form.*

5. If no further evaluation was necessary, what was the reason? Check all that apply. Then skip to **Step 4** of this form.

Exposure Analysis: WAC 173-340-7492(2)(a)

- ☐ Area of soil contamination at the Site is not more than 350 square feet.
- ☐ Current or planned land use makes wildlife exposure unlikely. Used Table 749-1.

Pathway Analysis: WAC 173-340-7492(2)(b)

- ☐ No potential exposure pathways from soil contamination to ecological receptors.

Contaminant Analysis: WAC 173-340-7492(2)(c)

- ☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 15 feet at concentrations that exceed the values listed in Table 749-2.
- ☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 6 feet (or alternative depth if approved by Ecology) at concentrations that exceed the values listed in Table 749-2, and institutional controls are used to manage remaining contamination.
- ☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 15 feet at concentrations likely to be toxic or have the potential to bioaccumulate as determined using Ecology-approved bioassays.

- ☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 6 feet (or alternative depth if approved by Ecology) at concentrations likely to be toxic or have the potential to bioaccumulate as determined using Ecology-approved bioassays, and institutional controls are used to manage remaining contamination.

C. Site-specific evaluation. A site-specific evaluation process consists of two parts: (1) formulating the problem, and (2) selecting the methods for addressing the identified problem. Both steps require consultation with and approval by Ecology. See WAC 173-340-7493(1)(c).

1. Was there a problem? See WAC 173-340-7493(2).

- ☐ Yes *If you answered "YES," then answer **Question 2** below.*
- ☐ No *If you answered "NO," then identify the reason here and then skip to **Question 5** below:*
- ☐ No issues were identified during the problem formulation step.
 - ☐ While issues were identified, those issues were addressed by the cleanup actions for protecting human health.

2. What did you do to resolve the problem? See WAC 173-340-7493(3).

- ☐ Used the concentrations listed in Table 749-3 as cleanup levels. *If so, then skip to **Question 5** below.*
- ☐ Used one or more of the methods listed in WAC 173-340-7493(3) to evaluate and address the identified problem. *If so, then answer **Questions 3 and 4** below.*

3. If you conducted further site-specific evaluations, what methods did you use?
Check all that apply. See WAC 173-340-7493(3).

- ☐ Literature surveys.
- ☐ Soil bioassays.
- ☐ Wildlife exposure model.
- ☐ Biomarkers.
- ☐ Site-specific field studies.
- ☐ Weight of evidence.
- ☐ Other methods approved by Ecology. *If so, please specify:*

4. What was the result of those evaluations?

- ☐ Confirmed there was no problem.
- ☐ Confirmed there was a problem and established site-specific cleanup levels.

5. Have you already obtained Ecology's approval of both your problem formulation and problem resolution steps?

☐ Yes If so, please identify the Ecology staff who approved those steps:

☐ No

Step 4: SUBMITTAL

Please mail your completed form to the Ecology site manager assigned to your Site. If a site manager has not yet been assigned, please mail your completed form to the Ecology regional office for the County in which your Site is located.

Northwest Region: Attn: VCP Coordinator 3190 160 th Ave. SE Bellevue, WA 98008-5452	Central Region: Attn: VCP Coordinator 15 W. Yakima Ave., Suite 200 Yakima, WA 98902

David Polivka, Project Manager
EcoCon, Inc.
15 S. Oregon Ave, Suite 110
Tacoma, WA 98409

Dear Mr Polivka:

Included are the results from the testing of material submitted on October 26, 2017 from the 0267-07-02, F&BI 710416 project. There are 39 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 26, 2017 by Friedman & Bruya, Inc. from the EcoCon 0267-07-02, F&BI 710416 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>EcoCon</u>
710416 -01	GSMW1-5
710416 -02	GSMW1-10
710416 -03	GSMW2-5
710416 -04	GSMW2-10
710416 -05	GSMW3-5
710416 -06	GSMW3-10
710416 -07	GSMW4-5
710416 -08	GSMW4-10
710416 -09	B5-5
710416 -10	B5-10
710416 -11	B6-5
710416 -12	B6-10
710416 -13	B7-5
710416 -14	B7-10
710416 -15	B8-5
710416 -16	B8-10

A 6020A internal standard failed the acceptance criteria for several samples due to matrix interferences. The data were flagged accordingly. The samples were diluted and reanalyzed.

All other quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

- a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.
- b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.
- ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.
- c - The presence of the analyte may be due to carryover from previous sample injections.
- cf - The sample was centrifuged prior to analysis.
- d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.
- dv - Insufficient sample volume was available to achieve normal reporting limits.
- f - The sample was laboratory filtered prior to analysis.
- fb - The analyte was detected in the method blank.
- fc - The compound is a common laboratory and field contaminant.
- hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.
- hs - Headspace was present in the container used for analysis.
- ht - The analysis was performed outside the method or client-specified holding time requirement.
- ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.
- j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.
- J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.
- jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.
- js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.
- lc - The presence of the analyte is likely due to laboratory contamination.
- L - The reported concentration was generated from a library search.
- nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.
- pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.
- ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.
- vo - The value reported fell outside the control limits established for this analyte.
- x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

David Polivka, Project Manager
EcoCon, Inc.
15 S. Oregon Ave, Suite 110
Tacoma, WA 98409

Dear Mr Polivka:

Included are the results from the testing of material submitted on November 2, 2017 from the 0267-07-02, F&BI 711049 project. There are 19 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on November 2, 2017 by Friedman & Bruya, Inc. from the EcoCon 0267-07-02, F&BI 711049 project. Samples were logged in under the laboratory ID's listed below.

<u>Laboratory ID</u>	<u>EcoCon</u>
711049 -01	GSMW1
711049 -02	GSMW2
711049 -03	GSMW3
711049 -04	GSMW4

All quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

- a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.
- b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.
- ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.
- c - The presence of the analyte may be due to carryover from previous sample injections.
- cf - The sample was centrifuged prior to analysis.
- d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.
- dv - Insufficient sample volume was available to achieve normal reporting limits.
- f - The sample was laboratory filtered prior to analysis.
- fb - The analyte was detected in the method blank.
- fc - The compound is a common laboratory and field contaminant.
- hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.
- hs - Headspace was present in the container used for analysis.
- ht - The analysis was performed outside the method or client-specified holding time requirement.
- ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.
- j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.
- J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.
- jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.
- js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.
- lc - The presence of the analyte is likely due to laboratory contamination.
- L - The reported concentration was generated from a library search.
- nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.
- pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.
- ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.
- vo - The value reported fell outside the control limits established for this analyte.
- x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Mr. Joe Carmen
C/o Spencer & Associates
1326 Tacoma Avenue South
Tacoma, WA 98402

Re: Acceptance of VCP Application for the following Contaminated Site:

- **Site Name:** Former Texaco Service Station
- **Site Address:** 704 Puyallup Ave Tacoma, 98421 Pierce
- **Cleanup Site ID:** 14432
- **Facility/Site ID:** 78349
- **VCP Project ID:** SW1633

Dear Mr. Carmen:

The Department of Ecology (Ecology) has accepted your Voluntary Cleanup Program (VCP) application for Former Texaco Service Station (Site). We applaud your initiative and welcome your interest in the VCP. This letter confirms your entry into the VCP and provides important information on how we will manage the VCP Cleanup Project (Project) and the Site.

Agreement

Ecology has completed and signed the VCP Agreement governing the Project on **January 10, 2018**. This is the effective date of the Agreement. **Enclosure A** includes a copy of the Agreement. Please review it carefully.

Identification

Ecology has assigned a unique name and number to the **Site**. We have also assigned a unique number to your **Project** at the Site. You can find this information in the box at the bottom of the first page of the Agreement. When contacting us, please use this information to identify your Project.

Designated Managers

Please direct communications between Ecology and Spencer Law Firm through the designated managers to the maximum extent possible.

- **Ecology**

We have designated the following site manager to respond to your requests:

Jason Cook
Department of Ecology
Toxic Cleanup Program,
Headquarters
300 Desmond Drive SE
Lacey, WA 98504
Phone: 360-407-6834
E-mail: Jason.Cook@ecy.wa.gov

- **Spencer Law Firm**

The application designated you, Joe Carmen as the project manager for Spencer Law Firm. We will therefore respond only to your requests. If someone replaces you as the project manager or your contact information changes, please submit a Change of Contact Form. You can download the Form from our VCP web site:

www.ecy.wa.gov/programs/tcp/vcp/vcpmain.htm.

Requests for Written Opinions

In your application, you requested an opinion on the November 15, 2017 Remedial Investigation Report. Ecology will review the documents you submitted and provide you a written response within about 90 days.

Reporting Requirements

When requesting written opinions on planned or completed remedial actions, please comply with the following reporting requirements:

- **Licensing.** You must submit documents containing geologic, hydrologic, or engineering work under the seal of an appropriately licensed professional, as required by Chapters 18.43 and 18.220 RCW.

Mr. Joe Carmen
January 11, 2018
Page 3

- **Data Submittal.** You must submit environmental sampling data in both a printed form and an electronic form capable of being transferred into our Environmental Information Management (EIM) system. For an overview of data submittal requirements, please refer to **Enclosure B**, which includes a copy of Toxics Cleanup Program Policy 840. For instructions on how to submit data, please refer to the following web site:
www.ecy.wa.gov/programs/tcp/data_submittal/data_requirements.htm.

Failure to comply with these requirements may result in unnecessary delays.

Payment

Ecology will send monthly invoices to the billing contact designated in the Application Form. If someone replaces the billing contact or their contact information changes, please submit a Change of Contact Form. You can find the Form on the VCP web site.

The invoice will include a summary of the costs incurred, payments received, identity of staff involved, and the amount of time spent on the Project during the previous month. Payment is due within thirty days of the invoice date. For more information on the billing system, please refer to the VCP web site.

Site Status

Under the Model Toxics Control Act (MTCA), Ecology maintains a list of contaminated sites. Based on your VCP application, Ecology has determined that remedial action is required at the Site under MTCA and has added the Site to the list. Your cooperation in planning or conducting remedial actions at the Site is appreciated and is not an admission of guilt or liability. This "Early Notice" is required under WAC 173-340-310(6)(b).

Mr. Joe Carmen
January 11, 2018
Page 4

Contact Information

We are committed to working with you to accomplish the prompt and effective cleanup of the Site. Again, if you have any questions about the VCP or your Project, please contact Jason Cook at 360-407-6834.

Sincerely,

Nicholas Acklam
VCP Unit Manager
Toxics Cleanup Program, Southwest Regional Office

VCP Agreement

VCP AGREEMENT

INSTRUCTIONS: Submit this Agreement (original) to Ecology as part of your Application. Before submitting, enter the Customer's name and the Site's address on the first page and sign the Agreement on the second page. If your Application is accepted, then Ecology will do the following: 1) identify the Site and VCP project in the box below; 2) sign the Agreement; and 3) send you a copy of the completed Agreement.

This document constitutes an Agreement between the State of Washington Department of Ecology (Ecology) and Mr. Joe Carmen C/o Spencer Law Firm (Customer) to provide informal site-specific technical consultations under the Voluntary Cleanup Program (VCP) for the Site identified below and associated with the following address:
Former Texaco Service Station 704 Puyallup Avenue Tacoma, WA

The purpose of this Agreement is to facilitate independent remedial action at the Site. Ecology is entering into this Agreement under the authority of the Model Toxics Control Act (MTCA), Chapter 70.105D RCW, and its implementing regulations, Chapter 173-340 WAC. If a term in this Agreement is defined in MTCA or Chapter 173-340 WAC, then that definition shall govern.

Services Provided by Ecology

Upon request, Ecology agrees to provide the Customer informal site-specific technical consultations on the independent remedial actions proposed for or performed at the Site consistent with WAC 173-340-515(5). Those consultations may include assistance in identifying applicable regulatory requirements and opinions on whether the remedial actions proposed for or conducted at the Site meet those requirements.

Ecology may use any appropriate resource to provide the Customer with the requested consultative services. Those resources may include, but shall not be limited to, those of Ecology and the Office of the Attorney General. However, Ecology shall not use independent contractors unless the Customer provides Ecology with prior written authorization.

In accordance with RCW 70.105D.030(1)(i), any opinions provided by Ecology under this Agreement are advisory only and not binding on Ecology. Ecology, the state, and officers and employees of the state are immune from all liability. Furthermore, no cause of action of any nature may arise from any act or omission in providing, or failing to provide, informal advice and assistance under the VCP.

Payment for Services by Customer

The Customer agrees to pay all costs incurred by Ecology in providing the informal site-specific technical consultations requested by the Customer consistent with WAC 173-340-515(6) and 173-340-550(6). Those costs may include the costs incurred by attorneys or independent contractors used by Ecology to provide the requested consultative services. Ecology's hourly costs shall be determined based on the method in WAC 173-340-550(2).

Ecology shall mail the Customer a monthly itemized statement of costs (invoice) by the tenth day of each month (invoice date) that there is a balance on the account. The invoice shall include a summary of the costs incurred, payments received, identity of staff involved, and amount of time staff spent on the project.

The Customer shall pay the required amount by the due date, which shall be thirty (30) calendar days after the invoice date. If payment has not been received by the due date, then Ecology shall withhold

FOR COMPLETION BY ECOLOGY ONLY	Facility / Site Name:	Former Texaco Service Station
	Facility / Site No.:	78349
	VCP Project No.:	SW1633

RECEIVED

any requested opinions and notify the Customer by certified mail that the debt is past due. If payment has not been received within sixty (60) calendar days of the invoice date, then Ecology shall stop all work under the Agreement and may, as appropriate, assign the debt to a collection agency under Chapter 19.16 RCW. The Customer agrees to pay the collection agency fee incurred by Ecology in the course of debt collection.

Reservation of Rights / No Settlement

This Agreement does not constitute a settlement of liability to the state under MTCA. This Agreement also does not protect a liable person from contribution claims by third parties for matters addressed by the Agreement. The state does not have the authority to settle with any person potentially liable under MTCA except in accordance with RCW 70.105D.040(4). Ecology's signature on this Agreement in no way constitutes a covenant not to sue or a compromise of any Ecology rights or authority.

Ecology reserves all rights under MTCA, including the right to require additional or different remedial actions at the Site should it deem such actions necessary to protect human health and the environment, and to issue orders requiring such remedial actions. Ecology also reserves all rights regarding the injury to, destruction of, or loss of natural resources resulting from the release or threatened release of hazardous substances at the Site.

Effective Date, Modifications, and Severability

The effective date of this Agreement shall be the date on which this Agreement is signed by the Toxics Cleanup Program's Section Manager or delegated representative. This Agreement may be amended by mutual agreement of Ecology and the Customer. Amendments shall be in writing and shall be effective when signed by the Toxics Cleanup Program's Section Manager or delegated representative. If any provision of this Agreement proves to be void, it shall in no way invalidate any other provision of this Agreement.

Termination of Agreement

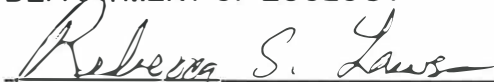

Either party may terminate this Agreement without cause by sending written notice by U.S. mail to the other party. The effective date of termination shall be the date Ecology sends notice to the Customer or the date Ecology receives notice from the Customer, whichever occurs first. Unless otherwise directed, issuance of a No Further Action opinion, either for the Site as a whole or for a portion of the real property located within the Site, shall constitute notice of termination by Ecology.

Under this Agreement, the Customer is only responsible for costs incurred by Ecology before the effective date of termination. However, termination of this Agreement shall not affect any right Ecology may have to recover its costs under MTCA or any other provision of law.

Representations and Signatures

The undersigned representative of the Customer hereby certifies that he or she is fully authorized to enter into this Agreement and to execute and legally bind the Customer to comply with the Agreement.

VCP AGREEMENT

INSTRUCTIONS: Submit this Agreement (original) to Ecology as part of your Application. Before submitting, enter the Customer's name and the Site's address on the first page and sign the Agreement on the second page. If your Application is accepted, then Ecology will do the following: 1) identify the Site and VCP project in the box below; 2) sign the Agreement; and 3) send you a copy of the completed Agreement.

This document constitutes an Agreement between the State of Washington Department of Ecology (Ecology) and Mr. Joe Carmen C/o Spencer Law Firm

(Customer) to provide informal site-specific technical consultations under the Voluntary Cleanup Program (VCP) for the Site identified below and associated with the following address:

Former Texaco Service Station 704 Puyallup Avenue Tacoma, WA

The purpose of this Agreement is to facilitate independent remedial action at the Site. Ecology is entering into this Agreement under the authority of the Model Toxics Control Act (MTCA), Chapter 70.105D RCW, and its implementing regulations, Chapter 173-340 WAC. If a term in this Agreement is defined in MTCA or Chapter 173-340 WAC, then that definition shall govern.

Services Provided by Ecology

Upon request, Ecology agrees to provide the Customer informal site-specific technical consultations on the independent remedial actions proposed for or performed at the Site consistent with WAC 173-340-515(5). Those consultations may include assistance in identifying applicable regulatory requirements and opinions on whether the remedial actions proposed for or conducted at the Site meet those requirements.

Ecology may use any appropriate resource to provide the Customer with the requested consultative services. Those resources may include, but shall not be limited to, those of Ecology and the Office of the Attorney General. However, Ecology shall not use independent contractors unless the Customer provides Ecology with prior written authorization.

In accordance with RCW 70.105D.030(1)(i), any opinions provided by Ecology under this Agreement are advisory only and not binding on Ecology. Ecology, the state, and officers and employees of the state are immune from all liability. Furthermore, no cause of action of any nature may arise from any act or omission in providing, or failing to provide, informal advice and assistance under the VCP.

Payment for Services by Customer

The Customer agrees to pay all costs incurred by Ecology in providing the informal site-specific technical consultations requested by the Customer consistent with WAC 173-340-515(6) and 173-340-550(6). Those costs may include the costs incurred by attorneys or independent contractors used by Ecology to provide the requested consultative services. Ecology's hourly costs shall be determined based on the method in WAC 173-340-550(2).

Ecology shall mail the Customer a monthly itemized statement of costs (invoice) by the tenth day of each month (invoice date) that there is a balance on the account. The invoice shall include a summary of the costs incurred, payments received, identity of staff involved, and amount of time staff spent on the project.

The Customer shall pay the required amount by the due date, which shall be thirty (30) calendar days after the invoice date. If payment has not been received by the due date, then Ecology shall withhold

FOR COMPLETION BY ECOLOGY ONLY	Facility / Site Name: <u>Former Texaco Service Station</u>	RECEIVED DEC 29 2017
	Facility / Site No.: <u>78349</u>	
	VCP Project No.: <u>SW1633</u>	

any requested opinions and notify the Customer by certified mail that the debt is past due. If payment has not been received within sixty (60) calendar days of the invoice date, then Ecology shall stop all work under the Agreement and may, as appropriate, assign the debt to a collection agency under Chapter 19.16 RCW. The Customer agrees to pay the collection agency fee incurred by Ecology in the course of debt collection.

Reservation of Rights / No Settlement

This Agreement does not constitute a settlement of liability to the state under MTCA. This Agreement also does not protect a liable person from contribution claims by third parties for matters addressed by the Agreement. The state does not have the authority to settle with any person potentially liable under MTCA except in accordance with RCW 70.105D.040(4). Ecology's signature on this Agreement in no way constitutes a covenant not to sue or a compromise of any Ecology rights or authority.

Ecology reserves all rights under MTCA, including the right to require additional or different remedial actions at the Site should it deem such actions necessary to protect human health and the environment, and to issue orders requiring such remedial actions. Ecology also reserves all rights regarding the injury to, destruction of, or loss of natural resources resulting from the release or threatened release of hazardous substances at the Site.

Effective Date, Modifications, and Severability

The effective date of this Agreement shall be the date on which this Agreement is signed by the Toxics Cleanup Program's Section Manager or delegated representative. This Agreement may be amended by mutual agreement of Ecology and the Customer. Amendments shall be in writing and shall be effective when signed by the Toxics Cleanup Program's Section Manager or delegated representative. If any provision of this Agreement proves to be void, it shall in no way invalidate any other provision of this Agreement.

Termination of Agreement

Either party may terminate this Agreement without cause by sending written notice by U.S. mail to the other party. The effective date of termination shall be the date Ecology sends notice to the Customer or the date Ecology receives notice from the Customer, whichever occurs first. Unless otherwise directed, issuance of a No Further Action opinion, either for the Site as a whole or for a portion of the real property located within the Site, shall constitute notice of termination by Ecology.

Under this Agreement, the Customer is only responsible for costs incurred by Ecology before the effective date of termination. However, termination of this Agreement shall not affect any right Ecology may have to recover its costs under MTCA or any other provision of law.

Representations and Signatures

The undersigned representative of the Customer hereby certifies that he or she is fully authorized to enter into this Agreement and to execute and legally bind the Customer to comply with the Agreement.

Voluntary Cleanup Program

Washington State Department of Ecology Toxics Cleanup Program

APPLICATION FORM

Under the Voluntary Cleanup Program (VCP), the Department of Ecology (Ecology) may provide informal site-specific technical consultations to persons conducting independent remedial actions at a hazardous waste site. Ecology may provide such consultations under the authority of the Model Toxics Control Act (MTCA), Chapter 70.105D RCW, and its implementing regulations, Chapter 173-340 WAC.

To enter the VCP, complete and submit to Ecology a VCP Application. The Application consists of the following two documents:

1. Application Form (including required attachments). ← **THIS DOCUMENT**
2. Agreement.

For guidance on how to complete your Application, please refer to the Application Instructions, which are available separately on the VCP web site: www.ecy.wa.gov/programs/tcp/vcp/vcpmain.htm.

Part 1 - ADMINISTRATION

A. Customer Information. The Customer is the person or organization requesting services from Ecology under the VCP, and is responsible for paying the costs incurred by Ecology. The authority and duty of the Customer are explained in the Agreement.

Name of Customer: Mr. Joe Carmen C/o Spencer & Associates

What type of entity is the Customer?

☒ Person

If the Customer is a "person," then the Customer shall serve as both the Project Manager and the Project Billing Contact. Please identify this person and their contact information in both Parts 1B and 1C.

☐ Organization

*If the Customer is an "organization," then please identify the Project Manager in Part 1B and the Project Billing Contact in Part 1C. **Both persons must be employed by the Customer organization.***

What is the Customer's involvement at the Site? Please check all that apply.

☐ Property owner

☐ Business owner (operator)

☒ Past property owner

☐ Mortgage holder

☐ Future property owner

☐ Consultant

☐ Property lessee

☐ Attorney

☐ Other – please specify: _____

If not the current property owner, is the Customer acting as the agent for the property owner?

☐ Yes ☒ No

If not the current property owner, is the Customer authorized to grant access to the property?

☒ Yes ☐ No

TCP SWRO ID # SW1633

RECEIVED

DEC 29 2017

Part 1 – ADMINISTRATION continued

B. Project Manager Information. Ecology will send this person all official correspondence. This person must either be the Customer or be employed by the Customer. This person may not be an independent contractor hired by the Customer. Please enter the required information below.

Name: Mr. Joe Carmen C/o Spencer & Associates		Title:
Mailing address: 1326 Tacoma Avenue South		
City: Tacoma	State: WA	Zip: 98402
Phone: 253-383-2770	Fax:	E-mail: jspencer@spencer-lawfirm.com

C. Project Billing Contact Information. Ecology will send this person monthly invoices. This person must either be the Customer or be employed by the Customer. This person may not be an independent contractor hired by the Customer. Please enter the required information below.

Name: Mr. Joe Carmen C/o Spencer & Associates		Title:
Mailing address: 1326 Tacoma Avenue South		
City: Tacoma	State: WA	Zip: 98402
Phone: 253-383-2770	Fax:	E-mail:

D. Project Consultant Information.

Is the Customer a consultant?

☐ Yes

If you answered "YES," then skip to the next question.

☒ No

If you answered "NO" and the Customer hired a consultant to conduct the independent remedial action, then enter the required information below.

Name: David Polivka		Title: Senior Hydrogeologist
Organization: ECI Environmental Consulting		
Mailing address: P.O. 153		
City: Fox Island	State: WA	Zip: 98333
Phone: 360-349-0851	Fax:	E-mail: david@ecocon.us

Do you want Ecology to contact the Project Consultant?

☒ Yes ☐ No

E. Property Owner Information.

Is the Customer the owner of the property where independent remedial action is being conducted?

☐ Yes

If you answered "YES," then enter the type of entity and skip to the next question.

☒ No

If you answered "NO," then please enter all of the required information below.

Name:		Title:
Organization: Landmark Tacoma I/Landmark Tacoma II LLC		
Mailing address: 406 E 4TH ST		
City: Winston-Salem	State: NC	Zip: 27101-4112
Phone:	Fax:	E-mail:

Part 1 – ADMINISTRATION continued

What type of entity is the property owner? Please check only one.

- | | |
|--|--|
| <input checked="" type="checkbox"/> Private | <input type="checkbox"/> County |
| <input type="checkbox"/> Tribal | <input type="checkbox"/> Municipal |
| <input type="checkbox"/> Federal | <input type="checkbox"/> Mixed |
| <input type="checkbox"/> State | <input type="checkbox"/> Public School |
| <input type="checkbox"/> Other – please specify: _____ | |

F. Request for Written Opinion.

Are you requesting a written opinion at this time?

- ☒ Yes ☐ No

If you answered "YES," on what planned or completed remedial actions do you want a written opinion?
Remedial Investigation

Please attach to this Application any additional remedial action plans or reports you want Ecology to review. Ecology will base its opinion on the information contained in the Site file, including any information attached to this Application.

If you answered "NO," please explain why you are enrolling in the VCP at this time and when you expect to request a written opinion from Ecology.

Attach additional pages if necessary.

G. Reporting Requirements.

Please comply with the following reporting requirements when requesting written opinions on planned or completed remedial actions:

- ☐ **Licensing.** Documents submitted containing geologic, hydrologic, or engineering work must be under the seal of an appropriately licensed professional, as required by Chapters 18.43 and 18.220 RCW.
- ☐ **Data Submittal.** Environmental sampling data must be submitted in both a printed form and an electronic form capable of being transferred into Ecology's data management systems. For instructions on how to submit the data, please refer to the following Ecology web site:
www.ecy.wa.gov/programs/tcp/data_submittal/Data_Requirements.htm.

Failure to comply with these requirements may result in unnecessary delays. Ecology will not issue a No Further Action (NFA) opinion unless these requirements are satisfied.

Part 2 - DESCRIPTION OF THE SITE

A. Name of the Site. If Ecology has already identified the Site, enter the name provided by Ecology. Otherwise, enter a suggested name for the Site. You may also include an alternate name.

Name: Former Texaco Service Station

Alternate Name:

B. Location of Property where the Releases Occurred (Source Property).

The "source property" is the property where hazardous substances were released into the environment. For example, if petroleum was released from a leaking UST, the source property is the property where the UST was located.

Do you know on which property the releases occurred?

- ☒ Yes *If you answered "YES," then please refer to the source property when answering the following questions.*
- ☐ No *If you answered "NO," then please refer to the property addressed by your remedial action (cleanup) when answering the following questions.*

Physical Address. Please enter the physical address of the property below.

Street Address: 704 Puyallup Avenue

City: Tacoma

State: WA

Zip: 98421

Geographic Position. Please enter the geographical position of the property below. For additional guidance on how to complete this part, please refer to instructions on the VCP web site.

COORDINATES	LATITUDE:	Degrees: 47	Minutes: 14	Seconds: 27.34
	LONGITUDE :	Degrees: -122	Minutes: 25	Seconds: 28.30
LOCATION ON PROPERTY: [e.g., point of release or center of parcel]		Center of Parcel		
COLLECTION METHOD: [e.g., GPS or address matching]		Google Earth		
COLLECTION SOURCE: [i.e., map scale]		Google Earth		
HORIZONTAL DATUM: [i.e., base reference for coordinate system]				
ACCURACY LEVEL: [i.e., +/- feet or meters]				

Legal Descriptions.

TRS DATA:	Township: 20N	3E	9	Quarter-Quarter: NE-NE
TAX PARCEL #(s):	2074280010			

Part 2 - DESCRIPTION OF THE SITE continued

C. Identification of Properties affected by the Releases (Affected Properties).

An "affected property" is a property affected by the release of hazardous substances on the source property. For example, petroleum released from a leaking UST on one property (source property) may migrate through the soil or ground water onto an adjacent property (affected property).

Do any of the releases affect any properties adjacent to the source property?

- ☐ Yes *If you answered "YES," then please identify below each property that you know has been affected by the releases on the source property. If you need to identify additional properties, please attach additional pages.*
- ☐ No *If you answered "NO," then skip to the next question.*
- ☒ Unknown *If you answered "UNKNOWN," then skip to the next question.*

1.	Address:
	Tax Parcel(s):
2.	Address:
	Tax Parcel(s):
3.	Address:
	Tax Parcel(s):
4.	Address:
	Tax Parcel(s):

D. Identification of Public Right-of-Ways affected by the Releases.

Do any of the releases affect any public right-of-ways (e.g., streets)?

- ☐ Yes ☐ No ☒ Unknown

If you answered "YES" above, please specify below. Otherwise, skip to the next question.

Attach additional pages if necessary.

E. Extent of the Site.

What is the approximate areal extent of the Site? Please check only one.

- ☒ < 5,000 square feet
- ☐ > 5,000 square feet, but < 1 acre
- ☐ > 1 acre, but < 10 acres
- ☐ > 10 acres
- ☐ Unknown

Part 2 - DESCRIPTION OF THE SITE continued

F. Description of Release(s) at the Site.

Source of Release(s).

What are the source(s) of the release(s) at the Site? Please check all that apply.

- ☒ Point source (e.g., leaking tank)
- ☐ Non-point source (e.g., contaminated soil used as fill)
- ☐ Area-wide lead and arsenic soil contamination (see questions below)
- ☐ Other – please specify: _____
- ☐ Unknown

To the extent known, please describe the source(s) of the release(s):

Leaking Underground Storage Tanks

Attach additional pages if necessary.

Circumstances of Release(s). To the extent known, please describe below the circumstances of the release(s).

Unknown

Attach additional pages if necessary.

Circumstances of Release Discovery. To the extent known, please describe below the circumstances of the discovery of the release(s).

Found during removal of the USTs

Attach additional pages if necessary.

Part 2 - DESCRIPTION OF THE SITE continued

Area-Wide Soil Contamination. For information about the area-wide soil contamination project, please refer to the following web site: www.ecy.wa.gov/programs/tcp/area_wide/area_wide_hp.html. For information about the Tacoma Smelter Plume (TSP) and the associated Management Plan, please refer to the following web site: www.ecy.wa.gov/programs/tcp/sites/tacoma_smelter/ts_hp.htm.

Is the Site located within an area affected by smelter emissions, such as the TSP area?

☒ Yes ☐ No ☐ Unknown

To determine whether your Site is located within the TSP area, please refer to the map on the TSP web site identified above.

Is the Site located on a former apple or pear orchard in operation prior to 1947?

☐ Yes ☒ No ☐ Unknown

Is the Site impacted by area-wide arsenic and/or lead soil contamination?

☒ Yes ☐ No ☐ Unknown

G. Nature and Extent of Hazardous Substances Released at the Site. The following questions refer to conditions after the release, but prior to any cleanup, of the hazardous substances at the Site.

Hazardous Substances and Affected Media. To the extent known, please identify in the following table the hazardous substances released at the Site and the media (e.g., soil) impacted by those substances. Use the codes at the bottom of the table.

HAZARDOUS SUBSTANCE	AFFECTED MEDIA				
	SOIL	GROUND WATER	SURFACE WATER	SEDIMENT	AIR
EXAMPLE: Benzene	C	S	N/A	N/A	B
Gasoline	C	C			
Benzene	O	O			
Ethylbenzene	C	O			
Toluene	B	B			
Xylenes	C	O			
Total Lead	B	C			
Dissolved Lead		O			
Total Arsenic	B	C			
Dissolved Arsenic		N/A			
Total Chromium	B	C			
Dissolved Chromium		N/A			

When identifying the affected media in the table above, please use one of the following codes:

- C = confirmed, above cleanup level
- B = confirmed, below cleanup level
- O = confirmed, not present
- S = suspected
- N/A = not suspected
- U = unknown

Part 2 - DESCRIPTION OF THE SITE continued

Drinking Water.

Does any of the contamination at the Site pose a threat or potential threat to an existing drinking water source (ground water or surface water)?

☐ Yes ☒ No ☐ Unknown

If you answered "YES" above, what type of drinking water system is threatened by the contamination? Please check all that apply.

☐ Single Family
☐ Public Drinking Water Supply

If you checked "Public Drinking Water Supply" above, is the contamination located within or upstream of a 10-year wellhead protection area?

☐ Yes ☐ No ☐ Unknown

To help answer the above question or if you answered "Yes" to that question, then go to <https://fortress.wa.gov/doh/eh/dw/swap/maps/> or call (800) 521-0323.

Indoor Air.

Are contaminant odors present in any buildings, manholes, or other confined spaces?

☐ Yes ☒ No ☐ Unknown

If you answered "YES" above, please specify:

Attach additional pages if necessary.

H. Maps of the Site.

Please attach to this application map(s) that identify, to the extent known, the following:

- ☐ The location of the site.
- ☐ The properties, and any public right-of ways, affected by the site.
- ☐ The source(s) of the release(s) at the site.
- ☐ The nature and extent of contamination at the site.
- ☐ Any human or ecological receptors impacted by the site (e.g., drinking water wells).
- ☐ The physical characteristics of the site (e.g., property lines, building and road outlines, surface water bodies, water supply wells, ground water flow direction, and utility right-of-ways).
- ☐ The properties adjacent to the site and the uses of those properties (e.g., gas station, dry cleaner, residential).

Part 3 – OPERATIONAL HISTORY OF THE SITE

A. Current Use of Source Property. *Note that the following questions refer only to the Source Property, not other properties affected by the Site. Answer these questions to the best of your ability.*

Current Property Owners. To the extent known, please identify below the current owner of the source property.

Name: _____ Title: _____

Organization: Landmark Tacoma I/Landmark Tacoma II LLC

Mailing address: 406 E 4TH ST

City: Winston-Salem State: NC Zip code: 27101-4112

Phone: _____

Current Business Owner (Operator). To the extent known, please identify below the current owner of the business located on the source property.

Name: _____ Title: _____

Organization: Diamond Parking

Mailing address: _____

City: _____ State: _____ Zip code: _____

Phone: _____

Current Business Operations. To the extent known, please identify below the current operations of the business located on the source property.

What is the current land use of the source property? Please check all that apply.

- | | |
|---|---|
| <input type="checkbox"/> Residential | <input type="checkbox"/> School |
| <input checked="" type="checkbox"/> Commercial | <input type="checkbox"/> Childcare facility |
| <input type="checkbox"/> Industrial | <input type="checkbox"/> Park |
| <input type="checkbox"/> Agricultural | |
| <input type="checkbox"/> Other – please specify: <u>Parking lot</u> | |

Is there a currently operational commercial or industrial business located on the source property?

- ☒ Yes ☐ No ☐ Unknown

If you answered "YES" above, please identify in the following table the current business operations using the North American Industry Classification System (NAICS) codes and specifying the operations.

NAICS CODE	DESCRIPTION OF OPERATIONS
EX: 447110	Gasoline Stations with Convenience Stores
812930	Parking Lot

Part 3 – OPERATIONAL HISTORY OF THE SITE continued

Is there a solid waste handling facility located on the Source Property?

☐ Yes ☒ No ☐ Unknown

If you answered "YES" above, please identify:

Attach additional pages if necessary.

Is there a dangerous waste treatment, storage, or disposal facility located on the Source Property?

☐ Yes ☒ No ☐ Unknown

If you answered "YES" above, please identify:

Attach additional pages if necessary.

Regulation of Current Business Operations.

Does the business operate under any federal, state, or local permits related to the release of hazardous substances into the environment (e.g., NPDES permit)?

☐ Yes ☒ No ☐ Unknown

If you answered "YES" above, please specify the regulated operation, the name of the permit, and the date it was issued in the table below.

REGULATED OPERATION	PERMIT	DATE ISSUED
EX: Wastewater discharge	NPDES permit	02/02/02

Has a state or federal notice of enforcement action (e.g., notice of violation) ever been issued related to the release of hazardous substances at the business?

☐ Yes ☒ No ☐ Unknown

If you answered "yes" above, please specify (notice and year issued): _____

Have business operations resulted in any other spills or other unpermitted releases on the source property?

☐ Yes ☐ No ☒ Unknown

If you answered "YES" above, please specify in the table below.

RELEASE	DATE OF RELEASE	STATUS OF RELEASE

Part 3 – OPERATIONAL HISTORY OF THE SITE continued

Storage Tank Information. In table below, please identify all above ground storage tanks (AST) and underground storage tanks (UST) that have been used for storing hazardous substances on the source property, irrespective of whether the tanks are still in use or in place. *If you are unable to provide answers to specific questions regarding a tank, please enter "U" for unknown.*

IDENTIFICATION				STATUS AND CLOSURE				RELEASES	
Hazardous Substance	Type (AST/UST)	Size (Gallons)	TANK ID	DATE INSTALL	IN USE (Y/N)	DATE CLOSED	CLOSURE METHOD (*)	PAST (Y/N)	CURRENT (Y/N)
EX: Diesel	UST	10,000	4	02/87	N	05/98	Removed	Y	N
U	UST	550	U	U	N	07/98	removed	U	N
U	UST	1,000	U	U	N	07/98	removed	U	N
U		2,000	U	U	N	07/98	Removed	U	N

(*) Options = Removed or Closed in Place

B. Past Use of Source Property. Note that the following questions refer only to the Source Property, not other properties affected by the Site. Please answer these questions to the best of your ability.

Past Property Owners. To the extent known, please identify below the owner of the source property at the time the release occurred.

Name:		Title:	
Organization:			
Mailing address:			
City:		State:	Zip code:
Phone:	Fax:	E-mail:	

Past Business Owners (Operators). To the extent known, please identify below the owner of the business (operator) at the time the release occurred.

Name:		Title:	
Organization:			
Mailing address:			
City:		State:	Zip code:
Phone:	Fax:	E-mail:	

Identification of Past Business Operations. Please identify in the following table the past operations of businesses located on the source property using the North American Industry Classification System (NAICS) codes and/or specifying the operations.

NAICS CODE	DESCRIPTION OF OPERATIONS
EX: 447110	Gasoline Stations with Convenience Stores
447190	Gasoline Service Station

Part 3 – OPERATIONAL HISTORY OF THE SITE continued

C. Future Use of Source and Affected Properties. The following questions refer to both source and affected properties. Please answer these questions to the best of your ability.

Will any ownership interest in the source or affected properties be conveyed prior to, or upon completion of, the cleanup?

☐ Yes ☐ No ☒ Unknown

If you answered "YES" above, please specify:

Attach additional pages if necessary.

Will any of the source or affected properties, or portions of those properties, be redeveloped as part of the cleanup?

☐ Yes ☐ No ☒ Unknown

If you answered "YES" above, please specify the proposed land use below. Please check all that apply.

- | | |
|--|---|
| <input type="checkbox"/> Residential | <input type="checkbox"/> School |
| <input type="checkbox"/> Commercial | <input type="checkbox"/> Childcare facility |
| <input type="checkbox"/> Industrial | <input type="checkbox"/> Park |
| <input type="checkbox"/> Agricultural | |
| <input type="checkbox"/> Other – please specify: | |

Please also specify the activities proposed for that land use:

Attach additional pages if necessary.

Part 4 – ADMINISTRATIVE HISTORY OF THE SITE

Have you previously reported the release(s) of hazardous substances at the Site to Ecology?

☒ Yes – If so, when? _____ ☐ No ☐ Unknown

Has the cleanup of the Site, or any portion of the Site, ever been managed under the VCP?

☐ Yes – If so, please specify the VCP Project Number: _____
☒ No
☐ Unknown

Has the cleanup of the Site, or any portion of the Site, ever been managed under a federal or state order or decree?

☐ Yes – If so, please specify the type and docket number: _____
☒ No
☐ Unknown

Part 5 – DESCRIPTION OF INDEPENDENT REMEDIAL ACTIONS AT THE SITE

A. Scope of Remedial Actions.

Do you plan to characterize and address all of the contamination at the Site, including any contamination located on affected adjacent properties, as part of the VCP project?

☒ Yes ☐ No ☐ Unknown

If you answered "NO" above, please describe below the scope of the VCP project, including the contamination (properties, portions of a property, media and/or hazardous substances) that you DO NOT plan on characterizing and/or addressing as part of the VCP project. Please include additional pages if necessary.

Attach additional pages if necessary.

Part 5 – DESCRIPTION OF INDEPENDENT REMEDIAL ACTIONS AT THE SITE continued

B. Status of Remedial Actions.

What is the current status of remedial actions at the site? Please check all that apply in the table below.

REMEDIAL ACTION	PLANNED	ONGOING	COMPLETED	NOT APPLICABLE
INITIAL RESPONSE (UST ONLY)			X	
INTERIM ACTION			X	
REMEDIAL INVESTIGATION		X		
FEASIBILITY STUDY	X			
CLEANUP ACTION	X			

C. Documentation of Remedial Actions.

Please list in the table below all known remedial action plans or reports produced for the site, including:

- The title of the plan or report,
- The author (e.g. consulting firm) of the plan or report,
- The date the plan or report was produced,
- Whether the plan or report has been submitted to Ecology,
- The date the plan or report was submitted to Ecology.

EXECUTIVE SUMMARY

Environmental Management Services (EMS) performed a Subsurface Investigation at 725 E. 25th Street, Tacoma, Washington, Pierce County Parcel Number 2074280010 (the site). The purpose of the investigation was to further assess and delineate on-site subsurface soil and groundwater conditions related to historic site use as a fuel service station. The site is currently used as a public parking lot operated by Diamond Parking.

On September 12, 2006, EMS advanced a four soil borings (denoted as B1 to B4), utilizing direct push sampling techniques and collected five soil and four ground water samples for subsequent laboratory analysis.

Select soil and ground water samples were analyzed by Friedman & Bruya, Inc., a Washington State Accredited laboratory for the presence of benzene, toluene, ethylbenzene and total xylenes (BTEX), and for gasoline-, diesel- and heavy-oil range petroleum hydrocarbons. Selected samples were also analyzed for the presence of volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), and metals (arsenic cadmium, chromium, lead and mercury).

Analytical results indicated that gasoline-range hydrocarbons were detected at concentrations exceeding the Washington State Department of Ecology Model Toxics Control Act Method A (MTCA-A) cleanup levels in soil samples collected from boring B4. The ground water sample collected from B4 contained diesel- and oil-range hydrocarbons concentrations exceeding their respective cleanup levels. Groundwater samples collected from borings B1, B3 and B4 contained lead at concentrations exceeding the cleanup level of 15 micrograms per liter and groundwater samples from Boring B3 were reported containing chromium at 52.2 ug/L slightly above the MTCA-A cleanup level of 50 ug/L.

Laboratory results for the remaining soil and ground water samples indicated that concentrations of the target analytes either were not detected or were detected at concentrations less than respective cleanup levels.

Based on the results of our soil and ground water investigation at the site, it appears that soil and ground water in the area of boring B4 contains concentrations of diesel- and oil-range hydrocarbons at concentrations exceeding current MTCA A cleanup levels.

Lead contamination detected in ground water samples from borings B1, B3 and B4 may be related to historic on-site practices (leaded gasoline or lead batteries) or historic industrial activities (Asarco Smelter) in the area. It is also possible that the lead detected in the ground water samples is naturally occurring.

1.0 INTRODUCTION

Environmental Management Services, LLC, (EMS) is pleased to provide this Subsurface Investigation report for the property located at 725 E. 25th Street Tacoma, Washington. The objective of this investigation was to collect soil and groundwater samples from areas near a former auto service station and former underground storage tank location.

A Phase I Environmental Site Assessment was conducted in 1998 by Creative Environmental Technologies, Inc. (CETI). In their report, CETI identified what appeared to be a fuel service station in the northwest portion of the property, during the years between 1939 and 1955, CETI completed a geophysical investigation identifying three underground storage tanks (USTs). Two gasoline USTs and one diesel UST were subsequently removed from the site and decommissioned in 1998. Following UST closure activities, approximately 43 tons of petroleum-contaminated soil was excavated and transported off-site for disposal.

Following a review of the UST closure report, Ecology determined that additional work in the vicinity of the former fuel station was required. In their May 18, 2006 letter, Ecology requested that additional investigation activities be conducted to evaluate the possible presence of petroleum hydrocarbons and other fuel-related compounds in soil and ground water.

Also provided EMS by the Spencer Law Firm was information related to an area approximately 200 feet southeast of the former services station that is know to be impacted with diesel extended range petroleum hydrocarbons in both soil and groundwater. According to the Spencer Law Firm, the building located approximately 200 feet southeast of the former services station is currently being monitored following a soil remediation project in 2000. EMS was told that diesel and heavy oil range hydrocarbon impacted soil and groundwater remain under the building.

1.1 Scope of Services

EMS conducted the following tasks in general accordance with our June 20, 2006 proposal:

1. Pre-Sampling Activities;
2. Public and private utility location;
3. Preparation of site-specific Health and Safety Plan;
4. Completed site figures identifying sampling locations;
5. Subsurface sampling using direct push sampling techniques in areas of concern;
6. Completed chemical analysis of site-specific contaminants of concern on selected samples; and
7. Completed this sampling report detailing sampling activities and laboratory findings.

1.2 Health & Safety

A site-specific Health and Safety Plan (HASP) was prepared in accordance with Chapter 296-62 of the Washington Administrative Code and 29 CFR 1910.120 (Code of Federal Regulations). The HASP identified potential physical and chemical hazards and specified personal protection and safety monitoring requirements. Site health and safety meetings were conducted during fieldwork at the beginning of the project to review aspects of the HASP, and to provide an opportunity for EMS site workers and contractor personnel to discuss health and safety issues or concerns. On-site EMS personnel associated with the field activities were required to be familiar with and comply with provisions put forth in the HASP. Subcontractors on-site were required to have their own HASP that identified potential physical and chemical hazards associated with their own work activities.

1.3 Utility Location Identification

Prior to implementing subsurface sampling activities at the site, EMS notified the public underground utilities alert network of intrusive activities. The service contacted appropriate agencies or companies with underground utilities in the area. These agencies then marked the location of their utilities along the right-of-ways and easements of the property.

A private utility locate of the site was completed by Locate Inc prior to implementing subsurface sampling activities. All borings were hand cleared to 30 inches bgs to ensure no underground utilities were encountered during drilling.

2.0 SITE AND VICINITY CHARACTERISTICS

The site is currently paved with asphalt and utilized as a parking lot for Diamond Parking Services. Puyallup Avenue borders the site to the north, G Street borders the site to the west, a commercial building, part of the same property, borders the site to the south and additional asphalt parking and a coffee stand border the site to the east. The location of the site is shown relative to surrounding physical features in the Vicinity Map, Figure 1 and Figure 2. The general layout of the site is shown in the site plan, Figure 3.

2.1 Surface Topography/Hydrology

The site is located at an elevation of approximately 20 feet above mean sea level. The property is relatively flat, sloping slightly towards the north. Surface water is directed into an on site storm water conveyance system discharging offsite into the City of Tacoma Storm water system.

2.2 Soils, Geology and Groundwater Hydrology

Native soils in the area consist of laterally discontinuous layers of brown clay and brown and grey sand with silt,

Ground water was encountered at depths between approximately 8 and 10 feet below ground surface. The ground water appears to occur under unconfined conditions and is inferred to flow to the north, toward Commencement Bay.

3.0 FIELD INVESTIGATION ACTIVITIES AND OBSERVATIONS

Four direct push borings (B1 to B4) were completed on September 12, 2006 at selected locations on the property (Figure 3). The boring locations were chosen based on the locations of the former UST excavation and the former service station and pump islands. The boring locations are shown relative to site features in the Site Plan, Figure 3.

3.2 Soil and Groundwater Sampling Activities

The borings were advanced using direct push drilling techniques by North West Probe, a Washington State licensed drilling company. Borings B1, B2, B3, and B4 were advanced to approximately 12 feet bgs..

At each sampling location soil samples were collected using a 2-inch diameter, 4-foot long stainless steel sampler fitted with acetate liners. The sampler was driven into the soil in four-foot increments. Upon retrieval, the sampler was opened and the retained soils were visually observed, and logged using the Unified Soil Classification System. Soil descriptions and field screening results were recorded on the boring logs provided in Attachment B.

At selected depths, soil samples were collected and placed into clean, laboratory provided sample jars, which were sealed, labeled, placed into an ice to preserve the integrity of the sampling pending delivery to the analytical laboratory. Chain of custody forms were completed in the field and accompanied the samples to the laboratory.

Ground water samples were collected from each boring by placing clean, 0.75-inch diameter PVC casing and slotted well screen in to the borehole. Ground water was purged from the casing using a low flow peristaltic pump and clean, disposable tubing until the produced water was clear and relatively clean of suspended sediment. Once purging was complete, water samples were collected using the peristaltic pump into clean, laboratory supplied containers appropriate for the requested analyses. The containers were then sealed, labeled, placed into an ice chest containing ice pending delivery to the analytical laboratory. Chain of custody forms were completed in the field and accompanied the samples to the laboratory.

After collecting the groundwater samples, the PVC casing was removed from the boring, and the hole was filled with bentonite and capped with asphalt .

3.3 Laboratory Analysis & Results

Following sampling activities, samples were submitted to Friedman & Bruya, Inc. a Washington State Department of Ecology accredited laboratory.

Select soil and groundwater samples collected from borings B1 through B4 were analyzed for volatile aromatic hydrocarbons (BTEX) using EPA Method 8021B, for gasoline-range hydrocarbons using Northwest Method NWTPH-Gx, and for diesel- and oil-range hydrocarbons using Northwest Method NWTPH-Dx/Dx extended. Selected soil and ground water sample collected from each boring were also analyzed for volatile organic compounds (VOCs) using EPA Method 8021B, polycyclic aromatic hydrocarbons (PAHs) using EPA Method 8021B, polychlorinated biphenyls (PCBs) using EPA Method 8021B, and for metals (arsenic, cadmium, chromium, lead and mercury) using EPA 7000 series methodology.

Laboratory results indicate that gasoline-range hydrocarbons were detected in the soil samples collected from boring B4 at depths of 7 and 9 feet at concentrations of 200 micrograms per gram ($\mu\text{g/g}$) for both samples. This concentration exceeds Ecology's MTCA Method A cleanup level of 100 for gasoline-range hydrocarbons. Gasoline-range hydrocarbons were not detected in any of the other soil samples at concentrations exceeding 100 $\mu\text{g/g}$.

Diesel- and oil-range hydrocarbons PAHs and PCBs either were not detected, or were detected at concentrations less than the respective MTCA Method A cleanup levels in any of the analyzed soil samples. Similarly, metals (arsenic, cadmium, chromium, lead and mercury) either were not detected, or were detected at concentrations less than their respective cleanup levels.

The ground water sample collected from boring B4 contained diesel- and oil-range hydrocarbons at concentrations of 1,700 and 8,600 micrograms per liter ($\mu\text{g/L}$) respectively. The Ecology MTCA Method A cleanup level for these compounds is 1,000 $\mu\text{g/L}$. Gasoline-, diesel- and oil-range hydrocarbons either were not detected, or were detected at concentrations less than their respective MTCA Method A cleanup levels in the remaining ground water samples.

Lead was detected in ground water samples collected from borings B1, B3 and B4 at concentrations exceeding the Ecology MTCA Method A cleanup level of 15 $\mu\text{g/L}$. Chromium was also detected in the water sample from boring B3 at a concentration of 52.8 $\mu\text{g/L}$ which exceeds the Ecology MTCA Method A cleanup level of 50 $\mu\text{g/L}$. The remaining metals either were not detected, or were detected at concentrations less than their respective cleanup levels in the remaining ground water samples.

The chemical analytical results for soil and ground water samples are summarized in Tables 1 through 10. A copy of the laboratory report is included in Attachment A.

4.0 CONCLUSIONS

Analytical results indicated that gasoline and extended range petroleum hydrocarbons were detected at concentrations exceeding the Washington State Department of Ecology Model Toxics Control Act Method A cleanup levels in soil samples collected from boring B4. The ground water sample collected from B4 contained oil-range hydrocarbons concentrations exceeding the MTCA-A Cleanup level of 500 ug/L. Groundwater samples collected from borings B1, B3 and B4 also contained lead at concentrations exceeding the cleanup level of 15 micrograms per liter.

Laboratory results for the remaining soil and ground water samples indicated that concentrations of the target analytes either were not detected or were detected at concentrations less than respective cleanup levels.

Soil samples collected from Boring B4 were reported contain gasoline range hydrocarbons exceeding MTCA Method A cleanup level of 100 ug/g. Water samples collected from boring B4 were reported below the MTCA A Cleanup criteria for gasoline. Select volatile aromatic hydrocarbons, benzene, toluene, ethylbenzene and total xylenes were reported below MTCA-A cleanup levels for both soil and groundwater. The gasoline range hydrocarbon soil contamination is likely due to historic activities on the property.

Ground water in the area of boring B4 contains concentrations of diesel-(1700 ug/g) and oil-(8600 ug/g) range hydrocarbons at concentrations exceeding MTCA-A cleanup levels. The source of the impacted groundwater is not know, however based on the analytical results reporting diesel range hydrocarbon well below the MTCA-A cleanup level and extended oil range hydrocarbons below the laboratory reporting limits, the source may be attributed to historic site use or the know release adjacent approximately 200 feet to the southeast.

Lead contamination detected in ground water samples from borings B1, B3 and B4 may be related to historic on-site practices (leaded gasoline or lead batteries) or historic industrial activities (Asarco Smelter) in the area. It is also possible that the lead detected in the ground water samples is naturally occurring.

4.1 Recommendations

Based on the reported levels of petroleum hydrocarbons exceeding MTCA-A cleanup criteria, further delineation of the site, specifically the area near boring B4 is warranted. Lead and to a lesser degree chromium detected in groundwater should also be delineated to ascertain the horizontal extent of impact.

5.0 LIMITATIONS

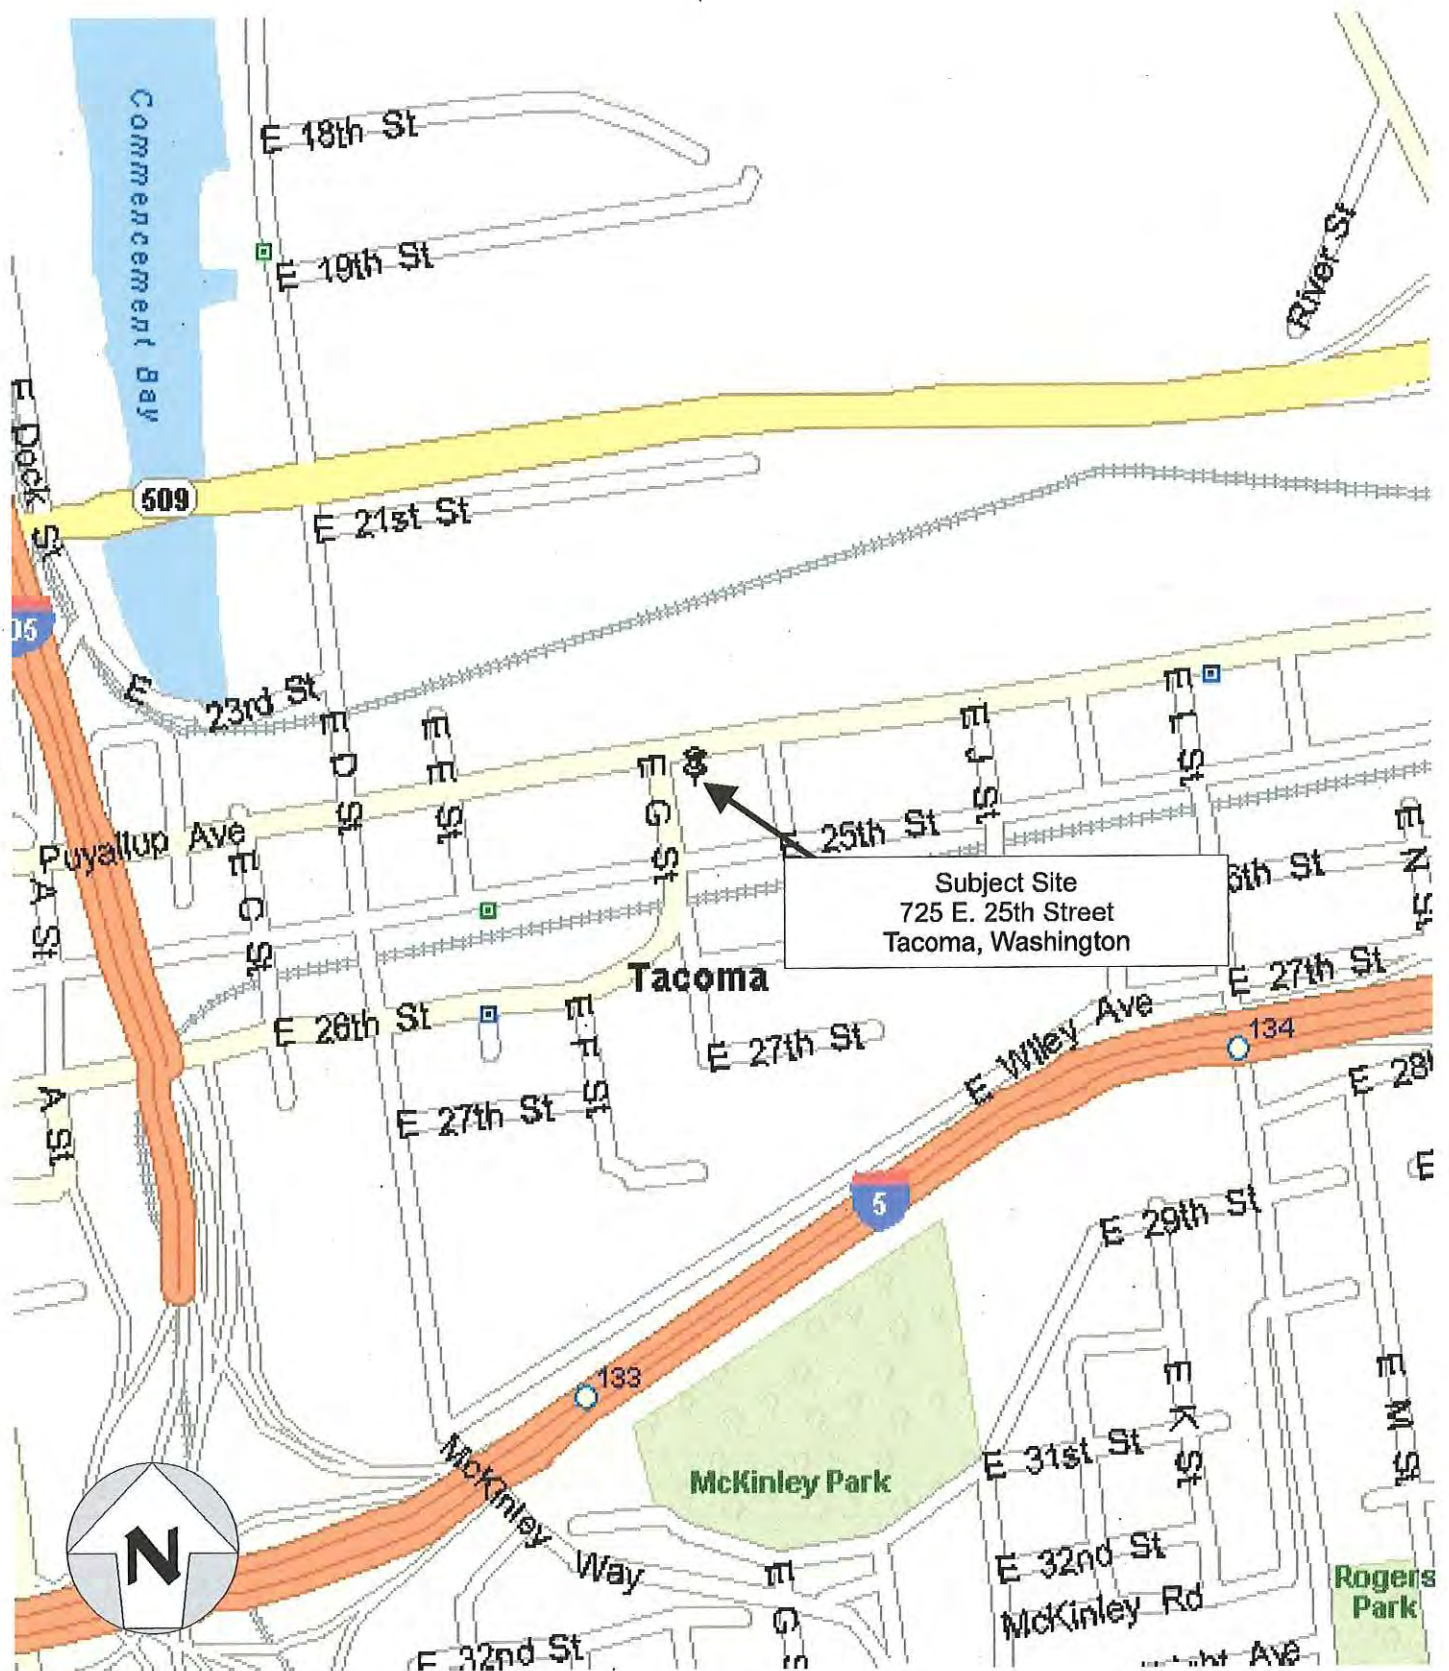

The findings and conclusions documented in this report have been prepared for the specific application to this project and have been developed in a manner consistent with that level of care and skill normally exercised by members of the environmental science profession currently practicing under similar conditions in the area. A potential always remains for the presence of unknown, unidentified, or unforeseen subsurface contamination. No warranty, expressed or implied, is made. This report is for the exclusive use of the Spencer Law Firm and Carmon Manufacturing and/or their representatives or assigns.

If new information is developed in future site work (which may include excavations, additional borings, or other studies), EMS should be contracted to re-evaluate the interpretations in this report, and to provide amendments as required.

Steve Spencer, Project Manager
Environmental Management Services, LLC
652 8th Avenue
Fox Island, WA 98333

Dear Mr. Spencer:

Included are the results from the testing of material submitted on September 12, 2006 from the Spencer Law Firm Spring Air, F&BI 609091 project. There are 63 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

B3-7-8 609091-08	<0.02	<0.02	0.02	<0.06	4	90
B3-11-12 609091-09	<0.02	<0.02	<0.02	<0.06	<2	87
B4-7-8' d 609091-11	<0.2	<0.2	0.95	1.6	200	ip
B4-8.5-9' d 609091-12	<0.2	<0.2	1.9	2.4	200	ip
Method Blank	<0.02	<0.02	<0.02	<0.06	<2	122

d - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

EMS PROFESSIONAL QUALIFICATIONS

Environmental Management Services

Environmental Management Services (EMS) is an environmental services company providing practical environmental compliance solutions to clients throughout the Northwest. EMS understands the importance of blending a variety of expertise and experience in order to provide our clients the most effective support in addressing their projects needs. Our professionals combine a high level of technical ability with a broad understanding of the overall regulatory compliance requirements.

As an environmental services and consulting company, EMS is obligated to maintain a broad understanding of the most current regulatory compliance requirements, local and state permitting requirements and our regions environmental advocacy group's positions. EMS provides our clients the services they require by offering non-biased, practical, realistic solutions while maintaining positive relations with the regulatory community. EMS associates have completed projects including remediation design and management, facility regulatory compliance reviews, due diligence assessments, regulatory compliance training for clients throughout the northwest in all avenues of business. The diverse background of our associates complements the diverse nature of our clientele providing better understanding of our client's needs and ultimate goals for their projects.

The information in the following pages outlines our experience and capabilities in providing environmental management and consulting services.

Stephen M. Spencer, LRA, LSA **Principal Environmental Scientist**

Mr. Spencer started his career in the environmental services and construction industry in 1987. During his career, Mr. Spencer has worked on and successfully completed projects in many varied aspects of the environmental industry. During the past eight years, as a Senior Project Manager, Mr. Spencer has successfully completed jobs totaling over twenty million dollars for clients throughout the Northwest. His forte is in facility assessment, due diligence investigation, health & safety program development and remediation management. Mr. Spencer has established positive working relationships with regulatory agencies throughout the northwest, affording his clients a superior level of confidence in his approach to their specific project. The majority of Mr. Spencer's remediation projects have been completed through the Washington State Department of Ecology voluntary cleanup program and ultimately received a "No Further Action" status.

Mr. Spencer's skills as a project manager frequently result in significant savings in both time and budget to his clients. He is proficient in report writing providing a clear, concise detail of project activities including supporting documents and figures. His client's have ranged from property owners and facility operators to the regulatory agencies themselves. Mr. Spencer's overall understanding of environmental compliance

EMS PROFESSIONAL QUALIFICATIONS

requirements provides a unique perspective on assessing potential and realized environmental risk and a creative understanding of remediation technique.

William E. Halbert, LPG/LPHG/LEPG

Sr. Environmental Hydrogeologist / Engineering Geologist

Mr. Halbert has over 20 years of environmental, geological, hydrogeological and engineering geological experience with the past 16 years in Washington State. His expertise lies in the investigation and remediation of subsurface contamination of soil and ground water at various facilities including bulk plants, refineries and manufacturing plants.

Mr. Halbert is registered and licensed with the State of Washington as a professional geologist, hydrogeologist, and engineering geologist. His affiliations with several organizations including the Association of Groundwater Scientists and Engineers, Association of Engineering Geologists and the Geological Society of America provide his clients the security that their specific regulatory compliance issue will be managed correctly meeting the most current compliance requirements.

Jason G. Cook, RG, MS

Licensed Geologist / Environmental Scientist

Jason G. Cook is a Registered Geologist (#G1990) in Oregon with pending reciprocity in Washington, Illinois and Florida.

Mr. Cook's educational background is concentrated in the disciplines of geology and geography, at both the undergraduate and graduate levels, focusing in environmental and engineering geology. Mr. Cook has been working in the environmental industry for approximately six years primarily in the Seattle and Portland markets, with experience ranging from *due diligence*, geotechnical and environmental fieldwork to project management and client-relations/marketing, creating a unique, diverse and multiple skills set.

As Project Manager for a national environmental consulting firm, the design, coordination, implementation and management of large-scale environmental projects, (i.e. gasoline station/UST decommissioning and subsequent monitoring) was often implemented, specifically requiring the ability to work with a diverse, multi-disciplinary work group, ranging from engineers to excavators, assuring that the project meets budget/time restraints and achieving client expectations, while adhering to a stringent health and safety protocol as well as any applicable local, state and federal environmental regulatory standards/requirements.

EMS PROFESSIONAL QUALIFICATIONS

Mr. Cook is well versed in the areas of *due diligence* and field activities, including conducting Phase I and Phase II Environmental Site Assessments, wetland assessments/delineations, asbestos surveys, soil and groundwater sampling, well installation, soil compaction analysis, stormwater sampling and permitting, GIS map construction, statistical analysis and presentation, spreadsheet construction, soil classification and geotechnical laboratory analysis.

Mary Loftfield, MS, LSA Environmental Scientist

Mary Loftfield is a soil scientist trained in the assessment, research and design, and field implementation of bioremediation solutions for site clean-up. She has had five years of experience designing supervising remediation projects in the Pacific Northwest. Ms. Loftfield also has extensive experienced in laboratory and field techniques for the evaluation and analysis of water quality, soil and plant chemistry, and microbiology. She specializes in soil and plant remediation (phytoremediation).

Working through the voluntary clean up program Ms. Loftfield has successfully used bioremediation strategies she developed and tested in the laboratory and greenhouse in the field. She successfully used soil amendments to sequester and degrade pollutants in the soil, preventing them from harming human health and the environment. Research into phytoremediation (plant remediation) resulted in field projects using trees to take up and degrade chlorinated solvents and using rhizosphere (rooting zone) remediation to degrade hydrocarbons. Ms. Loftfield's extensive understanding of environmental chemistry and risk assessment as well as her knowledge of passive remediation strategies offer another approach site investigations and cleanups under the Model Toxics Control Act (MTCA) and corrective Action under RCRA/Dangerous Waste.

Collette Foley, LBI Environmental Scientist / Geologist

Ms. Foley received here Bachelors degree in Geology and Environmental Science in 2003 form Pacific Lutheran University. Ms. Foley has one year of experience as a HAZMAT instructor including 40-hour and 24-hour HAZWOPER certification, 8-hour HAZWOPER refresher, 30 hour OSHA Compliance instruction and confined spaces certification. Ms. Foley has two years experience as a field geologist / hydrogeologist conducting Phase I due diligence investigations, sub-surface investigations and hydrogeologic regional characterization.

Ms. Foley's current position is as Project Hydrogeologist / Environmental Scientist. Ms. Foley performs a variety of field activities associated with drilling and installing monitoring wells, completing subsurface investigation and Phase I Environmental Site Assessments.

Mr. Joe Carman
c/o Spencer Law Firm
1326 Tacoma Avenue South
Tacoma, Washington 98402

Re: **Remedial Investigation Workplan**

Spring Air Northwest
725 East 25th Street
Tacoma, Washington

Mr. Carman:

EcoCon, Inc. (ECI) appreciates the opportunity to submit this Remedial Investigation Workplan for the property located at 725 East 25th Street in Tacoma, Washington (the Property). It is our understanding that the Washington State Department of Ecology (Ecology) recently issued a letter titled "Request for Information on Status of VCP Project", dated April 14, 2015 (Attached). This letter specifically requests the following information:

- Cleanup Status Report;
- Any Reports Documenting the Cleanup; and,
- Plan and Schedule for Completing the Cleanup.

Per your request, ECI completed a review of all available records relating to environmental work completed the Property and is prepared to produce a Cleanup Status Report and provide any available environmental reports not already submitted to Ecology. ECI's review, as summarized in this proposal, also identified the first steps necessary to communicate a plan and schedule for completing the cleanup.

In order to evaluate cleanup alternatives, Ecology requires that the "Site" is fully defined. The Site is defined by Ecology as the full vertical and lateral extent of contamination resulting from a release of hazardous substances. In this instance, the impacts to soil and groundwater from a release of petroleum hydrocarbons associated with the former fueling station on the northwest corner of the Property. As described below, Ecology has determined that this Site is not currently defined.

Site Location and Description

The Property consist of a single tax parcel (Pierce County #2075270010), currently improved with a manufacturing building and parking lot in the upland edge of the industrial Tacoma Tideflats area. Land use in the vicinity includes rail yards, a transit station, train station, and industrial and commercial businesses.

Historical use of the Property, on the portion where the current 1891-vintage building exists, has included manufacturing (furniture and mattress), a warehouse company, and a heating and boiling company. The area of the Property currently utilized for parking was developed by at least 1896, and has included lumber/wood storage, part of a sawmill and engine shop, a fuel and service station, and a restaurant.

Previous Environmental Investigations

Previous research has uncovered the following recognized environmental conditions (RECs) associated with the Site: three underground storage tanks (USTs) associated with the gasoline service station in the northwest corner of the Site, a storage area for varnish and oil in the vicinity of the current parking garage, and a UST that fueled the building's boiler.

Heating Oil UST

Environmental investigative and remedial activities began in 1986, with the reporting of one UST on the Property, associated with the boiler at the manufacturing facility. This approximately 7,000-gallon diesel UST is located under the current building and was closed in place in 1989 by Don Golden Company. One soil sample was collected from the UST area and analyzed for TPH. The soil sample contained a reported TPH concentration of 53.2 mg/kg, below the Model Toxics Control Act (MTCA) Cleanup Level of 2,000 mg/kg.

A Level I Site Assessment was later conducted by Creative Environmental Technologies, Inc. (CETI). Three soil borings were advanced in the vicinity of the former boiler, which confirmed significant free-phase hydrocarbon contamination in two of the three borings.

In August 1998, CETI conducted a Level II site assessment to further investigate environmental concerns identified in the Level I assessment. Thirty three borings were drilled in the boiler UST area north of the building, one test pit adjacent to the factory building (the exact disposition is unknown), one temporary monitoring well, and three permanent monitoring wells were installed (MW3 through MW5). Selected soil samples were analyzed for DRO, ORO, chlorinated solvents, PCBs, total metals, volatile organic compounds (VOCs), and polycyclic aromatic hydrocarbons (PAHs). Visible free product was encountered in several borings (B1, B4, B5, B6, B10, B17, B19, and B22) and a lens of diesel/heating oil was identified between five and eight feet bgs. The concentration of DRO in B1, which was used as a temporary monitoring well, exceeded the MTCA Method A cleanup level at 41,500 µg/L. Additional analysis of the soil sample from B31 included EPH/VPH and PAH analysis, which confirmed diesel as the predominant hydrocarbon at the Site. B31 contained concentrations of DRO in excess of MTCA Method A cleanup levels, and cPAH concentrations in slight excess of the Method B cleanup levels for benzo[a]anthracene, chrysene, and benzo[a]pyrene.

The Site was entered into the Washington State Department of Ecology (Ecology) Voluntary Cleanup Program (VCP) in September 1998, with a request for opinion on a proposed remedial action. Ecology approved CETI's November 1998 Cleanup Action Plan (CAP), which utilized the remedial alternative of removing contaminated soil outside the building and using a pump and treat system inside the building,

with possible bioventing later on. Quarterly groundwater monitoring was approved for five years (monthly for the first six months).

Following the Level II site assessment, CETI excavated the diesel-contaminated soil from the parking lot and up to within several feet of the north and east walls of the building. A total of 2,804 tons of contaminated soil was transported offsite for disposal. Diesel-contaminated soil remained under the building, so an impermeable geomembrane was installed vertically between the contaminated soil in place near the building and the clean fill material. The pump and treat system outlined in the CAP was approved by Ecology and installed by CETI in 1999 to remove the remaining free-phase hydrocarbons from the Site. Six recovery wells were installed inside the building (RW1 through RW6) and two were installed outside, near the northeast corner of the building (RW7 and RW8). Approximately 100 gallons of free product were sequestered during the two years the pump and treat system was in operation. In April 2001, the system was shut off and the pumps were removed from recovery wells, due to the results of groundwater sampling and reduced amount of product recovery. Several years of groundwater monitoring was then conducted by Sound Environmental Strategies (SES), which effectively shows a stable groundwater plume which is laterally defined.

In September 2006, a prospective purchaser of the Property contracted a Phase I and II Environmental Site Assessment at the Site from Swift Creek Environmental (SCE). Piezometers were installed as part of the investigation to determine groundwater flow at the Site. SCE performed a limited subsurface investigation which included the collection of groundwater samples from existing monitoring wells (RW-2 and MW-4) on March 27, 2006, and groundwater and soil samples from recently installed temporary piezometers (MWA and MWB), boring B-3, and existing monitoring well MW-4. One soil sample was collected from B-3 (northwest of the former boiler), MWA, and MWB and analyzed for DRO, VOCs, semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and Resource Conservation and Recovery Act (RCRA) metals, including arsenic, barium, cadmium, chromium, lead, mercury, silver, and selenium. Groundwater samples were collected and analyzed for DRO, VOCs, SVOCs, PCBs, and RCRA metals. SCE concluded metals concentrations were consistent with background levels in soil. No PCBs, SVOCs, or VOCs were detected in soil. The groundwater samples collected from MWA and MWB contained concentrations of DRO and ORO in excess of the MTCA Method A Cleanup Level.

Gasoline Service Station

As part of the Level I Site Assessment conducted by CETI in 1998, a geophysical survey was conducted by Apollo Geophysics in July 1998 in the area of the former service station. The geophysical survey identified three USTs: one 550-gallon, one 1,000-gallon, and one 2,000-gallon tank. The USTs were removed by Environmental Tank Services (ETS) under the direction of CETI in July 1998. Soil impacted with concentrations of diesel-, oil-, and gasoline- range organics (DRO, ORO, and GRO) below MTCA Method A cleanup levels was encountered in the fill material of the removed gas station USTs. Confirmation soil samples from the UST basin excavation indicated concentrations of all analytes below laboratory reporting limits (non-detect) and well below MTCA Method A cleanup levels.

In an effort to further characterize the release identified in the area of the former fueling station, Environmental Management Services (EMS) advanced four borings (B1 through B4) to twelve feet bgs in

the northwest corner of the Property. Soil and groundwater samples were collected and analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), GRO, DRO, and ORO. Selected samples were also analyzed for the presence of VOCs, PAHs, PCBs, and metals (arsenic, cadmium, chromium, lead, and mercury). GRO was detected at a concentration exceeding the MTCA Method A cleanup level in soil samples collected from boring B4. Groundwater collected from B4 also contained concentrations of DRO and ORO exceeding MTCA Method A cleanup levels. Groundwater collected from B1, B3, and B4 contained concentrations of lead in excess of the MTCA Method A Cleanup Level of 15 ug/L and the groundwater sample collected from B3 contained a concentrations of chromium exceeding the MTCA Method A cleanup level.

On June 15, 2007 Ecology provided an opinion on the completed remedial actions for the Site, which concluded that further characterization was necessary to adequately define the contamination associated with the former service station. Specifically:

- Petroleum hydrocarbon contamination in soil;
- Metals in soil;
- Petroleum hydrocarbons in groundwater;
- Volatile organic compounds in groundwater; and,
- Metals in groundwater.

Ecology suggested that groundwater monitoring wells should be installed in order to define the extent of this contamination. Ecology's opinion letter is attached to this proposal.

PROPOSED SCOPE OF WORK

Focused Subsurface Investigation

Included in this FSI will be the survey and identification of subsurface utilities, and the collection and analysis of soil and groundwater samples from multiple locations in the area of the former service station. ECI also proposes to collect groundwater samples from the existing well network originally installed to define the nature and extent of the DRO and ORO contamination. ECI will then compile the data acquired and complete a detailed report providing the FSI findings, opinions and recommendations.

Pre-Sampling Activities

- Public and Private utility location identification at the Site
- Preparation of Site-Specific Health and Safety Plan (HASP)

Limited Geophysical Survey

Prior to completing the sample collection portion of the project, ECI will complete a thorough non-invasive geophysical survey of the Site, using electromagnetic survey techniques. The intent of the limited geophysical survey is to locate and trace subsurface utilities and other buried equipment and "clear" each boring location.

Sample Collection

ECI will complete up to eight (8) borings using direct push sampling techniques as shown on the attached "Figure 3". Exact boring locations will be determined in the field by a qualified environmental professional based on geophysical survey data, utility locations and site observations. All drilling will be completed by a licensed driller as required in Washington Administrative Code (WAC) 173-160.

Soil will be field-screened utilizing olfactory techniques and physical observations such as soil staining and sheen presence prior to sample collection. Soil samples locations will be determined in the field by a qualified environmental professional. All soil samples will be collected in accordance with industry standard sampling techniques.

If groundwater is encountered, samples will be collected using industry standard techniques, including the use of low flow sampling equipment and disposable (single-use) polyethylene and silicon tubing.

Following collection, each discrete sample will be placed in new, laboratory provided containers and assigned unique sample identification numbers (e.g. B1-4'-022514). Volatile Organic Compounds (VOC) soil samples will be collected using the Washington State Department of Ecology (Ecology) -required Environmental Protection Agency (EPA) 5035 sampling collection method. Samples will then be placed into a container maintained at 4° Celsius until delivered to an on-site mobile laboratory.

Based on the results of the soil and groundwater samples, four of the eight soil borings will be completed as 1-inch diameter resource protection wells constructed of 5 feet of blank PVC casing, flush-threaded to approximately 10 feet of 0.010-inch slotted well screen. The depth of the slotted well screen section may vary and will be determined by a qualified environmental professional based on the observed soil groundwater interface.

ECI will collect groundwater samples from the newly installed wells in addition to those already installed on the Property. Based on the most recent groundwater sampling event conducted by SES, ECI understands there are 13 monitoring existing wells or recovery wells which can be accessed and sampled.

Groundwater samples will be collected in accordance with American Society of Testing and Materials (ASTM) *Guideline D6771-02 "Standard Practice for Low-Flow Purging and Sampling for Wells and Devices Used for Ground-Water Quality Investigations"*.

ECI field staff will follow the procedures described below when collecting groundwater samples:

- The cap from the monitoring well will be removed and the groundwater level will be allowed to equilibrate to atmospheric pressure for a minimum of 20 minutes.
- The depth to groundwater in the monitoring well will be measured relative to the top of the well casing using an electronic water-level meter.
- Each monitoring well will be purged at a low-flow rate (100 to 300 milliliters per minute) using a peristaltic pump and dedicated polyethylene tubing. Temperature, and specific conductivity will be monitored during purging using a water quality meter to determine when these parameters stabilize.

Dissolved oxygen, oxidation-reduction potential, and pH will also be measured as they are important factors for the solubilization and mobilization of metals.

Regulatory Compliance

Regulatory compliance for this project is based on the WAC 173-340 –MTCA – Revised Code of Washington (RCW) Chapter 70.105D, implemented by Ecology. Pursuant to Chapter 70.105D RCW, Ecology has established cleanup standards and requirements for the cleanup actions (MTCA).

The rules establishing these standards and requirements were developed by Ecology in consultation with the Science Advisory Board (established under the Act) and with representatives from local government, citizen, environmental, and business groups. The rules were first published in February 1991, with amendments in January 1996, February 2001, and October 2007.

Contaminants of Concern & MTCA-A Cleanup Levels

Based on previous investigations and requirements outlined in Ecology's June 15, 2007 opinion letter, the contaminants of concern (COCs) at the Site are identified as: GRO; DRO; ORO; BTEX; select metals including arsenic, chromium, lead, and mercury; and VOCs.

The concentrations of these contaminants in the samples that will be collected for this FSI will be compared to the MTCA Method-A Soil CUL for Unrestricted Land Use and the Method-A Groundwater CUL, (MTCA WAC 173-340-900, Tables 740-1 (Soil) and 720-1 (Groundwater). These cleanup levels are presented below.

Table 1: Primary Contaminants of Concern

Method-A Cleanup Levels (MTCA-A) for Soil and Groundwater (MTCA Cleanup Regulation 173-340-900: Tables 720-1 and 740-1)		
Contaminant of Concern (COCs)	Soil Cleanup Levels - mg/kg	Groundwater Cleanup Levels - µg/l
Gasoline Range Organics (GRO)	100/30 ¹	1,000/800 ²
Diesel Range Organics (DRO)	2,000	500
Oil Range Organics (ORO)	2,000	500
Benzene	0.03	5
Toluene	7	1,000
Ethylbenzene	6	700
Xylenes	9	1,000
Arsenic	20	5
Chromium VI	19	50
Chromium III	2,000	
Total Lead	250	15
Mercury	2	2
VOCs	Varies	Varies

¹ Gasoline Range Organics: Gasoline mixtures without benzene and the total of ethylbenzene, toluene and xylene are less than 1% of the gasoline mixture has a soil CUL = 100 mg/kg. All other gasoline mixtures have a soil CUL = 30 mg/kg. For groundwater, the CUL is 1,000 µg/l for gasoline mixtures without benzene and 800 µg/l for all other gasoline mixtures.

Sample Analysis

ECI expects up to 37 samples will be collected and analyzed during this primary investigation, 16 soil and 21 groundwater. Samples will be analyzed for site specific contaminants of concern outlined in Table 1. Should additional chemical analysis be warranted, ECI will provide recommendation and estimated costs for client authorization.

Analytical methodology will be consistent with Ecology and EPA criteria. All samples will be analyzed by a Washington State accredited laboratory.

Focused Subsurface Investigation Report

Following the receipt of sample analytical results ECI will prepare a focused subsurface investigation report, detailing site activities, sampling observations, and a summary of the laboratory analytical results.

Groundwater Monitoring Plan

Prior to the selection of an interim remedial action for the former gas station area, four consecutive quarters of groundwater samples will be collected from the 4 newly installed monitoring wells. Samples will be collected in accordance with American Society of Testing and Materials (ASTM) *Guideline D6771-02 "Standard Practice for Low-Flow Purging and Sampling for Wells and Devices Used for Ground-Water Quality Investigations"*, along with the monitoring procedures described above.

Samples will be delivered to an Ecology accredited laboratory and analyzed for Site specific COCs discussed above. The proposed analytical methods are presented in the table below:

Contaminant of Concern	Analytical Method
Gasoline-range Organics (GRO)	NWTPH-Gx
Diesel-range Organics (DRO)	NWTHP-Dx
Oil-range Organics (ORO)	NWTPH-Dx
Benzene	EPA Test Method 8260C
Toluene	EPA Test Method 8260C
Ethylbenzene	EPA Test Method 8260C
Total Xylenes	EPA Test Method 8260C
Arsenic	EPA Test Method 7010 Series/6020/200.8
Chromium VI	SW846 7196A
Chromium III	EPA Test Method 7010 Series/6020/200.8
Total Lead	EPA Test Method 7010 Series/6020/200.8
Mercury	EPA Test Method 7010 Series/6020/200.8
VOCs	EPA Test Method 8260C

All chain-of-custody requirements will comply with industry standard operating procedures (SOPs) for sample handling. Sample documentation for custody purposes includes:

- Sample identification numbers,
- Sample labels,

Remedial Investigation Workplan

725 East 25th Street
Tacoma, Washington

October 10, 2016

- Custody seals,
- Chain-of-custody records,
- Field logbooks, and
- Analytical Records

The static depth to groundwater for the four monitoring wells will be measured each quarter prior to sampling to determine the groundwater elevation. The measured value will be subtracted from the elevation of the top of the monitoring well casings, which will be professionally surveyed after installation. Groundwater elevations will then be contoured and depicted on a figure with the relative flow direction and gradient.

ECI appreciates the opportunity to work with you on this project, should you have any questions please contact me directly at 805-680-4286.

Sincerely,

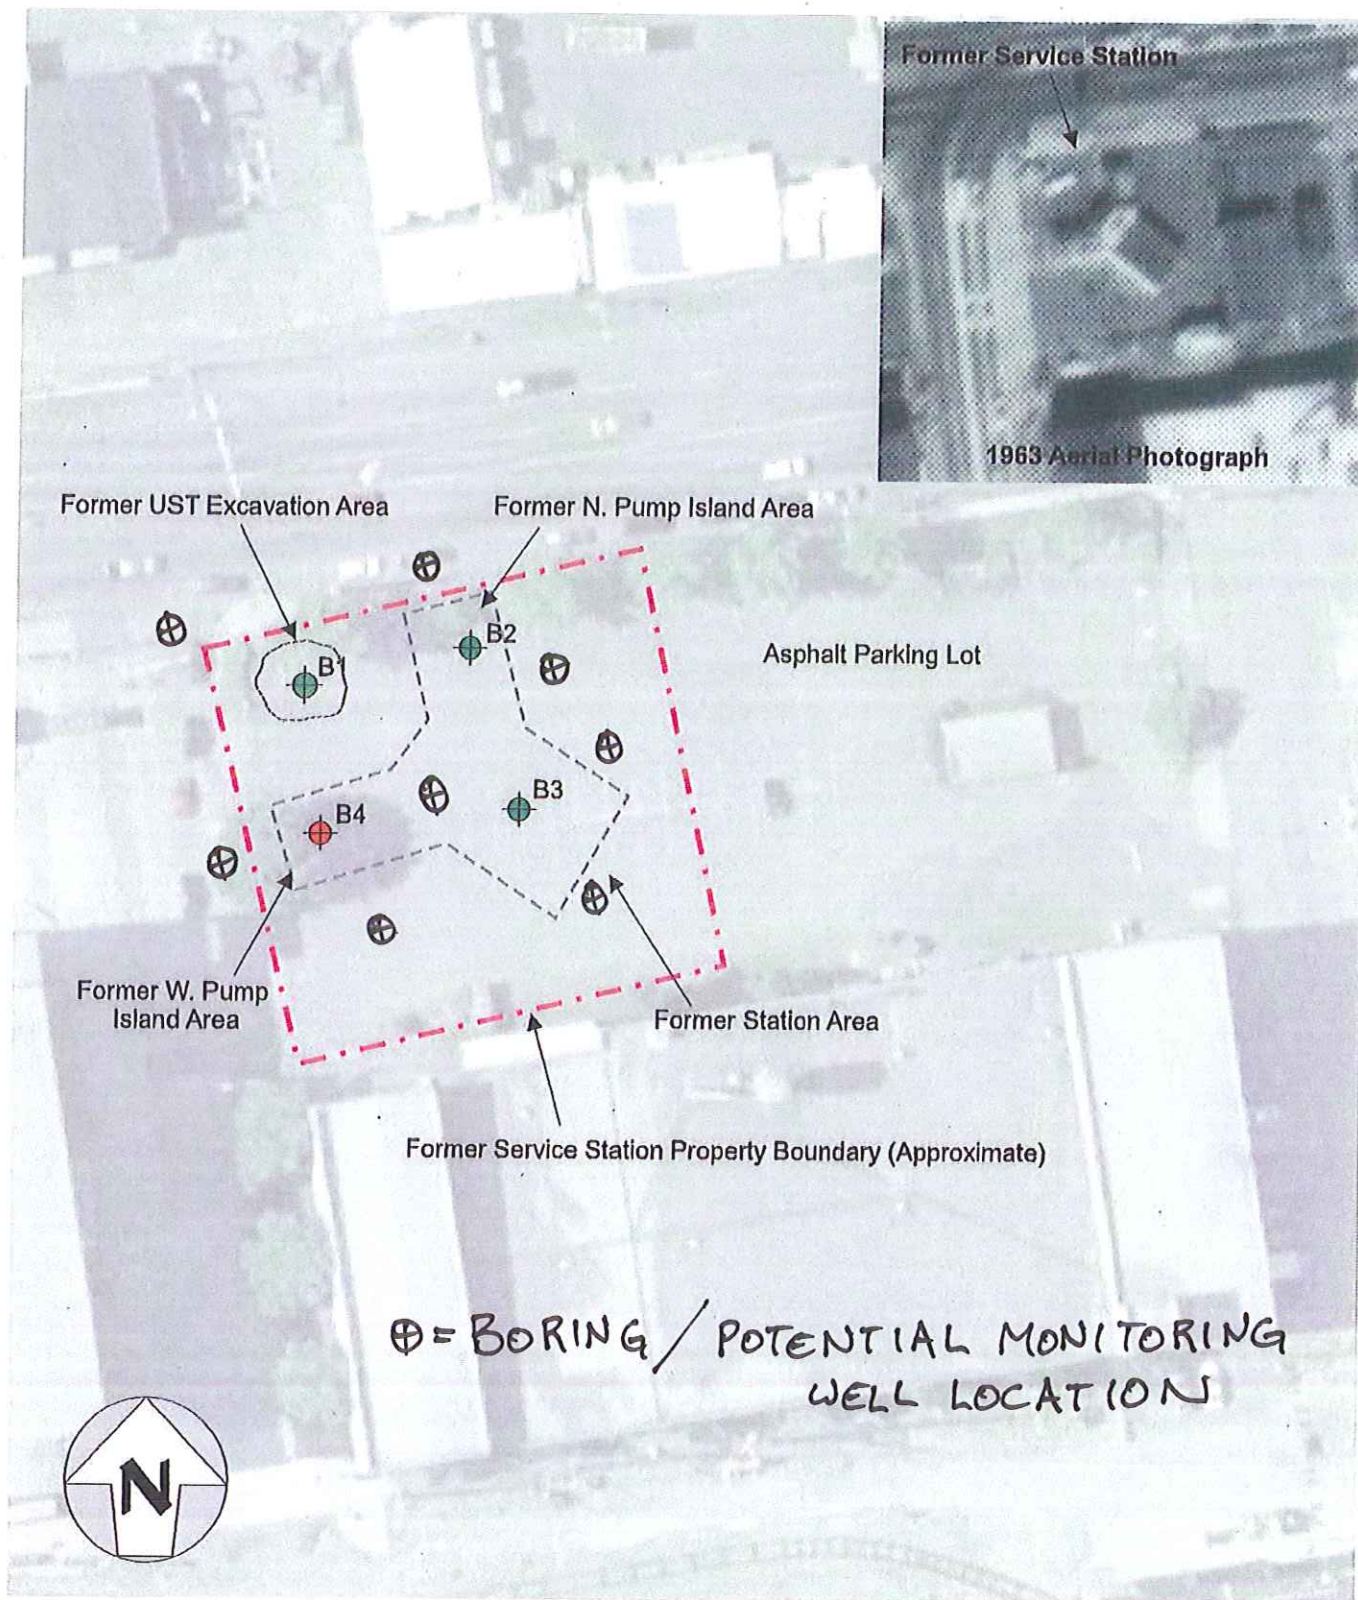

Brian A. Dixon
Vice President / Sr. Environmental Scientist

Mr. Dennis Kemp
Spring Air Northwest
c/o Mr. John R. Spencer,
Spencer Law Firm, LLC.
1326 Tacoma Ave. S., Suite 200
Tacoma, WA 98402

Re: Request for Information on Status of VCP Project for the following Site:

- **Site Name:** Spring Air Northwest
- **Site Address:** 725 E 25th St, Tacoma, WA 98421
- **Facility/Site No.:** 9111625
- **VCP Project No.:** SW0085

Dear Mr. Kemp:

The Department of Ecology (Ecology) appreciates your decision to clean up the Spring Air Northwest facility (Site) independently. However, our records indicate that you have not conducted any remedial actions during the past year at the Site. This letter requests information on the status of your cleanup and your continued interest in the Voluntary Cleanup Program (VCP).

Request for Information

Please submit the following information to Ecology within 30 days of the date of this letter:

1. Cleanup status report.
2. Any reports documenting the cleanup.
3. Plan and schedule for completing the cleanup.

Next Steps

Based on your response, Ecology will decide whether to continue providing you services under the VCP. We will notify you of our decision in writing. Please note that we will terminate the Agreement governing this Project if you do not respond to this request.

Mr. Dennis Kemp
April 14, 2015

Contact Information

We are committed to working with you to accomplish the prompt and effective cleanup of the Site. If you have any questions about this request, please contact me at 360-407-7263.

Sincerely,

Thomas Middleton
VCP Site Manager
Toxics Cleanup Program, SWRO

CERTIFIED MAIL

June 15, 2007

Mr. Joe Carman
Spring Air NW
2626 Willamette Drive NE
Lacey, WA 98516

**Re: Opinion under WAC 173-340-515(5) on Remedial Action(s) for the following
Hazardous Waste Site:**

- Name: Former Spring Air NW
- Address: 725 East 25th Street, Tacoma, Washington
- Facility/Site No.: 9111625
- VCP No.: SWO085

Dear Mr. Carman:

Thank you for submitting your site characterization report(s) for the Former Spring Air NW (Site) for review by the Washington State Department of Ecology (Ecology) under the Voluntary Cleanup Program (VCP). Ecology appreciates your initiative in pursuing this administrative option for cleaning up hazardous waste sites under the Model Toxics Control Act (MTCA), Chapter 70.105D RCW.

This letter constitutes an advisory opinion regarding whether the remedial action performed is sufficient to meet the specific substantive requirements of MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing and addressing the following release(s) at the Site:

- Petroleum Hydrocarbons in Soil;
- Volatile Organic Compounds in Soil (suspected);
- Polychlorinated biphenyls in Soil (suspected);
- Metals in Soil;
- Petroleum Hydrocarbons in Groundwater;
- Volatile Organic Compounds in Groundwater (suspected);
- Metals in Groundwater.

Ecology is providing this advisory opinion under the specific authority of RCW 70.105D.030(1)(i) and WAC 173-340-515(5).

This opinion does not resolve a person's liability to the state under MTCA or protect a person from contribution claims by third parties for matters addressed by the opinion. The state does not have the authority to settle with any person potentially liable under MTCA except in accordance with RCW 70.105D.040(4). The opinion is advisory only and not binding on Ecology.

Ecology's Toxics Cleanup Program has reviewed the following information regarding your remedial action(s):

1. May 29, 2007, Environmental Management Services, LLC. Subsurface Investigation, 725 East 25th Street, Tacoma, Washington.
2. May 2, 2007, Sound Environmental Strategies. Groundwater Monitoring Report, First Semester of 2007, Former Spring Air NW Facility.
3. September 25, 2006, Swift Creek Environmental, Inc. Phase I & II Environmental Site Assessment, Han Jo Ro, LLC Property a.k.a. Spring Air NW Facility or Chami Design Inc. Property, 725 East 25th Street, Tacoma Washington 98421.
4. November 9, 2006, Sound Environmental Strategies. Groundwater Monitoring Report, Fourth Quarter of 2006, Former Spring Air NW Facility.

The reports listed above will be kept in the Central Files of the Southwest Regional Office of Ecology (SWRO) for review by appointment only. Appointments can be made by calling the SWRO resource contact, Debbie Nelson, at (360) 407-6365.

The Site is defined by the extent of contamination caused by the following release(s):

- Petroleum Hydrocarbons in Soil
- Volatile Organic Compounds in Soil
- Polychlorinated biphenyls in Soil
- Metals in Soil
- Petroleum Hydrocarbons in Groundwater
- Volatile Organic Compounds in Groundwater
- Metals in Groundwater

Mr. Joe Carman
June 15, 2007
Page 3

The Site is more particularly described in Enclosure A to this letter, which includes a detailed Site diagram. The description of the Site is based solely on the information contained in the documents listed above.

The groundwater monitoring for the Spring Air NW facility is being conducted according to an Ecology approved groundwater monitoring plan (May 18, 2006 Opinion Letter). Since the previous Opinion Letter (May 18, 2006), Ecology received the above referenced four reports. Two of these reports provide groundwater monitoring results for the Spring Air NW facility (southern portion of the site) and the other two reports primarily reported on investigation results for the northwest portion of the northern parcel. This parcel previously contained a gasoline service station.

Based on a review of the reports listed above, **Ecology has determined that the site characterization and remedial action associated with the former gasoline service station area is sufficient to meet the specific substantive requirements contained in MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing the following potential release(s) in the northern portion of the Site:**

- Volatile Organic Compounds in Soil (except benzene, toluene, ethylbenzene, and total xylenes: BTEX)
- Polychlorinated biphenyls (PCBs) in Soil

However, based on a review of the reports listed above, **Ecology has determined that the site characterization remedial action associated with the former gasoline service station is not sufficient to meet the specific substantive requirements contained in MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing the following potential release(s) at the northern portion of the Site:**

- Petroleum Hydrocarbons in Soil (including BTEX)
- Metals in Soil
- Petroleum Hydrocarbons in Groundwater
- Volatile Organic Compounds in Groundwater
- Metals in Groundwater

The extent of total petroleum hydrocarbons –gasoline range (TPH-G) soil contamination needs to be defined. Two samples from boring B4 (7.0 to 8.0 and 8.5 to 9.0 foot depth below ground surface, bgs) exceeded the total petroleum hydrocarbons –gasoline range (TPH-G) MTCA Method A Cleanup Level for Unrestricted Uses. Also, as stated in the previous Opinion Letter, because the site lies within the Tacoma Smelter Plume, there is the potential for arsenic and/or lead soil contamination. Exposed soil at the site should be sampled for arsenic and lead.

Additionally, groundwater monitoring wells should be installed in order to define the extent of contamination from total petroleum hydrocarbons – diesel range (TPH-D), total petroleum hydrocarbons – heavy oil range (TPH-O), chromium, arsenic, and lead.

Grab samples of groundwater from borings SC-TL-MWA and SC-TL-MWB exceeded the MTCA Method A Cleanup Level for TPH-D and TPH-O and results from boring SC-TL-MWB exceeded the Cleanup Level for total chromium and arsenic. Results from B4 (west pump island area) were above MTCA Method A Cleanup Level for TPH-D and TPH-O. Results from boring B1, B3, and B4 exceeded the Cleanup Level for total lead and results from B3 slightly exceeded the Cleanup Level for total chromium.

The Former Spring Air NW site is located downgradient of the adjacent Tacoma Dome Station site. Therefore, it is possible that the observed groundwater contamination is migrating from the Tacoma Dome Station site. Because the constituents of concern for the Tacoma Dome Station site included volatile organic compounds (VOCs), **VOCs should also be included in the constituent list for the site.** When groundwater monitoring wells are installed, samples should be conducted on a quarterly basis. Groundwater flow direction and gradient should be determined for each sampling event.

Please provide Ecology with a site characterization and remediation work plan for these issues and areas of concern within three months of the date of this letter. The plan should include proposed groundwater monitoring well locations and monitoring depths, analytical constituents, and sampling schedule.

It is our understanding that the property will be redeveloped into a residential condominium complex. If the contaminated soil beneath the former Spring Air NW building will not be removed as part of the redevelopment, then an Environmental Covenant (EC) (formerly called a "Restrictive Covenant") should be filed on the property. The EC will prohibit withdrawal of groundwater from the property, and will require notification to Ecology of any future property sale or building renovation or demolition so that the contaminated soil beneath the building can be addressed. A boilerplate EC will soon be available from our website:

<http://www.ecy.wa.gov/programs/tcp/vcp/Vcpmain.htm>. After Ecology has reviewed and approved the EC, it will need to be filed with Pierce County.

In accordance with WAC 173-340-840(5) and Ecology Toxics Cleanup Program Policy 840 (Data Submittal Requirements), data generated for Independent Remedial Actions shall be submitted in both a written and electronic format. Additional information regarding electronic format requirements, see the website <http://www.ecy.wa.gov/eim>. All laboratory analyses shall be performed by the State of Washington Certified Laboratory for each analytical method used.

Please note that this letter does not provide an opinion on the sufficiency of any other remedial actions conducted at the Site or whether further remedial action is necessary to characterize and address all contamination at the Site. To obtain such an opinion, you must

Mr. Joe Carman
June 15, 2007
Page 5

submit an independent remedial action report to Ecology upon completion of the cleanup action for the Site and request such an opinion under the VCP.

Please also note that this opinion is based solely on the information contained in the documents listed above. Therefore, if any of the information contained in those documents is materially false or misleading, then this opinion will automatically be rendered null and void.

The state, Ecology, and its officers and employees make no guarantees or assurances by providing this opinion, and no cause of action against the state, Ecology, its officers or employees may arise from any act or omission in providing this opinion.

Again, Ecology appreciates your initiative in conducting an independent remedial action and requesting technical consultation under the VCP. As the cleanup of the Site progresses, you may request additional consultative services under the VCP, including assistance in identifying applicable regulatory requirements and opinions regarding whether remedial actions proposed for or conducted at the Site meet those requirements.

If you have any questions regarding this opinion, please contact me at (360) 407-6247 or via e-mail at stee461@ecy.wa.gov.

Sincerely,

Steve Teel, LHG
