Summary

The purpose of this Hazardous Materials Technical Memorandum is to identify potentially contaminated sites of concern on or near the Bus Base North site prior to project construction so that these areas can be avoided or the effects of the contamination mitigated. This technical memorandum also identifies likely hazardous materials that would be used or generated through operation of the facility. This analysis defines a hazardous material as any media such as soil, groundwater, or building materials that contain detectable concentrations of state or federally regulated contaminants. This memorandum summarizes the research that was conducted to identify both current and historic land uses in the project vicinity that may have resulted in releases of hazardous materials and reported releases of hazardous materials.

The research did not identify sites of concern in the one-eighth-mile study area. Adjacent facilities that have been or are hazardous waste generators either had no violations or had violations that resulted in written informal enforcement for which compliance was promptly achieved. The Northshore School District Transportation Center, adjacent to the site to the north, has four underground fuel storage tanks that were installed in 2009 with no known releases. Based on the absence of known or suspected contamination and the lack of sites of concern, no properties within the study area were determined to need further evaluation. In addition, no measures to mitigate the risk are needed.

1 INTRODUCTION

1.1 Overview

As was identified in the *Sound Transit 3 (ST3) System Plan* (Sound Transit 2016), Sound Transit is planning for a new bus operations and maintenance facility (Bus Base North [BBN]) located near the Interstate I-405/State Route (SR) 522 corridors to service vehicles operating on the I-405 and SR 522/NE 145th bus rapid transit (BRT) lines and ST Express buses. The site identified for development of the BBN project is in the Canyon Park subarea of Bothell along 20th Avenue SE, as shown in **Figure 1-1**.

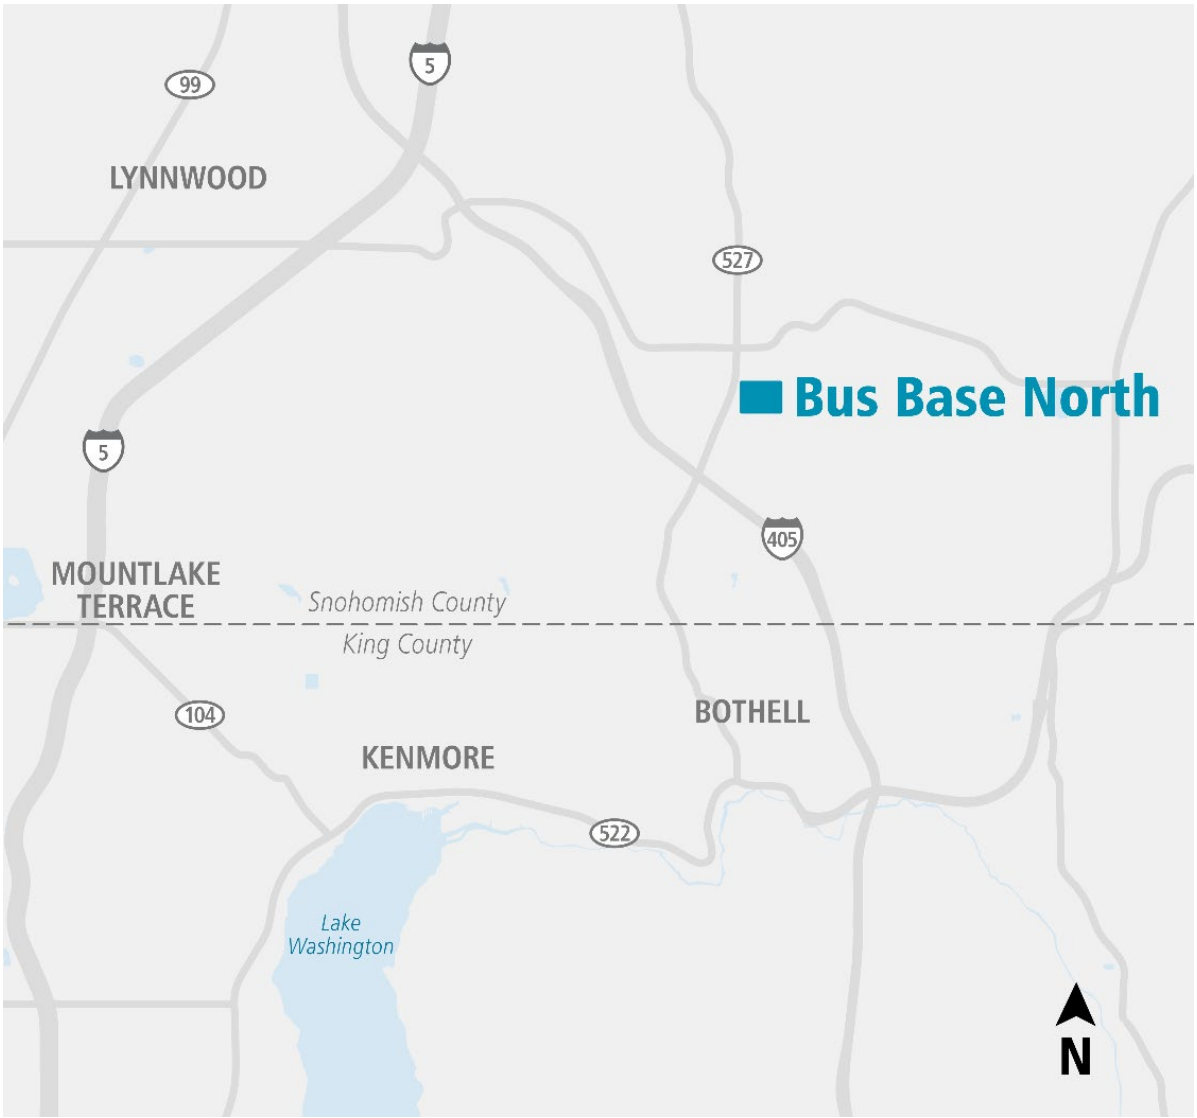

Figure 1-1 Bus Base North project vicinity

The BBN project would provide support for up to 80 articulated (60 feet in length) and 40 double-decker or standard transit coaches (40 feet in length). The fleet would primarily be diesel/electric hybrid buses, but approximately 10 of the buses would operate with battery-electric propulsion when the project opens. The facility would be configured to allow for the future potential conversion of the bus fleet to battery-electric buses if Sound Transit determines that to be an appropriate vehicle technology. The BBN project would include construction of the following:

- A maintenance and operations building
- Storage/parking for the 120 buses at ground level
- An aboveground, second-story parking deck to be provided for all employee and visitor parking, which would also provide cover for the bus parking area below
- A security guard house at the bus entrance gate to ensure that all vehicles entering the bus traffic areas have authorization to enter
- A bus wash building to accommodate a fully enclosed, two-bay, drive-through bus wash operation
- A fueling facility, including a support systems building and canopy-covered fueling lanes
- Stormwater facilities as needed to address regulatory and design requirements
- Utility and street connections

Sound Transit is expected to select a design/build contractor for the project in 2021. Following selection, the design/build contractor would develop the detailed construction documents for the project and permit applications would be submitted to the City of Bothell and other permitting agencies. Construction is anticipated to start in 2021 and to be completed in 2023 prior to the start of BRT services in 2024.

1.2 Purpose of technical memorandum

The purpose of this Hazardous Materials Technical Memorandum is to identify:

- Potentially contaminated sites of concern on or near the BBN site prior to project construction so that these areas can be avoided or the adverse impacts of encountering or disturbing the contamination can be mitigated as needed
- Likely hazardous materials to be used and wastes to be generated through operation of the facility

Mitigation measures to address probable adverse impacts are identified, as appropriate.

2 PROJECT DESCRIPTION

The BBN facility is a bus operations and maintenance facility on a 12.5-acre site, programmed and sized to maintain, service (including fuel and wash), and store up to 120 buses. These buses include the fleet that would operate on the proposed I-405 and SR 522/NE 145th BRT lines, as well as ST Express buses from existing lines of bus service. The site plan and layout of the facility are based on a conceptual level of design. These site plans are shown in **Figure 2-1** and **Figure 2-2**.

2.1 On-site facilities

The following provides a description of the proposed facilities on-site.

2.1.1 Maintenance and operations building

As shown in the conceptual site plans, the maintenance and operations building would be the primary structure on-site with a total building footprint of approximately 58,000 square feet. The maintenance and operations building would include two levels. The first floor is anticipated to include approximately 57,000 square feet of floor area, and the second floor is anticipated to include approximately 19,000 square feet of floor area, for a total floor area of approximately 76,000 square feet. The ground level is expected to house shop and maintenance bay functions and maintenance offices, while the operations offices, dispatch areas, driver areas, and administrative functions would be located on the second floor. The building would also include an enclosed paint booth (for vehicle touch ups, damage repairs, and full coach repainting) designed in accordance with regulatory requirements.

2.1.1.1 Hazardous materials from operations

The maintenance and operations building would be expected to house and generate the bulk of the hazardous materials associated with the maintenance of buses. Hazardous materials would likely include petroleum lubricants, machinery cleaning solvents, on-board fire suppression system recharge units, engine coolants and refrigerants, lead-acid batteries, compressed gas cylinders, hydraulic hoist fluid, paints (paint booth), fire extinguishers, rechargeable batteries, and general cleaning supplies. In the future, if a battery-electric bus fleet is stored on-site lithium-ion batteries would be expected to be used and would be maintained and stored on-site. Both new and waste versions of these hazardous materials would be stored within the maintenance and operations building. In addition, the maintenance and operations building would have a dedicated fire suppression system that, depending on the fire code requirements, could be a potential source of contaminants. Because of the types of flammable materials used or stored in the maintenance building, the fire suppression system could be required to use materials other than just water, such as foam, which uses organic solvents, or a high-pressure carbon dioxide extinguishing system..

Figure 2-1 Bus Base North – Ground-level site plan

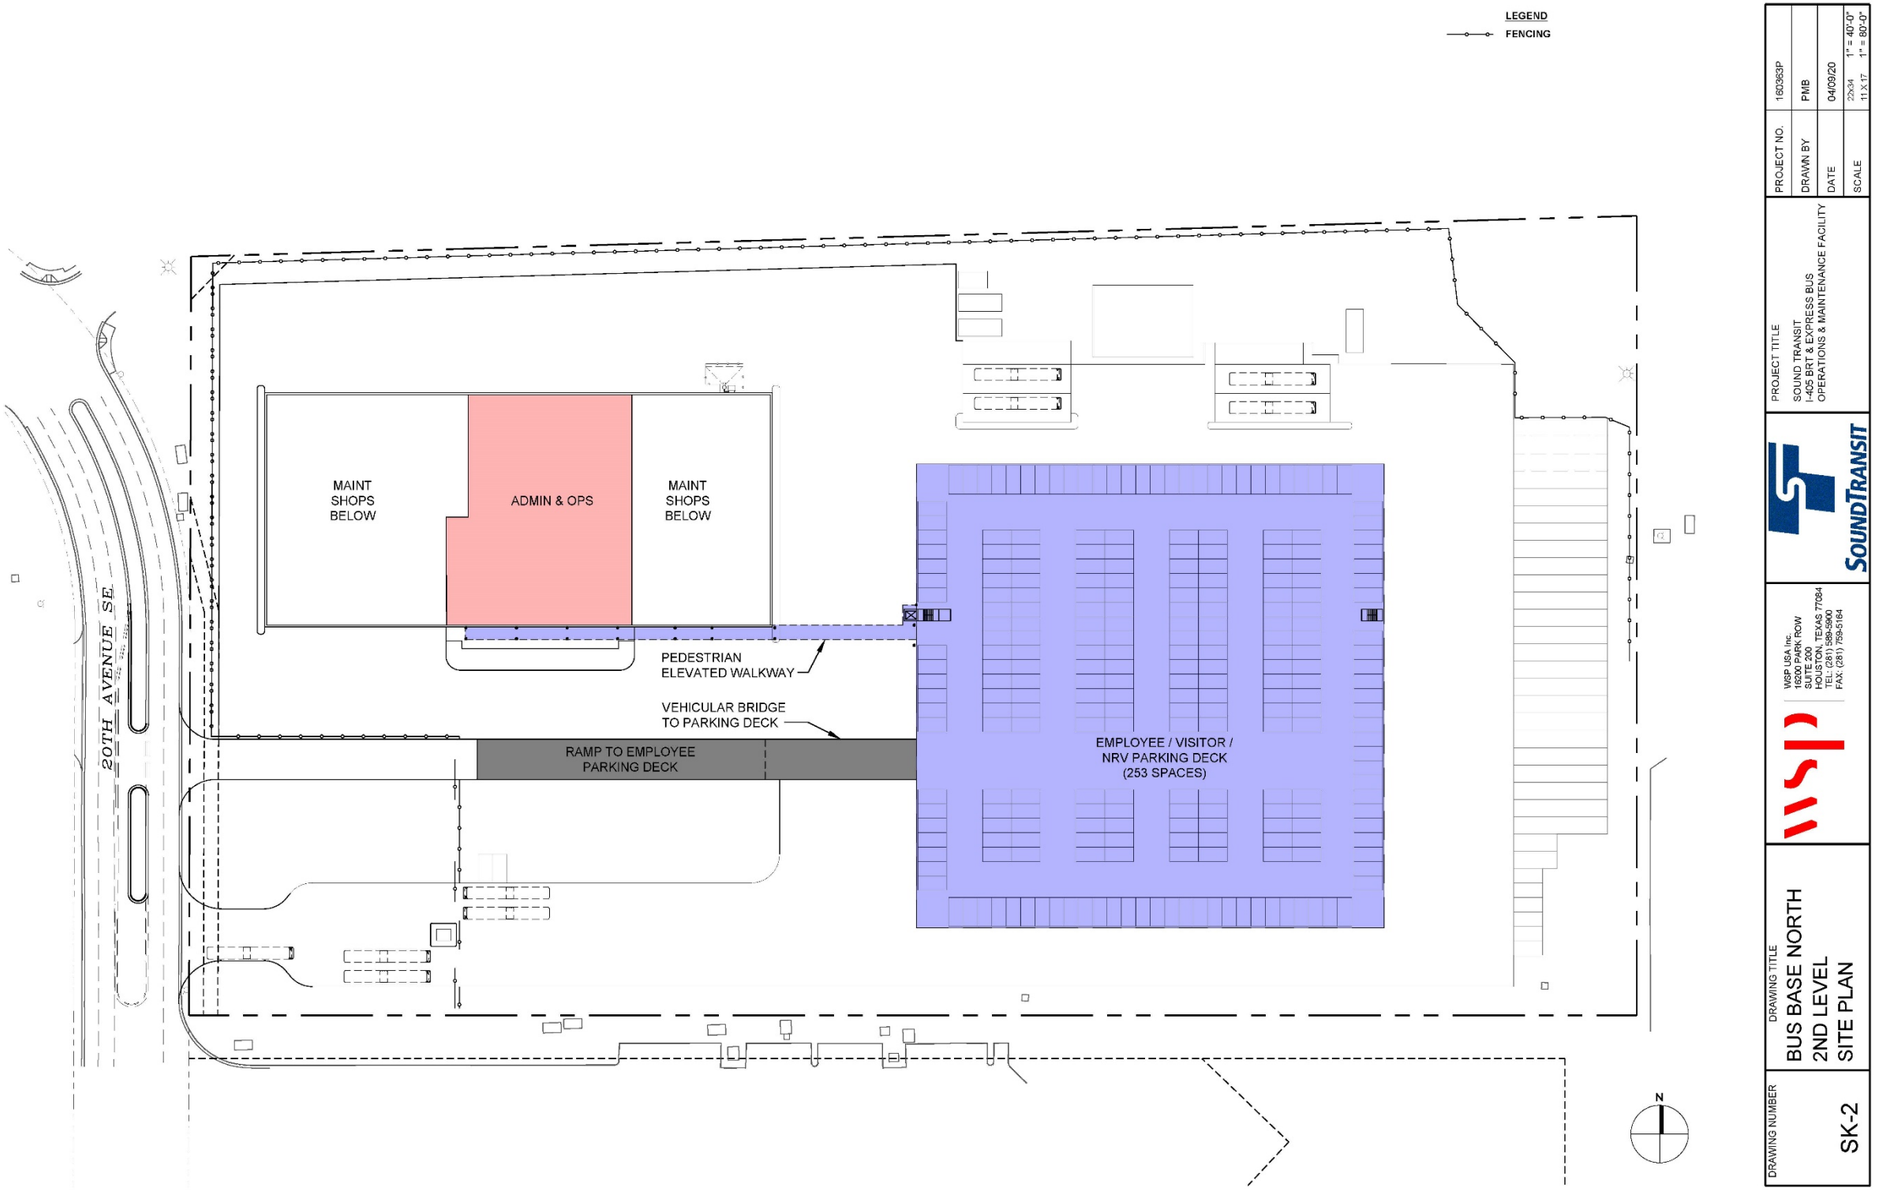

Figure 2-2 Bus Base North – Second-level site plan

2.1.2 Bus storage and elevated parking deck

Storage/parking for the 120 buses would occur on the ground level in the eastern portion of the site, set back from 20th Avenue SE. Access to the bus parking area would be from a bus-only entrance/exit driveway from 20th Avenue SE along the southern property boundary. The bus parking area includes space for the electrical charging infrastructure that would be needed for the potential future conversion to a battery-electric bus fleet.

Above the ground-level bus parking area, a second-story parking deck with approximately 250 parking stalls and approximately 105,000 square feet in area, would be provided for employee and visitor parking and non-revenue vehicles (vehicles used by staff for service and other non-customer transportation uses). This parking deck would cover the bus parking area and would provide weather protection for the parked buses, an overhead structure to attach lighting for the bus parking area, and a structure to attach potential future overhead electric charging equipment. Automobile access to the parking deck would be from a second driveway from 20th Avenue SE, just north of the bus entrance/exit driveway, to a dedicated drive and ramp. The parking deck would likely include an elevated pedestrian walkway directly into the second floor of the maintenance and operations building and would also include an elevator and egress stairs, as required by code, to provide pedestrian access to the ground-level bus parking area below.

2.1.2.1 Hazardous materials from operations

No hazardous materials are anticipated to be routinely used or stored either under or on the elevated parking deck. Accidental spills, or drips, from buses parked under the parking deck and from vehicles parked on the elevated parking deck could occur. For these instances, emergency spill cleanup kits would be staged at these locations. Wastes generated from cleanup activities, such as paper or cloth materials used to clean up a spill, would likely be removed and disposed of with other wastes from the maintenance and operations building.

2.1.3 Security guard house

An approximately 100-square-foot security building would be located at the bus entrance/exit driveway to monitor access and help control the ingress and egress of buses at the site. Entrance and exit gates would be located on each side (to the north and south) of the security building. Two security guard parking spaces would be provided just northeast of the security building.

2.1.3.1 Hazardous materials from operations

The only hazardous materials anticipated to be stored at the security house would be fire extinguishers and rechargeable batteries for communications equipment.

2.1.4 Fuel and wash buildings

A bus wash building, approximately 4,500 square feet in size, would accommodate a fully enclosed, two-bay, drive-through bus wash operation.

A fueling facility would be provided, including an approximately 1,000-square-foot support systems building and an approximately 3,000-square-foot canopy over two fueling lanes. The support systems building would include lube tanks for fluids used at the fuel island, an air compressor to run the pumps and equipment at the fuel island, vacuum equipment used to clean the buses during servicing, computerized equipment for the fuel/fluid management systems, a custodial room, and staff restrooms. An area for aboveground fuel tanks would be sited to the north of the fueling facility building. The fuel tanks are proposed to be aboveground and double-walled for easier observation and maintenance purposes as well as for easier removal should the fleet be converted to an alternative fuel source in the future.

2.1.4.1 Hazardous materials from operations

Hazardous materials stored and used at the fuel building would include petroleum diesel for revenue service vehicles, unleaded gasoline for non-revenue service vehicles, spill cleanup kits, and cleaning supplies. The wash building would store and use detergents for exterior bus washing and cleaning supplies for interior bus cleaning and disinfection of the operator area.

2.2 Utilities and connections

The site would be equipped with an oil/water separator that would be connected to all sanitary sewer elements serving vehicle maintenance areas and where otherwise required by the Washington State Department of Ecology's (Ecology) *Stormwater Management Manual for Western Washington* (Ecology 2019) and the Alderwood Water & Wastewater District. This would include floor and trench drains in maintenance areas as well as the chassis wash areas. The bus washer system would be connected to a water reclaim system to reduce the water supply required for that function. Water and sanitary services would be tied to the Alderwood Water & Wastewater District services located along 20th Avenue SE.

Stormwater would be collected underground and detention would be provided in an on-site underground vault. Low-impact development practices, consistent with Ecology's *Stormwater Management Manual for Western Washington* (Ecology 2019), would be accommodated as space and site conditions allow. Stormwater would ultimately tie into the City of Bothell system via the adjacent ditches.

Communications and natural gas services for the site would be tied into utilities currently available in 20th Avenue SE. Electrical service would be coordinated with the local electrical service provider—the Snohomish County Public Utility District—who would extend service to the site, most likely along the southern portion of the property. While the use of battery-electric buses is being considered for the future, it is not currently planned for the initial construction at this facility. To accommodate battery-electric buses on-site it is anticipated that the area initially used to accommodate the aboveground fuel tanks (shown in **Figure 2-1**) would be removed and that area would be used for a small substation and battery area to provide the on-site power generation and storage needed to charge the bus batteries. It is anticipated that this area would be fenced for safety purposes.

Two site driveways/entrances would be provided from 20th Avenue SE to separate the bus and personal vehicle traffic. The primary fire department access would be through the bus entrance driveway. A secondary fire access would be provided through the employee parking entrance with an access point prior to the ramp up to the employee parking deck, as shown in **Figure 2-1**. To allow turns into and out of the facility from both driveways, the raised median that separates the

northbound and southbound lanes of 20th Avenue SE would be modified, including providing a break in the median for the employee entrance and shortening the median on the south end to allow buses to exit the facility. Required sidewalks would be provided along the site street frontage.

2.3 Site work

Prior to construction, the site would be cleared and grubbed to remove existing vegetation not intended to be protected (i.e., outside of wetland areas that would not be filled and the stream buffer area shown on **Figure 2-1** as being fenced). The site would also be graded as needed to properly support the development and provide adequate drainage for the site.

Reinforced concrete paving would be used for all driveways and bus and large maintenance vehicle parking areas. Limited areas of asphalt paving could be provided in areas trafficked by personal vehicles. Depending upon existing soil conditions, paving may be installed over a treated subbase, such as lime or cement stabilized soil.

The site would be equipped with lighting as required to support the 24-hour-per-day operations and as needed for security. Landscaping would be provided in designated areas and in accordance with local ordinances. Vegetation would be low maintenance and provided with irrigation. The entire yard area would be secured by fencing with control gates at access and egress points. While fencing materials could vary around the site, all fencing would be affixed at the base via concrete. Gates and access points would be equipped with a key card system, provided with intrusion detection, and would also comply with Bothell's requirements for fire and life safety access. Closed-circuit television cameras are anticipated to be used on the site.

Landscaping would be provided on the perimeter of the site in designated areas and in accordance with local ordinances. Existing trees would be preserved around the perimeter of the site where possible, and vegetation/landscaping would be provided in accordance with Sound Transit's design standards and would be low maintenance and provided with irrigation where needed.

3 METHODOLOGY

A hazardous material is a media such as soil, groundwater, or building materials with concentrations of chemicals above state or federally regulated cleanup levels. Hazardous materials may include pesticides, herbicides, toxic metals, chemicals, volatile chemicals, explosives, or low-level radioactive wastes. Hazardous materials can be classified in different categories based on laws and regulations that define their characteristics and use. These categories include hazardous waste, dangerous waste, hazardous substances, and toxic substances. Generally, hazardous waste is a waste with properties that make it dangerous or potentially harmful to human health or the environment. Hazardous wastes can be liquids, solids, contained gases, or sludges. They can be the by-products of manufacturing processes or simply discarded commercial products such as cleaning fluids or pesticides. Hazardous wastes fall into two groups: listed wastes and characteristic wastes. For this analysis, the term "hazardous materials" is intended to describe waste materials requiring special handling and disposal. The term "hazardous materials" is intended to describe all types of contaminated or hazardous media, including dangerous waste per the Washington Administrative Code (WAC) 173-303-070 through WAC 173-303-100), hazardous waste (40 Code of Federal Regulations [CFR] 261), problem waste (WAC 173-304), hazardous substances (42 United States Code [USC] 9601[14] and 40 CFR 116), and petroleum products.

The methodology presented below is similar to a Phase I Environmental Site Assessment (ESA) per ASTM 1527-13; the report format follows the Federal Transit Administration's guidance for technical reports.

3.1 Regulatory context

The federal and state policies and regulations applicable to hazardous materials are listed below.

3.1.1 Federal

- All Appropriate Inquiries, 40 CFR Part 312
- Clean Air Act
- Clean Water Act, 33 USC 1251 et seq.
- Comprehensive Environmental Response, Compensation, and Liability Act
- National Emission Standards for Hazardous Air Pollutants, 40 CFR Parts 61 to 71
- Oil Pollution Prevention, 40 CFR Part 112
- Occupational Safety and Health Act, 29 USC 651 et seq.
- Resource Conservation and Recovery Act, 42 USC 6901 et seq.
- Safe Drinking Water Act, 42 USC 300f et seq.
- Superfund Amendments and Reauthorization Act
- Toxic Substances Control Act, 15 USC 2601
- 40 USC 9601 et seq.

3.1.2 State

- Dangerous Waste Regulations, WAC 173-303
- General Occupational Health Standards, WAC 296-62
- Hazardous Waste Operations, WAC 296-843
- Minimum Standards for Construction and Maintenance of Wells, WAC 173-160
- Model Toxics Control Act Cleanup Regulation, WAC 173-340
- Safety Standards for Construction Work, WAC 296-155
- Sediment Management Standards, WAC Chapter 173-204

- Solid Waste Handling Standards, WAC 173-350
- Underground Storage Tank Regulations, WAC 173-360
- State Environmental Policy Act, WAC 197-11
- Water Quality Standards for Groundwaters of the State of Washington, WAC 173-200
- Water Quality Standards for Surface Waters of the State of Washington, WAC 173-201A
- Water Pollution Control Act
- Washington Contingency Planning and Facility Oil Handling Standards Regulations, WAC 173-180
- Washington Industrial Safety and Health Act

3.2 Study area

The study area for hazardous materials extends for up to one-eighth-mile (0.125 mile or 660 feet) from the boundary lines of the BBN parcel (**Figure 3-1**). The study area identified for hazardous materials includes the location where project-related construction would occur that would disturb the existing ground surface and subsurface soils and groundwater that could contain hazardous materials, as well as the likely maximum distance at which nearby contaminants could have traveled into the BBN parcel.

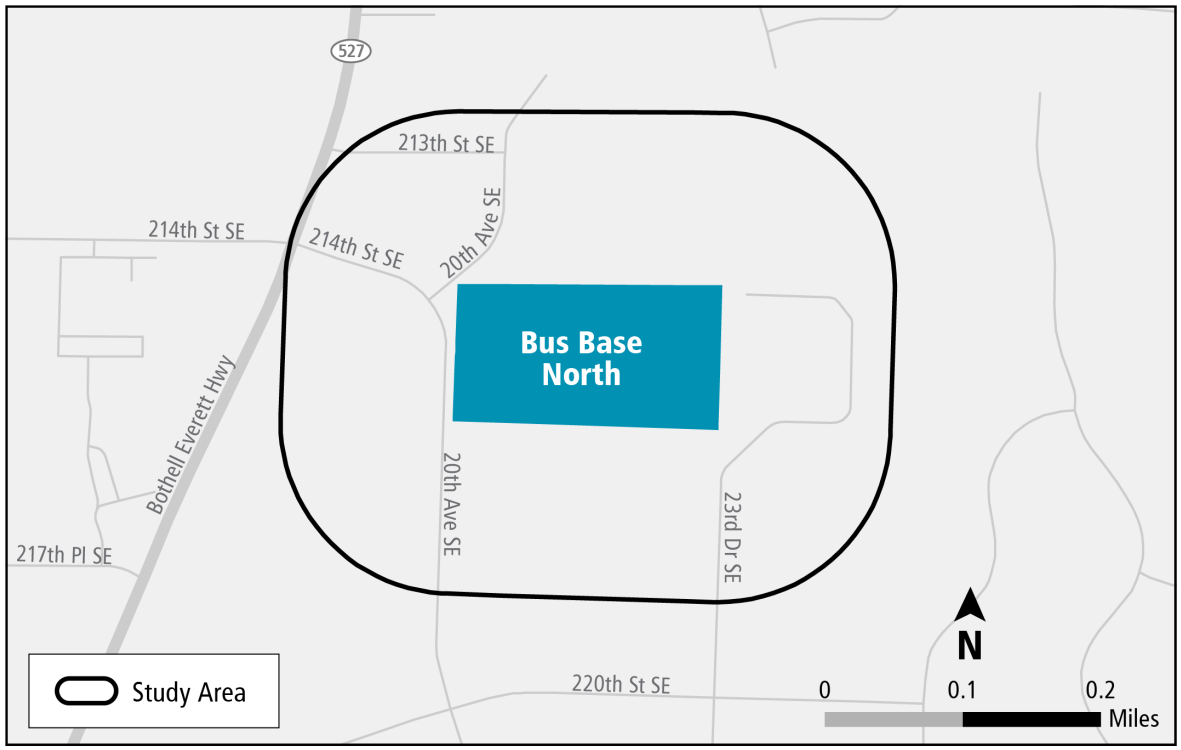

Figure 3-1 Bus Base North hazardous materials study area

3.3 Data sources

The data sources listed below were used in this assessment and include government mapping and databases, an environmental database report specific to this study area, previous site investigations, and a field reconnaissance.

3.3.1 Geologic and groundwater review

Geologic and groundwater conditions in the study area were identified through a review of:

- United States Geological Survey (USGS) geologic mapping
- Washington State Department of Ecology (Ecology) well logs
- Natural Resources Conservation Service recent soil survey
- Ecology's database of known groundwater contamination sites

3.3.2 Historic and existing land use review

Past and present land uses in the study area were evaluated for potential sources of hazardous materials. This evaluation included a search of local, state, and federal regulatory databases to identify sites that currently or previously handled, stored, transported, released, or disposed of hazardous or regulated waste, as these sites are potential sources of hazardous materials contamination. Contamination on-site can result from past uses of the site and in the study area where contamination could migrate into the site. The assessment determined past and current property uses and ownership, as well as conditions that may be indicative of releases or potential releases of hazardous substances in the project area.

Available historical aerial photographs and USGS topographic maps were reviewed to provide an understanding of past occupants, businesses, or land uses that may have affected the soil or groundwater within the study area. Historical mapping files were provided by Environmental Data Resources, Inc. (EDR), which are included electronically in Appendix A. Existing land uses were identified based on aerial imagery and the site reconnaissance described in Section 3.3.5.

3.3.3 Government environmental records review

To identify potential contaminant sources a review was conducted of available government environmental records of properties with prior violations within the hazardous materials study area, such as reporting requirements, illegal dumping, or releases of contaminants that may affect soils or groundwater. Database records were provided by EDR and search results are included in Appendix A, which is provided electronically. The database search was performed for listed sites within 1 mile of the study area in accordance with ASTM E1527-13 standards. Ecology's on-line database of cleanup sites was also reviewed.

3.3.4 Previous site investigations

To identify potential hazardous materials on-site and within the study area, recent Phase I and Phase II ESAs performed for the BBN site were reviewed.

3.3.5 Site reconnaissance

On July 31, 2019, a site reconnaissance was conducted to verify database information and identify potential sources of contamination not identified in the database review. The site reconnaissance was conducted by an environmental professional with experience completing similar work. Field work was performed within the BBN site and from publicly accessible locations immediately adjacent to the site.

3.4 Impacts assessment

The following describes the methodology used to identify potential long-term and construction impacts from the BBN project.

3.4.1 Construction impacts

All of the resources listed above documenting known hazardous material contamination were reviewed within the study area to identify whether hazardous material contamination was known to exist on the project site and the likelihood that construction might encounter those materials. The analysis involved consideration of the project construction footprint and methods, as well as maximum excavation depths, designs, and techniques.

3.4.1.1 Site screening and ranking

The evaluation process screened sites by eliminating those that would pose no risk, thus not warranting further investigation, and identifying those that the project would likely encounter during construction. A risk level was then applied, ranking the sites as low, moderate, or high with respect to a combination of: 1) likelihood of project interaction (impact) and 2) the complexity of that impact (e.g., localized versus widespread soil or groundwater contamination).

The following criteria were used to eliminate sites identified in the EDR report from further screening and focus the analysis on those sites listed that have a high likelihood of interacting with the project (EDR 2019a):

- Sites listed in databases that document a site that uses hazardous materials or generates Resource Conservation and Recovery Act hazardous wastes as part of their business but the database listings do not document a release of hazardous materials into the environment. These sites were eliminated from further screening due to a very low likelihood of interaction with the project.

- Sites that have underground or aboveground fuel storage tanks with no documented releases of fuels or their chemical constituents into the environment. These sites were eliminated from further screening due to a very low likelihood of interaction with the project.

- Sites that are only listed in Ecology's database as having applied for and received coverage under Ecology's construction stormwater general permit. These sites were eliminated from further screening due to the temporary use of the stormwater general permit, not a continuing source of sediment release.

Low risk sites

Low risk sites are where the hazardous materials concern is related to historical activities, but contamination has been remediated or the likelihood that contamination would be encountered during project construction and result in effects to human health, cost increases or construction delays is low.

Moderate risk sites

Moderate risk sites are where: past or present land uses have used or stored hazardous materials; sites contaminated by known, adjacent contamination sources that would be acquired for project construction; and sites for which land use information is not sufficient to determine the likely presence of hazardous materials that could be encountered during project construction.

High risk sites

High risk sites are where: contamination is known to exist from past or present uses and where all or a portion of the site (where contamination is known) would be acquired as part of the project; where contamination would be expected to be encountered during project construction and would require extensive remediation for project construction to occur. High risk sites may pose an adverse environmental impact if soil, groundwater, or sediment contamination were encountered during construction and not properly managed.

3.4.2 Long-term impacts

For hazardous materials, the potential long-term impact from the on-going operations described above were considered, along with the likelihood for these actions to result in significant adverse impacts. Design features that would minimize the risk of hazardous material releases from the facility, whether currently proposed for the project or known regulatory requirements, were considered in this evaluation process.

3.4.3 Mitigation measures

If the site screening and ranking process identified one or more areas off-site presenting a high risk to the project, then further evaluation would be conducted to determine if appropriate mitigation measures are incorporated into the design (i.e., required through contract documents such as specifications), or readily available during construction. For example, soil sampling may be recommended prior to construction to identify areas where excavation could encounter soil contamination. Soil sampling and special handling procedures would be written into the construction specifications for unanticipated discoveries of contamination during the progress of construction.

4 EXISTING CONDITIONS

The following describes the existing context of the study area, which helps determine the likelihood of the project to encounter or disturb hazardous materials during construction, as well as the likelihood to generate a hazardous materials impact during operations.

4.1 Geology and hydrogeology

The general topography in the immediate vicinity of the BBN site is typical of glaciated landscapes in Western Washington—broad, fairly flat land bisected by seasonal and/or year-round small drainages and creeks (Snohomish County Public Works Department, undated). Elevations at the BBN site range from approximately 200 feet above mean sea level at the east end to approximately 100 feet above mean sea level at the west end (USGS 1953). Soils on the BBN site include Mukilteo muck (80 percent of the area) and Everett very gravelly sandy loam (20 percent of the area). Mukilteo muck is classified as very poorly drained and Everett very gravelly sandy loam is classified as somewhat excessively drained (Natural Resources Conservation Service 2019).

The BBN site is located within the North Creek subarea in the Cedar-Sammamish Watershed. According to Ecology records, North Creek is water quality limited for temperature, dissolved oxygen, bacteria, and bioassessment (i.e., its biological integrity is degraded). Groundwater elevations below ground surface (bgs) vary depending on the proximity to North Creek. A groundwater monitoring well near North Creek at 20th Avenue SE (approximately 3,000 feet south of the BBN site) had a recorded static groundwater elevation of 20 feet bgs, and a groundwater monitoring well approximately 500 feet north of the BBN site at the North Shore School District transportation facility had a recorded static groundwater elevation of 68 feet bgs (Ecology 2019b).

During a geotechnical investigation for the BBN property performed during summer 2019, on-site boreholes first encountered groundwater at depths ranging from 8 to 12 feet bgs (Shannon & Wilson 2019b).

4.2 Historic and existing land use review

4.2.1 Historical records review

The earliest available aerial photographs of the BBN site, from the 1940s, shows the SR 527 roadway with an alignment similar to today. Visible land uses in the study area from the 1940s are an agricultural use to the northwest of the BBN site with almost the entire area east of SR 527 as undeveloped forest land. Available aerial photographs and historical topographic maps from the 1950s show east-west roads originating from SR 527, similar to current roads, with rural residential land uses on both sides of SR 527. The BBN site continued to be undeveloped forest land.

By 1968, aerial photographs show that additional development has occurred on each side of SR 527 and the electrical substation north of the BBN site has been constructed. The BBN site continued to be undeveloped forest land, but some land clearing to the north had occurred. No noticeable changes in land use occurred between 1968 and 1980 except for some logging of the western portion of the BBN site and access road construction to the south.

Between 1980 and 1990, substantial land use changes occurred as the Canyon Park development to the south of the BBN site, including the Romac Industries building, was completed. During this time, the BBN site remained undeveloped but was cleared of trees. By 2006, the commercial facilities to the immediate south (northeast of Romac Industries) and the AGC Biologics building to the east of the BBN site have been constructed. The existing roadway network northeast of the BBN site has been constructed. An east-west temporary access road through the BBN site was in place to access the eastern portion of the property. In 2009, construction of the Northshore School District transportation facility adjacent to and north of the BBN site began. By 2017, all adjoining parcels have been developed with the BBN site remaining an undeveloped parcel within the surrounding Canyon Park development (**Figure 4-1**).

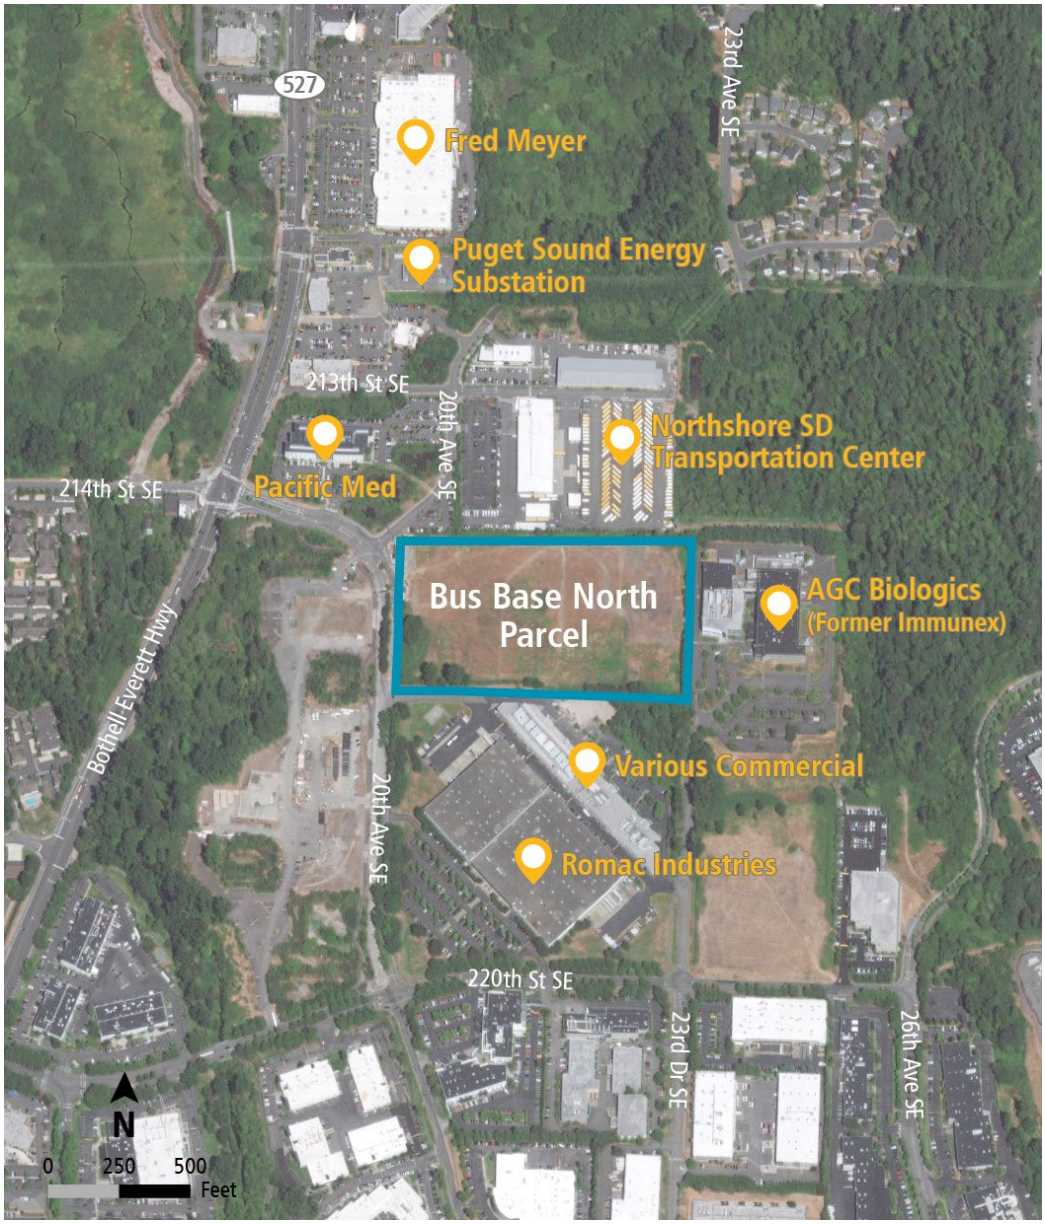

Figure 4-1 Existing land uses adjacent to the BBN site

As a matter of interest, **Figure 4-2** shows a photograph of an existing interpretive display of the development of the North Creek area near the BBN site.

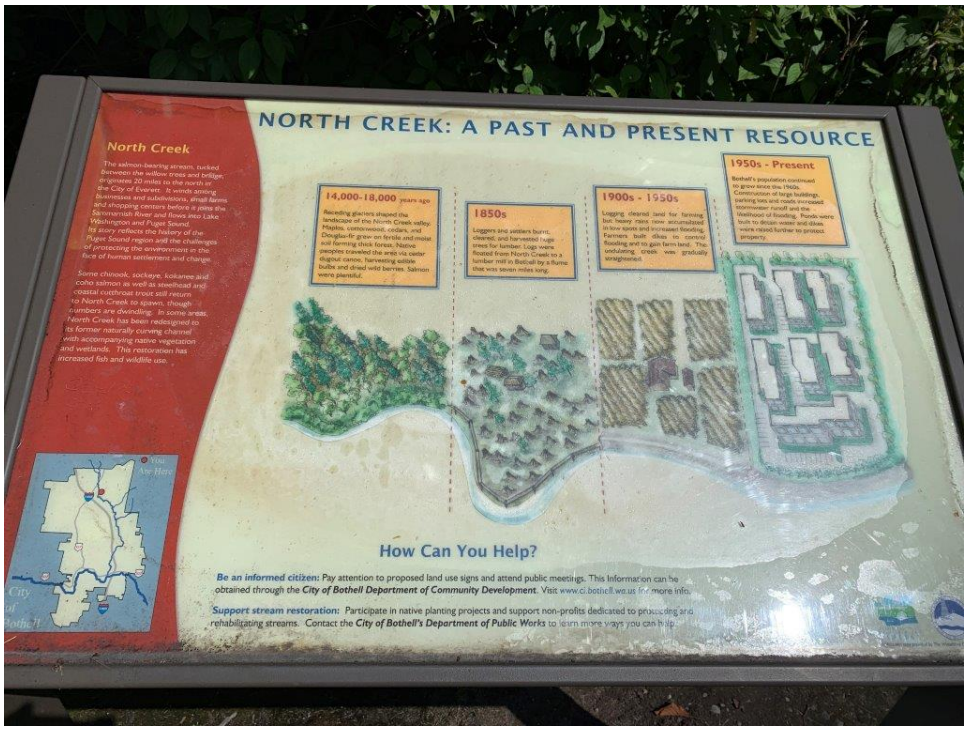

Figure 4-2 North Creek interpretive display

4.2.2 Existing zoning and adjacent land uses

The BBN site is zoned R-AC (Residential-Activity Center), OP (Office Professional), and LI (Light Industrial). Parcels to the north of the BBN site are zoned R-AC, OP, and LI, and have an MVSO (Motor Vehicle Sales Overlay). Parcels to the east, south, and west are zoned the same as the BBN site (City of Bothell 2018). Developed land uses identified during the site reconnaissance (Section 4.2.5) were consistent with these zones.

4.2.3 Government environmental database findings

The review of government environmental records identified 12 sites within the 0.125-mile (660 foot) study area that have a prior regulatory action reported, such as a record of underground storage tanks for fuel, a hazardous materials storage inspection, or an application for a construction general stormwater permit (EDR 2019a). None of the database listings reflect a release to the environment or indicate an environmental violation has occurred; the listing is related to a reporting requirement for the materials handled, stored, or treated on the site. The complete database list is included in the EDR report, which is provided electronically as Appendix A.

4.2.4 Previous investigations

Shannon & Wilson completed a Phase I ESA for Sound Transit for the BBN property in the fall of 2017 (Shannon & Wilson 2018). The Phase I assessment identified the following environmental conditions for the property:

- Within the 400-foot study area, eight sites were identified as being listed in a government record database with a prior regulatory action reported.
- Fill of unknown origin exists at the BBN site and, at a minimum, includes concrete, glass, and metal debris. The fill material represents a potential source of contamination and suggests that other waste materials may be present that could contain hazardous substances or petroleum products.
- Aerial photographs from approximately 2007 show unidentifiable objects were stored outdoors on an unpaved surface in the eastern portion of the property. No information was available to determine the nature of these items. The project site was previously owned by Immunex and therefore is associated with the adjacent Amgen/Immunex facility, which used hazardous substances and generated hazardous waste. As a result, a potential exists that hazardous substances or petroleum products were stored in the eastern portion of the site and are considered a potential source of contamination.

As a result of the Phase I findings, Shannon & Wilson completed a Phase II ESA for Sound Transit in the summer of 2019 (Shannon & Wilson 2019a). The soil borings conducted with the Phase II ESA investigation identified limited petroleum impacts within shallow soils (2 to 3 feet bgs) and within groundwater at the eastern end of the BBN site. Evidence of petroleum contamination was not encountered outside of the eastern end of the BBN site. Based on the analytical data and field observations, the Phase II ESA noted that petroleum contamination would likely be encountered during construction activities on the eastern end of the BBN site within shallow soils and groundwater, and may be encountered in other areas, particularly if debris is present within the fill.

None of samples collected had petroleum hydrocarbons in the soil or groundwater that exceeded Model Toxics Control Act Method A cleanup levels. Arsenic was detected above Method A cleanup levels within one soil sample in the north-central portion of the BBN site and within groundwater samples taken from two direct-push borings in the eastern portion of the BBN site. The groundwater sample taken from the western end of the BBN site did not contain detectable arsenic. The slightly elevated arsenic concentrations within groundwater are likely associated with soil chemistry that mobilize naturally occurring arsenic, which can be attributed to either the prevalence of peat within the subsurface of the BBN site or the petroleum contamination on the eastern end.

4.2.5 Site reconnaissance

A reconnaissance-level site visit of the hazardous materials study area was conducted on July 31, 2019. Evidence of the recently completed geotechnical investigation at the BBN site included areas of ground disturbance, 55-gallon drums of soil and groundwater awaiting disposal, and the installation of a groundwater well for groundwater level measurements in the center of the parcel (**Figure 4-3**). During the site reconnaissance, no additional sites of concern for hazardous materials were identified over and above those identified by Shannon & Wilson's 2018 Phase 1 ESA (Shannon & Wilson 2018).

Figure 4-3 Groundwater level well installed in center of BBN parcel during geotechnical investigation

5 ENVIRONMENTAL IMPACTS

5.1 Construction impacts

The potential exposure to contaminated materials disturbed during construction could present a health and safety concern to the environment, and to construction workers and the public in the area, if not managed properly. Anticipated construction activities that could result in encountering or disturbing hazardous materials in contaminated soils and groundwater if found in the area include mass grading, excavations for building foundations (depth estimated at 10 feet), electrical pole foundations (approximately 8 feet deep), and utility connections (likely 6 to 8 feet deep) (Sound Transit 2019). Most other areas would be covered with pavement or concrete slabs, which would only require excavating 4 feet deep during construction, after completion of mass grading.

Based on the research conducted, existing information and soil and groundwater samples that were taken as part of the Phase II ESA for the BBN site, there is a low risk of effects to human health as a result of encountering contaminated materials at the BBN site during construction. No areas on the parcel had petroleum hydrocarbons in the soil or groundwater at detection levels that exceeded Model Toxics Control Act Method A cleanup levels. Low levels of arsenic in the north-central and eastern portions of the parcel are likely due to naturally occurring levels and are not indicative of a spill.

As described, it is possible that unanticipated residual soil contamination may be encountered during construction activities in portions of the BBN site. Where hazardous materials are known to be present, Sound Transit would be responsible for the remediation of any contaminated soil and groundwater, including that which would be previously unknown and found during construction. Sound Transit would ensure that hazardous materials found on-site are cleaned up or appropriately contained as legally required. Sound Transit would minimize construction activities that might encounter contaminated groundwater or contaminated soil. Soils excavated for off-site transport that are potentially affected by contaminants would be characterized for waste profiling and disposed of at a Subtitle D landfill. If dewatering occurs during construction, the groundwater would be tested and pre-treated as required prior to disposal at a publicly owned treatment works (i.e., sanitary sewer/wastewater treatment plant) or infiltrated back to groundwater on-site if feasible.

During construction, minor spills could occur as a result of activities that would involve the use of equipment or the handling of materials such as fuels, lubricants, and hydraulic fluids. Exposure to such accidental releases could damage skin, eyes, lungs, and organs. Unless a spill is a major event, it would be unlikely to present a significant risk to human health.

5.2 Long-term impacts

The project is subject to Sound Transit's safety and security certification process and would be managed by Sound Transit through design, construction, and testing, and commissioning of the facilities. The operational risks related to the use, storage, and disposal of hazardous materials would be integrated into the Safety and Security Program though the preparation and implementation of a Safety and Security Management Plan specific to BBN. Sound Transit has a policy to meet or exceed federal safety and security process requirements on all projects.

No long-term adverse impacts are expected to occur as a result of on-going activities at the BBN site. As described above, facility operation would involve the use of hazardous materials, including lubricants, solvents, vehicle fuels, and other chemicals. All of these materials would be managed as required by Ecology's Solid Waste Handling Standards (WAC 173-350) and Ecology's Dangerous Waste Regulations (WAC 173-303). Section 19 (Operations and Maintenance Facility) of Sound Transit's Design Criteria Manual puts forth additional requirements for the design of the BBN facility to ensure compliance with appropriate regulations for the storage and handling of hazardous materials.

Aboveground storage tanks (ASTs) for diesel bus fuel and unleaded gasoline are also proposed (**Figure 2-1**). These ASTs would be managed as required by Ecology's Contingency Planning and Facility Oil Handling Standards regulations (WAC 173-180). Double-walled fuel storage tanks will be specified for this project.

In addition, hazardous waste (e.g., petroleum products and waste solvents) would be generated through the routine maintenance and repair of the buses. An operating maintenance facility could cause long-term impacts from hazardous waste if there were an uncontrolled accidental release of hazardous materials such as from a fuel spill. However, hazardous waste generated at the BBN site would be managed according to applicable regulatory requirements (Washington State Solid Waste Handling Standards, WAC 173-350) that would minimize exposure risk. In addition, the facilities would be designed and constructed with engineering controls to limit and contain releases and spills. In addition, Sound Transit has an established program for responding to emergencies, including a spill response and hazardous materials handling plan. Therefore, the potential of long-term recurring releases of hazardous materials from bus operation and maintenance activities would be low.

Bus storage, maintenance, and operation on impervious surfaces could possibly release petroleum chemicals to the environment. However, impacts to the environment and human exposure to petroleum spills would be minimized and managed by oil/water separators and stormwater treatment facilities, as described in Section 2.2, Utilities.

6 MITIGATION MEASURES

No mitigation measures are needed.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by WSP were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent NPL

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 02/27/2019 has revealed that there is 1 WA HSL site within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 01/15/2019 has revealed that there are 8 WA CSCSL sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

WA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the WA LUST list, as provided by EDR, has revealed that there are 3 WA LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

WA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the WA UST list, as provided by EDR, and dated 02/09/2019 has revealed that there is 1 WA UST site within approximately 0.25 miles of the target property.

WA PTAP: A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

A review of the WA PTAP list, as provided by EDR, and dated 05/13/2019 has revealed that there is 1 WA PTAP site within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 04/16/2019 has revealed that there is 1 WA CSCSL NFA site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 6 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D018
. Waste name: BENZENE

. Waste code: D029
. Waste name: 1,1-DICHLOROETHYLENE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: D040
. Waste name: TRICHLORETHYLENE

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS

ROMAC INDUSTRIES CANYON PARK (Continued) **1000878975**

CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

. Waste code: U031
. Waste name: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 868

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 25590.9

Waste code: D007
Waste name: CHROMIUM

ROMAC INDUSTRIES CANYON PARK (Continued) **1000878975**

FINDS:

Registry ID: 110005388106

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

. Waste code: D018
. Waste name: BENZENE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: P105
. Waste name: SODIUM AZIDE

. Waste code: U002
. Waste name: 2-PROPANONE (I) (OR) ACETONE (I)

. Waste code: U117
. Waste name: ETHANE, 1,1'-OXYBIS-(I) (OR) ETHYL ETHER (I)

. Waste code: U188
. Waste name: PHENOL

. Waste code: U218
. Waste name: ETHANETHIOAMIDE (OR) THIOACETAMIDE

. Waste code: U236

IMMUNEX CORPORATION PDF/CCF FACILITY (Continued) **1014402203**

. Waste name: 2,7-NAPHTHALENEDISULFONIC ACID,3,3'-[(3,3'-DIMETHYL[1,1'-BIPHENYL]-4,4'-DIYL)BIS(AZO)BIS[5-AMINO -4-HYDROXY]-, TETRASODIUM SALT (OR) TRYPAN BLUE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 2507

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 7918

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 5

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 876

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED

IMMUNEX CORPORATION PDF/CCF FACILITY (Continued) **1014402203**

SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Amount (Lbs): 876

Violation Status: No violations found

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D009
. Waste name: MERCURY

. Waste code: D038
. Waste name: PYRIDINE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: U002
. Waste name: 2-PROPANONE (I) (OR) ACETONE (I)

. Waste code: U007
. Waste name: 2-PROPENAMIDE (OR) ACRYLAMIDE

FINDS:

Registry ID: 110000897968

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D009
. Waste name: MERCURY

. Waste code: D022
. Waste name: CHLOROFORM

. Waste code: D028
. Waste name: 1,2-DICHLOROETHANE

. Waste code: D038
. Waste name: PYRIDINE

. Waste code: F002

ELITECHGROUP MOLECULAR DIAGNOSTICS (Continued) **1005445074**

. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

FINDS:

Registry ID: 110012562841

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/11/2019
Date Data Arrived at EDR: 04/18/2019
Date Made Active in Reports: 05/14/2019
Number of Days to Update: 26

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/11/2019
Date Data Arrived at EDR: 04/18/2019
Date Made Active in Reports: 05/14/2019

Last EDR Contact: 07/02/2019
Next Scheduled EDR Contact: 10/14/2019
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/11/2019
Date Data Arrived at EDR: 04/18/2019
Date Made Active in Reports: 05/14/2019

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019
Date Data Arrived at EDR: 04/05/2019
Date Made Active in Reports: 05/14/2019
Number of Days to Update: 39

Telephone: 703-603-8704
Last EDR Contact: 07/03/2019
Next Scheduled EDR Contact: 10/14/2019
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

TACOMA/PIERCE COUNTY:

LF TACOMA/PIERCE: Closed Landfill Survey
Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/11/2019

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

SOUND TRANSIT BUS BASE NORTH
21516 23RD DRIVE SE
BOTHELL, WA 98021

TARGET PROPERTY COORDINATES

Latitude (North):	47.802907 - 47° 48' 10.47''
Longitude (West):	122.203958 - 122° 12' 14.25''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	559608.7
UTM Y (Meters):	5294482.5
Elevation:	140 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	6005523 BOTHELL, WA
Version Date:	2014

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

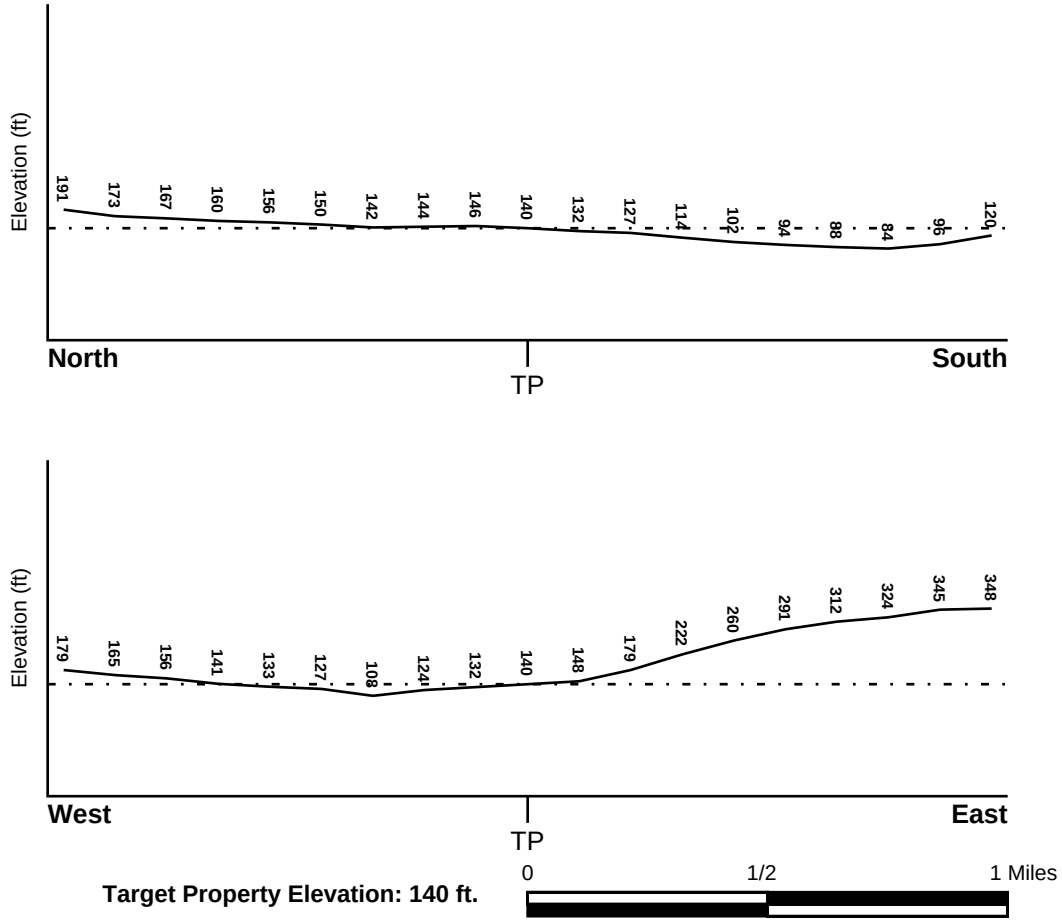
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
5355340490B	FEMA Q3 Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BOTHELL	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1307	1/2 - 1 Mile SW	ESE
1G	1/2 - 1 Mile SW	ESE

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Mukilteo

Soil Surface Texture: muck

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	3 inches	muck	A-8	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Organic Clay or Organic Silt.	Max: 42 Min: 14	Max: Min:
2	3 inches	35 inches	mucky peat	A-8	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Organic Clay or Organic Silt.	Max: 42 Min: 14	Max: Min:
3	35 inches	53 inches	mucky peat	A-8	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Organic Clay or Organic Silt.	Max: 42 Min: 14	Max: Min:

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
4	53 inches	59 inches	fine sandy loam	A-8	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Organic Clay or Organic Silt.	Max: 42 Min: 14	Max: Min:

Soil Map ID: 2

Soil Component Name: Everett

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6.5 Min: 5.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	5 inches	18 inches	very gravelly sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6.5 Min: 5.6
3	18 inches	59 inches	extremely gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Clean gravels, Poorly Graded Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel.	Max: 705 Min: 141	Max: 6.5 Min: 5.6

Soil Map ID: 3

Soil Component Name: Norma

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
2	9 inches	27 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 5.6
3	27 inches	59 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6.5 Min: 5.6

Soil Map ID: 4

Soil Component Name: Alderwood

Soil Surface Texture: gravelly sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Ecology
Telephone: 360-407-6121

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells
Source: Department of Health
Telephone: 360-236-3148
Group A and B well locations.

Water Well Listing
Source: Public Utility District
Telephone: 206-779-7656
A listing of water well locations in Kitsap County.

Ecology Well Logs
Source: Department of Ecology
Telephone: 360-407-7294
Point geodatabase with a record for each Ecology well report. Points are located by quarter quarter section centroid. Points contain all well report types including water wells, resource protection wells, and decommissioned wells.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing
Source: Department of Natural Resources
Telephone: 360-902-1450
Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

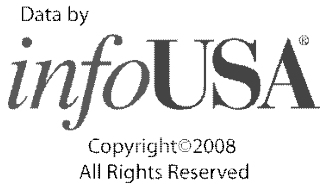
DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.



RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.
