Note: A copy of the EDR report can be obtained by contacting Sound Transit.

^a Risk levels:

1. High. Sites that might be substantially contaminated and might create liability for Sound Transit either due to construction activities or by virtue of acquiring all or a portion of the site, such as for a maintenance facility.
2. Medium. Sites where the nature of potential contamination is known based on existing investigation data, the potential contaminants are not extremely toxic or difficult to treat, and probable remediation approaches are straightforward.
3. Low. Sites where the nature of potential contamination is known based on existing investigation data, and the sites are not expected to have noticeable impacts on the project due to their location.
4. Sites where the following has occurred: (a) used hazardous materials but for which no releases have been reported, (b) are listed as having regulatory interactions unrelated to potential releases of hazardous materials to the soil or groundwater, or (c) had a spill of less than 10 gallons that is reported to be cleaned up.

^b HWS (CSCSL) and VCP entries based on EDR Radius Map Report Inquiry for TTM Technologies, 17460 NE 67th Court, Redmond, WA 98052, No. 2676460.2s, January 12, 2010.
