1 INTRODUCTION

1.1 Overview

The Central Puget Sound Regional Transit Authority (Sound Transit) is proposing to expand Link light rail transit service northward from the Lynnwood City Center Station to the Everett Station area in Snohomish County, Washington (Figure 1-1). The Everett Link Extension (EVLE) Project would provide fast, reliable light rail service to regional residential and job centers in Snohomish County's growing urban areas. The proposed project is part of the Sound Transit 3 (ST3) Plan of regional transit system investments, funding for which was approved by voters in the region in 2016.

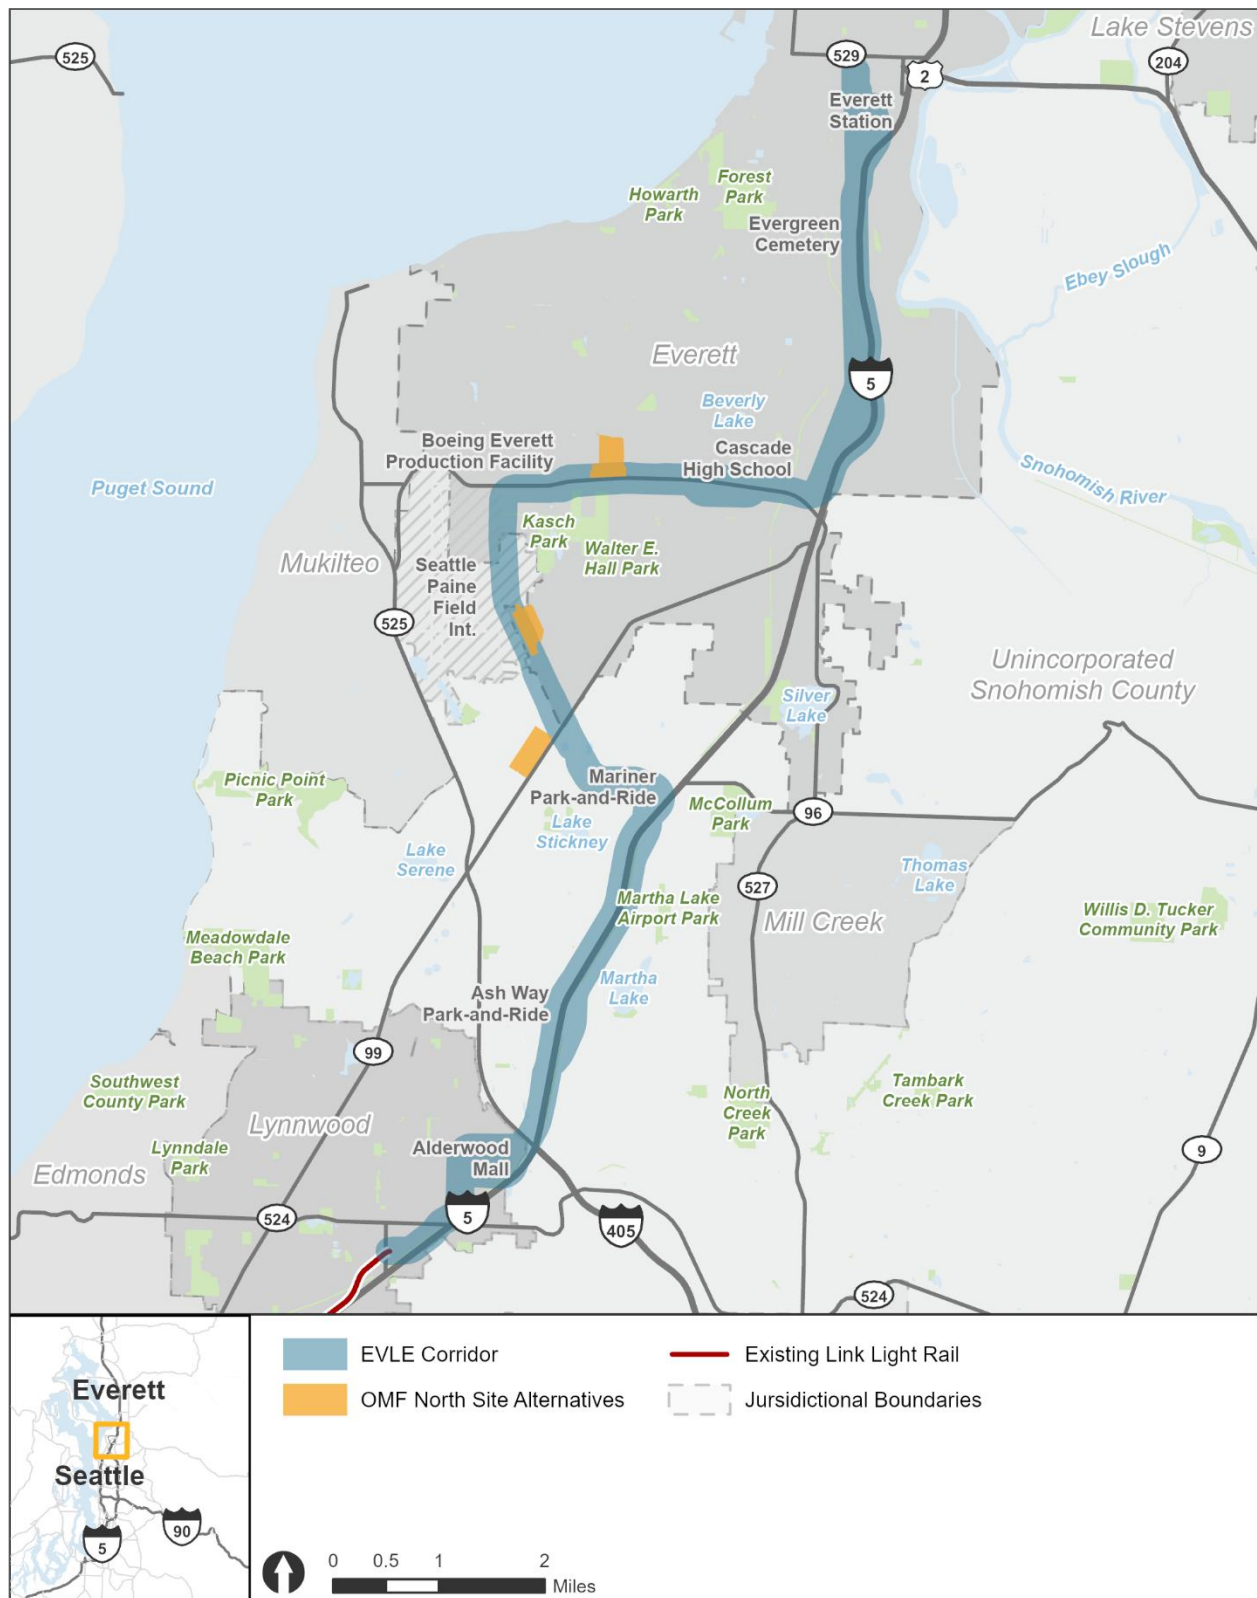

For this analysis, the EVLE Project consists of approximately 16 miles of light rail guideway, seven light rail stations, two parking facilities, and an operations and maintenance facility (OMF North). Sound Transit proposes to begin construction of the project in 2030. The current schedule for opening light rail service from the Lynnwood City Center Station to Everett Station is 2041. A shorter route connecting Lynnwood City Center to the SW Everett Industrial Center Station would open first in 2037 as the initial phase. OMF North would open by 2034, prior to opening of the light rail extension, as the facility is necessary for storing rail cars and supporting service for not only the extension to Everett, but also other parts of the regional system.¹ Parking facilities at the Mariner and Everett Stations would open by 2046.

One station, State Route (SR) 99/Airport Road Station, is currently considered provisional since planning, preliminary engineering, and environmental review are funded, but final design and construction are not. However, for purposes of this evaluation, all seven stations are assumed to be funded and open according to the schedule described above to capture all locations where impacts could occur. The station would be fully constructed and open for service when additional funding is identified.

The initial phase is not discussed in this analysis because it would not have additional potential impacts when compared with the fully built alternatives (i.e., the impacts would be the same in the West Alderwood, Ash Way, Mariner, SR 99/Airport Road, and SW Everett Industrial Center Segments, and for the OMF sites, but the impacts in the SR 526/Evergreen, Broadway/I-5, and Everett Station Segments would not occur until construction on those segments begins). All potential impacts are described in Section 4.

¹ Construction of light rail projects is typically divided into sections, and construction would occur across different parts of the corridor between 2030 and 2046. For more information on the construction approach, see Draft EIS Appendix B.

Figure 1-1 EVLE Project Corridor

For planning and engineering purposes, the project is organized into eight geographic segments, discussed in this document from south to north. Within those segments, a total of 17 alignment alternatives and 18 station location alternatives are under consideration. These alignment and station alternatives are combined into Build Alternatives for analysis as shown in Table 1-1 and Figure 1-2.

Table 1-1 describes the alignment and station alternatives as follows:

- **Segments:** The eight alignment segments and corresponding abbreviations are:
 - West Alderwood (ALD).
 - Ash Way (ASH).
 - Mariner (MAR).
 - SR 99/Airport Road (AIR).
 - SW Everett Industrial Center (SWI).
 - SR 526/Evergreen (EGN).
 - Broadway/I-5 (BI).
 - Everett Station (EVT).
- **Alignment alternatives:** Alignment alternatives in each segment are identified with numbers (e.g., ALD-1).
- **Station alternatives:** Station alternatives in each segment are identified with letters (e.g., ALD-B).²
- **Build Alternatives:** Alignments and stations are combined to create the Build Alternative name (e.g., Station ALD-B is located on Alignment ALD-1, so this pairing is referred to as Alternative ALD-1B). If a preferred Build Alternative has been identified by the Sound Transit Board of Directors, it is indicated with an asterisk.
- **Design options:** A design option is an alternate design for a portion of a Build Alternative. It could be a different route or profile along a portion of an alignment, a different station configuration, or a different parking location. For example, in the West Alderwood Segment the Alderwood Mall Boulevard Design Option is being considered for all three Build Alternatives.

² Letters identifying station alternatives are non-sequential in some segments; missing letters denote alternatives that did not perform as well as alternatives considered in the Draft EIS. For more information on the Alternatives Development process, see Draft EIS Chapter

Table 1-1 Alignment and Station Build Alternatives

Segment	Alignment Alternatives	Station Alternatives	Build Alternatives (Combined Alignment and Station)	Build Alternative Design Options Also Considered
West Alderwood	ALD-1	ALD-B	ALD-1B	Alderwood Mall Boulevard
	ALD 2	ALD-D	ALD-2D*	Alderwood Mall Boulevard
		ALD-F	ALD-2F	Alderwood Mall Boulevard
Ash Way	ASH-1	ASH-A	ASH-1A	None
	ASH-2	ASH-D	ASH-2D	None

	BI-2	None	BI-2	None
Everett Station	EVT-1	EVT-A	EVT-1A	None
	EVT-2	EVT-C	EVT-2C*	None
	EVT-3	EVT-D	EVT-3D*	None

* Denotes preferred alternative

There are also three OMF North site alternatives under consideration as shown in Table 1-2 and Figure 1-2.

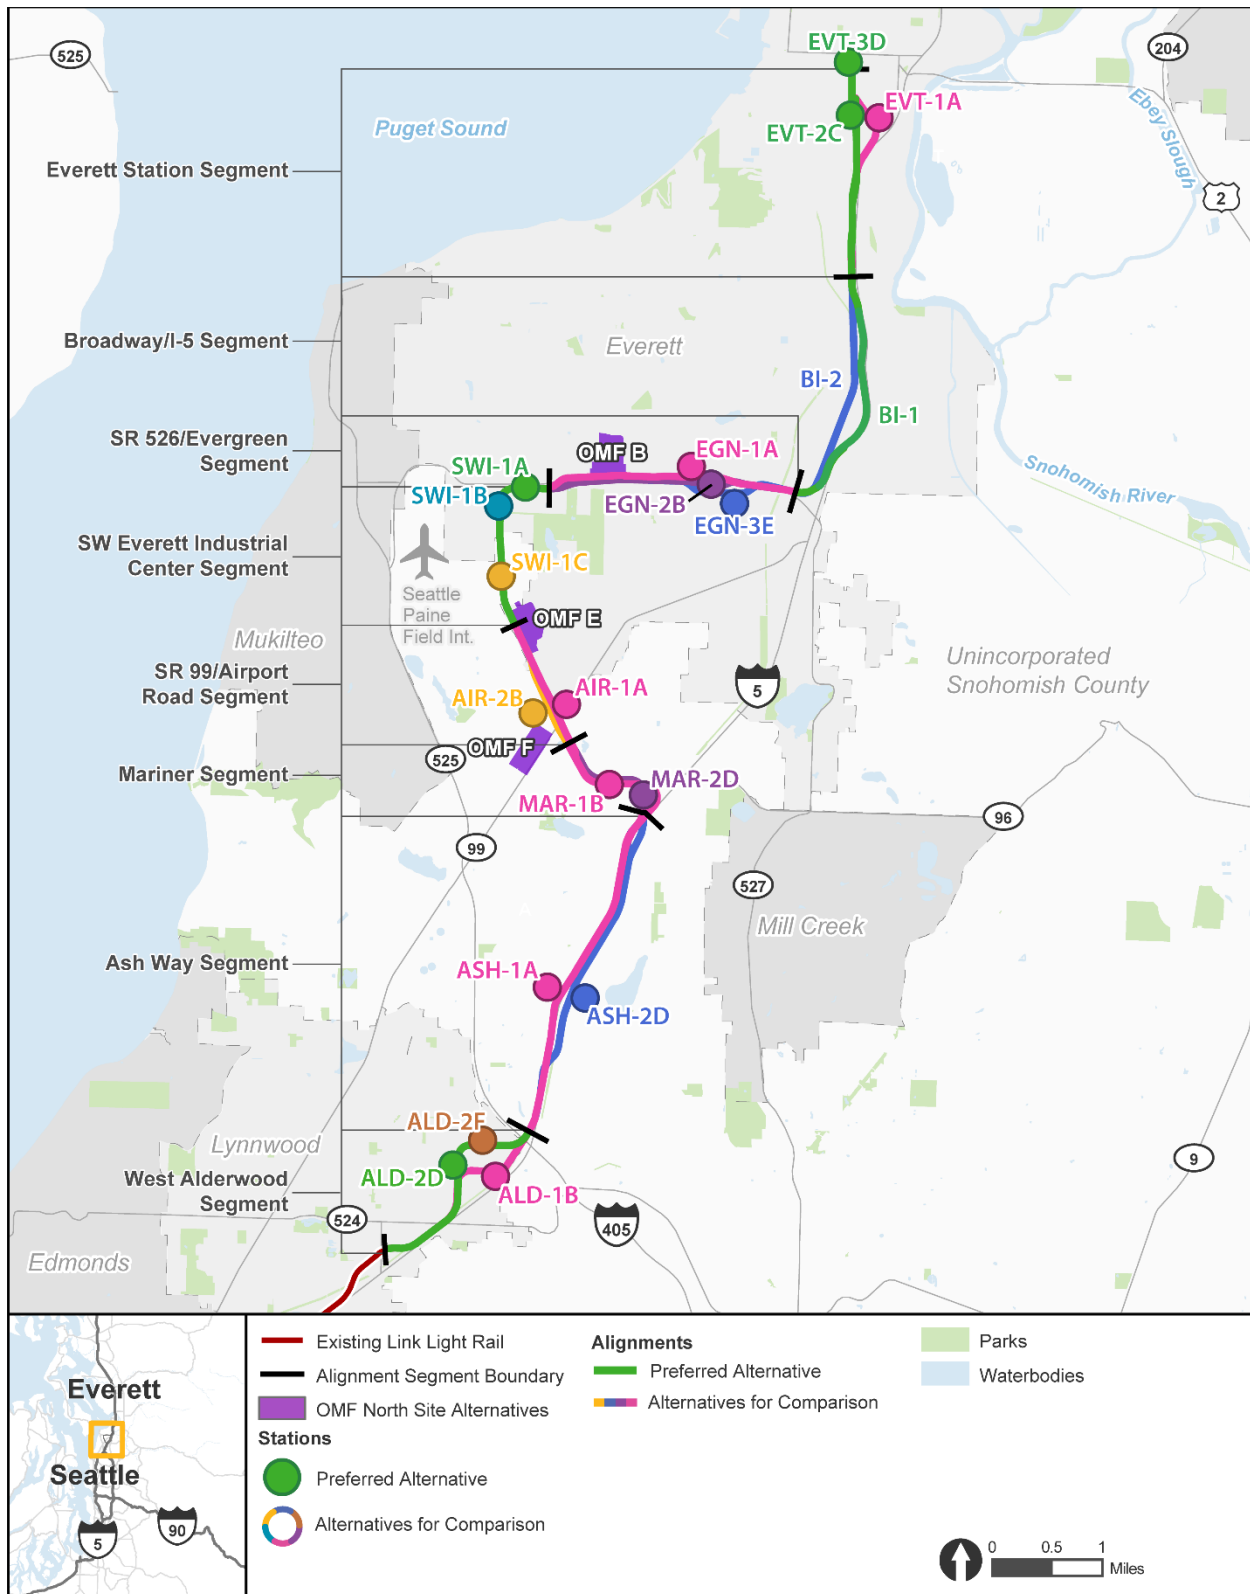

Table 1-2 OMF North Site Alternatives

Build Alternative	Build Alternative Design Options Also Considered
OMF Site F	Lead Tracks to West Side of Airport Road
OMF Site E	None
OMF Site B	Lead Tracks to South Side of SR 526

Analysis of the Build Alternatives was based on the conceptual design drawings included in Draft Environmental Impact Statement (EIS) Appendix F.

The No Build Alternative describes the environment, including the transportation system, as it would exist in 2046 without the proposed project. The No Build Alternative uses 2046 as the year of analysis to align with the target date for completion of all EVLE Project components and the full buildout of the light rail capital projects included in the ST3 Plan.

Figure 1-2 EVLE Project Alternatives

1.2 Potential Design Refinements

In addition to the alternatives described above, the Draft EIS provides a qualitative evaluation of potential design refinements that could reduce overall project cost if applied to the alignment and station alternatives (for more information, see Draft EIS Chapter 2). The potential design refinements identified to date that could be considered in each segment, along with potential changes in impacts, are described in Draft EIS Chapter 4. Potential changes in acquisition impacts are also described in Section 4.1.1.3 below. If Sound Transit decides to include these refinements as part of the project prior to the Final EIS, they would be reflected in the conceptual design plans and evaluated in the Final EIS.

1.3 Purpose of Report

The purpose of this report is to document the property that would potentially be affected by construction and operation of the EVLE Project as well as the residences, businesses, and public uses that would be displaced and relocated due to property acquisitions.

2 REGULATORY CONTEXT AND METHODOLOGY

2.1 Applicable Laws, Regulations, and Guidelines

This analysis considered the following regulations and guidelines specific to acquisitions, displacements, and relocations that apply to the EVLE Project:

- Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970:** The Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Code of Federal Regulations [CFR] Title 49, Part 24), as amended, is a federal requirement that provides guidance on how federal agencies, or agencies receiving federal financial assistance for a project, will compensate for impacts on property owners or tenants who need to relocate if they are displaced by a project.
- Making Highway Rights-of-Way Available for Mass Transit Projects:** In accordance with CFR Title 23, Part 810, Subpart C, Making Highway Rights-of-Way Available for Mass Transit Projects, Sound Transit must apply to Washington State Department of Transportation (WSDOT) to use the right-of-way on Interstate 5 (I-5). Following an acceptance of Sound Transit's application, WSDOT would request authorization from Federal Highway Administration (FHWA) to make the right-of-way available for the project. Acceptance by FHWA would be dependent on Sound Transit providing evidence that the use of the right-of-way for the project would not impair future highway improvements or the safety of highway users.
- Sound Transit's Real Property Acquisition and Relocation Policy, Procedures, and Guidelines:** Sound Transit adopted the Real Property Acquisition and Relocation Policy, Procedures, and Guidelines to guide its compliance with Chapter 8.26 Revised Code of Washington and Chapter 468-100 Washington Administrative Code. Property acquisition will meet these laws and policies so that property owners are treated properly (Sound Transit 2017).

2.2 Methodology

This report summarizes expected property acquisitions based on current conceptual designs and describes major differences between alternatives. Building and operating the EVLE Project requires acquiring public and private property for right-of-way and other facilities, and displacing and relocating some residential, commercial, and public uses. The study area for this analysis includes the local jurisdictions and the broader region for discussion of relocation opportunities and vacancy trends. The area of effect is limited to the properties that are anticipated to require full or partial acquisition for each Build Alternative evaluated.

This analysis evaluated the potential property impacts of the No Build Alternative and the Build Alternatives within the study area. National Environmental Policy Act (NEPA) regulations require that an EIS disclose impacts (i.e., effects) of a proposed action on the environment. NEPA requires an EIS to evaluate and disclose the “reasonably foreseeable environmental effects of the proposed agency action” (42 USC Section 4332). Reasonably foreseeable environmental effects are those that are sufficiently likely to occur during operation (long-term) or construction (short-term). Reasonably foreseeable environmental effects do not include effects that are speculative in nature or remote in time or place, or that are the result of a lengthy causal chain. For this analysis, reasonably foreseeable effects include all effects that are considered likely to result from the project over its operational lifetime within the study area of each resource.

All EVLE Build Alternatives would require the permanent and temporary acquisition of public and private property for the track, station, and OMF right-of-way, as well as transit integration, road realignment, construction staging, and mitigation. There are two types of potential permanent property acquisitions:

- **Partial acquisition** – A portion of a parcel would be permanently acquired, but the current use would likely not be displaced. In some instances, such as larger parcels that hold multiple uses, a business or residential unit on a parcel could be displaced while other uses remain.
- **Full acquisition** – The entire parcel would be permanently acquired, and all current uses would be displaced. In some instances, full acquisitions include parcels that may not be needed for the project but would be affected to the extent that current uses would be substantially impacted.

At this level of design, potential partial and full permanent acquisitions for the Draft EIS alternatives are identified as affected properties. The property and displacement data presented in this analysis are based on the conceptual design drawings developed by Sound Transit for the Draft EIS (see Draft EIS Appendix F). Businesses and other uses described here are based on 2023 existing conditions and could change as the project design is further developed. The information on affected parcels is an estimate based on conceptual design to provide for comparison of alternatives and will be updated as the project design is refined. Final determination of affected properties, including whether the acquisition would be partial or full, would be based on the project’s final design following completion of the EIS process and the Sound Transit Board’s selection of the project to build. Property acquisitions described here are intended to be used for comparison across alternatives and are not final determinations.

The parcels that may be impacted as a result of potential design refinements are not yet known. If design refinements are implemented, affected parcels would be identified in the Final EIS. A preliminary list of additional parcels that may be affected by design refinements is included in Attachment C.

For stations and alignments, the number of business displacements were estimated using parcel data and ownership information from Snohomish County, conceptual design drawings, and field reconnaissance. For the OMF North site alternatives, the estimates for business displacements were instead provided by PSRC due to the specialized industrial uses on those sites. PSRC derived the business counts from the Quarterly Census of Employment and wages to provide a more accurate estimate (PSRC 2024).

Sound Transit overlaid the proposed project limits, which include permanent project improvements and areas needed for project construction, for all the Build Alternatives over the parcel data from Snohomish County to identify which parcels would be affected and to estimate the potential acquisitions and displacements for each alternative. The number of parcels affected, which includes both full and partial acquisitions, is presented for each alternative. For this analysis, a displacement is defined as a property acquisition that would require removing an existing use. The number of displacements reflects whether an acquisition is anticipated to be full or partial and is based on the number of dwelling units for affected residential properties and the number of business units for affected commercial and industrial properties.

In addition to the potential property acquisitions described in this report, the project would also require temporary construction easements, permanent aerial and subterranean easements, permanent easements for maintenance, and the permanent use of rights-of-way owned by WSDOT and local jurisdictions. The area of these easements is not evaluated in this report. Wherever possible, construction staging would occur on parcels needed for the project's alignment, station, or right-of-way. Draft EIS Appendix F identifies the preliminary project limits. The areas identified for temporary construction uses may change as the project is refined.

3 AFFECTED ENVIRONMENT

The study area includes the parcels that are within the areas where the light rail alignments, stations, OMF sites, related facilities, and construction staging areas require right-of-way. This includes residential, commercial, and industrial development, and some vacant and public properties. Properties within the West Alderwood Segment are primarily commercial, with some public institutional uses. Properties within the Ash Way and Mariner Segments are mostly residential and commercial. Properties within the SR 99/Airport Road and SW Everett Industrial Center Segments primarily consist of industrial and commercial developments. Properties within the SR 526/Evergreen, Broadway/I-5, and Everett Station Segments consist mostly of residential and commercial uses.

4 ENVIRONMENTAL IMPACTS

4.1 Build Alternatives

4.1.1 Operational Impacts

All Build Alternatives for the EVLE Project would require property acquisitions and would displace and relocate some uses for operation of the light rail. During construction, additional property would be needed for staging areas and construction access. Table 4-1 through Table 4-9 summarize the estimated number of affected parcels for both operation and construction

and the estimated number of business and residential displacements (where an acquisition would require removing an existing use) for each alternative. A parcel can be affected without resulting in a displacement if the existing use remains. Acquisitions and displacements for Build Alternatives within a segment often vary. The following discussion highlights the key differences between Build Alternatives.

In addition to the potential property acquisitions described in this section, the Build Alternatives would require aerial easements, temporary construction easements, and/or subterranean easements. These easements would not require displacements of the surface uses, and the area of the easements is not included in the data presented here. The EVLE Project would also require use of public rights-of-way owned by the City of Lynnwood, City of Everett, Snohomish County, and WSDOT.

Some properties that would be affected have the potential to be or currently are emergency shelters. These properties include religious facilities, schools, and community centers. For more specific information regarding these properties, refer to the Public Services, Safety, and Security Technical Report in Draft EIS Appendix G.15.

Properties that would be difficult to relocate based on their size or use are also noted. Attachment A and Attachment B provide tables and maps, respectively, to identify the potentially affected parcels by parcel number and address for each Build Alternative.

Table 4-1 Number of Potential Parcels Affected and Displacements by Alternative – West Alderwood Segment

Build Alternative	Affected Parcels							Displacements ^a	
	Single-Family	Multi-Family	Commercial and Industrial	Mixed Use	Public and Institutional	Vacant	Total	Business Units	Residential Units
ALD-1B	0	2	29	0	5	3	39	14	0
ALD-1B with Alderwood Mall Boulevard Design Option	0	2	28	0	13	3	46	14	0
ALD-2D	0	2	29	0	5	1	37	37	0
ALD-2D with Alderwood Mall Boulevard Design Option	0	2	31	0	12	1	46	36	0
ALD-2F	0	2	30	0	5	1	38	29	0
ALD-2F with Alderwood Mall Boulevard Design Option	0	2	31	0	12	1	46	28	0

NOTE:

- a) Displacements would result from parcel acquisitions that would require removing an existing use. Not all parcel acquisitions would result in displacements.

Table 4-2 Number of Potential Parcels Affected and Displacements by Alternative – Ash Way Segment

Build Alternative	Affected Parcels							Displacements ^a	
	Single-Family	Multi-Family	Commercial and Industrial	Mixed Use	Public and Institutional	Vacant	Total	Business Units	Residential Units
ASH-1A	56	14	0-1	0	5	15	90-91	0-1 ^b	63

OMF Site F with Lead Tracks to West Side of Airport Road Design Option	81	27	26	0	1	9	144	62	186
OMF Site E	37	11	10	0	2	31	91	13	49
OMF Site B	0	0	7	0	1	5	13	16	0
OMF Site B with Lead Tracks to South Side of SR 526 Design Option	0	0-1 ^c	10	0	3	7	20-21 ^c	13	90

SOURCE: PSRC (2024).

NOTE:

- a) Some parcels affected by alignment and station alternatives would also be affected by OMF North site alternatives. To not double count those parcel impacts, only the additional affected parcels and displacements for the OMF North site alternatives are included in the numbers presented in this table.
- b) Displacements would result from parcel acquisitions that would require removing an existing use. Not all parcel acquisitions would result in displacements.
- c) Ranges reflect differences from connecting to different alternatives in adjacent segments. The total impacts are based on individual alternatives and connection options and not the high and low numbers of each impact type shown in the table.

4.1.1.1 Alignment and Station Alternatives

This section provides additional information regarding Table 4-1 through Table 4-9. A list and map of affected parcels are included in Attachment A and Attachment B, respectively.

Impacts Common to All Build Alternatives

All Build Alternatives would acquire property and would displace and relocate some uses during operation. During construction, additional property would be needed for staging areas and construction access. Consistent with Sound Transit policy and local land use regulations, some parcels initially acquired for a project use, such as construction staging, could be redeveloped to accommodate transit oriented development (TOD).

West Alderwood Segment

Alternatives in the West Alderwood Segment would primarily affect commercial/industrial and public/institutional properties. As shown in Table 4-1, Alternatives ALD-2D and ALD-2D with Alderwood Mall Boulevard Design Option would displace the most businesses with 37 and 36 displacements, respectively. ALD-2F and ALD-2F with Alderwood Mall Boulevard Design Option would each displace 29 and 28 businesses, respectively, and Alternatives ALD-1B and ALD-1B with Alderwood Mall Boulevard Design Option would each displace 14 businesses.

Alternatives ALD-1B and ALD-1B with Alderwood Mall Boulevard Design Option are the only alternatives that would displace Alderwood Mall property, notably the existing AMC Theatres and Claim Jumper Restaurant. Alternatives ALD-2D, ALD-2D with Alderwood Mall Boulevard Design Option, ALD-2F, and ALD-2F with Alderwood Mall Boulevard Design Option would primarily displace the strip-center retail and office along 33rd Avenue W adjacent to Alderwood Mall, along with the Kohl's department store located on 184th Street SW. Each alternative would affect two multi-family properties near Alderwood Mall, while no alternatives in this segment would displace any residential units.

Ash Way Segment

The alternatives in the Ash Way Segment would primarily affect residential properties, with the remainder of properties affected being vacant or institutional (Table 4-2). Alternative ASH-1A would result in 18 to 25 more residential displacements than Alternative ASH-2D. Residences that would be displaced as a result of both alternatives are primarily single-family. Alternative ASH-1A would displace one business only if Alternative MAR-1B is also selected to be built. Alternative ASH-2D would result in the displacement of one business, regardless of which alternative is selected in the Mariner Segment.

Mariner Segment

Alternatives in the Mariner Segment would primarily affect residential and commercial/industrial properties as shown in Table 4-3. All alternatives would displace three single-family residences and more than 280 multi-family units. Alternatives MAR-1B and MAR-1B with Surface Parking Design Option would also result in the displacement of the Safeway along 128th Street SW, as well as other smaller retail units in Puget Park Center. All four Mariner Segment alternatives would result in displacing businesses primarily along the 128th Street SW corridor.

Alternatives MAR-1B and MAR-1B with Surface Parking Design Option would displace 68 businesses compared to 45-46 businesses with Alternatives MAR-2D and MAR-2D with Surface

Parking Design Option, depending on which alternative is selected to be built in the SR 99/Airport Road Segment.

SR 99/Airport Road Segment

Alternatives in the SR 99/Airport Road Segment would affect residential, commercial, institutional, and vacant parcels (Table 4-4). Alternative AIR-1A would displace 12 more residential units than Alternative AIR-2B.

Alternative AIR-2B would affect 10 more commercial parcels than Alternative AIR-1A, although Alternative AIR-1A would result in four more business displacements than Alternative AIR-2B. Businesses that would be displaced by Alternatives AIR-1A and AIR-2B are primarily small retail businesses, services, or storage or warehouse facilities along Airport Road and SR 99.

SW Everett Industrial Center Segment

Alternatives in the SW Everett Industrial Center Segment would primarily affect commercial, industrial, or institutional properties, as well as some vacant parcels. Only Alternative SWI-1A with Lower Design Option would result in residential displacements. As shown in Table 4-5, Alternative SWI-1A and Alternative SWI-1A with Lower Design Option would displace the largest number of businesses (35 and 37, respectively). All SW Everett Industrial Center Segment alternatives would displace Paine Field Business Park, including 22 businesses related to home goods, manufacturing, fulfillment, and technology, as well as a fitness center and restaurant.

Almost all businesses that would be displaced by the alternatives in this segment are industrial, with the majority being logistics or specialty product manufacturing. Alternative SWI-1A and Alternative SWI-1A with Lower Design Option would displace the Northwest Regional Data Center campus, which is part of the Northwest Educational Service District 189 and Access Laser.

SR 526/Evergreen Segment

Alternatives in the SR 526/Evergreen Segment would primarily affect residential properties and some commercial properties along arterial streets. As shown in Table 4-6, Alternative EGN-2B and Alternative EGN-3E would result in substantially more residential displacements (171 and 184, respectively) than Alternative EGN-1A (58), Alternative EGN-2B with North Side of SR 526 Design Option (32), or Alternative EGN-3E with North Side of SR 526 Design Option (42). These residential displacements would be primarily single-family homes. However, Alternatives EGN-2B and EGN-3E would both result in the displacement of around 30 units from two multi-family buildings as well as other smaller multi-family complexes.

As shown in Table 4-6, Alternatives EGN-2B and EGN-2B with North Side of SR 526 Design Option would have the most business displacements, with 23 and 24, respectively. This would include displacement of the Casino Square complex on Casino Road, affecting more than 20 businesses. Alternatives EGN-1A would displace the least number of businesses for this segment (five).

Broadway/I-5 Segment

Alternatives in the Broadway/I-5 Segment would primarily affect residential properties, as well as some commercial and public/institutional properties. As shown in Table 4-7, Alternative BI-1

would displace 204 residential units (40 single-family residences and 164 multi-family residences). Alternative BI-1 would displace multiple mid-rise apartment complexes between Lexington Avenue and Madison Street. Notably, Alternative BI-1 would displace 65 senior housing units and the Montessori School of Snohomish County campus. Alternative BI-2 would displace 148 residential units (62 single-family residences and 86 multi-family residences).

Businesses that would be displaced as a result of Alternatives BI-1 and BI-2 are primarily service-oriented businesses located along the Broadway corridor. One notable business that would be displaced by Alternative BI-1 is the Northwest Ambulance Critical Care Transport headquarters and dispatch center. Both alternatives would also displace the Extended Stay America at 8410 Broadway, self-storage units, a gas station, and other retail offices.

Everett Station Segment

Alternatives in the Everett Station Segment would primarily affect commercial/industrial and residential properties (Table 4-8). Alternatives EVT-2C and EVT-3D would displace a substantially higher number of businesses (34 and 37, respectively) compared to Alternative EVT-1A (17). Businesses that would be displaced by all three Everett Station Segment alternatives are primarily warehouses and industries related to wholesale trade, manufacturing, or construction services, as well as food and beverage retail. All residences that would be displaced as a result of the three Everett Station Segment alternatives are single-family residential units.

4.1.1.2 OMF North Site Alternatives

OMF Site F (SR 99)

As shown in Table 4-9, OMF Site F and OMF Site F with Lead Tracks to West Side of Airport Road Design Option would affect commercial, industrial, and residential properties. Businesses that would be displaced by OMF Site F or OMF Site F with Lead Tracks to the West Side of Airport Road Design Option include several automotive-oriented businesses along SR 99 and heavy equipment or recreational vehicle sales. Both alternatives would also displace the Empire Industrial Park on SR 99, which contains businesses related to professional services, automotive, healthcare, construction, and fitness.

OMF Site F and OMF Site F with Lead Tracks to West Side of Airport Road Design Option would result in similar numbers of residential displacements, with a majority being multi-family displacements. Both alternatives would also result in the displacement of Airport RV Park on SR 99.

OMF Site E (Airport Road)

OMF Site E would affect a mixture of residential, industrial, and vacant parcels and would displace 49 residences and 13 businesses (Table 4-9). Most businesses that would be displaced by OMF Site E are industrial, including manufacturing, contracting, and automotive repair. The residences that would be displaced include both single- and multi-family units.

OMF Site B (SR 526)

Both OMF Site B and OMF Site B with Lead Tracks to South Side of SR 526 Design Option would primarily affect commercial/industrial properties (Table 4-9). Notably, both OMF Site B and OMF Site B with Lead Tracks to South Side of SR 526 Design Option would displace several industrial businesses related to the aerospace sector, including some Jamco facilities

that are located adjacent to Seattle Paine Field International Airport (Paine Field) and Boeing's Everett Production Facility. OMF Site B and OMF Site B with Lead Tracks to South Side of SR 526 would displace commercial/industrial properties on the north side of SR 526. OMF Site B with Lead Tracks to South Side of SR 526 Design Option would also affect residential properties south of SR 526; however, these parcels would also be affected by the SR 526/Evergreen alternatives and were therefore not counted in Table 4-9. OMF Site B with Lead Tracks to South Side of SR 526 Design Option would displace 86 multi-family units and four single-family homes along the W Casino Road corridor, one of the densest housing areas in the Snohomish County.

4.1.1.3 Potential Design Refinements

As mentioned in Section 1.2, Sound Transit is considering potential design refinements in each alignment segment. Potential changes to acquisitions, relocations, and displacements resulting from the potential design refinements are described in Table 4-10. Attachment C provides a preliminary list of additional parcels that may be affected by design refinements.

Table 4-10 Potential Changes to Impacts on Acquisitions, Relocations, and Displacements

Potential Design Refinement	Applicable Alternatives	Potential Changes to Impacts
Shift the guideway closer to the public right-of-way along 33rd Avenue.	All West Alderwood Build Alternatives	Would reduce private property impacts along 33rd Avenue W.
Shift the guideway near the intersection of 184th Street SW and Alderwood Mall Parkway north to reduce building impacts.	ALD-2D, ALD-2D with Alderwood Mall Boulevard Design Option, ALD-2F, and ALD-2F with Alderwood Mall Boulevard Design Option	Would reduce private property impacts near the intersection of 184th Street SW and Alderwood Mall Parkway. The overall number of displacements would be reduced, but up to two different businesses may be displaced.
Redesign the station to be at-grade.	ASH-2D	Would require displacing one additional business just south of 164th Street SW.
Cross I-5 further south and shift Station ASH-D and the 164th Street SW crossing further east.	ASH-2D	Up to 11 different properties may be affected.
Move the turnback tracks from the Mariner Segment to an at-grade portion of the Ash Way Segment.	All Ash Way and Mariner Build Alternatives	Turnback tracks would be located within existing transportation and utility right-of-way instead of private property. Up to five different properties may be affected.
Move potential parking from the Mariner Segment to the Ash Way Segment.	All Ash Way and Mariner Build Alternatives	Additional properties adjacent to the station may be affected.
Change profile from elevated to at-grade where able.	SWI-1A	Up to four different properties may be affected.

Potential Design Refinement	Applicable Alternatives	Potential Changes to Impacts
Move guideway into WSDOT right-of-way.	EGN-2B and EGN-3E	Would reduce private property impacts.
Shift Station EGN-E to the west side of SR 99 and shift the guideway closer to E Casino Road to reduce property impacts.	EGN-3E	Would reduce property acquisitions and prevent the displacement of a historic property (General Telephone Company). Up to six different properties may be affected.

4.1.2 Construction Impacts

During construction, property would be needed for staging areas and construction access. Most of the area needed for construction would be accommodated within areas required for permanent right-of-way. However, some additional properties would need to be acquired for construction and are accounted for in estimated acquisitions and in the project limits depicted in the conceptual design drawings in Draft EIS Appendix F.

Temporary construction easements provide for temporary use of a property during construction. These easements might be needed along the EVLE Project corridor. Once construction is complete, the property would be restored to its previous condition, and the easement would be terminated. These parcels are not included in this analysis because they would not permanently displace existing uses, and they are not anticipated to substantially disrupt existing uses. Additionally, the location and extent of temporary construction easements are subject to change as the design of the project progresses.

4.2 No Build Alternative

The No Build Alternative would not require any property acquisitions. If the EVLE Project is not built, there would be no light rail related displacements or relocations of the existing properties in the corridor.

5 RELOCATION OPPORTUNITIES

Sound Transit researched market conditions for available residential and commercial real estate in the city of Everett, city of Lynnwood, and Snohomish County. Property availability will change over time, but this research, described below, indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity. Some affected properties with unique characteristics or uses, such as aerospace facilities and public facilities, could be difficult to relocate and could require construction of new facilities.

Currently, there is adequate retail, office, and industrial space available in the Seattle metro area (King, Kitsap, Pierce, and Snohomish Counties) to accommodate the spaces that could be displaced by the EVLE Project. In some instances, zoning restrictions may make it difficult for some businesses to relocate in the same area, particularly industrial businesses.

Currently, available residential units in the Seattle metro area also exceed the number of units potentially displaced, and there is a sufficient supply of housing similar in size and quality for renters in the study area. However, depending on market conditions and individual

circumstances, the potential relocation properties may cost more. Section 6 of this report describes how Sound Transit would accommodate this difference.

Sound Transit would offer relocation assistance that includes compensation and supporting services that consider the needs of those being relocated to help reduce inconveniences or hardships. Sound Transit would also satisfy federal and state requirements for residential relocation, which define a “comparable replacement dwelling” as follows (42 United States Code 4601(10)):

- Decent, safe, and sanitary.
- Adequate in size to accommodate the occupants.
- Within the financial means of the displaced person.
- Functionally equivalent.
- In an area not subject to unreasonable adverse environmental conditions.
- In a location generally not less desirable than the location of the displaced person’s dwelling with respect to public utilities, facilities, services, and the displaced person’s place of employment.

To meet these requirements, Sound Transit may identify relocation properties that are in better condition and of higher value than the properties being acquired. If so, tenants may be eligible for a rent supplement.

5.1 Commercial and Industrial

Table 5-1, Table 5-2, and Table 5-3 summarize the 2024 commercial and industrial vacancy rates in the city of Lynnwood, Snohomish County, and the city of Everett, respectively. There is a suitable amount of office space in all sub-markets (neighborhood-level real estate markets) along the alignment due to the impact the COVID-19 pandemic had on in-person office attendance regionally. Retail and industrial sub-market inventory has stayed consistent following the pandemic, especially in Lynnwood. The rate at which new Seattle metro office space is leased has stayed consistent after a rise of vacancies during the pandemic (Cushman and Wakefield 2023a).

The COVID-19 pandemic resulted in higher office vacancy rates, further exacerbated by layoffs and a slowing of the tech sector in the Seattle metro area. Within Seattle suburban sub-markets the office vacancy rate has doubled since the fourth quarter of 2022, creating more available office space, especially as regional tech firms vacate subleased office space. Suburban markets have been more volatile in the delivery of new office space and the rate at which it is leased than central Seattle markets post-COVID-19; however, rents have stayed stagnant since COVID-19, with a small decrease in 2023 (Cushman and Wakefield 2023b).

Lynnwood has the highest commercial/industrial vacancy rate of the three jurisdictions with a vacancy rate of 13.6% in the first quarter of 2024 (Table 5-1), versus 6.5% in Snohomish County (Table 5-2) and 6.8% in Everett (Table 5-3). The vacancy rates in Lynnwood are consistent with the suburban Seattle vacancy rate of 16.1% (Cushman and Wakefield 2023b) while Everett and Snohomish County have less available inventory than the rest of the Northend sub-market (i.e., Lynnwood and Everett). There is suitable replacement office inventory within Lynnwood, Everett, and Snohomish County, as well as in several other Seattle metro area sub-

markets, for office space that would be displaced by the EVLE Project. As of the fourth quarter of 2023, there are no major office projects under construction in the Northend submarket, which may increase demand in the future to relocate to other Seattle metro area markets.

In the fourth quarter of 2023, Seattle metro area retail vacancy rates were under 3.0% for the 22nd consecutive quarter. As shown in Table 5-1 and Table 5-2, Lynnwood and Snohomish County both have lower vacancy rates than King County, near the Seattle metro area average of 2.9% (Kidder Matthews 2023a), while the city of Everett has a retail vacancy rate slightly above the Seattle metro area average at 3.8% (Table 5-3). There are approximately 9.8 million square feet of retail space available in the Seattle metro area (CoStar 2024c), which is a suitable amount of retail space to accommodate those businesses displaced by the EVLE Project. Sound Transit would perform a case-by-case assessment of the available retail inventory and the displaced retailer's specific needs.

The Seattle metro area industrial market has remained volatile since the COVID-19 pandemic; however, the Edmonds-Mountlake Terrace-Lynnwood area had one of the metro area's lowest vacancy rates in the fourth quarter of 2023 (Cushman and Wakefield 2023c). Snohomish County has the highest vacancy rate of the three jurisdictions the EVLE Project is in, with a 2024 vacancy rate of 4.3% or nearly 2.6 million square feet (see Table 5-2). Everett has a vacancy rate of 3.7% or nearly 1.2 million square feet (see Table 5-3), and Lynnwood has a vacancy rate of 2.6% or 72,000 square feet (Table 5-1). Lynnwood has a significantly smaller industrial inventory than Everett or Snohomish County, with much of the existing industrial inventory near the EVLE Project being related to the aerospace industry and located near Paine Field and the Boeing's Everett Production Facility.

For the first time since 2019, there was a lower number of industrial units leased than new industrial units constructed in 2023, following inventory growth in 2022 and fewer sales in 2023 (Kidder Matthews 2023b). Within the Seattle metro area, there are approximately 23 million square feet of vacant industrial space (Kidder Matthews 2023b). While there is a suitable amount of industrial space in other suburban markets, most notably in Bellevue and Redmond, there are fewer areas suitable for airport-dependent industrial uses (Cushman and Wakefield 2023c).

There is undeveloped industrial land in north Snohomish County in the Arlington and Marysville submarkets (Kidder Matthews 2023b), offering opportunities for displaced businesses to complete new build-to-suit projects. However, the transportation and logistical advantages of Everett and unincorporated Snohomish County are a challenge for relocating aerospace businesses currently adjacent to Paine Field and Boeing's Everett Production Facility.

Table 5-1 Lynnwood Commercial and Industrial Vacancy Rates

Property Type	Vacancy Rate	Amount of Vacant Space (Square Feet)
Office	13.6%	403,627
Retail	2.5%	208,320
Industrial	2.6%	72,312

SOURCE: CoStar (2024a, 2024b, 2024c), calculated for Quarter 1 2024.

Table 5-2 Snohomish County Commercial and Industrial Vacancy Rates

Property Type	Vacancy Rate	Amount of Vacant Space (Square Feet)
Office	6.5%	1,428,897
Retail	2.7%	1,050,941
Industrial	4.3%	2,582,215

SOURCE: CoStar (2024a, 2024b, 2024c), calculated for Quarter 1 2024.

Table 5-3 Everett Commercial and Industrial Vacancy Rates

Property Type	Vacancy Rate	Amount of Vacant Space (Square Feet)
Office	6.8%	460,940
Retail	3.8%	385,828
Industrial	3.7%	1,158,315

SOURCE: CoStar (2024a, 2024b, 2024c), calculated for Quarter 1 2024.

5.2 Residential

Table 5-4, Table 5-5, and Table 5-6 summarize residential property availability within the corridor based on the most recently available census data. The city of Everett is the only jurisdiction of the three to have a majority of housing units occupied by renters, though the margin is slim.

The city of Lynnwood has the highest residential vacancy rate of the three jurisdictions. However, the number of rental units available is higher in Snohomish County and Everett, and those markets could accommodate some of the rental units displaced by the EVLE Project in Lynnwood. Additionally, anticipated residential developments in Lynnwood will increase supply with more rental units, which would also help to accommodate rental units displaced throughout the EVLE Project corridor.

Everett and Lynnwood have fewer available owner-occupied units than the total number of owner-occupied units that would be displaced by the EVLE Project (Table 4-1 to Table 4-9). Snohomish County (unincorporated) has a suitable amount of available owner-occupied units, however, and would likely accommodate much of the owner-occupied inventory displaced by the EVLE Project in Everett and Lynnwood. Relocation sites are expected to be available in the same general area, but not necessarily in the same neighborhood. Depending on market conditions and individual circumstances, the replacement property may cost more.

Table 5-4 Lynnwood Residential Property Availability for Relocation

Property Type	Vacancy Rate	Occupied Units	Approximate Number of Available Units
Owner Occupied	0.4%	8,633	35
Renter Occupied	7.2%	8,001	576

6 SOUND TRANSIT REAL PROPERTY ACQUISITION AND RELOCATION POLICY, PROCEDURES, AND GUIDELINES SUMMARY

Sound Transit has notified property owners whose property may be directly affected by any of the alternatives. With the exception of certain early acquisitions that would be reviewed for approval by the Federal Transit Administration (FTA), property acquisition generally would not begin until the environmental process is complete, and the Sound Transit Board selects the alternative to build after publication of the Final EIS and FTA issues the Record of Decision (ROD). The tables and maps in Attachment A and Attachment B identify each potentially affected parcel based on the project's conceptual design. Once the project is approved, Sound Transit's assistance and advisory services would work closely with affected residents, businesses, and organizations to determine their relocation needs and preferences.

A public agency must pay "just compensation" to property owners for land and improvements acquired for public purposes, including measurable loss in value to any remaining property as a result of a partial acquisition. "Just compensation" must not be less than the fair market value of the property acquired. This value includes any measurable loss in value to the remaining property as a result of a partial acquisition. For instance, Sound Transit would compensate for the permanent loss of parking lots resulting from partial property acquisition by compensating the property owner or by providing replacement parking. Sound Transit would pay for normal expenses of sale, including escrow fees, title insurance, prepayment penalties, mortgage release fees, recording fees, and typical costs incurred as part of conveying title.

Agency staff will be available to answer questions and provide additional information regarding just compensation, relocation advisory services, and relocation expenses, as well as the timing of the processes. The agency would also provide information on the current availability, purchase price, or rental rates of comparable replacement properties. Sound Transit uses interpreters to help those with limited English proficiency understand their choices and options. Relocation assistance applies to all residential relocations, regardless of ownership status.

Affected residents and businesses owners would make the final decision on their relocation sites. Generally, owners would not have to relocate until they have been paid the agreed-upon purchase price or an amount equal to Sound Transit's estimate of just compensation has been deposited with the court. Businesses and tenants would not be required to move or relocate without receiving at least 90 days notice via written communication.

Relocation benefits depend on the circumstances of each affected resident or business. In addition to compensating owners for property, other benefits and compensation could include residential moving expenses and replacement housing payments, nonresidential moving expenses, and other eligible expenses. See Sound Transit's Property Acquisition and Residential/Non-Residential Relocation handbooks for detailed compensation and acquisition procedures (Sound Transit 2023a, 2023b).

7 POTENTIAL MITIGATION MEASURES

Sound Transit is committed to complying with all applicable federal, state, and local environmental regulations, following best management practices (BMPs), and designing the EVLE Project in a way that mitigates adverse impacts. As a result, mitigation measures are reflected in the design of Build Alternatives. This section identifies additional potential mitigation measures that would further reduce or eliminate adverse effects. Final mitigation measures will be based on advanced design and will be included in the Final EIS and in FTA's ROD as environmental commitments for the project.

When developing the EVLE Project alternatives, Sound Transit used several measures to mitigate potential acquisition impacts. During the Alternatives Development phase, the alternatives under consideration were analyzed for potential property impacts, and the Build Alternatives evaluated in this Draft EIS were ultimately chosen, in part, to reduce impacts to residents and businesses. During conceptual design, the alternatives were configured to meet design and programming requirements while minimizing acquisitions, displacements, and relocations, to the extent feasible. Property impacted temporarily for construction would be restored to as near to prior condition as practicable.

Sound Transit's policies and procedures comply with the federal Uniform Relocation Assistance and Real Property Acquisitions Act of 1970 (as amended) and Washington State's relocation and property acquisition requirements. Sound Transit may provide advisory services to property owners above the minimum requirements of federal and state law.

Sound Transit would compensate affected property owners according to the provisions specified in Sound Transit's adopted Real Property Acquisition and Relocation Policy, Procedures, and Guidelines (Sound Transit 2017). Benefits would depend on the level of impact, available relocation options, and other factors.

Everett Link Extension

ATTACHMENT A

Tables of Affected Parcels

Potentially Affected Properties

Building and operating the Everett Link Extension (EVLE) light rail would require acquiring property for right-of-way and other facilities and presumes displacing and relocating some of the existing uses. This attachment lists likely property acquisitions based on current conceptual designs and the existing conditions at the time the analysis was conducted. The properties listed and mapped in this attachment should not be interpreted as the final determination regarding property acquisitions because the list will be updated as the project design is refined. Accordingly, the number and type of displacements could vary between what is disclosed in this Draft EIS and what is ultimately required. For example, current vacant properties might be developed between the publication date of this EIS and the beginning of project construction.

There are two types of property acquisitions presented together in the list of affected properties:

- Partial acquisitions, which would acquire part of a parcel and generally would not displace the existing use. In some instances, it is possible that some of the businesses or residential units on a parcel would be displaced.
- Full acquisitions, which would acquire the full parcel and displace the current use.

Full acquisitions include parcels that might not be fully needed for the project but would be affected to the extent that existing uses would be substantially impaired, such as by loss of parking or access. This includes parcels that would be acquired for construction activities, although in some cases all or part of the parcel would be available for other use or redevelopment after construction is complete.

Table A-1 through Table A-11 present information on the affected properties by alternative for each alignment segment and OMF site. The tables list map ID numbers that correspond to the exhibits in Attachment B, Snohomish County Assessor's Office parcel identification numbers, and addresses. Properties have a "Yes" in the column for alternatives that affect the property and "No" for alternatives that do not affect the property. The tables, as well as the exhibits in Attachment B, do not distinguish between full and partial acquisitions and reflect potential acquisitions required to connect to all alternatives in adjacent segments. In addition to the potential property acquisitions described, the project would also require temporary construction easements and use of public right-of-way not listed here.

Some parcels affected by alignment and station alternatives would also be affected by OMF North site alternatives. To not double count those parcel impacts, only the additional affected parcels and displacements for the OMF North site alternatives are included in the numbers presented in Table 4-9 above; however, they are shown in Table A-9 through Table A-11 below and in the exhibits in Attachment B.

Potential Design Refinements: Preliminary List of Additional Affected Parcels

Potential Design Refinements

In addition to the alternatives described in this report, the Draft EIS provides a qualitative evaluation of a number of potential design refinements that could reduce overall project cost if applied to alignment and station alternatives. Types of design refinements that could be considered include:

- Altering the guideway profile by lowering the elevated guideway or changing the structure type from an elevated guideway to retaining supported or at-grade guideway to reduce structural and construction costs.
- Maximizing the use of existing transportation right-of-way to reduce property acquisitions and associated costs, by shifting the alignment, moving or consolidating supporting guideway infrastructure, or using space below the elevated guideway for stormwater ponds.
- Relocating special trackwork (such as crossovers³) to areas that would have lower construction costs and/or reduced impacts.
- Relocating or removing maintenance (hi-rail⁴) access points.

The design refinements identified to date that could be considered in each segment, along with potential changes in impacts, are described in Draft EIS Chapter 4. Potential changes in impacts specific to acquisitions, displacements, and relocation are also described in Section 4.1.1.3 above.

The parcels that may be impacted as a result of these potential design refinements are not yet known. Table C-1 provides a preliminary list of additional parcels that may be affected by design refinements. If Sound Transit decides to include these refinements as part of the project prior to the Final EIS, they would be reflected in the Final EIS conceptual design plans and analysis.

Table C-1 Preliminary List of Additional Affected Parcels

Parcel ID	Site Address

³ Crossover tracks connect two parallel tracks and allow trains to change safety from one track to another.

⁴ Hi-rail vehicles are specialized vehicles that can operate on both rail tracks and along conventional roads. These vehicles are used for track, guideway, and overhead catenary system inspection and maintenance.
