<p>04/28/2022</p>	<p>Dear Sound Transit Board of Directors,</p> <p>I am submitting a public in regards to the West Seattle and Ballard Link Extension – Draft Environmental Impact Statement. I am a member of the CID Coalition and a board member of OCA-Asian Pacific American Advocates Greater Seattle Chapter. The Chinatown-International District is my community and cultural home, I also use the light rail to commute from South Seattle to downtown for work. I would like to ask the Sound Transit Board of Directors for additional time for public comment that extends to the end of September and consider additional alternatives that does not include residential and commercial displacement to the proposed Chinatown-International District segments.</p> <p>Sound Transit describes the Chinatown International District as a “hub of cultural importance for Seattle and its Asian American communities,” but does not acknowledge the systematic displacement and gentrification of the neighborhood by local government agencies. In 1886, anti-Chinese sentiment sparked the Seattle riot, City of Seattle officials, police and white residents carried out the forcible expulsion of all Chinese from the city. World War II hysteria fueled the government removal of Japanese and Japanese Americans from the neighborhood to incarceration camps. In the 1960s, the construction of Interstate-5 divided the neighborhood, drastically increased air pollution levels, and eliminated many businesses, homes, and churches. In the 1970s, King County and the Stadium Commission constructed the Kingdome Stadium despite vocal opposition from many community members, compounding traffic and parking issues in the neighborhood. Most recently, the triple impact of the global pandemic, anti-Asian racism, and economic instability impacted the neighborhood these past two years, leaving it susceptible for disaster gentrification. Sound Transit’s proposed Chinatown-International District segments contribute to the continued systematic displacement and gentrification that has been practiced on the neighborhood and Seattle’s Asian American community.</p> <p>There is a history of Sound Transit’s differential treatment between Black, Indigenous, and communities of color versus predominately white neighborhoods. When Sound Transit first constructed the light rail in South Seattle, residents and small businesses along Martin Luther King Jr Way S protested against the project citing noise, safety hazards, and residential and retail displacement. Since the completion of the South Seattle light rail, there have been several pedestrian and vehicular accidents, and even fatalities. These incidents could have been prevented if the light rail was constructed underground versus above ground, as many community members advocated for during the planning process. In contrast, the predominately white Roosevelt neighborhood in north Seattle, was initially proposed as an above ground light rail station. However, when the Roosevelt community pushed and advocated for a below ground alternative, Sound Transit acquiesced. In contrast, South Seattle communities were not offered an alternative that addressed their concerns around retail and residential displacement, traffic congestions, and public safety. Sound Transit’s history of ignoring the concerns of communities of color continues to be seen in proposed segments for the Chinatown-International District regional station.</p> <p>We recommend Sound Transit to do the following:</p> <ul style="list-style-type: none"> • Propose additional alternatives that do not involve any residential or commercial displacement. • Propose additional alternatives that include the use of Union and/or King Station. Both Union and King Street station have the existing transportation infrastructure and ADA facilities to make the proposed Chinatown-International District station a regional hub that connects the light rail to the Bellevue, Ballard/West Seattle, and the Everett/Tacoma line. • A 120-day extension in the Draft Environmental Impact Statement public comment period, for Sound Transit to use the summer months to conduct extensive outreach and engagement that includes, but is not limited to: <ul style="list-style-type: none"> o Focus groups for those most impacted by the new segment such as elders, youth, immigrants/refugees, small businesses, workers, neighborhood non-profit organizations and clients, and unhoused members of the Chinatown-International District. o Work with neighborhood ethnic media outlets and in-language media to promote the new proposed segment options and public comment period. o Pay community-based organizations to conduct outreach to their membership/clients, as these organizations have existing relationships of trust with those most impacted. • Create a Community-Benefits Agreement that encompasses: <ul style="list-style-type: none"> o Free Orca Cards to all Chinatown-International District small businesses, employees, and residents. o Monetary small business and residential construction impact compensation. o Increase the Chinatown-International District tree canopy. o A plan to contract Women and Minority Owned Businesses for the construction of both the proposed segment and if there is a potential for transit-oriented development (TOD). As well as working with a construction apprenticeship program that recruits local talent from Black, Indigenous, and communities of color. <p>The history of the Chinatown-International District has been marred by government agencies who displaced residents, small businesses, and communities, but it doesn’t have to be the neighborhood’s future. I encourage the Sound Transit Board of Directors to propose alternatives for the Chinatown-International District segment that minimize residential and small business displacement and to extend the public comment period to allow for deeper and more meaningful community engagement. After two years</p>	<p>Jacqueline Wu</p>
-------------------	--	----------------------

of a pandemic, economic instability, and anti-Asian hate, current proposed segments will only inhibit the neighborhood from equitable recovery.

Thank you for the opportunity to provide feedback on the Chinatown-International District segment and the creation of the regional station. I look forward to your response.

Sincerely,

Jacqueline Wu

Member, CID Coalition

Board Member, OCA – Asian Pacific American Advocates, Greater Seattle Chapter

04/28/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Ken Bailey
------------	---	------------

04/28/2022	<p>West Seattle Link</p> <p>a. Junction - Medium Tunnel 41st Avenue Station: Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings.</p> <p>b. Avalon - Retained Cut: Prefer WSJ-5 with a request to study a refined DEL-6 pairing.</p> <p>c. Delridge - DEL-6: Study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].</p> <p>d. SoDo - Mixed Profile Station: Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking.</p> <p>2. Ballard Link</p> <p>a. Chinatown-International District - 4th Avenue: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than 4.5 minutes.</p> <p>b. Midtown - 5th Avenue: Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>c. Westlake - 5th Avenue: 5th Avenue Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access.</p> <p>d. Denny - DT-1 on Westlake Avenue: Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower.</p> <p>e. South Lake Union - Harrison or Central SLU: Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible.</p> <p>f. Uptown / Seattle Center - Republican Street: Prefer Republican Street Station and work to mitigate impacts to arts organizations to the extent possible.</p> <p>g. Smith Cove - Galer Street: Preferred Galer Street Station [SIB-1].</p> <p>h. Interbay - Retained Cut or Slimmed Down 15th Avenue Elevated: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3].</p> <p>i. Ballard: Study pairing a high bridge with an elevated 15th Avenue Station and to continue to refine all tunnel options to put a station entrance west of 15th Avenue. Open additional study of the 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p>	Benjamin Friend
04/28/2022	<p>Please support the Chinatown-International District Segment - 4th Avenue Shallow Alternative (CID-1a or 1b).</p> <p>This is a reasonable alternative that can significantly minimize the damning and?? lasting harm to our beautiful historic community. Home to hundreds of immigrant owned small businesses, and thousands of vulnerable low income senior citizens?, The 5th Ave option will require several years of upheaval and business closures.?</p> <p>Please move forward with the 4th Ave options and preserve the fast-fading valuable character of our neighborhood!!!</p>	Christopher Wright
04/28/2022	<p>We are absolutely opposed to running Sound Transit on 5th Avenue in Seattle, which will seriously and negatively impact the Chinatown/International District. This is a culturally and economically important area that has been ignored and abused by the City of Seattle and King County periodically over the years. Still viable, charming, and vital to the City and the Asian community, the 5th Avenue plan will take out several businesses, cause unemployment, and subject this area, which has already survived a history of Sound Transit development, to a decade of construction. Don't do it!!</p>	Penny Koyama

04/28/2022	<p>As someone who lives within the community of the CID, I understand the importance of the community as it is and the importance of maintaining the current harmony of the neighborhood. This is a neighborhood of great cultural importance, with an identity for those who live and work here. Simply walking around the neighborhood demonstrates how collected and tight knit the community actually is. This proposed project is a threat to that identity and the community as is.</p> <p>The CID is currently one of the few Asian centric neighborhoods in the country and is already relatively small in size. This project threatens to shrink that even further by displacing businesses and residents. On top of this, this is a recognized neighborhood for tourists and visitors who frequently enjoy the food, cultural events, and shops that promote culture in a way that is hard to find not simply in this region, but throughout the country.</p> <p>To those who want to proceed with the project within the boundaries of the CID, consider whose lives that would interrupt. Consider whose businesses and livelihoods you would be sending. Consider who, living here, would be affected by this. Consider those connections to the neighborhood that this threatens to destroy. Consider the thousands of people who have visited and will visit who will not have the opportunity to connect. This will be a disruption with rippling effects, ones that can be replaced or simply moved, while options exist for this project to be commenced elsewhere.</p>	Kolber Joseph
04/28/2022	The CID is an integral and historic part of Seattle thst is rich with stories of my parents and grandparents. CID is a place that brings business to Seattle.	Keona Moy
04/28/2022	4th ave shallow will have the least impact on the existing community in the CID. CID-1a is preferred.	Colin Katagiri
04/28/2022	The 5th Ave options are harmful to the Chinatown International District. Pick the least harmful option which is 4th Ave S.	Jen Chong Jewell
04/28/2022	<p>Through downtown and Seattle Center, I think the preferred route works the best. For Ballard, the station seems better on 15th - if on 14th, what would happen to the Ballard market and the nearby school?</p> <p>As for the Chinatown area, I do not understand why you need another parallel station/tracks so close to the current one if doing so results in tearing down half of Chinatown. Who are you building that extension for?</p> <p>For West Seattle, going through the Industrial area should have very little disruption and loss off existing businesses as possible. Seattle has already lost so many close in and downtown.</p> <p>Building light rail is fine as long as we have a livable city left when you are done.</p>	Loretta Sutherland
04/28/2022	<p>Preservation of culture should be prioritized in the planning of this expansion. The vitality of any city lies in its history and culture. If we fundamentally change each neighborhood as we expand lightrail access, there will be less incentive to visit these areas. I am primarily concerned, at this time, with the long-term impacts on the cultural and community gathering spaces under threat in the Chinatown/International District. The 5th Avenue options of the extension threaten spaces of great significance to the people of this community. The 4th Avenue Shallow option (CID-1a) has the least impact, longterm, on important social, historic, and economically valuable institutions to the people of the CID. I urge you to consider the longterm benefits of preserving beloved institutions by choosing the CID-1a alternative.</p>	Catherine Swedberg
04/28/2022	The Central District is a home to many BIPOC Seattle residents. While I am a public transit enthusiast, building the extension through the Central District will undoubtedly displace people from their homes. I urge you to reconsider this development if it literally means bulldozing through people's livelihoods.	Braden Colaner
04/28/2022	The ID has been thru enough. Please do not impede on our businesses and our community	Benjamin Shiau
04/28/2022	Avoid going through 5th for the Chinatown link! Go through 4th to affect less small businesses!	Almida Meyer

04/28/2022	<p>I am writing in regards to the planned route for DEL-5 and DEL-6. Although these are not preferred routes and at this state are options and I want to voice my concern in regards to the impacts this might have on the wonderful work and non profit that Transitional Resources provides. They have been tirelessly working with the most marginalized members of society for decades. It is not secret that homelessness is a big problem in this city and that there is also a subset of that population that struggles with mental health concerns. The mission and the work that TR does helps these members integrate into a community that is supportive and helps in recovery, not to mention that the properties that house these individuals would go away which displaces them and in this market a small nonprofit cannot afford to replace the properties or staff this .</p>	cathlyn fraguela rios
04/28/2022	<p>Focusing on Table ES-5 on page ES-29. Addressing options CID-1a and CID-1b versus CID-2a and CID-2b. Specially my comments relate to the difference between option CID-1 and CID-2 options and not shallow or deep.</p> <p>No where in your Impact Statement has Sound Transit addressed the impacts to the adjacent Historical Chinatown-International District neighborhood as if is equivalent only to its parking spaces, intersections and adjacent bus routes, with no concern to the people and the cultures in the affected area. Parking spaces adjacent to the stadium (options 1) much more likely to be used by event goers than area residents. the # of residential location affected is highly suspect, as the 4th Ave side abuts stadiums while the 5th Ave side abuts a vibrant business and residential area.</p> <p>3)5 - 8 business vs 18 - 27 obviously indicate an advantage to options 2. Additionally these business also affect the customers of the business who live in the adjacent historical and cultural community.</p> <p>the largely white male Sound Transit white collar workers making these decisions are obviously making decisions only on technical issues and without consideration for cultures they do not value.</p>	Sylvia Shiroyama
04/28/2022	<p>As a lifelong resident and homeowner in West Seattle I have concerns about the proposed new light rail project to West Seattle and the longterm impacts this will have on our community. Because we have been without a bridge for 2+ years, the impact of detours, congestion, deferred road maintenance and inability to get in/out of West Seattle raise more concerns for a proposed project and the impact it will have on our community.</p> <p>Of the proposed options, I find WSJ-1 most troubling. The impact on general transportation disruption and displacement of neighborhood businesses is a concern. There are already plans in process to redevelop part of the area along 36th avenue in the triangle area that is set to provide a transit -oriented project with housing units and business space that could complement an adjacent Avalon station. This proposed option WSJ-1 would not only cause noise and disruption to this area but also take away from this planned project that looks to provide longer term housing with transit accessibility.</p> <p>I feel the tunnel option should be considered and looked at as the best, long term solution for West Seattle. Tunnel Alternative WSJ-3a should be advanced and modified as the preferred option. This would reduce issues within the neighborhoods and reduce displacement as compared to an above ground option. The future station option of 41st Ave SW is a better location compared to the 42nd Ave SW location and will have less impact on existing established business in the heart of the Junction during construction.</p> <p>One thing we have learned from the past two years and no bridge, more study and research needs to go into the impact of this proposed project on transportation, road closures, detours and the short-term and long -term impact this will have on our community.</p>	Kate McGovern

04/28/2022	<p>The route that Sound Transit is choosing will economically impact businesses in the ID that have already suffered from Covid and widespread xenophobia that has only increased in the past two years. Closures could last up to 11 years and negatively effect the flow and economy of the international district. As someone who moved to Seattle four years ago and is of Chinese descent, this neighborhood holds a lot of importance for me and I would hate to see it suffer even more. The preservation is of this neighborhood is of utmost important to me and the wider community and I urge you to rethink the planning of where the station will be. Thank you.</p>	Sarah Chu
04/28/2022	<p>Vulnerable and minority communities are continuously being affected greatly in the name of public good. These drafted plans will only continue to displace and threaten the existing vulnerable population in this area. This area does not need years of disruptive construction. Please reconsider and think of a solution that will not displace and harm the existing businesses and people. These plans are not acceptable solutions.</p>	G Lee
04/28/2022	<p>Please select 4th Avenue options for the Sound Transit plans. I work in the CID and enjoy the neighborhood. It is struggling mightily, amid COVID and development. It is difficult to imagine it retaining its vitality if the additional burden of many years of construction and loss of small businesses were added.</p> <p>The CID is a cultural treasure. It has already been displaced, due to Seattle's past racism and prioritizing commerce over community.</p> <p>Please do the right thing and select 4th Avenue. The cost in extra dollars to the public will be more than repaid in the joy and legacy of a vital Asian-led, Asian-rooted, Asian-resided community.</p>	Beth Amsbary
04/28/2022	<p>The Chinatown International District is a rich part of Seattle's history and culture. Growing up, I frequented the grocery stores and restaurants, attended a summer leadership camp sponsored by the Northwest Asian Weekly, and worked within the community for several years at the CIDBIA and SCIDPDA. This community has already faced so many challenges (anti-Asian hate crimes, loss of business during the pandemic, continuing gentrification) and it breaks my heart it is now facing this threat of displacement by the station. I'm speaking up to advocate on behalf of others who can't due to language barriers. We need to celebrate and preserve this historic community and its diverse people for future generations. Please don't displace businesses here. Consider the 4th Ave options.</p>	Veda Sonexaysana
04/28/2022	<p>Please consider the 4th avenue option for the International district. While all options will impact the surrounding neighborhood and communities, the 4th avenue option is the least impactful to the community already marginalized by decisions dictated by government transportation projects.</p>	Sydney Goldsmith
04/28/2022	<p>Protect 5th Avenue and the International District. Looking at the options, 4th Avenue has the lower impact on an irreplaceable neighborhood and one of the best parts of downtown. If we tear through CID we will never see these business or restaurants again. We are already at risk for losing the cultural diversity as the community ages and adding to that in the name of transit defeats the entire purpose. To bring together parts of Seattle (and it's people) that haven't been able to before.</p> <p>I don't pretend these choices are black and white but this shouldn't be hard to see. As a lifelong Seattle resident, I have been going to the ID since I was little and I have been so excited to see it surviving and thriving in such hard times. Leave 5th Avenue alone.</p>	Michael Rotman Koenen

04/28/2022	<p>Hi Sound Transit,</p> <p>First off, I LOVE you. You make me proud to be a born-and-bred Seattlite. I am so excited for you to connect to my hometown of West Seattle!</p> <p>Here's the problem. The CID link displacing 19 small businesses. We have already seen this happen in capitol hill, and we can't have it happen again, especially with these essential, Seattle-proud small businesses. We need to ensure that Seattle is interconnected AND keeps its small businesses strong. Without this, we run the risk of becoming a city of corporations.</p> <p>I have no doubt that you've considered many options for this project. But if you displace this many small businesses, you will be expected to assist them to relocate. This is the only ethical next move if the plan goes through as is.</p> <p>Again, thank you for the wonderful service you offer to our city. Thank you for upholding a green, just, and vibrant future for Seattle.</p> <p>Best,</p> <p>Abigail Smith</p>	Abigail Smith
04/28/2022	<p>I want to encourage Sound Transit to move forward with the 4th Avenue alternative for International District development. The CID has felt major impacts of development projects guided by the government rather than the needs of the community, resulting in displacement and further marginalization of one of Seattle's oldest and poorest populations. The 4th Avenue alternative reduces displacement, preserves small businesses and maintains mobility owed to the CID's residents.</p>	Charles Barton
04/28/2022	<p>I'm a resident of West Seattle since 2018 and eager for the future construction of the light rail. I'm especially interested in the proposed and final selected alternative for the light rail station in Chinatown. I have read and concur with the analysis and concerns posed by the Wing Luke museum: https://www.wingluke.org/wp-content/uploads/2022/04/Wing-Luke-Museum_response-to-WSBLE-DEIS_2022-04-26.pdf.</p> <p>As someone who professionally reviews draft EA and EIS and final environmental and cultural compliance documents, I understand the importance and criticality of these analyses and decision documents. Thus, I have reviewed these documents and understand the importance of the public notice and comment process.</p> <p>I am a frequent visitor and patron of the Chinatown business district and prefer the 4th Avenue tunnel option that will least impact and displace the chinatown residents and business community. As a former resident of the Washington DC chinatown area (affectionately and sarcastically known as "Chinablock" to locals), I lived through the displacements of the Asian population in DC and eventual closing of the majority of Chinatown businesses and housing for Chinatown elders. It is shameful that impacts (primarily detrimental) to communities of color are either not considered (or considered least important) as part for the decision-making process.</p> <p>I look forward to reviewing the final EIS and Record of Decision and hope the evaluation of cumulative impacts is more robust and incorporates a more solid evaluation of impacts to the Chinatown community.</p>	Janis Millete
04/28/2022	<p>Please respect the wishes of the International District community and build the expansion in 4th Ave.</p>	Melissa Hamasaki

04/28/2022	Please choose to move forward with the 4th ave option. It's clear that this is the best way both to carry out the much needed expansions to our city's public transit and to minimize the detrimental impacts that expansion could have on the C-ID and it's community members.	Shawn McNabb
04/28/2022	I do not think that this is practical for the asian american and other families who have built their entire lives around their shop in the international district. The construction would significantly reduce accessibility to these shops meaning it would be harder for those who shop their but make it even harder for the shops to make a living since foot traffic to the area and otherwise would be so severely decreased! It is unfair!	Huyen Pham
04/28/2022	<p>Hello</p> <p>There are three areas that I would like to shine so focus on for the DEIS.</p> <p>Delridge: Please ask if all displacements being noted in this neighborhood are needed. Both Dakota street and Delridge Way options include a large displacements in a low income neighborhood that should generally be avoided. See where turns can be less arching and stay over the street grid where possible. The very high options should be eliminated for difficulty of access which support staying on the 120 or H line in the future over using the station.</p> <p>CID: This is another place where asking if all displacements and construction impacts are needed. The 5th Ave. options turn the front door of the neighborhood into a construction zone and remove nearly two blocks of buildings. 5th should also have the time it would take to put new buildings over the station and construction areas as an impact. Capitol Hill had a large vacant area for several years after the station was finished. I couldn't find a cumulative impact like this though it would carry affects on the district after the station was finished due to the potential for several years of mostly vacant lots. 4th Ave. needs to be studied in more detail. Why the tunnel needs to be two stories deep is not adequately described as greater exploration could be put for cut and cover far enough to get the new line over the transit tunnel and the Great Northern Tunnel (That is if you really need to temporarily displace the ICON residents). Community plans have also been building on having a 4th Ave alignment for nearly a decade now with the most recent plan being here (https://issuu.com/pioneersquareseattle/docs/190328_jackson_hub_final_document). The vent placed in the Union Station Plaza is badly done design-wise and attempts to build the ventilation into the bridge deck similar to the transit tunnel stations should be attempted. A better used Union Station would also be an overall good especially if not considered out of the way from other transit functions since it is a beautiful station that has not gotten to see true passenger movement in long time. 4th Ave also serves Pioneer Square which is not getting it's own station in this project. My grandparents moved into the CID in the 1970's. So it's preservation is not only about general Seattle History but personal family history and is it going to be lost if the impacts from this construction are badly managed. So here is just a plea that these considerations be taken. Some have argued that the mix of local projects and national/global events bringing large negative economic impact have prevented full recovery for what may reach three decades by the end of this project.</p> <p>Ballard: Just reopen the options closer to the commercial core of Ballard. You admit the Coast Guard is requiring any unmovable bridge to be quite high in the air and tunneling ends up being all about the same. Maybe build a station where the line crosses under the ship canal goes out and ultimately have the tunnel end pointing east. Under Market St should be considered due to the width of the road to help reduce impacts in a heavily populated area.</p> <p>In reading the DEIS these were the the most outstanding concerns I had. Other potential alignments may be better or worse but not to the extent that these three areas are to be called out.</p>	Conor Smith
04/28/2022	The 5th avenue station would destroy key parts of Chinatown. 4th avenue is a much better option for the community.	Alicia Hanscomb
04/28/2022	As a business owner in the CID, I believe 4th Shallow (CID-1a) is the best choice that minimizes direct harm to our neighborhood. Businesses have suffered so much since the pandemic and this makes the most sense to minimize business displacement. It will also create a much needed connection between Pioneer Square and the CID. The CID should not be sacrificed for the sake of the larger transit system.	Karleen Ilagan

<p>04/28/2022</p>	<p>The proposed plans to demolish 5th street are completely unacceptable. Time and again Seattle has felt comfortable tearing into marginalized neighborhoods of color for the sake of so called progress. The international district, a neighborhood formed by racist redlining practices, has been targeted by this kind of construction many times in its history, being forced to move and rebuild over and over again. The fact that Seattle governmental groups are still freely proposing the destruction of community spaces and mom and pop shops who have recently struggled through waves of racist violence is laughable and disgusting. The neighborhood continues to do its best to fight against constant gentrification and rising hate crimes while still maintaining a sense of community and vibrant culture. Tearing a hole in the heart of that community and forcing the most vulnerable populations including our cherished elders who live in these neighborhoods to give up more space and live in a loud disruptive construction zone for the next 11 years is simply not an option. Additionally, while our neighborhood is home to all of these wonderful businesses, we are mostly a residential area and you cannot simply ask us to live our lives with that kind of noise pollution and restriction for such a long period of time. Save our businesses and our cultural spaces and consider alternative options, at a very minimum 4th street and beyond. Do not force out the residents here who actively support and consistently take public transit by ruining our homes and businesses. Please consider taking steps to not add to the racist targeting of our neighborhoods of color by chipping away at them block by block. Help us preserve one of the oldest and most culturally rich areas in Seattle.</p> <p>Sincerely,</p> <p>A long time resident of the CID</p>	<p>Nina Ozbek</p>
<p>04/28/2022</p>	<p>Improved and alternate public transit to and from W. Seattle is vital. Cutting pollution is critical, and residents need alternate egress and access that do not include driving through neighborhoods. My concerns about the route chosen are in regards to the Duwamish River, and to the natural habitat for many birds and other wildlife that it provides.</p> <p>I urge you to choose a route that avoids disruptions to this habitat, that values the return of species to it, and that avoids destruction of heron rookeries.</p> <p>There should not be a false choice forced between light rail and natural habitat on the river.</p>	<p>Susan Ward</p>

<p>04/28/2022</p>	<p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p>	<p>Jacob Wolf</p>
-------------------	---	-------------------

04/28/2022	The city should reconsider its plan to remodel the Link station in such a way that it threatens businesses along 5th avenue. Long term construction will lead to decreased quality of life and threaten businesses. The ID is home to many intergenerational families and businesses with incredible history in Seattle. They should not be displaced if other options are available. Residents of the ID have already been displaced due to the construction of the Kingdome and I5. City planners should strive to preserve this beautiful, vibrant neighborhood. It is entryway to our city for many. Wouldn't it be better for visitors to exit the train station and see historical local businesses, rather than the chain stores that are the only businesses large enough to afford rent here in the future?	Maya Rowland
04/28/2022	I think it should be on 4th because otherwise it takes up valuable community space and disrupts small, local businesses.	Derek Zable
04/28/2022	Building a transit through International District would greatly affect the community and businesses around the area.	Brandon Bee
04/28/2022	Please be considerate about the concerns of local business owners and residents, especially Asians whose voices are less strongly represented.	Joel Uy
04/28/2022	If a light rail is to be built in Chinatown/International District, it should be placed on 4th Ave rather than 5th Ave. Placement of the light rail on 4th Ave would result in the least amount of disruption to any surrounding businesses/organizations. I believe ensuring the stability of these businesses/organizations should be prioritized especially during a pandemic no matter what stage we are in.	Yaslynn Makein
04/28/2022	As a born and raised Seattlelite, and a Black woman, I've experienced the affects of displaced communities of color from transportation upgrade projects such as the Light Rail. I, along with many other Seattle residents, cherish the small businesses in Chinatown that have helped build Seattle into the diverse city it is. These businesses should be protected. I do not support any of the alternative options for the train station placed in Chinatown. I ask Sound Transit to reconsider the placement of this train station and extend the deadline for the plan for additional public comment for those in the Chinatown/International District area to help come up with better alternatives.	Nirae Petty
04/28/2022	I hope Sound Transit is seriously consider doing a deeper analysis for the tunnel project for the fact that whatever the decision is the project takes 10 years or so providing deadlines are met throughout. Why tunnel must go through downtown neighborhoods? and why Ballard?...who goes in and out of Ballard anyway???	Lai Ping Kimura
04/28/2022	Dear whom it may concern, With all respect, I don't believe creating new construction into CID is a good idea. It will destroy the land, the businesses and the large Asian community that exists in the state. CID brings many generations together. CID can be easily compared to downtown Westlake since it is always busy. The businesses have great revenue, tourist and of course, the existent of Asian community. Alternative route should heavily be considered. Especially because CID already has a link stop. Please and thank you.	Tram Nguyen
04/28/2022	The 4th Ave option or another option that does not split the CID is preferred. The CID has not recovered from anti-Asian racism of the past few years and COVID shutdowns. Give the neighborhood what it needs to stay intact.	Erin Okuno
04/28/2022	Please use the Ballard route alternative ending on 15th Ave NW and NW Market Street, NOT 14th Ave NW. There are a lot of small businesses on 14th that would be impacted (razed) by the "preferred alternative." A stop at Safeway is more suitable and 15th Ave provides more options for possible northward expansion. 14th Ave does not unless the route jogs expensively around Ballard High (or goes underground).	Hilary Mohr

04/28/2022	<p>Place the Lightrail station on 4th Ave instead of 5th Ave because putting on 5th will harm BIPOC communities in the International District. Please consider these points from the community.</p> <p>Construction on 5th Avenue in Chinatown to Japantown means:</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years Re-routing cars, buses, to 6th, Maynard, 7th, 8th, 10th & 12th Gas, water, electrical shut offs to businesses, non-profits and residents Traffic detours throughout Chinatown, Japantown, Little Saigon Daily dump trucks, cement trucks, cranes, supply trucks, delivery vehicles Construction workers taking parking from businesses Increased noise & air pollution, dust, dirt, vibrations Taking property from owners of color for demolition and resale after construction Endangering lives of 1,200 elderly by blocking access/egress for emergency vehicles with street/sidewalk closures and detours Permanent changes to National Register Seattle Chinatown Historic District—loss of 3 blocks in addition to prior loss of 3 blocks for Transit Tunnel Severe disruptions to:</p> <p>300 businesses already battered by the pandemic, higher than ever anti-Asian hate crimes, criminal violence 30 immigrant businesses permanently closed or forced to move Schools, daycares, programs serving thousands of children and youth Programs, classes, recreation for 1,200 elderly non-English speakers</p>	Grace Nguyen
04/28/2022	<p>I support Sound Transit selecting the 4th Avenue option for the Light Rail expansion. The 5th Avenue option will tear down 19 locally owned business and bring 10 years of construction to the hub of the neighborhood. I heartily support the Light Rail expansion and I want it to be done in a way that is respectful of the needs of historically marginalized neighborhoods.</p> <p>Thank you.</p>	Sarah Turner
04/28/2022	<p>Hello,</p> <p>While I think having more trains will be of great service to this city and its residents, I don't think putting the station on 5th avenue and blocking out many important Chinatown/ International district businesses is the answer! Please move to put the train station on 4th avenue instead to protect the livelihoods of our very important neighbors!!</p> <p>Thank you, Nicole</p>	Nicole Schmidt
04/28/2022	<p>I implore for the design of this project to not follow through, to stop. It is beyond unfair — symbolizing racist gentrification yet again.</p>	Jessica Garcia
04/28/2022	<p>Please don't displace ID businesses. I've heard there's an option to put the station on 4th Ave instead of 5th. That seems like a much better idea.</p>	Irene Akio
04/28/2022	<p>I strongly urge planners to choose the 4th Ave option to have the smallest impact on communities in the International District. As documented on pages 27 and 28, the 5th Ave options will have will have more adverse effects from property demolition and construction disruption. Businesses may not survive the disruptions and will not benefit from this project. The 4th Ave options will have the least harmful impact. We should not be causing additional harm to this vital community.</p>	Kelly Merdinger

04/28/2022	<p>The budget is of major concern; \$73 million cost overrun before the project even starts definitely needs to be addressed. Also, the projected displacement of hundreds of people's homes, businesses, employment must be re-evaluated especially in light of the dearth of options for relocation. My concerns are many but the impacts to wetlands, waterways, parks, green spaces, tree canopy and the Longfellow Creek basin and West Seattle Green Belt are primary. As much as I am concerned about things monetary – the existential threat to people and wildlife is my bigger worry. I feel great despair reviewing this Sound Transit DEIS. I feel that it is vague, superficial, and cavalier – lacking in awareness for the possible loss of our homes, our neighborhoods, our businesses and jobs. The entire light rail route should be underground tunnel. Avalon station is not needed. Elevated light rail is not an option. DON'T DESTROY WEST SEATTLE UNLESS YOU ARE GOING TO START BY SACRIFICING YOUR OWN HOMES FIRST. The noise that elevated light rail will generate is a public health hazard. I'm already in complete despair over the additional train noise created by Terminal 5 and the trains that vibrate my house daily. Lisa Herbold refuses to acknowledge that this is even possible. Now you want to make it worse. DON'T SHIT ON WEST SEATTLE!</p>	Chris Scullin
04/28/2022	<p>Hi, I would like to urge my support AGAINST the 5th ave S options in contrast from 4th ave options as provided by sound transits prospected construction areas of the central international district. The CID has been historically subjected as an area of constant major construction projects displacing businesses, culture, and residents of the area. Though I reside out of the city, I frequently travel in the area when I travel to work, when I have late night plans to go to Oasis, when I travel to concerts or games and stop at the CID to eat at local restaurants such as pings dumplings house and more. Please support local community in their fights against the 5th ave options!</p>	Brenda Gonzalez
04/28/2022	<p>I am a resident of West Seattle and a Professional Engineer and would like to weight in with a few comments for the West Seattle-specific alignment options. I think a few major goals need to be met: Do not remove existing high-density housing. The entire point of high-capacity transit is to encourage transit oriented development, and the Junction area already has a great quantity of this type of housing, including some that are brand new. Any station option that removes high-density apartments or condos should not be considered. Shallow stations for underground. Many of the underground options for Avalon and WSJ are very deep, and require up to 3 escalators to reach them. This will not only increase overall transit time, but also discourages casual users from using them as its perceived to be too much effort and time commitment. No stations should be eliminated in West Seattle. Keep the Delridge, Avalon, and WSJ stations. Avalon especially has some of the densest housing density in the entire peninsula and needs high capacity transit to sustain it and prevent additional vehicular traffic from being needed. Place stations near the core. One of the alternatives for WSJ has the station placed straddling Fauntleroy and Alaska, which is absolutely not the main destination for most people taking transit to the Junction. While it is understandable that a station can not be placed at Alaska/California intersection, keeping the stations as close to that core node is incredibly important to get the ridership forecasted. Minimize aerial guideway. Many of the alternative options between Delridge, Avalon, and WSJ involve incredibly tall aerial guideways. Not only is this more costly for long-term maintenance vs. a tunnel, but it is unsightly and not befitting of the neighborhood character surrounding the guideway. Decades of research have shown where aerial guideways are installed for highways that they end up dividing neighborhoods, blocking light, and creating unusable space below them in between support columns. We want the West Seattle area to be as dense as possible, and creating unusable swaths of land due to aerial guideway construction is untenable. There was a time when aerial guideway might have made sense versus the cost of tunnel construction, but with real estate acquisition costs what they are now, and given the now-parity between the two, tunnel is now always preferable.</p> <p>With those main goals in mind, here is what I believe is the best option given the current alignments:</p> <p>While WSJ-3b at 42nd/Alaska is by far the best station location given its proximity to Alaska/California, the removal of the park space at the NW corner of 42nd and Alaska is unfortunate given the lack of public parks in the area. Additionally, removing the businesses on the SE side of the intersection (including the office building, Bartell, and other businesses) is also not perfect. Finally, the depth of the station is not ideal. In this case, WSJ-5, while indeed moving the station 1 block farther away from the core, solves these issues by utilizing low-density space for the entrances (including empty parking lots and a single standalone bank). Additionally, this station is perfectly shallow and will surely generate huge amounts of ridership. While seemingly similar, please do not consider WSJ-4, because it removes an entire apartment building at Edmunds/41st that provides high density housing.</p>	Mark Peterson

	<p>WSJ-5 is by far the best, because not only does it provide the best balance for the Junction station, but it is paired with the best Avalon station. The WSJ-5 Avalon station has the smallest impact on high-density housing, is easy to access given its elevation, and allows for an easy transition to aerial guideway parallel to the West Seattle bridge roadway before transitioning over to Delridge (DEL-6 is best). Aerial guideway parallel to a multi-lane highway like the WSB is not as egregious as running it through the Avalon or Junction area.</p> <p>In summary:</p> <p>WSJ-1 - Bad (aerial guideway through the heart of the Junction and removing entire Safeway/Elan 41 apts) WSJ-2 - Awful (Aerial guideway, removing brand new Maris apartments, far from core) WSJ-3a - Best WSJ station (Underground, shallow, minimal land disturbance, reuse of empty parking lots), bad Avalon station (deep), poor Delridge connection (only high aerial guideway down Genessee) WSJ-3b - OK (good location, bad impact on surface amenities and businesses) WSJ-4 - Bad (requires removal of high-density housing) WSJ-5 - Best WSJ station (Underground, shallow, minimal land disturbance, reuse of empty parking lots), Best Avalon station (shallow, minimal housing impact), Best Delridge connection (DEL-6).</p> <p>Please choose WSJ-5 as the preferred alternative for Avalon and the Junction, connecting to DEL-6. Thank you!</p>	
04/28/2022	The CID has already had I-5 cut through it. It seems unfair and unreasonable for the new train tunnel to also cut through. I prefer the 4th Ave options, CID-1a and CID-1b.	Mindy Fung Chen Pen
04/28/2022	Move forward on the 4th	Teresa Mawi
04/28/2022	The C-ID was already critically affected when Seattle decided to construct I-5 right through the neighborhood. The fact that Seattle has once again chosen the I-CD as a place undeserving of protection is extremely upsetting. It seems to be indicative of a system that continues to value white privileged neighborhoods over people of color.	Kalene Gillespie

04/28/2022	<p>To those who it concerns, I wanted to voice my concerns over the Sound Transit plans on 5th ave vs. 4th ave in the CID.</p> <p>I vehemently believe that it is up to the city to mitigate, as much as possible, the impacts of increasing public transportation. I absolutely adore public transit and the ability to get to places without a car and I fully support the city's move to expand these options. But for the plans that have been proposed, there is one option that has clearly devastating impact for a community that has been systemically burdened. People who live in the CID are those who have been systemically excluded from other housing around the city and other prospects for businesses. Throughout the history of Seattle, as I would hope Sound Transit is aware, this neighborhood has been displaced and moved around</p> <p>I do not believe any of the options on 5th ave are acceptable options for Sound Transit to pursue. The options on 5th ave will destroy the businesses and community of the CID in irreparable ways. Having grown up in the area and as the daughter of a Taiwanese immigrant, the CID holds so many precious memories for me. Furthermore, the food, other businesses, and people contain so much of what makes Seattle what it is.</p> <p>To see this neighborhood impacted and possibly destroyed when there is a less destructive option seems unacceptable. As we look to the future of the city, I hope that the Sound Transit board and city of Seattle looks to preserve this historic and incredible neighborhood.</p> <p>Please opt for the 4th Ave options instead of the devastating 5th Ave ones. Though the 4th Ave options would also have impact, that impact is much more manageable for the neighborhood.</p> <p>What is the city planning on doing to assist those who are most impacted by this project? Will the impact assessment that is under way be published for the public?</p>	Rachael Robinson
04/28/2022	<p>Please please do not continue with any plans to build on 5th. The CID has already been through so much with local families/jobs/businesses being displaced after Covid, building on there would be an even greater crushing blow to people that would be pushed out and have no where else to go. There will be so many people, especially elderly, that have been there their entire lives in the US and will not be able to survive being forced elsewhere. Please if anything move it to 4th!</p>	David Dang

04/28/2022	<p>Dear Sound Transit Board Members,</p> <p>Of the choices given for comment, I strongly support choosing the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b).</p> <p>I strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5), both of which would result in significant displacement and environmental impacts in the Yancy/Avalon/32nd Ave corridor including:</p> <ol style="list-style-type: none"> (1) displacement of Transitional Resources on Avalon Way; (2) more housing displacements on and adjacent to 32nd Ave SW than preferred alternatives; (3) accessibility of remaining residences given the alignment of guideway near the corner of 32nd Ave SW and SW Andover St; (4) construction impacts from excavation of retained cut; and (5) operational visual/noise impacts to remaining residences along 32nd Ave SW, SW Andover St, and SW Genesee St. (6) significant damage to adjacent green belts and wet lands <p>I further suggest the removal of the Avalon station. Not only is it too close to the other proposed stations, it also combines a high foot/bike/transit traffic location with the entrance to the West Seattle Bridge making it dangerous for people coming to and from such a station and, by extension, the unsafe feeling will give people the reason to just stay in their car and head over the bridge.</p> <p>For the people who do choose to ride, the Avalon station will further add traffic and parking impacts to our Avalon neighborhood, already suffering with a lack of parking, resulting in crosswalks and bike lanes being blocked by vehicles, making pedestrians less visible and at elevated risk when crossing the street. Adding even a modest 1200 daily boardings to the Avalon station will further put the remaining families (and their pets) at increased risk in our Avalon neighborhood.</p> <p>I do appreciate the ability you've give the public to respond to these initial routes and I do believe that you do take every serious comment into account and do your very best to seriously respond to them. But I also understand that you're selling a train here and I have some concerns that there are some alternative solutions available that maybe aren't getting their due.</p> <p>One alternative that I believe makes a lot of sense is to split the West Seattle Extension into two phases. Phase one could get the line from SoDo to a more southern, lower-height Delridge station aligned to take advantage of the recent transit upgrades. Later, Phase two could then get up to a Junction adjacent station and possibly a third station further south somewhere to service the ferry or some future destination.</p> <p>Thanks again for opportunity to comment,</p> <p>Alan McMurray 4022 32nd Ave SW, 98126</p>	Alan McMurray
04/28/2022	Please do not choose one of the options on 5th that will severely impact the CID. 4th avenue is a better, more equitable choice.	Katherine Howell
04/28/2022	I'm concerned about the impact this plan will have on small businesses in the CID. Given the historically detrimental relationship between communities of color and public transit, I hope you can find an option that doesn't displace small businesses and cultural landmarks. That said, if a decision must be made then 4th Ave S is the only option that should be considered!	Emi Okikawa

04/28/2022	<p>I understand the importance of reliable mass transit and wholeheartedly support the light rail expansion. However, it is absurd that Sound Transit would even consider the 5th Ave S options/design alternatives for the new station. The CID should not have to pay the cost of this light rail expansion for the rest of the city.</p> <p>A quick online search would show a number of large infrastructure and development projects that the government had forced upon the CID community by use of eminent domain. All of these projects have had adverse impacts on the neighborhood. They go as far back as redlining in the 1920s, to the construction of Interstate 5 that cuts the neighborhood in half in the 1960s, to the most recent street car construction in 2012. The government and local authorities continuously cause harm to the CID while providing lip service about centering their work around equity and uplifting underrepresented communities is quite the irony.</p> <p>I strongly urge you to reevaluate these options and conduct a much more thorough EIS before you move forward with the selection. The DEIS is flawed and showed white supremacy culture at work. The historic fabric of the CID includes tangible and intangible assets and should be looked at as a whole. You cannot use institutional rubrics to measure the historic significance of a neighborhood that was created as a result of racist ordinances and policies.</p>	Ching Chan
04/28/2022	<p>Dear Sound Transit,</p> <p>I submit the following comment on the Draft Environmental Impact Study of ST3:</p> <p>For the Duwamish crossing, I urge you to choose the North Crossing (DUW-2), which is necessary to avoid cutting into the West Duwamish Greenbelt and the north end of Pigeon Point, where a critical hillside and a Great Blue Heron habitat are at risk. The North Crossing avoids loss of vital park resources (the West Duwamish Greenbelt, Seattle's largest greenbelt) and avoids loss of a biodiversity area (Heron colony, et al). I believe these should be held paramount, and projected higher costs are worth the protection of these vital natural assets.</p> <p>Thank you for your consideration.</p>	Caroline Borsenik
04/28/2022	<p>Please do not displace businesses that have been in the ID for decades, please put the new Lightrail station somewhere else.</p>	Sabrina Woon-Chen
04/28/2022	<p>As a resident of C-ID, I think it would be cruel and unnecessary to make much of Chinatown fall apart for an unnecessary light rail addition on 5th Avenue, especially when there are other viable options available. The Asian population of Seattle has suffered enough due to historic transportation construction and relocation, and it is absolutely unnecessary to do it again and repeat the same oppression.</p> <p>The 5th Ave extention option should not have even been created let alone considered for this reason.</p> <p>Also, importantly, the Publix Hotel is a historic property that will be disturbed and possibly unnecessarily damaged if the 5th Ave extention proposal is chosen. Many surrounding buildings are proposed to be demolished, and damaging a historic property- one especially important to the Filipino population of Seattle- is absolutely not appropriate.</p> <p>I urge the city to consider the 4th Ave option. \$500 million and Bartell's are absolutely nothing compared to what could be lost in this small plot that Chinatown occupies.</p> <p>If this city chooses to uproot several Asian owned businesses to save \$500 million dollars that it can certainly afford to spend on the 4th Ave extention, I will absolutely move myself and my family away from Seattle and pay taxes elsewhere.</p>	Lillian Johnson

04/28/2022	<p>Once again, Seattle’s Chinatown-International District (CID) is being victimized by a public works project that does little to understand the impacts on its residents, community service organizations, small businesses and their customers, while trumpeting the grand efficiencies of its project.</p> <p>From the 2nd Avenue expansion, I-5 and Kingdome construction and beyond, the history has ranged from projects not seeking ample community participation and feedback to inadequate responses to any feedback received. That history cannot continue.</p> <p>With the CID in a constant state of recovery, any project alternative that results in displacing a CID resident, small business or community service, should not be considered. Coupled with impacts to King Street, the CID’s core, the 5th Avenue options are not viable and must be removed.</p> <p>Construction is anticipated to last a duration of nearly ten years. The impacts of this long-term construction activity on the community in all aspects must be fully weighed in collaboration with CID residents, businesses and service organizations.</p> <p>This collaboration will help determine whether remaining options are feasible or even the feasibility of the project itself.</p>	Edmon Lee
04/28/2022	<p>Please extend the public comment period for 90 days, there has not been meaningful engagement with the CID community. This could have devastating effects on that already-afflicted area of Seattle. None of these alternatives seem sustainable for that community -- all cause displacement and environmental disruption and could wipe out vulnerable populations and the small businesses that are so vital to the comeback of Seattle after the COVID crisis. This only compounds problems afflicting the vitality and viability of Seattle as a whole.</p>	Sarah Sakurazawa
04/28/2022	<p>To Whom This May Concern:</p> <p>Please reconsider and do not move forward with construction on 5th Ave. for the light rail. It will serve as a huge disruption and cause economical and social harm to the AAPI community. The International District has been hit hard with Covid-19 as well as increased anti-Asian hate associated with the pandemic. The ID is finally recovering from that. If construction moves forward on 5th Avenue, you will be causing a huge setback in our community. I implore you to consider instead to move forward with construction on 4th Ave. Thank you.</p>	Samantha Chin

04/28/2022	<p>I am an environmental public health practitioner who leads a circular economy project at the Danny Woo Community Garden. The board should consider option C-ID-1b, 4th Ave Deep, for the West Seattle & Ballard Link extension in the C-ID segment.</p> <p>Positioning the station on 4th Ave is a less disruptive option because anything on 5th Ave or the diagonal option further dissects the neighborhood than its current already-fragmented state, i.e., I-5 literally cuts the neighborhood in half now. The C-ID -1b option appears to cause the least displacement (# of employees), and balances cost, operational vibrations.</p> <p>Here are my other questions and concerns:</p> <p>Based on figure ES-32 in the Executive Summary, there will be elevators to connect the platform to the tunnel to the existing C-ID link station. Growing up in Hong Kong, I'm very familiar with mature mass transit systems and transportation hubs. Elevators concerns me as it will bottleneck foot traffic during rush hours (e.g., after a game). How will Sound Transit solve this issue?</p> <p>2. The C-ID has traditionally been impacted by historic redlining, environmental racism that led to poor air quality. Pollutants from I-5 traffic is one of the many examples. What is Sound Transit's plan in mitigating noise and air pollution during the construction to a neighborhood that has residents suffering from elevated levels of asthma and are already compounded by environmental disadvantages? Similarly, how will Sound Transit ensure public safety in the neighborhood? E.g., during road closures? Public safety is a huge concern in the neighborhood especially since the Black Lives Matter Movement.</p> <p>3. What were the methods that Sound Transit used to come up with these options? I want to understand how did the engineers arrive at the conclusion that only these five options are viable. Are there other options for the community to consider?</p>	Joycelyn Chui
04/28/2022	<p>The only equitable option is to build on 4th street.</p> <p>The international district is a very important part of this city's history, and the fact that many businesses have been struggling recently after racist events during COVID doesn't mean the area should be redeveloped and changed into something different. Redevelopment of the international district in any form would certainly raise rents on businesses and make it more likely that remaining culturally important businesses would be pushed out.</p>	Christopher Blappert
04/28/2022	<p>Seattle is fundamentally a city comprised of strong and distinct neighborhoods. The CID is one of these, and is unique in that it is home to multiple Asian-American communities. This neighborhood relies on a mix of walkability, business, residential, outdoor spaces, affordability and cultural familiarity to be the strong neighborhood that it is. Some of it's special characteristics include affordable housing and desirability for older residents. Not to mention that it's a destination for Seattlelites and tourists alike. We must do everything possible to sustain and enhance successful places such as this. I should also note that doing so is a stellar example of meeting the State's Growth Management Plan. The 5th Avenue proposal is extremely damaging to the CID, and would be counter to everything that the neighborhood, the City and the State value. The great news is that there is an excellent alternative: 4th Avenue. Spending more money now, when viewed from 10 years post-construction will have been the obvious right decision, as it has been for every case like this. Thank you.</p>	Kim Gould
04/28/2022	<p>I am very disappointed in the DEIS and the five proposed options in the CID/Pioneer Square neighborhoods. Sound Transit is further burdening the CID, a historically marginalized neighborhood and community, on the name of progressive mass transit and environmental justice.</p> <p>Please reconsider and do a deeper dive with a real EIS. The CID and Pioneer Square community members have a right to fully understand what the construction impact and long term impact for each option entails - not just showing how many number of parking stalls will be removed. People's livelihood, homes, and businesses are at stake.</p>	Ian Lee

04/28/2022	Please consider how many businesses, jobs, and livelihoods this is impacting! Do not build in 5th! Please also make this a priority job so that the work is completed in a timely fashion in order to cause less disruption to this area and provide more safety for those who work and live in the area.	Samantha Lee
04/28/2022	Can someone please explain to me in person, what is really going on and how I can prepare for what's coming along with lots of other questions.	Julie Camp
04/28/2022	Hi, I am providing feedback on the proposed project that will directly affect my home and neighborhood. I am concerned that the proposed tall and elevated tracks will negatively impact the visual characteristics of this neighborhood and overtake the natural green elements that exist today. Additionally, Seattle already experiences a lack of sunshine and this tall structure will further inhibit the small amount of light we already receive. Personally, this would affect my own well being including increased physical and mental duress. I hope that my issues are taken into consideration and an alternative is prioritized such as DEL-5 or DEL-6. The proposed lower tracks such as DEL-2a or DEL-4 also provide a good secondary option. Thank you	michele darragh
04/28/2022	Please modify and find an alternative to the West Seattle and Ballard Link Extensions. I live in west Seattle and I'm excited about the opportunity to take public transportation from my front door but not at the expense of displacing businesses in the International District. Many families depend on the livelihood of the ID.	Linda Diep
04/28/2022	<ul style="list-style-type: none"> • Tall, elevated tracks will destroy the character of the neighborhood and have dramatic impacts on the health and mental well-being of residents. • These tall tracks will tower in the air blocking natural light throughout the day, making the neighborhood feel trapped. • Please choose an alternative that goes around the neighborhood (DEL-5 or DEL-6) or a lower track (such as DEL-2a or DEL-4) 	Michael Betts

<p>04/28/2022</p>	<p>Greetings,</p> <p>My name is Doug Pierson, and I'm the production manager at Dusty Strings Harps and Hammered Dulcimers. I've been working for this wonderful Seattle business for over 22 years.</p> <p>Our beloved manufacturing shop at 3450 16th Ave W, Seattle 98119, lies directly in the proposed path of the new light rail line, unless this group decides, as I believe, that option IBB-1b is the way to go.</p> <p>Our building was custom-built to do the work we do. We would be hard pressed to find a comparable facility in or near Seattle.</p> <p>Ray and Sue Mooers, the owners of Dusty Strings, have worked extremely diligently over the years to keep this business viable in Seattle as the cost of living here has soared. They have always put their employees first, and they've been rewarded with a dedicated, highly skilled and loyal staff.</p> <p>I worry about the prospect of losing any of these great people if a light rail route is chosen that forces us out of the city.</p> <p>My family and I are excited for the new light rail extension. We appreciate the work you are doing, and we know you must make many difficult decisions. I strongly encourage you to choose option IBB-1b, and help us keep our Seattle business community strong!</p> <p>Thanks so much, Doug Pierson</p> <p>PS-we suspended offering shop tours due to the pandemic, but I believe we would make an exception if any of you would like to see our facility and meet our great staff! I think you'll agree Seattle's a better place with this business, these people, thriving right where we are!</p>	<p>Doug Pierson</p>
<p>04/28/2022</p>	<p>Hello,</p> <p>For the Delridge segment of the light rail plan, I am STRONGLY AGAINST DEL-1a and DEL-1b. I live on 30th avenue and Nevada. These options would be hugely detrimental to the community in this area. The tall lightrail track would make this community feel trapped inbetween the track and Andover. It would cut off this area both mentally and phsically. These options would have a dramatic effect on the communitys mental health and would be an eyesore to this neighborhood. The tracks would block both green space views and natrual light throughout the day, making this community feel trapped. The tall elevated tracks would destroy the character of the neighborhood, where children, dogs, and families regularly walk around and visit the nearby Delridge park.</p> <p>Please choose an alternative that goes around the neighborhood, such as DEL-5 or DEL-6 (much preferred), or a lower track such as DEL-2a or 2b (lesser preferred, but still preferred over option 1a and 1b).</p> <p>Along these lines, for the Junction segment of the light rail plan, I would strongly urge you to consider the underground options (WSJ-3a, 3b, 4 or 5). West Seattle has a small "downtown" area and the addition of an above ground light rail and station would cut this area in half, destroying the feel of this community. Studies have shown that increased concrete (and thus lack of green space) in cities has a poor effect on the populations mental health (Zhang et al. The Association between Green Space and Adolescents' Mental Well-Being: A Systematic Review. 2020.)</p> <p>Thank you for accepting these comments.</p> <p>Cheers, Tessa</p>	<p>Tessa Concepcion</p>

04/28/2022	<p>Thank you for the opportunity to comment on the Draft EIS relative to the proposed West Seattle to Ballard Link Extension. I am limiting my comments to the Key Environmental Impacts of the Chinatown-International District Segment Alternatives (Pages ES-25 through ES-29). Given the adverse impact that the Covid-19 pandemic has had on the viability of local small businesses in the Chinatown-International District, I oppose CID-2a and CID-2b and encourage Sound Transit to adopt either CID-1a or CID-1b, which are less impactful to these businesses and will result in fewer employee displacements. The Chinatown-International District is a fragile community and its continued vibrancy depends in large part on the economic ecosystem created by these local small businesses. In addition, having more workers in the Chinatown-International District should also enhance public safety in that area.</p> <p>Benson Wong Former Mayor of Mercer Island</p>	Benson Wong
04/28/2022	<p>4th Ave is a much better alternative than 5th Ave. The latter will have economic impacts on local businesses in excess if the former. Please consider the impacts on the existing local economy.</p>	Laura Hoberecht
04/28/2022	<p>I am a West Seattle resident and want to voice my support for the Ballard-West Seattle Link Extension. I look forward to the completion of this project and think it will greatly benefit the city's public transit and result in fewer vehicle trips.</p> <p>I am greatly concerned about the proposed Chinatown/International District segment. Given the potential negative impact to the businesses and residents of this important and vital community, as well as the history of marginalization and displacement during past infrastructure projects, I support the 4th Avenue alternative over the 5th avenue alternative. Furthermore, I support an extension of the Draft Environmental Impact Statement public comment period and for Sound Transit to use such an extension period to engage with community leaders to better understand potential impacts and develop mitigation strategies for the strain that will be placed on the community during the construction phase.</p> <p>I stand with the many organizations, such as Transit Equity for All, The Wing Luke Museum, OCA Seattle and others, who are fighting to save the historic Chinatown/International District. The closure of King Street, S. Well we and 5th Avenue for several years, the displacement and closure of over 30 immigrant businesses and the increased noise and air pollution are all unacceptable. Please move forward with the 4th Avenue alternative and take steps to ensure that the project will not negatively impact the historic Chinatown/International District.</p>	Brian Stein
04/28/2022	<p>On ES-29, I think that either of the 4th Avenue options (CID-1A or CID-1B) should be pursued over the 5th Ave options (CID-2A or CID-2B). The CID is rich with culture and these businesses need to be protected at all costs. As victims of Asian hate and xenophobia, it's essential that businesses on 5th Ave are not displaced, and continue to foster community in their neighborhood. As a cultural hub for many Asian cultures, these businesses must be preserved. Although an additional intersection will be impacted by using 4th Ave, the cultural impact of the 5th Ave businesses will have longer lasting community benefits once the new stations are open. The CID would not be the same without these businesses, and I hope the CID can continue to not only survive, but thrive for future generations.</p>	Maya Fraser-Philbin

04/28/2022	<p>As a resident and homeowner in West Seattle I feel strongly about the placement of our new station I'm eager for the station to be built and very excited to use it.</p> <p>From a user perspective I strongly believe that the best option is the tunnel in Alaska Junction (WSJ-5). We've got a lot of condo buildings and new development that this option would allowed to remain. It would enable our community to be supported by transit without destroying the community in the process. It provides the most access with the least disruption.</p> <p>I'm also a fan because although the aerial would have originally been less expensive than the tunnel, purchasing all of the brand new developments for the sake of demolishing them will increase the cost of the project significantly while displacing the residents who likely voted for it and want it.</p> <p>I believe that this alternative will be the most bang for our buck and encourage the greatest amount of use and happiness in our community. Residents and visitors will have easy access to the core of Alaska junction without being totally deterred because of distance, or, quite frankly an imposing and unattractive structure.</p> <p>WSJ-5 for the win!</p>	Sharon Podobnik
04/28/2022	<p>This project will be detrimental to the well-being of the Chinatown-International District community and its visitors. I urge the halt of construction and any further pursuit of the Sound Transit expansion.</p>	Minh Powell
04/28/2022	<p>It is clear that putting the station on 5th Avenue will destroy businesses, directly harming residents of of CID. Putting the new station on 4th Avenue is clearly less impactful.</p>	Braden Colaner
04/28/2022	<p>If Seattle is to continue to be a tourist destination, we need to preserve the diversity in CID and the small businesses that make this location unique. Please consider building on 4th Avenue so we can continue to preserve this historical part of the city.</p>	Sandra Gutierrez
04/28/2022	<p>I would recommend the Revision thru 4th street would be the least damaging option for the international district and the community.</p>	Charles Davis
04/28/2022	<p>It would be incredibly hurtful to our community for the project to go through 5th Ave. It would cause much community disruption and exacerbate inequities. The route with the least negative impact would be 4th Ave. Furthermore, I recommend the project go through there.</p>	Brian Ramirez
04/28/2022	<p>When considering the demolition of buildings with established, minority-owned businesses as tenants, the 4th Avenue route is the better option.</p>	Briana Boche
04/28/2022	<p>Hello,</p> <p>Thank you for taking the time to review comments as part of this process. I am a resident of West Seattle, and my neighborhood is the focus of my comments at this time. We all know we live in a beautiful region, and the appearance of light rail is important. To this end, my preferences are:</p> <p>tunnels, especially as close to the Alaska Junction as possible</p> <p>1.a. the Alaska Junction is a major hub in West Seattle, and when thinking about people with mobility issues, having stations a significant distance away from Alaska Junction is not ideal</p> <p>lower elevated tracks where tunneling is not an option</p> <p>I respectfully request that the tall elevated tracks are not considered for West Seattle. Along I-5 (North Seattle), such tracks make sense. However, West Seattle is dense and the tall elevated tracks would drastically impact the look and vibrancy of West Seattle.</p> <p>Peripherally related: please do not entertain the people who are pushing for gondolas, as their proposal is absolutely rubbish. A major downside about Seattle public transit is that several of the different modes available (light rail, monorail, and streetcar) are not easily connectable to each other or bus lines. Adding another mode of transportation would be ridiculous, especially when voters want light rail.</p> <p>Thank you, Laurie</p>	Laurie Feldman

04/28/2022	How is are members and visitors of ID going to be affected in displacement? These decisions will massively affect the community and surrounding areas for many years. This is not something I wish for an area that I have grown up in and wish to see flourish.	Lisa Chung
04/28/2022	CID 1a and CID 1b seem most fair to the businesses in the CID, as they've historically had to readjust their businesses and homes to accommodate and construction or revision.	Danielle Rogers
04/28/2022	The proposal for your organization to expand service from West Seattle to Ballard will completely decimate the International District in Seattle if the 5th Ave option is chosen for the tunnel. Not only is this a gigantic waste of money because very few Seattlites actually use your horrible service, but you are destroying history, heritage, and a powerful, strong community that is very historic in the entire state, if not the entire country. Sound Transit's history is subpar compared to that of the International District, and your costs are overly outrageous as well. The ID has been around for almost 100 years. You guys? You guys will be bankrupt by then. I am so outraged and horrified at the fact that big business is even considering this.	David Sanford
04/28/2022	Choose the 4th Ave option in Chinatown-International District! We need the option that causes less disruption to the neighborhood. Thank you!	Nell Gross
04/28/2022	Please consider an alternative for the Chinatown-International District proposal such as 4th Deep or 4th Shallow. All 5th avenue options would severely displace the already fleeting Chinatown businesses. This neighborhood has already been hit hard with the COVID pandemic and the surge of homelessness and crime. Please do not continue the destruction of this beautiful neighborhood/tourist attraction by construction the station on 5th AVE.	Justin Tanapukdee
04/28/2022	I was born and raised in Seattle. I've called Chinatown my home for most of my life. Most of my formative years took place right on 5th Avenue. We cannot displace any of these businesses that have made our community a home. I ask that we move forward on 4th and keep as many businesses preserved as we can	Diana Ratsamee
04/28/2022	I strongly oppose the station options as they have put forth because they will have immense detrimental impact on the local neighborhood, community, and small businesses in Chinatown - International District. I urge Sound Transit to consider this critical issue and suggest more compelling station options.	Jang Wook Huh
04/28/2022	It makes me so happy to live in a city that champions local businesses and shopping small. The Chinatown-International District is by far my favorite part of Seattle, and it is a thriving neighborhood with so many of these great small businesses. I ask that you please consider opting for Sodo routes that would use 4th Avenue instead of 5th Avenue, so that we do not end up pushing out more hardworking store owners than the pandemic already has. Thank you for your thoughtful consideration.	Victoria Pocklington
04/28/2022	Please consider an alternative for the Chinatown-International District proposal such as 4th Deep or 4th Shallow. The 5th Ave option would detrimentally impact the small business and the historical significance that the International District carries. Have the station built on 4th Ave would be less disruptive and would not displace small businesses that currently still support the economy of this area. The community has already been through a lot with COVID and hate crimes. Having the station built through 5th Ave would split the community in half here and cause many business hinderances with the construction. Let's try to save historical areas in Seattle and not continue to put down a community that is already hurting from recent issues. There can be alternative routes but having it on 5th Ave SHOULD NOT be an option.	Melissa Feng
04/28/2022	how many regional transit hub is sound transit building? one! where are regional transit hubs located in other major cities? downtown! why is this regional transit hub in cid? racism! if you can make modification to this line to accommodate a newly build apartment complex of 300 units, you can make an accommodation to this design in historic cid	Yin Yu
04/28/2022	Please consider running the new light rail extension through 4th Ave in the International District to minimize the impact on the ID/ Chinatown community and business district. Thank you!	Jessie McAbee
04/28/2022	Expanding Sound Transit in the CID for the WSBLE project will displace small businesses and low income immigrants. There are so few walkable neighborhoods in Seattle. This expansion will hurt an already vulnerable community.	Mathilde Xiao

04/28/2022	<p>Please select the 4th Ave option for the light rail expansion.</p> <p>I am Concerned about the city ruining the International District which is an important treasure to the fabric of Seattle. Do the right thing choose 4th Ave option</p> <p>Thank you for your work on this and listen to the people.</p> <p>Respectfully Carol Coleman</p>	Carol Coleman
04/28/2022	<p>Preserve the Chinatown International district!!! We have seen this neighborhood disrupted time and time again with development of I -5, the Kingdome, and most recently, Covid-19 racism and discrimination, which gravely hurt a number of businesses.</p> <p>For this reason, 4th Avenue options 1a and 1b should be your only consideration. When selecting, ask yourself - for whom is this benefitting, for whom will this be easier? Closures and impacts to the western border of the Chinatown International District does not benefit and is not easier for our pan-Asian community and all those who frequent the neighborhood.</p> <p>4th Avenue Options ONLY</p>	Mari Sugiyama
04/28/2022	<p>The DEIS cannot go forward without a comprehensive study as to how it will affect the lives of the people living where construction will take place. Do not begin construction if it means displacing community members.</p>	Cameron Coates
04/28/2022	<p>I support the 4th street shallow. Please don't take away what little we have left in our International District.</p>	Jennifer Kwong
04/28/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate</p>	Claudia Villa

04/28/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). 04/28/2022	<p>I am a lifelong resident of Seattle, my family is very connected to the Seattle Chinatown International district, we are directly intertwined into this community from volunteering, working, and owning businesses. My dad to this day has worked in the community for over 45 years. I have traveled across the world and have marveled at their implementation of their mass transit systems and was hoping one day Seattle and its surrounding areas can have that. Because of this I have been a major supporter of all the Sound Transit, especially the link light rail, including the increase taxation of and fees that came with ST3. However any options of taking a part of Seattle Chinatown community (5th Ave S options) I cannot support. It is harmful to the community that has been greatly impacted by many generations of discrimination, from the removal of Japanese Americans and interning them in 1942, the demolition of Japanese and Chinese businesses to erect I-5, to the current issues with the pandemic and rise of anti-asian hate rhetoric. The community has suffered and rebuilt each time, but when is it enough to keep kicking a historically ethnic community down. Sound transit already disrupted the lives of South Seattle a predominant minority neighborhood. Instead of having an elevated or underground light rail it chose the light rail to be on the street level with regular vehicle traffic, while other parts of the light rail was elevated or underground in less diverse neighborhoods.</p> <p>I implore Sound Transit to please continue to explore further ramifications of all its options and while all options are harmful to this community. The 4th Ave S options is the least harmful and any option on using 5th Avenue should be thrown out. We must keep the diverse neighborhood of Seattle Chinatown International district whole.</p>	Randall Wo

04/28/2022	<p>I am a homeowner on 26th, near Andover and the Youngstown Flats, and have been a West Seattle resident for 8 years. I feel so privileged to live in an urban neighborhood that incorporates the beautiful Longfellow Creek nature trail and the wonderful Delridge playfield in walking distance. I approve and support the development in West Seattle over the last decade, and an elevated West Seattle Junction station would destroy the unique character of the community, which wonderfully blends urban and suburban characteristics (I grew up in Mill Creek, WA). The costs of the Andover station do not justify having a third station so closely linked to the Alaska and Delridge stations. The cost savings of removing the third station from the project would be better spent supporting a tunnel to the Alaska Junction.</p> <p>Referring to the Executive Summary (ES-17,18) I support Andover Street Station Lower Height Alternative (DEL-6). It has the lowest residential impact (which should be a high priority given the housing market of the last 10 years), the least impact on the green characteristics of the neighborhood, and the lower height prepares for connection to the very important tunnel alternative in the West Seattle Junction Segment.</p> <p>Referring to the Executive Summary (ES-21,22) I strongly support the Medium Tunnel 41st Avenue Station (WSJ-5) to preserve the characteristics of the West Seattle Junction area, the business park, and the grocery stores. This is also the SECOND CHEAPEST OPTION, with the lowest number of businesses impacted and the second lowest number of residents and employees impacted, and the least impact to parks.</p>	Carol Storch
04/28/2022	<p>Please do not build the transit center on 5th Avenue. This will severely impact and hurt our AAPI community. This area is sacred and so rich with history, that building this would take away both homes and jobs. I urge you to come up with alternate solutions. With all that has happened with the pandemic and Asian hate crime, we need a win for our community, and this would be going backwards.</p>	Sarah Lam
04/28/2022	<p>I am sick and tired of watching Sound Transit mow down hundreds of trees to put in a LRT line that should have gone up the middle of the freeway like BART has been doing for decades now - who are you kidding with your %(*\$%% 'tree planting' program now having done all that?</p> <p>and now you are already doing it again southbound to tacoma and likely for the other two lines. WHEN will you pull your heads out of your overpaid, over-taxing ASSES and protect our climate first? you are liars and tax cheats, plain and simple, and WE have to pay for it? See you in 25 years when our climate is truly f'd by shitty planning from the likes of you and those 'tree plantings' had been left to die on the vine through lack of care while the hundreds of conifers you mowed down are long, long gone - F you.</p>	kevin orme
04/28/2022	<p>Please avoid harming the ID/ Chinatown. After all they small businesses have endured during the pandemic and the ongoing anti-Asian hate, please reconsider. Perhaps take out one of the car lots instead!</p>	Shannon McCann
04/28/2022	<p>For the Chinatown-International District Segment: while the Fifth Avenue alternatives are favorable in terms of cost, estimated duration of construction, and disruption of traffic/transit patterns as listed in Table ES-5, Sound Transit should seriously consider the long term effects on small businesses affected by the Fifth Avenue option. I strongly believe that the potential displacement of 19-27 (CID-2a) or 18 (CID-2b) small businesses is not a justifiable outcome for businesses and community that have already been deeply impacted by the COVID-19 pandemic.</p>	Megumi Matsushita
04/28/2022	<p>ID is an important neighborhood to me as a Chinese American. I'm concerned that the prolonged construction will do permanent damage by displacing businesses and people that give ID its identity. Additionally, air pollution and sound pollution will certainly keep hurt the people and business that remain.</p> <p>While the 4th street options are better on paper, I'm still concerned that the only options are those that will affect businesses and residents. Is it possible to consider areas that wouldn't displace any person or business? Public transit shouldn't come at a cost to anyone, especially those who need it the most.</p>	Alan Zhang
04/28/2022	<p>Please do not build a station on 5th street in the International District, it will seriously disrupt the small businesses there and fragment the culture of the international district that has been steadily building.</p>	Ava Ross

04/28/2022	I am in support of the 4th Ave options instead of the 5th Ave options. Do not displace people in the CID.	Joshua Berl
04/28/2022	<p>Time and time again, Sound Transit will be negatively impacting the lives of its most vulnerable with the implementation of the the new West Seattle & Ballard extension. The Chinatown-International District is home to many businesses, non-English speakers, elderly communities, and BIPOC communities. The estimated 11 years of construction would displace businesses and communities. Buildings where our beloved community restaurants are will be demolished and displaced. The proposed construction will require years of street closures and loud machinery for 16 hours a day, which will greatly impact the quality of life for those in the area, while simultaneously impacting air quality.</p> <p>This isn't the first time the community has experienced wrongful decision making at the hands of the government. The government's decision making has come at the cost with the community's residents, businesses, and cultural identity. Unfortunately, there has been a theme of continuous attempts to displace our communities with careless decision making. I ask that your repeat history over again as we've already experienced in years past.</p>	Kirsten Garcia
04/28/2022	<p>I am commenting on the CID station specifically to strongly urge you to move forward the 4th Ave option, and not the "diagonal" 5th Ave option. As the draft EIS notes, the CID neighborhood is a unique historical neighborhood and is highly significant to communities who rely on that specific location for cultural connection and anchor. Not only do the buildings hold cultural significance, but most of the BUSINESSES themselves directly reflect and represent the Asian communities and cultural significance of the neighborhood. These are not businesses that could simply find another location in the city and still survive. Displacing 5 to 8 businesses for the 4th Ave station option, versus displacing 18 to 19 businesses for the 5th Ave station option, is a huge difference in impact for this unique cultural ecosystem and beloved gem of a neighborhood and part of what makes Seattle the city it is. Plus, these unique businesses in the CID have already been struggling because of the pandemic and loss of income. Displacement of such a significant number of CID businesses with the 5th Ave station option would cause even more devastation. Community members from the CID are calling for support of the 4th Ave option as the less harmful of the two, and I stand in support of them.</p>	Sierra Nelson
04/28/2022	<p>The rich history and culture of the CID has already been disrupted and marginalized in Seattle History with the dissection of the community with the development of i5 and the stadiums in the backyards of predominantly low-income, multigenerational families. The pandemic and recent anti-AAPI hate has unfairly doubled down on crime and vulnerability to this neighborhood. CID-1A and CID-1B should be reassessed and relocated out of the CID to avoid more disruptions to family owned small businesses in this historic district.</p>	Tanya Subcleff
04/28/2022	<p>I commute through Chinatown and visit for food/shopping at least 3x a week. The neighborhood is special because of the small businesses like Seattle's Best Tea and Ping's Dumplings. I'm worried about the impact of ST's presented options and the impact on the neighborhood's businesses and character. How will you mitigate construction stress/negative impacts on our small mom and pop shops? What the noise and health of our older residents? My mom's friends live in Chinatown and already have to deal with lots of noise & debris from construction—to the point that they don't feel like they can relax in their own homes. How will you make sure that older, low-income residents like my family's friends won't be stuck living in a construction zone for years? Will they be able to talk to ST (with interpretation) and have their comments/questions change existing plans or change how ST handles the construction process?</p> <p>Chinatown is a neighborhood and home for many of my friends and family; it doesn't need to become a transit hub. I commute using the light rail station in Chinatown all the time and the transit options are ok. How will your plans affect the connections with Metro routes that run down Jackson?</p> <p>Your website says that ST values equity and makes decisions with that in mind. I'm not sure how displacing our neighbors and routing more traffic through a very small neighborhood is demonstrating equity. Respectfully, neither the 5th or 4th Ave station plans seem like they really take into account the rippling effects on our vulnerable populations.</p>	Tyler Neff

04/28/2022	<p>Please prioritize long-term benefits to riders over short-term disruptions and costs. In particular, keep stations shallow, optimize placement for convenient access and transfers, and design in options for future expansion. Short-term construction impacts should play very little role in the decisions.</p> <p>In short, follow Seattle Subway's recommendations: https://seattletransitblog.com/2022/04/13/seattle-subways-summary-recommendations-for-the-st3-deis/</p>	Steven Stroiney
04/28/2022	<p>I'm writing in regards to the proposed Chinatown/ID light rail expansion. I strongly encourage you to choose the 4th Ave S route option. 4th Ave is already mostly just a traffic arterial and construction there will only be a small inconvenience to traffic. 5th Ave S is a vital commercial hub for this community, full of thriving small businesses. If this route is chosen, it will result in the demolition of some buildings which house these businesses, requiring them to close or move and leaving hundreds of people unemployed. The construction equipment and detours will further disrupt the community and negatively impact local businesses.</p> <p>Please do the right thing for this community and our city as a whole and choose the 4th Ave S route. Thank you!</p>	Tasha Santos
04/28/2022	<p>In section 3.2.1 of the Appendix G: Environmental Justice, SoundTransit states, "The Seattle Chinatown Historic District is listed in the National Register of Historic Places and is a City of Seattle Landmark District, and is historically and culturally important to the Asian community and the City of Seattle." Please respect the community by choosing the least disruptive option for local businesses and residents, and build the CID station on 4th Ave S (CID 1-a, 1-b). Thank you!</p>	Linnea Lippart
04/28/2022	<p>I support the Wing Luke statement for opposition to the stations as they exist, and calls for a more thorough study on impact to the local neighborhood and community. It will destroy the neighborhood and the community that resides there for generations.</p>	Huong Nguyen
04/28/2022	<p>Please reconsider the options on 5th Ave for the Chinatown-International District area. The affected businesses expand beyond that area due to the interconnected Asian communities and businesses. Parking situation is already tough in that area and businesses are struggling. The communities in South Seattle have been negatively affected by many decisions that haven't been communicated well with the local community such as the changes to traffic lanes and above ground light rail. Please minimize impacts to Chinatown-International District area and keep the work on 4th Ave.</p>	Quinn Ma
04/28/2022	<p>Build on 4th ave not 5th. CID has already had a major freeway cut through. We don't need another construction project displacing businesses right through the heart of CID.</p>	Rowena Johnson
04/28/2022	<p>Please strongly consider using 4th Avenue instead of 5th Avenue for construction. The CID should not be sacrificed when there is a better alternative - 4th Avenue - regarding construction. The CID will be permanently damaged by long term shutdowns if construction is located on 5th Avenue and neighboring streets.</p>	Sandra Lee
04/28/2022	<p>The Chinatown station option CID-1b is the better option. We should listen to the neighborhood leaders and minimize the destruction of Chinatown as well as connect the train line to the existing Link light rail to the airport.</p>	Samuel Mitchell

04/28/2022	<p>I welcome the ability to comment on the draft EIS for the West Seattle-Ballard Light Rail Link.</p> <p>The Seattle Chinatown is an important historical landmark and cultural center for the city's Chinese and Asian American residents. Impacts to Chinatown, both during construction and during operation, should be carefully considered, and the one which will least impact the general day-to-day of residents and businesses in the area should be chosen.</p> <p>While both the 4th Avenue S and 5th Avenue S routes would be disruptive, a route through 4th Avenue, nearer to the edge of the Chinatown district, would be less disruptive and have less impact on Chinatown business than placing a route straight through Chinatown on 5th Avenue. 4th Avenue is already a greater thoroughfare for vehicle traffic than 5th Avenue, so having the rail go there also makes sense. The benefits of avoiding 5th Avenue more than make up for the incrementally higher cost for the 4th Avenue alternatives.</p> <p>Sincerely, Evan Lum</p>	Evan Lum
04/28/2022	<p>Due to the proposed impact to the Delridge corridor there are two options that seem to be the better options. Due to less neighborhood impact the options DEL-5 and DEL-6 for the West Seattle Sound Transit route would be the ideal options.</p>	Kris Wilson
04/28/2022	<p>I did not know that the West Seattle link would go through the International District. Please don't have the light rail go through the International District. It will again ruin another community of color. International District is an important community to Seattle. Thank you for reading my email.</p>	Kristen Desjarlais
04/28/2022	<p>Hello,</p> <p>As a concerned citizen in north delridge I am concerned raised, elevated tracks will cast noise and an unsightly view from the neighborhood and golf course.</p> <p>I also worry with rising costs of concrete and it's failure rate as we have seen in the bridge that this might not be the best solution.</p> <p>Please choose an alternative design that goes around the neighborhood (DEL-5 or DEL-6) or a lower track (such as DEL-2a or DEL-4)</p>	Andrew Israel

04/28/2022	<p>This is a a response to the DEIS draft Traffic impact. directed at appendix N.1A Attachment N.1A Transportation Technical Analysis Methodology Table N.1E-13. DEL-5 and DEL-6* (cost 3rd party) shows the least impact for traffic in Youngstown during construction timeline. Other alignments have longer impact timeline. Neighborhood impact Appendix J Del-1a, Del-2a*, Del-2b* alignments would impact recently improved housing and neighborhood community. Similarly Del-3, Del-4* alignments impact recently improved housing and neighborhood community. Delridge Segment DEL-5 and DEL-6 would move the alignment closer to Spokane st and closer to the park and ride facility, lessen impact to community in Del-1a, Del-2a*, Del-2b*, Del-3, Del-4*. alignments.</p> <p>I would rather have the alignment and its impact in the front yard of the nucor steel as they benefit directly from sound transit construction in the form of rebar used throughout. I would think there would be far less impact in the delridge segment/station with alignments Del-5 or Del-6*.</p> <p>The Appendix J Delridge Segment Del-1a,Del-2a*, Del-2b*, Del-3, Del-4* shows the demolition of the same neighborhood. Why would those impacted most in these alignments want it there when there is an alternative offered in front of the steel mill? Sleepy office park (Del-5/Del-6*) or new towhomes demolished (Del-1a,Del-2a*,Del-2b,Del-3,Del-4*).</p> <p>Del-5 or Del-6* would serve the needs of the community in the Delridge segment with the least impact. Even this alignment would change the area in unforeseen ways. I don't think near enough of the communities have seen Appendix J for a clearer understanding of the exact impact of the current Draft EIS. My comment and opinion.</p>	Tracy Slatten
04/28/2022	The 4th street option is best, it will impact less businesses	Qing Wenes
04/28/2022	I'm concerned about the impact that building 5th avenue will have on businesses and the community in the Chinatown-ID neighborhood. The 4th avenue option though not without costs would mitigate these harms.	Kyra Arnett

04/28/2022	<p>I am voicing my comment on section ES.3.1.2.2. and specifically want to call attention to Table ES-5 "Key Environmental Impacts of the Chinatown-International District Segment Alternatives".</p> <p>Though alternatives CID-1a and CID-1b have the highest cost, that includes potential third party funding for the 4th Ave viaduct reconstruction. Not considering that additional cost, those alternatives are empirically better than the two 5th avenue alternatives.</p> <p>Now let's consider the costs that are harder to measure. The 5th avenue alternatives, CID-2a and CID-2b, both have over 18 business impacts. The economic and cultural impact of disrupting so many businesses in such a historic neighborhood (that is also very popular with tourists) would be devastating. I hope other comments elaborating more on the need to preserve and protect the existing community in the CID are strongly considered. Though the costs may be cheaper to City Hall with alternatives CID-2a and CID-2b, the immeasurable cost to the already marginalized community of CID must be at the forefront of our concerns.</p> <p>Also consider the possibility of a Stadium station closure bringing more foot traffic and business to the CID as pedestrians are rerouted to walk from the CID station to the stadiums.</p> <p>We should prioritize the impact on the most vulnerable and most affected. Thru-traffic can be rerouted, and drivers temporarily passing through can be diverted. But the community and businesses in the CID cannot be destroyed if we care about building robust communities and economic centers our city can be proud of.</p>	Imran McGrath
04/28/2022	<p>Please ensure prioritized transit and cycling connections to all light rail stations as part of this project.</p> <p>If the Avalon station is to be deleted in favor of tunneling, please ensure transit connections from 35th have on-street priority to the remaining stations.</p>	Chris Rodkey
04/28/2022	<p>I don't want any further slicing and dicing of Chinatown/ID. This cultural space is just beginning to recover after a disproportionately difficult covid period and the construction in the heart of C-ID would cause irrecoverable harm.</p>	Alyssa Lew
04/28/2022	<p>Hi there,</p> <p>I read the article on Crosscut about how expanding the light rail on fifth could harm the Chinatown-International District businesses and community. Our community does not have a price tag. I strongly urge you to please consider building underneath Fourth street rather than Fifth street, to protect and support the vibrancy and beauty of the C-ID businesses and community.</p> <p>Thank you for your time and consideration. Warmly, Kaitie</p>	Kaitie Dong
04/28/2022	<p>I've lived in West Seattle in the North Delridge neighborhood since my wife and I bought our first home in 2016, after renting in Admiral for two years. I've mostly enjoyed it as a place to grow a family and raise my kid, and I've approved of the development in the neighborhoods we've lived in. I don't think a elevated junction station would be good for the character and quality of the neighborhoods it will impact. Best case scenario is that the junction would look like 5th with the monorail tracks near Amazon. Additionally, I can't imagine the benefits to commuters from a third station on top of Delridge and Alaska being worth the cost.</p>	Kyle Freemantle
04/28/2022	<p>Sound Transit should consider options that don't displace residents and businesses in the CID. I'm concerned about both the short and long term impacts on the community there.</p>	Yates Coley

04/28/2022	Please consider the impact that this project has on the people who are currently living and working in this area. The CID is home to so many communities and businesses that are important to not only that area, but Seattle and even the PNW.	Tan Nguyen
04/28/2022	Please don't build through 5th Ave as it's harmful to the community and demolishes historic buildings that are cultural resources. Please use the alternative plan and use 4th instead.	Airy May
04/28/2022	I'm deeply concerned about the impacts to small businesses (and the neighborhood at large) that will result if alignments on 5th Avenue move forward. When I lived in Seattle for 5+ years, I used public transportation — and often the light rail — as my main way to get around the city. I agree that we need more and better access to public transportation. But any future changes should not be at the expense of the CID, which has already endured many construction and transportation projects to date. Please reconsider these options on 5th Avenue that will displace businesses and cause significant construction impacts.	Lauren W
04/28/2022	I do not support light rail on 5th Avenue. Sound transit changes the rules and never genuinely listens to feedback from the community as evidenced by what happened in south seattle as well as what happened in on mercer island. We lived right on the commuter corridor in south seattle and it could have been a wonderful project for the community. No park and rides were put in, the developers made millions and reduced parking in the name of TOD, all of it was put above ground, and the bus routes were decimated. I could go on. Now, listen to the people and do not impact Chinatown or the ID.	Tom A.
04/28/2022	We must learn from our history and we must do better! We cannot keep disrupting communities.	maureen dollar
04/28/2022	I'm an Asian American resident of Seattle, and I'm extremely concerned about the impacts this project will have on the Chinatown International District. I'm especially concerned with the 5th avenue options and the harm that would do to the CID and Asian community of Seattle. I urge you to move forward with the 4th Ave (CID-1a) option and NOT any of the 5th Ave options which would do extreme harm to many beloved & crucial businesses and AAPI community gathering spaces. How will Sound Transit ensure that the least possible harm is done to the neighborhood community, especially considering a history of harmful infrastructure projects in the area? (for instance, the construction of the 1-5 which divided the neighborhood in two). Again, I urge you to go with the 4th Ave 1a option which would be the least harmful to the area, its residents, and its businesses. Thank you.	Angela Huang
04/28/2022	Hi, I've been a long time Seattle resident and the Chinatown International district is a very important space for me, my family, and community. This proposal for the new light rail expansion doesn't make any sense. We shouldn't be demolishing beautiful historical sites and up root small businesses in Chinatown when we have a more viable option along 4th. Thank you for listening.	Lynn Bui
04/28/2022	Seattle's Chinatown-International District is far too important culturally and historically to be broken up by this construction.	Catalina Valdez
04/28/2022	Please choose the 4th ave option supported by CID community members.	Hillary Coleman
04/28/2022	Hello, for the Chinatown-International District alternatives, please do not build on 5th Avenue. The 5th Avenue alternatives would mean construction in the heart of the Chinatown-International District, and further damage the Asian American community that has already been suffering from the effects of the civil unrest of 2021 and COVID.	Andrew Gong
04/28/2022	I'm opposed to tearing down businesses in the Chinatown-International District area. If the space is used for transportation how will the businesses currently in the area be supported? Will we be providing these businesses shop spaces underground... similar to other major cities with large transportation systems? Are we going to continue the gentrification of this city?	Alexandria Rivas

04/28/2022	<p>When deciding where to build a station in the CID segment, please move forward with the 4th Ave options only. Building on 5th Ave will negatively impact the local community by disrupting, displacing, and eliminating key businesses there. The 5th Ave plan will also subtract anywhere from 20 to nearly 200 parking spaces in our growing city, where parking is already competitive.</p> <p>In section 3.2.1 of the Appendix G: Environmental Justice, SoundTransit states, "The Seattle Chinatown Historic District is listed in the National Register of Historic Places and is a City of Seattle Landmark District, and is historically and culturally important to the Asian community and the City of Seattle." Given that SoundTransit understands the great cultural importance of the CID, please understand that building along 5th Avenue will work against SoundTransit's mission to support the greater Seattle area. Avoid building along 5th at all costs. Thank you for your consideration.</p>	Ian Britz
04/28/2022	<p>The International District 4th Ave route would be less invasive than the 5th Ave alternative, and the optimal option for those living and working in the neighborhood.</p>	Courtney Parker
04/28/2022	<p>Thank you for the great job reaching out to community and working on getting more mass transit to our City.</p> <p>For equity and cost reasons, please consider only the 4 preferred Ballard Station options in the EIS. NOT Central Ballard. Top reasons to maintain the four preferred options</p> <ol style="list-style-type: none"> 1) East Ballard is under-resourced relative to other Ballard neighborhoods and in the next several years it will be one of the most densely populated areas. 2) Keeping it on 15th or 14th will provide a better, more efficient connective network for people coming from Crown Hill, Whittier, Blue Ridge, Greenwood, Phinney, Wallingford. Busses would only have to head to 15th or 14th as opposed to diverting to go into Central Ballard. 3) There's also a lot more opportunities to develop dense housing allowing more opportunities for people to live closer to mass transit. <p>I live in Sunset Hill with my family and have a rental property in central Ballard. So advocating for central Ballard station would actually be to our benefit. But I realize the City has more to gain by maintaining the preferred options by keeping the project going, not delaying it, saving money, providing transit to other areas in Ballard that need it, and create a better connective network of transition to more neighborhoods.</p> <p>Of the 4 Ballard station options, I hope you choose either the Tunnel 15th Ave (IBB-2b), or my second choice, Tunnel 14th Ave (IBB-2a). Both tunnel options are the least disruptive to businesses and neighbors that live, work, and commute in that area. Additionally, it'll provide the most gain by not having an elevated structure dividing the neighborhood, creating noise, and a visual eye sore. Our neighborhood can't afford all the construction an elevated option will create. Considering costs between all the Ballard station options, there's more gain from the tunnel options relatively to the same amount of money.</p> <p>This comment is coming from a long time Ballard resident (over 35 years) who has been in the neighborhood since elementary School.</p>	Jules Posadas
04/28/2022	<p>Please move forward with the 4th Ave route for the Chinatown / International District link, in order to minimize the impact on the many long-standing community businesses there. The 5th Ave alternative would have an unnecessarily large impact on the community, to whom so many other detriments and injustices have already been committed. My family has been saddened to see family businesses close down that contributed so much to making Chinatown what it was, and we don't want to see more of that happen when it can be avoided.</p>	Length Crowley-Hall

04/28/2022	<p>I stand with my community in being STRONGLY AGAINST the transit options along 5th Ave S. The Chinatown-International District has suffered immensely in recent years — constant construction, displacement + loss of cultural spaces, hate crimes among small businesses and elderly... the list goes on. The CID cannot afford to lose more.</p> <p>The 5th Ave options will 1.) demolish longstanding businesses that have been a staple to Seattle, and 2.) further decrease the quality of life for residents through nearly a decade of closure and construction. It is extremely disheartening to see how our local government can only see the CID as infrastructure opportunity and not bat an eye at the consequences it would have on the people.</p> <p>Building and improving Seattle public transportation is important, but not at the expense of a community that is so central and dear to our hearts. We urge Sound Transit to pick 4th Ave Shallow (CID-1a) to avoid direct effects on the CID.</p>	Jennifer Vuong
04/28/2022	<p>Please move forward with the 4th Ave route for the Chinatown / International District link, in order to minimize the impact on the many long-standing community businesses there. The 5th Ave alternative would have an unnecessarily large impact on the community, to whom so many other detriments and injustices have already been committed. My family has been saddened to see family businesses close down that contributed so much to making Chinatown what it was, and we don't want to see more of that happen when it can be avoided.</p>	Alicia Crowley-Hall
04/28/2022	<p>If you build the light rail down 5th in Chinatown, not only will the impact be devastating to the community—the job loss and displacement will be too big a cost for this vibrant neighborhood to bear. That's a no from me.</p>	Sieglinde Levery-Nicholas
04/28/2022	<p>The 5th Ave. options will seemingly displace the heart of the Chinatown International District community and businesses. If a station expansion must happen, it seems that the 4th Ave. options (CID-1a, CID-1b) will make the most sense. Plus, closer proximity to Union Station and the 4th Ave. bus routes will better help commuters like me.</p>	Patrick Pineda
04/28/2022	<p>Thank you for including a tunnel alternative and option in the environmental review for the Interbay/Ballard Segment.</p> <p>In section 2.1.2.2.5, I disagree with the alternatives for an elevated structure to the current Ballard Bridge crossing area, and highly recommend and request the either of the 2 tunnel options for this area (14th or 15th). I'm concerned the "preferred alternative" and other elevated alternatives will impact to the maritime industry during and post construction. I'm also concerned the height of the elevated structure mentioned in the draft EIS would highly impact the visual quality of the area.</p> <p>I appreciate your consideration of my comments and hope one of the tunnel alternatives will be chosen for the Project design and construction.</p>	Laurel Hansen
04/28/2022	<p>I think reviewing the Ballard station to consider 20th again would be important. Previous studies concluding it wouldn't increase ridership almost don't make sense.</p> <p>I'd like to indicate a preference for underground rail as well. Underground rail just bypasses a number of complaints current residents have that are hard to solve, and reliability over water could be impacted if bridges of any kind need to raise.</p> <p>And preference for shallow line downtown.</p>	George Chen
04/28/2022	<p>The impact to Chinatown should be considered with 4 of your 5 proposed routes for this expansion. As shown on your slides, the number of businesses under threat ranges from unacceptable losses, to absolutely disgusting. After two years of COVID-19 and rising racism against those in CID, on top of the systemic racial violence that is continually lobbied at the community, Sound Transit should do more to prevent the further destruction and damage to the CID.</p> <p>The proposed construction paths, and timeline would cause irreparable harm to many of the multigenerational families who have lived within this area, as well as harm those who will have to attempt to survive through the construction period, and all of the consequences that will follow.</p>	Brett Kodama

04/28/2022	The CID is an important community not only for the people that are living and working in the area but also everyone in Seattle. It is also an important and historic landmark which are visited by many people from all around the world.	Newie Nguyen
04/28/2022	I liv near the CID. Please move forward with the station on 4th to minimize the impact on the neighborhood and community. A station would be too disruptive to a community that has already had suffered much disruption.	Mykhanh Pham
04/28/2022	I urge you not to build on 5th Ave, doing so would be disruptive and damaging to the community and businesses there. 4th Ave is a better option. Don't carve up this neighborhood even more..	Tobey Solomon-Auger
04/28/2022	<p>For section ES 3.1.1.2 - the Duwamish Segment, Option DUW-2 is significantly prefrable than the others for these reasons:</p> <p>Reduced noise for Pidgeon Point Residences Reduced impact on Blue Heron habitat No guideway columns in the water. Zero residential displacements. Fewer employee displacements</p> <p>Even though it negatively impacts some business, because it puts the needs of wildlife and human residents of the area above the needs of business.</p> <p>Thanks, Susannah Scott (Alaska Junction Resident)</p>	Susannah Scott
04/28/2022	<p>Dear Sound Transit,</p> <p>My name is Ryan Avery at 4308 26th Ave SW Unit D. I'm writing to express my excitement and concern about the DEI report outlining plans for the light rail. I support the light rail, but want to emphasize the jarring effect it would have to build in the middle of the Youngstown neighborhood. Many more folks would be displaced, including myself, from an area that has offered one of the few (barely) affordable neighborhoods to own a house in Seattle. It would also place the noisy loud rail in the middle of a neighborhood, which would bring adverse effects to life and livelihoods for many folks who work from home.</p> <p>I think it would be much better to go with the Andover street station plan with the tunnel option instead of the Dakota station plan. Moving the station a little north would not be overburdensome for the majority of ridership (Youngstown, North Delridge) but would preserve the neighborhood, offer less noise impacts, and still provide all the benefits of a light rail station. From looking at these slide presentations, many less units would be displaced, cost is same or cheaper than the pink preferred alternatives, and less units would be impacts by noise given that much of the rail would border an industrial plant. (Source: https://westseattleblog.com/2022/03/dozens-of-questions-answers-comments-sound-transits-west-seattle-public-hearing/)</p> <p>I think West Seattle would benefit from light rail (even though I'm personally getting by fine with biking, buses, and car). At the same time, we need to preserve neighborhoods that are more affordable than the high income areas up the hill. I implore Sound Transit to consider changing the preferred alternative to the Andover street station (preferably the tunnel option) and to make concerted efforts at securing the funding and other support to make this possible.</p> <p>Sincerely, Ryan Avery</p>	Ryan Avery

04/28/2022	<p>To the Sound Transit board of directors-</p> <p>I have been a resident of Seattle for seventeen years now and I take the light rail every single day. I am generally excited for the expansion of the light rail and how it can connect our city but am concerned at some of the options to expand in the Chinatown International District both in terms of the environmental impact and displacement of already vulnerable residents and businesses.</p> <p>If I may be so frank, both options on 5th Avenue (CID-2a and CID 2-b) sound disastrous and should not be considered. I fear that some businesses such as Ping's Dumplings, who have already been strained by the pandemic, would disappear completely if they were to lose their current location. I would hate for culturally and historically significant establishments to be thrown to the wayside in favor of progress for the rest of the city.</p> <p>Although CID-1a and CID-1b seem less disruptive to me, I would like for Sound Transit to consider options that do not contribute to further displacement of residents or businesses in this neighborhood at all. This area is already well connected in terms of transit and the benefits of such a build would be marginal to the people who live and work there. These people are already affected by I-5 running through the neighborhood and I worry that increased air particulates during construction would be incredibly harmful to the elder population in particular.</p> <p>Jane Jacobs said that cities have the capability of providing something for everybody, only because, and only when, they are created by everybody. The proposed expansions in the Chinatown International District appear to cost its residents far more than what has ever been given to them by the city.</p>	Stella Christoforou
------------	---	------------------------

04/28/2022	<p>I submit this comment as someone who has worked in the Chinatown-International District for almost a decade cumulatively and as someone who serves as a board member of a local neighborhood granting agency. Suffice it to say, I am heavily invested in the cultural and economic vibrancy of this neighborhood. Time and time again, the CID and its community have endured historic harms from major infrastructure projects -- please refer to Wing Luke Museum's comment letter and Historic South Downtown's comment letter for further context. While there are potential benefits from expanding the light rail system generally, it can't be at the price of further devastating a community with displacement and other harmful impacts.</p> <p>Based on review of the DEIS, all three of the 5th Ave S options are unacceptable. The DEIS references social cohesion of this neighborhood. Those 5th Ave S options would demolish, displace, or seriously threaten dozens of businesses that contribute to that very social cohesion and unique character that make the CID what it is today. Should Sound Transit move forward on any of the 5th Ave S options, that is an active decision to dismantle the social, cultural, historic, and economic vibrancy of the CID.</p> <p>The two deep tunnel options CID-1b and CID-2b are not beneficial for a neighborhood or the larger WSBLE project. The combination of elevator-only access (and longer transfer times) and potential mechanical issues is a recipe for disaster, particularly during surge event such as any football, soccer or baseball games at the stadiums or large community events in the CID. This elevator only-access will likely lead to passengers disembarking or transferring at a different station altogether.</p> <p>Overall, the 4th Ave S shallow alternative (CID-1a) minimizes direct harms to the CID. CID-1a will reactivate Union Station as a transit hub and create better pedestrian and public realm connections between Pioneer Square and the CID. CID-1a is not without its fault however -- there are still concerns around construction impacts and displacement of businesses and residents. There is also a huge traffic concern, as 4th Ave S is a major backbone for Metro and Sound Transit bus routes and this alternative would require far more traffic study. How will traffic reroutes during construction impact the CID business and organizations? How can Sound Transit minimize those impacts? Also, more study should be done on the proposed ventilation building directly in front of Union Station.</p> <p>It is clear that CID-1a, 4th Ave Shallow, is the least harmful of the current alternatives, but it will require far more additional study by Sound Transit moving forward. Our neighborhood has taken the brunt of infrastructure projects for decades, causing major disruption and displacement. The 5th Ave S options will continue that history, further shrinking our historic Chinatown and broader neighborhood. Chinatown-International District deserves better. I also urge Sound Transit to remove them from further consideration in addition to all deep-tunnel options.</p>	Jessica Rubenacker
------------	---	--------------------

04/28/2022	<p>4/28/2022</p> <p>Sound Transit West Seattle and Ballard link extensions</p> <p>WSBLEDEIScomments@soundtransit.org</p> <p>Comments on DEIS due 4/28/2022</p> <p>Commenting on light rail to West Seattle. Realizing tunneling costs more, if you look at the long-term effects, and this sets the stage for west Seattle Alaska junction forever, tunneling makes more sense.</p> <p>A tunnel across the Duwamish and up the hill towards Alaska would have the least surface, noise, neighborhood impacts. Expensive yes, but for the long term, it would be worth it in my opinion. An alternative for this should be displayed.</p> <p>At Alaska junction, preferred tunnel WSJ-3a onto 41st would seem to have the least surface impacts. Its 2 blocks off California, so commuters would not dump onto an already busy commercial street. A tunnel would cause less visual impact, less impact on historic structures, and the overall small town neighborhood business feel. It would cause less surface impacts to current residential housing and businesses. Long-term one-time investment would set the stage for a less intrusive high transit impact. It would keep surface options open for the future.</p> <p>It might cost more now, but surface and elevated light rail just do too much impact on so many fronts. Economics are important, but for the long term and the neighborly feel of the community a tunnel makes sense. New York, London, mostly subsurface, let Seattle make this work.</p>	dale luhman
04/28/2022	<p>Excited for the future possibilities with the link, and at the same time concerned about the impacts on the nature and families, especially regardless housing. It is very hard to think about the best option... I would say that the DEL 6, WSJ-5, Sodo 1-b and DuW-2 would work better, if I understand correctly to be honest; however, I am not sure if the information I read in the document are all the information that is known. Thank you for listening people voices.</p>	Debora Nascimento de Araujo Dold

04/28/2022	<p>Hi</p> <p>My name is Bernie Kay. I am a third generation Chinese American whose great grandfather, Goon Dip, was instrumental in building the two Kong Yick buildings and the Milwaukee Hotel in Seattle's Chinatown. I served as a director on the Kong Yick Investment Company Board of Directors from 1995 to 2018. I also helped maintain the West Kong Yick building from 2002 to 2018.</p> <p>I have read the public statement letter written by the Wing Luke museum and I agree with their statement. I believe that any of the current proposals for the Link Light Rail will severely impact the financial well being of the Chinatown International District. One proposal will close many long standing businesses on 5th Ave. Other long standing businesses like the American Hotel will be closed for many years. This particular business is well used by people traveling on a budget. It will also block the China Gate from many tourists and customers to the CID. The Gate is used in many pictures that people take to remember their time in this neighborhood. This project will negatively impact their memories for many years and many may not return after experiencing the mess a construction site will bring. The increased traffic through this neighborhood should be evaluated. Drivers will be detouring through much of this neighborhood possibly at higher speeds due to the closure of many main streets. The increased traffic will cause safety concerns for the many seniors and children that live and play here. Parking is already a problem in Chinatown especially during professional sports days. The construction will take away some very large parking lots that help on game days as well as on an average shopping day for those of us that live in other nearby neighborhoods. I also want to bring up the condition of the sidewalks and the foundations of many of the historic buildings in this neighborhood. I personally have seen the condition of the rebar in the many old sidewalks in Chinatown. I think the vibrations and possible increased traffic that might accidentally run up on the sidewalks, might result in a collapse. Some building foundations have not seen the maintenance that they should have had over the years. The increased vibrations might accelerate the cracking that may be present. The construction effects might extend well beyond the blocks adjacent to the construction site.</p> <p>This neighborhood is a very unique neighborhood in Seattle and if lost, will be something that cannot be replicated. Over time little bits have been taken from Chinatown. I am hoping that the Board of Sound Transit will stop and reconsider the various plans to develop the future rail lines. There needs to be more time given to evaluating the long term impacts of this location. Please stop and think before proceeding.</p>	Bernard Kay
04/28/2022	I am in support of moving the Chinatown/International District station to fourth street so as to avoid displacing pivotal businesses.	Megan Berry

04/28/2022	<p>May 28, 2022</p> <p>RE: West Seattle and Ballard Link Extensions DEIS</p> <p>Dear Sound Transit Board of Directorrs:</p> <p>Thank you for the opportunity to comment on the West-Seattle & Ballard Link Extension Draft Environmental Impact Statement. I am a resident of West Seattle and care deeply about maintaining and supporting the health of our communities, ensuring that people of color and low income people are not adversely impacted by public infrastructure projects like this one, and that we move forward with the option that best reflects how our region wants to grow. I encourage you to hold the following values in choosing the next steps from the DEIS:</p> <ul style="list-style-type: none"> • Build a system that is designed for equity and is racially just; • Ensure that air pollution and climate pollution are reduced because of the system; • Maximize affordable housing and transit oriented development opportunities; • Carefully integrate and improve critical transit, bike, and walking networks; • Ensure travel and use reliability and accessibility, especially for those with disabilities; • Minimize and reduce displacement and address displacement that does occur; <p>In addition to the above values, I offer the following more specific points:</p> <ul style="list-style-type: none"> • Choose the Delridge Station and path that is designed to benefit the people who live in and around the Delridge neighborhood. This includes accessibility, minimizing displacement, and improving air quality. This station and path also should minimize impacts to water quality, habitat and tree canopy. This neighborhood ranks relatively high on Washington State’s Department of Health’s environmental health impacts map (https://fortress.wa.gov/doh/wtnibl/WTNIBL/) and should therefore have additional attention and consideration given to the path to minimize impacts, including displacement, and ideally benefit the residents and community overall. • Choose the West Seattle Junction Station and path that is designed to capture the most residents of West Seattle, prioritizes minimizing displacement, and improves air quality. All the alternatives presented have some impact and it appears that the Medium Tunnel 41st Avenue Station Alternative (WSJ-5) has less impact and more benefits. That said, further analysis with an equity lens should be applied to ensure there is not undue burden and that this path indeed is best. • Choose the Chinatown/International District Station and path that proactively reflects an equity and racial justice lens. This neighborhood in Seattle also ranks relatively high on Washington State’s Department of Health’s environmental health impacts map (https://fortress.wa.gov/doh/wtnibl/WTNIBL/) and should therefore have additional attention and consideration given to the path to minimizing impacts and ideally benefiting residents and local businesses that have been historically impacted by public infrastructure projects. Key issues in deciding on a path include but are not limited to reducing air pollution and addressing any likely new pollution sources such as venting, addressing noise pollution from the operation of the system, proactively ensuring limited displacement, particularly of elderly populations, and ensuring the low income and businesses run by people of color are retained and supported. To evaluate and address these may require further analysis, per the request of the Wing Luke Museum and other community organizations. Given the historic harm of other public infrastructure projects to this community, this request should be elevated and addressed. <p>Thank you for your attention to these important issues in making decisions on how our region advances equitable and accessible public transit.</p> <p>Regards, Rebecca Ponzio</p>	Rebecca Ponzio
04/28/2022	<p>These plans will impact residents small businesses workers and guests of the C-ID and i am opposed to these plans this will also take 11 years to build I am AGAINST this plan.</p>	Isabella Alonso

04/28/2022	<p>First, thank you for doing a great job reaching out to the community and working on getting more mass transit to our City.</p> <p>For equity and cost reasons, please consider only the four preferred Ballard Station options in the EIS. NOT Central Ballard. Top reasons to maintain the four preferred options: East Ballard is under-resourced relative to other Ballard neighborhoods and in the next several years it will be one of the most densely populated areas. Keeping it on 15th or 14th will provide a better, more efficient connective network for people coming from Crown Hill, Whittier, Blue Ridge, Greenwood, Phinney, Wallingford. Busses would only have to head to 15th or 14th as opposed to diverting to go into Central Ballard. There's also a lot more opportunities to develop dense housing allowing more opportunities for people to live closer to mass transit.</p> <p>I live in Sunset Hill with my family and have a rental property in central Ballard. Advocating for a central Ballard station would actually be to our benefit; however, I realize the City has more to gain by maintaining the preferred options by keeping the project going, not delaying it, saving money, providing transit to other areas in Ballard that need it, and create a better connective network of transportation to more neighborhoods.</p> <p>Of the four Ballard station options, I hope you choose either the Tunnel 15th Ave (IBB-2b), or my second choice, Tunnel 14th Ave (IBB-2a). Both tunnel options are the least disruptive to businesses and neighbors that live, work, and commute in that area. Additionally, it'll provide the most gain by not having a elevated structure dividing the neighborhood, creating noise, and a visual eye sore. Our neighborhood can't afford all the construction an elevated option will create. Considering costs between all the Ballard station options, there's more gain from the tunnel options relatively to the same amount of money.</p> <p>This comment is coming from a long time Ballard resident (over 35 years) who has been in the neighborhood since elementary School. Thank you.</p>	Sunny Bae
04/28/2022	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>Please prioritize the 4th avenue tunnel station option. Community advocates in the CID have endured so much through gentrification, displacement and anti-Asian hate. The 4th avenue station creates less disruption and harm for this community.</p> <p>Sound Transit, please take 5th Ave. off the table. 4th Ave Tunnel Station avoids 5th Ave impacts!</p>	Makeba Greene
04/28/2022	<p>The growth of a city or municipality of any size always has substantial implications - this much is obvious. And as an 11-year resident of an ever-changing Seattle that has been welcoming and inviting that growth, I've seen this town drastically evolve even in my short time here. There are so many transplants like me that have arrived and I seemingly meet more of them everyday. Much of this change has been welcomed, although the pending effects were likely unforeseen and as I've gotten to know more and more long-term residents (specifically in historic neighborhoods that I adore, like the CID), I've learned more about the negative impacts of growth and how that can disrupt and displace communities. While I know there are endless options to consider, I implore you to move forward with pursuing the project on 4th Avenue rather than 5th Avenue. The CID is so oft overlooked and many times the track record of this city reflects that lack of investment and protection for this historic area. Please consider interrupting parking lots over people's livelihoods in perhaps the most vital cultural center in this city. Let us not add to the list of historical errors that have been made when new infrastructure is built in and around the CID community. Let your decision be clear to the community that you care about them and the prosperity of their businesses.</p>	Colin Camacho

04/28/2022	<p>For Section 3.1.1.3 Delridge Segment, DEL2a and DEL4 are the options that should be considered moving forward.</p> <p>Both are tunnel options, and we absolutely want to put as much of the train as we can underground, for the following reasons Reduce traffic impacts on West Seattle Residents Reduce noise impacts on West Seattle residents and wildlife Scarce, above-ground land can be used for business or residents. West Seattle residents deserve the same consideration that Capitol Hill residents received.</p> <p>Why take land from the golf course? The golf course isn't being used by most West Seattle residents, and it can afford to lose the land more than residential areas or businesses. I would perhaps feel differently if this was a park for multiple uses for the general public.</p> <p>These are also the most cost-effective options and can save money for other areas.</p>	Susannah Scott
04/28/2022	<p>Options on 5th Avenue will displace many C-ID small businesses and result in the demolition of buildings that currently house much loved businesses. Nearly a decade of street closures, detours, loss of parking, and subject residents to construction noise throughout the day will severely impact the ability of these businesses to thrive. These and other cumulative impacts remain unaddressed in the current proposals.</p> <p>The economic impact of the pandemic and anti-Asian American sentiment has hit the -ID neighborhood harder and longer than most. Many of the small businesses that struggle to survive today will be hit even harder.</p> <p>Sound Transit have ultimately failed to fully address and account for the ways in which the expansion will irreversibly change the neighborhood.</p> <p>The area has endured the construction of I-5, which cut the neighborhood in half and paved over churches, homes, and businesses. It has endured the construction of the Kingdome, which threatened to turn the C-ID into a parking lot. The legacy of their impact is experienced year-round.</p> <p>For a neighborhood that exists due to historically racist policies such as redlining and lack of city services, it once again faces an uncertain destiny.</p>	D H
04/28/2022	Shallow line downtown	Elizabeth LeMar
04/28/2022	I do not support building transit through 5th Ave.	Vivian So
04/28/2022	<p>I strongly oppose all the proposed station alternatives for the Chinatown International District (CID) and urge you to consider other locations that are less disruptive to an already endangered community. The CID has a long history of providing a much needed sense of community to Asian Americans. When my dad immigrated to the United States from China in the 1930s, he spent his youth in Seattle Chinatown where he learned English and developed a strong sense of community during his time there. Now, almost 90 years later, my daughter lives and works in the CID, and she too has developed strong ties with the community and is proud to represent the community through various organizations. I'm sure this is just one of thousands of stories of how the CID has touched the lives of generations of people.</p> <p>Your proposed demolition of this vital neighborhood would wipe out decades of historical significance not to mention the lost of so much culture. The displacement of residents and businesses would destroy the community's already strained economy and the remaining businesses could not survive the years long construction of the station.</p> <p>Please do not destroy this culturally rich and vital community with these proposed station alternatives. Find another way.</p> <p>Nadine Mandery</p>	Nadine Mandery

04/28/2022	<p>DUW-1b: I support the North crossing /Andover Street / or tunnel to eliminate the proposed track adjacent to the park on Genesee and Delridge.. This is a hang out and exercise site where kids spend hours, exposing them to greatest amount of Light Rail's polluting elements . Others using the park would continue to benefit from the restorative public health aspect of cleaner air, less noise and mechanical speed. Let's protect this park serving many lower income families, especially the many children who have greater consequences for negative impact of toxins on their smaller bodies. Thinking ahead with the likelihood of continued housing shortage, I predict a high rail system with a long stretch of cover, would invite more encampments close to the park.</p> <p>ES4: Location of the proposed Fauntleroy station is closer to High Point and Westwood geographically. This location allows greater access as it serves the both the Junction center while extending the use to the South. Let's put a tunnel station there.</p> <p>General comments:</p> <p>1). Elevated stations in West Seattle will create visual and social barriers that divide our urban village with monolith chunks of concrete, industrializing the landscape to ugly. High rise stretches are not wanted. in residential neighborhoods. The longer the tunnel the better for community cohesiveness and I believe, mental and physical health.</p> <p>2). Station designs need a vehicle drop-off zone. Not everyone will arrive on a bus, scooter or bike. The stations need to serve the elderly, disabled and families with young children or infants for example. A car ride to the station will be needed by some of our population who cannot be excluded.</p>	Margaret Allen
04/28/2022	I dislike the plan for the international district light rail route. We need those 20 businesses dearly. South/ central seattle will greatly be affected if that many small business are forced to close.	Justine Potter
04/28/2022	All 5 proposals adversely affect the Chinatown-International District. Facing decades of displacement and encroachment through projects like the I-5 and the stadiums, and facing a new transit center will further squeeze this neighborhood and its residents. I am asking for more studies and exploration into alternatives that would not displace the C-ID or disrupt it with years of construction and traffic. While I fully support more public transit, and especially transit that would serve those in the C-ID, I am asking for alternatives that are not adversely affecting those living and working in the C-ID.	Mackenzie Lew
04/28/2022	<p>What level of resources, time, and priority are being dedicated to mitigate development impact and to support anti-displacement of local businesses in the I.D. and residents (especially the unique elderly population living on fixed/low incomes)? How will the project know these measures have been successful both by project standards and from the perspective of local residents of that neighborhood?</p> <p>How will the development and construction work in the I.D. For this project contribute to a thriving, supportive community environment and economy both after and during construction, for those currently living in the I.D., Central District, and Little Saigon?</p> <p>What compassionate and holistic measures will be taken to support those living in that area but unhoused?</p>	Yiling Wong
04/28/2022	As a community member, I strongly urge the Sound Transit Board of Directors to move forward with the 4th Ave option for the link rail station. Thank you.	Loan Vo
04/28/2022	<p>Design the system for transit riders and the optimal rider experience.</p> <p>Traveling between the station platform and the surface should be quick, straightforward, and reliable.</p> <p>Closing a busy road for a few years is a small price to pay, especially if doing so means we can have rail sooner.</p> <p>Avoid bridges that would need to be opened.</p>	k a

04/28/2022	<p>Please consider the impact of the proposal on Chinatowns vibrant community. Choose a 4th Ave route that minimizes travel times to the Stadium. Would stadium station/connection make more sense in general? Options cid-1a or b.</p> <p>Ballard proposed plan seems decent but displaces many residents. In-1a</p> <p>The report was a lot of info. This comment period was not well planned for input. Let's get on with it. Seattle has been without real transit for too long!</p> <p>The more we wait, the more displacement happens. Build it!</p> <p>Thanks Melissa</p>	Melissa Lerch
04/28/2022	<p>I'd like to comment on the potential link rail extensions affecting the Chinatown-international district.</p> <p>There are so many businesses on 5th Avenue South that are beloved by the community and important to the CID that would be negatively affected by the construction efforts of this extension. The years of construction necessary for this extension could result in negatively impacted business, displacement, or even closure.</p> <p>When I moved to Seattle in February of 2020 with no friends or family in the area, businesses like Seattle Best Tea and Chun Chun Rice Dog offered immeasurable comfort and joy as I navigated a new city that quickly came under quarantine. A big reason that I stayed in Seattle was because of these amazing businesses and restaurants nestled on 5th Avenue. Two years later, I still make weekly visits to the CID to support these small businesses and express my gratitude for helping a new transplant make it through a pandemic.</p> <p>If extension efforts were focused onto 4th Avenue South instead of 5th, the city could preserve important businesses that keep the Chinatown International District alive. I know countless others like me who have greatly benefited from the services provided on 5th Avenue. I urge you to please reconsider to help these businesses as well as your constituents in the city. Thank you</p>	Nathaniel Han
04/28/2022	<p>For section ES.3.1.1.4 - West Seattle Junction Stations options WSJ-3a, WSJ-3b are strongly preferred.</p> <p>A tunnel option would reduce gardening noise pollution and traffic impacts for West Seattle residents in the long term. The residents here deserved the same consideration residents of Capitol Hill received.</p> <p>Thanks, Susannah Scott (West Seattle Resident)</p>	Susannah Scott

04/28/2022	<p>There are so many serious problems that demonstrate entrenched racism and discrimination/neglect in this Draft EIS. There are incredible gaps in ST staff's understanding of the social inequities and environmental harms that the proposed plans will exacerbate. It is shocking in many ways how the proposed plan does not center or prioritize the people in the County that need rapid transit the most, that are the most dependent on public transportation. The way this entire plan has been designed demonstrates a fundamentally racist and classist approach to providing transportation to the public. The preferential treatment and planning considerations consistently prioritize the downtown, Ballard, and West Seattle-based professional workers at the expense of lower income communities and riders of color.</p> <p>One of the most egregious examples of that is the proposed destruction of many Chinatown/International District historic buildings to make room for a new connecting station on 5th Avenue. This proposal is a direct threat to the already vulnerable cohesion of this historic neighborhood. The proposed construction timeline alone of about 11 years in the heart of this small neighborhood, made up of so many Asian heritage elders, will accelerate displacement and ruin significant cultural markers that are precious to the local residents and shop owners. The quality of life for the residents and business owners will be disproportionately impacted; especially considering that the light rail's intention and target ridership for this station is not for this community.</p> <p>In addition, the West Seattle stations run through and destroys some of the limited affordable housing resources in the Delridge neighborhood south of West Seattle. Again, at the expense of lower income communities of color there, particularly Seattle Housing Authority properties will be displaced. It is worth noting that the nearby golf course is only marginally effected (a local resource not widely used by low income families of color).</p> <p>Also, the Duwamish Valley communities of South Park and Georgetown, who have long advocated for better public transit, is completely excluded from the benefits of this light rail investment. There is not even connecting extensions or rapid ride alternatives to link the community to light rail benefits. This oversight and neglect is palpable, especially in the naming of the "Duwamish Segment" that has misled many community members to think that this proposal will finally provide them with service.</p> <p>The whole plan, in spite of claiming a racial equity analysis has been conducted, demonstrates a severe disregard for the actual lives of low income communities of color and their transit riders. The plan is obviously not centering the communities and riders most in need of improved, reliable, and fast service. If you take this ST proposed map/the communities it benefits, and line it up against a 1930s Seattle redlining map, you can see very clearly that there is no change.</p> <p>In order to discontinue repeating the racist and classist transportation planning strategies that has worsened our cultural and social divides in this County, I encourage ST to go back to the drawing board and re-think its priorities. Bring the communities most needing public transit to the table and listen to them and actually do what they say. We will all be better off for it - guaranteed.</p>	Christina Rajan
04/28/2022	<p>It is critical for passengers and for growing ridership that stations are shallow, with in the lowest amount of time to reach the platform. For deep station alternatives that add 7+ minutes to the start and end of the trip, this will hinder peoples willingness to use Link instead of driving or taking an Uber/Lyft.</p> <p>Additionally, the Chinatown station will be a crucial transfer point and a key station connecting all lines in the system. I prefer the 4th Avenue Shallow Alternative (CID-1a) alignment but it needs to be as shallow as existing station to reduce transfer times between lines.</p> <p>For South Lake Union (SLU) the proposed station locations do not serve the heart and core of SLU where the majority of Amazon, tech, biotech, and medical offices are, and where all the new residential development is. This is defined by 9th Ave N to the West, Mercer St. to the North, Fairview Ave to the East, and Denny Way to the South. Instead the proposed stations are too far to the west away from the SLU center, which will simply cause SLU commuters or residents to opt for a more convenient transportation option, which is driving or taking an Uber/Lyft. My recommends to Reject both presented options, study a Westlake or similar alignment oriented north/south centered as much within the core of SLU as possible.</p>	Julian Kwok

04/28/2022	<p>As a lifelong Seattle resident and Chinese American I am one of the many who is concerned that the new Chinatown-International District light rail station will further degrade our historic and cultural district.</p> <p>Based on the DEIS the least detrimental alternative to the CID appears to be the 4th Avenue alternative. I agree with the comment letter submitted by the Wing Luke Museum calling for exploration of options for refinements to the proposed alternatives beyond what typically occurs from a DEIS to Final EIS that will not result in displacement within the CID.</p>	Lorena Eng
04/28/2022	<p>Please please do not displace some of the most beloved small businesses in the ID by creating a station on 5th Ave. As a former resident of the area and a person of Asian descent, it would be absolutely crushing to see that space impacted so heavily for so long. I'm in full support of expanding the light rail and all public transit, but would hate to have to suffer through construction and lose my favorite boba spot at the same time. There are other options on 4th, so I urge you to pick one of those instead.</p>	Almodine Thompson
04/28/2022	<p>My comment is regarding 2.1.2.2.2 by building on 5th Avenue in Chinatown and International District. Building on 5th Avenue in Chinatown and International District would be detrimental to the Asian American community already faced with racism and discrimination. By building on 4th Avenue instead SoundTransit would be saving 19 businesses. SoundTransit needs to work with the residents and businesses in International District and be more transparent about what they plan on doing. The International District is an important place for the Asian community in Seattle.</p>	Sayako Kawashima
04/28/2022	<p>Dear Sound Transit Board of Directors,</p> <p>I vote for the 4th Ave option for the link rail station.</p> <p>Thank you.</p>	Phuong Nguyen
04/28/2022	<p>I am writing to express my plea with Sound Transit that it not proceed with the 5th Avenue South route for the West Seattle Ballard Link extension. Given the historic and continued displacement, economic and racial tragedies that our International District has undergone, it is imperative that we protect our International/Chinatown cultures and small businesses for generations to come, especially as Seattle continues to develop and improve upon it's public transportation. Construction on the 5th Avenue South route would displace as many as 19 small businesses. As a very concerned citizen who believes in the importance of preserving and protecting our CID and small businesses, I urge Sound Transit to proceed with the 4th Avenue South route alternatives as these will not impact businesses in this historic and special neighborhood that is comprised of many crucial small businesses.</p>	Temre Brandt
04/28/2022	<p>The 3 options for 5th Ave S. displaces the most number of businesses, most of which are locally owned by people of color. It would be best if the finalized plans included an equity plan that ensures the livelihood of people of color are not harmed in the process.</p>	Elaine Walsh
04/28/2022	<p>I'm concerned about construction disrupting the character of the neighborhood irreversibly if plans proceed for the new transit center around 5th Ave.</p>	Manas George

04/28/2022	<p>To who it may concern</p> <p>My name is Erik Rios, and I am a community member of Seattles Historic Chinatown/International neighborhood. I am writing this letter to oppose the construction of the Ballard/West Seattle Link station.</p> <p>The C-ID has historically been a neighborhood that has been torn, destroyed, and uprooted for the sake of many initiatives that displaced many folks and businesses. Whether it be the King Dome and other sports stadiums, the construction of I-5, or the diminishing of Japan Town, the new proposed Link Station, especially the 5th ave proposal, will continue the displacement of the C-ID. It is a never ending cycle that our community has to continually recover from, only to have to go through again every generation.</p> <p>Poor air quality during construction, noise pollution, immense traffic, and driving up the already limited parking in the neighborhood would have devastating and lasting effects of so many different folks living, working, and visiting the C-ID. I understand the need for public transit to be able to get to every corner of the city, but I believe this could be done without the displacement and inevitable health risks of the people who call the C-ID home.</p> <p>I would really hope you would consider the option of not doing the 5th ave proposal for I believe that will cause the most direct harm to the residents and community. Essentially a stake to the heart of the neighborhood, the 5th ave proposal has the most direct impact, slapping itself right in the middle hub of businesses and residential hotels. The 4th ave proposal will have a less impact to the neighborhood, but will have a lasting impact regardless.</p> <p>Seattles Chinatown-International District is a gem for the city. It is only fair to treat it as such. Elders and young children deserve to be able to walk in their neighborhood with clean air, and free of noise pollution. Please consider this in making your decision when making the light rail station. It is something that will effect folks for generations to come.</p>	Erik Rios
------------	--	-----------

<p>04/28/2022</p>	<p>The 5th Avenue options are the worst in that they will ultimately contribute to the displacement, destruction, and disregard for one of the historical communities that has helped to build Seattle into the city that it is today. The fact that the Chinatown International District keeps on coming up as an option for transportation construction is irresponsible. This is 10 years of work on the edge of the neighborhood that will contribute to the erasure of this community. We would be losing current businesses that have been long standing in the neighborhood-- this project would change the entrance of the neighborhood by the Welcome Gate.</p> <p>Has there not been any consideration to what has been happening to the CID in regards to the pandemic? Does the surge in xenophobia and the violent attacks and death of Asian Americans not play a role in weighing in this idea for this project? The CID should have never been an option in the first place.</p> <p>The construction of I-5 from the 1960s should be enough of an example of the problems that in considering the Light Rail extension. I-5 cuts right through the CID and creates a barrier between the existing communities Little Saigon and the Chinatown core. Air pollution studies have shown that the air quality in the CID are the worst in the city due to the freeway. In the building of the I-5, we lost a significant portion of Japantown.</p> <p>Japantown used to be 67 blocks all together in Seattle before World War II. The removal of Japanese American citizens and their parents that came out of wartime hysteria costed the neighborhood a vibrant community that was only doing what every other immigrant community is always trying to do-- build a family, settle into a home, and accumulate wealth to pass on to their future generations. Yet why is it that communities of color are always unable to accumulate this wealth? It all comes back to this idea that communities of color are expendable, exploitable, and not worth it.</p> <p>Look at the history of Seattle around redlining and restrictive covenants that came out of the 1930s. Neighborhoods that had a larger number of immigrant communities of color were seen as risky and hazardous places to purchase homes-- continually keeping up these racist stereotypes. People of Color kept within those red lines were unable to buy homes up north where the "good" neighborhoods were. There is a lot of resiliency in BIPOC communities, but just because we are resilient, it does not mean that we should be continually being beat and killed to show you how strong we are. People within these communities have found ways to carve out spaces in the "bad" neighborhoods they were relegated to and now that we made a wonderful home for ourselves in the CID, Central District, South End in general, there is this constant threat of gentrification to push us out of the spaces we built.</p> <p>I keep on hearing that 5th Ave is an option because it is the least expensive option. This is going to be costly to the CID-- the residents, the business owners, all of the people who travel to this community to enjoy what it has to share. You are going to lose the trust of the people who have called this place their home since its start in the early 1900s. Did I mention that the Chinese American community in Seattle has had to move locations 2 times before it settled to where it is today? Additional examples of displacement that came out of racist scapegoating the Chinese immigrant community: Seattle's first Chinatown was out on the docks along Washington Ave and where the Alaskan Viaduct used to be. It was destroyed because other European immigrants saw the Chinese immigrant laborers as a threat to the make up of the US and that they were stealing the jobs of the "real" hardworking Americans. And the second Chinatown? That used to be in Pioneer Square by 2nd Ave and Washington St. It disappeared because of new zoning laws to basically make it so that Chinese immigrant faces were not the first faces that visiting people would see when getting off the trains in the area. It is all the same-- constant disregard for these marginalized communities.</p> <p>Are we only preserving the history of the neighborhood through art and statues to recognize what has been lost? It would seem more thoughtful to try and preserve and protect these historic communities than to erase them and then erect a little memorial for its death as retribution.</p> <p>Do a better job. 5th Ave should have never been an option. 4th shallow CID-1a is the way to show us that you will not repeat these same mistakes to our neighborhood.</p>	<p>Doan Diane Dy</p>
-------------------	---	----------------------

04/28/2022	<p>What will happen to the stores, businesses, tenants, and elders if plans for either the 4th Avenue Station or the 5th Avenue Station take place? Will they be displaced? Will they be destroyed? Plans for either station will be devastating for this neighborhood that has already seen hardships through its history and most recently through the pandemic.</p> <p>In addition to the displacement of these businesses and residents, the environmental impact and air pollution from this project will affect those who work and live in here. I live in Little Saigon and the traffic and construction will be hard to avoid especially on my way to work in downtown.</p> <p>The Chinatown-International District neighborhood is not expendable. It is important we have a light rail system that connects West Seattle and Ballard and I'm all in support for public transportation, but I implore you to reconsider where this station should go. The implications of this station will have long and lasting effects for generations to come. These station plans should NOT be built in this neighborhood.</p>	Shaun Mejia
04/28/2022	<p>Comment re: Section 5.4.2 - Acquisitions, Displacements, and Relocations appears takes a cavalier approach that does not account for the fact that many proposed stations and rail tracks particularly in the Delridge Segment and the International District segment are in communities where a higher concentration of lower income and people of color reside and work. This demographic data exists from the census and was not cited to. Additionally, this section only focuses on residential displacement and relocation and ignores the small businesses (many that are managed, owned, and operated) by the BIPOC communities in these segments. To conclude that sufficient "mitigation" is new affordable housing within the city does not equate to a commitment to ensuring certain communities can continue to prosper and thrive such as the International District. For example, if a small business is displaced, the same business opening up in a different part of town or in a new development (likely not in the same area) does not allow a community to grow because such displacement fragments collective efforts that have attempted to thrive in the past couple of decades and eliminates the same opportunity in that specific location.</p>	Vivienne Nguyen
04/28/2022	<p>Members of my family immigrated from Japan in the early 1900's and lived in rental housing along Main Street & 10th Avenue, later the site of Yesler Terrance Housing Project, which has been since torn down to be replaced with more contemporary projects. My grandfather took the streetcar from the Pike Place Market home to his wife & 4 children. My grandmother worked in two CID area hotels prior to WW2. While my own former husband & his family have been connected with Metro Transit in scheduling and transit operations for over thirty years, plans as submitted for Sound Transit stations and connections in the Chinatown/International District corridor, do not fully articulate or take into account the irreversible damage to this vibrant current and formerly historic neighborhood that would occur if any of the proposed scenarios were to be implemented.</p> <p>It would effective cripple and then kill what diverse and ethnic communities remain, by crippling residential and economic initiatives which already were in crisis due to layers of historic discrimination, displacement, neglect and indifference by placement of other city, state and federal government projects including the interstate freeway, sports stadiums, viaduct, and inner city light rail.</p> <p>The CID is not merely just another city neighborhood and the businesses, agencies , institutions and communities it evolved around and new ones it continues to serve cannot be reduplicated by the usual market developers and corporate chain financiers.</p> <p>By going forward as plans indicated, with further study and specific neighborhood research, you will kill what's left of this once vibrant and historic immigrant community, and what you'll retain is a shell of the neighborhood your agency has then ravaged.</p>	Mizu Sugimura
04/28/2022	Please consider CID-1a	Seth Kvam
04/28/2022	In the interest of equity and valuing community voice, Sound Transit should move forward with either 4th avenue options (CID1a or CID1b) rather than the 5th avenue (CID2a or CID2b) to minimize disruptions to businesses and livelihoods of those in the historically marginalized community of the CID.	Annalise Quach

<p>04/28/2022</p>	<p>Blinding sunlight streamed through my curtains as I opened up my computer and logged onto Zoom. Expecting a casual planning meeting for a racial justice club I run with a couple of friends, I got comfortable at my desk and made sure my cup of tea was within reach. Conversations about future plans quickly morphed into something deeper concerning current events in Seattle. The news in early 2021 was filled with stories of hate crimes, but my friends and I knew that anti-Asian oppression is more than just violence. As the now-setting sun cast shadows across my room, we discussed historic redlining, housing discrimination, language discrimination, and more. I drained my tea and my best friend mentioned connecting to mutual aid and local organizers for an upcoming meeting.</p> <p>Immediately, a name popped into my head. I opened up Instagram to browse the CID Coalition’s page and see what they were up to. The CID Coalition, also known as Humbows Not Hotels (@humbows_not_hotels), was formed in 2017 as a direct response to hotel development in the Chinatown-International District (CID). They host community forums, connect with other local BIPOC-organizing groups throughout Seattle, and constantly protest new developments that would displace local businesses and residents in the CID. One of their recent campaigns was protesting the actions of KODA Condominiums, the first luxury high-rise building in the CID, completed in late 2020. After clicking through the posts and reading a few graphics, I ran a quick search to find the prices of the units being sold.</p> <p>Prices for the new condos ranged from hundreds of thousands to \$1.6 million for a two-bedroom condo. It was more money than I could possibly imagine.</p> <p>Back in early 2020, before the pandemic reached the shores of the U.S., my family and I were attending a Sunday service at the Seattle Betsuin, just off Jackson on the eastern side of the neighborhood. Founded by Japanese immigrants practicing Jodo Shinshu Buddhism in 1901, the Betsuin is the oldest Buddhist temple in the Pacific Northwest. At this particular Sunday service, a board member stood in front of the assembled temple members and delivered some grim news: Due to earthquake safety codes, the Betsuin would have to be renovated in order to be kept standing. Renovations would cost \$1.5 million dollars (now estimated to be \$2 million due to the pandemic), roughly the same cost of a new condo in the KODA building a mile away.</p> <p>The Betsuin’s halls and kitchens are filled with memories of generations upon generations of Dharma School kids playing hide and seek, aunties gossiping while frying noodles, and Boy Scouts grilling teriyaki chicken and musubi in the back lot. Children become parents, students become teachers, parents become grandparents, and generations go on to attend services at the Betsuin. The rich generational culture of the temple is undeniable, and this culture is what holds the Betsuin community together despite two pandemic years forced online.</p> <p>The Betsuin holds many fundraisers throughout the year, but these normally cover our annual operating costs and not much more. The new required earthquake upgrades combined with the economic hardships of the pandemic mean the future of the temple is uncertain. To relocate and abandon a building and space that holds so much history and community value would be a huge loss to the CID and the Japanese American community. It strikes me as ironic that \$1 million is worth such different things to these two organizations. To KODA, it’s merely a tiny fraction of their profits. To the Betsuin, it would be a chance to preserve our temple and its history for the younger generations to come.</p> <p>The KODA developers hold no connections to the CID or the residents. They are a Taiwanese company, and KODA Condos is their first venture in the United States. While in development and construction, they constantly skirted around flimsy commitments for “community space,” retracting them completely after being called out by local organizers. According to the CID Coalition, the average annual income of the neighborhood is \$35k. With parking stalls selling for up to \$75k, KODA is quite simply not built to serve the needs of the community, nor are they interested in making any meaningful attempt to do so. Despite the fact that they have ample funds for community investment, they have continued to ignore the complaints of advocates, even going so far as to call the police on protesters in August 2019.</p> <p>KODA is merely another warning sign of the larger movement of gentrification sweeping Seattle, with chain retailers and luxury homes taking over ethnic neighborhoods, effectively sending costs of living sky-high and forcing the original residents to relocate. Small businesses are shuttered, and the once vibrant diverse voices of community are starting to fade away.</p> <p>Gentrification is not new in Seattle, with a long history of racial redlining and displacement. These trends of gentrification are not only luxury buildings like KODA, but also include “modern” market-rate housing that pushes out affordable housing developers and still has price points unattainable for many Seattle residents. First the Central District, then the CID and South Park, Georgetown, Colombia City, the list goes on and on.</p> <p>And guess what? ST3 would essentially kickstart even more developers like KODA and give them incentive</p>	<p>Madelyn Tanabe</p>
-------------------	---	-----------------------

	<p>to continue gentrifying at this rapid pace. I sincerely hope that Sound Transit will take into account the many intersectional issues that gentrification brings. ST3 is another devastating plan to systemically erase a diverse community of color.</p>	
04/28/2022	<p>While it is important to increase transport access, as part of the Seattle community we believe that choosing the 5th Ave option would detriment the community in ID the most. The disruptions from the construction would further destabilize a community that is still struggling from the pandemic and other factors. Please choose the 4th Ave option as it is the least disruptive.</p>	Joanna Wang

04/28/2022	<p>The proposed plan prioritizes the downtown, Ballard, and West Seattle-based professional class at the expense of lower income riders of color. It is unacceptable, inequitable, and a waste of our taxpayer dollars to invest in this proposal.</p> <p>Redo the plan completely by bringing low income riders of color into the design room. It is obvious their perspectives are missing. The staff-misled racial equity analysis is poorly done.</p> <p>Do not move forward with the destruction of many Chinatown/International District historic buildings to build the new station on 5th Avenue.</p> <p>Do not allow the West Seattle stations to destroy Seattle Housing Authority properties and other social service buildings that house and support low income people.</p> <p>Redesign the southern route to include increased transportation access to South Park and Georgetown.</p> <p>There are many other socio-economic problems that will be exacerbated if Sound Transit moves forward with the proposal as is -- therefore it should be redone with racial equity actually centered in the process, not as an afterthought.</p>	Bebek Gulduren
04/28/2022	<p>I strongly disagree with the 5th Ave option for the new Sound Transit station as it will have detrimental impacts on the livelihoods of the people inhabiting and doing business in the historically and culturally important CID district which has already suffered so much during Covid and because of anti-Asian hate crimes spurred by xenophobic ideologies related to the pandemic. As a lifelong resident of Seattle and a Japanese American, I genuinely hope Sound Transit will choose to avoid doing further damage to an already suffering historically important area of Seattle.</p>	Lauren Iida
04/28/2022	<p>I am concerned about the harm and displacement that will occur if Sound Transit moves forward with the 5th Ave options. The 4th Ave 1A option seems to be the best for the community and I strongly encourage Sound Transit to move forward with this one. This community has already faced significant upheaval and does not deserve to have more instability created by outside factors. Thank you.</p>	Ilana Hoff
04/28/2022	<p>Hello, my name is Joshua. I moved to Seattle almost a decade ago to pursue my studies at the University of Washington. In my time in this city, I always found myself coming back to the Chinatown-International District. When I learned about the origins of Filipino immigrants in Seattle and how they shaped the neighborhood, I felt an even stronger kinship to this place where my own community has been apart of its foundation as a cultural hub and refuge. I later volunteered in the neighborhood at the Danny Woo Garden, wrote for one of its local newspapers (the International Examiner), and worked for over a year with InterIm CDA, an affordable housing agency in the area. My love for this neighborhood knows no bounds, and I am proud to call it my own sense of home.</p> <p>I am writing to voice my opposition to the construction of the light rail on 5th Ave in the neighborhood, and implore you all to instead pursue constructing it on 4th Ave to minimize the detrimental effects the construction will have on the neighborhood. The shuttering of small business and the loss of access to such an integral area of public space will be devastating if built on 5th. Please, consider the options to build on 4th instead.</p>	Joshua Talosig

04/28/2022	<p>As a long time king county resident I am concerned about the impact that proposed light rail projects will have on impacted communities.</p> <p>I do not feel that enough is being done to address community concerns, particularly in the china town international district and lower income areas of west Seattle (delridge/avalon).</p> <p>I am concerned that if transit routes disrupt 5th avenue and the international district business and community core, irreversible damage will be done to this community. This area is a vital community and a regional asset. The history and culture of this community and the people who live here must be preserved and protected.</p> <p>I am also concerned that lower income areas in west Seattle such as delridge and avalon may not see much benefit from regional transit expansion but may experience extreme costs. There are environmentally sensitive areas that provide habitat for herons and other animals. The characteristics of the neighborhood and habitat must be preserved.</p> <p>There has been talk of eliminating light rail stations while still having above ground rail lines running through the neighborhood (a cost cutting move). This seems to be a recipe for cost without benefit</p>	k. a.
04/28/2022	<p>I'm against alternative IBB-1b for the Ballard link extension as it has the highest impact to residents, and the second highest impact on businesses. I'm concerned of the impacts to 14th Ave W. There are many apartment buildings, and condo buildings that house a large number of people. With the housing market what it is, this could negatively impact a large number of people. I'd like to see Sound Transit look for third party funding if possible for the tunnels. I know there are pros, and cons to each option, however, the tunnels displace the fewest number of residents, businesses, and employees, and avoids the most historic buildings. Additionally, the tunnels do not have the same noise problems that the other options do.</p>	Brianna Suffety
04/28/2022	<p>As a resident of Ballard, a fan of public transit, and a fan of the ID, I implore you to stop the plans for this transit stop. Please take the time to gather community feedback on the line. Currently you're being told by the ID that this stop will decimate their neighborhood. Chinatown has struggled through anti-Asian violence, and a current and historical rhetoric of prejudice, and has amazingly, consistently, attempted to rebuild. It is one of the few cultural neighborhoods we have here in Seattle, and one of the only where the young and old are found hanging out together on Friday nights playing chess, doing tai chi, chatting while the younger generation is dressed up getting dinner and drinks, and going out on the town. It has a vibrant cultural history, drawing locals and visitors alike to the Wing Luke, street food fairs, Chinese lions during the Lunar New Year, etc. it is one of the only young, trendy neighborhoods that hasn't been built for our white, high earning tech brothers. This neighborhood is important, please listen to community voices and pause the project to collaborate with neighborhood leaders.</p>	Lena Yim

04/28/2022	<p>Hello,</p> <p>I am a resident and community member of the C-ID, and I strongly oppose all of the presented alternatives for the CID station. It is unacceptable to treat this neighborhood as if it is disposable. I wrote the following after spending many days wondering exactly how I wanted to express what I have found so frustrating about the proposals for the new CID station. Finally, I realized that much of that frustration came from having to watch history repeat itself.</p> <p>Beginning in the 1920s with the 2nd Avenue South Extension which destroyed many of the last remaining buildings of Seattle's second Chinatown; through the 50s and 60s with the construction of I-5 which split the neighborhood in half and displaced so many homes and businesses; through the 70s with the construction of the Kingdome which began the long trend of outpricing and gentrifying our neighborhood; through the 80s with the creation of the first tunnel through the current C-ID which caused strife through its construction period and beyond; through even the 2010s with the construction of the street car, which saw anywhere between a 30 to 80 percent decrease in customers to many C-ID businesses (leading the permanent closure of some), this neighborhood has always been TOLD to accept and appreciate developments without ever being a part of the conversations about developments that will permanently affect it. Sound Transit failed to provide appropriate outreach to our neighborhood and failed to consider the needs, both short and long term, of this community.</p> <p>The entire nation, Sound Transit included, spent a month sending out tweets, posts, and comments with the hashtag "stop Asian hate," and yet this proposal continues to treat the Asian American community in the CID as if it is expendable. It is not. This is a community of real people who deserve their past, present, and future to be respected. They deserve clean air in the heart of their neighborhood. Our neighborhood has persevered in the face of countless projects and developments that have displaced thousands of community members and businesses. Please, do not make us suffer through another.</p> <p>I urge Sound Transit to reconsider construction in the Chinatown-International District. Honor your promise to take steps towards stopping Asian hate; do not displace one of the last historic Asian American communities left in this country.</p>	Emily Halladay
04/28/2022	<p>As a longtime Seattle resident, small business owner, and Ballard resident, I implore the Sound Transit Board of Directors to choose the less disruptive 4th Ave option for the Chinatown-International District portion of the West Seattle-to-Ballard light rail expansion.</p> <p>The small businesses in the C-ID have already faced countless challenges over the past few years, from xenophobia to COVID-19 shutdowns, and the 5th Ave option would only exacerbate and extend these challenges, shuttering numerous businesses and directly impacting the heart of the neighborhood. Thank you for your consideration.</p>	Natassja Uraine
04/28/2022	<p>I'm writing in regards to the proposed plans (three total), which build the new station through 5th Ave, and require the demolition of existing buildings which serve the local, minority community. I believe the plan to continue to bulldoze the culture and livelihood of the communities who have already been taken advantage of in Seattle's history repeats past mistakes, and would be doing a disservice not only to the Chinatown/ID area, but Seattle's reputation as a progressive city as well.</p> <p>I'd like to voice my support for either of the two proposals which instead place the construction of the new stations on 4th Ave, and will not have nearly as severe an impact on the community.</p> <p>Thank you!</p>	Randy Chung

04/28/2022	<p>After reviewing the alternatives for the Chinatown-International District (CID) segment of the Ballard Link Extension (section 2.1.2.2) and the community impact described in the Draft Environmental Impact Statement, I have significant concerns about options CID-2a and CID-2b. As described in this document, these alternatives would place a crushing burden on the small businesses along 5th Ave E in the CID. This neighborhood has suffered some of the greatest costs of any area during the ongoing COVID-19 pandemic due to intense and explicit racial profiling and explicit racism, and an extended demolition and closure period for this historic area would only exacerbate the injury done. Closing and displacing thirteen businesses along this area would have a dire impact on the livelihood of this neighborhood. Many of these businesses have been settled along 5th Ave E for decades, and will never have the means or opportunity to relocate or rebuild after the construction period is complete. Please don't place this tremendous burden on this historic and underprivileged Asian American community; please don't choose options CID-2a or CID-2b.</p>	Michael Schreiber
04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am a small business owner on 5th Ave between King and Weller. We are a family-owned business that opened our doors in Chinatown-ID in 2019. We spent our one-year anniversary by shutting our dining room due to public health mandates. Our business lost almost 50% in revenue during the pandemic and is slowly regaining business, but have yet to make a profit. The impacts of the past few years of the pandemic on top of xenophobia, hate crimes, and safety concerns have been devastating to many businesses in our neighborhood including ours. I fear that we may not make it as a business with the construction impacts if the 5th Ave alternatives are chosen.</p> <p>I urge the Sound Transit board to choose the 4th Ave alternative to link West Seattle to Ballard and give Chinatown-International District small businesses a fighting chance to recover from the pandemic and not yet again make us suffer from construction impacts. Regardless of the alternative chosen, I understand that impacts will be had. However, I strongly believe the compounding historical effects of construction in the neighborhood, the pandemic, and now possibly years of road closures will devastate our neighborhood and my business to a place that we may never recover.</p> <p>Move forward on 4th.</p>	Chera Amlag
04/28/2022	<p>The 5th avenue option and removal of business that are deeply rooted in CID and changes the landscape of a neighborhood that had experienced marginalizing and economic upheaval.</p> <p>4th Street is a better viable option that allows for the community to thrive. Please take into account this neighborhood</p>	Monica Cowdery
04/28/2022	<p>The culture and heritage of this city is very important, especially in a rapid development that the city has been doing. Please save the CID.</p>	Febry Fawzi
04/28/2022	<p>Closing down multiple businesses in the CD-ID area is irresponsible and disingenuous for a city that claims to embrace diversity and inclusion. This is not the city I moved to decades ago and not living up to the potential we could be.</p>	Vivien Lai
04/28/2022	<p>The Asian American community has been repeatedly pushed out and attacked throughout US history. Please do not build the station within the International district. The options within the district will disrupt life and business for many small businesses that have been struggling through the pandemic. The 4th Avenue option is close enough to provide access to the ID community while not harming those businesses.</p>	Chris Nye

04/28/2022	<p>Hello ST3 team, Of the proposed solutions for the ST3 line to West Seattle the tunnel is the only option that makes sense. The elevated alternatives will destroy much needed single family and multi-family homes. The tunnel design is also the only design that fits with the current and desired character of West Seattle. Residents of West Seattle would have never supported the elevated designs if they had been shared with voters at the outset. This has been communicated over and over with ST3 planners during many community outreach events that have taken place.</p> <p>Thanks for taking this comment into consideration and listen to the community and make the tunnel option the preferred option for West Seattle.</p>	Gary Reifel
04/28/2022	<p>Can you investigate Totem Pole Park/Rotary Viewpoint as a station location. This would be an ideal location for a station as it is easy and quick to access the Junction and has the potential for future expansion south.</p> <p>Of the existing information, removing the Avalon station location would be a short sighted decision considering the 2 new 7 story apartment complexes to be developed on the Alki Lumber site.</p>	Kelsey Johnold
04/28/2022	<p>Totem pole park and the adjacent land near West Seattle Golf Course are an ideal location for a light rail station, either above or below ground. It is largely unused at the moment—and in the case of a tunnel station—could be even better utilized when reopened as a public park covering a busy transit station. It's only a 10 minute walk from Alaska Junction, is served by several bus routes, and is nearby many new and future residential developments. This option would not only displace fewer residents and business owners, but it would align the future light rail expansion along 35th Ave SW, which is a better option than either 41st Ave SW or 42nd Ave SW. Both of those routes (especially in the case of elevated tracks) would require substantial future displacements when the line extends further south.</p>	Nate Johnold
04/28/2022	<p>I'd like to give my input on the light rail station decision in the CID. The station on 4th would be less detrimental to the CID and all businesses in that area. I'm born and raised in the Seattle area and my mom's side grew up in Chinatown. I would like Seattle to continue the longevity of the International District well past my lifetime. Chose the 4th Ave station so we can preserve a little part of my culture and heritage.</p>	Kendra Zapata
04/28/2022	<p>Chinatown/International District holds immense significance to me and the greater community. I grew up frequenting the area to visit with friends and family, to support mom-and-pop shops, and to observe events and cultural celebrations. It would be devastating to see those ties lost to years of disruptive construction, demolition and displacement via the proposal to implement WSBLE on 5th Ave. The communities that this proposal seeks to service would be gravely impacted by the decision to close local businesses and subject residents to heavy traffic, air and noise pollution. This community is already struggling amidst the pandemic and socio-economic tension. It has lost so much to both current and historic decisions/policies, such as the evacuation and incarceration of Japanese Americans, and building of the I-5 to name a few. Of the options offered 5th ave would be the most harmful for the reasons aforementioned. I implore you to consider choosing CID-1a, 4th and Shallow as the preferred option as it has the most minimal impact on Chinatown/International District; with far less business disruptions and is more remote from residents living/working there. It will reactivate the use of Union Station and provide more access to pedestrians between Pioneer Square and Chinatown. I also prefer it over CID-1b as I have concerns on access and safety from relying on elevators to access the platform. Thank you for your time and consideration.</p>	Molica Perry
04/28/2022	<p>Quite simply, if Sound Transit decides to do construction as far as 5th Ave, it will prove to me that the city of Seattle has no moral compass. How many times must the CID pay for the needs of the more fortunate? How many times do we need to be displaced? This construction shouldn't be happening in our neighborhood at all. Construction on 4th Ave is the lesser of 2 evils, but we'll take it I guess. If anyone actually wants to live up to the values of equity and solidarity the city of Seattle claims to uphold, then do us all a favor and do this somewhere else.</p>	MJ Steele

04/28/2022	<p>This plan favors Seattle's professional class and burdens lower income diverse communities. This is not what I voted for when I supported Sound Transit's extension.</p> <p>Sound Transit should fully redesign the proposal. It is currently focused on people who are not transit dependent, which means the entire orientation of the plan is less efficient, effective, and useful for reducing traffic and greenhouse gases.</p> <p>South Park and Georgetown need better access to rapid transportation and this is unaddressed in this plan. There is nothing in the proposed plan to provide any improved transit connections for these two diverse communities who are disproportionately impacted by the West Seattle Bridge closure, climate change, air pollution, and lack of public transportation options.</p> <p>The West Seattle construction will worsen homelessness by removing low income housing for residents in the Delridge area. There is a housing crisis in the city and we do not need transit to be the cause of additional strain on affordable housing resources.</p> <p>Avoid any proposal that destroys more historic areas in the International District, such as the proposal to build a station on 5th Avenue. The Asian American community needs better transit but this investment is not based on incorporating their needs and where they need to go. The racial equity analysis shared is insufficient and not community-designed, which is unacceptable in this day and age.</p>	Yanaz Tahtaci
04/28/2022	<p>Hello ST3 team,</p> <p>Of the proposed solutions for West Seattle the tunnel is the only option that makes sense for our community. The elevated alternatives will destroy much needed single family and multi-family homes and disrupt traffic for years during the construction phase. The tunnel design is the only design that fits with the current and desired character of West Seattle. Residents of West Seattle have resoundingly rejected the elevated designs. Had they been they shared with voters at the outset ST3 would not have been supported. This message communicated with ST3 planners during the community outreach events.</p> <p>Make the tunnel option the preferred option for West Seattle.</p>	Linda Braddock
04/28/2022	<p>I'm a Japanese-American Seattle resident who lives near the CID in Yesler Terrace, and I'm very concerned that the 5th Ave S options would cause irreparable, long-term harm to the CID neighborhood. This neighborhood has faced a long history of neglect and harm from the city of Seattle, including the I-5 overpass and Kingdome construction, red-lining, and Japanese internment. Even now, the neighborhood is still grappling with the devastating impact that COVID-19 and targeted racism has had on local businesses, along the rise of racist attacks and threats against Asians, particularly the elderly. I really struggle to understand how any plan that tears through the center of the CID could be considered when this neighborhood has already endured so much. It sends the message that the city of Seattle still considers the businesses, people, and legacy of the CID expendable.</p> <p>Simply put, if Sound Transit chooses any of the 5th Ave S options, especially when there is a viable option on 4th Ave S (CID-1a), you are deciding to tear apart the social, historic, and economic fabric of the CID.</p> <p>4th shallow (CID-1a) is the choice that minimizes direct harms to the CID. The CID is a valuable part of the city, vulnerable due to past and ongoing neglect/harm, and worthy of Sound Transit's consideration.</p>	Gina Marioni

04/28/2022	Potentially shuttering 19 businesses in the ID is harmful to our community. I5 has already ravaged the ID enough. Please reroute this station to 4th avenue to preserve the culture of Seattle.	Alyssa Johnson
04/28/2022	<p>I am third generation Chinese-American, and my extended family established themselves in the C-ID. For example, my grandfather, Henry Mar Hing plus other Chinese men formed the Kong Yick Investment Company (est. 1910) that continues to today. In addition, my grandfather opened Yick Fung Company (1910-2008) that eventually was taken over by my father, James Mar. Through this small business, they were informal case workers to assist many immigrants with housing, medical information, translations, etc. without expecting payment. Other family businesses included Bo Wah Jewelry and Sun May Company. They both opened in 1911, and Sun May remains in business in Canton Alley, operated by my cousins (Constance Magorty and Donnie Chin- he was a volunteer medic for C-ID and was murdered almost six years ago- murder unresolved). Donnie's love and vigilance kept C-ID safe 24 hours/day. It was this type of support that allowed the immigrants a place to live and work safely.</p> <p>This balance is very fragile, for this community is almost voiceless because of a language barrier. I know that if the C-ID community could truly speak to you, they would tell you that they do not want their lives and livelihoods to be disrupted and forever changed by displacing small businesses and residents who live in the apartments above those establishments. The C-ID is a small, unique community that is mostly made up of immigrants. Where would they go?</p> <p>A new light rail hub in the C-ID would have a negative impact on those who are in the community (workers, residents, visitors). Having to endure possibly a decade of construction will definitely impact the C-ID in the worse way possible. Due to the discrimination and high crime in the area, the C-ID is already fragile, and many businesses are struggling. Having to overcome the challenges that a large and long construction project is going to be destructive and will make it difficult for the community to survive.</p> <p>It saddens me to know of the possibility that the C-ID will be victim to this project if the C-ID is chosen. My ancestors worked hard and made many sacrifices to thrive and build the C-ID. They are no longer with us, but they, too, would be very disappointed and angry if this project moves forward in the C-ID.</p>	Dorrienne Chinn
04/28/2022	For the Comment: My name is Hisato Kawaminami. I have lived in Chinatown International District (CID) for several years and I own a business in the neighborhood. After talking to my business partner, other business owners, and other neighbors. I think having the light rail station on 5th is a terrible idea. My wife takes my 1 year old son on daily walks around the neighborhood and knowing that there will be street closures and air pollution from the construction will disrupt the health of my family. With my business being so close to 5th, this will also effect the overall business and amount of people will want to come to the CID. I ask that Sound Transit re-evaluate their plans on where to put the light rail station and be more transparent in where they gather their data.	Hisato Kawaminami
04/28/2022	The Chinatown International District has often been a scapegoat for the city of Seattle. In WWII the Asian community endured interment and were forced to leave our neighborhood. Now Gentrification threatens us again. These shops won't exist if the shop keepers can't afford to live here. They won't exist if they can't afford to pay their workers or have their kids go to day care and school near by. We were forced to live in the CID because of Redlining. We made it our home and it is special to not just us but over a thousand non English speaking Asian American seniors who deserve to stay in their neighborhood, which they dedicated their lives to creating. People my age are Yonsei, 4 generation Japanese American, or maybe they're first generation Khmer or Somalian. The Black community and disabled community has a home here too. Putting this project here takes away more historic buildings, it makes more people houseless and those people are Asian American seniors.	Dean Kubota

04/28/2022	Please reevaluate the impact that CID-2a, the 5th Avenue option has on businesses and more importantly, people. The demolition and displacement that this option creates would cause irreparable harm to an already vulnerable population. It's stated that this is the cheaper option, but it's coming at the expense of real human beings who live here or have a livelihood here. The CID-1a, 4th Ave shallow choice is the better option.	Jintana Lityouvang
04/28/2022	Chapter 4 Chinatown gate should , if not already be designated a landmark and preserved . The future should honor and respect the past .	C Chinn
04/28/2022	The placement of the new light rail station in the International District shouldn't be selected without fully-informed, transparent consultation with the residents, tenant business owners, and workers of the District. Consultations in which these stakeholders have actual power. The fact these location proposals only came to general knowledge of the public (via TV news and the District's facebook page) on the final day of the comment window is very worrisome. The District is already split and hemmed by interstates and other major, pedestrian-unfriendly roadways. A new station shouldn't come at the cost of further eating into the district by demolishing buildings which house dozens of small businesses. These small businesses are the entire reason to visit the District.	Natalie Wilkie
04/28/2022	I support the the "4th St Shallow" or "4th St Deep" option for the Chinatown section of Sound Transit. The 5th Ave option would destroy many Chinatown businesses.	John Liu
04/28/2022	I'm an employee of Ada Developers Academy which is located on 5th Ave S. The proposal in its current state does not provide sufficient detail on the environmental impact (noise, air quality, street closures, taking away parking spots) and potential mitigations for businesses that will inevitably be disrupted. Cumulative impacts around the community's ability to stay and thrive remain unaddressed. I am not in support of the EIS and any of the options as they stand. There must be more community input from the International District to reach a favorable solution for all.	Jerica Huang
04/28/2022	Move forward with the 4th Ave option	Daniel Beadle
04/28/2022	After reading the options for the West Seattle Ballard Link Extension, I would like to show my support for the 4th Ave S alternatives. The 5th Ave S options for the station have too many negative impacts, including the displacement of 19 small businesses that are cultural hubs for Chinatown/International District. As an Filipino-American person, these are treasured places where some of us are able to feel connected to our cultures and have space for our communities. Cultural hubs like Hood Famous, that are just barely getting out of the struggle of the restaurant industry from the pandemic, will be needlessly put in another challenging situation. Chinatown has been historically negatively impacted by various construction projects in the past, and there is an opportunity to not repeat history. Please consider the cultural impacts of this project and move forward on 4th Ave S. Thank you.	Angelica Sta. Teresa
04/28/2022	Imagine what Seattle would be like without a Chinatown-International District. That may be the ultimate outcome if we don't pay attention to the well-being of that neighborhood. Building on 5th Avenue will negatively impact the Chinatown-International District, a historic and already fragile neighborhood that is trying to recover from effects of the pandemic and anti-Asian hate. The C-ID has also already suffered the negative impact of other major transportation projects disrupting and tearing apart the neighborhood and ultimately, community. Those effects are still felt to this day. Please do not build on 5th Avenue for the light rail project and make 4th Avenue the solution. Please find another way - we know you can.	Margaret Su

04/28/2022	<p>I am writing my remarks as someone raised on Queen Anne and now a resident in north Ballard for the past 30 years.</p> <p>I certainly agree with the Six Needs listed in the Alternatives Evaluation, and especially Need #5 – the importance of providing access to the highest number of riders.</p> <p>For the Smith Cove stretch, I would support using 15th Avenue West as the route along Interbay. It would provide easiest access to residents of the dwellings along the east side of 15th and the easiest access to workers at all the businesses on the west side of 15th. Moving the route one block either east (up the hill to 14th) or west (to the BNSF right of way) would reduce ridership of either residents or workers.</p> <p>For the Interbay Station, I would support the Elevated 15th Avenue Station. Anyone who has lived in the area knows that Dravus St. gives the best access to residents on both Queen Anne and Magnolia by car or bike. And 15th gives the easiest access for Metro riders coming from the north or the east.</p> <p>As for the Ballard Station, I think it is imperative not to lose any more maritime or manufacturing facilities than absolutely necessary. Preserving and expanding maritime and other businesses is essential to why so many people live and work in Ballard. Tunnelling under the canal is the only way we can preserve the historical roots of Ballard and the future potential of Ballard. We need our elected officials to get the third-party funding.</p> <p>Thank you</p>	Chuck Richards
04/28/2022	<p>Hello ST3 team,</p> <p>Make the tunnel option the preferred design for ST3 for West Seattle.</p> <p>Of the proposed solutions for West Seattle the tunnel is the only option that makes sense for our community. The elevated alternatives will destroy much needed single family and multi-family homes and disrupt traffic for years during the construction phase. The tunnel design is the only design that fits with the current and desired character of West Seattle. Residents of West Seattle have resoundingly rejected the elevated designs. Had those designs been shared with voters at the outset ST3 would not have been supported.</p> <p>Thank you,</p> <p>Lexi Reifel Mobile: 425-301-1221 lexi.reifel@gmail.com</p>	Alexandra Reifel
04/28/2022	<p>Please choose the 4th Ave plan. I believe the 5th Ave plan is detrimental to a community with deep roots, and a vibrant part of the city. I travel to the ID multiple times a week and frequent many of the small businesses located in the area. It is my favorite neighborhood in the city. I moved here 5 years ago and I chose Seattle because of its diverse population (and the weather). I feel this community has had enough hardship that it would be unfair to pile on more economical stress if the 5th Ave were to be picked. It is not that difficult to circumvent that 4th Ave area in a vehicle compared to the devastating impact the 5th Ave would have on a community. What is the point of a city that values transit stations over the people who live there? Thank you for the opportunity to comment.</p>	Kathleen Wheeler

04/28/2022	<p>Please do not eliminate any stations in the proposal. Planning for a dense, walkable future throughout the region is both wise and necessary.</p> <p>All below-grade stations should be as shallow as possible, especially the midtown station. Reducing travel and transfer times should be a priority to ensure the best experience for riders.</p> <p>My preferred station options are: INTERBAY: Thorndyke Retained Cut (IBB-2a/IBB-2b); SEATTLE CENTER: Republican Street Station SOUTH LAKE UNION: Please study additional options, the current ones are too far west DENNY: Westlake Ave Station (DT-1) WESTLAKE: 5TH Ave Station (DT-1) CHINATOWN/INTERNATIONAL DISTRICT: 4th Avenue Shallow Alternative (CID-1a), please study cut and cover over downtown transit tunnel SODO: Mixed Profile Station (SoDo-2)</p>	Stephen Pettis
04/28/2022	<p>Please do not build a new station on 5th avenue in International District/Chinatown! The neighborhood is one of the best parts of Seattle. It's such a thriving, beautiful community, and the thought of having shops closed, buildings demolished, and 11 years of construction in the heart of the neighborhood is horrible. If you have to build a new station, please choose the 4th avenue location, which will have minimal impact on the Chinatown neighborhood.</p>	Caroline Steen
04/28/2022	<p>To Whom It May Concern:</p> <p>My name is Derek Dizon and I am a Chinatown-International District community member and social worker. I am writing this message to oppose the construction of the West Seattle-Ballard Link Extension in the Chinatown-International District along 5th ave.</p> <p>In the early 1900s, my great grandfather migrated to the United States from the Philippines to work as a laborer. The first place he called home in America was the Rex Apartments, located in the CID on 6th ave and King St. For nearly 100 years, this neighborhood has been a safe haven for my family (along with many other local Asian Americans) as it historically reflects the cultural identity of our community, economic opportunity, and safety. The CID, similar to many Chinatowns across America, is a product of racism as historically, many Asians, Black, and brown people were not allowed to live in "affluent" or white neighborhoods. Systemic racism (xenophobia) such as Anti-asian exclusion acts, Japanese Internment, racist ideologies of yellow peril, and discriminatory housing practices such as red lining, have pushed Asian Americans in the most undesirable parts of cities across this nation. Seattle's CID is no exception to this history, a history of oppression which continues its legacy today. The exploitive timeline of the CID can be exemplified through the city's construction of Interstate 5, The Kingdome, T-Mobile Park, Lumen Field, current Light Rail station, and street car. Time and time again, the City of Seattle disregards the humanity of this neighborhood by continuing to geographically carve out and displace land and people of the CID.</p> <p>Today, the CID continues to be a residential neighborhood that continues to survive the daily reality of what it means to be an Asian American in the year 2022: Fear of anti-Asian violence, levels of poverty among elders, fighting for language access, the right to clean air, accessible pedestrian walkways, and a safe and accountable community, to name a few.</p> <p>The RET Report for West Seattle and Ballard Link extension lists racial equity outcomes such as, "Advance environmental and economic justice to improve economic and health outcomes for communities of color. Enhance mobility and access for communities of color and low-income populations. Create opportunities for equitable development that include expanding housing and community assets for communities of color. Avoid disproportionate impacts on communities of color and low-income populations. Create a sense of belonging for communities of color at all stations, making spaces where everyone sees themselves as belonging, feeling safe, and welcome" (pg. 5 RET Report).</p> <p>Continuing to construct a light rail station across 5th ave in the CID would contradict such outcomes and further marginalize the residents of this place. If Sound Transit truly desires to "identify opportunities to repair past harm" (as stated in RET Report), it must hold itself accountable to their own organizational values of inclusion, respect, and integrity by listening to the communities most affected by its projects and subsequently stop the further demolition to the CID.</p>	Derek Dizon

<p>04/28/2022</p>	<p>Having examined the DEIS, it is very clear to me now that the construction options that run along 5th Avenue pose an existential threat to the Chinatown International District neighborhood’s community and future. I write this to you as a former long-time CID resident, employee of several of its great organizations, and a child raised in the neighborhood’s playground of parks, bars, restaurants, stores, cafes, sidewalks, streets, and many other “third places” offered by the CID’s uniquely vibrant environment, which happens to be inextricable from its history of formation and its community’s struggle for survival.</p> <p>Dear Sound Transit, I have questions.</p> <p>Why this neighborhood? Why here? What amount of “community engagement” could possibly justify the placement of your gargantuan exhaust vents in an area densely inhabited by residents, businesses, and pedestrians? In a COVID-era time in scientific discovery where we now know the importance and priority of air quality in society, why would you choose to ventilate the bad, dirty air from the underground train station straight into the CID, the highest concentration of senior-aged residents in the Seattle-area? Who are mostly low-income, immigrant, Asian seniors! Did you know that kids live in the International District? (So much so, that multi-family housing has become a priority for affordable housing developers in the area. Look at the types of units SCIDpda and Interim have built and are building right now! They are specifically building large multi-room units because there is a tradition of large immigrant families living in the CID and there is a need/desire by large families to live in the CID. Renderings I’ve seen mocked-up for us to imagine these vents in the neighborhood (renderings not found in the DEIS, but by people who read the DEIS and modeled images to scale) are dystopian, to say the least. Laughably and horrifically so.</p> <p>To the authors of this version of the DEIS, the lead decision makers, and the Sound Transit Board: here’s a hypothetical statement, that is hopefully an empathy-generating analogy and pair of shoes you could step into for one second. (And possibly a way to gauge how I feel about the proposed options on 5th Avenue.) What if the government bore a train tunnel into your backyard – no, your aging mother’s backyard – connected a ventilation shaft from the nearest construction site to just outside her kitchen window and front door, and piped all the exhaust, smoke, and airborne particulates into her home’s vicinity for 10 years? While that may sound like an uncalled for statement, it is not hyperbole. It is not an alarmist’s exaggeration. This is what you, Sound Transit proposes to do to our community’s grandmothers, aging uncles, children, mothers, sisters, brothers, shopkeepers, workers – real people who deserve better than to have their air further poisoned or have their mental health continually ground upon day-in and day-out with the incessant noise pollution you will bring, your mortar and pestle continually grinding on the brick and mortar of our neighbors’ minds – by proposing to build right outside their front door. (And finally, the functional purpose of those vents I mentioned earlier.) You are indeed inflicting violence on a community with every right to live in a peaceful environment. The 5th Avenue options will bring constant destruction, ruin, and sadness to a neighborhood that has proven itself to be not only a place of life, but a place of life-giving impact for the greater Seattle region.</p> <p>Between redlining, Japanese incarceration, the building of the Kingdome, and the construction of I-5, the Streetcar, and all the other infrastructure and utility projects that you most certainly already know about, fueled and framed by the historically consistent malice and negligence of racism and white privilege, the CID has seen too many traumatic changes in its lifespan. Construction on 5th Avenue will be yet another chain in the chainlink of inconsiderable harm we have seen throughout the CID’s history. Why is it that we, as friends, advocates, and member’s of this neighborhood’s community, find ourselves needing to speak up to prevent another violent act to be actively inflicted upon it by the powers that be? Why is it not common sense for the people at Sound Transit to not pursue the least violent option? (Move on 4th. Minimize harm.) Does Sound Transit think it can get away with the violent acts of displacement and community destruction by prioritizing the community AFTER they are gone (as suggested by the racial equity toolkit published in February)?</p> <p>The CID exists because the people who originally built it had nowhere else to go, and generation after generation the community made lemonade out of the lemons they found when they got there. Waves of Asian immigration could not go anywhere else but this area due to redlining, and the people who fought to preserve and strengthen these communities gave their lives to give its current shape. Communities survived and sometimes thrived DESPITE the game (This Very American Life) actively rigged against them. But this is not a reason for Sound Transit to do whatever it wants to because the community’s resilience will allow it to survive this future – this is a reminder that Sound Transit NEEDS TO MINIMIZE HARM where harm has been par-for-the-course for so long, and quite frankly we do not know how much more this community can take before it’s existence has been fully eroded.</p> <p>This project feels like engineers and planners who majored in science and did not take a single class in the humanities. I say this because Sound Transit’s plans to build on any of the 5th Avenue options lack any sense of humanity. Where Is Sociology In The Draft Impact Environmental Survey? Where Is The Humanity In The 5th Avenue Options Which Plan To Rip Through The Chinatown International District And Leave A</p>	<p>Joseph Guanlao</p>
-------------------	--	-----------------------

Lasting, Cumulative Harm On A Community Of Color?

Why pick the 5th Avenue options, with the greatest possible number of businesses displaced?

How is this not class warfare? Were the neighborhood in question a wealthy, white neighborhood – Sound Transit would not have been emboldened to include the 5th Avenue options. The 5th Avenue options are so obvious in their de-prioritization of communities of color and those living in poverty.

I have a question. When Sound Transit sees and reads the word “community” as it relates to the CID, does Sound Transit not see that word and envision real people? Does Sound Transit not see real children live in the CID? Real mothers? Real seniors? Real people with dreams, hopes, and aspirations? Real people who spend time in real homes? Shop in real stores? Real business owners? Are small business owners not real people? Are small businesses not part of the real fabric of a community? Is the Chinatown International District not a real home for people?

Is the Chinatown International District not worthy of the same considerations afforded to more affluent, less Asian, more white neighborhoods?

By proposing to build in the CID with any of the 5th Avenue options, Sound Transit is saying boldly that Sound Transit does not see the CID as a real community. One of my favorite places to get coffee or get a drink is Hood Famous Cafe & Bar. The owners recently renovated to enlarge the place and account for the sizable and largely Filipino American community that patronizes it. Seattle’s Historic Filipinotown, one could say, finds its lasting vestige in that cafe. Filipino Americans get the opportunity to imagine a future where the community can come together in a neighborhood where the community once was. We waited through the permissive ups and restrictive downs of the pandemic to eat and drink there again with our friends and family. The construction of I-5 displaced many Filipinos who once lived there. And now Filipinotown faces, once again, to see the glimmers of a community foothold washed away. With all the buildings surrounding Hood Famous (and the Publix, in which it is located) demolished, the streets closed, and the miserable level of construction noise, Hood Famous will effectively be surrounded by a moat of misery and chaos for years. How does any business survive that? Who wants to hear constant jack-hammering and beep-beep-beeping while they are studying or meeting with a friend? And how will the residents who live above Hood Famous in the residents endure the noise and pollution? That will become an area to be avoided during construction. Small businesses not immediately displaced by demolition will not have a fighting chance to operate and exist and make money as businesses. And residents will want – perhaps need – to move “of their own accord.” (Really, you guys are forcing them out.)

Why were the residents in the Publix Building not specified as “displaced” in the sections describing displacement by the 5th Avenue options? Are those residents not real people, worthy of inclusion in Sound Transit’s definition of displacement? How does Sound Transit define displacement as it relates to the residents who will leave because the air and noise pollution will have rendered their homes unlivable? (How many people in Capitol Hill moved away from the Pike/Pine Corridor during the ongoing protests where the police constantly tear-gassed demonstrations? Those 2020 protests lasted a summer in that area, and the ST3 construction proposes to last a decade.)

I was told Sound Transit would have to answer every question made via comment. Above all, please answer this for yourselves: How will Sound Transit minimize harm and avoid unneeded harm and create a future where it prioritized THE LIVES OF PEOPLE above all else?

Consider my impassioned statement reflective of many who cherish the CID as their physical and spiritual home. I feel like had Sound Transit done any amount of real community engagement, Sound Transit would have received many more statements like mine. But alas, nobody knew. I talked to the owner of Oasis Tea Zone last week, and he had no idea that the building where Oasis is located (Nagomi Tea House) is slated for demolition. This is a business located just off 5th Avenue with a 20 year history in that location. It is preposterous to find out that the owner of Oasis did not receive outreach and engagement from Sound Transit on the fact of its demolition – so preposterous it can only be an intentional act of omission from the greater business community in the CID or a largely negligent oversight of the most extreme proportions – casting doubt on the levels to which Sound Transit had made any on-the-ground efforts to understand the community in which it proposes to build within.

I found myself angry while writing much of this. But I did not find myself overstating anything. I am saying things with added emphasis perhaps, or but not exaggeration. I may have said the same things more than once or twice because they need to be reiterated because we are not sure you understand. I would not be here with my grievances if it was apparent you already did.

People are mad and scared and rightfully so: the impacts of building on 5th Avenue are so obviously bad for

	<p>the harm it will cause.</p> <p>Do not build on 5th Avenue. Building on 5th Avenue is not just a bad idea. It is a foreseeably destructive plan that will cause physical, mental, and psychic harm on people in the area, and erode the immeasurable gift that the CID is for people across the region and those visiting. If it means less harm, build on 4th Avenue. And make it worth it because it's gonna take a long time either way, and it will need to serve it's purpose for much longer than that.</p> <p>Please do the right thing.</p>	
04/28/2022	<p>Hi, I am commenting because I am concerned that some of the most incredible businesses in all of Seattle will be impacted and displaced, especially those on 5th. Please show respect and support to those who make Seattle what it is. Please whoever is reading these comments, please do what you can.</p>	Emma Doerner
04/28/2022	<p>The option to have new entrances on 5th Avenue should not be chosen. Not only would the immediate loss be felt with the demolition of buildings that currently house beloved establishments, but it would add to the list of unfortunate, and avoidable decisions made by people that hold city & county positions that altered the Chinatown-International District's landscape not only geographically, but also demographically, and culturally, while the neighborhood and the ones that call it home continue to be routinely ignored.</p> <p>Don't add to that history that spans generations. Revisit the plan, connect with the community and allow their collective knowledge to better guide the work that needs to be done.</p>	James Sok
04/28/2022	<p>Save the international district. Save the buildings in the international district which have history and are unique in style fitting the area. Save all of the international district small businesses, the owners, their businesses and well as their livelihood. We need the culture. The buildings, the businesses and the people can't be replaced once decimated. They are all a bit like the huge old trees we are losing. Move the light rail station south into SODO which is more industrial and has many open spaces. The roads are wider and better accommodating to the high and heavy truck traffic that will be required. The light rail currently goes through SODO take advantage of it there.</p> <p>Save the international district.</p>	D Dare

<p>04/28/2022</p>	<p>From my desk at the Wing Luke Museum I can see Uncle Bob’s Place under construction and the I-5 overpass crossing 8th Avenue and the historic King Street. Uncle Bob’s Place is named after activist Robert “Uncle Bob” Santos and this development is the dream project commemorating his life: affordable family housing in the heart of the Chinatown-International District (C-ID); Uncle Bob’s Place represents development and preservation. The I-5, cutting through the middle of the neighborhood, historically displaced countless C-ID residents and represents development at the expense of a marginalized, historically redlined, disposable community.</p> <p>The view from my desk is unique and absolutely precious to me. I can see community members walking from Little Saigon, where I get my weekly (sometimes tri-weekly) vegan banh mi; I can see coworkers coming back from boba breaks and chatting with construction workers on the corner; I can see people making the most of hard situations like houselessness under I-5 and volunteers who help clean up and offer translation services; I can see the historic building housing my precious Szechuan Noodle Bowl in the foreground juxtaposed with the new luxury apartments in the background. The view from my desk is just a small window of a community that is irreplaceable. I cannot stand the thought of this community being threatened in this generation, or in the next seven generations. This last week, I haven’t slept more than 4 hours a night because something is seriously threatening my community.</p> <p>Earlier this January, a Draft Environmental Impact Statement (DEIS) was released for the West Seattle and Ballard Link Extensions Project (WSBLE). This project boils down to a proposed new train station that would be built in the C-ID. This 2000-page DEIS very clearly does not recognize the disproportionately negative impacts it will have on a marginalized, historically redlined and underserved community of color. Not only that, but it fails to hold Sound Transit accountable for the way past development has harmed communities of color like the C-ID and will harm the communities like the C-ID in the future. Furthermore, the DEIS does not include comprehensive or even reasonable research on the long-term public health and environmental impact of people most affected by the DEIS.</p> <p>Development in this current draft is not centered on the community it impacts. This project erroneously concludes that the construction phase is the only source of cumulative negative impact to the C-ID neighborhood. This is a false conclusion that has not been backed up by adequate research on how the health of, housing of, and future of the neighborhood is at risk. Uncle Bob said that “one development by itself does not necessarily affect the ID negatively, but all these projects together can cause an impact that drastically affects the lives and the small businesses of the people in the community.” This project is just another proposal in a long line of historically neglectful and systemically racist development.</p> <p>Because Seattle needs its communities of color to be healthy and thriving. Everyone deserves a neighborhood where residents can breathe clean air and conduct business and have safety at home. In my line of non-profit communications work, I’ve fielded questions and heard some common comments as awareness of this DEIS has grown.</p> <p>“Be mad at cars, not trains”: are there options that don’t require the displacement of people? It’s not an either/or issue at this stage.</p> <p>“It has to happen somewhere”: accessible, equitable, and efficient public transportation development is absolutely necessary; however, that kind of development is only possible with decision-making made with clear accountability to the public which centers communities most impacted at at risk and their health, and livelihood. Why was this neighborhood chosen for a new station and were those neighbors consulted?</p> <p>“Public transportation development is good for achieving climate change goals”: This issue is not about opposing public transportation nor is it just about the construction affecting the neighborhood in the short-term. It’s about development being in harmony with public health and specifically the public health of those who surround development in the long-term. New train stations need ventilation for tunnels and in the DEIS, those ventilation points – or a release of pollutant air – disproportionately affects this community. Does the environmental impact report account for the long-term health of C-ID residents and especially children there?</p> <p>“What are you suggesting as an alternative?”: I am not an expert in drafting public transportation proposals nor is it my job to be – the responsibility for that is on Sound Transit. This public comment period is about asking for due diligence on behalf of the community affected by this DEIS, and for things to be done right by a historically marginalized community. I’m concerned about the options in the DEIS because I have folks I care about in the C-ID. Can you provide more options? I don’t like any of them because they don’t seem fair.</p> <p>“Can I comment if I don’t live in the C-ID/ if I’m out of town?”: People who visit Seattle and people who live outside the C-ID have a voice that needs to be heard too! They might be concerned about the</p>	<p>Tidaporn Trout</p>
-------------------	---	-----------------------

	<p>neighborhood not feeling the same when I visit again because the shops affected were so unique and it was so beautiful last time.</p> <p>Sound Transit needs to go back to work and do research properly to present equitable options especially in respect to the C-ID. These aren't the only options. They're just the cheapest. Sacrificing people of color's health and homes is unacceptable. Period.</p> <p>This last week, I haven't slept more than 4 hours a night because something is seriously threatening my community; however, it's not paralysis that keeps me up anymore. This last week, I've felt newly mobilized to start working with my peers and to start writing and to start using my voice to make this issue known to others. I credit my friends in the neighborhood for that feeling. We are encouraging each other now, no longer waiting for some unknown activist savior. My friends are hosting open mics, educating the public about what to do, and building an organized community. That sense of dread I have felt about the future of the C-ID has rapidly changed into one of hope. The energy here is urgent and angry and loving all at once. I feel a sense of purpose and I feel the community waking up to that too. Please consider lending your voice on behalf of this community like no other, for there will never be another like it.</p>	
04/28/2022	<p>I DO NOT support the expansion on this project if it is going to affect the long standing and vital businesses on 5th Ave. Please re-consider the scope of this to only include 4th Ave. and spare these businesses.</p>	Kadra DeFils
04/28/2022	<p>This comment is in support of comments made by Wing Luke Museum on the impact of the light rail options on the CID community. This community was hit harder than anyone by the pandemic, and have had a history of being pushed aside in the name of progress. Ensuring that further impacts on this community are taken into consideration and providing solutions for those impacts is crucial in preserving and supporting an already struggling community.</p>	Gabrielle Hogan

04/28/2022	<p>I'm writing to raise concerns related to section ES.3.1.2.2. I'm concerned in that I don't have faith that these historic and often marginalized communities will not get the necessary consideration and that "cost" will be a larger consideration in the equation than the holistic impact they'll feel.</p> <p>" All alternatives would have an adverse effect on historic properties. Alternative CID-1a* and Option CID-1b* would have an adverse effect on Seattle Chinatown Historic District from construction disruption and to Pioneer Square-Skid Road National Historic District from construction disruption and partial property acquisition." This quote leads me to believe that not enough consideration was given to even more options. I'm far more interested in paying additional taxes to protect these communities than taking the cheaper route to get things done.</p> <p>Why aren't there options on the west side of 4th Ave? I'm sure there are complications I'm unaware of, but I want to hear about all options that might protect small businesses in the area that done have the means to protect themselves.</p> <p>The CID has historically had promises made to them in the name of progress that never are lived up to, and it feels like it's about to happen again. I think it's a pipe dream that any small displaced business will be able to survive these proposals.</p> <p>This feels like a bad 80s movie.</p>	Chris Brummel
04/28/2022	Hello I am commenting to express that I am in favor of the 4th Avenue plan and against the 5th Avenue plan that would be a detriment to Asian American owned businesses.	Mehul Patel
04/28/2022	<p>For your comment: My name is Alan Trang and I've been a long time bartender in the neighborhood and formerly lived in Chinatown International District (CID). After speaking to my customers, friends, and family a about how the light rail station project, I don't think the 5th Ave sites would be beneficial to neighborhood. I enjoy working as a bartender in the neighborhood because of the history and culture. People from the local business and the people who live in the neighborhood bring a great experience that doesn't exist anywhere else in the neighborhood. By displacing the businesses and residents, this will also force a lot of the culture and what makes CID a great place to be. I want Sound Transit to re-evaluate their plans for 5th and 4th ave to find another alternative. I ask that Sound Transit also be transparent in their data and how they come to their conclusions in these light rail sites.</p>	Alan (TN) Trang
04/28/2022	Please select the 4th Ave. Option!	William Agle
04/28/2022	<p>To whom it may concern,</p> <p>I am a resident of 4847 California Avenue SW. This is a condominium building located on the west side of California Avenue at the intersection of California and Hudson. Although the building is not in the direct path of the preferred alternative elevated 41st/42nd station, myself and many residents of the building have concerns that the building of an elevated light rail line could significantly impact the livability of our building. Our unit, including the bedroom, face east across California Avenue, so I am concerned that sound from an elevated light-rail line could significantly impact our quality of life. My understanding is that a short tunnel route to the Alaska junction has been considered that could have a similar cost to the preferred alternative elevated 41st/42nd station. I would request that Sound Transit carefully consider this short-tunnel option as it may reduce the impact to residents in our building. I think this option also warrants further consideration because any expansion of the West Seattle light-rail line further South in the future would potentially displace thousands of residents along California Avenue if the elevated route were continued and significantly impact the livability of thousands of other residence who live in apartments, condos, and townhouses along California Ave. Thank you for your time and consideration.</p> <p>Best,</p> <p>Dan O'Brien</p>	Daniel O'Brien

04/28/2022	<p>I am writing to express concern about the proposed Chinatown International District Segment options outlined in ES.3.1.2.2. The CID is a culturally vibrant neighborhood that has already been bisected by I-5. All of the options you've proposed will displace small, local businesses. 5-8 seems like a lot and 19-27 would totally change the neighborhood's character. These businesses have been managed to stay afloat with the pandemic and xenophobia, but they may not be able to weather (even temporary) displacement. Main street intersection closures and construction activities will disrupt life for the area's residents, many of whom are low-income, non-english speaking, elderly immigrants. I understand that building light rail extensions will have some adverse impacts and I support more public transit. I also believe it is important that infrastructure projects be planned and executed in an equitable way. I hope that Sound Transit is taking seriously its responsibility to think about and document clearly and completely the impacts this project will have on this vulnerable community. Please be sure to explore any and all options to minimize disruptions and protect this living and evolving piece of Seattle's cultural heritage. Thank you for your time.</p>	Alise Kuwahara Day
04/28/2022	<p>Please consider avoiding 5th Ave. There are many businesses including my favorite boba tea place Oasis, that would be displaced if construction were to take place there.</p> <p>Least disruptive option seems to be on 4th Ave S. Even there, please try to research other long term impacts it'd have decades after construction ends. It would be great to see Chinatown International District thriving because of the new transportation options provided by Sound Transit.</p>	Aung Oo
04/28/2022	<p>As a resident of the International District (Chinatown, about a block from the existing Link station), I am excited to see our transit options increased. I'm looking forward to more feasible transit options to Ballard and other neighborhoods, and visitors from those parts of the city will be great for businesses in my neighborhood.</p> <p>However, I am extremely concerned about alternatives CID-2a and CID-2b and their impact on a neighborhood the city already neglects in favor of wealthier, whiter areas. Small, minority-owned businesses are the lifeblood of the international district, and many have struggled recently due to the pandemic and other social and economic factors. It would be terrible to displace nearly 30 of them; many would likely close permanently, including several cultural touchstones. It would also be disastrous to displace residents in a neighborhood already straining under the effects of gentrification.</p> <p>Proposals CID-1a and CID-1b are much better. The space on the other side of 5th Ave is basically empty above ground and contributes nothing to the neighborhood aside from the existing link station. These proposals would therefore do little harm to the neighborhood beyond the temporary disruption inherent to a major infrastructure project. This is a great tradeoff: all the benefits of an additional light rail line without taking away any of what makes International District so vibrant and special. I understand that it is substantially more expensive; half a billion dollars is a lot of money. But after more than a century of neglect (and sometimes worse), it seems like the least Seattle can do for CID.</p>	Nathaniel Woods
04/28/2022	<p>Please build on 4th Avenue versus 5th.</p> <p>The damage to the neighborhood would be devastating if the construction is done on 5th. More shops and businesses would be adversely impacted by the 5th Avenue construction.</p> <p>Please do not build on the 5th Avenue plan.</p> <p>Thank you for the consideration.</p> <p>DMK Doug Kinoshita 206-660-3546</p>	Doug Kinoshita

<p>04/28/2022</p>	<p>Re: Chapter 2: The West Seattle-Ballard Link Extensions must put riders and increased ridership first.</p> <p>Stations should be as shallow as possible to minimize total travel times and improve accessibility and reliability. Many of the proposed station depths, especially at the Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are common for the large number of riders who are not suburban commuters.</p> <p>Any deep high capacity stations must have significant capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure.</p> <p>Elevators should go from the street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Section 2.1.2.2.1 Prefer the Mixed Profile Alternative (SODO-2) - bias for supporting improved frequency and reliability. Study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility (re page 6-5).</p> <p>Section 2.1.2.2.2 In Chinatown/International District, reject any deep stations and study shallower 4th avenue stations, similar to Option CID-1a. As a critical regional transportation hub, transfer times must be optimized</p> <p>Section 2.1.2.2.3 In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>At Westlake, build 5th Ave Station [DT-1], but update the elevator and escalator plan (Appendix J, pg 173 / B05-ASX100) to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower.</p> <p>At South Lake Union Station: Reject both presented options, study a Westlake Avenue or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. The presented options are too close to the SR99 interchange which is a pedestrian hostile environment and too far from neighborhood centers of activity.</p> <p>At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p>	<p>Kahn Duong</p>
-------------------	---	-------------------

<p>04/28/2022</p>	<p>I have not once ever heard anyone living in the Seattle community request Sound Transit demolish sections of the Chinatown-International District [CID] in order to expand "services."</p> <p>As a 6th generation Chinese American, speaking on behalf of the diverse senior communities living in the CID that are not internet savvy, their associations resoundingly condemn this latest racist action in a well documented history of injustices committed against minority communities in Chinatown.</p> <p>Given the option, no expansion of ST3 into Chinatown at all is their preferred option, especially since the region from SoDO to the Stadiums offers ample alternative to demolishing this residential community. Of course the 4th avenue "alternative" is the least worst poison pill the community is willing to accept, but it should persist as a mark of shame for the next 100 years upon EVERY single individual involved in this prejudice fueled push by ST3.</p> <p>The Chinatown-International District is not some transient parking lot, there are children and families that live here. It is the heart of the Seattle Asian-American and Pacific Islander community of the entire Pacific Northwest. Moreover, it is a National Historic Treasure from the Streets that Bruce Lee called home to the Wing-Luke museum to the oldest Chinese-American association in the country.</p> <p>From the hate crimes and government mandates of recent years; to vagrancy that has been directed at the CID; to unsolved murder of Donnie Chin; to the need for Donnie to Co-found the International District Emergency Center to begin with; to I-5 threatening the neighborhood; to the King Dome proposals; to the Internment of Japan town; to the Chinese Exclusion Act, lynch mobs, and burning down of Chinatown of the past the Government of Washington and Seattle City just never seems to be able to just leave the community alone to prosper. Yet, what an amazing coincidence over the decades that they can find every justification or another over the years to destroy parts of the International District.</p> <p>The 4th Avenue option is the least worst, but it will also necessitate: 10+ years of pollution that the "environmental impact analysis" doesn't address for in public health; it does not account for the fact that at least 30-50 years of environmental remediation efforts will be needed to offset this construction; as a American Society of Transportation Certified logistician I see the economic necessity based on the population size of the region doesn't require expansion of this scale; the final products calls for an exhaust structure that will pump dirty air into the International District for generations to come with an elementary school nearby; Sound Transit right now is not safe and has ample other concerns funding should be going to; and the community doesn't want this expansion (of course that appears to be the least concern for ST3).</p>	<p>Sea Chan</p>
<p>04/28/2022</p>	<p>Dear Sound Transit,</p> <p>I rent an art studio in the Inscape Arts and Culture building; I've been a tenant there since 2012 and have spent a great deal of time in and around the Chinatown- International District, frequenting many businesses, attending cultural events, and using the current available transit options. I recently attended the CID - specific virtual public meeting about the West Seattle and Ballard Link extensions on 3/22/22 and have reviewed information on the website and downloaded the current DEIS.</p> <p>I am troubled by the options offered for the CID portion of the Ballard Link extension and the potential construction impacts on the many vulnerable communities that live in and access this neighborhood, including large numbers of elderly people. None of the options are good; the 5th avenue routes seem particularly likely to cause irreparable harm to the coherence of this important neighborhood and community which has already weathered so much historic harm.</p> <p>Please consider routing these extensions another way.</p> <p>Thank you, Britta Johnson</p>	<p>Britta Johnson</p>

04/28/2022	<p>I strongly feel that options 1a and 1b on 4th Ave are not only the ideal choices for the new Link line, but they are the only acceptable choices. All other suggested options will disrupt— and thus harm— the Chinatown International District, a vital and historical community that has, historically, been subjected to far too much disruption. I am part of the staff at long-standing restaurant Fort St. George, and in my year of working here, I have witnessed and been invited into a community ceaselessly welcoming and ever-growing, all while maintaining deep roots and an awareness of those who came before. In short, the CID does not just house people— it provides a home to people. Including myself and those I love. I ask that Sound Transit please take the time to prioritize the options that do not destroy this home.</p>	Erin Hunley
04/28/2022	<p>ES.3.1.2.3. Downtown Segment:</p> <p>I don't think the current placement of the South Lake Union station is ideal in either DT-1 or DT-2. I believe DT-2 has the better overall layout when connecting with Queen Anne/Seattle Center, but the SLU station is on the wrong side of Aurora. Both proposals for the station miss the "heart" of SLU, somewhere near Mercer/Harrison and Westlake Ave. Having a station several blocks away next to Aurora seems like it would be underserving the SLU area. I would rather see the DT-2 layout but with the SLU station around Mercer/Eastlake instead of on the opposite side of Aurora.</p> <p>As far as construction impacts go, I would rather see the bandaid ripped off and the line built correctly the first time so that it serves the most people when it's complete. I don't think concessions should be made for temporary construction concerns. I would rather see cut-and-cover to have the station closer to the surface rather than multiple escalators/elevators to get down to the station - this would just add time/complications/discourage people from riding, and the goal should be to make access to public transit as easy as possible. Burying the station 8 minutes deep for an intra-city light rail will just hamstring passenger usage.</p> <p>ES.3.1.2.4. South Interbay Segment</p> <p>No strong opinions, but I generally think SIB-2 and SIB-3 are better options. I would guess the Magnolia bridge gets replaced at some point in the near-ish future, and these two options seem like they would avoid that potential complication. Also, having a station on Elliot seems more accessible than something on the opposite side near the ports/Expedia campus. I also think SIB-3 leads well into my preference for the Interbay station on 15th...</p> <p>ES.3.1.2.5. Interbay/Ballard Segment</p> <p>I think the IBB-1a option for a station on Thorndyke would be underutilized, unless significant effort was made to revamp the industrial area back there, and re-route buses to connect. For walking purposes, there's railroad that blocks all traffic to the northwest. With the IBB-1b or IBB-3, at least it's on 15th so there is access from all sides (and presumably bus connections up Magnolia and Queen Anne).</p> <p>That being said, I don't like any of the options that results in the Ballard station being on 14th Avenue. I would rather see the Ballard station at Market and 15th, which presumably would allow station access from both West and East sides of 15th. It's only a block, but crossing 15th as a pedestrian could be discouraging for daily commuting. 14th also seems less residentially populated than the area along Market west of 15th, going toward the heart of Ballard. 14th seems to miss the "main area" (Ballard Ave and surrounding apartments/businesses) even more than 15th. I'd love to see more stations along Ballard/Fremont/Wallingford trajectory, but I don't think that's in the budget. If nothing else, at least 15th seems like it would allow for more flexibility in the future toward the North. 14th seems like a dead end because it's mainly residential houses north of Market.</p> <p>If I had to pick an existing option, I would go with IBB-2b even though it's projected to be the most expensive. I don't particularly like the placement of the Interbay station on Thorndyke, but I think this station will be less utilized than Ballard in the end, anyway. I'd rather prioritize the placement of the Ballard station to be as accessible as possible, as it's a far busier area residentially and for businesses. 15th construction closures would certainly be more impactful than closures on 14th, but again, if it's being built, build it right.</p> <p>Also, from a purely cosmetic standpoint, I don't like the idea of a huge concrete bridge in the middle of the</p>	Andrew Quesada

	<p>Fremont Cut. These options also seem to have more impacts on Fisherman's Terminal and surrounding area, which would be entirely avoided with a tunnel option.</p> <p>Overall, whatever you do, please prioritize accessibility of use. If it's going to take 15 years to be built anyway (is there anyway to expedite this? Ballard could use the light rail yesterday), build it right the first time!</p> <p>Thanks, Andrew</p>	
04/28/2022	Please don't build the transit on 5th avenue in Chinatown where multiple businesses will be severely affected and not to mention the entire neighborhood as well. Chinatown-ID has a long history of disruptions due to many construction projects which has affected this community in so many negative ways. Please try to build away from this neighborhood to preserve the health of the community. Thank you.	Phan Su
04/28/2022	I object to the proposed sound transit plan until there has been a viable opportunity for the CID residents and businesses to weigh in.	Robin Mar
04/28/2022	Please do not displace businesses in Chinatown	Daniel Jiang
04/28/2022	Please proceed with the 4th Ave option which preserves the cultural and historical elements of the neighborhood that the other concepts would destroy.	Ben Chapman
04/28/2022	I think this is a waste of time and money there's already a link in the area and this will be a disaster for the people who already live here. Don't destroy this community.	Marina Hooker
04/28/2022	No matter what option you pick there will be pros and cons. Transit is critical to the future of our city, however choosing 4th instead of 5th will do less harm to local businesses and community today.	Kristina Rakestraw

04/28/2022	<p>Hello, Our family has been paying taxes in Seattle/King County for almost 60 years, and we are always fare-paying riders when riding the Link light rail between home and airport, and between home and UW and Northgate. I would hope that our opinion carries some weight. In reviewing Section ES.3.1.2.2. Chinatown-International District Segment options (pages ES-25 through ES-29), we feel the best choices are CID-1b, 4th Avenue Deep Station Option, or CID-1a, 4th Avenue Shallow Alternative. These disrupt the fewest number of businesses and upon completion result in a permanent reduction of travel time for riders to Lumen Field and T-Mobile Park, compared to the temporary and permanent increases in travel time present with the 5th Avenue options. The 4th Avenue options also recognize the cultural importance of the Chinatown-International District by minimizing the short and long term impacts to it from this major 6-10 year project. Thank you for your consideration. Regards, John.</p>	John Lee
04/28/2022	<p>I have major concerns about the health consequences of putting this light rail station in or near what we know is a historical neighborhood (CID) filled with people of all ages. Economic and environmental consequences make the 5th Ave options entirely unethical. I favor a 4th Ave option or reconsider entirely given how much construction disruption CID has endured (Kingdome, I-5, Jackson trolley). The displacement, replacement and erasure of people via this station further reinforces the systematic racism that POC and Asians face. Seattle can do better and this is an opportunity to do just that. Hearing the consideration of moving the west Seattle location to avoid a single apartment complex shows it is possible to not select construction that would irreversibly hurt a vibrant, critical, cultural neighborhood. Please don't continue to a history of displacement. It would be devastating to see CID deteriorate due to the wrong choice on link station. I love public transit but not at the cost of my peoples neighborhood.</p>	Joye Sumner
04/28/2022	<p>I feel as if this move for the city is inevitable but to have a chance to choose which plan would cause less of an issue for families and business owners, I choose building along 4th Ave. I am a former Chinatown resident and it would sadden me to see so many people get displaced. Chinatown holds much Seattle history it would be a shame to tear down much of the area to create space for a light rail station. I don't believe much space is absolutely necessary for what is trying to be done. Also, the building of this would take quite some time which would involve an overload of construction in an already congested area. We do not need more space being taken up. Plan to move forward with 4th Ave.</p>	Bianca Lopez
04/28/2022	<p>I am a longtime CID worker and someone with deep cultural and community ties to this neighborhood. I am opposed to all five of the Draft EIS alternatives for the CID expansion. The 5th Avenue options cut through the heart of the historic core of the CID and displace a devastating number of small, BIPOC-owned businesses. Traffic diverted into the neighborhood by construction on both 4th Avenue options would result in increased air pollution and decreased pedestrian safety, which would be especially harmful to the many elders, unhoused residents, and people with disabilities who live in the CID. The 4th Avenue shallow option would displace people from their homes. All of this is unacceptable.</p> <p>Sound Transit has conducted little meaningful engagement with small business owners, residents, and other community members in the CID, let alone culturally competent, in-language outreach for those with limited English proficiency. I first learned about the proposed alternatives and this public comment period only a month ago. This is true for almost everyone else I have spoken to about this project, including my coworkers, staff and volunteers at other CID organizations, grassroots organizers who are active in the neighborhood, and others who have cultural and ancestral ties to the CID. The fact that the 2,000 page DEIS has not been fully translated means our immigrant elders who primarily read and speak in Chinese, Vietnamese, and other languages are not able to engage with the full report. This is also unacceptable.</p> <p>I urge Sound Transit to extend the public comment period by at least 90 days, continue community outreach, and explore alternatives that will not cause displacement and disruption to the CID community.</p>	Nina Wallace

04/28/2022	I am concerned that Sound Transit's current construction plans will negatively affect businesses in Chinatown-International District and potentially cause internal displacement for its community members. What is Sound Transit's plan for how they will support local businesses, restaurants, and community members who may be negatively impacted by the construction of the proposed light rail stations?	Emma Wong
04/28/2022	<p>Thank you for providing a clear executive summary of such a complex transit expansion. The CID segment presents unique challenges specific to preservation of a historic neighborhood and as such I believe the route that prioritizes historic preservation should be pursued. This is 4th Ave shallow CID-1a. While the alternatives could allow reduced construction time or traffic interference it is only at the expense of historic buildings, businesses (18-27, CID-2a and CID-2b), and employees. Yes, CID-1a is potentially 5 years longer in construction time but at the expense of destroying businesses and buildings (CID-2a/2b) that have existed for over 100 years and have a lower chance of recovering.</p> <p>It is not made clear what the direct impacts of the CID alternatives would have upon the CID; these need to be more tangibly defined and not described through euphemistic terminology. The measure of impact on "historic properties and historic districts with adverse effects" is not clearly defined. Are the buildings destroyed? Partially removed? Relocated? The impact measure for "potential displacements" is equally misleading. How many of the businesses displaced will actually be able to come back when they are defined by the unique neighborhood in which they currently exist?</p>	Aaron Conitz
04/28/2022	I am very concerned about this plan that is going to be building a new light rail station on 5th ave. This will destroy a lot of local businesses that have been around for a long time and also will be affecting the neighborhood for the next 10 years so. I do not like the plan for the 4th but it will be less evil in this situation. I like the idea of expanding the light rail stations throughout the city since it gives better public transportation but I believe this could have been located in a different place where it would improve the area without hurting small businesses. I hope you consider 4th option to be a better one in this case.	Daniel Oh
04/28/2022	Please don't displace more of Chinatown / the ID than is needed. Choosing either of the 5th Ave options would irrevocably change the area, and the city will lose a cultural stronghold. Fourth Ave not only displaces the least number of businesses, but also seems to have the most benefits listed!	Sabina Look
04/28/2022	<p>Hello,</p> <p>I'm writing to express my opinion/belief that no light rail work should impact international district, along 5th or anywhere else.</p> <p>As an individual who used to live there, and has an understanding of its unique history to Seattle and the US, it needs improvement and help, NOT disruption.</p> <p>Please do not do anything that will impact International District negatively. No construction. No detours. No traffic or pedestrian impacts of any kind.</p> <p>Thank you, Rod Custer</p>	Rod Custer
04/28/2022	Don't destroy ping's dumplings please	Kyle Wong
04/28/2022	Any new roadway or train coming into or out of West Seattle needs to be in a tunnel. It was a mistake and disrespectful to the community that Sound Transit Line down Martin Luther King Jr Way S, was above ground. The rail is above ground because it is a poorer neighborhood, and no one was watching out for the underrepresented citizens. It is still said "What side of the tracks do you live on"	Don Goodwin
04/28/2022	<p>Hello</p> <p>I am a community member who has grown up in the cid.</p> <p>Please don't move forward with 5th ave. option, the negative impacts outweigh any other option. Please don't displace so many people, for the cid has a repeated history of that. A decade of construction and pollution is very concerning, for that area is vital for community and culture. What kind of support will people have? Will rents end up higher? Thank you for your time. Peace</p>	Shea Takabayashi Dailey

04/28/2022	The 5th Ave S options would impact many of the Chinatown international district businesses that is a staple for many local residents. There is a more viable option on 4th Ave S (CID-1a), in comparison to the choices of 5th Ave. Have you done more research and gather input from community members who might be affected? Please consider	Long Dinh
04/28/2022	Light rail plans threaten Chinatown - International District's future! The hub to be built on 4th Ave will take away businesses and jobs for over 200+ people and disrupt the Chinatown community and it's forever future. I attended the Open House Information at the 5th Ave Plaza in March and it seemed they were pushing to have the 5th Ave location to be best!!!	Marie Thomas
04/28/2022	The construction to expand the stations seem like they will displace many businesses, especially the expansion on 5th Ave in International District. There are a lot of businesses right by the existing station and it would be a shame to needlessly displace some long standing stores. Is there any way to expand those stations without significant above ground construction? Is it possible to make station entrances that are as unobtrusive as possible, ex: just a stairway down on an intersection - similar to subway entrances in NYC. Regardless, please consider the impact of expanding the station in international district as it is already an area that faces many struggles.	Sam Zhou
04/28/2022	The CID is a precious site that must be protected from the impacts of this project. What I am hearing from the community is that those who live, work, and have family there believe the 4th avenue option to be preferable to the 5th avenue option. From the research for your Environmental Justice report: "The general feeling [in the CID] is that this neighborhood has endured a disproportionate share of impacts from these [public] projects." I believe this is true. I don't feel it is sufficient to employ the same mitigation measures you would employ elsewhere along the corridor— the level of care & consideration must be even greater. This is an important historical neighborhood that means so much to the community, and the neighborhood and its residents have already faced decades of undue burden due to a long history of racism. If anything can be done to preserve the neighborhood and minority-owned businesses there, it should be done— even if it costs the city more money.	Madelena Romansic
04/28/2022	Due to the overwhelming cumulative impacts and threats to neighborhood cohesion, built up over 150 years and amplified by the WSBLE Project, furthering and cascading historical, institutional racism, we are concluding our response with a call for exploration of options for refinements to the proposed alternatives beyond what typically occurs from a DEIS to Final EIS that will not result in displacement within the CID. As our response indicates, without exploration of these refinements, the harm to cultural resources and social cohesiveness is far too great to risk the survival of the CID, a treasured place of belonging and an authentic historic cultural district like no other in the nation. Additionally, due to the direct proximity of the 5th Avenue South alternatives within the CID and along its King Street core, we find the 5th Avenue South alternatives unacceptable and call for the options for refinements to move away from the cultural, economic heartline of the CID.	Tim Ichien
04/28/2022	While I support the increased access to public transit, especially for the ease of access for those who live & work in the C-ID and the potential business it will bring to the C-ID community, I implore you to select the 4th Ave option which will have the smallest impact on the existing neighborhood and community. As someone who frequents businesses in the C-ID, I have seen the suffering caused by the pandemic and the increase in property damage and hate crime in the C-ID and our local AAPI community. Some of these businesses will not survive the disruptions from construction and would not gain the benefits from the transit expansion if a 5th Ave option is selected. The people and community of the C-ID do not need the extra burden the construction would cause. Choosing a 4th Ave option will have the least detrimental impact on the community and neighborhood.	Ching-In Chen
04/28/2022	Please do not destroy Chinatown by routing the new light rail through it. Chinatown is a historic landmark enjoyed by all. It provides employment and housing to many who are marginalized. It is a social hub for the elderly.. where will they go if it's gone? Where will you get roast duck?	Becky Chan

04/28/2022	<p>While I support the increased access to public transit, especially for the ease of access for those who live & work in the C-ID and the potential business it will bring to the C-ID community, I implore you to select the 4th Ave option which will have the smallest impact on the existing neighborhood and community. The people and community of the C-ID do not need the extra burden the construction would cause. Choosing a 4th Ave option will have the least detrimental impact on the community and neighborhood.</p>	Ching-In Chen
04/28/2022	<p>I am against any more downtown tunnels, especially in the International District which will damage the neighborhood irreparably. Also, a tunnel under the International District will forever change the historic character of the neighborhood, which should be retained. If a tunnel MUST be built here, I favor the 4th Ave. option, which would at least put it on the edge of the I.D. and not right down through the the heart of it, as in the other options.</p>	R DeGabriele
04/28/2022	<p>I agree with the Wing Luke Museum that the DEIS does not properly evaluate the impact of the West Seattle and Ballard Link Extension Project. There is much reevaluation that needs to be done before this project proceeds. In it's current state it will perpetuate indignities of the past.</p>	Robert Moreno
04/28/2022	<p>To whom it may concern, Thank you for the opportunity to submit feedback and for the work you are doing to make more accessible public transportation!</p> <p>I am currently looking at page 41 of the Draft EIS pdf, Table ES-5 about the Chinatown-International District segment alternatives. Of these, I think 4th avenue deep station option is the best since it will cause the least harm to businesses while also not displacing any residents. Although it will still affect 200 employees, I hope work will be done to support these displaced employees if possible.</p> <p>Please do not choose either option on 5th avenue as it will be very disruptive to CID and displace many businesses that make the CID what it is. ID is known for it's great food places, many of which right around the current light rail station and we all love it for that. The restaurant businesses are what make this area a noteworthy place to stop in Seattle.</p> <p>Many of the businesses on 5th are hubs for Asian / Asian American communities and are important to us. Places like Oasis tea are great hang out places with lots of memories while always being a reliable go-to spot. It would be a very big shame to see these businesses closed so please pick a direction that everyone can be at peace with as more communities of color have to fight against gentrification. I also currently ride the streetcar fairly frequently to get to the ID and get off at 5th and Jackson so it would be inconvenient to end up further away from the main part of ID where I go to. The area near 5th is historic, with the Chinatown gate always giving me a sense of comfort even though I'm not from Seattle nor Chinese. As an Asian American, we celebrate any representation where we can find it, especially in perilous times with unprovoked hate directed at Asians in light of Covid-19 etc. Even if it's in the cuisine and flavors crafted by local people, having that to hold onto is a precious thing.</p> <p>Thank you so much for taking time to read this and I trust you will make a decision that minimizes harm. -Rebecca Haynes</p>	Rebecca Haynes

04/28/2022	<p>Thank you for the opportunity to comment on the DEIS. My name is Rie Shintani, and I have been a Chinatown International District community member since 2008. I urge Sound Transit more comprehensively study the long-term economic, cultural, and environmental impacts of the ST3 project in the International District. The current DEIS is inadequate. It focuses mostly on the direct impacts of the ST3 construction and not the long-term negative consequences such as indirect displacements. While it is terrible to directly displace so many beloved small businesses on or near 5th Avenue South, it is also detrimental that ST3 will fuel unprecedented development and displacement pressures that the International District/Chinatown neighborhood is under today.</p> <p>ST3 and the additional station will significantly raise the neighboring property values, which will accelerate gentrification and displacement of long-term, low-income residents who rely on the culturally competent services and businesses available in the neighborhood and the small businesses and non-profits that serve these residents. Rising property values will result in rising property taxes, which makes the rents go up, displacing existing residents and businesses. Chinatown-International District neighborhood exists where it is because of historic restrictive racial covenants. Regardless of which alignment option moves forward, it's unjust for the ST3 to push out the very people who built the neighborhood.</p> <p>More meaningful studies and community engagement must be conducted using the Race and Social Justice lens. Ultimately, more resources will be needed to fully address the additional displacement pressures from the ST3 in the Chinatown-International District neighborhood. Are the 5th Avenue options truly cheaper than the 4th Avenue options if you also consider the detriment of the last remaining historic ethnic community in Seattle? A more comprehensive DEIS should've given us a clearer answer.</p>	Rie Shintani
04/28/2022	Regarding the CID construction, I ask that you defer from building in the CID anywhere along 5th avenue. It impacts too many businesses and runs through the heart of the CID. Too many businesses and workers will be displaced	Angela Yonker
04/28/2022	Seems like there are a lot transfer points. Why can't there be one major transfer point downtown where the trains from West Seattle, Ballard and Bellevue meet? Would be more efficient and much easier for the rider.	Loretta Sutherland
04/28/2022	<p>I write to urge the adoption of one of the 4th Ave (shallow or deep) alternatives for the light rail expansion.</p> <p>The projected costs do not adequately reflect the severe, long-term impacts on the viability of Chinatown-ID, already struggling due to increased rates of anti-Asian bias, a collateral effect of the Covid-19 pandemic.</p> <p>Do the right thing, and find a solution via 4th Ave!</p> <p>Thank you,</p> <p>J. P. Kang</p> <p>Rev. Dr. J. P. Kang Associate Pastor, Japanese Presbyterian Church of Seattle Affiliate Faculty, Seattle School of Theology & Psychology</p>	J. P. Kang
04/28/2022	Please reroute the West Seattle Ballard Link Extension to the 4th Ave S option. The 5th Ave S route would displace 19 small businesses and would wreck a cultural community that has already been through so much the past few years. Please do not cause this much upheaval of the CID neighborhood. Choose the 4th Ave S route.	Tayler Hart

<p>04/28/2022</p>	<p>Regarding: Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions (WSBLE) Project to inform the public about proposed Seattle Light Rail expansions, local impact, and proposed construction options.</p> <p>Of the five options have been put forward by Sound Transit for expansion of Chinatown-International District Station: the three options place new station entrances on 5th Avenue S will displace many C-ID small businesses and result in the demolition of buildings that currently house Ping’s Dumpling House, Joe’s Bar, Pacific HK Cafe, and Oasis Tea Zone. No matter the location, station construction will require nearly a decade of street closures, detours, loss of parking, and subject residents to construction noise throughout the day. This neighborhood has been seriously negatively impacted during COVID-19. Cumulative impacts around the community’s ability to stay and thrive remain unaddressed.</p> <p>The economic impact of the pandemic and anti-Asian American sentiment has hit the C-ID neighborhood harder and longer than most. Many of the small businesses that struggle to survive today will be hit even harder, Wing Luke Museum included. Evaluations by Sound Transit have failed to fully address and account for the ways in which the expansion will irreversibly change the neighborhood. I request that you take the impact on this neighborhood more seriously.</p>	<p>Maura G Fallon</p>
<p>04/28/2022</p>	<p>I oppose both the 4th and 5th Ave alternatives for the new train station to Ballard, but the 5th Ave alternative is worse. As reported in the draft, The C-ID HAS THE MOST MINORITY AND LOW INCOME PEOPLE THAN THE REST OF THE PROJECT. The C-ID is the major hub of Asian activity and culture in the City of Seattle and throughout the years the government has been negatively impacting the neighborhood, its people, and its businesses by lack of respect and thought for the Asian community. Fifty+ years ago the I-5 corridor already split the neighborhood in half and devalued the land around it without consideration to the its affects on the people, the businesses, and the cultural identities that rely on the area.</p> <p>You say that you are committed to "creating equitable processes and outcomes across our region" yet this project would be anything but that. With the 5th Ave alternative, more businesses will be affected and more people will be displaced not only for employment but housing as well. Furthermore, it would require the demolition of buildings along 5th Ave that currently house businesses that are major community gathering spots and fixtures important to the diverse fabric of the C-ID community. Is it equitable to the Asian population to lose important businesses and community hubs that may never come back to the area? Being relocated to a different part of the city loosens the identity and strength of the community, shaping it is ways that mainly benefit people coming from outside the C-ID. Is it an equitable process to exclude the many elderly, low income individuals who make up a large part of the fabric of the C-ID by not explicitly reaching out with targeted, culturally appropriate focus groups?</p> <p>Using the 5th Ave alternative would result in years of street closures, detours, and loud machinery in the C-ID, along with lowering the sound and air quality of the neighborhood with nearly 16 hours per day of construction. The C-ID already has among the worst air and sound quality of the city due to the I-5 bisecting through, the proximity to the stadiums, the trains, the bus hub, and the street cars. While section 6.1.2 of the report tries to suggest that these problems would be offset by the benefit of greater accessibility to the area in the long run, it fails to ask who that actually is benefitting. For the people who live and many who work in the C-ID, as well as community members who visit the area regularly, there would be a net LOSS. For years the quality of life of those who live, work, and visit the area will be much worse due to poorer air, louder noise, and greater hazards due to construction, not to mention the loss of the ease of access to the community, and the loss of beloved businesses.</p> <p>This lack of failing to see that the actual minority community of station placement not only benefits much less than the majority population but to their detriment overall, is the crux of systemic racism and displays blatant lack of equity, fairness, environmental stewardship and community partnership that Sound Transit professes to embrace. I am embarrassed by the city for so casually dismissing the importance that the API community places in the C-ID and for failing to see that time and again over the past 50+ years the government has failed the API community by continually eroding its places, failing to protect its people, and downright bulldozing the API population based on racist tropes and stereotypes of Asian not wanting to complain, of being hardworking so they'll land on their feet just fine elsewhere, and continuing to colonize the areas that they have built as their own places of community for mainly the white person's benefit.</p> <p>If a station has to be built in the C-ID, do it on 4th Ave, but better yet, place it out of the C-ID neighborhood altogether!</p>	<p>Estela Martinez</p>

04/28/2022	<p>To the Sound Transit Board of Directors,</p> <p>I am writing to express concern for the residents and community of the Chinatown-International district from the impacts of the proposed West Seattle-Ballard Link Extension.</p> <p>I moved to Seattle from New York City three years ago, without knowing or having a community to connect with. One of the first memorable meals I've had was at Pacific Cafe on 5th Ave S where I connected quickly with an immigrant worker from Hong Kong (where we both share familial roots) about native soft drinks. In that moment, I felt optimistic about belonging to and preserving the AAPI culture in Seattle that is so often diminished and fallen prey to racism and segregation throughout history. Despite not having seen my family in years, an interaction in my native tongue, with food that was nostalgic, Pacific Cafe felt like family on this particular night.</p> <p>C-ID 2a and 2b would not only threaten to end the legacy of Pacific Cafe -that I wish to support on a regular basis for my life-and it's neighbors, but it would threaten to destroy the preservation of a multicultural Seattle scene that many people seek out to visit. As a chef with a Cantonese themed food pop up , I seek inspiration from Joe's, a legacy dive bar space, coexisting with Pacific Cafe, a Chinese owned Hong Kong Diner, situated next to a Thai owned restaurant. There is historical meaning and charm to these businesses existing with each other that educates generations about Asian immigrants in Seattle; why they chose to settle on 5th avenue and how they melded with American culture. To destroy this strip of business shows a lack of consideration to the history and preservation of the international district and sets a poor example for Chinatowns across the nation. These details cannot be overlooked and I hope that Sound Transit can work with communities to decide on a less intrusive way to expand the light rail in Seattle.</p> <p>Thank you for your time, Christine Li</p>	Christine Li
04/28/2022	I'm worried about adding a station on 5th avenue because of the displacement and business impact.	Peter Lim
04/28/2022	<p>I support the option for West Seattle to build the LONG TUNNEL (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b).</p> <p>I support the removal of the Avalon station due to the low ridership estimate, and eliminating this station would save funds which could be used towards a tunnel. There would also be less displacements and impacts in the Avalon area. The Avalon Station is also very close to the Junction Station, and it seems like a waste, as residents in and around Avalon can walk to the Junction station easily as well as commuters.</p> <p>Please consider the longer tunnel plans.</p>	Boyd Sugiki
04/28/2022	The CID has already had I-5 cut through. Why does the new train tunnel also have to come through? I prefer 4th Ave options, CID-1a and CID-1b, because they seem more fair.	ronald meriales
04/28/2022	I feel personally we should build on 4th. Keeping as much of chintatown in its orginal form means a lot to the people and the city. Destroying and burying the history that Chinatown holds would be devastating. Building the rail on 4th would be less congested for traffic for commuters traveling through. Please consider building this project on 4th. Thank you.	Raymond Ignacio
04/28/2022	<p>Please select the 4th Avenue solution in order to preserve and protect the Seattle history of Chinatown ID. Although the 4th Avenue solution is estimated to be more expensive, this cost cannot be compared to the history, jobs, buildings that will be lost to the 5th Avenue station solution.</p> <p>Thank you for your consideration. Elana Lim</p>	Elana Lim

04/28/2022	<p>Leave ID Chinatown alone. Choose 4th Ave options. This historical and significant community cannot withstand more interference. I-5 and stadiums already squeezed it into pieces. Let white Seattle take the weight of this one. Leave our elders and vulnerable immigrant businesses alone.</p>	Corinne McKisson
04/28/2022	<p>The 5th Ave S options will close or displace up to 19 local businesses. The construction in this area will seriously impact the entire neighborhood.</p> <p>The 4th Ave S will cause road closures and displace only 5-8 businesses. We believe the 4th Ave shallow station will cause the least amount of harm to our historic buildings and community.</p> <p>Some businesses at risk on 5th:</p> <p>Fuji Bakery Oasis Musashis Seattle's Best Tea A+ Hong Kong Kitchen Chun Chun Rice Dog International Model Toys Milkie Milkie</p> <p>4th Ave S is the only option that should be considered!</p>	Rachel Senda
04/28/2022	<p>The main consideration is preventing the disruption, displacement and loss of the CID neighborhood; the residents and their businesses. The 4th Avenue Alternative sounds like the best approach if all options with the least human and environmental impact are explored and exhausted.</p> <p>WE need to preserve and protect the Chinatown-International District; the culture and community.</p> <p>Thank you.</p>	Michele Nako
04/28/2022	<p>Please choose the 4th avenue route for the Chinatown station. We need to preserve our historic buildings.</p>	Duke Bhuphaibool
04/28/2022	<p>Hello, I am extremely concerned about the impact of C-ID2A and 2B on local businesses. These drafts would destroy so many treasured Chinatown-International District businesses, including Pacific Cafe, Ping's Dumplings, Musashi's, Joe's Bar, and more. I am a professional food writer and have worked as The Stranger's food and drink calendar editor since 2017, so I am intimately familiar with the city's culinary scene and appreciate the rich culture these businesses add to Seattle. My partner is also Chinese-American and I have witnessed her experience deep hospitality and connection at Pacific Cafe in particular. I fear that our city would be losing something truly irreplaceable if these businesses were to be destroyed and I urge you to find a way to preserve them. Thank you!</p>	Julianne Bell
04/28/2022	<p>Please do not go forward with building the light rail station through 5th Avenue! Doing so will affect small businesses and long time residents who have already been through so much. Please reconsider the placement of the new light rail station so that construction will be least disruptive to the international district community.</p>	Alyetta Mendez
04/28/2022	<p>I am grateful for the work that has been done on this project.</p> <p>I have been a resident of Ballard for 31 years.</p> <p>I support reopening the Ballard 20th Ave. NE/Thorndyke alternative. The purpose of light rail is to support the highest number of users. Ballard is expanding west of Market Street. This would produce an increased level of ridership and increased accessibility.</p> <p>I support the Interbay stop. This is an area of increased development.</p> <p>I support the Smith Cove stop. This stop will allow residents of Magnolia, who have been somewhat isolated by the transit planning.</p> <p>I live near 3rd NW and 58th NW. I want to use light rail. It is fabulous. Please coordinate with Metro to assure that bus lines feed into the light rail on regular intervals.</p>	Anne Harper

04/28/2022	<p>I would strongly advocate against the Chinatown-International District Alternatives. Not only would construction severely impact a neighborhood that is just now starting to bounce back from the pandemic and the racial effects thereof, but the environmental impact on a neighborhood that has a large senior population would be terrible. Additionally, a new station in this area could cause the destruction of buildings and businesses that have been a part of the International District for decades and force even more businesses out of a neighborhood still plagued by racial displacement. Having lived in a city with an actual subway system, it would make much more sense for multiple light rail lines to converge in already existing stations which there are a plethora of already in the International District.</p>	Noel Chapman
04/28/2022	<p>Please move forward with the 4th Avenue station to minimize the displacement of Asian businesses in the C-ID! The loss of these businesses for whatever stretch of time is a huge risk to keeping this local economy which is already on the brink of major loss after the anti-Asian and specifically anti-Chinese rhetoric during the pandemic. Any impact on the C-ID will disproportionately affect the elderly population that live here and that come here specifically to stay culturally connected.</p>	Jennifer Cheung
04/28/2022	<p>When deciding between the 5th and 4th avenue alignments for the CID station expansion, I urge ST to consider the distinct history of this neighborhood and its importance in the city. Though the light rail expansion is greatly needed, and disruption is inherent in a major infrastructure projects like this, the 5th avenue alignment would result in irreversible damage to numerous small businesses that hold a central place in this community, and are not easily replaced. The 4th avenue option is a viable alternative. It has its own costs and downsides, yet it avoids inflicting the worst effects on CID, and because of that should be the preferred option.</p>	Daniel Jones
04/28/2022	<p>I am writing in strong opposition to the DEL-5 & DEL-6 proposals of the West Seattle Link light rail extension plan. I am writing to advocate for Transitional Resources, an organization that supports many marginalized members of our community, as they will be directly impacted by these light rail plans. I am writing on behalf of the many voices that are not able to.</p> <p>Transitional Resources provides behavioral healthcare and supportive housing services to some of our most vulnerable populations. Their services meet the unique needs to serve individuals struggling with severe mental illnesses, and range from residential treatment to crisis diversion to intensive case management to vocational services. Transitional Resources gives them hope, opportunity, and a chance for recovery. Their model of care relies on multiple buildings that are in close proximity to one another, in order for the TR staff to provide the necessary support to clients. The proposed route for DEL-5 & DEL-6 directly cuts through the area in which a few of these buildings are located (Rise at SW Yancy Street, and properties at 2988 & 2980) and would drastically disrupt the ability to continue to provide such care. We are in the midst of mental health crisis, and to take away one more lifeline will do a huge disservice, not only to the individuals, but to the community at large. If anything, we need to have more places like TR, not take away places like TR.</p> <p>I am, always have been, and always will be, a passionate supporter of the light rail project and access to a robust public transit system. And as someone who seldom speaks up when it comes to these kinds of things, I feel compelled to speak up now. Please reconsider another alternative other than the DEL-5 & DEL-6 plans. Thank you for your time and consideration.</p>	Lynn Phan

04/28/2022	<p>I understand CID2a / CID2b with the idea of utilitarianism are the best option for the greater good — but I do not think Sound Transit understands that both of those options would destroy the years of community building, multi-cultural incubation of this neighborhood, that we all fought hard to hold back together when the city once again tear us apart with the planning of King Dome, I-5, and now with the WSBLE. I work in this neighborhood, and I love this neighborhood with people who care and love every inch of this place. CID 2a/2b would destroy and further displace the neighbor. There's only one CID in the nation with such a history of diversity of multi-cultural. Not to mention, the project summary is biased without taking accountability for the impact displacement of CID that clearly historically been proven. CID 1a & 1b seem to involve with longer time, and bigger "visibility" impact, but it would vitally create less displacement to the community and neighborhood itself. If I have to choose, CID 1a/1b is the choice. It is time to be accountable for all the displacement that has been done to CID. For the old-time sake, CID had enough and done enough.</p>	Ling Chun
04/28/2022	<p>Dear Sound Transit, Please select whichever option that does not impact the integrity, economic and cultural livelihood, the businesses and buildings of the Chinatown/ID/Japantown district. This historic section of town is too vital to this city and its residents. It is a vibrant historic neighborhood that is home to multi-generational families, preserved buildings, family-owned businesses, and community organizations that provide vital services to its residents and serves as a cultural destination and place of belonging for many throughout the region. They had to suffer through the construction of I-5 and other disrupting factors over time and this project, while valuable, could just kill this neighborhood. Please don't destroy this precious cultural asset to the City of Seattle in the name of bringing light rail to other neighborhoods. We must find another route that does not destroy the neighborhood! Thank you!</p>	Ms. Jules Hughes
04/28/2022	Move Forward on 4th Ave Tunnel Station to avoid 5th Ave impacts	April Kwon

04/28/2022	<p>HELLO, MY NAME IS ANDREA SMITH AND MY HOUSE IS AT 4139 25TH AVE SW AND WILL BE DIRECTLY IMPACTED BY MOST ALTERNATIVES IN THE DELRIDGE SEGMENT (DEL-1a, etc) I HAVE LIVED HERE SINCE 1997 WHEN I BOUGHT AND RENOVATED MY HOUSE WHICH WAS BUILT IN 1909, SHORTLY AFTER YOUNGSTOWN WAS INCORPORATED AFTER THE STEEL PLANT WAS BUILT IN 1904. THIS HISTORIC NEIGHBORHOOD HAS BEEN CONVENIENT, WITH EXTREMELY RELIABLE BUS TRANSIT ONE BLOCK AWAY ON DELRIDGE, WITH SERVICE TO DOWNTOWN IN 10-15 MINUTES. ALSO, THE RAPID RIDE H LINE HAS JUST BEEN COMPLETED. MOST OF YOUR PREFERRED ROUTES WILL DEMOLISH MY HOUSE, RUIN MY QUIET, TREE LINED NEIGHBORHOOD AND ERASE A HISTORIC DISTRICT. IN FACT, YOUR DELRIDGE SEGMENT PREFERRED ROUTES HAVE THE HIGHEST IMPACT OF ANY SEGMENT ON THE WSBLINK, DEMOLISHING BETWEEN 341 AND 607 RESIDENCES AND 31-77 BUISNESSES, ACCORDING TO THE DEIS. THERE IS NO PRECEDENT IN ANY OTHER ALIGNMENTS ON THE WHOLE SYSTEM FOR DESTROYING A WHOLE RESIDENTIAL NEIGHBORHOOD. ALSO, THERE ARE MANY LONG STRETCHES BETWEEN THE CID AND BALLARD WHICH HAVE TUNNEL OPTIONS, WHICH ALL MY NEIGHBORS HAVE TOLD YOU THEY PREFERRED IN WEST SEATTLE BUT I DO NOT SEE HERE WITH THE EXCEPTION OF SHORT STRETCHES. IN THE LAST 5 TO 10 YEARS YOUNGSTOWN HAS GROWN ORGANICALLY, EXCHANGING SINGLE FAMILY HOMES FOR 3-4 TOWNHOMES ON ONE LOT, WHILE KEEPING A SEMBLANCE OF A QUIET SUBURBAN NEIGHBORHOOD. ALL THIS GROWTH WILL BE DEMOLISHED FOR WHAT? A CLUMSY, TONE DEAF, OUT OF SCALE MONSTROSITY WHICH WILL BE OF NO USE TO THE CURRENT RESIDENTS. ALSO, MY WEST SEATTLE HEALTH CLUB GYM WITH ONE OF FEW PRECIOUS POOLS IN SEATTLE WHICH HAS OVER 5000 MEMBERS AND IS A MAJOR COMMUNITY HUB WOULD BE IMPACTED OR DEMOLISHED IF YOU DECIDE TO GO WITH THE DEL-6 ALTERNATIVE, AND JEFFERSON SQUARE (SAFEWAY, BARTELLS, UPS STORE, AND HUNDREDS OF APARTMENTS) WOULD BE DEMOLISHED IN THE WS JUNCTION. I DON'T UNDERSTAND HOW YOU THINK IT IS OK TO DEMOLISH EVERYTHING ABOUT WEST SEATTLE THAT WE ALL LOVE AND USE. IN SHORT, AS I HAVE STATED IN PERSON AT SEVERAL MEETINGS, NONE OF YOUR WEST SEATTLE ALTERNATIVES WORK FOR US OVER HERE. I DON'T NEED TO TELL YOU THAT WE IN THE YOUNGSTOWN AND OTHER WEST SEATTLE NEIGHBORHOODS HAVE HAD A VERY HARD 2 PLUS YEARS WITH THE WS BRIDGE DOWN. DO WE REALLY WANT TO LIVE THROUGH ANOTHER 5+ YEARS OF CONSTRUCTION FOR DUBIOUS BENEFIT? WITH THE BRIDGE CLOSURE, MY NEIGHBORHOOD HAS BECOME THE ONLY WAY IN AND OUT OF WEST SEATTLE. DO WE REALLY WANT TO CHOK OFF THE ONLY WAY ON AND OFF OUR ISLAND WITH CONSTRUCTION AGAIN? ALSO, IF YOU DECIDE TO DEMOLISH MY HOUSE AND NEIGHBORHOOD I WILL EXPECT COMPENSATION IN LINE WITH TAKING AWAY MY OPPORTUNITY TO DEVELOP MY PROPERTY INTO 3 TOWNHOMES AS IS TYPICAL IN THE CURRENT REAL ESTATE MARKET. ALSO, ON THE MAJORITY OF YOUR MAPS MY STREET, 25TH AVE SW IS NOT INDICATED. ALSO, I DO NOT SEE A PICTURE OF MY STREET AND HOW IT WOULD LOOK AFTER AN OUT OF SCALE GUIDEWAY INVADES IT (SEE PGS 2-22, 2-23, 2-24 etc.) I KNOW YOU KNOW THAT 25TH AVE SW EXISTS, AS I HAD PARTICIPATED IN SEVERAL IN PERSON WALKS AROUND THE NEIGHBORHOOD WITH YOUR REPS, (STEPHANIE BOWMAN etc) BEFORE THE PANDEMIC. THERE IS SO MUCH MORE TO SAY.</p>	Andrea Smith
04/28/2022	Please select the 4th Avenue site. The 5th Ave site would be very disruptive to the neighborhood.	Lillian Lahiri
04/28/2022	<p>I am deeply alarmed by these expansion plans and their hugely negative impact on the Chinatown International District. While I am a huge proponent of public transit, this will destroy so much of the CID and displace so many. Have you even considered the devastating impact this type of construction will have on small businesses? The displacement that will occur when you literally destroy the buildings where people live and work? The CID is a hugely important part of Seattle's history and identity and these plans would gut this site of so much historical and cultural knowledge it's appalling. The destruction of a community of low-income, immigrant, elder folks ESPECIALLY during this heightened time of Anti-Asian hate is vile and offensive. The CID needs our support now more than ever NOT these plans of destruction and gentrification. Sound Transit MUST come up with a plan that does not threaten the CID this is unacceptable.</p>	Kelly Linhardt

04/28/2022	<p>Hello!</p> <p>I am a community member that is highly concerned of the potential displacement of the community members in Chinatown-International District. Chinatown-ID is already at high risk of displacement and 11 years of constructions, closed roads, and impacts on businesses can severely hurt our communities.</p> <p>The Bipoc community has historically been redlined into communities such as Chinatown, and we have created our own space and made it into a beautiful space. When the pandemic hit, anti-Asian crimes have harmed our businesses and many businesses either had to close and or is in more financial debt. Many of my friends and families own businesses in Chinatown-ID and they have shared about their struggles keeping their businesses alive during these times. The 5th ave options will severely hurt our businesses even more.</p> <p>Our elders, such as our grandmas rely on the resources that are provided in Chinatown-ID. Our elders, live in Chinatown-ID, and it is the ONE NEIGHBORHOOD where they feel closest to home. With language and economic barriers, resources that are provided by non profits such as Scidpda and Cidbda and at Hing Hay all have supported my elders. They donated free food to neighborhoods and apartments where our elders live, they provide culturally appropriate resources. It is instrumental that they have accessible roads, that they live in an area where they are not met with even more barriers to these resources.</p> <p>I share this personal story because this neighborhood, (aside from South Seattle), is one where I am reminded of my culture, where we the Chinese community can come to live and breathe and be within our culture, be with our elders, and be in tradition and solidarity space with others from the BIPOC community.</p> <p>Please choose the 4th ave option.</p> <p>Thanks,</p>	Christina Chan
04/28/2022	<p>The light rail must make it easy and convient for riders to easily transfer between modes of transit. Reducing the impact of climate change requires Seattle to expand public transit ridership. The only way that will happen is if it is convient.</p>	Eric Boekeloo
04/28/2022	<p>Please consider a station at 20th Ave NW and NW Market St. The more eastern locations have far less population, retail, and food within walking distance. Having the station central to the existing businesses and population is a far better location.</p>	John Whitaker

<p>04/28/2022</p>	<p>A. General Comments</p> <p>First and foremost, design the system for transit riders and the optimal rider experience. Traveling between the station platform and the surface should be quick, straightforward, and reliable. Transferring between transit lines should also be quick and easy, especially at the major transfer points at Westlake Station and International District/Chinatown Station.</p> <p>2. Build the system to maximize ridership. Design a good rider experience and ridership should follow. Still, even the most elegant station will struggle for riders if it's in the middle of nowhere, with few homes, jobs, activity centers, or transit connections nearby. Preliminary ridership projections aren't the be-all end-all, but all things being equal, the station alignment projected to get higher ridership does have a leg up.</p> <p>3. Design the system to be easy to expand. Ideally, West Seattle Junction will not be the southern terminus long as the line extends south to White Center and Burien. Likewise, Ballard should not be the northern terminus long as the line extends north to Greenwood and perhaps east to Wallingford and the University District. Meanwhile, a future Aurora rail line may link up with the new Downtown light rail tunnel near South Lake Union Station. Planning with expandability in mind could save billions of dollars and numerous headaches down the road.</p> <p>4. Station locations should unlock transit-oriented development (TOD) opportunities to the highest extent possible. A station isn't just a transit stop, it can be a catalyst for neighborhood development and housing growth, both market-rate and affordable. Sound Transit has an Equitable Transit-Oriented Development program that has aided in the construction of hundreds of affordable homes on the agency's surplus properties. Alternatives more favorable to TOD have an edge and they will help the system attract more riders down the road by allowing more people to live in close proximity to light rail.</p> <p>5. Construction impacts are important but shouldn't solely determine a 100-year investment. Construction-related road closures weigh heavy on the mind of policymakers, but it is crucial we pick the right station for the future of Seattle and grapple with the construction impacts that entails. Closing a busy road for a few years is a small price to pay to add a light rail line that will last centuries. The priority in mitigating construction impacts should start with prioritizing pedestrian access, transit operations, and bike routes.</p> <p>6. Cost is an important factor, but we shouldn't shy away from big investments where there is a high return. Mostly we are worried about building this right, but we can't dismiss costs, especially since some high-ticket items will require third-party funding, which could be difficult to secure. Controlling costs is also key to avoiding delays to these much-needed transit lines.</p> <p>B. Detailed Comments</p> <p>West Seattle Link</p> <p>a. Junction - Medium Tunnel 41st Avenue Station: Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings.</p> <p>b. Avalon - Retained Cut: Prefer WSJ-5 with a request to study a refined DEL-6 pairing.</p> <p>c. Delridge - DEL-6: Study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].</p> <p>d. SoDo - Mixed Profile Station: Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking.</p> <p>2. Ballard Link</p> <p>a. Chinatown-International District - 4th Avenue: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than 4.5 minutes.</p> <p>b. Midtown - 5th Avenue: Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>c. Westlake - 5th Avenue: 5th Avenue Station [DT-1]. Update the elevator and escalator plan to improve</p>	<p>Alan Fung</p>
-------------------	--	------------------

	<p>ease of use and redundancy and find ways to speed up transfers and surface access.</p> <p>d. Denny - DT-1 on Westlake Avenue: Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower.</p> <p>e. South Lake Union - Harrison or Central SLU: Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible.</p> <p>f. Uptown / Seattle Center - Republican Street: Prefer Republican Street Station and work to mitigate impacts to arts organizations to the extent possible.</p> <p>g. Smith Cove - Galer Street: Preferred Galer Street Station [SIB-1].</p> <p>h. Interbay - Retained Cut or Slimmed Down 15th Avenue Elevated: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3].</p> <p>i. Ballard: Study pairing a high bridge with an elevated 15th Avenue Station and to continue to refine all tunnel options to put a station entrance west of 15th Avenue. Open additional study of the 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p>	
04/28/2022	Please choose the 4th option. This will cause the least harm to our Chinatown-International, a neighborhood that is already at risk of displacement.	Jade Wong
04/28/2022	<p>I've lived in Seattle for a little over a year now and am late to discovering the beauty and joy in the Chinatown International District (CID). Despite the rising hate against Asian and Asian Americans, the heart of the CID Still beats and lives on. The 5th Ave S options would demolish, displace, or seriously threaten dozens of small businesses I'm only now coming to learn and love.</p> <p>If Sound Transit chooses any of the 5th Ave S options, especially when there is a viable option on 4th Ave S (CID-1a), the social, historic, and economic fabric of the CID will be torn apart. "How will you put a mitigation price tag on the compounded harm that past construction and infrastructure projects have caused? The harm isn't just caused by Sound Transit tearing down these buildings or closing down these streets the harm is done because we are still struggling with how to handle I-5, we've barely had time to THINK about COVID recovery, and barely had time to PROCESS the hate crimes that happened to our elders and friends in broad daylight. How will you calculate for that compounded exhaustion and chronic fear that this community has had to bear?"</p> <p>4th shallow (CID-1a) is the choice that minimizes direct harms to the CID. CID-1a will reactivate Union Station as a transit hub! CID-1a will create much needed pedestrian and public realm connections between Pioneer Square and the CID. CID-1a will have more regional construction impacts, but that is the fair choice. The CID should not be sacrificed for the sake of the larger transit system.</p> <p>Sound Transit should pick CID-1a, 4th Ave Shallow, as its preferred alignment.</p>	SHEENA WONG

04/28/2022	Please select the 4th Ave site and NOT the 5th Avenue site that would be more disruptive.	Lillian Lahiri
04/28/2022	Please choose 4th ave option.	Tsan Chan
04/28/2022	As a local 20+ year resident of West Seattle, I respectfully request the sound transit enter West Seattle through an underground tunnel with a station located at Erskine Way-California Ave-Edmunds. I currently live on 41st Ave SW within a block of the proposed station on 41st. As a long time house renter, my family will lose our housing with no compensation. Currently, street parking is restricted. 41st Ave SW is a narrow street with parking on both sides. Since 42nd St now has restricted parking, vehicle parkers from outside of the area park on 41st, leaving their cars to use buses to get to SeaTac. With a sound transit station nearby, parking and moving in a vehicle down narrow 41st will be impossible. I work in Human Services, providing resources to families in need of youth substance use disorder services. At best, my family is middle income. We can't afford to purchase a home in Seattle and have a generous landlord. If sound transit builds above ground on 41st or nearby, we'll be displaced and likely need to rely on government services to not become homeless. Please build underground and not displace middle income long time West Seattle families with limited living options.	Liz Wilhelm
04/28/2022	Re: West Seattle Tunnel Options: Choice: #1 - (#3) - 41st Avenue tunnel. #2 (Option #4 - tunnel) if tunnel can not be built then the least impactful location is along Fautleroy (option #1) The raised platforms are grossly out of scale for the West Seattle neighborhood. Approaches will dominate the area, wipe out residential, block out light & views. especially if built closer to California Ave. Re: International District. Don't wipe out more of the existing commercial area.	MK McCullough
04/28/2022	Out of all the options, 1a deep ave is best for game days due to its ability to handle large volumes of people, is most accessible compared to needing an elevator, and is by far the least disruptive of the local businesses and community spaces which are crucial to preserve. All of the 2 options are inconsiderate of the asian community and business that exist and to simply uproot them feels immoral to do something to a community that continues to be displaced. It also ignores the growing celebrations and areas that would be shut off by construction that could span for over a decade. People live here, they work here, they come to this area because it makes them feel safe and to tear up a crucial part of the district feels like a slap in the face for all of the historical and cultural additions this neighborhood and its occupants provide to the city. Why is it that there are no funds or even considerations given for the relocation and costs and losses of this community? This lack of consideration doesn't give consideration for the kids, families, elders who see this as a constant demonstration that they aren't cared for, they aren't considered enough to even be told that they are being displaced but rather told indirectly. All of these businesses matter because they show Asian wealth and growth, they matter because they are rooted in the minority dream of being successful and proud to be american. It's a privilege to think that people can just uproot their lives and the community that has been built here... a privilege that many within the international district / chinatown do not share. Displacement could mean permanent destruction and harm to their lives and jobs. You are chipping away at the community and the land the people who have made this their one place historically they could feel safe. Please consider 1a as the most viable and moral.	Andrew Le

04/28/2022	<p>Hi, I'm Cam. Seattle resident for 10 years, city employee, and transit enthusiast. I'm here to echo the thoughts of others, mostly Seattle Transit Blog, who have made extensive recommendations to help Sound Transit provide the most equitable and effective light rail expansion. To summarize some of their key findings, they include moving the Ballard station further west towards the already dense, walkable, and beautiful town center. Although many, such as myself, would like to see a future East-West line going through here, and would like to see a version of our current ST3 Ballard station that accommodates that future possibility, we still need to make sure that we're building in the heart of the neighborhood NOW rather than waiting for a future that might never come. Stations need to be shallower, especially the new very important IDC station, which should also avoid bulldozing businesses by going on 4th ave. Any "South Lake Union" station should actually be in South Lake Union. The full write up is here: https://seattletransitblog.com/2022/04/13/seattle-subways-summary-recommendations-for-the-st3-deis/</p> <p>I hate to "make perfect the enemy of good" but we really only have one shot at this. I think I speak for many when I say taking the time to make sure every avenue is explored to the full extent, and to try and avoid drastic compromises is worth it. I realize that this plan gets more expensive each day we wait, but personally I'm willing to sacrifice time and money to get the world class transit system Seattle deserves, and is long overdue for.</p> <p>Now, to echo Seattle Bike Blog, another way to ensure this new system works well for more people, and improves our environment, is to make cycling a central focus of the project from Day 1. Biking and taking the train should not just be allowed but encouraged, in order to make the greenest and most efficient transportation system we can. Bike lane connections, large, free (or cheap) bike lockers, room for bicycles on trains, actually functioning bike rails to get bikes in and out of stations, these are of the upmost importance if we're serious about making this a green project. We should be building large, ride-in-and-park bike garages like you see in the Netherlands. In this way, the stations could become a central hub for all things cycling in a neighborhood - they should support this even beyond just supporting people who are riding the train; the whole neighborhood regardless of ridership status should see this as a beacon of bike infrastructure and green living, and then perhaps other places will follow suit.</p> <p>Thank you for your time! Let's make this new line the best it can be. I can't wait to start riding.</p> <p>-Cam Miller</p>	Cam Miller
04/28/2022	<p>To whom it may concern,</p> <p>After reviewing the proposed options in the Draft EIS, the 4th Ave options would provide a more usable alternative than the 5th Ave options for the following reasons:</p> <p>The 4th Ave options would be closer to the sources of high-surge demand from the sports venues. As mentioned on page 11, patrons may be unfamiliar with the area, thus the closer proximity of the 4th Ave entrances would help reduce confusion.</p> <p>The 5th Ave options would adversely impact the existing small businesses whose buildings would be demolished, in addition to the surrounding businesses and residents who would need to endure the additional noise over the course of construction.</p> <p>The demolition of the buildings would also be too close to the Chinatown Gate, which represents our sense of community. Let's endeavour to keep our community intact.</p>	Ken Ma

04/28/2022	<p>I am submitting a comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. I am disappointed to see the plans laid out by DEIS. Currently, five options have been put out by Sound Transit for potential CID Station expansion. All five of these plans, especially those with options on 5th Ave, displace historic CID businesses (at minimum 5 and more likely 19), detour thousands of vehicles through the neighborhood's pedestrian oriented streets , and create disruptive construction, including noise and air pollution, for the next 5-11 years. The CID station is the only Link station to be surrounded by a densely populated community of color. It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. We urge Sound Transit to reconsider options on 4th or 5thave and instead look to other options that will not displace our beloved residents and businesses in the CID. Businesses on 4th and especially 5th Ave make up what I consider to be half of the identity of the CID today. Displacing any of these businesses will forever change the identity of the CID and as such warrant more options to be considered before moving forward with the project.</p>	Bradley Kim
04/28/2022	<p>The entire purpose of the link is ease and accessibility at its core. Moving the station deeper or farther from the CID only increases travel times for the future link travelers, makes public transportation more inaccessible and, long standing valued businesses will be crushed. There has to be another option that doesn't include demolishing years of history and installing inconvenience.</p>	Cieon White
04/28/2022	<p>Hello!</p> <p>It's important to have efficient, safe, affordable public transit in Seattle. It's also important to preserve the cultures, businesses, and people that built these communities. The 4th Avenue option is much more suitable for the CID. The CID is an integral part of Seattle. It's probably one of the only areas that feels like the "old Seattle." Please support the businesses and the neighbors that live in the area.</p>	Angelene Arciaga

<p>04/28/2022</p>	<p>Cancel West Seattle Link</p> <p>West Seattle would be better served with frequent and more direct BRT service that leverages the SR 99 tunnel and does not require a transfer to serve the majority of trips to downtown. The West Seattle Bridge and SR 99 provide nearly continuous transit priority already. Sound Transit should study transit trips that serve SLU and the north end of downtown via the SR 99 tunnel and Republican Street exits. The Delridge neighborhood should be saved as-is instead of largely destroyed to build a guideway and a giant elevated station. The climate impact of building West Seattle Link will be a net negative; Sound Transit should make this calculation. At what point in the future does West Seattle Link become a net positive for the climate versus a well-designed BRT network?</p> <p>The second downtown tunnel is redundant and counterproductive</p> <p>Sound Transit has already granted that headways as short as 90 seconds in the downtown Seattle transit tunnel (DSTT) are achievable with additional investments. Even with some temporary construction impacts, it must be tremendously cheaper and more climate friendly to leverage the existing DSTT rather than construct a second, parallel tunnel that serves the same or similar station locations.</p> <p>It must be possible to get West Seattle trains in the existing tunnel, even though West Seattle Link should really be cancelled, as suggested above. The constructability issue is on the north. There is an engineering solution that allows for a southbound track to merge in from Ballard just north and east of Westlake Station (near the Pine Street ramp off I-5). There is also an engineering solution for a new southbound split between Westlake and the University Street Station that then continues west to 2nd Ave., goes north to Virginia, and east to Denny/Minor to serve a station there. Sound Transit should investigate asymmetric routing options for Ballard Link that take advantage of this that do not require a northbound split.</p> <p>Sound Transit should also look into a stub line from Ballard that terminates or loops back at Westlake.</p> <p>The Center City Connector Streetcar should be completed to add additional north-south capacity through downtown. Stations at the surface are much more accessible than deep stations which makes the streetcar more appropriate for short downtown trips than Link.</p> <p>All configurations that introduce deep station transfers between lines in the downtown section are worse than the status quo for many, many trips. All transfers should be made at the same platform if possible.</p> <p>The "SLU" station should be moved to the east</p> <p>Consolidating stations in SLU is a bad idea. SLU and Denny Triangle deserve two stations, but Westlake/Denny and SR 99 / Harrison are really too close.</p> <p>SR 99 / Harrison is a bad location for a station. The station vicinity is lower density. The Gates campus and ventilation stacks for SR 99 are hostile to pedestrians. SR 99 bus transfers are of low value because the bus service on SR 99 goes downtown, as does Link. A better location for this station is further east, in a more pedestrian friendly area, closer to the center of employment density.</p> <p>The Denny station should be moved to the east</p> <p>Sound Transit should forego serving Westlake/Denny which is already a short, level walk from Westlake Station, or a short ride on the existing streetcar. This station is much better located around Denny/Minor. Note that Virginia street makes a straight shot from 2nd Ave. to Denny/Minor in public ROW the entire way.</p> <p>14th Ave. is not in Ballard</p> <p>14th Ave. is actually in the West Woodland neighborhood of Seattle, not in Ballard. There must be a station entrance on the west side of 15th Ave., preferably around 20th Ave., to serve Ballard well. The West Woodland area is lower density with many new townhomes and no major employment.</p> <p>thank you.</p>	<p>Jonathan Dubman</p>
-------------------	---	------------------------

<p>04/28/2022</p>	<p>Dear Sound Transit,</p> <p>My comment is related to the WSBLE station alternatives located in the CID.</p> <p>As someone who lives and works in the Chinatown International District, I am extremely concerned about the threat the stations and their construction pose to the neighborhood and its future.</p> <p>My preferred alternative is option 1a 4th Avenue Shallow Station. This station would cause the least harm to the CID neighborhood and not require the demolition of historic buildings and beloved businesses. This station would also once again connect Pioneer Square to the International District and reactivate Union Station. More explanation of why I prefer this option is below.</p> <p>A summary of my preferences for the Light Rail Extension in the CID: -Choose options 1a or 1b and build on 4th Avenue. Do not choose options 2a, 2a diagonal, or 2b on 5th Avenue. -Build a shallow station (1a, 2a, or 2a diagonal). Do not build a deep station (1b or 2b). -Choose the best option and do it right once.</p> <p>I am against any of the station alternatives on 5th Avenue. I believe all of these pose an existential threat to the neighborhood. First, to businesses. The most obvious harm will be to the businesses that will be directly displaced when their buildings are demolished. These are businesses I love and have been supporting for many years. They are important to the neighborhood and its character and should be treated as such. In addition to the businesses that will directly be displaced, every business in the neighborhood will feel the negative impacts of being in an active construction zone for the next 10+ years. Their businesses will be more difficult to access, there will be noise pollution affecting their staff and customers, and will generally feel the impact of the atmosphere while the neighborhood is being torn up. A few months of this is enough for a business to go under, but I don't see how these businesses will be able to survive a decade of construction and its impacts. Once they're gone, they're gone. There is nothing Sound Transit can do to restore the neighborhood once the businesses that make the CID the CID are gone. Now for residents. Residents will feel the same impact of having to live in an active construction zone. Noise for 16 hours a day up to 6 days a week is a horrible environment to live in. The constant trucks, disruptions to pathways, visible construction, and traffic changes will affect residents every single day. In addition to this, once the station is built, many residents may not be able to afford to live here anymore. Proximity to transit many times means higher rent and many CID residents are elderly and low-income. If they are pushed out by higher rent, we will lose the true heart of the neighborhood. I do not believe current mitigation packages are adequate to address the threat and damage to businesses and residents the new stations could cause. How will Sound Transit ensure proper mitigation is provided to businesses and residents of the CID.</p> <p>The 4th Avenue options are not without their downsides as well, but I overall believe these alternatives to be better. My primary concern with the 4th avenue options is the traffic impact on the historic core of the CID. How will traffic be managed through the narrow streets, short blocks, and stop sign intersections? This will impact all businesses and residents in the area. I am also concerned impatient drivers may be annoyed/aggressive toward pedestrians, especially our elders who tend to walk slower. I see the benefits of these stations to be better than the 5th avenue options. Like the 5th avenue options, the 4th avenue options will provide access to the extensions from the CID. In addition to this, the stations on 4th avenue will reconnect the CID to Pioneer Square. Although these neighborhoods are physically very near to each other, they are separated by all of the transit and traffic that has disconnected them over the years. The options on 4th avenue would also reactivate Union Station as a transit center. I'm sure the building makes for lovely offices, but offices can be moved and the people and businesses working from there can survive in their new spaces. This cannot be said in the same way for the residents and businesses that would be displaced by the 5th avenue options. It is a no-brainer that the 4th Avenue options are better for the CID and its community.</p> <p>I am in favor of all shallow station options over deep station options. The shallow stations provide greater accessibility to the general public and better fit the needs of a station in this neighborhood. The smaller distance from the surface to the stations is desirable in terms of efficiency and travel time. The deep options only being accessible by elevator is undesirable. They limit the capacity of how many people can use them at a time and generally seem to be the less efficient option, especially in an area like the CID that sees large volumes of traffic on game days. How has Sound Transit considered the impact of the proximity to the stadiums in their station planning? As a woman, I also feel much safer in stations with stairs or escalators. Elevators create the potential for situations with strangers who make me (or other people) feel uncomfortable or even unsafe. I encourage Sound Transit to consider the shallow options rather than the deep options.</p> <p>The neighborhood has consistently been viewed as disposable by Seattle and its developments. I-5, the</p>	<p>Naomi Saito</p>
-------------------	--	--------------------

	<p>Kingdome, and many other projects have continued to cut the neighborhood into pieces with little consideration for its businesses and residents. Many of these projects were completed decades ago, but we still feel the negative impacts today. Please don't go with the cheapest or fastest option because it is best for Sound Transit, do what is best for the CID and its community. Will this project be yet another on the list of developments that continue to tear apart the CID? Or will you listen to the voices of a community that has been marginalized and ignored? Do this project right.</p> <p>I would also like to see more research on mitigation for residents and businesses, tunnel ventilation, noise and visual impact analysis, stadium traffic impacts, and general long-term impacts.</p> <p>This station has great potential to be an incredible asset to the neighborhood, don't let it be yet another project that continues to harm the CID.</p> <p>Thank you for reading.</p>	
04/28/2022	4th Ave shallow looks like a rough road ahead but I can't see the rationale of making a station dependent on elevators when you already can't keep the ADA access working reliably on the existing stations and while it will be painful to get through the payoff in the end I believe will be worthwhile. Stadium Station MUST be preserved and PROTECT the Chinatown Gate!!	Brandon Clark
04/28/2022	These plans are totally unacceptable! Sound Transit needs to come up with a plan that does not threaten the Chinatown International District like this. How could you possibly suggest bulldozing so much of this wildly significant neighborhood? The CID needs support not this destruction! The disruption this will cause is horrific, how could you even think mom and pop businesses could survive up to a decade of construction?? This cannot go forward the way it is!	Kay Linh
04/28/2022	Please don't sacrifice the rider experience for short term cost savings that may or may not materialize. Think of the generations of residents, some who could benefit from this system 50 to 100 years from now if it is built in a way that can save the rider time, is convenient to use, and helps give people access for destinations people travel to. Build stations that are within walking distance of the central core of neighborhoods and business districts. Build the station next to Denny Street and Thomas Street in South Lake Union, next to California Avenue (42nd Ave SW) in West Seattle, at 4th Avenue in Chinatown that is shallow (at minimal disruption to business and housing here), and West of 15th Avenue in Ballard. In Ballard reopen study of 20th Ave Portal or at least do elevated or tunnel 15th Avenue but no deep tunnel there and no 14th Avenue station to nowhere). Build stations that aren't so deep below 100 feet that they will take ten minutes to exit from the train platform. Don't penalize the potential rider by making it take longer to go to their central destination.	Martin Haskins

04/29/2022	<p>I bought my first home in 2021. I felt so lucky because I was able to find a home within my budget in the safe, kind, and tight-knit community of Pigeon Point. In the last year, I found a sense of belonging in my community for the first time in my adult life. The light rail alternatives cutting through Pigeon Point threaten our community, our environment, the homes of my neighbors, and my home, too. My home is my nest egg. I was lucky to find a home in Seattle I could afford. And now, I am not only at-risk of being displaced by Sound Transit, but I am at -risk of buying in a low-supply, high-demand, high-interest market and potentially being priced out of the city where I've worked since 2012 and lived since 2015. Beyond that, both my neighbors and me whose homes are at-risk of Sound Transit acquisition will miss out on the home value increases realized when light rail is placed nearby. To protect homeowners and tenants who will be otherwise displaced, preserve community, and not create financial "winners and losers," I strongly, fervently urge that Sound Transit advocate for the North Crossing that will allow us all to stay in the homes and neighborhood we love.</p>	Savannah LaFerriere
04/29/2022	<p>Upon reviewing the DEIS, I have a few concerns regarding the options provided. Building out our region's light rail network is a once in a lifetime opportunity, and we need to ensure that we do it right. I advocate that stations be made as shallow as possible to minimize travel times to the surface and for transfers. I also encourage that the stations to serve Ballard and South Lake Union be made to serve existing population centers and amenities. The proposed SLU stations at Mercer and Harrison do not serve the core SLU community. Additionally, their walkshed is minimize due to the presence of SR99. Further research should be done on building a station in central SLU, potentially on Westlake Ave. This would maximize the walkshed of this station. In a similar focus on walkshed, the 20th Ave station in Ballard should be reconsidered as it is closer to the existing urban village.</p>	Noah Alderton
04/29/2022	<p>I am commenting as a resident of the Seattle Chinatown-International District, former Seattle International Special Review District Board mayoral appointee (Architect) boardmember and elected chairperson, and as a third-generation Chinese and Japanese American whose decedents who invested and help construct Seattle Chinatown district area - the only area in the continental United States where Chinese, Japanese, Filipinos, African Americans and Vietnamese settled together and built one neighborhood - where our BIPOC community still exists and happens to be in the immediate vicinity of all explored alternatives published in this DRAFT EIS chapter entitled ES.3.1.2.2 Chinatown-International District Segment.</p> <p>In the chapter, Table ES-5 summarizes the key environmental impacts of the Chinatown-International District Segment alternatives. The proposed station would be adjacent to the existing station in the Chinatown/International District, which to say - has been a hub of cultural importance for Seattle and its Asian American communities since the mid-to-late 1800s - would be a gross and bland understatement. Rather, the BIPOC community that has existed in the area just south of Seattle's Yesler Way, has been cyclically displaced in multiple "Chinatown" neighborhoods.</p> <p>Option CID-1b - having the most employee displacements and greatest impact to public services because it would require relocation of Metro's Ryerson Bus Base, residential displacements occurring with Alternative CID-1a from the loss of access to the ICON Apartments, relocation of the Chief Seattle Club Eagle Village pilot modular housing shelter - would perpetuate racist cycles of displacement. Alternative CID-2a and Option CID-2b would also have business displacements. For Alternative CID-2a, diagonal station configuration could require additional temporary displacement of some businesses during construction. These are all unacceptable, harmful design ideas.</p> <p>The least harmful option is alignment along Seattle's 4th Ave S.</p>	Matthew Fujimoto
04/29/2022	choose 4th ave and save the ID	Kristie Anderson

04/29/2022	<p>The rider experience needs to be viewed as your number 1 priority, and that is currently far from adequate as planned in the DEIS project options. The two main rider experience areas of focus to mitigate are as follows: station location and station depth/accessibility.</p> <p>Station location: stations on a multi billion dollar transit expansion need to be optimized and maximized to where the riders can easily access. As planned in the DEIS, the following stations miss the respective population centers and miss out on substantial ridership: south lake union, delridge, Ballard, Interbay. Proposed mitigation of poorly placed stations is to locate them closer to existing and established population centers in order to maximize ridership. South lake union station needs to be in the vicinity of Westlake and Mercer, delridge station needs to be in the vicinity of Delridge between Genesee and Andover, Ballard needs to be in the vicinity of market and 20th (nothing east of 15th Ave NW) and if possible recommend two stations in Ballard (15th & Leary and 20th & Market), Interbay station needs to be along 15th and Dravus.</p> <p>Station depth/accessibility: the proposed station depths of 150-200 feet in the center business district are simply too inconvenient and a significant travel time penalty for riders, especially considering considering the reliance on multiple escalators and elevators to convey riders to the station platforms with a less than adequate performance record. Additionally, transfers at Westlake and International District due to severe depths of proposed stations create inhospitable transfer conditions that will severely damper ridership. Proposed mitigation is to design stations that are within 50 feet of surface in order to expedite travel of riders to the platforms at Botha stations and transfer stations. Implore consideration of cut and cover tunneling techniques. Multi year Road closures for construction are insignificant over the course of a 100 year infrastructure investment, especially if station depth can maximize ridership.</p> <p>Also, highly encourage use of existing right of way to mitigate expensive property acquisitions. Explore use of immersed tube tunnels for crossings at Ballard and west Seattle to mitigate consolidation and cost of major fixed bridges.</p>	Andrew Whitmyre
04/29/2022	<p>While I support the increased access to public transit, especially for the ease of access for those who live & work in the C-ID and the potential business it will bring to the C-ID community, I implore you to select the 4th Ave option which will have the smallest impact on the existing neighborhood and community. As someone who frequents businesses in the C-ID, I have seen the suffering caused by the pandemic and the increase in property damage and hate crime in the C-ID and our local AAPI community. Some of these businesses will not survive the disruptions from construction and would not gain the benefits from the transit expansion if a 5th Ave option is selected. The people and community of the C-ID do not need the extra burden the construction would cause. Choosing a 4th Ave option will have the least detrimental impact on the community and neighborhood.</p>	Christina Chung

04/29/2022	<p>I do not support the alternatives being considered for a new transit station on 5th Ave. I have read the materials and it is clear that there will be damaging and irreversible impacts to the CID over a 8-10 year construction period. The duration of the project, the complexity of the project, the potential damage to historical buildings, the loss of historical buildings, jobs, small businesses, parking will create permanent and significant damage to the historical and cultural core of the CID community. This area was substantially impacted by the pandemic, white supremacist anti-Asian sentiment, Black Lives Matter protests, vandalism by anarchists. It is also surrounded by illegal homeless encampments and shelters that have resulted in life threatening public safety issues and out of control drug sales and every crime imaginable. The City of Seattle has been unsuccessful in dealing with these issues. In addition, history has proven that the City of Seattle, Metro and now Sound Transit has taken advantage of the Chinatown/International District repeatedly to build transportation systems, new development, and large stadiums with little or no concern or social and economic mitigation to this community. The decision of Seattle and Sound Transit to build the Transit Center on 5th Ave. will cause the loss of many small businesses, impact the quality of life of all residents in the CID, many who are income and elderly residents, and many ethnicities. It will destroy historical sites and prevent the ability of this community to grow and thrive during the lengthy and damaging construction of this project.</p>	Susan Mar
04/29/2022	<p>Will people be able to access the local business in C-ID during construction? The community took a big hit during the pandemic alongside the rise in anti-asian hate, not to mention the long systemic racist origins of this neighborhood. I-5 already cuts through the C-ID, and the 5th Ave options would bring even greater disruption, pollution and loss to the community. The CID-2a 5th Ave shallow option would be the worst when we've only recently started to see new businesses starting to grow in the neighborhood.</p>	Victoria Ju
04/29/2022	<p>Tall elevated tracks through the delridge neighborhood will have a negative effect on the character of the area and cast long, dark shadows across our homes throughout the day. The construction and presence of extremely tall and noisy light rail tracks will have a negative effect on the health and well-being of residents. Please choose an alternative that goes around the neighborhood such as DEL-5 or DEL-6.</p>	Clare Jacobsmeyer
04/29/2022	<p>Please continue to work with community partners to minimize the impact to small businesses and the culture of the International District. The options presented are not adequate. We need to do better to preserve and protect this part of Seattle history. Closing roads, detours all have an impact on the community.</p> <p>This community matters and by not listening or understanding the community, it is furthering inequalities. My great grandpa in the early 1980's would take the bus into the ID on weekdays, buy pastries, have dim sum with friends for hours and that would be the highlight of his day. I can tell you that the ID today is not the same as it was back then and the culture is eroding. All I ask is that YOU KEEP LISTENING, KEEP DISCUSSING other options because there is better - you have to engage the right people!</p>	Anna Masin
04/29/2022	<p>It's harmful and unacceptable that communities of colors are being displaced and destroyed on purpose. It's completely racist, bias, and systematically oppressive to use your power to continue to manipulate people for your gains. Stop prioritizing over-privileged white people at the expensive of POC neighborhoods. From the construction to the noise to the pollution; THIS IS MODERN DAY REDLINING!</p>	Atulya C
04/29/2022	<p>Sound Transit is a parasite sucking our tax dollars into a black hole. They have destroyed the Puget Sound region and they must be thwarted at all cost. Even in commie Seattle we now see how their destruction knows no bounds. It's time for EVERYONE to rise up and fight to end Sound Transit's cancerous growth in our society!!!</p>	Anthony Vicari

04/29/2022	<p>Please make an honest commitment to listen to the communities impacted by new construction. Listen to businesses that will have their buildings demolished. Avoid businesses and communities when they ask you to.</p> <p>If you make agreements to demo even more of international district you need to be pouring support and money into the businesses and community.</p> <p>. There will be far reaching repercussions that will only be experienced if you build without listening to the communities you could destroy. There are many calling for you to not build and tear down more of the international district.</p> <p>Please listen, please take action to develop a plan that centers small businesses and members of the community most impacted.</p>	Hope Donato
04/29/2022	<p>Please cherish Chinatown International District including the health and wellness of community. The environmental and economic impact of your decisions could devastate the CID.</p> <p>Listen to the community to develop a plan that hold all of this.</p>	Kimmy Donato
04/29/2022	<p>Please extend the Ballard line to the Crown Hill Urban Village. There is too much density with no plans to connect to the rest of the light rail system. Please extend through North Ballard. That is what we originally voted for years ago!</p>	Heather Krause
04/29/2022	<p>General:</p> <ul style="list-style-type: none"> -Because a public process involving the Seattle Planning Department will not occur until stations and routes are selected, metrics are inherently quantitative and do not receive the discussion and feedback allowing them to also be viewed through a qualitative lens. For example, no part of the process asks which station location works better for future neighborhood planning aspirations. -At grade Lightrail is one thing, but because all of the above ground options for West Seattle have to negotiate such extreme topography, the necessary guideways would be among some of the tallest in the entire network, but unlike any other locations with guideways of this size, the lightrail is directly adjacent to residential development or public parks making for a very unfriendly neighborhood experience. Any option that doesn't maximize tunnel use is a huge missed opportunity. <p>The DEIS exposed the significant increase in costs for home acquisitions, decreasing the cost delta between above grade and tunnel options. It seems very clear that the benefits of the long tunnel option significantly outweigh this ever-shrinking cost premium.</p> <ul style="list-style-type: none"> -Light rail is a generational project and we have to proceed with vision. A tunnel might cost more upfront but would preserve vital neighborhood fabric today and allow for the most vibrant development and growth in the future. <p>Delridge Station:</p> <p>The options that made it into the DEIS for the Delridge station all severely impact the Delridge neighborhood in:</p> <ul style="list-style-type: none"> -loss of single family homes -homes not demolished are in close proximity to 100+ foot tall guideway -all station options from a walkshed perspective are limited in service to north Delridge rather than the heart of Delridge <p>Avalon Station:</p> <ul style="list-style-type: none"> -The station proximity of the three stations in West Seattle is comparable to the downtown stations, which is the only other location in the sound transit network with this kind of station density, and West Seattle is obviously not as dense (and is never projected to be as dense) as downtown. -The ridership projections for the Avalon station grossly underperform the other two WS seattle stations and by their own projections would be the station with the lowest ridership in the entire Sound Transit Network. -More than 2/3 of the projected Avalon walkshed is captured by the Junction or Delridge station walksheds. The Avalon Station lies within the Junction walkshed, making it completely redundant. <p>The Avalon Station adds significant cost as well as slows train service, further lowering potential ridership for other stations in the area.</p> <p>Junction Station:</p> <ul style="list-style-type: none"> -The Fauntleroy station option is better situated to accommodate future southern expansion. (Although southern expansion anywhere west of Delridge Way SW will be challenging from a topography perspective) 	Fiona Booth

04/29/2022	Options for station locations on 5th are highly detrimental to short term and long term development and sustainability of the International District. Not only will short term construction affect businesses by demolition, construction, & road closures, but using 5th as a major transit exit/entrance for the nearby stadiums will cause long term problems for businesses in this area. These businesses already struggle with racism and regular damage to property with limited services and resources to combat these issues. Bringing larger crowds to filter through 5th as a transit station exit/entrance will detour regular patrons from this area and leave businesses to clean up after “the after party” left on the street, i.e. Pioneer Square. This is not the same kind of station like in Capitol Hill that will add positive foot traffic. The variable load on the transit system from the nearby stadiums/events and the behavior/purpose of riders using this station will differ and need to be considered in a specific way. Locating the station on 4th, which is already an existing traffic/transit corridor is more appropriate.	Queena Cheung
04/29/2022	I object the West Seattle/Ballard transit project going through the International District. this will hurt the international district community more than it already has suffered through the pandemic. Businesses I've already been impacted and gone through so much. Please don't make them suffer through construction for 11 years. Please find another way.	Eric Chee
04/29/2022	Small businesses that have been in the central and international district have been around since I was a kid living in rainier beach. Please do not sacrifice these Seattle staples that have made my home. I was born and raised in this area and I've seen enough strife on the toll gentrification has on south seattle in general. Please do not build through my home. Thank you.	Rosselle Macabata
04/29/2022	<p>Hello Sound Transit,</p> <p>This comment pertains to the station arrangement options. Further disrupting the community of the International district is an irreparable damage. This area of Seattle has historically been bisected by freeways and bulldozed to accommodate large business interests around the Stadium District. With orientation CID-2a, there is an opportunity to minimize the impact to this area, businesses, residents, and community and to capitalize on previously revitalized station buildings.</p> <p>Beyond this, the alignment 1 takes advantage of Union Station, existing infrastructure built to handle a large volume of multi-modal passengers that has already received an extensive structural upgrade, portions of which are literally sitting empty waiting for uses/tenants. Looking into the future, the opportunity to collocate two light rail lines, regional, and long-distance trains allows for quick and easy transfers, avoiding blocks of subterranean tunnels or walking.</p> <p>Downtown has been disrupted by traffic before - simply look at the number of private projects and towers that have been completed in the past year, all with some level of impact to traffic flows. If we can inconvenience the city with these closures, we can weather disruptions for a new, public transit, facility that will serve thousands or tens of thousands of people daily.</p> <p>Sound Transit, with option CID-2a there are opportunities to: avoid further damage the diverse international district, avoiding the racist history of development and freeway construction in Seattle. improve the transit experience, especially transfers between routes, to that of a world-class city utilize existing historic King Street station that has undergone seismic retrofit</p> <p>Thank You, Charlie</p>	Charles Landefeld

04/29/2022	<p>Please try to build a GOOD FUTURE RIDER EXPERIENCE. This is going to be a backbone of the region's transportation for decades to come. If it's worth spending billions on, it's worth designing it right FOR THE RIDERS.</p> <p>Please THINK ABOUT THE THOUSANDS OF PEOPLE WHO WILL BE USING IT AND HOW IT WILL BE, FOREVER, FOR THEM TO USE. Think about walking up to a station 25 years from now: will people be happy with how it WORKS, once construction is long forgotten? Try to make underground stations SHALLOW and elevated stations low. Try to make connections convenient and future expansions possible. Don't make it take 5 or 8 minutes to travel between an entrance and a train. We have a chance to build a GOOD system. Please try.</p>	Darwin Roberts
04/28/2022	<p>Subject: West Seattle Spur – A Lower Cost and Lower Environmental Impact Alternative Summary: The current proposed route of the West Seattle and Ballard Link Extension has been developed with the objective of direct service from Seattle to the Alaska Junction. The routes which would provide direct service entails high construction costs to provide grade for light rail due to changes in elevation. High costs are associated due to purchase price of land right of way and to either build elevated grade at a slope sufficient for light rail or for a tunnel beneath Alaska Junction. A lower cost alternative would be to develop a spur line routed through the West Seattle Golf Course and along Alaska Way SW that would minimize cost for land acquisition, minimize disruption to neighborhoods during construction, and minimize noise to neighborhood once operational. Furthermore, this alternative would also support a possible extension to White Center that would increase ridership from West Seattle, thus improving mobility for West Seattle residents. Discussion: The proposed West Seattle and Ballard Link Extension is schematically shown in Figure 1. The route currently would provide direct service from Ballard through Downtown and then south to Alaska Junction in West Seattle. As a consequence of the decision to provide direct service, the proposed alternative routes through the Delridge Segment would need to be placed on elevated tracks beginning at the SODO Segment and then across the Duwamish Segment. The alternatives presented would either maintain elevated tracks through the Youngstown neighborhood or bypassing the north edge of the Delridge Playfield. Options from thereon are to either tunnel to the station at Alaska Junction or to continue with elevated tracks along Fauntleroy Way SW. See Figure 2. One significant drawback from this chosen route is that to extend the line further south from Alaska Junction would either be significantly expensive due to either the cost of maintaining a tunnel, likely cut-and-cover, or have significant disruption should it be routed at surface grade for both traffic and neighborhood noise. An alternative route is presented in Figure 3 which would route the Link Extension parallel to Delridge Way SW along the Seattle City owned parkland and green belt. West Seattle would be served by a spur route with an elevated station at the corner of SW Genessee St and 26th Ave SW. The advantage of this route are: • Right-of-way acquisition costs are lower due to use of publicly owned land; • Rail could be kept at grade thus minimizing construction costs; • Neighborhood noise could be reduced by routing along green belt and with noise barriers erected to shield • Future extension to White Center and Burien The proposed route to Alaska Junction is shown in Figure 4. The West Seattle spur would utilize an elevated track routed through the West Seattle Golf Course to connect directly with Alaska Way SW. Since the line would be elevated, the golf course below could continue to operate without substantially affecting the course. It is observed that the route should be able to almost completely avoid the area reserved for the golf course and could be routed mostly between the West Seattle Stadium and the West Seattle Golf Course. The advantage of this route are as follows: • The neighborhood is minimally disrupted by construction since all construction occurs on open public land • The direct alignment with Alaska Way SW allows the options of either a surface line, a bored tunnel or a cut-and-cover tunnel to Alaska Junction. Alternatively, the spur line could consist of elevated roadway for regular transit bus access rather than rail access. A bus line spur would use existing surface streets along Alaska Way SW without any change to the road surface. The bus network in West Seattle would be developed that would deposit riders at the Delridge Way SW transfer station rather than having them transfer at Alaska Junction. Submitted by: Jeff Berner jkberner@comcast.net 206-817-1132</p>	Jeffrey Berner
04/29/2022	<p>I do not support the construction of the link extensions. It disrupts the livelihood of the communities in the CID and puts their needs below those of the wealthy (who don't need more attention). We ought to be enriching the lives of our friends and family in the CID, and this cannot be done by displacing them out.</p>	Gwynneth Resulta

<p>04/28/2022</p>	<p>Dear Sound Transit Board Members,</p> <p>We are West Seattle residents and have closely followed the process of ST3 for almost five years. We have participated in many community events and have been very involved as part of the Avalon Neighborhood Group in providing feedback and outreach to Sound Transit.</p> <p>Thank you for all of the time, effort, and thoughtful attention that your staff has contributed to the study and planning of light rail in West Seattle. As a vocal support of public transportation I am very excited for this future development and I enthusiastically support ST3 and the West Seattle extension. I appreciate the opportunity Sound Transit has provided to participate in this process by commenting on the WSBLE Draft Environmental Impact Statement.</p> <p>Some of the options presented in the WSBLE DEIS serve West Seattle better than others, and others should be abandoned outright due to their poor performance under many criteria and a failure to serve communities in the way a well-designed, forward-thinking, community-minded public transportation system should.</p> <p>Alignment:</p> <p>We urge the Sound Transit board to study and select a long-tunnel alternative, with a tunnel portal east of Avalon Way and north of Yancy Street.</p> <p>Originally proposed as a cost-saving measure, the elevated alignments now offer no significant cost savings when compared with tunneled options.</p> <ol style="list-style-type: none"> 2. Tunneled alignments that are cost-competitive offer so many more benefits than elevated guideways, namely that they preserve the built environment, displace fewer businesses and homes, and integrate more seamlessly with the neighborhoods that they serve. 3. An elevated light rail system has never been attempted through such a densely populated residential environment with such varied, steep and hilly terrain. The resulting height of the tracks necessary to clear hills and connect to stations is so completely out of scale with the surrounding area it will forever alter the skyline of West Seattle and aesthetic beauty of this unique neighborhood. 4. Tunneled light rail is overwhelmingly preferred to elevated or at grade options by the neighborhoods that receive it. <p>Delridge Station:</p> <p>We also urge the board to reject any Delridge station located north of Andover Street (Del-5 or Del-6). Both Del-5 and Del-6 are too close to the Nucor steel mill, a heavily trafficked and very active industrial site, and too close to the elevated West Seattle bridge, an unattractive concrete behemoth. Neither offer a very pleasant aesthetic environment for the station that welcomes riders to West Seattle.</p> <ol style="list-style-type: none"> 2. The walkshed of these station placements is severely undermined by their proximity to Nucor steel mill and the West Seattle bridge. 3. Located far off Delridge, tucked away these stations would require an inconveniently long and complicated transfer process for bus riders. After waiting at a stop light to turn left, buses would then have to compete with large trucks leaving and entering Nucor steel mill before finally pulling up to the towering light rail station which requires waiting for an elevator or trudging up several flights of stairs. And all of this just to ride the train one stop before having to transfer again to another train or bus in Sodo. 4. The proximity of this station development to Nucor steel mill and the West Seattle bridge make any potential T.O.D very undesirable. 5. These station placements would displace Alki Beach Academy, a large daycare center with deep roots in the West Seattle community that offers reasonably priced childcare to over a hundred children. To displace such a large capacity, successful childcare center in the midst of a child-care crisis severely undermines the parents and children of the Delridge community and West Seattle. How will Sound Transit remediate these deleterious impacts? 6. These station placements would also displace Transitional Resources, a highly respected and successful community behavioral health agency that serves vulnerable adults from all over King County living with serious mental illness. Transitional resources provides behavioral health treatment and supportive housing 	<p>Sarah Stevenson, Judah Stevenson</p>
-------------------	--	---

	<p>services, ensuring these folks remain safe, healthy, and housed. Displacing Transitional Resources has impacts far beyond just the loss of property or the loss of a few buildings—the life saving services that its patients and residents receive will vanish into the air, impossible to replicate quickly or replace seamlessly. Displacing such a vital community institution—especially in light of all the other glaring inequities of these station designs—would be a severely misguided plan in the midst of a region-wide mental health services crisis. How will Sound Transit account for the loss of these services and the resulting negative impacts to residents, neighbors, and West Seattle?</p> <p>Additionally, we urge Sound Transit to dedicate more resources to studying station designs that better serve the residents of South Delridge. The “Delridge” station options in the DEIS could more accurately be named the “Pigeon Point” or “Youngstown” stations. The area served by the proposed station’s walksheds offers scant convenience for the many residents of Delridge living south of Genesee street.</p> <p>Avalon Station: We support postponing or delaying indefinitely the Avalon station, both elevated and tunneled designs. The ridership estimates for the Avalon station are too low to justify the costly expense of building it.</p> <p>2. The proximity of the Avalon station to both the Delridge and Junction stations makes it redundant. This is evidenced by the overlapping walksheds of each station.</p> <p>3. The only other segment of light rail with comparable station density is located in Pioneer Square. This should make it obvious that the Avalon station is misguided and unnecessary. There is no justification for the West Seattle extension having so many stations, especially in the face of such a serious affordability gap.</p> <p>Additionally we recommend that the board resurface the Pigeon Point Tunnel alternative (Appendix M). This alternative reduces impacts in both the Andover and Pigeon Point neighborhoods and places the Delridge Station in a better location than the DEIS alternatives for both bus transfers and neighborhood integration. We believe that this alternative was dismissed too quickly and casually and merited inclusion in the DEIS.</p> <p>In closing I plead that the board not be tempted by quick and easy alternatives whose strongest attribute is the cobbled together pairing of cost savings and technical objective satisfaction. Light rail is a generational decision. The options chosen will be in place for decades. We urge you to demand something that the entire community can take pride in.</p> <p>Thank you again for this opportunity. I sincerely hope you will take the time to listen to those members of the community who will be impacted the most by this process, as future Sound Transit Riders, potential neighbors to Sound Transit infrastructure, or potential victims of displacement. And again, most importantly, I strongly urge you to avoid exacerbating the already catastrophic child care crisis and mental health care crisis in this region by displacing Alki Beach Academy and Transitional Resources.</p> <p>Sincerely,</p> <p>Judah and Sarah Stevenson 4100 32nd Avenue SW</p>	
04/29/2022	I really hope that you can prioritize rider experience and convenience when planning the ballard and west seattle extensions. Avoiding deep stations is critical to this point. I highly support the Shallow 4th avenue option for the CID as well.	Benjamin Jensen
04/29/2022	Please don't uproot AAPI small and local business. Seattle, as well as many cities across the US have a history of building infrastructure in minority neighborhoods in order to benefit the predominant white, middle class. Please do not continue this practice and select to build /improve sound transit on already established public transit routes. Please preserve our historical and cultural space. Wit it continuing to shrink it, members of the AAPI community like myself are feeling pushed out of this diverse city. Please reconsider! Thank you	Cameron Chow

04/29/2022	<p>I am strongly in favor of the Chinatown-International District option for the 4th Avenue shallow tunnel because of concerns I have that any of the 5th Avenue options would cause irreparable harm to the business community and residents of the CID. The 4th Avenue shallow tunnel will be more convenient than the deep tunnel for travelers who need to transfer to another light rail line.</p> <p>I am also strongly in favor of the Ballard 14th Avenue tunnel option. There are valuable businesses in the Ballard Brewery District on both sides of 14th Avenue that would be harmed by having the noise of an elevated train going directly past their outdoor seating areas.</p>	Fallon Boyle
04/29/2022	<p>I do not support any option involving 5th Avenue. I am a homeowner and resident in the CID and having a station and construction disrupt, displace, and dismantle a residential community that is primarily BIPOC, elderly, LEP, and lower income with few other resources as alternatives to housing and jobs is unacceptable.</p> <p>While 4th Ave may be a better option, that still will cause enormous hardship on the neighborhood residents and businesses. The neighborhood had already been impacted so negatively from the pandemic and anti-Asian hate, that we do not need more to deal with.</p> <p>While I do support mass transit, there has to be better options that do not impact the most vulnerable populations. These are the same people who need light rail as well, but if they have no housing and job before light rail arrives, then what is the point.?</p>	Liana Woo
04/28/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p>	Rebecca Ralson

	<p>Accept and embrace that people will continue to bring bikes on trains – and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>PS bike trails dedicated to link to transit would be the best. Rails to Trails connections make sense. More people will be biking because e-bikes make cycling enjoyable for all.</p> <p>Regards, Rebecca Ralston 9209 187th St SW Edmonds, WA 98020</p>	
<p>04/28/2022</p>	<p>I am a biker. I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. <p>04/28/2022</p>	<p>Please do not consider the 5th Ave alignments for the CID station, these options would be detrimental to a neighborhood that has already been chipped away at and these would create permanent impacts to the community and businesses.</p> <p>The 4th and Jackson Ave alignment is the best option given the limited space available in this neighborhood.</p> <p>Kristy Fry Transit rider and CID supporter</p>	<p>Kristy Fry</p>

<p>04/28/2022</p>	<p>West Seattle DEIS Citizen Comments Structure of the DEIS Project Chapter 1.3 addresses West Seattle and Ballard (incl. downtown) as one project. While many chapters are separate for each portion, others are combined. Why are these two separate projects treated together when they do not connect directly and are built on different timelines? A lot of detail has been lost by treating the separate segments as one; this should be rectified for the final EIS. Environmental Impact Appendix L4.6 references carbon consumption, citing that "general FTA estimates" were applied. However, no federal project has ever matched the size of WSBLE's 2+ mile, 80 to 160 ft tall elevated light rail guideway planned for West Seattle.</p> <ul style="list-style-type: none"> • Energy consumption during construction was not considered. (Chapter 4.2.10: "The FTA Greenhouse Gas Emissions Estimator was not used."). Therefore, the carbon figures for the elevated alternatives will be much higher than general FTA estimates. • While construction-related carbon output was estimated (Appendix L4.6D) at 158,067 - 614,461 tons, no estimate was made of GHG output and non-point pollution from vehicles idling for long periods during construction-related traffic delays for 5-7 years. • Chapter 4.2.6.3 and Table 2-9 cite a daily reduction of 117,000 miles of vehicular use per day for the region although it is not clear how this figure was computed and how accurate it is. It is also unclear how the reduction of 400 trips on the West Seattle bridge converts to miles or contributes to the 117,000 regional mile figure. West Seattle's contribution to carbon and greenhouse gases is not very well calculated, documented or explained in the DEIS. • The DEIS offers no calculation, metrics or plans for lost ecological benefits from erasing up to 3 acres of forests and green space. What will replace erosion control, storm water management, oxygen production, carbon sink, shade, etc. provided by green infrastructure? What is cost estimate for man-made replacements? • Calculations also need to account for any displacement of existing structures (homes, businesses, etc.) which ultimately have to be replaced in some way. <p>A proper impact evaluation for light rail alignments and possible other modes, such as bus and gondola, would involve using tools such as the Embodied Carbon in Construction Calculator (EC3) (developed by the nonprofit, Building Transparency) and be conducted in close consultation with objective environmental science organizations like the Carbon Leadership Forum (CLF), a nonprofit, industryacademic organization at the University of Washington.</p> <p>Even if DEIS calculations were accurate, the construction related carbon as estimated in Appendix L4.6D is between 158,067 and 614,461 tons, and the regional, annual carbon reduction from vehicles (Table 4.2.6-2) is 10,941 tons once the light rail connects directly downtown in 2037 (at the earliest.) Approximately a third of this would be attributable to West Seattle. It may take between 42 to 168 years to offset carbon emissions related to the West Seattle light rail construction.</p> <p>Chapter 1.2.2.6 states the need to reduce vehicle miles 30 percent by 2035. However, light rail will not connect West Seattle to the SODO light rail station until 2032 and won't be extended farther until at least 2037. That provides little incentive in the next 15 years for drivers to stop using their personal vehicles. Even after 2037 the expected savings in vehicle miles are minuscule, while the embodied carbon will be huge.</p> <p>The DEIS fails to mention that a gondola is an alternative which could provide reliable, grade separated, carbon free public transit a decade earlier than light rail while generating substantially fewer greenhouse gases during construction. That would significantly contribute to meeting the goal for 30% reduction by 2035.</p> <p>Equity Sound Transit evaluated multiple, possible alignments in South King County in 2014, and the Board selected a few alignments in 2019. Need #4 (serving low income, BIPOC communities – Chapter 6.1.4) was not considered when stations and alignments were selected. The pandemic showed that lower income riders and people of color rely more on transit than more affluent populations. The current ST3 stations (N. Delridge, Avalon, Alaska Junction) serve West Seattle neighborhoods in higher-income areas. ST3 includes funds to plan high-capacity transit to reach lower income and BIPOC neighborhoods like South Delridge, White Center, and South Park in the future. The DEIS fails to mention those needs and evaluate how proposed alignments might be extended to do so. It also does not clarify that the funding for such a project would require voter approval.</p> <p>If Sound Transit pauses to assess needs and priorities, it should consider building the light rail line to include neighborhoods where both a greater percentage of the population depends on public transit and far fewer (if any) demolition of homes and businesses is required. A route has been suggested from SODO along the Duwamish River to South Park. Because the terrain is flatter and provides wider existing rights-of-way than the hillier north of West Seattle, a combination of light rail along the South Park route, combined with a gondola from I.D. / SODO to ST3 stations in West Seattle, would cost about the same as building light rail to the Junction.</p> <p>Transit Mode Selection Chapter 2 fails to address mode selection. In addition to alignment evaluation, Sound Transit should</p>	<p>James Boyle, Conrad Cipoletti, Joe Drovetto, Joyce Hengesbach, Teresa Machmiller, Martin Pagel, Martin Westerman</p>
-------------------	---	---

review the choice of transit modes to meet West Seattle's unique situation. In 2014 Sound Transit evaluated different, high-capacity transit choices to serve as the spine of the regional network (from Everett to Tacoma and east from Seattle to Redmond). This was before Sound Transit began addressing how to envision and plan for shorter “feeder” connection to serve neighborhoods not part of the spine. When West Seattle was added to the ST3 measure shortly before it was put before the voters, a gondola was not considered, even though ST's 2014 high-capacity mode study stated that a gondola “could be considered for off-spine service that would operate on principally exclusive rights-of-way and would not interline (share the same tracks) with the spine.” Instead, ST assumed West Seattle would be served by light rail. No planning was done before the project costs were determined, and the measure put to vote in 2016. In comparison, because of hilly terrain the City of Kirkland is studying the possibility of using an urban gondola feeder with three stations to connect the Sound Transit bus station on 85th / I-405 to downtown Kirkland. Other cities who have studied, are planning, or have implemented gondola feeders in their transit systems are Vancouver BC, Paris, Haifa, Ankara, and Mexico City.

Commuter patterns

It is also not clear yet exactly how the pandemic and other factors have changed commuter patterns.

The trend for more working from home, strong employment growth in Bellevue, and the commencement of the Eastlink line will likely change transit patterns. CEO Rogoff pointed out in 2021 that there had already been a shift away from peak time trips to more of a distribution of trips during the day. Even so, Sound Transit continues to plan capacity around peak time travel and pre pandemic commuter patterns.

Potential long-term changes in transit patterns should have been addressed in chapter 3.5.2 of the DEIS. Peak capacity is the number that is used as the “capacity requirement” for a transit mode and the shift Rogoff referenced could mean that the “capacity need” should be lowered. It also calls into question the need for a second downtown tunnel and second line through SoDo. If these two projects were eliminated, the savings could fund connections from light rail spine stations to more neighborhoods via buses, gondola, bike paths, and bridges for walking/rolling (like at Northgate). It could also fund better sidewalks. Overall light rail station access and transfers between lines would improve.

Project funding/Cost

Chapter 2.8.2.1.1 lists the many alternatives contemplated in the DEIS, and associated costs totaling between \$3 billion and \$4.7 billion. This range is double to triple the amount approved by voters in ST3 (\$1.7 billion). Before the pandemic, three West Seattle buses (RapidRide-C, #121, #21) already provided 25,500 trips daily. The DEIS projects 27,000 trips on light rail by 2042, only 1500 more than buses were providing in early 2020. Also, there will be little improvement in travel time for many riders, given the likely need to transfer twice to and from light rail in West Seattle and SODO for at least the next 15 years as illustrated below. Is the high cost and increased burden on the taxpayer worth the benefits gained? At a light rail cost of almost \$10 million per additional daily trip (plus the building of additional OMF capacity and train acquisition) and an annual operating cost of \$35 to \$40 million this investment does not seem worthwhile and won't meet Sound Transit's fare recovery goals – and that's without considering the cost to the environment of greenhouse gases emitted during construction.

Transit Time

The average wait and transit times for taking light rail between West Seattle and SODO in chapter 3.4.3.3.1 are inaccurate. Riders who live south of the N. Delridge light rail station and want to take the light rail to Bellevue, would take a bus to the North Delridge station, get in line to ride up 2-3 escalators or 2 elevators, wait up to 12 min for a train to SODO, get up and down stairs/escalators at SODO to get to the platform for the 1 Line light rail, wait for a train to the International District (ID) transit hub, and walk and traverse escalators to get to a tunnel platform to wait for a train to Bellevue. The average, total travel time may be longer and less convenient than using buses or driving a car. If the West Seattle light rail is extended beyond SODO in 2037, using it may take about the same time as a bus. Travel times listed in Appendix N.1-3 are not realistic and reflect idealistic, “best case” scenarios.

By comparison, West Seattle gondola stations could be one story high. Therefore, to reach Bellevue, a rider might take a bus to the N. Delridge gondola station, walk or take the escalator/elevator up one story, board one of the constantly circulating cabins, ride it all the way to the I.D., go down one story to the tunnel entrance, take an escalator/elevator down, and wait for a train to Bellevue. It would be an easier, more convenient and shorter process which might attract more drivers to switch to public transit.

Pedestrian and Bicycle Trails

The Alki and Delridge Connector trail is a major walk/roll corridor to connect West Seattle with the rest of Seattle via the Lower Spokane Street Swing Bridge. Chapter 3.7.3 lists the Alki and Delridge Connector trail, but the mitigation (on 23rd Ave SW) is not clear and fails the assurances in 3.7.4.

Waterway Impact

Chapter 3.9.3 mentions some impacts to fishing rights, but still contemplates new in-water columns. The tribes have traditionally been disenfranchised, and the failure to address the impact of water columns is a major oversight. The chapter also does not mention that the West Seattle bridge will need to be replaced at some point. That section the DEIS should be updated to cover such space coordination requirements with SDOT.

Acquisitions, Displacements, and Relocations

Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). An urban gondola would avoid most of the impact listed in this chapter and therefore the current DEIS fails the "Least Harm Analysis" test in 4.2.18.5.

A gondola could provide the needed capacity, with minimal disruption, displacement, and damage to the environment and established urban community during construction and operation. Specifically, it would avoid the following problems caused by proposed light rail alternatives:

- Chapter 4.2.1.3: More than a thousand people may have to find new homes. Many businesses will lose their locations and not be able to find other suitable ones in the area or even in West Seattle, seriously impacting owners and employees alike. Residents will be affected since stores and services on which they now rely may no longer be available in West Seattle.
- Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin shows very low available home inventory in West Seattle, the DEIS says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify for a new home based on current social status / credit rating. Commercial real-estate is very limited in West Seattle which means displaced businesses may have to relocate causing them to lose their customer base and West Seattle residents to have to travel farther, perhaps even out of the Duwamish Peninsula, to access goods and services. Such travel may increase greenhouse gas emissions.
- Chapter 4.2.3.3 includes several pages of impacts: light rail will demolish businesses, reduce the city's tax base and may affect tribal fishing rights. It fails to address the social impact of the destruction to employees and business owners/operators, many of whom are small and privately owned. It does not address the impact to the community which has grown around these services and the businesses and families which will be impacted indirectly. Alki Beach Academy for example provides daycare services to 300 children; affected parents may need to quit their jobs and/or move elsewhere if they lose affordable daycare.
- Chapter 4.2.4.3 and 4.2.5 fails to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, the DEIS claims the light rail guideway is "consistent with existing views." While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The northern bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway may be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther.
- Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRideH. Light rail construction will affect all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) for several years. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours and an associated increase in greenhouse gas emissions.
- Figure 4.2.5-4 does not show any coverings over the station, which makes it appear lower than it would be in practice. It only shows the demolition of homes directly adjacent to the station, but not along the guideway which again provides a distorted impression of what will happen.
- Chapter 4.2.5.3.3 fails to mention that in the master plan for parks in Seattle, Olmsted suggested preserving the view from Pigeon Point which any of the southern alignments would destroy. For details see: Pigeon Point - West Duwamish Greenbelt – Friends of Seattle's Olmsted Parks (seattleolmsted.org)

Ecosystems

Chapter 4.2.9 provides a long list of impacts on the ecosystems, habitats, and many threatened and endangered species, some with potential impact and others with very specific impacts, in both Longfellow Creek and the northern portion of the West Duwamish Waterway. The alignments related to the two suggested southern bridge crossings would be detrimental to the Osprey nest and Great Blue Heron colony. While the Osprey nest could potentially be relocated, there is no guarantee that the birds would accept the new location. For the Great Blue Heron, the proximity of major construction work would most likely be detrimental.

The northern slope is unstable and may collapse (see 4.2.11) during an earthquake, causing many large trees which are currently providing an important buffer and stabilizing the slope to be removed.

	<p>Because the construction of the light rail guideway towers would induce shaking similar to an earthquake, the construction of either southern bridge alternative should be removed from consideration because it poses a serious danger to the northern slope of Pigeon Point.</p> <p>While the Genesee alignments may try to minimize the Longfellow Creek impact (also see 4.2.17), the removal of trees and bushes along Genesee would make it even more difficult for wildlife to migrate between the golf course and creek area than with the current roadway. This will cause major disturbance to this critical wetland, bird, and salmon habitat. The Andover alignments would be a bit better, but still disturb the creek area.</p> <p>Again, the DEIS should have considered transit technologies which are more compatible and friendly of the environment and unique geographical challenges of West Seattle.</p> <p>Geology and Soil</p> <p>Chapter 4.2.11 explains that the soil conditions along the whole alignment are challenging and unstable. A huge guiderail construction poses major risk for shifting and settling, and the soil conditions put the finished product and the people riding trains on it at risk should an earthquake occur (earthquake faults run through the northern Duwamish peninsula.) The DEIS should have considered other mode alternatives, including non-rail, lighter-weight, and more seismically stable transit options.</p> <p>Martin Pagel, Joyce Hengesbach, Martin Westerman, Terese Machmiller, Conrad Cipoletti, James Boyle, and Joe Drovetto</p> <p>Many of us submitted comments as individuals and would like these group comments recorded as part of our respective submissions. <p>04/26/2022</p>	<p>I urge Sound Transit to consider the following general principles as it reviews the WSBLE Draft EIS and prepares the Final EIS:</p> <p>Among the most important considerations must be the future users of the Link system. They must be able to quickly access the train platform from the surface. The escalators and elevators must be capable of reliably handling the passenger load and must have sufficient alternatives and redundancy that the embarrassing situations that developed on 1 Line in the past few years must not be repeated in the future.</p> <p>Where the users have an opportunity to change to the other Line, they must be able to make the change in a minimum distance and time. In short, the stations must be convenient to the users. This would generally mean using the most shallow possible station location. However, making the cross-over accessible to both north- and south-bound travelers may generally mean that the cross-over tunnel must run either above (onto an existing mezzanine) or below the existing Link station, placing the new Link station above the cross-over tunnel. The station design should start from defining the shortest and least height different cross-over tunnel and then placing the new station relative to the access to the pedestrian tunnel.</p> <p>The next extensions of the WSBLE lines must be considered and the chosen design should enhance those opportunities. It could be expected that the West Seattle line should continue south and the Ballard line should continue north. This suggests that the Ballard line and stations should be located on 15th or 17th Ave NW (the choice depending on the character of the soils that would be tunneled through under the Ship Canal) as this would enable an extension north past Ballard High School to about NW 90th St, where it would curve to the east to meet the 1 Line at Northgate Station. This would fulfill the first rule of transit system design: no isolated, dead end lines; create interconnection and transfer opportunities. The oft-mentioned route along Market-46th -45th to the 1 Line station on Brooklyn Ave NE is not practical due to the topography and should not distract from connecting the Ballard link to Northgate. The also mentioned extension up Aurora Ave N is not practical because of the Coast Guard requirements for a new high level bridge over the Ship Canal and the ability of Metro Rapid Ride to adequately meet the transportation requirements in that corridor.</p> <p>The stations should be designed for easy transfer from Link to the Metro bus system. How to move buses in and out at the station and users back and forth to the feeder buses should be part of the choice of station locations and station design.</p> <p>I have the following comments regarding the Chinatown/International District station alternatives and the Downtown alternatives:</p> <p>Again, shallower is better for Chinatown/ID. Of the alternatives you present, the least offensive is the inline station CID-2a but that station is still too deep. The station approach should be raised so it can be at approximately the same elevation as the existing 1 Line station with the cross-over tunnel running beneath both stations. The tunnel could be further extended west under 4th Ave to allow access to the commuter and AmTrak trains at King St Station.</p> <p>The new line should continue north on 5th Ave and Westlake Ave to about Republican St, where the next station should be located. The way west should be along Mercer so a Lower Queen Anne station could be located as in alternative DT-2. But with a station at Republican St there would not be a need for the station at 6th Ave N. The preferred path north would then continue on SIB-3. It would be necessary for the Prospect St station to be carefully designed to accommodate shuttle buses to the Smith Cove Cruise Ship Terminal for the, no doubt, lost and confused cruise passengers.</p> <p>With regard to the Ballard segment of the new line:</p> <p>The recent ruling by the Coast Guard on the necessary 205 ft height of fixed span bridges almost dictates that it will have to be a tunnel under the Ship Canal.</p> <p>The choice of location for the Ballard station must enhance not just convenience to central Ballard shopping area but ease of connection to various feeder buses that would serve the northwest area. A careful plan of the way buses could</p>	<p>Michael Ruby</p>
-------------------	--	---------------------

	<p>interact with the station and where there might be sufficient room to create a seamless transfer between Link and Metro must be a major consideration.</p> <p>With regard to the West Seattle segment of the new line:</p> <p>There are no good alternatives presented for this segment. The problem is the radical topography that must be accommodated. A tunnel under the Duwamish Waterway is not possible so the issue would be which bridge.</p> <p>Of the bridge alternatives, the least objectionable is DUW-2 since it could avoid impacts on existing greenbelts and habitats and would avoid horizontal disruptions to navigation. This option connects easily to the DEL-4 option, which would directly connect to the proposed H line Rapid Ride, allowing it to terminate at the Delridge Way station. This option would also connect to the WSJ-3b tunnel proposal.</p> <p>Recognizing that these choices are the best of a bad lot the preferred alternative is an in-depth study of the proposed SkyLink gondola, which seems almost tailormade for the topography of West Seattle and the Duwamish River valley. It is clear a design can be developed meeting all the transit rider objectives of the various link proposals without most of the adverse impacts of the Link options. It has the additional advantage of being able to easily extend branches both north and south from the primary terminus in West Seattle, providing much greater reach throughout West Seattle, perhaps even extending to Morgan Junction and the Fauntleroy ferry terminal. This proposal does not serve the Delridge valley, but the H line will provide an adequate transportation option. A seasoned professional designer of such a gondola facility must be brought on-board, but the delays caused by this additional review are trivial compared to the very late date of anticipated construction of this branch of the Link system.</p> <p>Thank you for your consideration of these comments.</p> <p>Michael Ruby, Ph.D., P.E.</p>	
--	---	--

04/28/2022	<p>In the purpose and need statement, there are the following sentences. "WSBLE would connect employment opportunities in Downtown Seattle to existing light rail lines and light rail extensions currently under construction in King, Pierce, and Snohomish counties, where more affordable housing is available. Improving mobility in the WSBLE corridor will help improve access to employment and educational opportunities for communities of color and low-income people around the region."</p> <p>These sentences may or may not be accurate. An analysis using data is required to make this claim. Such data is not sourced in the DEIS. The second sentence, in particular, appears to be a qualitative analysis that claims by definition, that an expanded HCT system is equitably reaching communities of color and low-income simply because the system is expanded.</p> <p>A quantitative analysis is requested with the data documented and transparent. First, a definition of the communities of color and low-income should be defined with census data and other standard data, and the definition provided. Current measures should be carefully considered such as health disparities. Second, affordable housing should be defined.</p> <p>These communities should then be mapped with GIS tools.</p> <p>Next, define access to Sound Transit services. Access to the West Seattle Ballard Link extensions is defined as 0.5 miles from the station and 0.5 miles from bus transit that serves the station. The bike shed is greater than the walkshed, but a relatively small number of riders.</p> <p>Access to Sound Transit service is then overlaid onto the defined communities mapped and the affordable housing mapped. The GIS tool would then be used to define the number of residents in the defined communities and the number of affordable housing units reached relative to all populations and housing in the West Seattle to Ballard Link Extension access area and relative to the total Sound Transit service access area.</p> <p>For transparency exceptions or reasonableness should be discussed in the text. This includes rider travel time greater than one hour accounting for walk time to transit and transfers; employment destinations with work hours outside Sound Transit core service hours (may not be able to quantify but need to disclose), and the real or perceived concerns with personal safety. Real and perceived safety concerns are important to all communities.</p> <p>Claudia S. Hirschey</p>	Claudia Hirschey
------------	--	------------------

<p>04/28/2022</p>	<p>My comments are specific to the Ballard station options. Those station options have environmental and governmental impacts which have not been adequately addressed.</p> <p>The station options selected to be advanced from scoping to the current EIS phase were based largely on two factors, cost estimates and an assessment that there would be insignificant differences in ridership among the various options. The ridership differential analysis was grossly inaccurate, as is clear from:</p> <p>zoning maps, urban village boundary maps, including those that show proposed extensions (none of which are attached, but are readily available from the City of Seattle). These all clearly show that both stations are on the periphery of any density, present or future.</p> <p>attached Exhibit A, which by showing the number of inhabitable floors per building is a useful proxy for population density. It shows that the center of population density is a significant distance west of the studied station locations.</p> <p>attached Exhibit B, which shows the locations of land uses commonly leading to transit ridership. Again, the center of these is far west of the studied station locations.</p> <p>a combination of the "NR" (non-residential) buildings of Exhibit A combined with Exhibit B is a useful proxy for employment density. Probably not as far west, but reasonably estimated to be in the vicinity of Swedish Hospital.</p> <p>attached Exhibit C, which shows the locations of land uses unlikely to generate any significant ridership. Notice that the greatest concentration of these are clustered in blocks just south of the proposed station locations, principally highlighting the number of auto service and jobsite contractor businesses located nearby. In contrast, most of the indicated locations elsewhere are currently parking, which could/would be converted to dense buildings if a light rail station were nearby.</p> <p>Metro bus route maps, which show that only 2 out of a possible 4 bus routes would directly serve the station (without governmental impacts described later). That's roughly half the ridership from feeder buses.</p> <p>So, the major environmental impact that is not adequately addressed by the DEIS is failure to divert more vehicular traffic to more environmentally benign light rail usage, by way of failing to achieve the ridership potential that an ideally located Ballard station would enjoy. Given all of the evidence outlined above, it is reasonable to believe that a station at 15th would struggle to attain half the ridership that a Ballard station better located would achieve. And a station at 14th would perform even more poorly.</p> <p>As for cost estimates, based on the difference in costs for different options presented during scoping, it is difficult to believe that the estimates for the 14th and 15th Avenue included the costs of either bridging over or tunneling under both Market St and 15th Avenue such that a pedestrian can get to/from any quadrant of that intersection without crossing these busy arterials. These streets are busy, many lanes wide, and have speedy traffic. Many pedestrians rightly consider crossing them at street level to be dangerous. Such passageways are very expensive, yet they are essential to make either of these inferior station locations regain a fraction of the ridership potential that a Ballard station should achieve.</p> <p>Governmental impacts:</p> <p>The only way to get 4 bus routes to feed a station located at 14th or 15th is to make 2 routes deviate several blocks out of their way. That forever imposes an extra burden on King County Metro in increased operational costs. It also presents an additional environmental cost by consuming more fuel. In contrast, if RapidRide D were to turn west to reach the Ballard location that is ideal for ridership, then it would gain ridership totally independent of any feeder aspect, because all the reasons that lead to optimal ridership are applicable to RapidRide D also. A station at 15th deprives Metro of the ability to attain higher ridership for RapidRide D. A station at 14th would depress RapidRide ridership even more.</p> <p>There is one additional impact specific to an aerial station at 14th. That option has no plausible route for future extension of the line to points north. There is simply nowhere for it to go without condemning multiple blocks of properties. It would be highly desirable to have a viable option to extend via Crown Hill to Northgate, Lake City, Kenmore, and Bothell, for example.</p> <p>If you pick a tunnel option, to retain the ability to extend in the future, and if you factor in the great expense of creating 3 underground pedestrian passageways (it takes 3 to get to all quadrants), then the cost difference between the tunnel options being studied and a tunnel option ideally located might well mostly evaporate, particularly if the ideal location can be adjusted to avoid taking out existing tall, expensive buildings.</p> <p>Thank you, Dale Menchhofer</p>	<p>Dale Menchhofer</p>

<p>04/28/2022</p>	<p>I've attached the corrected Historic Context. I added citations as best I could. I noticed the Filipino presence in Chinatown and Japantown in the '20s and '30s was missing so added a paragraph about it.</p> <p>The other major additions/clarifications::</p> <p>King Street Historic District became Chinatown Historic District</p> <p>Clarified with documentation the paragraphs on Mayor Devin's proclamation</p> <p>A couple paragraphs on the name from Chinatown to Chinatown International District and why the backwards forms of it</p> <p>I corrected some of the grammar, some of the dates and names of legislation impacting Asians.</p> <p>If the Comments section needs more help with the history, I can assist them, depending on the time frame.</p> <p>Betty</p> <p>Sound Transit DEIS Appendix J WSBLE Attachment N.5C1 Historic Context 2.3 Seattle Chinatown</p> <p>Much confusion surrounds the name of Seattle's Chinatown due to the intersecting factors of racism, on-going struggles of power, control, representation, and misguided efforts at being "politically correct." The word itself, Chinatown, is a translation of the Cantonese phrase "tong yun fow" or literally, Chinese people town." A variation is "tong yun gai," or "Chinese People Street." These two terms are in use by speakers of Cantonese and Hoisanese. Today, Chinese print media frequently use the Mandarin Zhongguo Cheng, or Chinatown.</p> <p>2.3 Three Chinatowns</p> <p>Chinatown, centering on King Street, is Seattle's third, the first being waterfront docks where Chinese cannery workers lived. Jim Sing Mar, dock foreman over Chinese workers, was one of them. He lived on the dock with his wife and children; two of whom were born there: a son and later, daughter Ruby, the future famed restaurateur and King County Councilwoman (Mar Family Remembrance by William Mar).</p> <p>As dock development pressures grew, this first Chinatown was forced inland, onto 2nd Avenue, where it thrived with 2nd and Washington becoming its heart. This 2nd Chinatown extended east to 5th Avenue with the Yee Chong Company anchoring the northeast corner and a Chinese restaurant next door in the same building. However, downtown was growing and pushed south but the hilly terrain had to be eliminated. The 2nd Avenue Extension project of the 1920s punched through the heart of Chinatown, forcing yet another move to the other side of the railroad tracks, to the present Chinatown centered on King Street.</p> <p>Chinatown's many historic buildings gained it nomination for National Register status in 1986. However, the original nomination form was for the King Street Historic District, which was widely viewed by the Chinese community as an attempt to erase Chinatown. Due to community objections and public comment led by Ruby Chow and Chong Wa Benevolent Association President Ted Pang, the Hearing Board of the Department of Archaeology and Historic Preservation voted to correct the nomination form name to Chinatown Historic District.</p> <p>Part of the process includes informing property owners of their right to opt out of a historic district designation. Some of the building owners in Japantown north of Main Street opted out, but those from Jackson to Main chose to remain within the new Seattle Chinatown Historic District. This is why the Seattle Chinatown Historic District includes a large portion of Japantown.</p> <p>After the nomination name was corrected by historic preservationist Larry Kreisman, it was sent to the National Register, where the nomination for the Seattle Chinatown Historic District was approved and listed on the National Register on Nov. 6, 1986.</p> <p>The National Register Seattle Chinatown Historic District is also a locally designated historic district, which brings it under the purview of the City of Seattle special review district.</p> <p>2.3.1 Early Years (1851 to 1894)</p> <p>The first Chinese settlers arrived in the Pacific Northwest as early as the 1860s. However, they did not move to Seattle until the 1870s (Dougherty 2013). The immigrants worked in such industries as railroad</p>	<p>Betty Lau</p>
-------------------	--	------------------

construction, lumber mills, canneries, and mining areas already gone over by white miners. They were considered an inexpensive source of labor for such enterprises. Chinese businessmen in Seattle contracted the laborers for these operations, assisted the workers, and constructed boarding houses for them. The vast majority of the immigrants were single, adult males who were only in Seattle temporarily. Chinatown was a densely populated area. By 1876, their numbers had reached approximately 250 people (Kreisman 1986:8-1).

Close proximity in Chinatown reinforced cultural and kinship ties and offered some protection against the white citizenry, which was often hostile towards the community. The community was prohibited from owning land, was taxed differently, and forbidden by law to marry whites (Takami 1998). In 1882, the United States passed the Chinese Exclusion Act that placed a 10-year moratorium on Chinese labor immigration (National Archives 1999). Despite the 1882 Act, there were approximately 950 Chinese living in Seattle by 1885, which accounted for almost 10 percent of Seattle's population (Dougherty 2013).

The Chinese Exclusion Act of 1882 limited the number of newly immigrated Chinese workers. These restrictions did not apply to Japanese immigrants, who began arriving in the 1880s. Japanese immigrants worked for the region's logging companies, railroads, canneries, and farms in Washington. The first to arrive were single men who were the second- or third-born sons, unable to inherit land in Japan. Many would settle in Seattle. As with the Chinese immigrants, there were restrictive real estate covenants and employment restrictions that forced the Japanese to live in a concentrated area of the city. Seattle's Nihonmachi, or Japantown, originally centered on Dearborn Street and later moved up Yesler Way and Jackson Street. Eventually, Japantown was recognized as an area bounded by Yesler Way to the north, 4th Avenue to the west, Dearborn Street to the south, and 14th Avenue to the east. The community flourished during the early twentieth century, with Japanese-owned businesses, bathhouses, newspapers, sports leagues, language schools, and religious institutions supporting economic development and cultural life (Tsutakawa 2020).

The West Coast experienced heightened anti-Chinese sentiment in the mid-1880s. At the beginning of February 1886, more than half of Seattle's Chinese population left the city because of earlier violence in cities like Tacoma. In Seattle, this peaked in 1886 when populist agitators demanded approximately 350 Chinese be expelled from Seattle for violating Seattle's cubic-air ordinance, which required all lodging to have at least 512 cubic feet of air space for each person sleeping there, which in the crowded conditions where Chinese immigrants lived was impossible. On the morning of February 7, a mob of men forced the remaining Chinese residents to the Ocean Dock at the foot of Main Street to board a steamer headed to San Francisco, California. A stalemate was briefly reached, but the next day violence erupted. It was eventually quelled, and the Chinese returned to Chinatown. Governor Squire declared martial law in Seattle, and on February 9, President Grover Cleveland ordered federal troops to Seattle. By February 14, nearly all of the Chinese had left Seattle and only a few dozen remained. Some were taken by Indigenous people, who sheltered them on the reservations [Chintown Childhood]. Federal troops stayed in Seattle through the summer of 1886. As the economy took an upswing, the anti-Chinese sentiment subsided as white males in Seattle again found employment (Dougherty 2013).

Seattle's first Chinatown did not survive the 1889 Great Seattle Fire. To ensure the future safety of their businesses, a group of Chinese businessmen built and leased a string of brick buildings on both sides of lower Washington Street at 2nd Avenue (three blocks west of the current Seattle Chinatown Historic District). An influx of single male laborers resulted in crowded conditions in the restricted confines of South Washington Street. The Second Avenue Extension project and the regrading and widening of South Jackson Street and South King Street in 1907 forced the Chinese community to relocate from the older quarters to the regraded area east of the railroad tracks (Kreisman 1986:8-2).

2.3.2 Expansion Era (1895 to 1909)

A Chinese investment group, Kwong Kick (Quong Yick) Company, led by the community leader Goon Dip, built a series of buildings on the south side of King Street from 8th Avenue South to Maynard Avenue South. The construction proved to be the catalyst for the building of a new Chinatown in the King Street area. Many of the buildings from that phase of development still stand. The proximity of King Street Station and Union Station combined with the renewed influx of seasonal laborers provided a strong stimulus for further construction of hotels and single-room-occupancy hotels; in some cases, the latter were operated by Chinese family associations (Kreisman 1986:8-3).

Many of the buildings in the Seattle Chinatown Historic District are associated with business and social organizations unique to the Chinese community and were built during the early 1900s. For example, the merchant shop owners built large hotels to house transient and immigrant contract laborers. In addition, Chinese family and district associations built substantial workers' hotels for their members, many embellished with traditional balconies in the style of their homelands in southern China (Kreisman 1986: 8-3).

The 1908 Gentlemen’s Agreement between the United States and Japan limited the immigration of laboring men, but it did allow for wives to enter. Immigrant men would marry “picture brides” from their native villages in Japan. These marriages were not recognized by the United States as legal until 1917, when group marriage ceremonies were conducted in immigration offices (Takami 1998). Along Seattle’s Main Street, Japanese immigrants established hotels, businesses, and clubs on the northern edge of today’s Japantown (Tsutakawa 2020).

2.3.3 Improvement Era and World War I (1910 to 1928)

Between 1910 and 1912, the three largest merchant shops in Seattle moved to hotel buildings in the new Chinatown location, and soon many other commercial enterprises followed. The move away from the older quarters on Washington Street was made permanent in the mid- 1920s when the Second Avenue Extension project cut through the center of the old Chinatown. After 1925, there were only a handful of Chinese residences and businesses remaining on Washington Street (Kreisman 1986:8-3). During these years, the Immigration Act of 1924 essentially ended all immigration from Japan (Takami 1998).

Filipino migration had been unlimited, due to US acquisition of the Philippines from Spain as a territory in 1898. Under U.S. territorial laws, Filipinos could freely migrate to the U.S. without a quota, until the Tydings-McDuffie Act of 1935, which re-classified Filipinos as “orientals” for quota purposes with one important difference. The Chinese quota was 105 per year; the Japanese quota not much more, but the Filipino quota was set at 50 per year. During the years of unlimited migration, Filipino laborers filled the hotels of Chinatown and Japantown to 12th Avenue and up to First Hill and Cherry Hill where they settled by the Catholic churches so important to their lives (Cordova, Fred. ‘60th Anniversary Program,’ Filipino Community of Seattle, Dec. 15, 1995; reprinted in full in Pamana II, p. 15, 17 2000).

2.3.4 The Great Depression and World War II (1929 to 1945)

Despite immigration limitations, Seattle had a sizable Japanese population. In 1930, more than 8,000 Japanese were living in Seattle (Tsutakawa 2020). That same year, the Japanese American Citizens League held its first convention in Seattle. During the Great Depression, Japanese businesses suffered but were not decimated. Many Japanese left Seattle for other parts of Washington, moved to California, or returned to Japan during the 1930s (Takami 1998).

Following the bombing of Pearl Harbor in December 1941, activity in Japantown shrank dramatically. Japanese bank accounts were frozen, and businesses were confiscated. A curfew was issued, which impacted many Japanese people with jobs as well as students studying at universities. Executive Order 9066 ordered Japanese immigrants (Issei) and their American- born children (Nisei) in Seattle and across the nation into incarceration camps in April 1942 (Tsutakawa 2020). Nearly all of Seattle’s Japanese population was sent to Puyallup Assembly Center (known as “Camp Harmony”) at the Western Washington Fairgrounds in Puyallup. Later they were transferred to Minidoka War Relocation Center in Idaho (Fiset 2020; Wakatsuki 2020). The impacts of this forced relocation are described in the following section.

2.3.5 Post-World War II Boom (1946 to 1969)

After World War II ended, Japanese-Americans returned to Seattle, but many no longer had homes and were living in temporary hostels. Many of their old neighborhoods and employers were openly hostile to their return. Numerous Japanese-Americans moved away from Japantown and, as a result, Japantown’s boundaries shrank. The Japanese and Japanese- American population was never again as high as it was before World War II (Tsutakawa 2020). A portion of Japantown was demolished for the city’s first public housing project, Yesler Terrace (Crowley 1999).

In 1951, Mayor William F. Devin issued a proclamation designating Chinatown and Japantown with the new name International Center. It was defined as the area bounded by 4th and 14th avenues, Yesler Way, and Dearborn Street (The Seattle Times 1951: 25). The renaming was to recognize the contributions of “...our citizens of Negro, Japanese, Chinese, and Philippine ancestry;” however, on Aug. 9, 1951, a group of community protesters called on Mayor Devin to object to the proclamation on the grounds that it eliminated Chinatown. They were Ruby Chow, Dr. Luke, Guy Searles, and Mr. Vaille (Dingwall, Ewen, Admin. Asst. to the Mayor. Letter to Ruth Manca, secretary of the Jackson Street Council, Aug. 10, 1951). And indeed, the belief that Chinatown was abolished was widely understood, as this headline from the Seattle P-I announces: “City’s Chinatown No Longer Exists” (Seattle P-I, Tuesday, July 22, 1951). No one questioned why only four peoples of color received the “international” label, and why no white citizens in the area were recognized in the proclamation. Paul de Barros, in Jackson Street After Hours, gives a clue. He writes that in 1948, the Chinatown area was a red light district that was so bad it was declared off limits to all military personnel stationed at Paine Field. Mayor Devin’s 1951 boundaries for the International Center exactly matched those of the military off limits area: Main Street to Dearborn and from 4th Avenue to 14th Avenue. It’s purpose was to limit the spread of people of color into the downtown business district (Lau, Betty. “Chinatown Childhood,” Seattle Histories, Front Porch Blog, Dec. 1, 2021).

	<p>The Immigration and Nationality Act of 1965 lifted immigration restrictions set by the 1924 Act and the Tydings-McDuffie Act of 1935 and allowed for broader immigration from Asia (Takami 1998). Koreans and Pacific Islanders began arriving in the 1960s (Crowley 1999a).</p> <p>2.3.6 Contemporary Chinatown-International District (1970 to 1980) After the fall of Saigon in 1975, thousands of refugees Southeast Asia settled in Seattle. Many Vietnamese-Americans opened businesses in a cluster around the intersection of 12th Avenue and Jackson Street east of Interstate 5, which became known as Little Saigon (Tsutakawa 2020).</p> <p>The Chinatown and Japantown areas were seen as blighted (Tsutakawa 2020). The construction of Interstate 5 through the heart of Chinatown did not help the district’s dwindling appearance. As early as 1960, there were plans by the Chinese Improvement Association to improve and beautify the area to help combat Seattle’s urban renewal efforts. The initial plans were drawn by engineer William S. Tsao (Jones 1960:10). Young activists protested the construction of the Kingdome because of the negative impacts it would have on the Chinatown and Japantown (Tsutakawa 2020). In 1973, the City created a Special Review Board that helped protect the historical and cultural assets from those negative impacts (Crowley 1999a).</p> <p>A small group decided to seek federal block grant funding to improve the area, but in order to make the area they represented larger, they decided to use the name International District, but the Chinese community resisted. In 1973, Ruby Chow brokered a compromise name with the mayor. The new compromise name was Chinatown International District. Therefore the names of new city funded organizations bore Seattle Chinatown International District as part of their new non profit names. In 1999, the Seattle City Council passed Ordinance 119297, which made the Chinatown International District name permanent.</p> <p>However, in 2004, the compromise was broken with the backwards International District Chinatown appearing on a new building publically funded on 8th and Dearborn and a new community center and a new library, against community wishes. The backwards name was supported by then Mayor Nickels. King County followed suit passing its own ordinance in contradiction to Seattle’s by using the backwards form; hence the name of ID Chinatown for the KC Metro Tunnel, now turned over to Sound Transit.</p> <p>These same activists and young Asian professionals established more social service organizations for health and food distribution for the community’s low-income aging population. They also established childcare for working members of the community (Tsutakawa 2020). The Seattle Chinatown-International District Public Development Authority, which formed in 1975, made further community improvements (Crowley 1999a). Senior housing apartments were built, including the International Terrace (1973) at 202 6th Avenue South. It was secured with federal funding through Ruby Chow’s friendship with Sen. Magnuson. She also founded the first community health clinic, but the city located it in Pioneer Square. She requested and was successful in having it moved into Chinatown to be closer to its patients. Today it is known as the International Community Health Services. Imperial House Apartments (1979) was added at 520 South Main Street. This activism strengthened the multi-Asian ethnic leadership of the area (Tsutakawa 2020).</p> <p>In 1986, activists approached Seattle Historic Preservation to fill out a nomination form for a King Street Historic district to be submitted to the National Register. Preservationist Larry Kreisman received the assignment to assess and inventory the area’s historic buildings. However, notices of the public hearings for the proposed King Street Historic District had to be published in Chinese as well as English. The notices were widely viewed as yet another attempt to abolish Chinatown. Chinese community objections coalesced around Chong Wa Benevolent Association president Ted Pang and newly retired KC councilmember Ruby Chow. They organized speakers to give public comment at a public hearing at the Nippon Kan in Japantown. After listening to speakers and considering the evidence, the historic board members voted to change the name from King Street Historic District to Chinatown Historic District and submitted it to the National Register in September 1986. On November 6, 1986, the Seattle Chinatown Historic District was listed on the National Register of Historic Places.</p> <p>The area is now known as Chinatown-International District, which encompasses the three neighborhoods of Chinatown, Japantown, and Little Saigon, as well as the Chinatown Historic District. It has become the center of Seattle’s Asian-American community.</p>	
04/28/2022	I support building the station on the 4th Ave. I oppose 5th options since it would bring adverse impact towards the built and (natural) environment, as well as impacting people’s daily life especially for the people who live here.	Kam Tai Chin

<p>04/28/2022</p>	<p>ES 3.1.2.4 South Interbay Segment</p> <p>The preferred Alternative (SIB-1) is a bizarre choice and I am highly suspicious of its cost estimate. How can the segment that requires the most land acquisition, demolition and permanent blockage to future land use possibly be the “cheaper” alternative? This option seems to be chosen out of some misguided attempt to make the station “useful” to the summer cruise ship passengers. Passengers who by and large make use of the truly massive parking lot that the port provides for them instead. Virtually none of the passengers make use of the bus station located on Magnolia bridge that is even closer than this proposed station. Are we to seriously believe that passengers loaded down with baggage will make a .7 mile trek from the cruise terminal to a station at Galer St., through an industrial port zone? This is madness, shuttle busses are already provided to these people to whisk them off to their hotels, the airport or more likely to their parked cars. Worse still this station location means the line will directly intersect with the Magnolia bridge which is also being discussed for some form of major refurbishment/replacement. Adding unnecessary complications to the project.</p> <p>A station located at this site will also require all buses who want to interact with it move off of Elliot Ave. The North bound half having to execute a left hand turn to get in and out, resulting in poorer bus service. In fact, it actually would break the potential bus connections that SIB-2&3 would naturally have with the Magnolia bus lines 24 & 33.</p> <p>The idea is also probably to get a station closer to the Army Reserve Armory which is scheduled to close and its land turned over to the state/city for redevelopment. However, from what I’ve seen of their proposals so far, they seem more interested in building more commercial/light industrial space as opposed to residential that would actually drive ridership. The presence of the Wholefoods complex as well is not a major traffic driver. If that locations parking lot is to be judged it appears to never be more than half full.</p> <p>In short Alternative SIB-1 seems to be suspiciously optimistic about its costs, moves the station further north for no real gain in ridership and an inferior bus connection. Immediately crosses paths with two major future construction projects. It also additionally has the 2nd longest construction impact with Elliot Way traffic (a sure way to piss off Magnolia and Ballard drives) for a year and half.</p> <p>Alternative SIB-2 is a complete non-starter since its purpose is shove the line down Elliot/15th and connect to the worst possible location for the Interbay North station. I feel like this design was proposed by someone who was just tracing a line following the road and never once visited the site locations. There is zero benefit to this proposal. It would only result in the biggest road traffic impact of any of the alternatives and saddle Magnolia with a station that is next to useless for all eternity. I feel like I should not have to tell people this but the North Interbay station is the only light rail station that Magnolia will ever get. While Queen Ann on the other hand is guaranteed to receive a separate line, on top of the hill in some future expansion of the system. Placing the station as close to Magnolia to attract as much ridership from them as possible is important, because this is the ONLY opportunity to ever do so.</p> <p>Alternative SIB-3. This appears to be the actual best Alternative. The station location makes use of the permanently empty parking lot (1110 Elliott Ave W Parking) at Prospect St. (seriously there has been an abandoned motor boat covered in graffiti in that lot for a year), (update: the boat has now caught fire and its burned-out hull remains in the parking lot). The existing bus stops are already at this location requiring zero change in service on their part. The existing bus stops also included lines 24 & 33 which are the primary buses for Magnolia Hill making this an excellent transfer station for Magnolia residents with zero changes needing to be made to the current bus routes. The all-ready built Helix bridge can carry any passengers over the BNSF train tracks straight into Expedia. A fact so useful that Expedia built an entire private bus terminal at its base to make use of it already. If the bridge is extended (as it should have been in the first place) over Elliott Ave. that will completely eliminate any danger to pedestrians crossing the very busy Elliott Ave. Pedestrians who I will note also include a large number of school children who utilize these bus stations to transfer to the 24/33 to get home in the afternoon. Regardless of where the track goes further north, this is the only sensible location for the South Interbay station.</p> <p>The only issue I see with this Alternative is north past the station location. For some reason the line is dragged further north so that it can access, W. Armory Way (yet another proposed construction site for a potential Magnolia Bridge replacement). However, doing so impacts more businesses needlessly. Especially since one of those is a Federal Post Office. Which invites the problem of having to deal with the Federal Government as well as disrupting a vital public service for no apparent reason. The cut over across 15th to reach the BNSF track area can be accomplished sooner and just as easily by making the turn sooner at the Brown Bear Car Wash/Chevron (1800 15th Ave W.) and cross over the low usage parking lot of the Wholefoods Complex. Crossing here does mean interacting the Armory site, but seeing as how the designers didn’t have a problem doing that in the SIB-1 Alternative I don’t see it being an actual problem here. The impact can even be further mitigated by crossing the Wholefoods parking lot (which would only lose a dozen parking spots at most) at a corner-to-corner angle and using a shallow S curve to hug the outer</p>	<p>Johann Schmidt</p>
-------------------	--	-----------------------

eastern permitter of the Armory site until it reaches, W. Armory Way, where it can proceed as its already laid out.

Should be further pointed out that if the Armory site is ever redeveloped into an actual residential neighborhood (again this seems unlikely) an infill station could be added anywhere along the Wholefoods to Army St. stretch of track. An instant generation of passengers along of a stretch of the line that will always have a very low usage rate due to its distance from high demand destinations or dense residential.

Alternatively, the line could simply cross Elliot Way immediately after the station and follow the track path laid out for SIB-1. However, this does again pointlessly mean the track will cross paths with the guaranteed construction work at some point of the Magnolia Bridge Redevelopment. Which has a high probability of occurring at the same time as the Light Rail construction.

ES 3.1.2.5 Interbay/Ballard Segment

This portion should really be broken into two segments as we are actually talking about two different station locations as well as two different modes of travel the line could take.

For the "Interbay Station" only the location along 17th Ave W./Thorndyke Ave W. makes any sense. It gets as close as possible to Magnolia Hill and will serve as the only station that neighborhood will ever get. A very minor road construction of only a couple hundred feet can easily link the West Nickerson St. to 15th Ave. South off ramp to Thorndyke Ave. Currently the space I am referring to is used as a parking lot for commercial dump trucks, so there is more than enough room for a road wide enough for a bus to travel through. This would allow the bus line 29, 31, 32 to terminate at the Thorndyke Station. This provides a more direct path for riders from Fremont, Seattle Pacific University and lower N. Queen Anne to reach a light rail station. It also provides an additional capacity for riders to cut across to the other N/S light rail line in the event one of them is out of service. Additionally, bus route 29 can with this altered route provide another bus link between Magnolia Hill and a light rail station.

The alternative of an elevated station at 15th and W. Dravus St. is a joke. I see zero benefit to this location. It would only provide bus links to bus routes that will be cancelled as soon as the light rail stations come on line. It will attract the same anemic ridership that the D line stop at this same location already does. It's near nothing in a bizarre attempt the split the middle between serving Magnolia and Queen Anne.

The Salmon Bay Water Crossing

Tunnel! ST spent a considerable amount of time complaining that a tunnel would be significantly more expensive than a bridge. However, the estimates now provided show that the cost difference is negligible to non-existent. Stop fighting the Tunnel option and wasting everyone's time.

A Tunnel also keeps the around the Ballard Bridge free of obstruction to yet another bridge replacement project that could very well happen at the time as the ST construction. The Ballard bridge is 100 years old and requires either major refurbishment or potentially even a full replacement. A full replacement would likely come in the form of a new bridge to 14th Ave. Something that could not be done if ST builds a Light Rail bridge to 14th and blocks the way. Again, staying out of the way of other major construction projects needs to be remembered and considered. If ST is seen as bungling up other projects with short sighted actions, it will very negatively impact the public perception and support of ST and any future Light Rail expansions. There is also the very serious matter of the Port of Seattle's objections to the bridge placements as they would impact the maritime industry which in Salmon Bay is the fishing industry. To say that the fishing industry thinks that Seattle is forcing them out of the city would be an understatement. Do not pointlessly add to this perception by taking away valuable and non-replaceable waterfront working space.

Ballard Station Location.

15th. I mean come on 15th is already considered to be the edge of Ballard and far from the actual attractions of Ballard proper. This location is merely following 15th Ave which is the major car artery of the neighborhood and nothing more. It is a commuter station only.

14th a terrible, terrible, terrible station location. I would rather ST abandon Ballard entirely and stop the line in Interbay than place a station here. I'm serious. It's clear the only reason this location is being proposed is in a vain effort to save money now and saddle Ballard with a sub-par station for decades, possibly forever, to come. I have seen some propose that this could be fixed in the future with a Ballard to UW line, but this is a lie. We all know that any future Ballard to UW line will stop at wherever this station is built today. ST is not going to extend the line further west for the same reason they are proposing a station at 14th, it's cheaper. If you can't come up with the funds to build a good station location, then don't build one at all. Don't handicap Seattle 2050 with the cheap decisions of Seattle 2022.

Alternative; if the tunnel option is used than it once again becomes possible to move the station location deeper into Ballard proper which would result in higher ridership and all-day traffic, not just commuter traffic, similar to what the University Way Station sees. In the past there were suggestions of tunneled stations at 17th, 20th or 24th Ave. Considering how not additionally expensive the tunnel to 15th Ave turned out to be, these superior stations locations should be reconsidered and seriously this time. Both locations will be directly next to large apartment buildings, the popular Old Ballard destinations and both have large empty lots and low-rise buildings in spots where a station could be built. The 17th location would be directly next to Ballard Hospital and has a triangular lot next to it that has only single-story buildings on it. This location seems well suited for a bus terminal as the triangular road layout allows for a natural bus turn around using just the street.

-Johann Schmidt

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, (Your Name)</p>	Tejinder Singh
------------	--	----------------

<p>04/27/2022</p>	<p>I am a fourth generation West Seattle homeowner who in 2016 voted in favor of light rail construction. The events of the last six years, however, have changed many of parameters of the Sound Transit West Seattle link project. The budget is of major concern; \$73 million cost overrun before the the project even starts definitely needs to be addressed. Also, the projected displacement of hundreds of people’s homes, businesses, employment must be reevaluated especially in light of the dearth of options for relocation. My concerns are many but the impacts to wetlands, waterways, parks, green spaces, tree canopy and the Longfellow Creek basin and West Seattle Green Belt are primary. As much as I am concerned about things monetary the existential threat to people and wildlife is my bigger worry. I have reviewed the 2022 DEIS. I refer to the sections and then make my comments (indented).</p> <p>4.2.9.3 Sound Transit analyzed the potential long-term impacts of operation of the West Seattle Link Extension Build Alternatives on ecosystem resources in the study area. These impacts would include permanent loss of habitat that is replaced with light rail facilities. Permanent changes in habitat adjacent or nearby the light rail facilities are also considered. Permanent loss of of habitat!</p> <p>4.2.9.3.1 The West Seattle Link Extension would have longterm impacts on ecosystem resources in the study area. In some areas, the guideway would be within or near existing forested habitat. Vegetation and wildlife habitat within and 15 feet beyond the footprint of the guideway would be permanently converted from forested or scrub/shrub vegetation to light rail. During operation, Sound Transit During operation, Sound Transit would continue to remove “hazard trees” (trees that might cause a hazard to light rail operations) throughout project operations as needed. Removing street trees with trunks larger than 6 inches in diameter during maintenance activities would require coordination with the City of Seattle. I assume this would be some 15 feet on either side. And the forested land destroyed. Who is to monitor the cutting of the trees? Coordination with the City of Seattle must be set up prior to the clear cut.</p> <p>4.2.9.3.1 Although the potential for adverse effects would be low, operations could impact vegetation and wildlife over the long term. For example, maintenance activities that involve the removal of vegetation during the breeding season could require removal of nests, eggs, or birds protected under the Migratory Bird Treaty Act. At-grade guideways would reduce the amount of habitat for small mammal species. Vegetated areas would be changed to impervious surfaces, which increases runoff volumes. However, as described in Section 4.2.8, Water Resources, stormwater from project-related impervious surfaces would receive flow control as required by the City of Seattle and, where appropriate, water quality treatment. Potential long term effects means forever. You acknowledge the Migratory Bird Treaty Act. Who is going to enforce it?</p> <p>4.2.9.2.1. Some species may move farther into greenbelt habitat to avoid the immediate area of the light rail, but these minor localized movements would not affect these species’ viability. Minor localized movements will not affect these species viability? According to whom? Some species may move “further into the greenbelt”. Wait, what? Some of the</p>	<p>Marilyn Kennell</p>
-------------------	---	------------------------

proposed Sound Transit routes remove the greenbelt that runs between Fauntleroy and 32nd Street SW.

4.2.9.6 Mitigation Measures

Sound Transit's policy on ecosystem mitigation is to avoid impacts on environmentally sensitive resources where practicable and to compensate for unavoidable impacts to ensure no net loss of ecosystem function and acreage as a result of agency projects. Mitigation for ecosystem impacts is based on a hierarchy of avoiding, minimizing, and compensating for unavoidable adverse impacts. Sound Transit would comply with all applicable laws.

What does "where practicable" mean? Please define. Is Sound Transit anticipating "unavoidable adverse impacts?" Perhaps to "ensure no net loss of ecosystem" this project should be rethought. Who will make sure that Sound Transit complies with all applicable laws?

4.2.9

Recovery plans for listed salmon identify shallow areas of shoreline as important to migrating salmonids. Guideway columns and pier-protection systems along the shoreline could change the movement patterns of migrating salmon, and navigation lights on the bridge structure could alter the nighttime swimming behavior of juvenile salmonids, which may avoid these areas to avoid potential predation, or seek these areas to feed on prey.

"Recovery plans identify the areas, the columns could endanger the migration which may cause the salmon to be preyed upon." Yes! It is good to identify these areas, but why destroy them in the first place?

4.2.9.6.1

Restricting clearing activities to outside the active bird nesting period, to the extent possible, to comply with the Migratory Bird Treaty Act administered by the United States Fish and Wildlife Service. If avoidance scheduling is infeasible, Sound Transit would work with staff at the United States Fish and Wildlife Service to conduct pre-construction surveys to determine the presence or absence of nesting migratory birds and assist Sound Transit in complying with the Migratory Bird Treaty Act.

Again, why are you doing this?

4.6.2.9.6.2

Improving stream habitat and riparian function by replanting affected areas with native vegetation would mitigate some unavoidable impacts on stream riparian areas. Replanting near shorelines could improve conditions for juvenile salmonids in the Duwamish Waterway. Wetland enhancement work in the Longfellow Creek wetlands could improve over-water shade to the creek itself, thus improving fish habitat. Fish passage improvements, such as culvert replacements, on Longfellow Creek could also be considered. Sound Transit would mitigate for impacts on forested vegetation using applicable policies and regulations, and would coordinate with the City of Seattle on tree replacement requirements.

These are very disturbing facts! No real plans for mitigating SOME of these so called "unavoidable" impacts. What are the "applicable policies" and who enforces the City of Seattle Tree Replacement requirements?

I feel great despair reviewing this Sound Transit DEIS. I feel that it is vague, superficial, and cavalier - lacking in awareness for the possible loss of our homes, our neighborhoods, our businesses and jobs. The luxury of living in an urban area that still has birds, salmon, big trees, and wildlife is rare. I realize we might need more public transportation in the future, but perhaps now (due to the pandemic, WS bridge closure, people

wanting to continue working from home, etc.) the needs have shifted. The Sound Transit "spine" is still a good idea. But electric buses on expanded bus lanes and other "feeders" to that main line sound like more economically and environmentally practical. And certainly less disruptive. I would support an independent study of the feasibility of a gondola.

04/27/2022	<p>NEPA requires the evaluation of the environmental impacts and related social and economic effects of proposed actions requiring federal approvals. Environmental justice must also be addressed via NEPA. The DEIS analysis of Chinatown/ID Alternatives significantly understates or ignores multiple economic and social impacts on Chinatown/ID businesses, employees, and the regional Asian Pacific Islander+ customer base that these businesses serve. The environmental justice appendix gives a cursory review of the profound economic effects of the 5th Ave alternatives and provides no real mitigation strategies. The following impacts have been inadequately accounted for and/or mitigated:</p> <ul style="list-style-type: none"> · Economic effects of street closures (all CID alternatives) <p>Estimates of employee lay-offs and business revenue loss due to reduced customer access from lengthy street closures are not included in the impact statement. In particular, the access impacts to Uwajimaya are not addressed. Uwajimaya is a regional-serving specialty grocery store that draws customers from an unusually large trade area. Because customers are driving in from throughout the region, they are even more sensitive to reduced car access and inconvenience than customers of local-serving mass-market groceries. Given potential multi-year closure of adjacent and nearby streets, Uwajimaya risks permanent loss of customers who find more convenient alternatives and do not return. Uwajimaya is an anchor retailer for the entire district, drawing in customers that park once for groceries and then walk to surrounding restaurants and specialty retailers. Reductions in shopping visits to Uwajimaya have inverse multiplier effects for surrounding businesses. These impacts are critical to the survival of the Chinatown/ID shopping district and should be studied to help determine the least harmful alternative.</p> <ul style="list-style-type: none"> · **Undercount of business displacements (CID – 5th Shallow diagonal) <p>**The classification of 8 business displacements under Alternative CID-2A Diagonal as temporary is misleading. These businesses will have great difficulty finding temporary quality spaces in decent locations where landlords will entertain short-term leases (less than 5 years), so that they can return to their original locations. The length of time necessary for permitting and construction of any needed tenant improvements is also likely to make this infeasible. Finally, the risk of customer and employee loss from re-location is high and not compensated for by Sound Transit re-location services. Experienced commercial brokers would agree that these two move scenarios are dubious; the displacements should be classified as permanent for the purposes of impact analysis.</p> <ul style="list-style-type: none"> · Lack of just compensation for restaurant business displacement under ST’s re-location policies (CID – all 5th alternatives) <p>The DEIS framework assumes that business displacements can be mitigated through re-location and re-establishment support. Unfortunately, the re-establishment compensation limit of \$50,000 is arbitrary and inadequate for the many restaurant and beverage businesses displaced by the 5th Ave alternatives. Restaurants, cafes and bars have custom build-outs with expensive and un-moveable equipment and fixtures including hoods, ducts, exhaust liners, electrical, plumbing, and costly finish carpentry and materials (ie flooring). This is why finished restaurant spaces rarely come up for lease in Chinatown/ID (or elsewhere), but are instead sold business to business with lease transfer at transactional values of \$90,000 to \$450,000 over the past 5 years. \$50,000 for re-establishment has no market basis and is not just compensation. The economic effects of the 5th Ave alternatives should include not just these businesses displacement, but also the cost of their financial losses.</p> <ul style="list-style-type: none"> · **Considerations missing from DEIS Appendix G Environmental Justice Analysis, Economics – CID Segment (P5-43) for 5th Ave alternatives <p>**</p> <ul style="list-style-type: none"> · Approximately 15 of the businesses permanently or “temporarily” displaced from the Chinatown core employ many Asian immigrants with limited spoken English and English literacy. Uwajimaya, which will be impacted by the road closures as described above, is a major employer of immigrants with limited English proficiency [LEP]. Losing upwards of 100 LEP-friendly jobs would be a significant blow to the 100 year identity and economic purpose of the district as a gateway district for Asian immigrants finding their first jobs in this country. The likelihood of these employees being retained with re-location out of the district is low, and finding a new LEP-friendly job is a challenge. The number of potential jobs lost for immigrants with limited English should be projected for the 5th Ave and 4th Ave alternatives to allow comparison. · The number of businesses permanently and temporarily displaced from the Chinatown core is not identified in the DEIS, but is approximately 21. The only mitigation strategy offered for CID business displacement is priority being placed on re-location within the district. The expectation that even half of that number could find spaces in the district within a common timeframe is absurd. Most of the businesses to be displaced are restaurants or cafes and existing spaces are highly valued and rarely come available or turnover. Perhaps one redevelopment project would come on-line within the right timeframe and accommodate a few businesses. But the the arbitrary limits on reestablishment support discussed above (\$50,000), are absolutely inadequate for cold or warm-shell build-out so that is unlikely. Adding a zero 	Shanti Breznau
------------	--	----------------

	<p>would be starting to get there for the lucky few that could find new spaces. Realistically, no mitigation is being offered to the displaced businesses whose brands is tied to the district and vice versa.</p>	
--	--	--

04/27/2022	<p>To Whom It May Concern:</p> <p>I have been working to improve the Interbay/Dravus neighborhood since 1998. In the valley between Queen Anne and Magnolia, within walking distance of Fisherman's Terminal, the potential for this area has mainly been lost under the weight of 'big ideas' elsewhere. I approached the City Planner in 2004 with a Master Plan vision for Interbay and was told, "we're busy with South Lake Union." Despite the lack of Executive support, the people in this neighborhood worked for the next four years to achieve the only citizen-led legislative zoning change in Seattle's history.</p> <p>The zoning enacted in 2008 is why there are now housing units where there were virtually none. The quality that brought people together is partly due to the pattern of roads. The 'side' streets 17th West, West Thorndyke, and 16th West, both north and south of West Dravus Street, are unique. They form a place like the eddy of a stream. Dead ends with loops are rare in the city. Places where growth and improvement have been allowed to flourish, such as Madison Park's street end, become vibrant places for people. A diminishing city quality. As with the center of a hurricane, the power is in what it is not. Unfortunately, while urbanists such as Jane Jacobs understood the power of place, the constraints of the DEIS do not. Sound Transit has a history of obliterating places and context. The necessary infrastructure is so overwhelmingly dominant that, as with a freeway cloverleaf, there's nothing left. People demonstrated the power of this place by planning a better future regardless of institutional disinterest, limited funds, and no recognized political standing. Sound Transit has the opportunity to design a Dravus station that benefits from and builds upon the eddy, creating a welcoming place people want to be. Only two of the current plan alternatives leave the door open to worthy aspirations.</p> <p>Alternative IBB-2a and Alternative IBB-3. Page 2 of 2</p> <p>Alternative IBB-1 should be reconsidered or eliminated. The DEIS renderings did not consider the blight from extending the Emerson Overpass condition to another eight acres. The result contradicts statements made by planners and ST staff at public meetings where they promoted the importance and power of a place in attracting riders. Lastly, when the public meetings were taking place at the beginning of the process, it was a different time. Traffic and freight studies for 15th/ Elliott must be reconsidered. People are not moving around as they did, and a substantial reduction in traffic volumes and time of day is more probable than not. Alternative IBB-3 should become the Preferred Alternative. Placing the route over 15th delivers considerable cost benefits in ROW acquisition and holds open alternatives for crossing the water to Ballard.</p> <p>Final recommendation: Preferred Alternative IBB-3</p>	Jeff Thompson
------------	--	---------------

<p>04/28/2022</p>	<p>April 27, 2022</p> <p>Sound Transit DEIS Comments Sound Transit Board</p> <p>RE: Comments on WSBLE DEIS Submitted by: Martin Westerman, 9361 47th Ave. S.W., Seattle, WA 98136</p> <p>The DEIS makes apparent that ST planners failed to anticipate and fully account for challenges of topography, cost, delivery delays and impacts on residents, businesses, the economy, the environment, and carbon footprint in the SODO to West Seattle portion of its planned WSBLE line.</p> <p>The Board and ST planners also failed to present alternative HCT options in the plan for connecting West Seattle with spine stations in SODO and the International District (I.D.), such as:</p> <p>exclusive lane BRT lines in West Seattle with rebuild of the West Seattle Bridge-SR99 interchange to accommodate direct service to Seattle downtown and Georgetown – a significantly less-expensive option than the WSBLE proposes, gondola technology that ST, RCW and federal statute have defined as HCT for connecting local areas with spine stations. It provides significantly lower costs and impacts, and would merit a fully transparent comparative study vs. light rail for serving West Seattle</p> <p>Overall, the DEIS presents the following challenges:</p> <ul style="list-style-type: none"> • social equity issues: all perspectives favor dominant, wealthier and more privileged groups and geographic areas over less wealthy and privileged groups and geographic areas. Example: ST tunnels through wealthier, densely developed areas, and runs surface or elevated trains through less wealthy, densely developed areas; ST is ignoring needs and concerns of BIPOC groups in future plans for the International District, etc. • no carbon footprint analysis, or plan for mitigation outside of removing SOVs from the road – though climate change is imminent and dangerous. This does not drive evaluations or analyses in any chapter or appendix • the assumption that, since environmental damage has already been done in urban areas, it is acceptable to do more environmental damage • all perspectives favor light rail, regardless of environmental issues, topography, disruption and destruction to communities and neighborhoods, cost, delivery schedule, and availability of more appropriate high-capacity transit options. • DEIS Chapter 2, p. 1, mirrors language in ST3 Sec. 2, granting the ST Board authority to override voter approved choices when options become infeasible, unaffordable or impractical. <p>Chapter 1.1 – Purpose</p> <ul style="list-style-type: none"> • Regional growth centers PSRC has designated do not include West Seattle. This undercuts rationale for the WSBLE. • PSRC Manufacturing and industrial centers do not include the West Seattle Peninsula. The centers run along the Duwamish River shoreline between Harbor Island and SW Cloverdale Street-14th Ave. Bridge. The WSBLE will not serve them. • The West Seattle Junction is included in the Urban villages that the project intends to serve. But West Seattle covers 10 square miles. This project will serve one square mile of it. • Local and east-west connections within the Peninsula, and to and from the regional rail network are not addressed. <p>Presently, the West Seattle extension is 73% over estimated budget (\$3.2 billion vs. voter-approved \$1.7 billion), and two years behind schedule (2032 vs. 2030). The DEIS fails to address cost overruns and delivery delays (see Chapter 2 above), or to present per-rider cost numbers for WSBLE.</p> <ul style="list-style-type: none"> • Sound Transit predicts that 13,000+ passengers will ride the West Seattle Link daily by 2042 (25,000-27,000 total leaving and returning), but it does not specify peak vs. off-peak ridership, or AM versus PM ridership. (Estimated ridership for the Ballard line is 34,000.) • Simple arithmetic indicates that delivery of the West Seattle portion of WSBLE will cost \$246,154 per rider the first day (sunk costs), \$684 per rider the first year (assuming 4.68 million riders the first year (365 days, sunk costs plus \$40 million /year O&M), and a slowly decreasing number thereafter. The DEIS fails to note that the cost of WSBLE will never be amortized, and large per-rider public subsidies will always be required. • Sound Transit has stated that it expects rider fares to cover 30% of operating costs. The DEIS offers no pertinent evaluation. As such, the DEIS presents an unaffordable and impractical WSBLE project. <p>The DEIS states a purpose to preserve and promote a healthy environment and economy by minimizing</p>	<p>Martin Westerman</p>
-------------------	---	-------------------------

adverse impacts on the natural, built, and social environments through sustainable practices.

This purpose is violated in West Seattle: depending on alignment chosen, WSBLE plans would eliminate up to 626 housing units, displace up to 1000 residents, lose up to 77 businesses, affect 420-1000 employees, and erase up to three acres of forest and green spaces that help mitigate climate change and stabilize soils, possibly disturb Duwamish Superfund sediments; and cause 5-7 years of traffic congestion, pollution and escalating carbon footprint. The DEIS does not address these impacts, and does not account for the contribution of forest and green space land to carbon footprint mitigation.

The PSRC Growth Management Act requires adding more housing, but WSBLE station areas will permanently remove a minimum of six square blocks of land from housing potential within its West Seattle service areas. The likelihood of finding additional land for comparable replacement housing and businesses is slim.

The DEIS presents a revised West Seattle Metro bus service plan after light rail begins operating, that relies heavily on the Rapid Ride C & H lines. No additional bus service for the 10 square mile peninsula would be added to provide the peninsula's growing population with equal access to a light rail station on a 24/7 basis.

1.2.2

While ST and PSRC anticipate that designated development centers will continue to increase in residential and/or employment density over the next 30 years, ST has been continually reducing the anticipated ridership for the West Seattle rail spur of WSBLE. The DEIS gives no explanation.

The DEIS states, "The region's citizens and communities (transit-dependent, low-income, & communities of color) need long-term regional mobility and multi-modal connectivity (WA State GMA / RCW 36.70A.108)."

ST's light rail extension will not provide this service to these communities in West Seattle. ST appears to expect these citizens and communities to transfer at least twice to reach their destinations: once from a West Seattle conveyance to light rail, once from SODO rail to bus or rail, until the downtown tunnel is completed in 2037. This will not encourage light rail ridership.

The VISION 2050 goal is 65% of the region's population and 75% of the region's employment to occur in the regional growth centers and within walking distance of transit.

The DEIS does not specify or exclude any form of transit: bus, BRT, trolley, boat, or gondola.

The WSBLE Project is expected to reduce dependency on single-occupancy vehicles (SOV), slow growth in vehicle miles traveled, conserve energy, and reduce greenhouse gas emissions.

The DEIS fails to calculate carbon footprint related to years of construction and related traffic congestion, or lost worker, business and economic productivity. Calculating expected reduction in daily vehicle miles traveled does not address creating and mitigating carbon footprint (see 4.2.6.3 and Table 2-9, Appendix N below)

1.6.2 – Construction Activities: carbon footprint of machinery used for dewatering is not included in carbon footprint calculation.

Chapter 2: "carbon footprint" is not addressed in this Chapter.

Chapter 3 – Deals with closures of roads, streets and arterials: the words "carbon footprint" and "pollution" do not appear here.

This Chapter fails to address generated pollution (air, water, non-point) from traffic congestion of personal, transit, freight, municipal service and emergency vehicles; mitigation of air, non-point and other pollution; costs of productivity losses due to street closure and detour delays. (See 4.2.4.4: closures of major arterials and transit ways to enter the center of West Seattle (see App. N.1-4) including Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years).

Chapter 4: environment and environmental consequences: Not addressed: mitigation of air, water, non-point and other pollution; costs of productivity losses; carbon footprint and pollution.

4.2.6.3 – DEIS fails to explain how cutting 400 trips from the West Seattle bridge (see Table 2-9 of App. N) would contribute to savings of 117,000 miles per day in the region. Accounting for the one-third of WSBLE reduction attributable to West Seattle, ST's calculation indicates it may take between 42 to 168 years to offset carbon emissions related to West Seattle light rail construction.

The DEIS should include a carbon comparison between light rail and alternative HCT modes, of projected

reductions in vehicle miles traveled. Alternative modes would include BRT and HCT gondola. DEIS should take into account the projected earlier implementation date of HCT alternatives, and the associated emissions reductions against the State's 2030 emissions reduction goals.

Even if DEIS calculations were accurate, the 158,067-614,461 ton construction-related carbon estimate (Appendix L4.6D) is overly broad, and the regional, annual carbon reduction from vehicles (Table 4.2.6-2) is small (10,941 tons) once light rail connects downtown in 2037 (at the earliest).

4.2.11: Soil conditions along the whole alignment are unstable and/or challenging.

The northern slope above West Duwamish Waterway is unstable and may collapse during an earthquake. Many large trees which currently help stabilize the hillside, and provide an important buffer are proposed for removal, impacting hillside stability and the wetland buffer.

The Seattle Fault runs through the proposed path of the SODO to West Seattle alignment, from the Kitsap Peninsula through the West Seattle Junction, south Harbor Island, SODO and Beacon Hill. The proposed alignments, with a Duwamish bridge 140 feet tall, and viaducts up to 150 feet tall, pose a high earthquake risk in the fault area. This imperils train riders on the guideway, and all residential, commercial and green space properties underneath. Other risks include settling and other earth shifting over time.

The piers for the Light Rail bridge over the Duwamish River will be placed in soil conditions subject to critical liquefaction during an earthquake. As the bridge supported by the piers will be at least 140 feet above the river, this could result in significant shaking.

The DEIS fails to consider alternative Duwamish River crossing options, and cost differences between these and the bridge option. These alternatives would include non-rail, lighter-weight and more seismically stable transit options.

4.2.2.2: WSTC recommends No Build Alternative until key issues raised here are addressed.

4.2.1.3.2 – Duwamish Segment – affecting commercial or industrial properties (Port of Seattle-owned, some institutional, public and residential): costs of relocating, and closing and furloughing employees who will take WA State unemployment insurance is not calculated. Cost of rebuilding structures eliminated by pathway clearing is not addressed.

4.2.10.4 – Environmental impacts during construction

- ST should look beyond energy consumption in BTUs. ST made no comparison of light rail against any other HCT system, such as exclusive lane BRT and gondola, but the environmental impact of the proposed light rail line did not include an evaluation of climate-warming emissions within the lifecycle of building materials.
- A proper impact evaluation for a single mode or comparison of two modes should use tools such as the Embodied Carbon in Construction Calculator (EC3) and be conducted in close consultation with objective environmental science organizations such as the Carbon Leadership Forum (CLF)
- An Environmental Product Declaration (EPD – ISO 14025 Type III) that "quantifies environmental information on the life cycle of a product to enable comparisons between products fulfilling the same function"—should be completed for each option so that an objective comparison of the full environmental construction and operational footprint can take place.

DEIS does not, but should compare the social and environmental impacts of displacement and replacement of existing residential and commercial structures, particularly in low-income/BIPOC areas that have historically been redlined.

DEIS should include realistic renderings of the visual effect of 8-16 story light rail towers and concrete/steel elevated tracks vs. alternative HCT modes. The communities through which these systems will run should be able to envision what their skyline will look like with each option.

4.2.11.3.3 -- Pigeon Point slope is considered unstable: construction costs of retaining, drainage and shoring structures are not calculated, nor are dollar benefits and savings of leaving vegetated soils intact

Chapter 5: chapter deals with environment and environmental consequences, but the words "carbon footprint" and "damage" do not appear at all. The word "pollution" appears only in context of statements related to aspirations and legal elements.

5.4.6.1 – DEIS states that the project's elevated guideway would be visually compatible with the large arterials that it would be above or parallel.

No 150-tall structure will be visually compatible in West Seattle, and no large arterials exist west of

Delridge. Bridge and guideway structures will change visual landscape, impact land important to Duwamish people, and block views from Pigeon Point that Olmstead Legacy expected to keep unobstructed. Duwamish Greenbelt was also slated for eventual inclusion in the Seattle parks system.

5.4.7.1 Air quality

p.15: Sound Transit analysis found the ST3 system would reduce greenhouse gas emissions by more than 130,000 metric tons annually. DEIS includes no calculation of regional construction and traffic-related carbon footprint impacts, nor of WSBLE-specific impacts. Also, no calculation is offered of effect with alternative HCT options, that can be delivered earlier, with significantly lower construction GhG, and lower O&M GhG than light rail.

5.4.10.1 – P. 18 – “The WSBLE alternatives would generally have a low potential to adversely affect the viability of local wildlife populations because of the highly urbanized environment of the study area” (see Sections 4.2.9 and 4.3.9, Ecosystems).

Assumption is that, because urban ecosystem damage has already occurred, it is acceptable to create more ecosystem damage.

5.4.18.1 – Impacts during Operation – no mention of West Seattle bicycle route blockages and re-routing. Construction of pillars on the south side would significantly impact bicycle travel.

Chapter 6: Alternatives Evaluation – chapter deals with evaluating alternatives, but the words “carbon footprint,” “damage” and “pollution” do not appear at all.

“Mitigation” listed in Tables assumes damage and pollution do occur, and need mitigation

6.1.1 Roadway congestion:

False equivalency between KC Metro (Metro) RapidRide C Line run between Westlake Station and the West Seattle Junction (Fauntleroy Way Southwest and Southwest Alaska Street – average 22 minutes during peak) and ST Junction WSBLE from Junction to SODO. The RR C goes downtown, Link will only reach SODO by 2032, requiring transfer to I.D. for points north and east until 2037-42 when downtown tunnel may be completed.

Time for WS Link to SODO + transfer is longer than RR C now into downtown, and will be equal to RR C in 2042. Also, RR C is a one-seat ride, WSBLE will be 2-3 seat ride. Rapid Ride C route travels >4 miles between Westwood and WS Junction, and qualifies as a link in regional transit, where WS light rail Link provides no comparable service

6.1.4 Equity issues:

Reasoning contradicts 6.1.1 statement about WS Rapid Ride C and other transit routes being slowed by increasing road traffic. DEIS authors know rail will not serve a majority of the region’s communities of color, and other modes (bus, BRT, gondola (Kirkland, WA)) must provide the local connections.

Emphasis on point-to-point speed and efficiency appear encourage focusing solely on rail.

DEIS states that the majority of lower-income and people of color are moving away from Urban Village areas, where rail nodes will be built and housing is less affordable, to areas in the region where housing is more affordable and light rail will not serve. (Low wage workers are moving to affordable suburb housing, driving more to reach work that’s further away: Report: Better Data Can Drive Equity in Suburban Transit)

The current ST3 stations (N. Delridge, Avalon, Alaska Junction) serve West Seattle neighborhoods in higher-income areas. ST3 includes funds to plan high-capacity transit to reach lower income and BIPOC neighborhoods like White Center, Westwood, and South Park in the future. DEIS fails to mention those needs and evaluate how proposed alignments may accomplish this. ST will require another voter measure to approve construction financing.

6.2.2.1.2 – Duwamish segment – Purple/Pigeon Ridge Tunnel and Andover-Yancy-Avalon routes avoid destruction of Youngstown neighborhood and homes.

6.5.1 – WS impacts: Displacement of water-dependent businesses on the Duwamish Waterway that could be difficult to relocate, require constructing new facilities, or cannot be relocated, and ripple effects on other maritime-related businesses (Preferred Alternative DUW-1a, Option DUW-1b, and Alternative DUW-2).

ST presents no calculation of dollar costs to businesses and the general economy during construction, nor costs to maritime industry of losing key suppliers, nor burdens on Spokane Street Bridge and Harbor Island businesses, on street traffic, SR 509 and First Ave. Bridge, nor likelihood of increased bridge openings and

traffic delays due to vessel-related maritime businesses relocating south and calling for more frequent bridge openings, nor impact on Puget Sound Pilots. “These impacts would include temporary but long-term lane or roadway closures (contradictory statement), and noise and vibration.”

6.6 – “...questions about the relationship of a long-term replacement bridge to the WSBLE Project. DEIS expects to squeeze three bridges (Spokane St., J. Williams and ST3) into the space between Harbor Island and north West Marginal Way. After 40-year expected lifespan of existing repaired J. Williams bridge (2062), Sound Transit (SDOT) will build a replacement bridge. WSBLE Project bridge is expected to be built in 2032.

DEIS notes that SDOT and ST are coordinating on how far south the WSBLE bridge must be built. The further south ST builds its WSBLE bridge, the more disruptive and destructive to West Seattle businesses, residences, environment, economy and daily activities WSBLE will be.

<p>04/29/2022</p>	<p>I think the EIS does a great job outlining the options and offering residents a weighted choice for each plan and strategy.</p> <p>I think the best choice is a tunnel strategy to West Seattle, specifically WSJ-3a or WSJ-3b. Either option that supports a tunnel station under 41st or 42nd Avenue is a preferred way to go. An elevated option might be cheaper, but will be disruptive to residential and business areas.</p> <p>After all, SoundTransit found a budget and path forward to tunnel not only under downtown Seattle under Third Avenue and Pine Street, but also extending tunneling under Capitol Hill, Roanoke + Montlake, and on to the University District as well as through Beacon Hill.</p> <p>What makes West Seattle distinctive is a higher building and residential density in the built environment, and the street arterials are not very expansive like a boulevard to accommodate an elevated solution. Clearly, the elevated option might be less expensive for the budget, but does not account for vehicle and pedestrian traffic coupled with a high density built environment.</p> <p>So my vote: tunnel.</p> <p>But on second thought, perhaps save yourself the resources to link up West Seattle to SoundTransit light rail. We wouldn't want our peninsula to become increasingly more dense in population and become like Hong Kong.</p> <p>I'm all for transit, but West Seattle wasn't designed to scale and be home for more than 30% of the city's overall population.</p>	<p>Eric Gould</p>
<p>04/26/2022</p>	<p>Hi Leda,</p> <p>For the CID diagonal, 8 businesses will be displaced. What are their names?</p> <p>In DEIS Chapter 2, I see structures listed but don't know if they are in tunnels or not. Please tell me if the following are in CID 2a or CID 2b or Diagonal:</p> <ul style="list-style-type: none"> Catenary poles The traction power substations Signal Bungalows Special Trackwork Hi-Rail Access and Maintenance Roads <p>2.1.1.3.7 Stormwater Facilities</p> <p>Stormwater facilities for the project would include flow-control and water quality treatment facilities as necessary.</p> <p>Stormwater vaults consist of concrete boxes sited below ground level, with access covers or grates at the surface.</p> <p>[Are access covers in the street or on the sidewalk?]</p> <p>Thanks,</p> <p>Betty</p>	<p>Betty Lau</p>

04/01/2022	<p>Dear Claudia Balducci,</p> <p>Hello, my name is Aurelia L. Ferguson. I am an eighth-grade student at Westside School in West Seattle. Throughout our course of study in Mandarin and Social Studies, we have learned about the rich history of the International District, the history of redlining in the City of Seattle, the Chinese Exclusion Act and Seattle Chinese Expulsion of 1886, the Japanese Internment, and the effects of the Covid-19 Pandemic on our Asian-American community members in the Seattle-Metro area. Most recently, we have spent some time with Betty Lau in the International District, learning about the history of Immigration Reform in the state of Washington.</p> <p>It is our understanding that the International District and, specifically, Chinatown, continues to experience destruction, gentrification, and Anti-Asian racism once again. Sound Transit cannot select the Fifth Avenue corridor as a future light rail route. If Fifth Avenue is selected, it will have a grave effect on our older Asian-American population in South Seattle and, specifically, the economy of Little Saigon, Chinatown, and Japantown. Road closures, re-routes, gas, water, electrical shut-offs, and noise pollution will severely affect the nearly 300 businesses already battered by the pandemic.</p> <p>As a multicultural student community that values equity and social justice, we cannot stand for a forced displacement of non-English speaking elderly, the acquisition and demolition of National Register Chinatown Historic properties, and the closure of schools, daycare, and elderly programs that serve thousands of Asian-American residents.</p> <p>The monetary and logistical expedience of big business and capitalism can not be prioritized over the rich history and vibrance of a historic bedrock of Asian-American culture in Washington State.</p> <p>We implore you, our local government representatives, to lobby to use Fourth Avenue, not Fifth Avenue, for the future Sound Transit Route. Equity, transparency, social justice, and inclusion are on the line. Do you want to be remembered for safeguarding Chinatown? Do you want to be recognized for inclusive city practices and policies? If so, protect Chinatown, Chinese Community History, and stop continued anti-Asian exclusion in the city of Seattle. Invaluable cultural heritage can not and should never be weighed on the same scale as economic or political interest.</p> <p>Sincerely,</p> <p>Aurelia L. Ferguson</p> <p>Westside School, Class of 2022</p>	Aurelia Ferguson

<p>04/27/2022</p>	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p>	<p>Liz Sands</p>

04/27/2022	<p>Dear Folks,</p> <p>The owners of Blade Gallery, Inc. have reached out to their customers for help. I understand that their brick and mortar shop, address below, is in the currently planned path of the light rail extension. The company prepared the text of an email requesting that you consider a slightly altered route that would not force Blade Gallery, Epicurean Edge to move from their new location in SODO. A move for this small company would be an incredible hardship and prohibitively expensive for them. They would likely have to close their doors which would be a huge loss to many. I urge you to do all you can so that their shop can continue to operate at its current location.</p> <p>I am sure you have read their prepared email. I support their arguments. This is an excellent small company that has been contributing greatly to the art and craft of knifemaking in the Northwest. Knives are not only tools we all use but knife making, over the past 30 years or so, has become a craft and art form in which many of us have participated as a rewarding hobby, much like woodworking or metalworking. I regard Blade Gallery's Epicurean Edge as a source of learning and inspiration, not just or only a retail store. The term "gallery" is descriptive and appropriate. Their showroom displays knife art from around the world. Little known perhaps, they also sell jewelry, some by knife makers or partner teams. In 2003 we ordered, for our twentieth anniversary, two custom gold and damascus (folded steel) rings made by the Swedish team of Sara-Mi Liljeholm and Roger Bergh. Roger is one of the top makers of Scandinavian style art knives. He hand-forges the damascus. Sara-Mi is the jeweler. She forms the steel and gold into unique rings. Blade Gallery is an important outlet for Sara-Mi's jewelry in the USA. I have attached a couple of (quickly taken) photos of these rings.</p> <p>Blade Gallery's Epicurean Edge is located at 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Thank you for your attention. John Christy BladeGallery Inc Customer: Home address: 9749 NE Sunny Hill Circle, Bainbridge Island WA 98110 Email:christyjh@gmail.com Phone: (360) 649-7138</p>	John Christy

04/27/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Gautam Shah</p>	Gautam Shah

<p>04/28/2022</p>	<p>The ability to bike safely to light rail stations is critical. Like many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough considerations of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Joleen Borgerding 3778 NE 153rd St Lake Forest Park, WA 98155</p>	<p>Joleen Borgerding</p>

That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Lindsey Beadle 2009 NE 130th St Seattle, WA 98125</p>	<p>Lindsey Beadle</p>

04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS), with a particular focus on the South Lake Union station.</p> <p>The Civic Hotel has been serving the community since 1962. Owned and operated by a local Seattle family, the hotel has continued to serve the community throughout the Covid-19 pandemic, as the owners temporarily converted the building into an emergency shelter in partnership with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped a number of people to transition into permanent housing (Colburn et al., 2020).</p> <p>This is the kind of business we want to have in our community. Acquiring and destroying this property would displace the livelihood of a family of color that both owns a business and lives in the city of Seattle. It would destroy one of the few remaining minority-owned family businesses in the neighborhood, and would permanently alter the fabric of the neighborhood.</p> <p>I request that the Civic Hotel not be acquired as part of building the South Lake Union station. Every effort should be made to preserve one of the few remaining minority-owned family businesses in South Lake Union. Please consider alternative locations for construction staging in order to maintain this valuable community resource.</p> <p>Sincerely,</p> <p>Deborah E. Klein, MD Seattle, WA kleinflm@comcast.net</p>	Deborah Klein

04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Anjani Vyas</p>	Anjani Vyas

04/26/2022	<p>Dear Madams/Sirs-</p> <p>I would like to offer some input on the Interbay/Ballard Light Rail expansion segments currently being discussed. Having spent much time in Seattle, a portion of it living in Ballard, I see the need for and support a light rail project. Although I do not currently reside in Seattle, I do spend time there regularly. I am strongly connected to the community as I am a graduate of Seattle Pacific University and the University of Washington, and have family-owned vacation property in the San Juan Islands.</p> <p>Having said that, I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. I understand that there is much to consider, but one in particular is of importance to me and, literally, the world wide music community. I am specifically speaking of the DUSTY STRINGS COMPANY located at 3450 16th Avenue West.</p> <p>Dusty Strings is a local family built, owned and operated company that has become a significant and world renowned builder of concert class harps. They have been committed to the local community for 43 years (even when shut down for Covid, the owner personally created and manufactured mask/shields for the health care workers at all of the local hospitals) by hiring local, skilled craftsmen and remaining in Seattle, unlike many other small manufacturers who have been driven out by rising costs fueled by tech driven businesses.</p> <p>Dusty Strings built a specially designed manufacturing facility just 20 years ago that would be astronomically expensive to rebuild locally, especially considering the current real estate costs and lack of site availability, and would severely disrupt their manufacturing processes for a significant period of time.</p> <p>The IBB-1b Alternative would be the route that would not force The Dusty Strings Company, as well as a number of other small, owner-occupied businesses, to either close their doors or do a costly relocation. It would save well over 100 jobs, many the jobs of dedicated local craftsmen with many years of expertise in instrument building. Alternatively, it appears that the "Pink Line" - according to your published map - would negatively impact far more businesses and their employees than the IBB-1b route. I strongly believe that the IBB-1b route would be a far better solution than decimating a number of small businesses and putting many businesses and, consequently, their employees' livelihood in jeopardy.</p> <p>Thank you for your thoughtful consideration -</p> <p>Deette Bunn Harpist and Teacher Visiting Lecturer, Cornell University, retired Harp Instructor, Syracuse University, retired Harp Instructor, Lemoyne College, retired Harpist, Syracuse Symphony, retired</p>	Deette Bunn

<p>04/26/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Brice Maryman 922 25th Ave S Seattle, WA 98144</p>	<p>Brice Maryman</p>
-------------------	--	----------------------

<p>04/26/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. 04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Finally, for all the Queen Anne residents working in SLU like myself, it is already congested and challenging getting past the Mercer traffic. Closing off yet another side street by which I am able to bypass the 5 onramp traffic will be a nightmare.</p> <p>Sincerely,</p> <p>Tanvi Patel</p>	Tanvi Patel

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last mile connections. That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough considerations of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Brandon Bertolucci 5449 35th Ave SW Seattle, WA 98126</p>	Brandon Bertolucci

As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains – and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough considerations of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Diana Craig 7529 18th Ave NW Seattle, WA 98117</p>	Diana Craig

<p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. <p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. 04/23/2022	<p>Dear Sir or Madam,</p> <p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS.</p> <p>I support either of the Andover/Yancy/Avalon routes.</p> <p>I am an avid golfer. My husband and I plus my sister, Jo-Mei Chiang, are owners of condos which are located at Genesee and Avalon Way. We oppose any of the alternatives along Genesee that impact the West Seattle Golf Course.</p> <p>Furthermore, we strongly oppose tunnel alternatives, which are unacceptable due to the loss of over 3 acres of the golf course. which is Park property.</p> <p>Some of the reasons for supporting Andover/Yancy Avalon routes include:</p> <p>Estimated budget is the same or cheaper for Andover/Yancy/Avalon routes at \$1.6 B or \$1.5 B. (Any reasonable option at \$100 million less cost should be preferred)</p> <ol style="list-style-type: none">2) The business disruption is closely similar for both of these options3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 4874) The Genesee routes likely violate Seattle City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for7) The Parks Department supports the Andover/Yancy/Avalon alternatives8) The West Seattle golf course has served the citizens of Seattle with excellent recreation, community fabric and vibrancy as a business for over 80 years. While respecting the need for light rail, the alternative routes that do not impact this unique use of parkland are preferred. <p>Sincerely,</p> <p>Jo-Li and Dale Sellin</p> <p>3221 SW Avalon Way, Apt 414</p> <p>Seattle, WA 98126</p> <p>Jo-Mei Chiang</p> <p>3221 SW Avalon Way, Apt 111</p> <p>Seattle, WA 98126</p>	Jo-Li Sellin
------------	---	--------------

<p>04/27/2022</p>	<p>Hello Sound Transit Team,</p> <p>My name is Conrad and I have many questions and concerns regarding the WSBLE as outlined in the DEIS. Given that some of my concerns about the West Seattle portion have been mentioned in a co-signed letter with fellow community members here in West Seattle (please consider those comments part of my submission), the general inaccessibility of technical planning documents to the public, and that no person could reasonably be expected to respond to the content of all sections of the DEIS, my below questions and comments on the project will have to suffice for now.</p> <p>Section 4.3.1.8 mentions "some water dependent facilities may not be able to be relocated." It does not consider that non-water dependent arts and cultural facilities at Seattle Center would also likely not be able to be relocated, simply that they "could be difficult to relocate." Why are arts and cultural organizations and spaces that are reliant upon being located at the hub that is Seattle Center not considered facilities that may not be able to be relocated? Even if their respective properties are not acquired for construction, it is unreasonable to assume they could all survive the construction period.</p> <p>2) Section 4.3.2.2 describes the No Build alternative as "slowing the rate of denser development in Seattle." Portions of neighborhoods that would be demolished by construction are already dense (Uptown, etc), and their continued densification would be stymied by construction. Given those conditions, why is No Build considered to slow the rate of density in Seattle?</p> <p>3) Page 4.3.17-11 describes impacts to Kinnear Park as "at a distance from park amenities;" that the project "would not affect...user experience;" and that "the tunnel portal would remove trees and vegetation from an undeveloped area of the park." Why are the presence of trees and vegetation not themselves considered park amenities? Why is that user experience of enjoying the green space as it exists today considered unaffected? The same holds for alternatives DEL-1a and DEL-1b that would remove vegetation from Longfellow Creek as described in 4.2.5.</p> <p>4) Section 6.1.3 describes the need for high-capacity transit. Why is light rail the only high-capacity transit mode considered in the DEIS, despite being massively over budget? Additionally, sections 6.1.4 and 6.1.5 describe the need for a multi-modal system. Why is light rail the only mode considered for the WSBLE portion of ST3 when a multi-modal system is desired?</p> <p>5) Section 6.1.4 considers "multi-modal connectivity" with an equity lens. Why is the project described as creating "greater transit connectivity for transit-dependent populations" without considering the displacement of existing transit-dependent households from project construction? Why is the project described as something that would unequivocally "reduce the transportation cost burden on disadvantaged populations" without considering the cost paid by those populations in current and existing taxes to Sound Transit?</p> <p>6) Section 6.2.1 claims "the increase in vehicle miles traveled would also result in higher greenhouse gas emissions in comparison to the Build Alternatives." Why is it assumed that, without additional light rail lines, people will drive a vehicle to get around rather than utilize public transportation modes that already exist within the project area? Even more importantly, why is it assumed that vehicle miles traveled would create greenhouse gas emissions higher than those involved in light rail construction? Other than tables like 4.2.6-1, whose numbers I could not verify, where is the evidence to back up that assertion? Chapter 4.2.10 says "the FTA Greenhouse Gas Emissions Estimator was not used;" why wasn't it?</p> <p>7) In Section 6.6 - Funding, why is a change in high-capacity transit mode not considered as an option to</p>	<p>Conrad Cipoletti</p>
-------------------	---	-------------------------

reduce the affordability gap? In Section 6.6 - Displacement of Public Facilities, why is building the project assumed as superior to maintaining the current locations of two large post offices and the Ryerson Bus Base? Project benefits are mentioned throughout the DEIS, but benefits are not mentioned in specific relation to existing public facilities.

8) Section 5.2 states that "when possible, Sound Transit would preserve existing vegetation." Why are additional high-capacity transit modes such as aerial gondola not considered when every light rail alternative involves destruction of green space throughout the project corridor?

9) Table ES-6 describes construction impacts downtown. First, why does the table not estimate the loss in productivity that would result in such closures? Additionally, why is the potential discouragement of transit ridership that could come with years of bus reroutes in the transit core and new limits on streetcar use not considered a negative impact to both productivity and greenhouse gas emissions? Also, Sound Transit cancelled a planned deep First Hill station in 2005. What has changed since that time which makes a deep tunnel adjacent to First Hill viable? Finally, why was the unreasonable platform depth of the new proposed downtown stations not included in table ES-6 and instead included on a subsequent blog post?

10) Section 3.19.4.5 - Safety does not describe safety risks for construction workers associated with working deep beneath ground level. Why is their safety not considered in that section? A worker died during construction of a below-ground system in Beacon Hill.

11) For Figure 4.2.5-5 on page 4.2.5-13, why is the height of the elevated guideways along Genesee as rendered in DEL-1a, DEL-1b, and DEL-3 considered potentially appropriate or at all viable? Figure 2-28 mentions a guideway of 150 feet; does the consideration of such a massive structure not necessitate exploring a change of high-capacity transit mode that can better handle hills?

12) The footnote on page 3 of the Executive Summary states that the "Puget Sound Regional Council acknowledges that the current pandemic may have effects on the economy that could alter long-range forecasts. Puget Sound Regional Council's next regional forecast is expected no earlier than 2023. For the purposes of this Draft Environmental Impact Statement, Puget Sound Regional Council's current forecasts are applied to the analysis." Why not wait until the next regional forecast is available as soon as next year to make more accurate ridership projections? Additionally, tables such as 3-6 evaluate "Peak Hour" traffic. Given the above footnote acknowledging that peak no longer exists in the same way, why base projections on "Peak Hour" numbers?

13) The Frye Commerce Center located at 2414 SW Andover St (Sound Transit ROW WS2470) would be demolished under all alternatives as outlined in Appendix L4.1-14. Profits from the Frye Commerce Center fund free admission to the Frye Art Museum on First Hill. Why are the important equity benefits that come with free access to art for marginalized populations not included in the DEIS? If Sound Transit were to demolish the Frye Commerce Center, would the agency be willing to fund the cost of free admission to the Frye Art Museum to maintain equitable access?

14) Table L4.1-6 identifies property in the Chinatown-International District that may be demolished to make way for any of the four Ballard Link Extension alternatives. How is it equitable to consider demolishing small businesses and community spaces in a marginalized neighborhood?

15) Figure ES-2 provides diagrams of how the light rail would connect to West Seattle, passing over Sodo and Harbor Island. Why was only a diagram provided for that portion, and not a visualization, as was done for everything west of Harbor Island? What would this part of the line look like?

Please acknowledge receipt of my comments. I eagerly await your review and response.

Thank you,
Conrad Cipoletti

<p>04/27/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Andre Stackhouse captainstack@gmail.com</p>	<p>Andre Stackhouse</p>

Dear Sound Transit Board,

I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.

Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.

To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.

Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.

This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.

Request:

Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.

Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace

minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).

Sincerely,

Bill Weise

Dear Sound Transit Board,

I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.

Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.

To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.

Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.

This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.

Request:

Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.

Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).

Sincerely,

Bill Weise

General Manager

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Joshua Campbell josh@p4a.net</p>	<p>Joshua Campbell</p>

04/28/2022	<p>Please do not take the 5th ave option. It will have a enormous impact on 3 neighborhoods. Moreover, Chinatown has had a long history of being pushed out when the land becomes valuable. The CID is a historical neighborhood and should be preserved as such. I respectfully ask that you take the other option and do not destroy the history of this essential neighborhood in Chinatown.</p> <p>Sincerely, Kelvin Sezto</p>	Kelvin Sezto

<p>04/28/2022</p>	<p>I'm glad to see the expansion of the CID station!</p> <p>As you consider the various options, I urge you to heavily consider the expansion on 4th Ave S. instead of 5th Ave S., which would severely impact the lives of PEOPLE, business owners and those who frequent the CID. Historically, Chinatowns around the country have been areas where voices and opinions of the people have been routinely squashed in order to serve the greater majority. I urge you to be considerate of a segment of the population that has had ENOUGH!</p> <p>I also request that as you present information to the public, please refrain from painting the 5th Ave options as the most ideal. These options are not ideal for our community.</p> <p>As you expand this rail system in service to the people, please remember the backs upon which the original railway system in this country was built.</p> <p>Respectfully, Bao Ng Resident of South Seattle - 98108</p>	<p>Bao Ng</p>

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>My name is Andrew - a transportation engineer from Seattle, working in South King County, living in North King County. I depend on Seattle's public transit and use it every week, although often work remotely. I would like to share my comments to submit to Sound Transit's Draft Environmental Statement</p> <p>My experience and comments not only from from my professional experience as a transportation engineer, but I have also lived in Japan and France for several years without a car, where public transportation is extremely convenient, very low effort to use, and easy to navigate for an English-speaker. There are no excuses for Seattle - we should be modeling our system by foreign examples who have been solving problems for over two centuries... since before Seattle was founded.</p> <p>When I use Seattle's light rail, I've noticed some very alarming issues that seem easily avoidable by simply traveling to Europe and Asia with open eyes. Of course, it would be better to professionally consult with European and Asian transportation systems. It's so disappointing that Sound Transit has so many problems with its current system despite it being such an old technology already near-perfected by parts of Europe and Asia.</p> <p>Firstly, here are my comments about the current system, and I continue below with my comments about the Ballard-West Seattle Link Extension.</p> <ul style="list-style-type: none"> -Deep stations are inconvenience and miserable for access, making every journey less than ideal; They should only be used for low ridership stations. -Stations without numbers are terrible for non-English speakers... the cute logos of animals and ships are only art, not helpful tools. Remove them and upgrade Sound Transit a professional transit system to serve the riders, not just tourists. -Quiet stations are uncomfortable and make for unpleasantness; Urban and rural stations need artificial sounds - Japan uses pleasant bird sounds and soft bell chimes that occasionally cut the silence. -Empty stations are unpleasant; Fill the urban stations with convenience stores, eateries, and other location opportunities for business owners. -Gate turnstiles! When I first rode light rail in 2009, I shook my head at the lack of gates or turnstiles. I wondered how long that would last before Sound Transit understands why nearly all metro systems use turnstiles. And now I see in the news that people aren't paying their fares. Now do you get it? -Low floor cars are for streetcars. I look forward to when Sound Transit promotes its giant regional streetcar system (link light rail) to a heavy rail system to take seriously, with standard high-floor train cars for higher speeds and capacity. <p>Regarding my comments to the Ballard-West Seattle Link Extension, it must put riders and increased ridership first.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p>	<p>Andrew Stephenson</p>
-------------------	--	--------------------------

In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible.
At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower.
At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.
In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.
In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.
In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.
In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.

Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.

In order to future proof our growing system, we must design for expandability in four locations:

- (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).
- (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
- (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
- (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
- (5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Jeremy Swirsley jeremy.swirsley@gmail.com</p>	<p>Jeremy Swirsley</p>

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>In short: please listen to Seattle Subway's advocacy. Prioritize long-term system excellence in station/transfer/routing design. These tracks aren't going anywhere anytime soon so get it right the first time.</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who live and work near the Seattle Core. I will use the system less if you make transfers expensive.</p> <p>It's also impossible to believe that SoundTransit will maintain deep stations' elevators/escalators to acceptable standards based on past performance.</p> <p>If deep stations are an absolute must (which they aren't), ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. 04/28/2022	<p>Please do not consider the 5th Ave alignments for the CID station, these options would be detrimental to a neighborhood that has already been chipped away at and these would create permanent impacts to the community and businesses.</p> <p>The Jackson Ave alignment is the best option given the limited space available in this neighborhood.</p> <p>Kristy Fry Transit rider and CID supporter</p>	Kristy Fry

04/28/2022	<p>Dear Seattle SoundTransit Leadership and Seattle Elected Officials,</p> <p>I am writing as a concerned Seattle citizen and active community member of the Historic Chinatown/International District (CID) in regards to the Sound Transit Hub in our beloved CID area which will adversely impact the CID historic significance, businesses and community members. The trauma sustained by the CID residents, businesses and communities over the years and most recently with COVID and hate crime attacks has been painful. We urge you to consider our plea to keep the CID a protected and valued cultural and historic community.</p> <p>The CID is in a designated Historic District. One of eight in the City. It is a collection of early 20th-century commercial and hotel buildings that serves as the center of Seattle's diverse Asian American community. The District was established by the City of Seattle through an ordinance in 1973 to preserve the District's unique Asian American character and to encourage rehabilitation of areas for housing and pedestrian-oriented businesses. The Seattle Chinatown National Register Historic District is located within the International Special Review District. Its listing on the National Register testifies to the important contributions of the Chinatown/International District area on a national level.</p> <p>How is it possible for Sound Transit to propose a large Transit Hub project in a designated Historic Seattle landmark district</p> <p>All of the Sound Transit options for the Transit Hub in the Draft Environmental Impact Statement will adversely affect and encroach into a City of Seattle designated Historic District, Chinatown/International District. This neighborhood is an important cultural asset to our city and region and must be preserved and protected.</p> <p>Please consider other locations and options farther south away from the CID that do not impact this important historic landmark district. All the 5th Ave options are unacceptable and would devastate the CID. Although the 4thAve options will seriously impact the CID, this would be preferable over the destructive 5th Ave proposals.</p> <p>We have faith in your leadership and wisdom to do the right thing for our community. Your actions and decisions impact our future generations - maintaining a preserved historic district where generations of immigrants and communities existed, stories of their ancestors will be visible in the buildings, historic family associations, mom and pop shops. The balance of historic and modernization/growth is essential for our community.</p> <p>Thank you for your consideration and support.</p> <p>Linda Ando Seattle Resident and CID Community Member</p>	Linda Ando

04/28/2022	<p>Hello.</p> <p>Light Rail is a 100-year investment in the infrastructure of our communities. Please keep that in mind in your decision making and not think in the short term. Realistically, we have only one time to get this right.</p> <p>There must be a tunnel under the Ship Canal. 14th Ave NW portal is better than no tunnel but I ask you consider 17th Ave NW, 20th Ave NW, or 22nd Ave NW. Do not impact Fishermen's Terminal as the marine business is an important source of revenue and employment along with providing a needed source of "blue collar" jobs.</p> <p>A station on 17th Ave NW, 20th Ave NW, or 22nd Ave NW makes more sense because it provides direct access to a hospital, other medical services, and restaurants. It will also provide better access for the existing multi-family developments.</p> <p>Instead of crisscrossing Elliott from Mercer Place W to W Galer St please consider tunneling. The traffic impact, noise, and disruption of Kinnear Park and the view corridor along with the business & residential loss is not worth it.</p> <p>The Smith Cove station should be located at W Galer Street on the west side of the street. This will facilitate access to both Expedia and the Port's Terminal 91 cruise traffic. Transit pick up and drop off should be on the west side of Elliott.</p> <p>Look closer at tunneling from W Galer St to 17th Ave W and locate a station there on the north side of W Dravus St for a functional access location for Magnolia and Queen Anne. This station should be the portal to the Ship Canal tunnel. Transit should have drop off & pickup on the north side of Dravus.</p> <p>Two stations are needed in the Mercer to Interbay corridor. Cost savings can be obtained by considering the size for the stations, entry plazas, and mezzanines.</p> <p>For light rail to succeed it needs to be accessible and take us where we want to go. Transit circulation though Queen Anne & Magnolia with schedules that coordinate with light rail schedules is a must.</p> <p>Thank you.</p> <p>Don Harper (206) 281-9018</p>	Don Harper

<p>04/28/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Melissa Riesland 305 NW 49th St Seattle, WA 98107</p>	<p>Melissa Riesland</p>

As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Douglas Sharp 356 N 73rd St Seattle, WA 98103</p>	<p>Douglas Sharp</p>

04/28/2022	<p>Dear Seattle City Council and Sound Transit Board,</p> <p>I write to urge the adoption of one of the 4th Ave (shallow or deep) alternatives for the light rail expansion.</p> <p>The projected costs do not adequately reflect the severe, long-term impacts on the viability of Chinatown-ID, already struggling due to increased rates of anti-Asian bias, a collateral effect of the Covid-19 pandemic.</p> <p>Do the right thing, and find a solution via 4th Ave, and do not proceed with plans for 5th Ave!</p> <p>Thank you,</p> <p>J. P. Kang</p>	JP Kang
04/26/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p> <p>Alison Grevstad</p>	Alison Grevstad

04/28/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. -------------------	---	-----------------------

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Sanjay Shirude</p>	Sanjay Shirude

<p>04/28/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. -------------------	---	---------------------

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I'm writing in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It's the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely,</p> <p>Laura Oxford</p>	Laura Oxford

04/28/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>BladeGallery Inc Customer: Zachary Brown</p> <p>Home address: 3203 35th Ave S</p> <p>Email: zac@zacbrown.org</p> <p>Phone: 206-486-5875</p>	Zachary Brown

As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Clay Vredevoogd 2640 36th Ave W Seattle, WA 98199</p>	Clay Vredevoogd

The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Samwise Rowe 1401 E Howell St Seattle, WA 98122</p>	Samwise Rowe

04/28/2022	<p>Dear Councilmembers and Sound Transit I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). Last fall, they moved from Kirkland, WA to Seattle. . I have recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that cannot be found anywhere else. We have been patrons of theirs for years. There is no other business in the world that has everything that they provide. Please help support a path for Light Rail that does not displace BladeGallery's Epicurean Edge. Who is BladeGallery? BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. I'm looking forward to their classes aimed at established knifemakers and beginners. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down " resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community. The BladeGallery Showroom is at: BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980 Yours, Sarah Williams 21410 NE 151st Street Woodinville, WA 98077 sarahwilliams.1@juno.com 425-788-6843</p>	Sarah Williams
04/28/2022	<p>I am writing to all of you because of a major project that Sound Transit is planning that will harm the Seattle Chinatown International District.</p> <p>Construction on 5th Avenue in Chinatown to Japantown means:</p> <ul style="list-style-type: none"> · Full closure of King Street, S. Weller and 5th Avenue for several years · Re-routing cars, buses, to 6th, Maynard, 7th, 8th, 10th & 12th · Gas, water, electrical shut offs to businesses, nonprofits and residents · Traffic detours throughout Chinatown, Japantown, Little Saigon · Daily dump trucks, cement trucks, cranes, supply trucks, delivery vehicles · Construction workers taking parking from businesses · Increased noise & air pollution, dust, dirt, vibrations · Taking property from owners of color for demolition and resale after construction · Endangering lives of 1,200 elderly by blocking access/egress for emergency vehicles with street/sidewalk closures and detours · Permanent changes to National Register Seattle Chinatown Historic District—loss of 3 blocks in addition to prior loss of 3 blocks for Transit Tunnel <p>Severe disruptions to:</p>	Eva Chuc

- 300 businesses already battered by the pandemic, higher than ever anti-Asian hate crimes, criminal violence
- 30 immigrant businesses permanently closed or forced to move
- Schools, daycares, programs serving thousands of children and youth
- Programs, classes, recreation for 1,200 elderly non-English speakers

I immigrated to Seattle with my mother and father in the late 90s, and Chinatown was the one place where we felt comfortable being ourselves and we felt a sense of belonging seeing others who looked like us and shared similar cultures. I have seen the many changes over the years, specifically to Chinatown whether it was businesses closing and new ones opening up or new complexes being built, buildings that have burned down, and new ones being built in their place that do nothing for the people who live in the community. I am heartbroken that while the city wants to continue to build more transportation access, it is harming the community that was there many many years before the light rail was built, and now another station is potentially being built. I am asking you to consider moving this project to 4th because of how it will affect the members of Chinatown, the businesses, the people, and especially the elderly who call this place home.

Sincerely,

Eva Chuc

04/27/2022	<p>Hi</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel for the past 2 years has been a participant in providing shelter to combat the “ emergency “ the city and State have declared to house the un-sheltered . And now you seek to take away this business to help you stage your construction .</p> <p>I assume you will compensate the family for the use , but you will take away the asset that they had nurtured for their future . Yes, some folks do have plans and the hard work of creating that legacy will be lost to your need to stage .</p> <p>Alas I say find your piece elsewhere . I know you want to ask me how you can stage , and not that I should have an answer for you , but I do suggest you approach Vulcan, or Gates and they have enough property if not the seattle center. Earn your keep and find an alternative.</p> <p>Leave the Civic hotel alone, leave them to help shelter the unhoused and DO not take away their livelihood. There are plenty places that you can site your good station , do not prey on the small . There are plenty of big fish with mire valuable property you can use your imminent domain on .</p> <p>With respect,</p> <p>Amit Shah 253.480.2803 USA</p>	Amit Shah
------------	--	-----------

04/27/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Sophia Miyazaki</p>	Sophia Miyazaki

04/27/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p> <p>Mary & John Hoverson Sent from my iPad</p>	John Hoverson

04/27/2022	<p>To Sound Transit,</p> <p>I am against both of your proposals and variations you suggest for the ID sound transit station.</p> <p>My comments</p> <p>First you say there are two major options with variations. Some ID community people have described the choices as between bad and bad. This is the usual ploy used by city planners -to say there are ONLY two choices. Limiting choice controls the narrative for the community. The planners don't want authentic community engagement but instead just want what is cheap and fast. Nevertheless, there are other choices that are not cheap and fast that should be put on the table:</p> <p>For example, use the existing Union Station for the light rail, if it will not work demolish it and rebuild it brick by brick on top of the new structure so in the end it looks the same. Or just demolish it. It must be a historic landmark but the ID is supposed to be a protected area and is ruled by some advisory committee. I think it is the CID so what is the difference?</p> <p>2. OR use the north parking lot of Lumen field and build a station there and on top of the station make a 10 story parking garage so that in the end Lumen field gets a parking garage. Connections can be made from Lumen field to Union Station and use Union station since it already exists.</p> <p>3. OR use land in the SODO area where it is industrial and doesn't impact an existing community</p> <p>4. OR use the old immigration Building and tear it down or retain the facade if it is historic..</p> <p>To say there are two options with variations is ridiculous. Where are the Peter Steinbruek's of Seattle now and why haven't planners and architects been instilled with the same sense of preservation that saved the Pike Place Market to make it world renown? Instead it is the same old "make it cheap and make it fast" mantra with two options. It was that same limited thinking that laid light rails tracks in the bus tunnels that did not fit any operating system and the same thinking that got "Big Bertha" stuck in the tunnel for months or was it years? Make it cheap and make it fast, should be replaced by clear thinking and concern for the community impacted.</p> <p>Finally I would say that this project fits the Boeing approach where one lead person said, "We never have time to plan it right, but when it goes bad we always have time to do it over again.</p> <p>I urge the planners to listen to the ID community and look for creative solutions that do no harm to the ID. Make it right, not cheap!</p> <p>Sincerely,</p> <p>Larry Matsuda, PhD</p>	Larry Matsuda
04/27/2022	<p>Please do not move forward nor approve construction of the proposed transit stations within the CID.</p> <p>The reasons are apparent. Take accountability for what you are planning to enact and the negative impact it will have on business and community.</p> <p>The CID is one of the only cultural hubs left within the city and to callously disregard how disastrous of a toll this would have on the community, residents and businesses is a blatant sign of disrespect and racism.</p> <p>Such proposals are never made for predominantly white neighborhoods and if this city is as progressive as it claims it needs to stand by its vows to its citizens and do better.</p> <p>Do not move forward with the construction of this transit proposal and the destruction of this crucial community.</p> <p>Best,</p>	Janu Sung

04/27/2022	<p>Dear Council members and Sound Transit,</p> <p>I am a customer at BladeGallery's Epicurean Edge. This last fall, they moved from Kirkland, WA to Seattle. I'm excited for them to have a new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. 04/27/2022	<p>To Sound Transit,</p> <p>I am concerned about the negative impacts on the CID if Sound Transit and partners choose to build the new station on 5th Street in the CID. I urge you to prioritize the concerns and feedback this important community(ies) have shared regarding the impacts of a 5th Ave/CID site.</p> <p>I value your work and vision for a better connected, high quality public transit for our region. And I value the historic and present day contributions of the CID community. Please choose the site that negatively impacts this community the least; listening to the community is the best way to determine what that is, as they are the experts on themselves and their needs.</p> <p>Thank you for your consideration.</p> <p>Jennifer Hydrick 703 30th Ave Apt D Seattle, WA 98122 206-306-6547</p>	Jennifer Hydrick

<p>04/27/2022</p>	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Samu Nariya</p>	<p>Samu Nairya</p>

04/27/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>BladeGallery Inc Customer: Derek Quattrini</p> <p>Email: quattrini47@gmail.com</p> <p>Phone: 551.404.2315</p>	Derek Quattrini
------------	---	-----------------

<p>04/27/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. This is an imperative for the climate, and it will also make our city much more livable. I am writing to submit my comments to Sound Transit’s Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region’s projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region’s voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system’s growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office’s facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region’s mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Robin Briggs</p>	<p>Robin Briggs</p>

<p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Nancy Conley 5003 51st Ave S Seattle, WA 98118</p>	<p>Nancy Conley</p>

My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Nick van den Heuvel 1205 NE 66th St Seattle, WA 98115</p>	<p>Nick van den Heuvel</p>

-------------------	--	----------------------

<p>04/25/2022</p>	<p>Greetings –</p> <p>I have been a Seattle resident for two decades, and a regular user of public transportation during that period. Since moving to Seattle, I have voted in favor of every transportation related levy and measure that has appeared on my ballot, except of course I-83 to kill the monorail. I wish we had gone forward with that construction, but unfortunately the window went past. Really construction should have begun in 2002 or 2003 in order to pencil out sensibly. For the most part, though, I have been satisfied and pleased with the progress Sound Transit has made in modernizing the public transit options in and around Seattle.</p> <p>The preceding notwithstanding, I am very concerned with the proposed light rail extension to West Seattle as described in the Draft EIS dated January 28, 2022. A small sampling of the many issues:</p> <p>ES 3.1.1.2 (& Similar): “Treaty-protected fishing rights and access to Usual and Accustomed Areas of the Muckleshoot Indian Tribe may be... permanently affected by placement of guideway columns in the water. Some bridge types could also impact treaty-protected fishing rights and access to the Usual and Accustomed Areas of the Suquamish Tribe.” Besides being an equity issue, this makes it sound as if the proposal is potentially in violation of treaty agreements, and potentially a future source of project disruption. Have the tribes agreed to forgo any challenges to this project? What happens to the project if they sue after the DEIS is accepted?</p> <p>Similarly: “Alternative DUW-2 would reduce the horizontal and vertical clearance of the United States Army Corps of Engineers-maintained navigation channel in the East Duwamish Waterway, just north of the existing Spokane Street Bridge restriction.” Is there any written indication from the Army Corps that this modification will be acceptable? Please reference.</p> <p>ES 5.1, Significant and Unavoidable impacts. It doesn’t seem like it will be possible to construct any of the West Seattle light rail alternatives without significant displacement of what is currently somewhat affordable housing. This section should be updated to indicate minimum housing units at various affordability levels that will be eliminated by the major alternatives. Please provide recent studies that explain how lost housing can be replaced. West Seattle housing inventory and real estate is incredibly tight.</p> <p>ES3 – general: The West Seattle alternatives that are presented are not varied or creative enough. Best practice in EIS creation includes consideration of options that are truly distinct from each other. Why are non-light rail solutions such as substantially building out BRT or a modern cable car system not included? The latter, in particular, has massive advantages over light rail in constructability, housing impacts, cost and timeline. How can this document be modified to demonstrate that the cable car proposal has received the consideration it deserves?</p> <p>AppN, Table 2-9 indicates that the West Seattle build options will reduce daily traffic by 400 vehicles EB and 700 vehicles WB. The 300 vehicle difference must reflect vehicles that are detouring away from the bridge for their return to West Seattle, is that correct?</p> <p>4.2.6.3 indicates that the build option will save 117,000 vehicle miles per day. If an average trip is a generous 30 miles round trip (roughly California Junction to Bellevue) that corresponds to ~4000 trips. With the previous comment in mind, this means that the build option must be saving 3500 trips that were not taking the bridge anyway. Where are those trips originating? Why are we building so purposefully along the bridge route if that’s not where the riders are coming from? Please clarify how you arrived at a savings of 117,000 vehicle miles and how the proposed alignments best serve those commuters. Why not build light rail directly to them and connect the California Junction and points north by means of increased busses or cable car?</p> <p>On numerous issues, it doesn’t seem like the light rail options end up being better than doing nothing at all. It is probably clear from my comments above that at this point I am convinced that the Cable Car proposal is a far better option from a constructability, cost, timeline and environmental impact perspective. I am willing to hear why that might not all be true, but so far, Sound Transit hasn’t provided any meaningful public commentary on the gondola proposal. Fortunately, the construction timeline is so much shorter for the cable car that it can be studied for a year and STILL be constructed before the light rail proposals. At this point, I am strongly in favor of the “No Build” option for the West Seattle link, followed closely by a deep and honest evaluation of the cable car.</p> <p>Thank you,</p>	<p>Adam Price</p>

Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Allen Bentley 4240 Chilberg Ave SW Seattle, WA 98116</p>	<p>Allen Bentley</p>
-------------------	--	----------------------

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. -------------------	--	-----------------------

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Frank Buty 1150 Alki Ave SW Seattle, WA 98116</p>	Frank Buty

Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough considerations of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Margaret Moore 7771 57th Ave NE Seattle, WA 98115</p>	Margaret Moore

<p>04/27/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. 04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West SEattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. WHICH has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local business should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Kevin Cruz</p>	Kevin Cruz

<p>04/28/2022</p>	<p>From: Richard Ellison, 8003 28th Ave NE, Seattle, WA 98115 climbwall@msn.com</p> <p>I request and extension to the comment period so others and myself can do a more thorough analysis. I have only found out about this deadline today.</p> <p>I am greatly disturbed by the difficulty to find an accurate assessment of the number of trees to be lost in the building of any action alternatives. Vague phrases as that trees will be removed and there will be visual impacts are not sufficient.</p> <p>"The project would remove trees and vegetation as necessary, which would make a visible change. Where possible and consistent with light rail operation and maintenance needs, the removed trees and vegetation would be replaced. Section 4.2.5 discusses potential visual impacts and mitigation. "</p> <p>How many exceptional or significant trees will be removed for each alternative. The analysis looks at small areas, gives vague statements, claims mitigations will be done without any details given, and assumes there will be therefore no impact.</p> <p>All alternatives would require removal of or disturbance to street trees. Several alternatives would also require removal of native trees and other existing vegetation within habitat biodiversity areas. During construction, removing street trees with trunks larger than 6 inches in diameter or any trees in critical areas would require coordination with the City of Seattle. Some of these trees could be removed entirely; others would be replaced with the same or similar trees.</p> <p>Construction of Alternatives SIB-2 and SIB-3 would require removing trees and other vegetation in the Queen Anne Greenbelt, and wildlife would be disturbed by construction noise. These effects on wildlife are expected to be minimal, as wildlife in the greenbelt is already habituated to noise and migration barriers are already present. The slope drains installed in the hillside could disturb vegetation and soil along the toe of the slope, where they would initially be only 5 to 10 feet underground.</p> <p>Alternative SIB-3 would have permanent impacts along the western edge of the greenbelt, where it would be in a retained cut for the Smith Cove Station. The guideway transitions from elevated to at-grade in this vicinity. This alternative would remove trees along much of the western edge of the greenbelt north of the Smith Cove Station.</p> <p>This piece meal approach is problematic without</p>	<p>Richard Ellison</p>
<p>04/28/2022</p>	<p>To whom it may concern,</p> <p>My name is Eve Scarborough and I am writing to ask that you do NOT build the Link Light Rail stop in the C-ID neighborhood. While I understand that this stop is intended to connect the Ballard and West Seattle neighborhoods to the Light Rail Sound Transit System, it will affect up to 19 small business located in the C-ID.</p> <p>I am currently writing this note from Oakland, California, where I am attending my last semester at Mills College. I am defending my thesis next week. That being said it is imperative that this stop is not built and that the Light Rail finds an alternative route. Jackson Street, where Sound Transit intends to build, is part of a larger network of businesses frequented by Asian-American elders and newer generations of immigrant families. These businesses and community members are important frameworks in the city of Seattle and we cannot force them out. We have already seen the effects of the Light Rail's construction in other Southend neighborhoods. Please don't do this.</p> <p>Thank you,</p> <p>Eve Scarborough</p>	<p>Eve Scarborough</p>

04/28/2022	<p>To the Sound Transit Board,</p> <p>I am a resident in Seattle (King county, district 8) that works in the environmental sector and a regular visitor to the CID. I have been following the documents and public comment forums for the various extensions of the Link, and have concerns around the issues that remain unresolved around the CID segment in particular.</p> <p>Most critical is the lack of detail in the environmental justice analysis, which should really address the depth of historical inequity in the displacement and health impacts of developments on the residents of color in the CID. Furthermore, ongoing inequity in health impacts of existing 2.5ppm pollution from the highways nearby should also be considered in a deeper analysis of the air pollution impacts of the tunnel ventilation system and construction truck volumes. For peak station construction, a range from 10 to 35 trucks an hour is absolutely unacceptable given the existing air pollution that already has disproportionate health impacts on the elders and youth who are residents of this area. The new tunnel ventilation close to Hing Hay Park, a central gathering space in the CID, will continue to build on historical inequities around who gets to enjoy outdoor green spaces.</p> <p>The lack of detail around the analysis for the health impacts of long-term, persistent operational noise, The and the sustained air pollution impacts on top of remain startlingly thin. This needs deeper analysis in the final EIS. transportation analysis did not include the impacts of the stadium events.</p> <p>All three 5th Ave alternatives are unacceptable. The building that currently houses Joe's Bar is a contributing building to the National Historic Register. The 5th Ave options would destroy this building, displace multiple businesses, and destroy the core of Chinatown in an irreversible way. 5th Ave Alternatives (CID 2a, diagonal, and 2b) lead to the most construction impacts on the neighborhood and the biggest negative impact on residents.</p> <p>Between the clear environmental injustice of making Chinatown uninhabitable for residents (studies well-document the consequences in the lowering of life expectancy) and the injustice of destroying the core of Chinatown (in favor of gentrification ten years down the line), the Board truly needs to reckon with the inadequacy of this DEIS and build out a final EIS that truly takes into account the above concerns.</p> <p>Sincerely, Rachel Lee</p>	Rachel Lee
------------	---	------------

04/28/2022	<p>Dear Ms. Swift and the Sound Transit Board of Directors:</p> <p>I am a concerned community member, worker in the Chinatown International District (CID), and my family has had a small business in the CID for almost two decades. I am very concerned about the proposed Sound Transit alternatives in the CID for the West Seattle Ballard Link Extension. This neighborhood holds deep meaning to me, as a third generation Seattle resident, and as an Asian American. It is a space of history, heritage, community and belonging. The thought of parts of the CID being torn up for the construction of a new station is unimaginable. I believe in the importance of public transportation systems, but displacing parts of our community and this neighborhood is most certainly not the way to do it.</p> <p>The CID is recognized as the center of Seattle's Asian American community and serves a crucial role for diverse Asian American communities to live, work, gather, and build community. It is important to take into account the history of the CID which exists due to the racist history of redlining and segregation in Seattle. Because of racist policies such as redlining and restrictive covenants, communities of color settled in the CID and created communities here -- this is an essential part of Seattle's history. The CID is recognized as a historic district by the City of Seattle and it should be treated as such, with care, respect, and a concern for preservation.</p> <p>After reviewing the five proposed station alternatives in the CID, it is clear that the 5th avenue alternatives would be catastrophic to the CID - displacing 18 to 19 businesses and this does not even include the many more businesses in the area that would be negatively impacted by this construction. Additionally, the 4th avenue alternatives would have detrimental impacts on CID businesses and residents via street closures, traffic impacts, noise and visual impacts, and much more that needs to be researched more comprehensively.</p> <p>The Draft Environmental Impact Statement does not adequately address: the historic displacement impacts of public development projects, historic racism which makes the CID particularly vulnerable to displacement, the impact this project could potentially have on neighborhood cohesion and preservation of history and heritage. Additionally the DEIS does not adequately address traffic impacts on CID residents and businesses, visual and noise impacts, vibration impacts, or the impact of parking losses.</p> <p>I am writing to ask that Sound Transit carry out additional study, working with CID community partners, to explore different options or significant modifications to the proposed alternatives. There is a history of public projects negatively impacting the CID including the construction of I-5, the King Dome, the Street Car, and more without regard for the people who live here and are part of the neighborhood community. The construction of the street car personally affected me and my family's small business -- this project led to a decline in business and led several family businesses to close in the CID. This Sound Transit project is much larger in scale and longer in duration and would have even more critical impacts which would make it difficult for small businesses to survive.</p> <p>In conclusion, the 5th Ave options would be devastating for this neighborhood, and the 4th Ave options, while potentially less destructive, would have significant impacts and more research needs to be done. Please take the time to approach this project from a racial and social equity perspective -- this means centering and being accountable to the communities who would be most impacted by this project.</p> <p>Sincerely, Aya Bisbee</p>	Aya Bisbee
------------	---	------------

<p>04/28/2022</p>	<p>Having examined the DEIS, it is very clear to me now that the construction options that run along 5th Avenue pose an existential threat to the Chinatown International District neighborhood’s community and future. I write this to you as a former long-time CID resident, employee of several of its great organizations, and a child raised in the neighborhood’s playground of parks, bars, restaurants, stores, cafes, sidewalks, streets, and many other “third places” offered by the CID’s uniquely vibrant environment, which happens to be inextricable from its history of formation and its community’s struggle for survival.</p> <p>Dear Sound Transit, I have questions.</p> <p>Why this neighborhood? Why here? What amount of “community engagement” could possibly justify the placement of your gargantuan exhaust vents in an area densely inhabited by residents, businesses, and pedestrians? In a COVID-era time in scientific discovery where we now know the importance and priority of air quality in society, why would you choose to ventilate the bad, dirty air from the underground train station straight into the CID, the highest concentration of senior-aged residents in the Seattle-area? Who are mostly low-income, immigrant, Asian seniors! Did you know that kids live in the International District? (So much so, that multi-family housing has become a priority for affordable housing developers in the area. Look at the types of units SCIDpda and Interim have built and are building right now! They are specifically building large multi-room units because there is a tradition of large immigrant families living in the CID and there is a need/desire by large families to live in the CID. Renderings I’ve seen mocked-up for us to imagine these vents in the neighborhood (renderings not found in the DEIS, but by people who read the DEIS and modeled images to scale) are dystopian, to say the least. Laughably and horrifically so.</p> <p>To the authors of this version of the DEIS, the lead decision makers, and the Sound Transit Board: here’s a hypothetical statement, a thought experiment that hopefully serves as an empathy-generating analogy and pair of shoes you could step into for one second. (And possibly a way to gauge how I feel about the proposed options on 5th Avenue.) Imagine: What if the government bore a train tunnel into your backyard – no, your aging mother’s backyard – connected a ventilation shaft from the nearest construction site to just outside her kitchen window and front door, and piped all the exhaust, smoke, and airborne particulates into her home’s vicinity for 10 years? While that may sound like an uncalled for statement, it is not hyperbole. It is not an alarmist’s exaggeration. This is what you, Sound Transit proposes to do to our community’s grandmothers, aging uncles, children, mothers, sisters, brothers, shopkeepers, workers – real people who deserve better than to have their air further poisoned or have their mental health continually ground upon day-in and day-out with the incessant noise pollution you will bring, your mortar and pestle continually grinding on the brick and mortar of our neighbors’ minds – by proposing to build right outside their front door. (And finally, the functional purpose of those vents I mentioned earlier.) You are indeed inflicting violence on a community with every right to live in a peaceful environment. The 5th Avenue options will bring constant destruction, ruin, and sadness to a neighborhood that has proven itself to be not only a place of life, but a place of life-giving impact for the greater Seattle region.</p> <p>I of course do not intend, nor hope for, any malice or harm on anyone’s loved ones or themselves. And I hope you all would hold the same position – please think about the harm the 5th Avenue Station will cause on our loved ones in the CID.</p> <p>Between redlining, Japanese incarceration, the building of the Kingdome, and the construction of I-5, the Streetcar, and all the other infrastructure and utility projects that you most certainly already know about, fueled and framed by the historically consistent malice and negligence of racism and white privilege, the CID has seen too many traumatic changes in its lifespan. Construction on 5th Avenue will be yet another chain in the chainlink of considerable harm we have seen throughout the CID’s history. Why is it that we, as friends, advocates, and member’s of this neighborhood’s community, find ourselves needing to speak up to prevent another violent act to be actively inflicted upon it by the powers that be? Why is it not common sense for the people at Sound Transit to not pursue the least violent option? (Move on 4th. Minimize harm.) Does Sound Transit think it can get away with the violent acts of displacement and community destruction by prioritizing the community AFTER they are gone (as suggested by the racial equity toolkit published in February)?</p> <p>The CID exists because the people who originally built it had nowhere else to go, and generation after generation the community made lemonade out of the lemons they found when they got there. Waves of Asian immigration could not go anywhere else but this area due to redlining, and the people who fought to preserve and strengthen these communities gave their lives to give its current shape. Communities survived and sometimes thrived DESPITE the game (This Very American Life) actively rigged against them. But this is not a reason for Sound Transit to do whatever it wants to because the community’s resilience will allow it to survive this future – this is a reminder that Sound Transit NEEDS TO MINIMIZE HARM where harm has been par-for-the-course for so long, and quite frankly we do not know how much more this community can take before it’s existence has been fully eroded.</p>	<p>Joseph Guanlao</p>
-------------------	---	-----------------------

This project feels like engineers and planners who majored in science and did not take a single class in the humanities. I say this because Sound Transit's plans to build on any of the 5th Avenue options lack any sense of humanity. Where Is Sociology In The Draft Impact Environmental Survey? Where Is The Humanity In The 5th Avenue Options Which Plan To Rip Through The Chinatown International District And Leave A Lasting, Cumulative Harm On A Community Of Color?

Why pick the 5th Avenue options, with the greatest possible number of businesses displaced?

How is this not class warfare? Were the neighborhood in question a wealthy, white neighborhood – Sound Transit would not have been emboldened to include the 5th Avenue options. The 5th Avenue options are so obvious in their de-prioritization of communities of color and those living in poverty.

I have a question. When Sound Transit sees and reads the word "community" as it relates to the CID, does Sound Transit not see that word and envision real people? Does Sound Transit not see real children live in the CID? Real mothers? Real seniors? Real people with dreams, hopes, and aspirations? Real people who spend time in real homes? Shop in real stores? Real business owners? Are small business owners not real people? Are small businesses not part of the real fabric of a community? Is the Chinatown International District not a real home for people?

Is the Chinatown International District not worthy of the same considerations afforded to more affluent, less Asian, more white neighborhoods?

By proposing to build in the CID with any of the 5th Avenue options, Sound Transit is saying boldly that Sound Transit does not see the CID as a real community. One of my favorite places to get coffee or get a drink is Hood Famous Cafe & Bar. The owners recently renovated to enlarge the place and account for the sizable and largely Filipino American community that patronizes it. Seattle's Historic Filipinotown, one could say, finds its lasting vestige in that cafe. Filipino Americans get the opportunity to imagine a future where the community can come together in a neighborhood where the community once was. We waited through the permissive ups and restrictive downs of the pandemic to eat and drink there again with our friends and family. The construction of I-5 displaced many Filipinos who once lived there. And now Filipinotown faces, once again, to see the glimmers of a community foothold washed away. With all the buildings surrounding Hood Famous (and the Publix, in which it is located) demolished, the streets closed, and the miserable level of construction noise, Hood Famous will effectively be surrounded by a moat of misery and chaos for years. How does any business survive that? Who wants to hear constant jack-hammering and beep-beep-beeping while they are studying or meeting with a friend? And how will the residents who live above Hood Famous in the residents endure the noise and pollution? That will become an area to be avoided during construction. Small businesses not immediately displaced by demolition will not have a fighting chance to operate and exist and make money as businesses. And residents will want – perhaps need – to move "of their own accord." (Really, you guys are forcing them out.)

Why were the residents in the Publix Building not specified as "displaced" in the sections describing displacement by the 5th Avenue options? Are those residents not real people, worthy of inclusion in Sound Transit's definition of displacement? How does Sound Transit define displacement as it relates to the residents who will leave because the air and noise pollution will have rendered their homes unlivable? (How many people in Capitol Hill moved away from the Pike/Pine Corridor during the ongoing protests where the police constantly tear-gassed demonstrations? Those 2020 protests lasted a summer in that area, and the ST3 construction proposes to last a decade.)

I was told Sound Transit would have to answer every question made via comment. Above all, please answer this for yourselves: How will Sound Transit minimize harm and avoid unneeded harm and create a future where it prioritized THE LIVES OF PEOPLE above all else?

Consider my impassioned statement reflective of many who cherish the CID as their physical and spiritual home. I feel like had Sound Transit done any amount of real community engagement, Sound Transit would have received many more statements like mine. But alas, nobody knew. I talked to the owner of Oasis Tea Zone last week, and he had no idea that the building where Oasis is located (Nagomi Tea House) is slated for demolition. This is a business located just off 5th Avenue with a 20 year history in that location. It is preposterous to find out that the owner of Oasis did not receive outreach and engagement from Sound Transit on the fact of its demolition – so preposterous it can only be an intentional act of omission from the greater business community in the CID or a largely negligent oversight of the most extreme proportions – casting doubt on the levels to which Sound Transit had made any on-the-ground efforts to understand the community in which it proposes to build within.

I found myself angry while writing much of this. But I did not find myself overstating anything. I am saying things with added emphasis perhaps, or but not exaggeration. I may have said the same things more than

	<p>once or twice because they need to be reiterated because we are not sure you understand. I would not be here with my grievances if it was apparent you already did.</p> <p>People are mad and scared and rightfully so: the impacts of building on 5th Avenue are so obviously bad for the harm it will cause.</p> <p>Do not build on 5th Avenue. Building on 5th Avenue is not just a bad idea. It is a foreseeably destructive plan that will cause physical, mental, and psychic harm on people in the area, and erode the immeasurable gift that the CID is for people across the region and those visiting. If it means less harm, build on 4th Avenue. And make it worth it because it's gonna take a long time either way, and it will need to serve it's purpose for much longer than that.</p> <p>Please do the right thing.</p> <p>— Joseph</p>	
04/28/2022	<p>Hello,</p> <p>My name is Christopher. I'm a resident of Seattle. As an employee and frequent visitor to the Chinatown International District, I'm appalled by the proposition of major construction in the neighborhood. All 5 of the DEIS options would drastically alter the neighborhood by paving the way for more gentrification, erosion of cultural heritage, and displacement long-term.</p> <p>Among the options, the two on 4th Ave would be less terrible given that they're further from the heart of the neighborhood but I'd like to see more efforts to work with CID community partners to explore other options or refinements to the proposed options.</p> <p>I am unaware of any community leaders or organizations that are strongly advocating for this construction development to begin with, and am upset that this seems forced on the neighborhood without our desire or consent.</p> <p>Best, Chris</p>	Chris Long

<p>04/28/2022</p>	<p>I am writing to demand that the Sound Transit Board reject the proposed 5th Avenue options for the Ballard-International District light rail stations. I am referencing the options laid out in Figures ES-33, 34, and 35 West Seattle and Ballard Link Draft EI. Any of these options would be tragic for the CID community; all light rail options must take the lowest impact route possible in order to preserve the quality of life, history, and cultural hubs of the CID.</p> <p>Please consider this excerpt from a recent post in the South Seattle Emerald: “We have nowhere else to go in Seattle,” she [Betty Lau, a resident of the CID] said, referencing a history of racism, gentrification, and redlining that has moved the neighborhood several times since its founding on the waterfront in the mid-19th century. “We’ve always taken the least desirable land, and as soon as it becomes valuable, we get pushed out.”</p> <p>Iris Pavitt</p>	<p>Iris Pavitt</p>
<p>04/28/2022</p>	<p>organization that is worth saving.</p> <p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery’s Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I’m excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I’ve recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can’t be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery’s Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef’s knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I’m looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>BladeGallery Inc Customer:</p> <p>Home address:</p> <p>Email:</p>	<p>Antoine Pepino</p>

04/28/2022	<p>Dear Sound Transit, I have not once ever heard anyone living in the Seattle community request Sound Transit demolish sections of the Chinatown-International District [CID] in order to expand "services."</p> <p>As a 6th generation Chinese American, speaking on behalf of the diverse senior communities living in the CID that are not internet savvy, their associations resoundingly condemn this latest racist action in a well documented history of injustices committed against minority communities in Chinatown.</p> <p>Given the option, no expansion of ST3 into Chinatown at all is their preferred option, especially since the region from SoDO to the Stadiums offers ample alternative to demolishing this residential community. Of course the 4th avenue "alternative" is the least worst poison pill the community is willing to accept, but it should persist as a mark of shame for the next 100 years upon EVERY single individual involved in this prejudice fueled push by ST3.</p> <p>The Chinatown-International District is not some transient parking lot, there are children and families that live here. It is the heart of the Seattle Asian-American and Pacific Islander community of the entire Pacific Northwest. Moreover, it is a National Historic Treasure from the Streets that Bruce Lee called home to the Wing-Luke museum to the oldest Chinese-American association in the country.</p> <p>From the hate crimes and government mandates of recent years; to vagrancy that has been directed at the CID; to unsolved murder of Donnie Chin; to the need for Donnie to Co-found the International District Emergency Center to begin with; to I-5 threatening the neighborhood; to the King Dome proposals; to the Internment of Japan town; to the Chinese Exclusion Act, lynch mobs, and burning down of Chinatown of the past the Government of Washington and Seattle City just never seems to be able to just leave the community alone to prosper. Yet, what an amazing coincidence over the decades that they can find every justification or another over the years to destroy parts of the International District.</p> <p>The 4th Avenue option is the least worst, but it will also necessitate: 10+ years of pollution that the "environmental impact analysis" doesn't address for in public health; it does not account for the fact that at least 30-50 years of environmental remediation efforts will be needed to offset this construction; as a American Society of Transportation Certified logistician I see the economic necessity based on the population size of the region doesn't require expansion of this scale; the final products calls for an exhaust structure that will pump dirty air into the International District for generations to come with an elementary school nearby; Sound Transit right now is not safe and has ample other concerns funding should be going to; and the community doesn't want this expansion (of course that appears to be the least concern for ST3).</p> <p>Respectfully, Sea Chan, Chinatown-ID Community Advocate LCDR (SSO) USNavy</p>	Sea Chan
------------	--	----------

<p>04/28/2022</p>	<p>I strongly support choosing the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b). We strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5), both of which would result in significant displacement and environmental impacts in the Yancy/Avalon/32nd Ave corridor. Particular concerns with the "Medium Tunnel" alternatives include:</p> <ul style="list-style-type: none"> (1) displacement of Transitional Resources on Avalon Way; (2) more housing displacements on and adjacent to 32nd Ave SW than preferred alternatives; (3) accessibility of remaining residences given alignment of guideway near the corner of 32nd Ave SW and SW Andover St; (4) construction impacts from excavation of retained cut; and (5) operational visual/noise impacts to remaining residences along 32nd Ave SW, SW Andover St, and SW Genesee St. <p>Delridge Station:</p> <p>I strongly support a Delridge Station located to the south of Andover St, either the Preferred Dakota St Lower Height (DEL-2a) or Delridge Way Lower Height (DEL-4). We do not support locating the Delridge Station north of Andover St (DEL-5 or DEL-6). Particular concerns with the Andover St. station include:</p> <ul style="list-style-type: none"> (1) undesirable location of transit-oriented development adjacent to a steel mill and elevated highway ramp; (2) poor walkshed of station; (3) poor compatibility with racial equity toolkit; (4) bus transfer requiring buses to turn off of Delridge Way SW; (5) lack of community input from bus riders in south Delridge and Burien. <p>Avalon Station:</p> <p>I support the underground Avalon Station (WSJ-3a or WSJ-3b). However, given the low ridership estimate (1,200 daily boardings) and uncertainty of 3rd party funding, we consider the Avalon station to be a lower priority than the longer tunnel and support dropping the Avalon Station in exchange for a longer tunnel.</p> <p>Additional alternatives to study:</p> <p>I strongly encourage Sound Transit to study additional long tunnel alternatives that would not require 3rd party funding. These include:</p> <p>Removal of the Avalon Station from the "long tunnel" alternatives (WSJ-3a/WSJ-3b). This option is similar to cost savings proposals presented to the CAG in April 2021 but with lesser displacements and impacts in the Avalon neighborhood.</p> <p>2. The Yancy/Andover alternative (WSJ-4/WSJ-5) with a tunnel portal to the east of Avalon Way (with or without the Avalon Station). This modification would reduce the impacts of the "Yancy-Andover" routing and lower the height of the guideway in Delridge.</p> <p>3. The Pigeon Point Tunnel alternative (Appendix M). This alternative reduces impacts in both the Andover and Pigeon Point neighborhoods and places the Delridge Station in a better location than the DEIS alternatives for both bus transfers and neighborhood integration.</p> <p>The success of ST3 is dependent on the integration of light rail stations within dense residential neighborhoods and job centers. The above recommendations will achieve the vision that was promised to West Seattle voters.</p> <p>Signed,</p> <p>Gary Reifel</p> <p>Mobile: 206-601-1051 gary.reifel@gmail.com</p>	<p>Gary Reifel</p>

04/28/2022	<p>The the elevated stations (Preferred Alternatives WSJ-1 and WSJ-2) and the Medium Tunnel 41st Avenue Station (WSJ-5 other alternative) are the cheapest alternatives and impact the least number of homes in the area. This, of course, makes several assumptions: first, SoundTransit is serious about keeping costs down and impacting fewer people and their homes. As of August 2021, SoundTransit was over its budget by 6.5Billion and many lines are delayed by at least 2 years later than planned. The second assumption is that SoundTransit will not exploit this opportunity to appropriate large to medium parcels, razing people's homes and gardens on them, rezoning and subdividing the lots, and selling them to builders after they have built their line for a net profit.</p>	Prag Mishra

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>I am humbly requesting: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Sincerely, Satbir Gill</p>	Satbir Gill

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>Hello Sound Transit,</p> <p>My name is Owen Phillips. I've been a Seattle resident since 2019, and I am writing to submit my comments to Sound Transit's Draft Environmental Statement. The Ballard-West Seattle Link Extension must put riders and increased ridership first.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p>	<p>Owen Phillips</p>

The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Jonathan Cracolici joncracolici86@gmail.com</p>	<p>Jonathan Cracolici</p>

<p>04/28/2022</p>	<p>Hello!</p> <p>I am writing to comment on the West Seattle / Ballard Link project.</p> <p>In terms of ridership potential and driving sustainable urban environments, this project is the single most important element of the entire ST3 program. Unfortunately, current plans as outlined in the draft EIS are woefully inadequate for this critical segment.</p> <p>Before examining each segment of the project in detail, I would like to outline the general principle by which I believe alternatives for such a project must be judged:</p> <p>Above all else, the project must build good transit. This means prioritizing users of the completed system as the most important stakeholder. Remember that construction pain is temporary but a poorly built system will pain Seattleites for 100 years or more.</p> <p>Considering this principle presents several general-case actionable imperatives, which can be applied to most project decisions:</p> <ul style="list-style-type: none"> -All proposed stations must be built, not cut -Stations must be located centrally, as close as possible to their intended destinations and activity hubs -Stations must minimize vertical circulation. Tunneled stations must be as shallow as possible. -Transfers must be short and fast. Vertical circulation involved in transfers must be even shorter than that required to exit the station. -Once in the system, trains must come as frequently and regularly as possible. <p>With these principles established, we can analyze each station area individually.</p> <p>BALLARD</p> <p>This is probably the most critical non-transfer station of the project. Unfortunately all currently studied alternatives fail to serve the core of the Ballard urban center by at least half a mile. The best location for a Ballard station is along 20th Ave just north of Market St. The proposed 14th Ave station misses this critical juncture by as much as two entire Link stations downtown, and 15th is only slightly better. No current alternative is acceptable, and the final EIS must study a 20th Ave station.</p> <p>The Ship Canal crossing is also a critical component of the system. A drawbridge is likely to cause unacceptable loss of system reliability, and a fixed bridge is (per recent Coast Guard decision) required to be too high to support a Ballard station with reasonable vertical circulation. A tunnel seems to be necessary in this instance.</p> <p>INTERBAY</p> <p>In addition to supporting the Ballard tunnel discussed above, the Thorndyke retained cut station discussed in alternative IBB-2 provides good access to marine industry at Fishermen’s Terminal and convenient bus connection on both Emerson and 15th.</p> <p>SMITH COVE</p> <p>While all Smith Cove options presented are acceptable, SIB-1 (Galar St) benefits from existing pedestrian infrastructure to help offset the height of the elevated facility and provides good connections to both the Smith Cove cruise terminal and the Expedia campus.</p> <p>SEATTLE CENTER</p> <p>While neither Seattle Center station proposal is particularly good, the Mercer St station is both unacceptably deep and significantly further from Seattle Center activities. The Republican Ave station is the only acceptable alternative, although further work should be done to reduce the depth of this station and, if possible, mitigate impacts on Seattle Center area theater groups.</p> <p>SOUTH LAKE UNION</p> <p>All proposed South Lake Union stations miss the South Lake Union urban cluster almost as bad as Ballard. Both proposals additionally dump riders in the middle of a freeway interchange immediately upon exiting the station. Neither proposal is acceptable.</p>	<p>John Lyon</p>
-------------------	--	------------------

A station in the vicinity of Westlake or Terry Avenues would actually serve South Lake Union and allow a shallower crossing of SR-99 further removed from its tunnel infrastructure.

DENNY

While either location is broadly acceptable Westlake provides better access to major employment centers. This station is mystifyingly deep and should be as shallow as possible, ideally at cut-and-cover depth.

WESTLAKE

While 5th Ave is the significantly superior location for Westlake Station, everything else about the DT-1 proposal is unacceptable. This station should be built in the style of the transfer stations in the Washington DC Metro, with the new platform crossing directly (~15 - 20 feet) below the existing and escalators directly from both existing platforms to the new center platform. This presents the ability to leverage the existing partial station box on 5th (currently used for escalators between mezzanine and platform levels), especially if short, frequent trains are used on this line as discussed later.

MIDTOWN

Consider using a side platform station or very slightly diagonal elevators to provide direct elevator access between street and platform levels.

INTERNATIONAL DISTRICT / CHINATOWN

This is the single most critical station in the project due to its location as not just a transfer station but the station allowing transfers not only between the two Link trunks but also Sounder access and the junction between the 1 and 2 lines. The station must be built holistically, connecting all modes with seamless transfer experiences. Unfortunately, none of the current alternatives do this.

This station CANNOT be a deep level station, and of the possible location for shallow stations 4th Ave seems the preferable choice. Unfortunately even the 4th Ave Shallow alternative is significantly too deep to allow seamless transfers. A better option would put the new platform underneath an extended 4th Ave viaduct at the same level as the mainline rail tracks. From there, a transfer tunnel could be dug underneath the Sounder platform, the new Link platform, and the existing Link platforms to allow the quickest possible transfers.

SODO

As the junction of trains headed to West Seattle and Tacoma this is another station where transfer experience is a critical concern. This transfer is best facilitated by the mixed profile (SODO-2) alternative, which has the additional benefit of preserving the SODO busway, which provides a critical connection for disadvantaged communities in south Seattle.

Car overpasses at Lander and Holgate should NOT be constructed with transit dollars from ST3. If it is of such critical importance to save car drivers from waiting 30 seconds for a Link train to pass it should come out of the car-focused budget of SDOT or WSDOT.

DUWAMISH CROSSING

The planned rebuild of the West Seattle Bridge provides opportunity for cost reduction by eliminating the need for a separate structure for light rail trains. This opportunity should be taken to the fullest extent.

WEST SEATTLE

This is the area I am least qualified to comment on, but I do have two areas of concern: First, that no station should be cut from this segment, and second on the extreme amount of housing that is suggested to be torn down to accommodate elevated rail tracks. The low density suburban style nature of West Seattle land use already makes this the lowest impact segment of the project, and removing housing only exacerbates this problem. Elevated tracks should be built within the street right-of-way in the style of the Chicago L. If this cannot be accomplished then alternate modes of service should be considered to West Seattle, such as surface Bus Rapid Transit or a gondola such as the one proposed by West Seattle Skylink.

CONSIDER AUTOMATED LIGHT METRO

While studied and built as one project, current plans are to operate the West Seattle and Ballard branches

as separate lines on the final Link network. Doing so would require technical compatibility with the rest of the Link network.

If, however, the West Seattle and Ballard branches are combined into a discreet operating line, however, great benefit could be achieved by swapping lengthy LRV trains for short, hyper-frequent automated light metro in the style of the Vancouver, BC Skytrain. This would have multiple significant benefits:

- Automation would reduce operating costs for the lifetime of the line
- This style of train can be cost effectively run at frequencies significantly greater than the current Link network. This makes turn-up-and-go travel significantly more attractive for users of the line.
- Increased frequencies mean the line could maintain the same capacity with significantly shorter trains. This in turn enables much smaller stations (as short as 150 feet), significantly reducing construction costs and enabling station placement that would be impossible with the ~400 foot trains of the rest of the Link network.

Due to the overwhelming potential benefits of this arrangement, it should be studied in the final EIS and not merely written off.

Operationally, this could be accomplished with 1 line trains short turning at Northgate using the existing pocket track and 2 line trains continuing to Everett. This would minimize the increase in line length over the existing ST3 operations plan.

Thank you for taking the time to carefully consider my feedback. I realize most of it has been less than complimentary, and appreciate your willingness to listen to make this project the best it could possibly be.

Sincerely,

John Lyon

04/28/2022	<p>I am writing to express opposition to the planned activities for the Ballard light rail extension. I'm opposed to the current initiative as it disproportionately affects a minority and low-income population located in the International District.</p> <p>The International District has endured a disproportionate share of impacts from City development projects. There was the 1920s street extension that displaced the previous International District. This neighborhood also endured impacts from the construction of I-5 in the 1960s, the sports stadiums in the 1970s and 1990s, and the First Hill Street care in recent years. The proposed extension only deepens this legacy.</p> <p>Based on the environmental justice evaluation provided in Appendix G, the International District would face:</p> <p>The displacement of 120 residents from a low-income building that is within the construction zone The permanent displacement of 5-27 businesses plus 8 businesses temporarily displaced during the project The displacement of 120-230 employees from the zone The residents would experience an increase in noise/vibrations for up to 16 hours per day over the course of an estimated 11 years. Three historic properties would be adversely affected under all segment alternatives A longer response time for emergency services, and potential delays in waste/recycle pickup, Exposure to hazardous construction material, and NO positive economic impacts.</p> <p>With such little benefit but extreme impact not only on the displacement of residents and businesses but also of cultures as road closures, subsequent business access will be limited, noise and pollution — this is a death sentence to a community that has already felt disproportionate impacts of COVID-19 that includes an increase in racial violence and xenophobia.</p> <p>The proposal is a model of injustice. To proceed would only deepen structural inequalities.</p> <p>Sincerely, Janine Sakiko Slaker, PhD Zip 98144</p>	Janine Slaker

04/28/2022	<p>To Whom It May Concern:</p> <p>My name is Michelle Chow and I am a member of the Chinatown-International District (CID) community. As a member of this community, I was deeply disappointed to learn that Sound Transit put forth several proposals that would significantly displace a number of local businesses in the 5th Ave alternatives.</p> <p>The Link Light Rail extension from West Seattle to Ballard is an exciting project that will meet several of our region's climate and transportation access goals. However, the current proposal for the 5th Ave alternatives falls short of meeting our community's most pressing needs.</p> <p>Sound Transit has a strong commitment to incorporate equity and the communities they serve. This means listening to community voices and making, at times, tough decisions to ensure that the actions the agency takes do not further inequities and injustices.</p> <p>The CID community has faced a history of unjust displacement in the name of city planning - the expansion of 2nd Avenue, the development of Interstate 5, and the building of the Stadiums have all had a negative impact on this historic, predominantly Asian, district of Seattle. In this time of reckoning for so many of our local, state, and federal government agencies, it is unacceptable for Sound Transit to move forward with the 5th Avenue proposals given the significant community opposition.</p> <p>And in addition to Sound Transit's equity commitment, the City of Seattle also has a strong Racial and Social Justice Initiative. The City is committed to ending institutionalized racism and race-based disparities in City government. The 5th Avenue proposals do not live up to this Initiative. The City should genuinely consider the vast opposition being raise by the community and at a minimum, outreach and engagement should be conducted in all of the top languages spoken by residents of this area. According to the data from the City of Seattle, this includes Traditional Chinese, Spanish, Vietnamese, Somali, Amharic, Korean, Tagalog, Tigrinya, Oromo, Japanese, Russian, Arabic, Khmer, Thai, and Laotian. We all know that the CID community is one of the most diverse communities in the region - it's critical that all people have access to engage in this decision.</p> <p>I strongly urge the agency to listen to the community's voice and move forward with the 4th Avenue options. Communities of color such as the CID community recognize the importance of green investments to reduce carbon emissions and improve public transportation. But those investments can be made at a lower cost to the community and avoid unnecessary displacements.</p> <p>Thank you for the opportunity to provide comment.</p> <p>Best,</p> <p>Michelle Chow Resident of 98122</p>	Michelle Chow

In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Michael Block miken_7@hotmail.com</p>	<p>Michael Block</p>

<p>04/28/2022</p>	<p>Hello,</p> <p>I am a homeowner in the Avalon neighborhood at 3166 SW Genesee St., and support the positions outlined in the recent comment letter provided by residents of this neighborhood that was submitted. I've included a summary below of the alignment, station locations, and cost reduction strategies that I strongly support. The WSBLE extension offers an incredible opportunity for the neighborhood to gain fast and reliable transit access to the growing region-wide light rail network. I strongly advise the board to select a long tunnel alignment which enhances and complements the existing built environment. All other proposed alternatives, including the short/medium tunnels, would result in significant and irreversible environmental impacts to the Avalon neighborhood.</p> <p>Alignment:</p> <p>I strongly support choosing the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b). I strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5), both of which would result in significant displacement and environmental impacts in the Yancy/Avalon/32nd Ave corridor. Particular concerns with the "Medium Tunnel" alternatives include:</p> <ol style="list-style-type: none"> (1) displacement of Transitional Resources on Avalon Way; (2) more housing displacements on and adjacent to 32nd Ave SW than preferred alternatives; (3) accessibility of remaining residences given alignment of guideway near the corner of 32nd Ave SW and SW Andover St; (4) construction impacts from excavation of retained cut; and (5) operational visual/noise impacts to remaining residences along 32nd Ave SW, SW Andover St, and SW Genesee St. <p>Delridge Station:</p> <p>I strongly support a Delridge Station located to the south of Andover St, either the Preferred Dakota St Lower Height (DEL-2a) or Delridge Way Lower Height (DEL-4). I do not support locating the Delridge Station north of Andover St (DEL-5 or DEL-6). Particular concerns with the Andover St. station include:</p> <ol style="list-style-type: none"> (1) undesirable location of transit-oriented development adjacent to a steel mill and elevated highway ramp; (2) poor walkshed of station; (3) poor compatibility with racial equity toolkit; (4) bus transfer requiring buses to turn off of Delridge Way SW; (5) lack of community input from bus riders in south Delridge and Burien. <p>Avalon Station:</p> <p>I support the underground Avalon Station (WSJ-3a or WSJ-3b). However, given the low ridership estimate (1,200 daily boardings) and uncertainty of 3rd party funding, I consider the Avalon station to be a lower priority than the longer tunnel and support dropping the Avalon Station in exchange for a longer tunnel.</p> <p>Additional alternatives to study:</p> <p>I strongly encourage Sound Transit to study additional long tunnel alternatives that would not require 3rd party funding. These include:</p> <p>Removal of the Avalon Station from the "long tunnel" alternatives (WSJ-3a/WSJ-3b). This option is similar to cost savings proposals presented to the CAG in April 2021 but with lesser displacements and impacts in the Avalon neighborhood.</p> <ol style="list-style-type: none"> 2. The Yancy/Andover alternative (WSJ-4/WSJ-5) with a tunnel portal to the east of Avalon Way (with or without the Avalon Station). This modification would reduce the impacts of the "Yancy-Andover" routing and lower the height of the guideway in Delridge. 3. The Pigeon Point Tunnel alternative (Appendix M). This alternative reduces impacts in both the Andover and Pigeon Point neighborhoods and places the Delridge Station in a better location than the DEIS alternatives for both bus transfers and neighborhood integration. <p>The success of ST3 is dependent on the integration of light rail stations within dense residential neighborhoods and job centers. The above recommendations will achieve the vision that was promised to West Seattle voters.</p> <p>Thank you,</p>	<p>Caitlin Singer</p>

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Reina Shah</p>	Reina Shah
04/28/2022	<p>Hello,</p> <p>After looking at the options I want to share that I am all for more public transportation in our city. Growing up here and relying on the bus as a kid I hope to have a future where there are plenty of transportation options for kids like me all around the city. Saying that I would love to have a minimal amount of impact on the historical International District and it's residence/ businesses. I support going ahead with the 4th Ave option since it will have a smaller impact on the neighborhood. Though it may be more costly I believe losing some of the historical parts of the neighborhood would be a much higher cost in the long run. Thanks for taking my comment into consideration.</p> <p>Best, Kelabe</p>	Kelabe Tewolde

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). 04/28/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, BladeGallery Inc Customer: Chao-Ching Wu Home address: 13421 NE 129th Dr. Kirkland, WA 98034 Email: goyasco@comcast.net Phone: 425.314.3962</p>	Chao-Ching Wu

Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Aaron Morton santasarmy@gmail.com</p>	<p>Aaron Morton</p>

	4019 Cascadia Ave S Seattle, Washington 98118	
04/28/2022	<p>Please do not build the Ballard to West Seattle light rail expansion on 4th Ave. It would irrevocably change the International District, which culturally and historically is of paramount importance to our city. It would destroy small businesses, leave workers without jobs and decimate the landscape of the neighborhood. It makes far more sense to use 5th Ave and honestly, the thought of sacrificing the ID for any reason is heartbreaking and unconscionable. So much of Seattle's history is gone now and the ID is special in that we can remember the horrors of our country's past and just as importantly we can celebrate and enjoy what the ID is today and going to be in the future.</p> <p>Please do the right thing. Thank you, Deborah Mangold</p>	Deborah Mangold

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Pooja Rao</p>	Pooja Rao

--	---	--

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>Hello, I hope these are concise and to the point but at the end of everything the Ballard-West Seattle Link Extension must put riders and increased ridership first.</p> <p>Your target should be to build a solution that would help a single parent who speaks English as a second language, has a bad back, and is holding down 2 part-time jobs.</p> <p>We must not eliminate ANY stations from what voters approved with ST3 in 2016. If planned stations are removed, that is in direct opposition to what the region's voters want and need.</p> <p>All stations should be built as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters.</p> <p>-Deep and high-capacity stations also call for excellent vertical conveyances, which is proven to have not been a priority in the past. This pattern has to be broken. Elevators and escalators cannot fail riders or trap them from alternatives in the event of mechanical failure.</p> <p>Creating large capacity areas other than elevators will allow optimal use of the elevators by less physically able-bodied individuals, allowing them to still use our transit to the fullest extent. Ensure escalators and elevators are both fast while having enough capacity and redundancy to handle traffic like game-day rushes.</p> <p>Elevators should go from street level straight to the platform level, without mezzanines to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. If we are to anticipate expanding our transit system off of this current expansion, we need a better and more flexible solution.</p> <p>In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard.</p> <p>In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. The organizations here have had to deal with quite a bit of disruption from the pandemic and Climate Arena's construction, and additional disruption and impacts should be heavily weighed and avoided when possible.</p> <p>In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. This will allow better expansion opportunities and quicker transfers which will increase usage.</p> <p>At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. Having to navigate 3-4 different mezzanines to reach your</p> <p>At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.</p> <p>In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.</p>	<p>Alex McGuire</p>
-------------------	---	---------------------

In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.

Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.

In order to future proof our growing system, we must design for expandability in four locations:

- (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).
- (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
- (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
- (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
- (5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. 04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely,</p> <p>(Your Name)</p>	Allie Scheidecker

<p>04/28/2022</p>	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>RE: West Seattle to Ballard Light Rail Plans</p> <p>I gave up my car 22 years ago. I'm a full time bus and light rail user. I LOVE the growth of light rail in our region. I'm concerned about plans for light rail in the International District (ID). Full closures of King and S. Weller streets will negatively impact area businesses. Also, I do not want Seattle to lose any more of our Historic Chinatown district. Three blocks were surrendered previously for the transit tunnel.</p> <p>Please reconsider using 5th Ave and move forward on 4th Ave instead.</p> <p>Thank you for your time, Susan Groshong Seattle, WA</p>	<p>Susan Groshong</p>

<p>04/28/2022</p>	<p>To whom it may concern,</p> <p>My name is Mark Jessup and I'm a proud member of our Beacon Hill community.</p> <p>I understand that the ICD Light Rail station needs expansion and there are two main routes being considered. While the 5th Avenue route offers a faster and financially less-expensive option, it would come at great cost to the residents of the IDC. Not only would it disrupt a number of local, and long-standing, businesses within the community, it would come as yet another blow to a neighborhood which has suffered disproportionately throughout the Covid crisis and continues to battle anti-Asian sentiment and active vandalism.</p> <p>This would seem to be an issue that the City would care about and weigh heavily as it considers the ultimate expansion route. Displacing successful local businesses, which are also cultural touchstones for the neighborhood and Asian community throughout the city, sends a terrible message to our friends and neighbors there. And it's yet another blow to an area of rich cultural heritage which has had to overcome far too much already. Recently and throughout our checkered past.</p> <p>I implore you to consider the people first, and make the ostensibly harder, but ultimately right, choice. Choose 4th Ave.</p> <p>Thank you for your time,</p> <p>Mark Jessup</p> <p>5052 28th Ave S Beacon Hill</p>	<p>Mark Jessup</p>
<p>04/28/2022</p>	<p>To Sound Transit Board Members and Seattle City Council Members:</p> <p>My name is Samantha Gil-Vargas and I am a member of the Seattle community. Along with hundreds of others, I am urging Sound Transit to move forward with the 4th Ave option, NOT 5th.</p> <p>We want the 4th Ave tunnel station to avoid 5th Ave impacts! To name a few consequences of 5th Ave option, there would be the full closure of King Street, South Weller, and 5th Avenue for several years, with increased noise and air pollution, dust, dirt, and unsettling vibrations for the CID. This harms CID residents, businesses, schools, daycares, and other programs that serve thousands of people -- from youth to elders, from residents to visitors. 5th Avenue construction would also cause enormous disruption to 30 immigrant and refugee businesses to permanently close or be forced to try to move, when these businesses have already been battered by the pandemic and higher-than-ever anti-Asian hate crimes.</p> <p>These are completely unacceptable consequences.</p> <p>A 4th Ave tunnel station avoids these 5th Ave impacts, so please: I am urging Sound Transit to listen to the people, take 5th Ave off the table, and #MoveForwardOn4th.</p> <p>Thank you for your time.</p> <p>Sincerely,</p> <p>Samantha Gil-Vargas</p>	<p>Samantha Gil-Vargas</p>

<p>04/28/2022</p>	<p>Dear Lauren Swift and Sound Transit Board,</p> <p>I currently live in Seattle (King County District 8) I'm a former CID resident and worker. I continue to visit the CID and Stadium area via public transit.</p> <p>A major issue with this DEIS in general is the lack of operational noise analysis and visual quality analysis performed for the CID segment. In addition, stadium events, which are frequent and bring in tens of thousands of visitors to the area, were not considered in the transportation analysis.</p> <p>In the Final EIS, I would like you to address the following:</p> <ul style="list-style-type: none"> -Air pollution impacts from the tunnel ventilation system and overall air pollution impacts of the project -Noise impacts <p>A lengthier and more in depth environmental justice analysis</p> <ul style="list-style-type: none"> -Stadium events in transportation analysis -How this project is in line with the City of Seattle's RSJI given the lack of in language outreach (see bottom of email for more) <p>I am most concerned about all three 5th Ave alternatives. The building that currently houses Joe's Bar is a contributing building to the National Historic Register. The 5th Ave options would destroy this building, displace multiple businesses, and destroy the core of Chinatown in an irreversible way. 5th Ave Alternatives (CID 2a, diagonal, and 2b) lead to the most construction impacts on the neighborhood and the biggest negative impact on residents.</p> <p>The 5th avenue alternatives are also negative for the health and well being of CID residents and visitors, since the DEIS indicates that "Closures of the 5th Ave S., 6th Ave S., King St. and Weller St. could affect emergency response times in the CID neighborhood." Eliminating the load zones in such an important commercial area will also significantly negatively impact CID small businesses.</p> <p>The DEIS disingenuously states that the 5th Ave alternatives will not have any long term impacts to Parks and recreational resources. Hing Hay Park is the central gathering space in the CID. A new tunnel ventilation building so close to the park will definitely prevent people from fully enjoying and coming to the space, especially with air pollution and noise pollution impacts that aren't fully explored in this DEIS. The DEIS states that construction truck volumes estimated for peak station construction range from 10 to 35 trucks an hour, which will definitely lead to increased air pollution in the CID and specifically in the biggest park and gathering space in the CID.</p> <p>Lastly, Sound Transit has absolutely not done their due diligence in reaching out to non English speakers. "The executive summary viewed by Northwest Asian Weekly in Chinese did not appear to have any damage assessments." (NW Asian Weekly, April 23-29, 2022, pg 11). In language outreach needs to be done, at a minimum, in Chinese, Spanish, and Filipino.</p> <p>Sincerely, Dre Say</p>	<p>Dre Say</p>

The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Alpa Gautam</p>	Alpa Gautam

<p>04/28/2022</p>	<p>Greetings to the ST3 Design Team and the Hon. Andrew Lewis,</p> <p>Thank you for the opportunity for providing citizen and resident comments to the Interbay-Ballard segment of the ST3 expansion.</p> <p>I am a life-long citizen of the State of Washington, a 70-year resident of Seattle and a 40+ year resident of the Magnolia-Interbay community and make this comment as such.</p> <p>My primary comment is that the Design Team must recognize the importance of the Magnolia-Queen Anne-Interbay-Ballard communities.</p> <p>These communities are vital to the economic and social welfare of the City of Seattle and must be fully supported by public transit.</p> <p>I urge the Design Team to consider all comments that are submitted by individuals and organizations.</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where residents and visitors will use it.</p> <p>A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW is a viable option.</p> <p>Please re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Please consider a continuation of a tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment.</p> <p>I encourage Sound Transit to consider long-term needs and maximize the size of stations, entry plazas and mezzanines.</p> <p>It is my view and experience that large facilities will encourage use and will provide for future growth.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand; Minimize transfer time from transit to platform; It is vital to avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. I am among the group that does not oppose elevated trains. Based upon my experience in other parts of the world, I do not believe that elevated trains are eyesores. Please locate a station on West side of Elliott and if it is an elevated station, locate it over Galer flyover/Magnolia Bridge Please ensure that buses pick up and drop off on west side of Elliott - under no circumstances require a pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): The station must be proximate to Magnolia peninsula for emergency access in event of bridge failures; The station must lead to the Ship Canal Tunnel; Please do not require a pedestrian crossing at Dravus for bus connections; Please design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>For the Ballard station: The Ballard station should take riders to where they want and need to go: e.g. medical center, dining, shopping, Historic Ballard; Please re-examine and complete the study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village; Please re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your time and consideration,</p> <p>Ted Willhite =====</p> <p>Ted Willhite (206) 604 0221</p>	<p>Ted Willhite</p>

--	-------	--

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. 5th Avenue station options also seem to be detrimental to the neighborhood for many years and too many businesses affected. 4th Ave may be more expensive but it would be the better path forward. International district will end up being the MOST critical and used station as it is central to ALL transit as well as huge sporting events. International district has to be prioritized and done right! In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p>	<p>Greg Pieczynski</p>

	<p>201 17th Avenue E Seattle , Washington 98122</p>	
--	---	--

04/28/2022	<p>Sound Transit Board Members: The Chinatown-International District (CID) has been renamed, repeatedly moved and historically hurt by major infrastructure projects. I am advocating from the 3rd and last Chinatown.</p> <p>The Sound Transit West Seattle to Ballard line connection is again threatening the CID.</p> <p>I am against the 5th Avenue tunnel where construction over the next decade would take place in the heart of the neighborhood (Jackson to King St and 5th to 8th Avenue) and will be devastating to the CID businesses and residents with street closures, noise and air pollution. Youth, elderly, businesses and visitors will be negatively affected for years to come.</p> <p>I urge sound transit to move forward on Fourth Avenue</p> <p>Building a tunnel beneath Fourth Avenue will only slightly affect the CID. The argument that it will cost more is not valid because the increase in cost is due to replacing the 4th Avenue viaduct which is already in need of replacing in the near future. The higher cost is valid to protect a historic neighborhood that has historically been devastated.</p> <p>I urge sound transit to solicit community input and include their concerns in the DEIS and that the DEIS be thoroughly analyzed before a decision is made.</p> <p>The CID has a long history of having to organize and fight for our neighborhood. From the beginning we were not allowed to live among mainstream society, pushed to the fringes of town, the industrial areas with little or no public utilities. Still we built a community, prospered and welcomed others who came after us who also were not welcome in mainstream society.</p> <p>We have been physically removed. It wasn't enough that the Chinese Exclusion Act prevented new Chinese immigrants. Seattleites were unaccepting of the Chinese who were already here resulting in rioting, burning of homes and businesses, forcing us to the docks for deportation and later relocating Japanese from their homes and businesses to concentration camps.</p> <p>Redlining kept us in the neighborhood. Infrastructure tore us apart from I-5 down the middle, the King Dome and Metro Tunnel on the west, loss of Lane street, and the Street Car Barn closing northbound traffic at Dearborn and 8th into the neighborhood, continually pecking away at the neighborhood and/or limiting access.</p> <p>For a long time we've prided ourselves on being resilient. As a 4th generation Seattle Chinatown great-granddaughter we are tired from having to retain resiliency. When can we relax and trust that we can just be, be included, considered, protected and prosper? Let's make it 2022!</p> <p>Best Regards, Sue-May Eng Chinatown Community Member</p>	Sue-May Eng

04/28/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick-and-mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high-performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, BladeGallery Inc Customer: Andrew Dieken Home address: 7705 168th Ave NE Unit 116 Redmond WA 98052 Email: andrewrd@live.com Phone: 425-577-0068</p>	Andrew Dieken

<p>04/28/2022</p>	<p>Dear Council Members and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Please take the time to respond,</p> <p>Steve Hoverson 5312 Sound Ave Everett Wa 98203 206 484 0171 stevehoverson@gmail.com</p>	<p>Steve Hoverson</p>
<p>04/28/2022</p>	<p>Please do not take the 5th Ave option, where it will have huge impacts on 3 neighborhoods. Further, Chinatown has had a long history of being pushed out, particularly when the land becomes valuable. The CID is a historical neighborhood and should be preserved as such.</p> <p>Sincerely, Amy Chen Lozano</p>	<p>Amy Chen</p>

<p>04/28/2022</p>	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p> <p>Dianne Spatz</p>	<p>Dianne Spatz</p>

<p>04/28/2022</p>	<p>I expanded the section on the National Register Seattle Chinatown Historic District because of the oddity of it including a large portion of Japantown. That needs to be explained, and here are the facts, gleaned from documents and meeting minutes in the DAHP file on Chinatown Historic District:</p> <p>Thurs., Aug. 14. 1986 "Proposed King Street Historic District" Seattle P-I, A9 map by Duane Hoffman, P-I</p> <p>1986 King Street Historic District nomination form listing of historic properties written by Larry Kreisman of the City's Historic Preservation Office; changed to Chinatown Historic District by Washington State Office of Archaeology and Historic Preservation</p> <p>Fri., Aug. 22 Washington State Advisory Council on Historic Preservation meeting at Nippon Kan to consider nomination of King Street Historic District to the National Register, 10 a.m. Aunty Ruby has organized speakers to change name to Chinatown Historic District.</p> <p>CWBA Pres. Ted Pang, Winnie Che (owner Little Saigon Restaurant, Winnie Fashion, Hop Thanh), and Paul Woo give public comment on re-naming of King Street Historic District nomination to Chinatown Historic District with written statements; written statement also sent by Aunty Ruby, who could not attend. Others present: Bisim Tsai Lee, Paul Mar, Richard Ou [which nomination name they supported is unknown]</p> <p>Paul Woo, president of Pacific Investment Corp. sent a letter calling for Chinatown Historic District name Chong Wa President Ted Pang speaks on correcting King St. Historic District nomination name to Chinatown Historic District; state office rejects King St. Historic District and sends in nomination as Chinatown Historic District.</p> <p>Commissioners vote to delete King Street Historic District name and approve Chinatown Historic District name</p> <p>Ron Chew, Sue Taoka, IDEA, support King St. Historic District name [their names appear on the King Street Historic District nomination form]</p> <p>Original historic district boundaries extend to Washington Street but due to property owner objections and opt outs, is finally set at Main Street.</p>	<p>Betty Lau</p>

04/28/2022	<p>I am a strong supporter of public transit and I believe that the light rail is extremely important to our region. However, I have concerns around the way public transit infrastructure so often takes place in marginalized communities who don't have the resources or opportunities to advocate for themselves.</p> <p>Listening to the community and working with the people you intend to serve is crucially important when undertaking civil projects. Please take the concerns around the environmental impact, the traffic, the quality of life into serious consideration, especially in regards to the construction on 5th Ave (CID-2a and CID-2b). I recognize that public projects will never have unanimous support, and that change is an inevitable side effect of progress. However, I implore you to listen to what the community is saying - not just which proposal would be the least painful for them, but really listen to what they are saying. In an ideal world, we would see another round of proposals with these concerns taken seriously - or at least an explanation of what alternatives were deemed infeasible in the current system.</p> <p>In the future, taking in these community concerns early on in the design process and treating them as major stakeholders (rather than making assumptions about what they want) would help get buy in and support sooner. Everyone impacted by the construction of the infrastructure should get a seat at the table. They deserve a representative or some way to give feedback ahead of time. They're owed that much, at least.</p>	Brian Park
04/28/2022	My vote goes for 20th avenue Ballard station. Would be the smartest move.	Tu Pham
04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Megan Miyazaki</p>	Megan Miyazaki

<p>04/27/2022</p>	<p>Sound Transit planners,</p> <p>Please do not put the new light rail station on 5th Ave in the ID!</p> <p>Although all options will affect this neighborhood, the 5th Ave options will have significantly more detrimental impacts that this neighborhood (after a history of construction impacts, xenophobia, hate crimes, and the pandemic) should not bear.</p> <p>I am particularly concerned about the harmful impacts that are outlined in the documents attached.</p> <p>Tera Oglesby 1005 E Spruce St, Seattle, WA 98122</p> <p>P.S. My five year old wanted to add these important Emojis to our message:</p> <p>???????????????????? ????????????????</p>	<p>Tera Oglesby</p>

04/27/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer of BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>R. Kent Morrison</p> <p>7701 Rialto Blvd., UNIT #34, Austin TX 78735</p> <p>rkentmorrison@gmail.com</p> <p>512.415.2530</p>	Kent Morrison

04/01/2022	<p>Dear Ms. Balducci,</p> <p>Hello, my name is Charlotte Ina Kuzminski. I am an eighth-grade student at Westside School in West Seattle. Throughout our course of study in Mandarin and Social Studies, we have learned about the rich history of the International District, the history of redlining in the City of Seattle, the Chinese Exclusion Act and Seattle Chinese Expulsion of 1886, the Japanese Internment, and the effects of the Covid-19 Pandemic on our Asian-American community members in the Seattle-Metro area. Most recently, we have spent some time with Betty Lau in the International District, learning about the history of Immigration Reform in the state of Washington.</p> <p>It is our understanding that the International District and, specifically, Chinatown, continues to experience destruction, gentrification, and Anti-Asian racism once again. Sound Transit cannot select the Fifth Avenue corridor as a future light rail route. If Fifth Avenue is selected, it will have a grave effect on our older Asian-American population in South Seattle and, specifically, the economy of Little Saigon, Chinatown, and Japantown. Road closures, re-routes, gas, water, electrical shut-offs, and noise pollution will severely affect the nearly 300 businesses already battered by the pandemic.</p> <p>As a multicultural student community that values equity and social justice, we cannot stand for a forced displacement of non-English speaking elderly, the acquisition and demolition of National Register Chinatown Historic properties, and the closure of schools, daycare, and elderly programs that serve thousands of Asian-American residents.</p> <p>The monetary and logistical expedience of big business and capitalism can not be prioritized over the rich history and vibrance of a historic bedrock of Asian-American culture in Washington State.</p> <p>We implore you, our local government representatives, to lobby to use Fourth Avenue, not Fifth Avenue, for the future Sound Transit Route. Equity, transparency, social justice, and inclusion are on the line. Do you want to be remembered for safeguarding Chinatown? Do you want to be recognized for inclusive city practices and policies? If so, protect Chinatown, Chinese Community History, and stop continued anti-Asian exclusion in the city of Seattle. Invaluable cultural heritage can not and should never be weighed on the same scale as economic or political interest.</p> <p>Sincerely,</p> <p>Charlotte Kuzminski</p> <p>Westside School, Class of 2022</p>	Charlotte Kuzminski
------------	--	---------------------

04/01/2022	<p>Dear Nicole,</p> <p>Hello, my name is Henry. I am an eighth-grade student at Westside School in West Seattle. Throughout our course of study in Mandarin and Social Studies, we have learned about the rich history of the International District, the history of redlining in the City of Seattle, the Chinese Exclusion Act and Seattle Chinese Expulsion of 1886, the Japanese Internment, and the effects of the Covid-19 Pandemic on our Asian-American community members in the Seattle-Metro area. 03/31/2022	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>I am writing this letter to object to the proposed construction on 5th Avenue from Chinatown to Japantown.</p> <p>This proposal would mean full closure of King Street, S. Weller and 5th Avenue for several years. This is unacceptable!</p> <p>Because going ahead with this construction would mean a great disruption for those businesses and the people from all around the Puget Sound Region that visit those businesses.</p> <p>300 businesses already battered by the pandemic, higher than ever anti-Asian hate crimes, and criminal violence</p> <p>30 immigrant businesses permanently closed or forced to move</p> <p>Schools, daycares, programs serving thousands of children and youth</p> <p>Programs, classes, recreation for 1,200 elderly non-English speakers</p> <p>The better option would be to coordinate with City of Seattle on 4th Ave. This alternative would save on demolition/construction time and save money for the taxpayers that are paying for ALL of these costs!! 4th NOT 5th!!</p> <p>Thank you for taking the time to read this!</p> <p>Best regards, Christine Wynder</p>	Christine Wynder
------------	--	------------------

04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood. Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested .</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region. Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, 1-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Phillip Jones</p>	Phillip Jones
------------	--	---------------

04/28/2022	<p>To whom it may concern,</p> <p>Recent discussions of “realignment” of the WSBLE should lead to an opportunity to reexamine assumptions and cost evaluation that have been considered baseline for the segment so far.</p> <p>Regarding the Interbay-Ballard segment, it is clear that escalating real estate and ROW costs, plus serious impacts of residential and business displacements have made the tunnel below the Ship Canal competitive or lower cost than an elevated line. Sound Transit should seriously weigh cost of the years-long disruptions in freight mobility during construction and afterwards.</p> <p>Therefore, Sound Transit should consider, even at this late date, tunneling all the way from downtown to Ballard, to avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines. Below, I have attached photos of tunnel entrances to Washington DC’s Metro stations, located in the city, often next to buildings. The entries are compact and recognizable, and should be considered as a less expensive alternative to massive elevated structures and unnecessary space taken up by grand entrances and mezzanines.</p> <p>We have waited a long time for light rail to make to our neighborhood, and still have close to two decades to wait. Let’s at least plan to have it go where we want to go (west of 15th in Ballard, a stop that’s proximate to Magnolia, which is chronically under-served by transit), and let’s avoid years of disruption, and plan to tunnel all the way from downtown to Ballard.</p> <p>Thank you for your consideration.</p> <p>Janis Traven 3247 Magnolia Blvd West Seattle WA 98199 206.285.7375 janistraven@comcast.net</p>	Janis Traven

<p>04/28/2022</p>	<p>Lauren Swift Sound Transit 401 South Jackson Street Seattle, Washington 98104</p> <p>Subject: Comments on the WSBLE Draft EIS</p> <p>I am providing comments on the Draft EIS for the proposed West Seattle and Ballard Link Extensions Project. My comments are focused on the Delridge Segment Alternatives of the West Seattle Extension. The text of Section 6.0 (Alternatives Evaluation), particularly Section 6.2.2.1.3 (Delridge Segment), provides summary information on the potential impacts of the Delridge Segment Alternatives based on the more detailed information presented in the Environmental Consequences section. Table 6-3 further summarizes that information. The following bulleted comments focus on comparisons of the key environmental impacts of the Delridge Segment Alternatives presented in Table 6-3:</p> <ul style="list-style-type: none"> • Transportation impacts: although there would be about a 3 percent lower ridership with implementation of Alternatives DEL-5 and DEL-6 as compared to the projected ridership for the other Delridge Segment Alternatives, both Alternatives DEL-5 and DEL-6 would have lower impacts on roadways during construction. • Potential Displacements: DEL-6 would have the fewest residential displacements (48), with the impact of other alternatives ranging from 70 to 197 displacements. Alternatives DEL-5 and DEL-6 would have the most potential business displacements, but only a difference of 4 to 8 displacements (21 For DEL-5, 20 for DEL-6, and 13 to 16 for each of the other alternatives). The substantial difference in residential displacements seems significant in comparison to the small difference in potential business displacements. In addition, as stated in Section 6.2.2.1.3, "All alternatives except for Alternatives DEL-5 and DEL-6* would displace Washington State Department of Children, Youth, and Families offices; however, Alternative DEL-5 would displace a duplex owned by Transitional Resources, and Alternative DEL-6* would displace the Transitional Resources main office, onsite supportive housing, and adjacent apartment building." The importance of these differences is not addressed in the DEIS. • Length of Potential Operational Visual Impacts: Alternative DEL-5 would have a visual impact on 0.2 mile, Alternative DEL-6 would impact 0.1 mile. All other Delridge Segment Alternatives would impact 1.0 mile. This represents a substantial difference in impacts. Unfortunately, the table does not include the following statement that is presented in Sections 6.5.1 and ES.5.1: "Visual impacts from elevated guideway in the Delridge Segment (Preferred Alternative DEL-1a, Option DEL-1b, Preferred Alternative DEL-2a*, Option DEL-2b*, Alternative DEL-3, and Alternative DEL-4*)" would be "Permanent impacts that could be significant and unavoidable [emphasis mine] . . .". As further stated in Section 6.5.1, "Preferred Alternative DEL-1a, Option DEL-1b, Preferred Alternative DEL-2a*, and Option DEL2b* would have the most adverse effects to historic resources and the greatest change to community character. These alternatives, along with Alternatives DEL-3 and DEL-4*, would impact the most area with sensitive viewers, but impacts would differ among alternatives. Alternative DEL-6* would have the least potential for visual impacts because it would be closer to industrial areas and a lower height west of Avalon Way Southwest." • Potential Operational Noise and Groundborne Noise or Vibration Impacts before Mitigation: Although the DEIS states that "all impacts can be mitigated," there is ample evidence that many wheel squeels and other noise of vibration impacts are not mitigated. The important point is that once again, Alternative DEL-6 has substantially fewer impacts (102) versus the other alternatives (178 to 270). • Historic Properties with Adverse Effects: As for other elements of the environment, DEL-6 is the least objectionable, with no adverse impacts as compared to Alternative DEL-5 with 2 resources adversely affected, and the other alternatives adversely affecting 4 to 6 resources. Further, as stated in Section 6.5.1, "Preferred Alternative DEL-1a, Option DEL-1b, Preferred Alternative DEL-2a*, and Option DEL-2b* would have the most adverse effects to historic resources . . .". • Park and Recreational Resources Impacts: Alternatives DEL-5 and DEL-6 would avoid impacts to Park and Recreational Resources, whereas all of the other alternatives would have impacts on these resources during both construction and operation. Affected resources include: The West Seattle Golf Course (from temporary modifications during construction to long-term effect on use; as noted in Section 6.2.2.1.3, "Preferred Alternative DEL-2a and Alternative DEL-4 would have the greatest impacts on parks entering a tunnel on the west end of the West Seattle golf course. These alternatives would require modifying the golf course and would permanently reduce the playable area."), Delridge Playfield (from long-term use to temporary construction impacts), Longfellow Creek Natural Area (from long-term operational impact to temporary construction impacts), and The Longfellow Creek Legacy Trail (detour of the trail). 	<p>Bill Staeger</p>
-------------------	---	---------------------

The summary information presented in Table 4.2.18-3 (Summary of Preliminary Section 4(f) Use Determinations by Alternative for the Delridge Segment) indicates that both of the Preferred Alternatives would affect many Section 4(f) properties (including use of the West Seattle Golf Course with implementation of DEL-2a). Alternatives DEL-5 and DEL-6 would avoid those impacts, except for de minimus impacts to the Seattle Steel Company/Bethlehem Pacific Coast Steel Corporation.

As noted in Table 6-9, the projected costs of Preferred Alternative DEL-1a (\$600 – 700 million) are substantially higher than those of Alternatives DEL-5 (\$500 million) and DEL-6 (\$400 million). Clearly there is not a financial advantage to the proponent's Preferred Alternative DEL-1a. However, the projected cost of Preferred Alternative DEL-2a (\$400 million) is similar to those of Alternatives DEL-5 and DEL-6.

The comparison of alternatives for the Delridge Segment presents summary information for each alternative but does not (1) compare the overall impacts of the alternatives, (2) identify the alternative with the least environmental impact, or (3) provide justification for selecting Alternatives DEL-1a and DEL-2a as the Preferred Alternatives. In short, the DEIS presents important data but does not answer the question: "So what?".

Based on my analysis of the summary information on the Delridge Segment Alternatives presented in Section 6.5, it seems clear that implementation of the Preferred Alternative and the other similar alternatives (Alternatives DEL-1, DEL-1a, DEL-1b, DEL-2a, DEL-2b, DEL-3, and DEL-4) would result in greater impacts than those of Alternatives DEL-5 and DEL-6. Importantly, the DEIS does not provide justification for selecting a Preferred Alternative that would result in significant impacts that cannot not be avoided or mitigated. There does not appear to be any justification for either Alternative DEL-1a or Alternative DEL-2a to be selected as the Agency-preferred Alternative in the Final EIS. Selection of the Agency-preferred Alternative will require a detailed analysis using the information on the impacts of the Delridge Segment Alternatives presented throughout the DEIS and any additional information made available after the DEIS was issued.

04/28/2022	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement. West Seattle has been desperate to connect with the rest of the city and after 2 years without our bridge we are suffering both personally and for our small businesses.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations:</p> <ol style="list-style-type: none">(1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).(2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).(3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.(4) Midtown must be designed to accommodate future expansion to the east along Madison St.(5) West Seattle should be built for future southern expansion to White Center and Burien. <p>Thank you for your review of these comments.</p> <p>Katherine Dee katedee@gmail.com 6321 Beach DR SW Seattle, Washington 98136</p>	Katherine Dee

Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Steven Gil shortycruz58@gmail.com</p>	<p>Steven Gill</p>

The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast, (2) reliable, and (3) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties. The Westlake station of late is an example of failures on these fronts: broken escalators and elevators with the added complexity of a mezzanine level.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments and I hope we can build a better future of transit together.</p> <p>Katherine Tully</p>	<p>Katherine Tully</p>

In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>As a resident of West Seattle myself, these last few stations are of particular importance to me. Creating practically designed and carefully located stations to support the highest ridership levels possible is what will most benefit the neighborhood long term. Moreover, overall, Sound Transit must prioritize the rider's experience whenever possible, by keeping stations from going massively deep, and by making transfers from one line to another as quick and seamless as they can be.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). 04/28/2022	<p>Hello,</p> <p>Please take the 4th Ave. option. I feel the 5th Ave. option will have a negative impact Chinatown, as I know it since I was born and raised in Seattle.</p> <p>Seattle has become a city I don't recognize anymore...high crime, traffic jams, pricing of housing for rentals and purchases among the highest in the nation just to name a few. Please do not destroy the CID as we know it now.</p> <p>Sincerely, Leslie Wittman</p>	Leslie Whittman

<p>04/28/2022</p>	<p>To the Sound Transit Board of Directors,</p> <p>I am personally joining many community members and organizations in calling for a 90-day extension of the comment period AND a deeper dedication to a culturally-relevant process for gathering feedback from the MANY communities impacted by a project of the scale of the WSBLE in Chinatown-International District. This comment is my own position and not the position of my staff at API Chaya, who has not yet been able to respond to the EIS, though much of my comment is informed by my work at API Chaya.</p> <p>Reviewing the proposals on "ES.3.1.2.2 Chinatown-International District Segment" (pages ES-25 through ES-29), I see that all four options outlined place significant burden on residents, businesses, infrastructure, and community members of the C-ID, even with a commitment to relocation. The neighborhood has experienced so many major shifts particularly during the pandemic and all four options will be yet another significant blow to the livelihood of the neighborhood.</p> <p>I am deeply concerned about the impacts the WSBLE project will have on so many families and community institutions that I serve and partner with in my role as Youth Program Coordinator at API Chaya, which is a community-based nonprofit organization that empowers survivors of gender-based violence and human trafficking to gain safety, connection, and wellness.</p> <p>My team at API Chaya has a long history of conducting outreach in the Chinatown-International District neighborhood to help inform the work we do. When we do outreach to the Chinatown-International District community, we dedicate a lot of time, resource, and relationship building because of the complexity of who makes up this neighborhood.</p> <p>Language accessible outreach must go beyond a handful of translated materials on physical fliers and online platforms. It involves format and platform considerations, the relationality of various language groups, the various cultural protocols that accompany a language, etc.</p> <p>Further, the community that makes up the C-ID extends far outside the physical boundaries of the neighborhood. There are many young people, families, workers, clients, and temporary residents that make up the day-to-day communities of the C-ID, and not all of them are physically in the neighborhood at the same times, on the same days, in the same places. Getting even a small sample of input from these various sectors of the neighborhood takes varied and intentional strategies, each with such deep insight about the needs of their community.</p> <p>Unfortunately, there is a legacy of many institutions' infrastructure projects (from the building of I-5, the many sports stadiums, and the Streetcar, for example) where the C-ID community has lived the negative consequences of ineffective, or improper, or negligent outreach strategies.</p> <p>Even getting input from my staff at API Chaya, which has been serving many communities in and beyond the C-ID for over two decades, takes time. At present, our agency does not have a response to the draft EIS because we have not had enough time to be able to digest and respond as a staff in time for this comment period.</p> <p>Survivors of gender-based violence and human trafficking in our communities have a significant disadvantage when it comes to access. Many families I work with and know personally rely on the C-ID as a go-to place for breaking isolation and finding resources. This is an invaluable neighborhood to so many survivors and their input on changes to this neighborhood are easily missed by large institutions.</p> <p>That said, I call upon Sound Transit to also commit to doing diligent feedback-gathering in the Chinatown-International District neighborhood and extending the commenting period on this EIS by 90 days.</p> <p>Sincerely,</p> <p>Robert Gavino (they/them pronouns)</p> <p>Youth Program Coordinator</p> <p>robert@apichaya.org</p> <p>On the unceded ancestral lands of the Duwamish people ~ click to learn more</p>	<p>Robert Gavino</p>

04/28/2022	<p data-bbox="261 100 321 128">Hello!</p> <p data-bbox="261 218 1232 275">I'm writing today to submit comments on the EIS for West Seattle Ballard Light Rail Extension. More specifically, the C/ID Light Rail Station.</p> <p data-bbox="261 365 1295 478">My preference is whatever option will do the least amount of harm to the C/ID community. The C/ID has been a 2nd cultural home for me ever since I moved to Seattle. I'm not a fan of all of the options present... However I do think the 4th Ave S options are better as they seem to have less of an impact on the neighborhood.</p> <p data-bbox="261 569 1297 737">I think Sound Transit should do an equity analysis to learn from the construction impacts of the King Dome and the Street Car on the neighborhood to identify additional strategies to support small businesses in the neighborhood. There have been so many examples of how transportation planning has failed BIPOC communities in the past, especially in the C/ID. This is a real unique opportunity for Sound Transit to be a leader in uplifting not just bold transportation choices, but support building community as light rail infrastructure expands.</p> <p data-bbox="261 827 1279 911">The worst case scenario would be for the tunnel to reopen to have the surrounding neighborhood completely gone. I hope that Sound Transit leads not just with equity, but compassion as a key employer and neighbor in the immediate area. Thank you for your consideration.</p> <p data-bbox="261 1001 354 1029">-Ben Han</p> <p data-bbox="261 1119 740 1146">Ben Han ben.han7@gmail.com 206-446-1826</p>	Ben Han

--	--	--

04/27/2022	<p>Dear Sound Transit Board & Mr. Foster,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family-owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off-ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion, given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>If you would like to speak in person on additional details around the scope of this request, please don't hesitate to let me know.</p> <p>Sincerely,</p> <p>Douglas Kikendall & Sarah Silbovitz</p>	douglas Kikendall

<p>04/28/2022</p>	<p>Dear Councilmembers and Sound Transit</p> <p>I was saddened to receive an email last night from The BladeGallery and learn that their business in jeopardy.</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle) and disappointed to learn that a business that is still new to your city (2 years), its citizens and creative community may be loosing their storefront. A small business that is still investing in your community with renovations and developing their facility to fully support their customers, may be sent packing.</p> <p>I have known about BladeGallery for many years, I have yet to find another business in the cutlery market space with such a diverse offering of knives (supporting more than 600 artisans from around the world) and this level of quality (hand crafted, forged durability). No other business brings this many brands to one accessible location.</p> <p>I would love to visit their new larger storefront and the opportunity to attend one of their classes such in knifemaking, forging, culinary knife skills, and sharpening.</p> <p>Learning that they are in danger of their loosing their new location, being taken through eminent domain, for the DUW-1a and DUW-1b Light Rail paths is unfortunate. I recognize the importance of rail transit and public transportation but please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Their little corner of your city serves them and the community well as it ties in with neighboring business's as well. Seaport Steel Lindmark Machine Works Decorative Metal Arts Lawless Forge and SCR Studios</p> <p>These businesses support each other and the hard working, creative community of crafters. Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. I'm looking forward to their classes aimed at established knifemakers and beginners. BladeGallery Inc is a small business that currently supports 8 employee households. During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>Please, visit The BladeGallery Showroom, experience this amazing building and what it has to offer before making your decision. These are not products you will find at a big box store.</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, Johnathan Frania</p> <p>BladeGallery Inc Customer from the other side of this amazing country:</p> <p>Home address: 164 Springhouse Rd Allentown, PA 18104</p> <p>Email:coldmm803@yahoo.com</p>	<p>Jonathan Frania</p>

	<p>Phone: 570-574-4375</p>	
<p>04/28/2022</p>	<p>Hi Light Rail planners, I use the light rail regularly, for both work and leisure. I am excited about the new extensions!</p> <p>It is important that the MAIN TRUNK remain reasonably continuous. I heard that you are considering running the current southern portion over to West Seattle, so a train change is required to continue further north between the airport and regions to the north. Please do not do that!</p> <p>As someone who actually uses transit, it is important for you to know in the design office (where, frankly, I assume most of you don't actually depend on the system you're building) every single transfer means I have to add about 15 more minutes to my scheduled commute, to accommodate wait time and early or late arrivals of one train (or bus) or the other. For someone actually trying to get somewhere, every minute counts.</p> <p>Please keep the main north/south route intact! Please do not force thousands of people into unnecessary and confusing transfers that reduce usability of the system. We need more people to get out of their cars and into the train, and that means efficient design for seamless ease of use.</p> <p>Build all branches off one intact main trunk, please.</p> <p>Thank you, Susan Zeman</p>	<p>Susan Zeman</p>

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Sten Iverson st.sten@gmail.com</p>	<p>Sten Iverson</p>

--	---	--

04/28/2022	<p>Greetings, In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements. I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines. For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges Thank you for your consideration.</p>	Elizabeth Stanton
------------	---	-------------------

<p>04/28/2022</p>	<p>Generally agree with the future of Light Rail for West Seattle (Delridge to WS Junction).</p> <p>Note: Sound Transit originally proposed an actual Junction Station. In some of the alignment options, including the Preferred Option WSJ-2, Sound Transit is proposing to shift the "Junction Station" east of Fautleroy which is outside of the "Junction" area. This seems to be in conflict with the original proposed intent for the Junction Station.</p> <p>Concerns with Draft EIS Alternatives:</p> <p>The Draft EIS is focused on Construction Costs for its preferred alternatives versus Total Cost based on community impacts. The impacts of non-construction costs should be quantified in monetary terms and added to each of the options to represent a clear "Total Cost" (Construction Cost and Non Construction Cost Value). Light Rail is a long term investment! This evaluation should not be shortsighted and based on Construction Costs alone! Low cost does not translate to being the best alternative. The non-construction impact costs include, but are not limited, to the following:</p> <p>Impact to existing and/or adjoining residential neighborhood areas in terms housing demo. Elimination of livability for adjoining neighborhoods in terms of noise, view obstructions (guideway locations and guideway heights). Loss of existing and/or established housing and/or living units (condos/apts.). Loss of Rental Assisted Housing (RAH). Cost and Timeframe to replace housing eliminated by each alignment option especially RAH.</p> <p>Recommendations:</p> <p>Pursue alignment options that are largely in existing commercial and industrial zoned areas that are largely underutilized and/or under developed. These areas exist as buffers from residential/housing areas and should be targeted and used as such for the purposes of light rail alignment and station locations. Pursue alignment options that have lower level stations for ease of accessibility. Pursue alignment options that lessen the impact/livability to existing (including adjoining) residential/neighborhood areas by reducing infrastructure obstructions as much as possible. Pursue alignment options that do not substantially reduce the existing built housing inventory. The Tunnel alternatives in the draft EIS mitigate/reduce several of the negative impacts listed above.</p> <p>Conclusion:</p> <p>This is an opportunity to preserve and enhance West Seattle for the long term! Sound Transit and the Sound Transit Board should pursue alignment and station location options that mitigate/reduce negative impacts of light rail infrastructure to the community as a whole. The Tunnel options (WSJ-3a, WSJ-3b, WSJ-4 and WSJ-5) substantially reduce the negative impacts and should be pursued.</p> <p>Thank you for the opportunity to comment.</p> <p>Sincerely,</p> <p>Mike Campagnaro,</p> <p>Family living within 4700 Block of 38th Avenue SW. Also have received notice from Sound Transit that certain other owned properties may be potentially affected.</p> <p>206-354-5235</p>	<p>Mike Campagnaro</p>
<p>04/28/2022</p>	<p>Dear city council</p> <p>I am writing you regarding the light rail project that is potentially going to affect Blade gallery at 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980. Blade gallery is a big part of my small business and it would be a extremely detrimental to my business if they taken out by this light rail project.</p> <p>Thank you for your time</p> <p>Mike Clark 683 high st n monmouth OR 97361 360 703 8036</p>	<p>Michael Clark</p>

04/28/2022	<p>Manager DEIS Comments,</p> <p>When are these expected to be completed? 2075?</p> <p>Brad Reynolds bbr8380@gmail.com 669 s. King st Seattle, Washington 98104</p>	Brad Reynolds
04/28/2022	<p>Hi!</p> <p>As a seattle resident that frequents the areas in the CID Id like to comment that 4th Ave options for sound transits new routes to be constructed seem like the better option as opposed to 5th Ave. this seems the best constructed route to minimize damages to local neighborhoods and businesses.</p> <p>Thanks for your consideration,</p> <p>Sarah B</p>	Sarah Blucher
04/13/2022	<p>I am a King County voter who just moved from Bellevue to Seattle. It is shocking to hear that King County might place Sound Transit construction on 5th Ave so that a large portion of Chinatown International District will be closed for years for light rail construction and businesses will be wiped out. I urge you to choose the option with least impacts: 4th Avenue viaduct partnership with City of Seattle. King County and City of Seattle have done many great collaborations. I hope this time you will choose collaboration than convenience because Chinatown International District is a very important reason why we Asians are here. We would like to celebrate the diversity and openness of Seattle generation after generation.</p> <p>Sincerely,</p> <p>Ling Zhuang</p>	Ling Zhuang

04/27/2022	<p>Dear Council members and Sound Transit,</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sq ft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. I'm looking forward to their classes aimed at established knifemakers and beginners. <p>04/27/2022</p>	<p>The Chinatown-International District is a National Historic District and that designation should be respected as development decisions for this project are under consideration that impact this neighborhood. There should not be any erosion or loss of property ownership in particular in the designated historic core. Protection of the history and culture of the neighborhood should be paramount. It seems ridiculous that such a possibility is even under consideration.</p> <p>This historic residential neighborhood is an extremely fragile one. Past public development projects and the on-going pandemic have stretched paper thin the community's resilience. We need outside changes and development to tread very carefully to keep the community intact for our future.</p> <p>Thank you. Jerry Chihara Chihara Architect 307 6th Avenue So. B Seattle, WA 98104 206.381-3961</p>	<p>Jerry Chihara</p>

04/27/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. I really cannot stress this part enough. In this day and age, when we are drowning in cookie cutter chain store fronts, it is crucial to keep alive a business such as Epicurean Edge. There is literally no place to take knives to get sharpened properly except for this place. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. 04/27/2022	<p>Hello,</p> <p>I request my comments below be registered regarding the Draft Environmental Impact Statement for extending light rail to West Seattle and Ballard.</p> <p>ES.3.1.1.2. Duwamish Segment The elevated options that will run over top of Pigeon Hill (and not illustrated) will be very unsightly and not appropriate for the height of the hill not to mention the steep climb that will be necessary for the rail cars. For that reason I believe the Northern Crossing DUW-2 option is best.</p> <p>ES.3.1.1.4. West Seattle Junction Segment If you must bring light rail to the West Seattle Junction (why wasn't a High Point option offered) one of the tunnel alternatives must be used. The elevated options are too destructive be considered. Beacon Hill's tunnel works well. We'd prefer tunnel options because is no available land on the peninsula for the large number of residences and businesses that you need to accommodate by relocation.</p> <p>ES.4 Avoidance, Minimization, and Mitigation Measures I am wondering how the Master Plan assists West Seattle commuters during construction of this project. It has been proven we need more viable options in and out of West Seattle. How about another low level pivoting bridge from Harbor Ave thru Harbor Island to First Ave almost duplicating what the current low level bridge provides and providing a flow of traffic to SoDo.</p> <p>Thank you for reading and logging my concerns. Cynthia McComish 4601 SW Stevens Seattle WA 98116</p>	Cynthia McComish

<p>04/27/2022</p>	<p>Hello,</p> <p>I live on 6th and Weller. If the plan was 5th Ave, it would definitely cause us to move out of neighborhood we love. I urge for the 4th Ave plan to be considered. I understand the 5th cost less and less disruptive to traffic but it would continue to push out communities that have constantly been pushed out.</p> <p>I also would like to note the public engagement has been terrible, especially towards younger (20-40s age) audience such as myself. I understand you did public forums but it did not outreach effectively to younger, working demographics. Only way I learned about was literally tik tok video and then pulled up article after googling. Your engagement to audience that does not read "traditional news" needs to be better to get their opinion. I take the light rail to work from ID station to Westlake, and not once saw single advertisement or note. We did receive mailer but it was not made clear the level of disruption.</p> <p>Here is the tik tok video that made me aware of the issue: https://www.tiktok.com/@janellebentley/video/7091423761442000174?lang=en</p>	<p>Lauren Alfiler</p>

04/27/2022	<p>Hello!</p> <p>Hope you're doing well! I'm Lucy Jiang, a senior at UW in the interdisciplinary Honors program. This quarter, I am taking a class on the urban ecology of Seattle, and we have been investigating how the environment, both natural and human-made, can have lasting impacts on race and social justice within a city. We have discussed the influence that public transportation can have on a neighborhood, both good and bad. Based on our discussions in class, I was inspired to look into the new light rail station options that have been proposed for the Chinatown-International District and to weigh in on this issue.</p> <p>I believe that CID-1a, the 4th Avenue Shallow station, is the strongest option for the new light rail station in Chinatown-International District.</p> <p>Below, I present a few key reasons for this decision.</p> <p>Benefits of Having a Shallow Station Go Beyond CID The Urbanist describes how a shallow station can greatly decrease transfer times. People who are transferring trains (a number that is presumed to be high, considering the central location of the station) will benefit since the time needed to transfer trains will be cut in half. All riders will benefit since having a shallow station in CID will likely mean that the station in Midtown will be shallower as well.</p> <p>Shallow Stations Address Accessibility Concerns Furthermore, I believe that having a shallow station has significant accessibility benefits for wheelchair users. Although I am not a wheelchair user, I have friends who are. It is important to consider that keeping the station as shallow as possible will allow wheelchair users and other riders with mobility disabilities to transfer as quickly as possible without being held up by delays with elevator services at peak times.</p> <p>Shallow Stations Provide Connection Flexibility Based on the notes provided in the Draft EIS, CID-1a and CID-2a are more desirable as they connect to all SODO and Downtown segment alternatives. There is significantly less flexibility associated with CID-1b and CID-2b, and CID-1b does not connect to the preferred at-grade station option at SODO.</p> <p>4th Avenue Leads to Less Disruption of Businesses and Communities Lastly, and perhaps most importantly, constructing a new light rail station on 4th Avenue will be less disruptive than the proposals for stations on 5th. While this may take longer and cost more than alternatives on 5th Avenue due to needing to replace the 4th Avenue South Viaduct, these are short term barriers - I believe that the economic impacts of shutting down businesses in the historical district will last generations.</p> <p>Many Asian families and Asian-owned businesses have been hit especially hard during the COVID-19 pandemic. Based on case studies of past light rail creation, we have seen how this can cause either temporary or permanent displacement of families and communities. As Chinatown-International District gradually revives in a "post-pandemic world", it would be devastating to shut down the core businesses along 5th Ave that are just beginning to thrive again.</p> <p>As a daughter of Chinese immigrants, I have many fond memories of visiting bakeries in the area with my family and friends and I am deeply grateful to live so close to a place that celebrates and welcomes Asian Americans in Seattle. Because of its lower impacts on businesses and families in CID, 4th Ave is a better choice for preserving and respecting the history, economic activity, and community in the CID.</p> <p>As discussed in my class, the introduction or expansion of public transit can vastly transform an area for better or for worse. I hope that Sound Transit will listen to the wishes of stakeholders within the CID, as well as those of other key groups such as disabled folks, to move forward with CID-1a (4th Avenue Shallow Station) option. I look forward to the great benefits that the expanded light rail will bring. Thank you so much for your time and hard work!</p> <p>Best, Lucy Jiang University of Washington Class of 2022</p>	Lucy Jiang
------------	--	------------

<p>04/27/2022</p>	<p>Hello,</p> <p>My general comments follow.</p> <p>First and foremost, design the system for transit riders and the optimal rider experience. Traveling between the station platform and the surface should be quick, straightforward, and reliable. Transferring between transit lines should also be quick and easy, especially at the major transfer points at Westlake Station and International District/Chinatown Station.</p> <p>Build the system to maximize ridership. Design a good rider experience and ridership should follow.</p> <p>Design the system to be easy to expand. Ideally, West Seattle Junction will not be the southern terminus for long as the line extends south to White Center and Burien. Likewise, Ballard should not be the northern terminus for long as the line extends north to Greenwood and perhaps east to Wallingford and the University District. Meanwhile, a future Aurora rail line may link up with the new Downtown light rail tunnel near South Lake Union Station. Planning with expandability in mind could save billions of dollars and numerous headaches down the road.</p> <p>Station locations should unlock transit-oriented development (TOD) opportunities to the highest extent possible. A station isn't just a transit stop, it can be a catalyst for neighborhood development and housing growth.</p> <p>Construction impacts are important but shouldn't solely determine a 100-year investment. It is crucial we pick the right station for the future of Seattle and grapple with the construction impacts that entails. Closing a busy road for a few years is a small price to pay to add a light rail line that will last centuries. The priority in mitigating construction impacts should start with prioritizing pedestrian access, transit operations, and bike routes.</p> <p>Cost is an important factor, but we shouldn't shy away from big investments where there is a high return. Mostly we are worried about building this right, but we can't dismiss costs, especially since some high-ticket items will require third-party funding, which could be difficult to secure. Controlling costs is also key to avoiding delays to these much-needed transit lines.</p> <p>My station-specific comments follow.</p> <p>West Seattle Junction – Please move forward with the Medium Tunnel 41st Avenue Station alternative. It is appropriately in the heart of the neighborhood, has the least displacement impacts, and it is relatively affordable. I live nearby and would use this station all the time for shopping, to go to entertainment and recreation designations, and to commute to work. I like how this station is centrally located between multiple grocery stores, existing apartment buildings, and many other shops and activities. Please avoid further advancement of the Fauntleroy Way elevated station, which has a ridiculous proposal to demolish a newly built multifamily buildings at a very cost and displacing hundreds of residents. The station should also be futureproofed to future extensions to the south, very frequent headways such as less than 2 minutes, and higher passenger loads.</p> <p>Avalon – I prefer the retained cut alternative of the Avalon station (WSJ-5), because it is the option that fits with the Junction tunnel station, it is the best option for bus transfers (near the corner of Avalon and 35th), and it doesn't require any third part funding. I like that the station would be close to the surface and easy to access. I oppose any notion of cutting this station, since the walkshed would not really overlap with the Junction given the distance and the uncomfortable pedestrian environment of Fauntleroy Way, and the fact that there is a lot of housing and businesses immediately around the proposed location. This station was also promised to the ST3 voters. I would likely also this station a lot because I live nearby. The station should also be futureproofed to allow frequent headways such as less than 2 minutes, and higher passenger loads.</p> <p>Delridge – The best alternative is Elevated Andover Station Lower Height Alternative (DEL-6). This pairs with the best retained cut Avalon station and it is much cheaper than the preferred alternative. It's not the greatest location, though, and I encourage further study of possible alignments to get the station was close to Delridge Avenue as possible, preferably over the street itself, to ease bus transfers and minimize property takings. The station should also be futureproofed to allow frequent headways such as less than 2 minutes, and higher passenger loads.</p> <p>Sodo – The best alternative here is a Mixed Profile station (SoDo-2) that avoids demolishing the post office facility and saves the Sodo busway, by moving the station further north. Demolishing the post office is a needless expense and would have major impacts from disrupting an essential public service that supports</p>	<p>Scott Bonjukian</p>
-------------------	---	------------------------

the Seattle community. Also the pedestrian overpass of 5th Avenue South appears unnecessary, so that use of the post office property appears a low value add. The Sodo busway is an amazing transit facility, and transit-only right-of-way is a rare and precious commodity that needs to be preserved forever. The station should also be futureproofed to allow frequent headways such as less than 2 minutes, and higher passenger loads.

Chinatown-International District – The shallow 4th Avenue alternative (CID-2a) makes the most sense because it has the least community impacts and it integrates well with the surrounding transportation and transit network. Avoid the deep 4th Avenue option because it creates unacceptable passenger movement times between the platform and the surface and transferring between lines; I would personally be very loathe to use any deep station because of the length of time it would take the traverse. I like the idea for an underground community market to create business activity and provide retail and serves to travelers. The shallow 4th Avenue option should be studied for an even shallower option than shown in the drawings, nearly level with the existing station, to make passenger access and transfers easier, faster, and less reliant on mechanical conveyance. Consider placing the station over the existing transit tunnel instead of underneath it, to help achieve a shallower Midtown station adjacent. Passenger transfer times must be much less than 4.5 minutes. The station should also be futureproofed to enable future additional lines (such as with stub tunnels), very frequent headways such as less than 2 minutes, and higher passenger loads.

Midtown – Although I like the idea of utilizing freeway right-of-way and bringing a station as close to First Hill as possible, the 6th Avenue alternative interferes with historic Freeway Park and creates significant complexity with the ongoing project to lid Interstate 5 in this location (more info on City of Seattle website, see 2020 feasibility study: <https://www.seattle.gov/opcd/ongoing-initiatives/lid-i-5-feasibility-study#whatwhy>). The 5th Avenue station alternative (DT-2) is superior because it has a more established walkshed with important uses in the area like the central library and it apparently will be a less deep station, but it could be shallower (it appears that being 140' deep or less could allow escalators to be feasible). A more shallow station at Chinatown-International District (see comment above) should help this station become much more shallow, easier to access, and have less reliance on mechanical conveyance systems. Build in ample elevator redundancy and make the elevators connect the surface to the platform as closely and directly as possible. The station should also be futureproofed to enable future additional lines (such as with stub tunnels), very frequent headways such as less than 2 minutes, and higher passenger loads.

Westlake – There are development plans on the station site for the 6th Avenue alternative, so the 5th Avenue alternative (DT-1) is really the only way to go. Again, the station needs to be made as shallow as possible to allow easier passenger transfers and less reliance on mechanical conveyance systems. Study ways to improve ease of use and redundancy in elevators and escalators, and find ways to make access and transfers as fast as possible. The station should also be futureproofed to enable future additional lines (such as with stub tunnels), very frequent headways such as less than 2 minutes, and higher passenger loads.

Denny – The alternative located at Denny Way and Westlake Avenue (DT-1) is superior and should be selected; the option is shallower and better connected to other transit. I would definitely use this station a lot because of its central location and connection to the Route 8 bus. The station should be studied to be as shallow as possible, in sync with the adjoining stations, and have robust vertical conveyance. The station should also be futureproofed to enable future additional lines (such as with stub tunnels), very frequent headways such as less than 2 minutes, and higher passenger loads.

South Lake Union - The Harrison Street alternative (DT-1) is the less bad option included. But both the alternatives at Harrison Street and Mercer Street bad station locations surrounded by major roads and highways, with almost nothing to walk to or TOD opportunities. I would probably never use this station because it doesn't connect to anything. Explain why a more central station location around the intersection of Westlake Avenue and Republican Street was not studied - and then go back to the drawing board and study a station in that location that actually serves the central core of the South Lake Union neighborhood. I would use a more central station access to South Lake Union Park, MOHAI, and businesses in the area. If sharp turns are needed, there is precedent for that at Westlake Station where trains have to slow down anyway as they approach the station. The South Lake Union station also should be designed as shallow as possible to minimize passenger movement times, and the station should also be futureproofed to enable future additional lines (such as with stub tunnels), very frequent headways such as less than 2 minutes, and higher passenger loads.

Seattle Center – The Republican Street station alternative (DT-1) is far superior because it is shallower, it would be easier to passengers to navigate, and it is much more central to all of the destinations and activities at Seattle Center. I would use this station a lot to access Climate Pledge Arena, the Armory, the

Space Needle, and the many events and festivals that take place at Seattle Center. I would be less happy to utilize a station location on Mercer Street, which is on the edge of the campus and involves a very busy and uncomfortable street for pedestrians. I sympathize with concerns raised about potential tenant disruptions at Republication Street, and perhaps one way to mitigate this is by locating the station slightly further east by the International Fountain. Sound Transit should work to mitigate impacts to arts organizations to the extent possible, but ultimately please look out long-term about what is best for ridership and access over the future life of the system (100 years and more). The station should also be futureproofed to enable very frequent headways such as less than 2 minutes and higher passenger loads.

Smith Cove – The preferred alternative of Galer Street (SIB-1) makes sense due to the cost advantage and the good connections to the neighborhoods, the major office campus there, and the Elliot Bay Trail. The other station location alternatives have considerable impacts to the Queen Anne greenbelt. The station should also be futureproofed to enable very frequent headways such as less than 2 minutes and higher passenger loads.

Interbay – The Retained Cut 17th Avenue Station (IBB-2a) is the best alternative because it sets up a better connection to Ballard. But also please go back to studying to advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3]. The station should also be futureproofed to enable very frequent headways such as less than 2 minutes and higher passenger loads.

Ballard – Explain why a central Ballard option (such as on 17th, 20th, or 22nd Avenue) has not been studied. Then, please reopen a study on that option so that a station that actually serves the center of the neighborhood is considered. I would be hesitant to use a 15th Avenue or 14th Avenue station because those stations are nowhere near the restaurants and business that bring me to Ballard. A 15th or 14th Avenue station is as far as away from the heart of Ballard as Pioneer Square is from Westlake. If located in a tunnel at 15th Avenue (IBB-2b), which would be preferred among the two currently, a station entrance must be located on the west side of 15th Avenue. The best Ship Canal Crossing alternative is a fixed-high bridge because it avoids reliability problems that a drawbridge presents. Remove a moveable bridge from consideration. If a taller bridge is not possible due to Coast Guard considerations, then a tunnel is better option that might end up costing the same (e.g. 20th Avenue Station/Thorndyke Tunnel Portal alignment). The Ballard station should also be futureproofed to enable future additional lines (such as with stub tunnels), very frequent headways such as less than 2 minutes, and higher passenger loads.

Thank you,

Scott Bonjukian

3213 Harbor Avenue SW, Seattle, WA 98126

<p>04/21/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Steven Neuman stevenrneuman@gmail.com</p>	<p>Steven Neuman</p>

In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Angela Buck angelaapples316@yahoo.com</p>	<p>Angela Buck</p>

<p>04/22/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel. In addition, transfer points must provide next train boarding for those transferring in for the system to be successful - riders who have to wait for multiple trains at a transfer point, become non-riders.</p> <p>In Ballard: Build a tunnel under the canal. The bridges won't work, and the Coast Guard just put the final decision in on that. As such, reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. The station belongs in the heart of the density.</p> <p>In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard.</p> <p>In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible.</p> <p>At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower.</p> <p>At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.</p> <p>In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.</p> <p>In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Nick Zombor nickzombor@hotmail.com</p>	<p>Nick Zombor</p>

<p>04/25/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). 04/28/2022	<p>Dear Sound Transit,</p> <p>I'm so glad we are expanding the light rail. However, I do not want to destroy the communities in order to expand this public transportation system. Especially thinking of the CID station and the proposed destruction to the center of the neighborhood, we must adjust our plans.</p> <p>The current plans would destroy an extremely important part of the neighborhood and the city of Seattle that we would not get back. The center of this CID neighborhood is the heart of CID and holds such valuable cultural and historical significance. Seattle would lose a huge piece of its soul by destroying the CID.</p> <p>Not to mention toys would be the continuation of racist displacement that Seattle has actively championed thought our history. It's time for us to make better choices. We must value the lives of the people that live and work in the CID, especially as we have repeated failed to value them in both our distant and very recent pasts.</p> <p>Please do not destroy the CID for the light rail. It is not worth the cost; it is not worth the soul of Seattle.</p> <p>Thank you for your time, Olivia</p>	Olivia Heath

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely,</p> <p>James Yalowitz Vice President KIDDER MATHEWS 601 Union Street, Suite 4720, Seattle, WA 98101 T 206.296.9627 M 425.890.4554 james.yalowitz@kidder.com kidder.com</p>	James Yalowitz

<p>04/28/2022</p>	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>My name is Nico Bucaro and I am a resident of the 3rd district in Seattle. The very first place I ever saw in Seattle upon visiting was the international district, and since then I have only learned the cultural and historic importance of supporting this neighborhood, these businesses, and most importantly the people who make it up.</p> <p>Please consider the community implications that would occur if you were to do construction on 5th:</p> <p>Disruptions to 300 businesses, who have already been battered by the pandemic, higher than ever anti-Asian hate crimes, and criminal violence Endangering the lives of 1,200 elderly by blocking access for emergency vehicles with street and sidewalk closures Disruptions to schools, daycares, and programs serving thousands of children and youth Please listen to the community and do the least amount of harm in this construction, move forward on 4th and not on 5th.</p> <p>Thank you,</p> <p>Nico Bucaro</p> <p>Nico Bucaro She/They</p>	<p>Nico Bucaro</p>
<p>04/28/2022</p>	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <p>Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures. Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott Station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead% Kirsten Roth Queen Anne resident</p>	<p>Kirsten Roth</p>

04/28/2022	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years, with increased noise & air pollution, dust, dirt, vibrations in the CID is unacceptable. Not to mention the disruptions to 30 immigrant businesses would permanently close or force them to move due to 5th Avenue construction.</p> <p>Sound Transit, take 5th Ave. off the table. 4th Ave Tunnel Station avoids 5th Ave impacts! Move Forward on 4th!</p> <p>thank you for your consideration,</p> <p>Anika Major</p>	Anika Major
04/27/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, BRUCE MACKINNON</p> <p>BladeGallery Inc Customer:</p> <p>Home address: KAMLOOPS BC CANADA</p> <p>Email: BRUCEMACKINNONRV@YAHOO.CA</p> <p>Phone:</p>	Bruce Mackinnon

<p>04/27/2022</p>	<p>Dear ST3/transit folks,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Please re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of the tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevated train and guideway on Elliott will be an eyesore. Locate station on west side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank operations. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand. Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>Thank you for your consideration.</p> <p>Chris Covert-Bowlds, MD, 523 North 84th St, Seattle, WA 98103, transit rider and daily bicycle commuter</p>	<p>Chris Covert-Bowlds</p>

------------	--	------------------

04/27/2022	<p>Our house is 4049 32nd Ave. SW. 98126 We strongly support choosing the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b).</p> <p>We strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5), both of which would result in significant displacement and environmental impacts in the Yancy/Avalon/32nd Ave corridor. Particular concerns with the "Medium Tunnel" alternatives include:</p> <ul style="list-style-type: none">(1) displacement of Transitional Resources on Avalon Way;(2) more housing displacements on and adjacent to 32nd Ave SW than preferred alternatives;(3) accessibility of remaining residences given the alignment of guideway near the corner of 32nd Ave SW and SW Andover St;(4) construction impacts from excavation of retained cut; and(5) operational visual/noise impacts to remaining residences along 32nd Ave SW, SW Andover St, and SW Genesee St.(6) mitigation of construction and noise impacts for the residents of 32nd Ave. SW. and Fautleroy Way, SW. will require expensive concrete barriers for noise mitigation from the onset of the project and also to protect the residential neighborhoods from the train noise ongoing. <p>Re: Avalon Station</p> <p>Further, we suggest the removal of the Avalon station as it combines a high foot/bike/transit traffic location with the entrance to the West Seattle Bridge making it dangerous for people coming to and from such a station.</p> <p>Additionally, the Avalon station will further add traffic and parking impacts to our Avalon neighborhood, already inundated with a lack of parking, resulting in crosswalks being blocked by vehicles, making pedestrians less visible and at elevated risk with crossing the street. Adding 1200 daily boardings to the Avalon station will further put families and their children at increased risk in our Avalon neighborhood.</p> <p>Sincerely, Vince Ferriols and Myra Ferriols 4049 32nd Ave. SW. 98126</p> <p>Myra 206-818-8746 Sent from my iPhone</p>	Myra Ferriols

04/27/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely,</p> <p>Narita Ghumman</p> <p>Narita</p>	Narita Ghumman

04/27/2022	<p>Greetings,</p> <p>I support the recommendations of the Magnolia Community Council, which are summarized below:</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p> <p>Dorothy Craig 142 N 75th St. Apt 1 Seattle, WA 98103 Dorothy@dpcraig.com 206-380-5621</p>	Dorothy Craig

04/28/2022	<p>Dear Council members and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>John and Margaret Way, BladeGallery Inc Customers</p> <p>8440 West Mercer Way</p> <p>Mercer Island, WA 98040</p> <p>206-232-0604</p> <p>pjway@comcast.net</p>	Margaret Way
------------	---	--------------

<p>04/28/2022</p>	<p>I have been informed that BladeGallery/Epicurean Edge may be forced out of business due to an eminent domain taking of their property for your proposed light rail system. While I recognize the importance of mass transit improvements for both citizen convenience and the environment, losing a rare and valuable resource like Epic Edge will be great loss to consumers and the general public not only in the Seattle area, but to people like me around the world that have enjoyed the unique business and services that Epic Edge provides.</p> <p>Epic Edge has informed its customer base that losing their brick and mortar location may cause them to cease operations. This would be a great loss that will unlikely be replaced by any other business.</p> <p>I would encourage you to find an alternate solution to the light rail system that would not only allow your system to proceed, but allow Epic Edge to remain at its current location to continue to serve the public. Small businesses like Epic Edge need the protection of government to allow them to compete in today's highly volatile business environment. We all know businesses that have suffered and closed due to Covid. Let's not lose another viable business that's an asset to the Seattle community and to the Epic Edge community across the country and around the globe.</p> <p>Regards, Marc Cornell 12403 Triton Springs Drive Midlothian, VA 23114 804-218-5462</p>	<p>Marc Cornell</p>
<p>04/28/2022</p>	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p>	<p>Avneet Atwal</p>

Request:

Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.

Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).

Sincerely,
Avneet Atwal

04/28/2022	<p>Dear Council members and Sound Transit,</p> <p>I am writing to you about the actions you are about to take in legally stealing this companies business. Giving them a fair market price is no where near fair compensation for all the unpaid actions they have done and will need to do if this happens. Stand in their shoes and ask about their greater good. Look in the mirror and reflect on the harm you will do to the individual.</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). <p>04/28/2022</p>	<p>As a lifelong Magnolia resident, I am very interested in SDOT's plans for the Interbay-Ballard corridor and want to voice my opinion as to the options that best serve the Magnolia- Queen Anne-Ballard communities. Please consider these comments in your planning.</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <p>Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand</p> <p>Minimize transfer time from transit to platform</p> <p>Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures.</p> <p>Plan for Ballard station by reopening study of a tunnel station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Smith Cove (SIB-1):</p> <p>Approach station by tunneling under Elliott</p> <p>Station on West side of Elliott</p> <p>Minimize size, if elevated station, over Galer flyover/Magnolia Bridge</p> <p>Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b):</p> <p>Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures</p> <p>Station must lead to Ship Canal Tunnel</p> <p>No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station</p> <p>Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village</p> <p>Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p> <p>Erle Cohen</p>	<p>Erle Cohen</p>

<p>04/28/2022</p>	<p>Dear Councilmembers and Sound Transit,</p> <p>I am a customer at BladeGallery’s Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I’m excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I’ve recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail path alternatives. This is a unique business, serving as a hub for the international bladesmithing community, that can’t be found anywhere else.</p> <p>Please consider the following comments on the appropriateness of Alternative DUW-2, which does not eliminate this unique business:</p> <p>As stated in Paragraph 4.2.2.3.3, Alternative DUW-2 would not convert any single- or multi-family residential land or City-owned open space to a transportation use.</p> <p>As shown in Table 4.2.3-2 and stated in Paragraph 4.2.3.3.3, Alternative DUW-2 would displace the fewest employees – about 40% fewer than other alternatives.</p> <p>As stated in Paragraph 4.2.5.3.3, Alternative DUW-2 would have the least change to the visual character in areas with concentrations of sensitive viewers and the least impact on visual quality of all the Duwamish Segment Build Alternatives</p> <p>As stated in Paragraph 4.2.7.3.2, Alternative DUW-2 would have the fewest noise impacts of all the Duwamish Segment Build Alternatives – about 90% fewer than other alternatives.</p> <p>As shown in Table 4.2.8-1, Alternative DUW-2 would introduce the least square footage of total new impervious surface by a significant margin – less than 10% that of other alternatives.</p> <p>As stated in Paragraph 4.2.8.3.3, Alternative DUW-2 would not require relocation of any outfalls.</p> <p>As shown in Table 4.2.9-2, Alternative DUW-2 would have no effect at all on Alternative Wetlands, Wetland Buffers, and Biodiversity areas.</p> <p>As stated in Paragraph 4.2.11.3.3, Alternative DUW-2 would avoid the steep slopes on Pigeon Point, offering the greatest slope stability and least landslide risk, thereby avoiding the need to construct retaining structures.</p> <p>As stated in Paragraph 4.2.14.3.3, Alternative DUW-2 would not be expected to require relocation of Fire Station 14, and no long-term effects are expected.</p> <p>Table 4.2.16-4 seems to indicate Alternative DUW-2 would impact 9 historic properties, the most of any alternative. However, the table inexplicably divides the Department of Highways District No. 1 Headquarters/Maintenance Facility into 5 subproperties, thereby skewing the statistics. If Table 4.2.16-4 instead tabulated only whole historic properties, Alternative DUW-2 actually impacts the fewest historic properties of any alternative.</p> <p>As shown in Table 4.2.17-1, Alternative DUW-2 is the only alternative that would have no permanent impact at all to parks and recreational resources.</p> <p>Table 4.2.18-2 repeats the inexplicable division of the Department of Highways District No. 1 Headquarters/Maintenance Facility into five subproperties. As a result, Alternative DUW-2 would appear to be similar to other alternatives in its impact on properties with Preliminary Section 4(f) Determinations. However, when evaluating the DOH District 1 HQ/Maintenance Facility as a single property, Alternative DUW-2 in fact impacts the fewest number of properties with Preliminary Section 4(f) Determinations.</p> <p>Please support the DUW-2 Alternative that does not force BladeGallery’s Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef’s knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select Alternative DUW-2 for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at 3628 E Marginal Way S., Seattle, WA 98134, phone (425) 889-5980.</p> <p>Thank you for your consideration,</p>	<p>Karen Guevara</p>

04/28/2022	<p>Dear Councilmembers and Sound Transit, I am a vendor at Blade Gallery's Epicurean Edge in SODO (Seattle). I live in Boise Idaho and I have been a custom knife maker for the past twenty four years and have been a blade gallery vendor since 2001. This last fall, Blade Gallery moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to possibly teaching classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. Although I live in Idaho, at least 50% of my income is from selling knives and teaching classes to and for BladeGallery. This is a unique business, providing a service not found anywhere else in the Northwest let alone Seattle, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Who is BladeGallery? BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. I look forward to being a part of their classes aimed at established knifemakers and beginners. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists and significantly contributes to their yearly incomes. During these stressful and unpredictable times, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc. to move or close down resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom BladeGallery's Epicurean Edge E Marginal Way S Seattle, WA 98134 (425) 889-5980 Thank You for your time</p> <p>Bill Burke ABS Master Smith Adams Ranch Rd. <p>04/28/2022</p>	<p>Thank you for the opportunity to comment on the Ballard/West Seattle Draft EIS, in particular the proposed Downtown station.</p> <p>I own/live in a condo on the corner of 5th and Madison. Our building is on the preferred 5th Ave route. Directly above the Downtown station. Our condominium residents will be significantly affected by the construction and operation of the Link.</p> <p>Passenger safety and comfort data might be missing from the EIS:</p> <p>Did you include slope and wind data in your report? It is a likely reason you propose to locate the entrance to the downtown station on 4th and Madison but I would like to see it documented. The corner on 5th and Madison would have been dangerous (due to the steep slope) and uncomfortable (due to the extraordinary wind tunnel) for many riders. It would be particularly dangerous for a disabled person. Even those of us who live in the condo find clever ways to avoid the corner (using the garage elevator or walking around the block). The decision to move the entrance to the 4th and Madison corner you propose is much better due to surrounding population density as well as safety and comfort. Please document.</p> <p>Resident health, safety and quality of life data to address:</p> <p>I see the EIS addresses some of the construction impact, but not all. For example, the condo building at 909 5th avenue does not have a loading dock or alley. This makes it more difficult to make sure that emergency service vehicles as well as garbage removal trucks, delivery trucks, utility/repair/construction services, moving and delivery trucks can access our building. We need to accommodate these essential services to insure that the building is habitable during construction. This will be important once the route decision is final. At what point in the process will these details be addressed?</p> <p>(I also didn't see data regarding the noise, vibration and emissions impacts of ongoing operation. I assume ST would not proceed if there were long term health consequences to the surrounding building occupants.)</p> <p>Future considerations:</p> <p>I assume you will update the ridership and population forecasts which may be permanently affected by 1) recent demographic shifts due to covid work from home policies, 2) millennial flight to suburbs as they approach child rearing ages, avoid taxes and the homeless and 3) new building construction impact on density per block. It would be comforting for you to provide a schedule for data updates.</p> <p>Thank you!</p> <p>Thank you again for the opportunity to share my concerns. Overall, I have deep respect for the Sound Transit team, the community feedback process and the thoroughness of the EIS reports.</p> <p>Julie Kruger-Lutz Kopp Resident, 909 5th Avenue</p>	<p>Julie Kruger-Lutz Kopp</p>

04/27/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a professional chef and a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their expertise in knife-making, forging, culinary knife skills, and especially sharpening- I use this service regularly. They are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <ul style="list-style-type: none">• BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.• The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.• They also offer a high performance sharpening service for home and professional chefs.• They offer classes aimed at established knifemakers and beginners.• BladeGallery Inc is a small business that currently supports 8 employee households.• BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community. As a professional chef, this business is essential to supplying and maintaining our tools.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>BladeGallery Inc Customer:</p> <p>Chef Kären Jurgensen chefkarenj@gmail.com Home address: 101 19th Ave, Seattle, WA 98122 Work Email: karen.jurgensen@seattlecolleges.edu Phone: 206-499-2276</p>	Karen Jurgensen

04/27/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Madhvi Daftary</p>	Madhvi Daftary

04/27/2022	I would ride the Light Rail from Magnolia pretty much daily if I didn't have to drive off the hill and find parking before boarding the train. If I have to walk to the bus, wait, then wait again after riding down the hill, I might as well ride the bus to downtown. Make the Light Rail user friendly!!	Sue Palewicz
04/27/2022	<p>I can't believe I haven't heard about this. It would be an utter over step to impact Chinatown. The ID is a gem the city needs to embrace and hold up And maintain.</p> <p>Let me guess. The fools that came up with this plane are a majority of white people. Cause only white nonsense would think of impacting Chinatown like this. I walk to the ID from first hill cause I love it down there and frequent the businesses from food to tea to grocery shopping.</p> <p>No matter the cost. Find alternate ways that don't impact Chinatown and the ID</p>	Garit Reuble

04/27/2022	<p>WSBLE Draft Environmental Impact Statement Comments c/o Lauren Swift, Sound Transit 401 S. Jackson Street Seattle, WA 98104</p> <p>Dear Ms. Swift,</p> <p>I am writing as someone who has worked or lived nearby the Chinatown-International District for over 20 years. In my time, I have been a board member of several community organizations, worked directly with businesses to ensure their economic vitality, taught history, served medical clients, and worked at one of the community newspapers. Suffice to say that I have seen the changes, both good and bad, from many different perspectives. And yet, there are clear and consistent observations and concerns. Time and again, this neighborhood bears the brunt of poor city planning and management and has borne the brunt of volatile and detrimental public works. These public works include the building of the Kingdome and the construction of I-5. The answer from city planners, managers, etc. has been to hold a press conference and do very little. Instead, we receive the message over and over that 'the neighborhood always bounces back.' Let's start with a plan that avoids needing to repeat meaningless platitudes.</p> <p>Based on the historical damage this neighborhood has endured, I am writing to specifically state that none, not one, of the proposals is acceptable. The only one, and only with major revisions, that could work for the community is the Fourth Avenue alternative.</p> <p>Additional issues impacting the neighborhood currently are the devastating impact on mom and pop shops here in the neighborhood due to four overlapping, compounded problems. The first of these is the violent uptick in racist attacks on Asian Americans throughout the nation— and specifically here in the city. The second is the COVID-19 pandemic; thirdly the irresponsible actions of the city during the Black Lives Matter protests and the damage done to the neighborhood. The fourth issue has been the ongoing mismanagement of the homelessness crisis in the city and the overt reluctance on the part of the police to act upon criminal elements associated with the crisis. These four problems have exacerbated each other in a terrible impact on our neighborhood.</p> <p>What makes the proposed construction of the new phase of Sound Transit even more tone-deaf—is the abject failure of Sound Transit to consider these all as environmental impacts. By considering the Fourth Avenue alternative we, the employees, residents, and business owners, would still have direct connections to both Pioneer Square and Chinatown-International District neighborhoods. This conjunction of so many transit options in this location would serve the greater transit needs. These needs would better coincide with long-term community goals for the entirety of the District, including the Jackson Street Hub.</p> <p>I would like to reiterate the tone-deafness of the overall proposal. The neighborhood is speaking up, and it will be a wonder if the Sound Transit board actually listens and better understands that the decision it makes now could further devastate a neighborhood that has been ignored historically and, in the present, in tangible recognition of its vitalness to Seattle and the region.</p> <p>Sincerely,</p> <p>Rahul Gupta Neighborhood Employee, Educator, and Advocate Chinatown-International District</p>	Rahul Gupta
------------	--	-------------

<p>04/27/2022</p>	<p>Hi there,</p> <p>I'm just hoping ya'll WON'T put the light rail on 14th. From my understanding, one of the major points of our city's light rail is so people can be more connected to various areas throughout the city, to make sure that everyone can get access, and to bring money in. Putting the light rail on 14th is about a 15-minute walk (with a 5-minute wait at the 15th and market intersection) for an abled body to get to old Ballard, where all the action remains. People who are wheelchair-bound, senior citizens, or families using strollers, etc will find it extremely time-consuming and difficult to make that walk a regular occurrence or even a once-in-a-while one. Case in point: the light rail that should just go directly to Sea-tac but for some reason doesn't. Even as an abled 40-something, it's quite exhausting to walk to the bus to then take a light rail, then wait for the light rail, and then get almost to the airport, having to walk another 15ish minutes all while carrying my luggage. It's not worth saving the \$65 bc it literally takes 3 times as long bc the light rail just can't go that extra half mile. That's what this feels like. Don't make the same mistake twice. Learn from it.</p> <p>Put the light rail on 20th and market where it belongs.</p> <p>All the best!</p>	<p>Barrie Arliss</p>
<p>04/27/2022</p>	<p>To whom it may concern,</p> <p>My husband and I were both born and raised in West Seattle and have lived here most of our adult life.</p> <p>We strongly believe that the alternative WSJ-1 should not advance due to its negative impact of increased noise, vibration, shadow and cost, as well as the loss of green space and natural habitats.</p> <p>We feel that the tunnel alternatives should be advanced with further study to mitigate long term road closures and traffic impacts, as well as lowering the number of displaced homes and businesses.</p> <p>Thank you for considering these comments.</p> <p>Sincerley,</p> <p>-Melissa Boender</p>	<p>Melissa Boender</p>

<p>04/27/2022</p>	<p>To whom it may concern,</p> <p>I am a concerned former Seattelite that wishes to protest the proposed building plan for the new link station on 5th avenue.</p> <p>Building a new station in this neighborhood will displace hundreds of employees and residents, and cause dozens of businesses to have to move.</p> <p>In a community that has faced Anti-Asian hate crimes, economic peril from COVID-19, and continues to be one of the remaining spaces for POC culture in a rapidly gentrifying city, this will be disastrous for the neighborhood and a death sentence for many businesses.</p> <p>Please consider the plan that harms the least amount of businesses.</p> <p>Rachel Hong Former South Seattle resident</p>	<p>Rachel Hong</p>
<p>04/27/2022</p>	<p>I just wanted to formally comment that as a frequent supporter/customer/traveler and worker within the International district that I would strongly prefer the 4th Ave addition to the light rail station over the 5th Ave option. 4th Ave seems like a more fitting location and would seem to disrupt less businesses that have just been through a pandemic. Similarly 4th Ave seems like a better connection spot as a current thoroughfare without as many small businesses being impacted.</p> <p>Thank you for your time and I greatly appreciate all of your hard work!</p> <p>-Rhett Taylor</p>	<p>Rhett Taylor</p>
<p>04/28/2022</p>	<p>Full closure of King Street, S. Weller, and 5th Avenue for several years, with increased noise & air pollution, dust, dirt, and vibrations in the CID is unacceptable. Not to mention disruptions to 30 immigrant businesses permanently closed or forced to move due to 5th Ave construction.</p> <p>History is known to repeat itself. Behind the development of many now flourishing metropolitan areas in the United States, the burden of construction-associated negative health outcomes as well as disruption in lifestyle by being forced to relocate homes or close businesses were directly on the racial and ethnic minority groups.</p> <p>Consequences from this construction that will directly impact racial and ethnic minority groups will leave the City of Seattle as well as the Sound Transit Board at the forefront of racial segregation in the modern history of the United States.</p> <p>Please take 5th Ave off the table. 4th Ave Tunnel Station avoids the negative impact on 5th Ave.</p> <p>Lisa Chung (she/her)</p> <p>lisachung18@gmail.com 760-546-8909</p>	<p>Lisa Chung</p>

<p>04/27/2022</p>	<p>Dear Seattle City council,</p> <p>I hope you would consider moving the new light rail from 5th street to 4th street. This would help alleviate business activities stress on the already struggling post pandemic International District. As a responsible Asian-American citizen, please help preserve the historic districts of the small part of the only thing left within the Asian Community (Chinatown, Japantown, Little Saigon, etc..) As we know, historically Chinatown has been relocated 3 times due to racism and segregation, we hope that a light Rail would not permanently displace the people living in the already crowded Seattle area. Please reconsider some of these displeasure cry for help that only so many of the Seattleites could vocalize as many of them do not have the energy, knowledge, and privilege to to take action. I plead for past, present, and future generations for you to make this sound decisions so you yourself can sleep at night.</p> <p>Sincerely, Jacky Chen</p>	<p>Jacky Chen</p>
<p>04/06/2022</p>	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>Please consider having the Sound Transit construction be on 4th instead of 5th Ave. I've seen the CID SODO Community Advisory Group presentation from March 10th, which is why I am writing to you today.</p> <p>We need to do all we can to preserve Little Saigon, Japan, and Chinatown from any more disruptions. It saddened me to see people stop visiting because of Covid or not feeling safe down here over the past couple years. Many shops are still boarded up. They're still battered from the pandemic and rise of Anti-Asian hate crimes. What will construction right at the entrance of the Chinatown Gates do to them?</p> <p>Please avoid displacing these businesses at the heart of CID. I can't imagine it to be affordable for them to move elsewhere with similar opportunities, financially and culturally, that a historic ID gives them, especially since Seattle has gotten more and more expensive. Please don't push them out and make it more difficult for the folks here for years to come, as their space is limited already, with little space to grow or expand.</p> <p>Thank you for your time and consideration,</p> <p>Bonnie H.</p>	<p>Bonnie H.</p>

03/23/2022	<p>Dear Sound Transit and Seattle City Counsel,</p> <p>Please build on 4th ave NOT 5th ave.</p> <p>Construction on 5th Avenue in Chinatown to Japantown means:</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years</p> <ol style="list-style-type: none">2. Re-routing cars, buses, to 6th, Maynard, 7th, 8th, 10th & 12th3. Gas, water, electrical shut offs to businesses, non-profits and residents4. Daily dump trucks, cement trucks, cranes, supply trucks, delivery vehicles5. Construction workers taking parking from businesses6. Increased noise & air pollution, dust, dirt, vibrations7. Taking property from owners of color for demolition and resale after construction8. Endangering lives of 1,200 elderly by blocking access/egress for emergency vehicles with street/sidewalk closures and detours9. Permanent changes to National Register Seattle Chinatown Historic District—loss of 3 blocks in addition to prior loss of 3 blocks for Transit Tunnel <p>Thank you for your time and consideration.</p> <p>Respectfully,</p> <p>-jim Y</p>	Jim Y.

<p>04/27/2022</p>	<p>To Sound Transit Board Members and Seattle City Council Members:</p> <p>Please Use 4th NOT 5th Ave.</p> <p>There will be severe destruction if using 5th ave:</p> <ul style="list-style-type: none"> o 300 businesses already battered by the pandemic, higher than ever anti-Asian hate crimes, criminal violence o 30 immigrant businesses permanently closed or forced to move o Schools, daycares, programs serving thousands of children and youth o Programs, classes, recreation for 1,200 elderly non-English speakers <p>Thank you for your consideration!!</p> <p>-Su M</p>	<p>Suma Kosami</p>
<p>03/20/2022</p>	<p>Hello,</p> <p>The current proposed Sound Transit CID Segment 5th Avenue Shallow and Deep Station (CID-2a & CID-2b) will impose severe impacts to Chinatown businesses, residents and organizations.</p> <p>Logically, why would any agency propose a project with direct negative impact on a community.</p> <p>Therefore, I recommend the 4th Avenue options (Options 1a and 1b). These options have the least impact on Chinatown, in terms of construction activities, noise, air pollution, blocked streets, disruption of business operations, minority property ownership transfers and displacement of immigrant businesses, tenants, and residents. Please support Chinatown like other cities and help keep Chinatown vibrant with a safe environment for our businesses, community members and residents by staying with the Fourth Avenue Options and not consider the 5th Avenue options.</p> <p>Respectfully,</p> <p>Hal Chinn.</p>	<p>Hal Chinn</p>

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Dan Kent 8465 SE 83rd St Mercer Island, WA 98040</p>	Dan Kent

04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Anitra Zipperer Queen Anne/Seattle Resident anitra.zipperer@gmail.com</p>	Anitra Zipperer

Village

Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges

Thank you for your consideration.

<p>04/26/2022</p>	<p>Overall:</p> <p>The West Seattle - Ballard Link Extension must:</p> <p>Integrate with substantially revised public transit (e.g., METRO) schedules to synchronize with future Link schedules and accommodate ridership needs and routes, particularly in underserved areas, and avoid pedestrians crossing major roadways; and,</p> <p>2. Minimize station sizes and time required for transit riders to arrive at Link boarding platforms.</p> <p>In addition, the dEIS should</p> <p>Further study an earlier proposed tunnel alternative from an Interbay station near W Dravus St. to either a 20th (preferred) or 17th Avenue NW Ballard Station (via a Thorndyke Portal); and, Conduct assessment(s) for continuing the Downtown Segment's proposed tunnel beyond the Seattle Center and lower Queen Anne and all the way to Ballard, with stations, as planned, at South Interbay (W Galer St.), Interbay (W Dravus St.) and Ballard (15th, 17th or 20th Ave. NW), so as to: preserve Seattle's open spaces and view corridors; and, avoid material and lengthy traffic delays and disruptions (as well as road closures), construction noise, residential and business displacements, and the resulting significant above-grade infrastructure.</p> <p>And, in accordance with the Nov. 2020 Ballard Interbay Regional Transit Study, take into account any plans for retrofit and/or reconstruction of the W Dravus (BRG-045 over BNSF railways) and W Emerson (BRG-046) viaducts.</p> <p>Station-specific:</p> <ul style="list-style-type: none"> • W Galer St. (SIB-1) provides the best access to Seattle's Port and Smith Cove shipping terminals, as well as the whole of South Interbay. The following improvements would address a number of SIB-1 drawbacks: <ul style="list-style-type: none"> · a guideway tunnel under Elliott Ave. W; · an at-grade (alternatively, below-grade) Smith Cove station (to eliminate high-span guideways over existing civil infrastructure, namely the W Galer St. flyover and Magnolia Bridge); and, · Transit stops located directly at the Smith Cove Station (and west of Elliott) to avoid riders having to cross Elliott Ave. W for transfers and connections. • 17th Ave. W – retained cut (IBB-2b) offers best proximity to communities east and west of BNSF railyards. Station location and transit connectivity: <ul style="list-style-type: none"> · should not require riders to cross W Dravus St.; · function as segue to preferred wsble Ship Canal Tunnel enroute to Ballard; and, · provide emergency access for the Magnolia peninsula in the event of bridge failure. 	<p>Advocacy Active</p>
-------------------	--	------------------------

- | | | |
|--|---|--|
| | <ul style="list-style-type: none">• 15th Ave. NW – tunnel (IBB-2b) will best serve Ballard’s Urban Village population and medical and historical centers. As a below-grade station, it avoids many of the undesirable attributes of an elevated alternative. However, a more optimal location for the Ballard station is west of 15th Ave. W. As such, the dEIS should reopen and further study a previously assessed station, specifically, the 20th Ave. NW Tunnel - Thorndyke Portal in view of ST’s 2021 re-alignment process due to significantly increased costs in securing rights-of-way and acquiring property rights for elevated alternatives in the dEIS. | |

04/26/2022	<p>would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>First: Thank you for building this section of light rail! I am a long time West Seattle homeowner, and I have done business in the Interbay for much of my working life. As such, I very much appreciate the need for this project.</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration. Linda Murphy</p>	Linda Murphy

04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely,</p> <p>Suba Chandrasekaran</p>	Suba Chandrasekaran

------------	--	------------------

04/26/2022	<p>To Whom It May Concern,</p> <p>Although I hate to see the CID area and surrounding neighborhoods be negatively impacted yet again by large projects, such as I-5 construction, Kingdome, Safeco Field, CenturyLink Field, etc., I am advocating that construction of the new link station be done on 4th rather than on 5th.</p> <p>If the new station goes through 5th, there will be detrimental effects. Once again, the residents, businesses, and its cultural identity will be harmed. Around 19-27 businesses will be displaced, around 170-230 employees displaced as well. That impacts more individuals and families than you know. As we still face the economic impacts of COVID-19, imagine how these folks, who have lived in the central district for decades, who have witnessed it change, will be impacted. Less work, unhealthy work environment (due to the years it will take to construct), less income, higher risk of not being able to pay rent or afford where they live.</p> <p>Construction will last for years, businesses will be demolished, and what is considered a safe place for a lot of communities of color, and young children will be taken away. We must do what we can to minimize these inevitable outcomes. 4th avenue will still have the same emotional impact but it does reduce the amount of businesses that could be destroyed and employee and residents that will be displaced.</p> <p>I cannot stress enough how important this decision is because of the amount of lives it will directly impact. Not only that, but as a college student at Seattle University, I have seen how much the CID means to people. The celebrations, the table tennis competitions in Hing Hay park, that places we hold on dear to and that make life worth living for matter. Please save the ID and choose 4th.</p> <p>Sincerely, Cienne Bronson</p>	Cienne Bronson

04/28/2022	<p>Manager DEIS Comments,</p> <p>Greetings and thank you in advance for your time with this comment.</p> <p>While much of the proposed development of light rail expansion gives reason to be optimistic, there are several extremely frustrating and concerning issues that must be addressed.</p> <p>To start, the construction of stations and their connecting rails should not, CANNOT be so heavily postponed - waiting 10-20 years for transit that should have existed 5+ years ago is nonsensical and devastating to our future transit woes. This process must be expedited to the greatest safely possible degree.</p> <p>Offering a greater, expanded, and robust rail transit network is the most direct, easiest, and economically beneficial answer. There is simply no better solution, and there is a need for a present and imminent solution. People need to stop tunnel visioning on the price tag, and realize that having a society is expensive and that the required infrastructure is not optional. We will and must come together to pay for what we need.</p> <p>Do not eliminate any stations from expansion plans. Make stations shallow for accessibility and improved transfer times between the varied modes of transportation.</p> <p>Also, in order to future proof our growing system, we must design for expandability as recommended by Seattle Subway:</p> <ul style="list-style-type: none">(1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).(2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).(3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.(4) Midtown must be designed to accommodate future expansion to the east along Madison St.(5) West Seattle should be built for future southern expansion to White Center and Burien. <p>Thank you again. Please do not let this critical moment go to waste. Our society is damaged by stagnation and we must act in favor of its future.</p> <p>Russell Chapin russell10407@gmail.com 12812 60th LN S Seattle, Washington 98178</p>	Russell Chapin
------------	---	----------------

<p>04/28/2022</p>	<p>General Comments</p> <p>O Tunneling vs. Bridges In areas involving neighborhoods I favor tunneling as much as possible as opposed to overhead bridges. This especially includes the routing to Market Street in Ballard and to the Alaska Junction in West Seattle.</p> <p>In general, overhead trackage works in industrial areas or areas away from neighborhoods, but in areas where people will be living near the overhead trackage, the overhead tracks and bridges are not wanted.</p> <p>There have been many heated neighborhood discussions regarding bridges and overhead tracks. I do remember a public hearing in the early days of ST Phase 1 where several bridge options were being considered over Lake Union. There was quite a bit of public outcry against those bridges. With overhead bridges there could be long protracted neighborhood battles which would only delay the project and run up the costs.</p> <p>Pretty Bridge or Not - Nobody wants bridges in their front yard. Bridges ultimately have proven not to be as reliable as tunnels over time in our region. There have been several bridge collapses and failures. There are also Navigation concerns. There is always the possibility that a large boat can run into a bridge or pier causing long bridge closures and expensive repairs. This too has happened in our region in the past.</p> <p>While tunneling has traditionally been a more expensive option, the cost of tunneling seems to be coming down.</p> <p>I would highly encourage Sound Transit to look at all the possible sources of funding – Federal, State and Local - in order to meet the cost of additional tunneling. This especially applies to Ballard and West Seattle.</p> <p>O Retained Cut Stations Retained Cut stations are ideal in the hilly terrain as is found on several sections of the line including Interbay and West Seattle. These open-air box stations can be located in transitional locations where overhead tracks will enter into tunnels going into the hills. The stations provide an open-air environment for the riding public while at the same time providing limited access routing for the trains. The Retained Cut 17th Avenue Station in Interbay and Retained Cut Avalon Station in West Seattle are examples of this.</p> <p>Alignment Recommendations Here are my Alignment recommendations. Since I do live in Magnolia, I will be going from north to south.</p> <p>O Ballard - Interbay I favor the Tunnel 14th Avenue Station (Preferred alternative with third-party funding) option. There is great Transit Oriented Development potential in the neighborhood just east of the Ballard Bridge.</p> <p>Sound Transit should work with King County Metro and the City of Seattle to develop very frequent – 5-to-7-minute electric trolley service on Market Street between downtown Ballard and the new 14th Ave Link station.</p> <p>A bit of History is that an old streetcar line once ran on 14th Ave. W. Early streetcars ran on an old Ballard Bridge on 14th Ave. W. with various routings going as far back as the late 1800s.</p> <p>Bus routes in Ballard, Magnolia, Queen Anne, and other areas could be re-worked serving the new Link stations in Ballard and Interbay.</p> <p>O 17th Avenue Station in Interbay I favor the Retained Cut 17th Avenue Station in Interbay.</p> <p>O Prospect Street Station A Sounder North connection should be developed at Prospect Street where people can transfer to and from the Sounder trains. Sounder North should be upgraded with service in both directions and mid-day and week-end service.</p> <p>Busses using the station from Magnolia and elsewhere should have safe curbside connections at Prospect Street Station.</p> <p>O Seattle Center The Seattle Center and Lower Queen Anne neighborhood is an active area with close-in urban living, a major Activity Center and where public transportation can continue to be developed.</p>	<p>James McIntosh</p>
-------------------	--	-----------------------

Sixth and Mercer Alignment

I favor the Sixth and Mercer alignment. This would allow for a station to be located closest in to the Lower Queen Anne neighborhood, and situated beneath Mercer Street between First Ave. N. and Queen Anne Ave. N. The Lower Queen Anne neighborhood is one of the highest densely populated neighborhoods in all of Seattle and with its close-in features, attractions and closeness to the water is very popular. The Mercer Street station location, between First Ave. N. and Queen Anne Ave. N. would offer extremely good connections to north / south and other local busses.

Continued Operation of Seattle Center Monorail

The Seattle Center Monorail connects two major activity centers, the Seattle Center and the Westlake Center and does it well. The Monorail is in good working order.

As well, it is of Historic Transportation interest and is on the National Register of Historic Places. The Seattle Center Monorail is a unique tourist attraction visited by people from all over the world. The Seattle Center is a major Arts, Cultural and Activity center in the Northwest. The Monorail can sustainably carry 12,000 passengers an hour and with restoration of the Center Platform at the Westlake Station complex it could carry even more.

This will offer two choices of travel to Seattle Center and Lower Queen Anne. For travel to the heart of the Seattle Center it would be the Monorail. For Lower Queen Anne and Seattle Center West it would be Ballard Link. The Mercer Street station location would be a two and a half block walk from the west side entrance of the Climate Pledge Arena.

Sound Transit should work with the City of Seattle on the continued operation of the Seattle Center Monorail.

O Midtown Station

Since this station is to be built in a location involving steep hills, access to it will have to involve many level entryways and elevators and escalators. If the station is built under 6th Ave., then entrances with level walkways should be built on 5th Ave to allow access to this station.

O International District Station

This location is the major transportation hub for the region. People will be transferring between Amtrak, Sounder, the two Link lines, streetcars, busses, and taxis. There must be a good pedestrian concourse between King Street, Union – the current International District station, and the new Link station. It could be either an overhead or underground concourse. If underground, it should be more than just another concrete underground walkway. It should be well lit, sound dampened, secure and provide a pleasant environment. This would provide an efficient way for accessing the various sections in this multi-station complex.

Sound Transit should work with Amtrak, King County Metro, the City of Seattle and other governmental agencies in the development and operation of this multi-station complex.

O West Seattle

I favor alternatives that involve tunneling between Avalon, the Alaska Junction and beyond.

Not being from West Seattle though, I am not as familiar with the details or the possible routes and station locations, so I will divert to West Seattle people who know more about their own neighborhood.

The Retained Cut Avalon Station appears to be a good alternative.

The Tunnel 42nd Avenue Station (Preferred alternative with third-party funding) does seem like a workable option.

Conclusion

The West Seattle - Ballard Link Line will be a valuable link in our regions overall transportation system. I will be looking forward to further community involvement in the development of this line.

These comments on the West Seattle - Ballard Link Draft Environmental Impact Statement are here-by submitted.

Thank you for the opportunity to comment.

Sincerely,

	James McIntosh Magnolia

------------	--	---------------

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Andrew Dyjak adyjak2916@gmail.com</p>	<p>Andrew Dyjak</p>

04/28/2022	<p>Dear Councilmembers and Sound Transit,</p> <p>I heard that Epicurean Edge might have to give up their NEW location due to eminent domain/future light rail.</p> <p>While I am a huge supporter of public transit, it's a bummer it has to come at the expense of a small local business. I am hoping you can find a way to help keep this business in there current location for years to come.</p> <p>As a chef and cook for many years professionally, I have seen almost every local knife sharpener close over the years. So I would travel all the way to Kirkland to Epicurean Edge to get my knives sharpened. Now they are here in SODO and it's like 6 minutes from my house, and they have expanded their space. Plus it adds life to an area of Seattle that's pretty industrial with their business and Henry mural.</p> <p>Anyways, those are my personal thoughts but I have included the template letter from Epicurean Edge below as they are more eloquent than I.</p> <p>Best, Gretchen Wattula BladeGallery Inc Customer: Home address: 4321 15th Ave S, Seattle, WA 98108 Email: gretchenwattula@gmail.com Phone: 3606319713</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery? BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. I'm looking forward to their classes aimed at established knifemakers and beginners. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at: BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p>	Gretchen Wattula
04/28/2022	PLEASE lay light rail tracks under 4th Avenue to avoid taking land from the Chinatown Historic District. Sincerely, Dr. Joelle Pretty	Joelle Pretty

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>My summary: please listen to Seattle Subway's advocacy. Prioritize long-term system excellence in station/transfer/routing design. These tracks aren't going anywhere anytime soon so get it right the first time.</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who live and work near the Seattle Core. I will use the system less if you make transfers expensive.</p> <p>It's also impossible to believe that SoundTransit will maintain deep stations' elevators/escalators to acceptable standards based on past performance.</p> <p>If deep station are an absolute must (which they aren't), ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations:</p> <ol style="list-style-type: none"> (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. 	<p>Matt Brannock</p>

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Sienna</p>	Sienna Landry
------------	---	---------------

<p>04/28/2022</p>	<p>Dear Councilmembers and Sound Transit</p> <p>I am a long-time customer at BladeGallery's Epicurean Edge in SODO (Seattle). As Seattle recovers from the pandemic, we need more small businesses that are the lifeblood of this great city. Blade Gallery is the finest shop for kitchen knives in the state of Washington, and their work is utilized in many of the elite kitchens around Seattle. This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening.</p> <p>I've learned that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. They are a special asset to Seattle. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Public Transit is crucial for the growth of our city, and I regularly use the light rail to commute to work. But there is plenty of space in the area to enable the growth of public transit AND keep the small business ecosystem that make us a unique and special city. Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. <p>04/28/2022</p>	<p>Dear All,</p> <p>Please do not take the 5th Ave option, where it will have a huge impact on three already disenfranchised neighborhoods, including Chinatown (CID). Chinatown has had a long history of being pushed out, particularly when the land becomes valuable. The CID is a historical neighborhood and should be preserved as such. I have many memories of Chinatown from my youth, including eating at restaurants, shopping at Uwajimaya, attending the Seafair Chinatown parade, and now I do such activities with my children. Thank you.</p> <p>Best regards, Krista Wittman</p>	<p>Krista Wittman</p>

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Kristopher Antonelli kantone192@gmail.com</p>	<p>Kristopher Antonelli</p>

	<p>1717 22nd Avenue Apt 404 Seattle , Washington 98122</p>	
<p>04/28/2022</p>	<p>Please take Sound Transit to 5th Ave OFF THE TABLE. Use 4th - not 5th.</p> <p>The 300 businesses that will feel the effects of this need to be protected. And the best option for their survival are necessary. In a time of anti-Asian hate crimes and criminal violence the neighborhood needs to be preserved for those businesses.</p> <p>I don't want 30 immigrant businesses permanently closed or forced to move.</p> <p>Please help my beloved community.</p> <p>Sincerely,</p> <p>Saya Moriyasu Seattle, WA</p>	<p>Saya Moriyasu</p>

<p>04/26/2022</p>	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW.</p> <p>Consider tunneling all the way from downtown to Ballard, to avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines. Below, I have attached photos of tunnel entrances to Washington DC's Metro stations, located in the city, often next to buildings. The entries are compact and recognizable, and should be considered as a less expensive alternative to massive elevated structures and unnecessary space taken up by grand entrances and mezzanines.</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>Thank you for your consideration.</p> <p>Janis Traven 3247 Magnolia Blvd West Seattle WA 98199 206.285.7375 janistraven@comcast.net</p>	<p>Janis Traven</p>

Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood. Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7thAve N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6thAve N and 7thAve N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7thAve N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region. Advance the Harrison Street station by exploring alternative locations such as the corner of 5thAve N and Harrison St and the corner of 7thAvenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Danielle Lowinger</p> <p>Danielle Lowinger, LMT, CCST Therapeutic massage and cranio-sacral therapy for every body Prenatal/postpartum support for families</p>	Helix Massage Therapy,Danielle Lowinger

<p>04/26/2022</p>	<p>To Sound Transit and the Board of Directors,</p> <p>I am a West Seattle resident and member of the Sound Transit Community Advisory Group. I have closely followed the process of ST3 for nearly five years and participated in almost every community event during that period. I am also a member of the West Seattle Bridge Community Task Force and founding member of the EAG Neighborhood Coalition in the Junction.</p> <p>I greatly appreciate the opportunity to participate in this process, both as a member of the CAG and through the ability to comment on the WSBLE Draft Environmental Impact Statement.</p> <p>The WSBLE extension offers an incredible opportunity for West Seattle, and I strongly support bringing well-designed public transit to our neighborhoods. As an architect and designer, I believe public transit to be the bedrock of any thriving city and can think of few endeavors more worthy of our time, energy, and resources.</p> <p>I strongly advise the board to select a long tunnel alignment for the simple reason that it is the single-best option for the future of West Seattle.</p> <ul style="list-style-type: none"> • While there are plenty of precedents for above-ground light rail around the country, there are very few cities that utilize such a configuration through the heart of residential neighborhoods. • Disruption to the current neighborhood fabric through the demolition of existing housing and introduction of 100-plus-foot tall guideways (an inevitable result of the neighborhood's dramatic topography) will be severe. • It is inevitable that the neighborhoods of West Seattle will continue to grow and densify. We do not have arterial boulevards like MLK in south Seattle that can accommodate both light rail and multi-lane traffic. So, any above-ground option proposed by Sound Transit will result in the loss of valuable real estate and act as a deterrent for surrounding development due to the undesirable views and noise. • As the most recent pricing analyses have shown, the cost delta between the long tunnel option and any above-ground options has narrowed dramatically when compared to initial Sound Transit projections. I believe the qualitative benefits of this tunnel option far outweighs the negatives and will pay dividends to the neighborhoods of West Seattle for the decades to come. <p>Please, do not be tempted by quick and easy alternatives whose strongest attribute is cost savings today. Light rail is a generational decision. The options chosen will be in place for decades. Support and build something the entire community can be proud to pass on to future generations.</p> <p>Thank you again for this opportunity. I sincerely hope you will take the time to listen to those members of the community who will be impacted the most by this process, as future Sound Transit Riders, potential neighbors to Sound Transit infrastructure, or potential victims of displacement.</p> <p>All the best, Charlie Able</p> <p>P. S. The following represents additional commentary related to the DEIS and process.</p> <p>Delridge Station:</p> <ul style="list-style-type: none"> • The options which made it into the DEIS for the Delridge station all severely impact the Delridge neighborhood in <ul style="list-style-type: none"> o Loss of single-family homes o Homes not demolished are in close proximity to 100+ foot tall guideway o All station options from a walkshed perspective are limited in service to north Delridge rather than the heart of Delridge • Both Avalon and Junction areas received the benefit of tunnel analysis while no tunnel options were considered in the DEIS for Delridge; this does not appear equitable <p>Avalon Station:</p> <ul style="list-style-type: none"> • The station proximity of the three stations in West Seattle is comparable to the downtown stations, which is the only other location in the sound transit network with this kind of station density, and West Seattle is obviously not as dense (and is never projected to be as dense) as downtown. • The ridership projections for the Avalon station grossly underperform the other two West Seattle stations and by their own projections would be the station with the lowest ridership in the entire Sound Transit Network. • More than 2/3 of the projected Avalon walkshed is captured by the Junction or Delridge station walksheds. The Avalon Station lies within the Junction walkshed, making it completely redundant. Sound Transit has also acknowledged that network ridership would not change without the Avalon Station. 	<p>Charlie Able</p>
-------------------	---	---------------------

	<ul style="list-style-type: none">• The Avalon Station adds significant cost as well as slows train service, further lowering potential ridership for other stations in the area.• I would strongly encourage Sound Transit to permanently “postpone” the Avalon Station, shifting all related cost-savings towards a long-tunnel option. <p>Future Planning:</p> <ul style="list-style-type: none">• Because a public process involving the Seattle Planning Department will not occur until stations and routes are selected, metrics are inherently quantitative and do not receive the discussion and feedback allowing them to also be viewed through a qualitative lens. For example, no part of the process asks which station location works better for future neighborhood planning aspirations.• Sound Transit has not presented any real vision for what southern expansion of the light rail network would involve. Selection of options if the Junction without understanding how Sound Transit intends to proceed south seems very shortsighted and highly prone to limited expansion options in the future.

04/27/2022	<p>WSBLE Draft Environmental Impact Statement Comments c/o Lauren Swift Sound Transit 401 South Jackson Street Seattle, WA 98104</p> <p>Re: Comments of Grant Wojahn, friend of Pioneer Square on the Draft West Seattle and Ballard Link Extension (WSBLE) project draft environmental impact statement (EIS)</p> <p>Dear Ms. Swift:</p> <p>Thank you for considering our comments on the draft EIS. Our letter focuses on the impacts and mitigation for the Chinatown-International District (“CID”) segment, station and track alignment because that is the part of the larger WSBLE project that directly affects our interests in Pioneer Square. All alternatives for the C-ID segment will be within the boundaries of the Pioneer Square Historic District or directly abutting it. Construction of all alternatives will have significant adverse impacts on Pioneer Square. I echo the comments, issues, and mitigation ideas suggested in the letter submitted by the Alliance for Pioneer Square, and I offer the following comments specifically related to my own review.</p> <p>I used to work for a large employer in the Pioneer Square neighborhood and I know the effect the project will have on the organization and my friends that still work there. I feel as though the mitigation ideas that the Alliance is putting forward will help with the livability of the neighborhood during construction.</p> <p>I reiterate what many have already said to date: I believe Sound Transit should study the Fourth Avenue shallow station (CID-1a) alternative further, to reduce impacts to transit and traffic, seek to shorten construction duration, and reduce costs. I believe this alternative meets more of the regional long-term transit needs than the other alternatives. It centers the new light rail station within the existing transportation hub, closer to more existing transportation, transit, and event facilities, offering greater opportunity for infrastructure development that benefits the whole region, not just Seattle.</p> <p>I request that Sound Transit communicate any alternative development studies and findings as soon as possible, and well before any formal NEPA or other environmental documents are published.</p> <p>I look forward to working with the Sound Transit Board of Directors, Sound Transit, and our City of Seattle officials to inform the decision to select the right preferred alternative for this once-in-a-generation regional project.</p> <p>Sincerely, Grant Wojahn, friend of Pioneer Square</p>	Grant Wojahn

03/15/2022	<p>the subjects: king street neighbouring unity</p> <p>Dear respect the council of Seattle and dear respect the Sound Transit: My name is Liu Dongdong, you can call me Bob in english name, although i am not a fat, but this english name is so short, easy to remember. I come from the mainland of China, live in an old city, Nanjing, in jiangsu province.</p> <p>I saw the weibo in Chinese about the news of the construction of the famous ChinaTown. I found that the plan was over complex, too much things involved in, old buildings, old streets, poor people asking for too much, costs up quickly, difficulties on moving people out of there.</p> <p>Here is a new idea and plan to make things easier, here is a Chinese word:"?????", in english, it means moving pay form the government makes you big money, so all the poor people rushing to move out of there. If the plan was rebuild here, the China Town, all the people will be happy.</p> <p>If the China Town becomes a best-visitor again, fresh new, it is worthy to spend the money here. There is a Chinese word, "??", the layout, it won't and can't be small. The China has changed a lot, its elements become: rich, luxury, green, technique. The China Town in USA, can't lose, right? It must and will have the modern elements of the China for the asian Chinese people who live in USA, to keep the country have the leadership around the world.</p> <p>Newly built buildings, crowds in the streets, businesses developed, that's the new asian community of the USA.</p> <p>Here is my sincere ideas: I suggests that to rebuild the China Town, to build a huge Chinese luxurious garden, like the place here: the Garden Expo park in tangshan, Nanjing, jiangsu province. Then build modern office buildings around the Garden, and with a modern mall and a big supermarket and a lot of parks. People who work here will visit the garden or the mall or the supermarket to buy something and sharing beautiful sunshine at noon and the fresh clean air. The train station will help the people who work here go to work and go back home convenient. Crowds make the money and the future, beautiful sights and easy life conditions will raise up the local property market.</p> <p>At last, if you like my ideas, you can ask for more details or more other detail suggestions if you wish, thank you for reading my e-mail. Best wishes!</p> <p style="text-align: center;">your sincere liudd. from Nanjing, jiangsu, China</p>	Liu Dongdong
04/22/2022	<p>"Hi, I'm calling about the Ballard Extension. My name is Julie, and I am definitely not in favor of the 14th Avenue options both of them because it cuts off all kinds of communication with Ballard Food Bank, which just recently opened. Trucks will not be able to come and go. It will be very difficult with all the construction for our clients to come and go. And so, 15th Avenue would be much better, and it looks like by your map, it makes a whole lot more sense because it displaces a lot less in general, OK, thank you."</p>	
04/26/2022	<p>"Hi, my name's Catherine Gu, and I'm here to comment on the sound transit plans to build a new station, I believe, in the Chinatown International District. And I wanted to mention that Chinatown has been such. There are so many small local businesses veteran home to Chinatown, and obviously it's a huge attraction for a lot of other people to look beyond that. All the locals that live there would be moving out on so much business. They're be so many small businesses closing. And it's not just all about corporations, obviously. With in, with this major decision coming up, if you want to think about the future, you think other people, and that doesn't just include the vast majority of corporations and things that also affects so many small businesses in so many families that live in Chinatown. And I just can't stand to see this happen. I can see that there is there are five different options for that. I just know that the one on Fifth Avenue would greatly, it would be such a tragedy to see so many small businesses shutdown. So I just wanted for my comment in there, and I'm sorry again for rambling and not being as I would like to be. But my e-mail is, C A T K G U at gmail dot com. Again, I would love to know the update for the Thank you and have a good day."</p>	Catherine Gu

04/27/2022	<p>Sound Transit planners,</p> <p>Please do not put the new light rail station on 5th Ave in the ID!</p> <p>Although all options will affect this neighborhood, the 5th Ave options will have significantly more detrimental impacts that this neighborhood (after a history of construction impacts, xenophobia, hate crimes, and the pandemic) should not bear.</p> <p>I am particularly concerned about the harmful impacts that are outlined in the documents attached.</p> <p>Tera Oglesby 1005 E Spruce St, Seattle, WA 98122</p>	Tera Oglesby
04/28/2022	<p>To Sound Transit Board Members and Seattle City Council Members:</p> <p>My name is Annie Xia, and I am a member of the Seattle community. Along with hundreds of others, I am urging Sound Transit to move forward with the 4th Ave option, NOT 5th.</p> <p>We want the 4th Ave tunnel station to avoid 5th Ave impacts! To name a few consequences of 5th Ave option, there would be the full closure of King Street, South Weller, and 5th Avenue for several years, with increased noise and air pollution, dust, dirt, and unsettling vibrations for the CID. This harms CID residents, businesses, schools, daycares, and other programs that serve thousands of people -- from youth to elders, from residents to visitors. 5th Avenue construction would also cause enormous disruption to 30 immigrant and refugee businesses to permanently close or be forced to try to move, when these businesses have already been battered by the pandemic and higher-than-ever anti-Asian hate crimes.</p> <p>These are completely unacceptable consequences.</p> <p>A 4th Ave tunnel station avoids these 5th Ave impacts, so please: I am urging Sound Transit to listen to the people, take 5th Ave off the table, and #MoveForwardOn4th.</p> <p>Thank you for your time.</p> <p>Sincerely, Annie Xia</p>	Annie Xia

04/28/2022	<p>Please do not take the 5th Ave option, where it will have huge impacts on 3 neighborhoods. Further, Chinatown has had a long history of being pushed out, particularly when the land becomes available. The CID is a historical neighborhood and should be preserved as such.</p> <p>Sincerely, Irene</p>	Irene
04/28/2022	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years, with increased noise & air pollution, dust, dirt, vibrations in the CID is unacceptable. Not to mention disruptions to 30 immigrant businesses permanently closed or forced to move due to 5th Avenue construction.</p> <p>Seattle's Chinatown ID is a historic area rich with immigrant culture – an asset to Seattle that must be protected. When my family first immigrated to the US, they found community in Seattle's Chinatown. This is where my dad learned English. This is where my grandpa began his career as a chef. This is where we gather to have weekly dim sum.</p> <p>Construction on 5th Ave would not only disrupt the community and local businesses, it would severely lessen the quality of life of all those that live here, especially our seniors. Over 300 businesses that have already been battered by the pandemic, higher than ever anti-Asian hate crimes, and criminal violence would be further disrupted by building on 5th Ave. This would also endanger the lives of 1,200 elderly by blocking access/egress for emergency vehicles with street/sidewalk closures and detours.</p> <p>Sound Transit, take 5th Ave off the table. 4th Ave Tunnel Station avoids 5th Ave impacts! Move Forward on 4th!</p> <p>Sincerely, Jessica Lee</p>	Jessica Lee

04/28/2022	<p>To Sound Transit Board Members and Seattle City Council Members:</p> <p>My name is Vivian Hua, and I am a member of the Seattle community. Along with hundreds of others, I am urging Sound Transit to move forward with the 4th Ave option, NOT 5th.</p> <p>We want the 4th Ave tunnel station to avoid 5th Ave impacts! To name a few consequences of 5th Ave option, there would be the full closure of King Street, South Weller, and 5th Avenue for several years, with increased noise and air pollution, dust, dirt, and unsettling vibrations for the CID. 04/28/2022	<p>We, the undersigned residents, community members, and riders along Sound Transit WSBL routes, urge you to choose 4th Avenue for the new Chinatown ID/SODO station. A 5th Avenue route would devastate community and economic life for 1,200 frail elderly, residents, thousands of children and youth in daycares, schools, youth programs, and harm nearly 300 immigrant businesses in Chinatown, Japantown and Little Saigon. According to Sound Transit, the negative impacts are: full closure of S. King Street, S. Weller and S. 5th Ave, direct demolition/construction noise, air pollution, gas, water, electrical shut offs, loss of property by owners of color, displacement/permanent closure of businesses.</p>	Raymond Chan
04/28/2022	<p>To Sound Transit Board Members and Seattle City Council Members:</p> <p>My name is Tiffany, and I am a member of the Seattle community. Along with hundreds of others, I am urging Sound Transit to move forward with the 4th Ave option, NOT 5th. We want the 4th Ave tunnel station to avoid 5th Ave impacts! To name a few consequences of 5th Ave option, there would be the full closure of King Street, South Weller, and 5th Avenue for several years, with increased noise and air pollution, dust, dirt, and unsettling vibrations for the CID. This harms CID residents, businesses, schools, daycares, and other programs that serve thousands of people -- from youth to elders, from residents to visitors. 5th Avenue construction would also cause enormous disruption to 30 immigrant and refugee businesses to permanently close or be forced to try to move, when these businesses have already been battered by the pandemic and higher-than-ever anti-Asian hate crimes. These are completely unacceptable consequences. A 4th Ave tunnel station avoids these 5th Ave impacts, so please: I am urging Sound Transit to listen to the people, take 5th Ave off the table, and #MoveForwardOn4th. Thank you for your time.</p> <p>Sincerely, Tiffany</p>	Tiffany T
04/28/2022	<p>My name is Tu Pham. My e-mail is Mr.TuPham@yahoo.com. I vote for the 20th Avenue, Ballard Station. That would be the smartest move. And the phone number is (206) 427-2325. Thank you.</p>	Tu Pham
04/28/2022	<p>My name is John Pham. My e-mail is john.tu.pham@gmail.com. My number is (206) 427-2325. I vote for the 20th Avenue Ballard Station, the historic site. Be the smartest move ever. You guys have got to do it. Bye</p>	John Pham
04/22/2022	<p>Talking about building a train in west Seattle is very important for us. I'm excited for building it and welcome that as a resident at Highpoint since 2010. Thank you.</p>	Ismael Mohamud

04/28/2022	Hi, Erica Mahony, 3229 Southwest Genesee Street in Seattle, Washington, 98126. And, I can also be reached via e-mail, Erica.Mahony@gmail.com. Regarding the West Seattle neighborhood DEIS letter. I know this is closing tomorrow. I'm a recent widower. My home was vandalized where there were six broken windows a couple of Mondays back starting at 1:30 in the morning. I resided on Southwest Genesee Street for, goodness, going on 18 years. My husband and I have reclaimed this property. It was an estate sale, it was built in 1925. It's no longer Maybury, but living right at the bridge deck, where the bridge has been shut down, how the neighborhood has changed over the years. I would love to just drive a stake in the ground and just say, You know what? It's kind of like Up. I know you can't buy your view, but it would be nice not to be forced out of eminent domain. So in regard to the plan proposal, I am way behind when my neighborhood off of Southwest Avalon and Southwest Genesee 32nd Avenue Southwest did a walk through, I was dealing with actually ensuring that my house was safe and sound with the elements and...	Erica Mahony
04/22/2022	Prefer 4th options, if the BOA building got displaced, it would be very inconvenient for the residents who goes here. I usually go to BOA to pay bills very often.	
04/28/2022	<p>To the Sound Transit Board and Seattle City Council:</p> <p>We, the undersigned residents and community members along Sound Transit WSBLE routes, urge you to choose 4th Avenue for the new Chinatown ID/SODO station, preferably 4th Avenue Shallow Station Option (CID-1a).</p> <p>Firstly, we find that Pages 27 and 28 of the Environmental Impact Statement draft significantly neglect the importance of preserving the historic and cultural relics of Chinatown. The only related information we can get from the text is "Prior to publication of the Final Environmental Impact Statement, historic areaways within the area of potential effects for the Preferred Alternative will be identified and documented, and evaluated for potential National Register eligibility." Such information is too vague to help us make an informed decision on which station option will least harm Chinatown's historic and cultural properties. However, based on common sense, we know the two 4th Avenue Options would cause less adverse effect on historic properties since they are one block away from Chinatown.</p> <p>Secondly, choosing the two 5th Avenue Options (CID-2a and CID-2b) would devastate the community and economic life of Chinatown, one of the most vulnerable communities in Seattle. It would make life even more struggling for the 1,200 frail elderly, small business owners, residents, and thousands of children and youth who are still trying hard to battle against the Covid-19 impacts; private schools and youth programs may have to be shut down; nearly 300 immigrant businesses in Chinatown, Japantown and Little Saigon may face displacement or even bankruptcy. According to Sound Transit, the negative impacts include: full closure of S. King Street, S. Weller and S. 5th Ave, direct demolition/construction noise, air pollution, gas, water, electrical shut offs, loss of property by owners of color, displacement/permanent closure of businesses.</p> <p>Choosing 4th Avenue Options means better preservation of the historic and cultural properties and wellbeing of all the residents, these are priceless. That's why we urge you to choose the 4th Avenue Options.</p> <p>[See document for petition signees]</p>	Seattle Chinatown International District Preservation and Development Authority (SCIDpda), Nihonmachi Terrace Apartments, Eastern Hotel Apartments
04/22/2022	Prefer to build the station on 4th in CID segment. IF the station is built on 5th, the BOA building has to be displaced and that would be a big concern for the Bush Hotel.	
04/22/2022	Prefer 4th Avenue. 5th many homeless concerns safety if the station built on 5th. (Hing Hay Park, many homeless).	
04/22/2022	Let the trains and buses come on time or at least wait until the exact time.	
04/22/2022	Please fix or replace the elevator and escalator system, or change companies.	
04/22/2022	So wonderful to see a city (Seattle) planning for the future. So many cities other cities are stuck in the past. The transit and light rail solution being implemented will pay huge dividends for the next hundred years, and set Seattle apart as a leading metropolis.	

04/22/2022	I believe it is useful and I welcome it. I do not ride but it is very useful for people who ride	Abdullahi A Hassan
04/25/2022	[Translated from Spanish to English] I would like not to disturb Mother Earth with tunnels and excavations. If possible, build it above ground or in the air with solar energy, and try not to use oil!!! Also, we need a train that travels from north to south and east to west with a central hub in the middle.	
04/25/2022	[Translated from Spanish to English] My opinion is that it is good for everything so that people can travel more with less traffic. Also, that it would cost less. Thank you.	
04/25/2022	[Translated from Spanish to English] I think it is a great idea to travel by train and that it should be expanded so that more people can use this means of transportation and have an easier way to go from one place to another.	
04/25/2022	[Translated from Spanish to English] I think it's good that the Sound Transit route continues. That can prevent traffic from getting worse and it's cheaper to ride Sound Transit. Also, it will be more economical to travel all over Washington.	
04/25/2022	[Translated from Spanish to English] It is a good thing that they will add this train service that will benefit many people of low income and communities that experience little security in their lives. It should benefit everyone because we all pay taxes in this country. This project will help many who do not have a means of transportation. Thank you for taking us into account.	
04/25/2022	[Translated from Spanish to English] For me it is a good thing to expand train service. It will benefit people of low income and a sense of security for the benefit of all. We have a right to this because our taxes contribute to the country. This project will benefit thousands of people who do not have a means of transportation. Thank you for taking us into account.	
04/25/2022	[Translated from Spanish to English] We need an efficient transportation service that covers all the areas where working people who use public transportation live. The light rail systems do not help our people move forward. It also collects a lot of taxes and I do not know where it is invested. The low-income neighborhoods are forgotten. We need security, better health insurance, better schools and equal justice for all. Politicians only use us when they are campaigning. We need to be inclusive in order to have a better world.	
04/25/2022	[Translated from Spanish to English] I think the light rail is a good thing because it is a step forward in urban transportation. I have already use it and like it very much. I agree that we should have light rail.	
04/25/2022	[Translated from Spanish to English] It is a good idea. First of all, to enable us to get to places where we can be in nature. Hopefully there will be no more damage to the environment so we can leave this for the for the future generation.	
04/25/2022	[Translated from Spanish to English] It is very useful for society and community because it minimizes road traffic and as an economic aid to transport us in daily work, comfort and family life. We hope it will continue to reach us in all places and corners of Washington.	

04/25/2022	[Translated from Spanish to English] The rail project will be a great help to move from one place to another quickly and economically. Today tourism is on the rise in Seattle and it will help tourists get to know the city using only one mode of transportation. Let's hope that in the future they will have more points of departure to travel to other cities in an effective and fast way.	
04/27/2022	Save Oasis Tea Zone! Save businesses in the CID! Build up Chinatown, Seattle, and protect the people who live here. Please do not continue displacement of local businesses and gentrification of Asian American communities. Move the link extension to 4th Ave.	Kiera Lyssikatos
04/27/2022	As a frequent patron and employee in the CID, I'm appalled by the thought of the major construction that is being proposed in the DEIS options. All of the options would drastically alter the neighborhood and pave the way for more gentrification, destruction & loss of cultural heritage, and displacement long-term. Not only would there be major disruption during the 5-10 years of construction, but the impact to the neighborhood would last for decades after. Among the options, the 4th Ave options are less terrible given how vital a street 5th Ave is, but I'd like to see more options considered further from the CID.	Christopher Long
04/27/2022	The 4th Ave CID station will provide better service (shallow) while minimizing impact to the area. The Deep option does not meet the needs of Sound Transit project (accessibility). If transit isn't going to be accessible there is no point, cars become easier to use in that scenario. I care about this issue because I rely on transit by necessity and if the places I go get destroyed when it's built, I may as well stay home and spend money elsewhere. It's also, in my opinion, silly to put a second station in this area when the current one could be better with renovation. I trust that you are smart enough to design tracks that don't require a second station in a vulnerable area of Seattle. All of your materials say you prioritize environmental impact, you knew that this would cost extra when you prioritized it. If you can't spend here to minimize impact, you never cared.	Isaac Miller
04/27/2022	The Chinatown-International district is not an acceptable location for construction of the West Seattle and Ballard Link light rail extensions. The construction of the I-5 devastated the community decades ago and now the city's greed threatens to repeat the same mistake. The ventilation system alone makes the C-ID ineligible for consideration. Pushing clean air into the tunnel and pulling bad air into the streets will cause health complications for generations of C-ID residents. I live here. Humans live here. Value C-ID residents' lives.	
04/27/2022	Hello, I've been listening to community members and formulating my thoughts on the Link extension. It seems like the people most impacted by the construction would prefer 4th Ave Shallow over 5th, even if it costs more or/and takes longer to build. More important than that though, the question posed is why construct in the CID in the first place? I'm sure there are many reasons I'm not aware of, but I'd urge you to consider not digging into the heart of the CID to begin with. Thank you for your service in our transportation concerns, and I hope you take our worries about this as an expression of love for the city and its people.	Benjamin Limpich
04/27/2022	I am a longtime resident of the CID and I very much believe that this neighborhood benefits most from accessibility via public transit because local businesses depend on foot traffic while car traffic mainly causes congestions and creates a more dangerous and polluted experience for locals and visitors. I do not have a preferred option but I am of the opinion that longer construction periods will only hurt more and cause more extended disruption and delay the moment when the CID stops being negatively impacted and starts benefiting from the new access.	Juan Iglesias
04/27/2022	The 1a or 1b station would be the most beneficial to the ID/Chinatown. I-5 already cuts through the ID and we should not further displace small local businesses. If union station was revamped to be use more efficient, then it would attract more users.	Landyn Barnhill
04/27/2022	I believe the 1a or 1b station would be the best options for Chinatown/ID. We are better as a city when we do NOT displace residents/businesses, especially in such a historic majority-minority neighborhood.	Connor Nash
04/27/2022	Do not build it in Chinatown.	Gary Lee

04/27/2022	I am distraught that the CID-1a 4th Ave S station option would disrupt our Chinatown businesses. We cannot have family owned businesses displaced. I believe the city can explore better options for the citizens of Seattle specifically in Chinatown!	Jason Jia
04/27/2022	I am worried the introduction of CID 1a and 1b causing air quality issues that not just effect the densely populated elder community, but also displaced them. If assistance is not provided then I think it is shallow to add link extensions in the Chinatown International District.	Erykah Sierra
04/27/2022	I am worried that the construction of the link extension will negatively impact small businesses, the residents of the Chinatown neighborhood (especially elders), and the Asian American Community in Seattle. Chinatown has been a crucial pillar to my racial identity as a Chinese American. Building a new link extension in it will close down businesses and kill the neighborhood. Building the link extension will erase Chinatown as a place where Asian Americans can gather.	Brianna Cho
04/27/2022	Growing up in the Seattle area, I have seen the gentrification of the CID because of the various projects the City of Seattle impose on its citizens. If the displacement of people and businesses, especially of POC continues, it's reminiscent of the Japanese internment camps and Chinese Exclusion Act. The new stations and lines that Sound Transit is proposing is detrimental to the businesses and civilians in terms of economy, air quality, noise pollution, traffic, and more. I highly recommend not choosing the most efficient or least expensive extensions plan but opting for one that least disturbs businesses and the people/families that live here and have been here. Dislocating them also means erasing Chinatown's rich history and ruin the family like atmosphere in the CID.	Katelyn Hoang
04/27/2022	International District has been a sanctuary for all Asian Americans - specifically East and Southeast Asians. The businesses here have built a reputation for themselves and among that - the workers that provide for their families work here. Why strip the culture away, the historical values of ID when there are commercial roads you can go through. People of all ethnic groups come to enjoy the culture of Chinatown at these businesses you're going to be disturbing, displacing, and/or cutting through. Please reconsider either not following through with this at all, and go somewhere that won't impact the hard work and efforts of these small businesses. Noise pollution is already a grand issue here in Seattle. Leave this community alone. I grew up here, walking with my grandma for groceries and the same restaurants you'd be ruining. How can history be restored - all this work?	Zarielle Mendoza
04/27/2022	The construction of the Kingdome & I-5 cutting through I-D in the 1970s have already caused so much permanent loss in the CID community. Though the temp impacts (traffic, construction, transit) are the longest for 4th Ave station. The permanent long-term impacts weigh heavy and will ruin the C-ID economy forever. You should find somewhere else to build it. Construction has taken advantage of this thriving residential community. If 5th Ave Station is pursued, the vent system will be centrally located in C-ID and cause 100s of years of health issues post-construction. This plan is so senseless to the population in I-D. You will accelerate the disappearance of the C-ID community forever. If 5th Ave station is pursued, you will cause many long-term Asian and Asian American residents to lose their livelihood - their businesses, their legacy. You will erase them from ever being here. The ends should not justify the means. Do not build 5th Ave just because it is cheaper and faster. You will only make the rich richer and the poor poorer, then gone.	Kayce Luna
04/27/2022	The CID would be an inappropriate place for the new light rail extension. The pollution created would shorten the lifespan of an already vulnerable community. I say no station in the CID there is more space in SODO for new construction. Businesses would be devastated by the currently planned project.	

04/27/2022	<p>I am concerned about the health conditions of the residents and businesses in CID. I am a descendent of Chinese immigrants of a long time CID business owners, and a business owner myself. I am appalled at the fact that this project has been in the works for SO long and we as the community who live here are just learning about this now. What will you do to care for the elders in this neighborhood? What will you do about the irreparable impact on businesses? NONE of the optoins, CID 1a, CID 1b, CID2a, CID2b, will be good for the longevity of the neighborhood. This is the ONLY culturally significant light rail stop and you are going to kill the residents. This displacement will cost lives. ANYWHERE but the CID.</p>	
04/27/2022	<p>Hello ST</p> <p>Seattle Chinateown & Sound Transit can do wonderful things for our city if we work together. Please respect the communities wishes by building tracks on 4th (CID 1a/1b) instead of 5th. Transit is for everyone and good transit cannot displace peoples livelyhood. Lets work together and create equitable transit that energizes instead of antagonizes our vibrant community.</p>	Emma Cooper
04/27/2022	<p>I don't think that the Link extension should go through the heart of Chinatown ID. This will unfairly disrupt businesses and residents who work and live here every day. Chinatowns all over the U.S. have been more affected by COVID due to Anti-Asian racism and this project would contribute to a further dampening of economic activity. Furthermore, the added pollution would be even more unhealthy for the elders who live and walk in the area.</p> <p>Please consider the real human cost of building this project in the middle of CID. I want to be proud of this city and tell my friends about how inclusive and progressive Seattle is.</p> <p>Thank you.</p>	Megan Graves
04/27/2022	<p>No to your deconstruction because we don't see what you're making. DON"TCARE ABOUT YOUR BUDGET, YOUR REROUTES, THE SOFFOCATIONS. YOU GAVE TIMESTAMPS, SCHEDULES + REARRANGEMENTS. NO TO YOUR 4TH + 5TH PLANS. Give us our 1- 2- + 3rd BREATH OUR VOICE + OUR BODIES. OUR STORIES OUR FUTURES. NO TO THE FURTHER ESCAPADE + "SILENCE US" with a quieted comment meeting 2 then escape into your paper filled determinations. No, not saying goodbye 2 Aunty, uncle, cousin filled rooms. No 2 saying compromise + King County's taking + taking (#13 grandchild speaking)(GRANDPA KERRY) our elders, our children + ourselves deserve better than our constant erasure. Make a new plan. Make it make sense. Make it for the neighborhood or not at all!</p>	Samantha Hilariu

04/26/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p>	Rachel Swerdlow
04/26/2022	<p>Magnolia people will use transit and light rail if they can get to it. Please observe the requests in the Magnolia Community Council letter of April 26. Many of the points are made to prevent mistakes in design and building.</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. 04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely,</p>	Samhita Reddy

04/26/2022	<p>4.3.2.1.2 Chinatown-International District Segment</p> <p>Much of the Chinatown-International District study area has Mandatory Housing Affordability zoning. The City's goal for this area is to provide accessible, inviting neighborhoods that have an efficient transportation system that encourages less dependence on cars (City of Seattle 2018).</p> <p>DEIS fails to provide parking for those coming to shop, visit elderly relatives, bring kids to multiple activities, see the doctor or herbalist, take relatives to doctor's appointments; getting granny to the ER on a bicycle or scooter doesn't do it; parking also needed for long term tourism; needs to be a study on effects of eliminating parking for businesses.</p> <p>Betty</p>	Betty Lau

<p>04/27/2022</p>	<p>General Comments</p> <p>Tunnel options are preferred, especially in light of recent legislation allowing for local funding mechanisms; Seattle residents will pay additional costs to “build it right” with tunnel options being the clear preference for a 100+ year investment.</p> <p>Build for pedestrian priority. Adding several blocks from stations to core areas will reduce ridership.</p> <p>It’s imperative that we plan for continued expansion of the system. The final deliverables must support extensions from Alaska Junction to White Center/Burien, from South Lake Union north via Aurora, and from Ballard north/east to Crown Hill (and beyond) or Wallingford (and beyond).</p> <p>Station Specific Comments</p> <p>For Alaska Junction: Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings.</p> <p>For SoDo: Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking. Eliminate wide-ranging pedestrian bridges (i.e., Northgate) in favor of compact station design with quick routes to surface streets. Prioritize maintaining the SoDo Busway (after construction is complete)</p> <p>Chinatown-International District: 4th Avenue is the best option to minimize disruption to businesses. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than four and a half minutes. We need ease of connection between lines, Sounder, Amtrak and busses. Study utilizing the existing Union Station as this is a regional community asset that could be re-tooled to again be used for transit. Prioritize direct payments to impacted local businesses to offset loss in customer traffic during construction. We can pay these businesses’ rental and operating costs during the construction period cheaper than we can build deeper, more elaborate tunnels, and with a 100+ year investment window, we need to build the tunnel correctly.</p> <p>Midtown station – the deep tunnel is not very workable. Difficult transfers and access between stations artificially depresses ridership. Again, stressing that these are multigenerational investments and we need to do them correctly. Make the station as shallow as possible, design the station for surface-to-platform elevators eliminating mezzanine transfers.</p> <p>Westlake/5th Ave station – This looks to be the busiest station in the entire system. Update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access.</p> <p>Denny: Prefer DT-1 on Westlake Avenue. Interruptions to streetcar are not that important (low ridership), especially since Center City Connector is not guaranteed. Bus detours via adjacent streets is possible. Aim for shallower and more direct station with access on Westlake Ave. Also, do not consider eliminating either this (Denny) or the next (SLU) station – we need both as this is a dense and growing area of the city.</p> <p>SLU Station: move this station away from SR-99 to maximize the residential population in the walkshed. This isn’t suburban Snohomish County, we need to place transit stations in the neighborhoods where people actually live – and no one lives atop SR-99.</p> <p>Seattle Center – prefer Republican Street. Mitigate impacts to arts organizations, preserving them on-site, increase mitigation efforts as well via enhanced landscaping</p> <p>Smith Cove – maintain, do not eliminate, this station. Prefer elevated Galer Street station as it offers good connections to Expedia and South Magnolia.</p> <p>Interbay - Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3].</p> <p>Ballard – advance and continue study of tunnels; again, this is a 100+ year investment and we need to pass local-option funding mechanisms that allow Seattle residents to pay additional dollars to build a Ballard tunnel. Continue studying 20th Avenue NW station costs as this is much closer to the core of Ballard and will likely increase appeal and ridership. Out of the existing, presented options, 15th Ave is preferred. The</p>	<p>Austin Johnson</p>
-------------------	--	-----------------------

line needs to be built with expansion in mind, and the 14th Ave option would be difficult to extend north due to Ballard High School. Design Ballard station for future extensions north to Crown Hill or Greenwood and east to Wallingford / U District. Finally, a movable bridge should be eliminated as an option due to possible future constraints on the system.

04/27/2022	<p>4.3.2.3.3 Chinatown-International District Segment</p> <p>The alternatives in the Chinatown-International District Segment would convert manufacturing/industrial center land and urban center land to a transportation use. When connecting to Alternative SODO-2, Alternative CID-2a would convert the most manufacturing/industrial land and the most overall land to a transportation use. Alternative CID- 1a* would convert the least amount of land to a transportation use. Much of the manufacturing/industrial center land that would be converted is currently vacant.</p> <p>Urban Center land should be converted to housing and small business uses, especially when manufacturing/industrial center land is readily available for transportation use. Explain why urban center land in a minority community is to be taken for transportation uses.</p> <p>4.3.2.5.2 Transit-Oriented Development Potential by Alternative</p> <p>The International District/Chinatown Station alternatives under 5th Avenue (Alternative CID-2a and Option CID-2b) have TOD potential, which could include affordable housing or other kinds of equitable TOD per Sound Transit’s 2018 Equitable Transit Oriented Development Policy. Alternative CID-2a and the CID-2a diagonal station configuration have considerable potential for a large-scale integrated joint development.</p> <p>TOD in the CID is very low if one looks at the conceptual maps because of property taken for bike storage structure, two ventilations buildings, a maintenance and communications room, station entrances and exits. Need to give dimensions of all transit related structures on appropriated property; not to mention property going out of the hands of BIPOC owners. How does that advance RET?</p> <p>Table 4.3.3-2. Estimated Property Acquisition Impacts on Businesses and Employees for the Ballard Link Extension</p> <p>Table Summary: CID 4th options business displacements 5-8, 5th Ave. displaced: 19-27; employees—up to 230</p> <p>Displacements of BIPOC businesses are unacceptable. How will harms be repaired from past infrastructure projects? What guarantees are there small businesses will survive in a different cultural environment after relocation? What guarantees are there remaining businesses won’t lose revenue from being in a demolition and construction zone?</p> <p>4.3.3.3.3 Chinatown-International District Segment</p> <p>Business and Employee Displacements</p> <p>Alternative CID-1a* and Option CID-1b* would have the least business displacements. Alternative CID-2a would have the most business displacements, and more employee displacements compared to Option CID-2b. Businesses displaced with either Alternative CID-2a or Option CID-2b would include some retail and service businesses that serve the local community.</p> <ul style="list-style-type: none"> · Explore ramifications of not having those retail and service businesses in the community; · Do a study of lost wages effects on employees and their families <p>4.3.3.4.1 Impacts Common to All Alternatives</p> <p>Negative effects of construction often include blocked visibility and reduction in access to businesses, traffic delays, noise, and rerouting traffic in ways that increase travel time.</p> <p>Need a baseline study of noise, traffic, dust, vibrations to compare to demolition and construction activities</p> <p>4.3.3.4.3 Chinatown-International District Segment</p> <p>Roads would be detoured or closed as needed to construct the project</p> <p>However, it could require temporary displacement of less than a year of businesses in the American Hotel building at 417 6th Avenue South and the Buty Building at 402 5th Avenue South while structural improvements are made to these buildings.</p> <p>Roads where traffic would be diverted include 4th Avenue South, Maynard Avenue South, South Jackson Street, and 6th Avenue South for Alternative CID-2a and Option CID-2b.</p>	Betty Lau

This list omits trolleys diverted to 7th or 8th, include haul truck routes
4.3.4 Social Resources, Community Facilities, and Neighborhoods

Add in daycares, children's programming, youth activities, schools when talking about CID, need to name the 3 neighborhoods within it as an integrated whole.

4.3.4 Social Resources, Community Facilities, and Neighborhoods

Add in daycares, children's programming, youth activities, schools when talking about CID, need to name the 3 neighborhoods as an integrated whole

Arterials: Include routes into the district; which are the main routes into CID, not just downtown

The Chinatown-International District has high neighborhood cohesion.

More analysis needs to be done on impacts of demolition and construction on neighborhood cohesion

4.3.4.1.2 Demographics

As shown in Table 4.3.4-1, the Chinatown-International District Segment population has the highest percentages of people of color, low-income people, and over-65-aged populations and of households with no vehicles; these percentages are much higher than the city average.

Need to include # of elderly non-English speakers, pre-K, school children, youths in the various school; profile of visitors, clients, patients coming for medical care or to visit.

4.3.4.1.4 Social Equity

The City of Seattle's 2016 equity analysis found that there is a high displacement risk in the Chinatown-International District. Access to light rail is one of 15 factors for displacement risk and 1 of 13 factors for access opportunity.

Sound Transit not looking at CID residents and businesses through an equity lens in continuing to present "evidence" that shows 5th Avenue is the best route.

4.3.4.3.3 Chinatown-International District Segment

Long-term neighborhood impacts would occur in the Chinatown-International District Segment due to property acquisitions for the station entrances. Long-term neighborhood benefits include increased access to light rail serving different parts of the city and the region. Because the number of acquisitions would be relatively small and would not include major social resources, community facilities, and the project would be underground except for station entrances and on the edge of the neighborhood along existing transportation and transit facilities, the project would not directly impact neighborhood cohesion.

How do long term benefits translate to benefits for displaced BIPOC businesses and residents?

Produce the evidence "the project would not directly impact neighborhood cohesion."

4.3.4.4.1 Impacts Common to All Alternatives

Construction activities that would temporarily affect neighborhood quality in adjacent areas would include:

- The presence and movement of equipment and materials to and from construction areas
- Clearing, grading, and exposure of soils
- Construction lighting for nighttime work
- Storage of construction materials onsite and at staging areas
- Road closures, access changes, and detours

Increases in noise, dust, and traffic congestion, as well as temporary road or lane closures and detours, would occur along the project alignment and at staging areas and may affect people using some community resources. Visual impacts of an active construction area, such as construction equipment and fencing, would occur.

Temporary road and lane closures on arterials would affect neighborhood circulation and access to and from study area neighborhoods.

As part of roadway closures during construction, sidewalks would be closed or the sidewalk width could be reduced within the construction areas along the impacted roadways.

	<p>What are the mitigations for above?</p>

04/27/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during the Covid pandemic it has found additional ways to continue serving the community as the local BIPOC family that owns the hotel temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing, all of which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works, but also lives, in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated in the neighborhood and forever changing the fabric of the community.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Rahul Misra</p>	Rahul Misra

<p>04/27/2022</p>	<p>Manager DEIS Comments,</p> <p>I am a Ballard homeowner and daily transit user and I'm writing to ask Sound Transit to put riders first in the design of the Ballard-West Seattle Link Extension. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from the voter approved ST3 plan. Doing so would break trust with voters and hurt the ability of Link to meet our future transit needs.</p> <p>Make stations as shallow and easily accessible as possible to promote shorter transit times and easier bus transfers. As a city dweller, the light rail is most useful to me for short trips and I'm concerned that excessively deep stations will decrease the utility of Link for short trips due to excessive time required to reach the platform.</p> <p>Prioritize escalators and elevators that work quickly and reliably. Sound Transit has a terrible recent track record on this which is already impacting usability of the newest Link extension. Failing to remedy these problems will have a long lasting effect on Link ridership.</p> <p>Prioritize short transfer times that minimize walking and vertical travel. In particular:</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard.</p> <p>In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible.</p> <p>At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower.</p> <p>At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.</p> <p>In SoDo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.</p> <p>In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>5. Plan to accommodate future growth and expansion of Link beyond ST3.</p> <p>In order to future proof our growing system, we must design for expandability in four locations:</p> <ol style="list-style-type: none"> (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien. <p>Thank you for your review of these comments.</p> <p>Lyndon Judge lvjudge1@gmail.com 1516 B NW 57th St SEATTLE, Washington 98107</p>	<p>Lyndon Judge</p>

<p>04/27/2022</p>	<p>?Dear Sir or Madam:</p> <p>All of the Sound Transit options for the Transit Hub in the Draft Environmental Impact Statement will adversely affect and encroach into a City of Seattle designated Historic District, Chinatown/International District. This neighborhood is an important cultural asset to our city and region and must be preserved and protected.</p> <p>Please consider other locations and options farther south away from the CID that do not impact this important historic landmark district. All the 5th Ave options are unacceptable and would devastate the CID. Although the 4thAve options will seriously impact the CID, this would be preferable over the destructive 5th Ave. proposals.</p> <p>Best regards,</p> <p>Jill Bullitt</p> <p>1614 20th Ave E Seattle, WA</p>	<p>Jill Bullitt</p>

04/27/2022	<p>When I lived overseas for 3 years 2014-2017, I was watching my friends' snapchat stories of their times in the Chinatown-International District back home. As a Filipino American, i was especially excited about the opening of Hood Famous Cafe & Bakeshop. Finally, a major Filipino business was back in the C-ID neighborhood. When I found out that Hood Famous would be impacted and its surrounding businesses will be demolished, I was devastated. As one of the last Filipino landmarks, I felt like my heritage didn't matter, and all these places me and my friends loved and enjoyed didn't matter. Like Richard said, it's all connected. I love the C-ID for its history and acknowledgment of so many Asian communities. Please do not build the statoin on 5th Avenue at all, and 4th Ave if it's avoidable. Do not build CID21, CID-2a Diagonal, or CID-2b.</p>	Auriza Ugahno
04/27/2022	<p>Opposed to any displacement this project will cause in this neighborhood that's already struggling. Do not place this station in Chinatown! We don't want it here. Unfair to disrupt the last ethnic neighborhood in Seattle.</p>	

04/27/2022	<p>How is Sound Transit going to prevent gentrification and displacement with this station? Is there a gentrification / displacement study? If Sound Transit is committed to ending systemic racism, then what are they doing to prevent it.</p> <p>Developers shouldn't be allowed to opt out of affordable housing. These developers and city should guarantee housing for those who community life here.</p> <p>What other transportation options can help supporting for the increase of population growth?</p> <p>If Sound Transit can't help stop gentrification/displacemeing then the station shouldn't be built.</p>	
04/27/2022	<p>It's important to me that Chinatown-ID NOT be a construction site and for the city to look into other options. Since the coming of Asian-Americans and other folks of color into Seattle, we've been displaced, red-lined, and pushed to an "unfavorable" area. We've been impacted and forced to condense the space we take up (I-5 & Kingdome, etc.). Chinatown-ID is my home - it's our home. This is where my grandparents & my dad opened their businesses + built community - felt at home when they had to leave their homes (China & Vietnam). This is a place where I would come every day after school to get boba, to feel at home, wherel unconvered more of my identity, found pride in my identity. The C-ID is a cultural hub where we've had many dance battles, family gatherings, rallies, festivals, and more. Please do not further cut our neighborhood, displace our elders, kick out our businesses that have been spaceholders for us, and pollute our neighborhood. We are tired of experiencing systemic racism. Do not break our home. Please listen to us.</p>	Tracey Wong
04/27/2022	<p>I worry about the impacts that the 5th avenue stations CID-2a-c would have on the people, businesses and culture of the Chinatown International district. While I believe the 4th ave options CID-1a/CID-1b would still be harmful they are preferred. The CID has already been gouged by I-5, to add disruption with the 5th avenue statoins displacing 18+ businesses each and many more residents would cause a lot of harm to a community that has already been impacted enough. As a Japanese american during a period of increased Asian hate the CID has been one of the few places in Seattle where it feels ok to come together as a community and embrace my identity. Again, the 5th ave stations (CID-2a-c) would gouge this community and distrupt one of the, in my opinion, greatest parts of Seattle. I implore Sound Transit to not only consider the cost of building this station financially but to elevate and value the human costs of propped CID 2a-c. Please show the people of Seattle, and specifically our Asian communities, that you value our businesses, our history in Seattle, our elders, and our community, by not moving forward on CID 2a-c.</p>	Andrew Asakawa
04/27/2022	<p>Why have the hub here within a vibrant community - why not move the project to a more industrial area or near the stadiums where parking is more accessible.</p> <p>Example - north gate station is a "hub" where metro buses feed in + out of area.</p> <p>The link at the university of Washington is near to stadim, not in the middle of community.</p> <p>I use the bus/metro all the time - conditions are on the perimeter of communities - not impacting small businesses.</p> <p>2. 4th Ave option is the "poison pill" over 5th Ave. Best option - scrap the CID plans + move the project outside community.</p> <p>3. Moving the project into CID has overtones of historically destroying neighborhoods running freeways through communities of color, low income, etc. The CID is a historical area that should be protected. It is unique and precious to Seattle.</p>	Sage Miller

04/27/2022	<p>Chinatown will not recover.</p> <p>Final EIS - My grandmother + mother grew up in CID. They are both (4th + 5th)(or 5 other) options assigned to the CID? I-5 tactics resurrected and reinacted! 2000 page drawings/plans designed by so-called experts with little knowledge and connections to the history of the community/neighborhood. Asked for input after drafted. 10+ years of construction. Pollution threatening seniors in walkers, school children, sm businesses. ([inelligible] deserve children waiting for school buses at 8:00 across from Hing Hay Park).</p> <p>Time to put Hub elsewhere</p> <p>Were our seniors polled to see if they would use this transit hub?</p> <p>Why does CID have to live with this for 100yr.</p>	Sue Kay
04/27/2022	<p>CID has 1) lowest tree canopy & 2) lacks open spaces like other neighborhoods. 3) It is the neighborhood with most pollution. Thank you I-5. Let's not repeat the racism #stophistrian #stoprailroadingus. #saveourhistoriccommunity!</p>	
04/28/2022	<p>WSBLE Draft Environmental Impact Statement Comments c/o Lauren Swift Suond Transit 401 S. Jackson St Seattle WA 98104</p> <p>Dear Ms. Swift.</p> <p>Thank you for the opportunity to comment on the DEIS for the West Seattle and Ballard Link Extension (WSBLE) Project.</p> <p>My background is grounded in community building and the Seattle Freeway Revolt: =Central Seattle Community Council Federation staff -President of two Seattle Community Councils -CARHT (Citizen's Against the RH Thompson)</p> <p>For me, Chinatown/International District has been the model locally for building solidarity and dismantling racism and also fightin large publically funded projects that threaten to disrupt and destroy C/ID economies and livelihood.</p> <p>C/ID groups and individuals are quite clear about their needs and hopes: -Economic development, affordable housing, cultural development, education, healthcare, food sovereignty; -Acknowledging historic injustices to address systemic racism and institutional barriers; -Strong, accountable, accessible, trasporent, and culturally appropriat solutions; -and Valuing of existing community an cultural assets</p> <p>"C/ID" also affirms Sound Transit and the City of eattle's commitment throuh their Racial Equity Toolkit (RET)process to: limit harmful impacts of the WSBLE Project and work with impacted comunities to identify opportunities to repair past harm; maximize connections for all users; and ensure that community shapes the decisions that impact them, through self-determination and with a 100 year vision for future generations,"</p> <p>I support the Wing Luke Museum four summary conclusions common to all WSBLE alternatives. (Wing Luke Museum DEIS Comment to Sound Transit, dated April 26, 2022)</p> <p>Sincerely</p> <p>Allan Davis Seattle WA 98122 northwestpassages@earthlink.net April 28, 2022</p>	Allan Davis

<p>04/17/2022</p>	<p>Hi Alex,</p> <p>I have a couple questions about the N.5 HAR Tech Report, which I just finished reading.</p> <p>I think it's Section 10. It reads because of adverse impacts to historic districts leading to impacts throughout, mitigation is for entire districts. Does that mean mitigation for construction impacts is only for historic districts? The parts of the CID that lie outside the National Register Chinatown Historic District don't get mitigation? This section needs to be clarified for the Final EIS, by the way.</p> <p>Also, the attachments for N.5 don't open or they are missing. How can I access them?</p> <p>Thanks,</p> <p>Betty</p>	<p>Betty Lau</p>
<p>04/14/2022</p>	<p>I think the 4th Ave options are better given that the station locations are located closer to the two stadiums (referring to Lumen Field and T-Mobile Park). A lot of people come to this neighborhood every weekend when there's a match happening. Also, the 4thOptions station locations are geographically closer to Downtown, which would benefit crowd mobility.</p>	
<p>03/21/2022</p>	<p>This is a comment about the DEIS submitted for the West Seattle and Ballard Link Extensions (the "WSBLE").</p> <p>1. Summary of Comment.</p> <p>The WSBLE DEIS does not meet a NEPA requirement. Chapter 1 ("Purpose and Need") does not demonstrate sufficient need for the extremely high levels of light rail transit ridership capacity the WSBLE would provide in that corridor.</p> <p>2. The purpose of the WSBLE is transporting high volumes of future commuters.</p> <p>The WSBLE is one of the ST3 projects. ST3 is a Sound Transit ordinance (Resolution R2006-16) that establishes corridor locations, ridership capacity levels, and other system attributes.</p> <p>The primary purpose of WSBLE would be to provide increased light rail system capacity for commuters:</p> <p>"[T]ransportation continues to be one of the area's biggest challenges with approximately 800,000 more people expected to call this region home in the next 25 years. By 2040 the region will also support 800,000 new jobs. In the past year alone, the region's population grew by 52,000 people – making daily commutes longer and more congested. In response, Sound Transit 3 provides the next phase of high-capacity transit improvements for central Puget Sound." ST3 -- Res. R2016-16 "Introduction" paragraph.</p> <p>ST3 also requires the WSBLE be designed for extremely high system capacity levels: 50,000 riders per direction per hour. Page C-4 of Res. R2006-16. That would be excessive capacity anywhere:</p> <p>"Most light rail systems in the United States are limited by demand rather than capacity (by and large, most American LRT systems carry fewer than 4,000 persons per hour per direction), but Boston's and San Francisco's light rail lines carry 9,600 and 13,100 passengers per hour per track during rush hour." (Referenced source: Hanson, Susan; Giuliano, Genevieve (2004). The geography of urban transportation. Guilford Press. ISBN 1-59385-055-7). https://en.wikipedia.org/wiki/Light_rail</p> <p>3. Nothing in Ch. 1 indicates the public would need extraordinary light rail transit ridership capacity in that corridor beginning in 2037. Moreover, the projections of population growth and employment growth in Ch. 1 could not indicate sufficient need for the WSBLE.</p> <p>The DEIS contains no light rail ridership capacity demand forecast for that 11.8 mile corridor. Moreover,</p>	<p>Art Cowen</p>

nothing in Ch. 1 indicates the public ever would need as much light rail transit capacity as the WSBLE is designed to provide.

Ch. 1 of the DEIS contains projections of employment growth and population growth:

"[Seattle] is expected to add about 135,000 people and about 150,000 jobs between 2015 and 2040 (Puget Sound Regional Council 2019)." Ch. 1 page 1-5.

That citywide population growth projection could not indicate a sufficient need for the WSBLE. Seattle's population could grow by a hundred thousand residents and rail transit demand capacity could drop from current levels. Not many of the new arrivals may be obligated to commute frequently to and from employer-provided worksites proximate to light rail stations. Any rule of thumb for estimating light rail demand from regions' population increases no longer is valid now that so many employers ended daily office commute requirements.

Likewise, that job growth projection could not indicate sufficient need for so much additional light rail ridership capacity. Many jobs no longer entail a daily commute. For example, technology businesses that have been operating productively for two years with highly distributed workforces now have teams with members that not only work from residences around this region, but also team members that live in and work from other parts of the country. The effects of increased numbers of employed persons can not be causally correlated to increased light rail system ridership demand.

Ch. 1 identifies a series of plans, policies, and reports prepared for other reasons:

the Sound Transit 3 Plan (Sound Transit, 2016)

Sound Transit's Equitable Transit Oriented Development Policy (Sound Transit 2018) and Sustainability Plan (Sound Transit, 2019),

-Sound Transit's System Access Policy (Sound Transit 2013),

an unidentified 2019 report from the Puget Sound Regional Council.

Vision 2050 from the Puget Sound Regional Council (that report was adopted in 2020, but it essentially is unchanged from the 2019 Final Draft),

the Regional Transit Long-Range Plan (Sound Transit 2014), and

an unidentified 2017 report from the United States Census Bureau.

None of those bear on the operative "NEPA need" issue, and each was prepared before March, 2020. That month transit ridership patterns fell substantially everywhere, due to reasons that persist now.

4. The DEIS disregards the substantial decrease in transit commutes over the past two years.

Jobs that require daily commutes plummeted in 2020, and commute levels to and from urban core offices have not increased much since. Those declines are quantified in a U.S. Census Bureau American Communities Survey for 2020. The Census Bureau estimated a work from home share for each state, before and after March, 2020. The percentage figures reported reflect commuting losses that occurred in the nation's largest central business districts, due to how office jobs are so easily replaced by remote working. Washington State ranked fourth-highest among the states in work from home share gain:

"The state of Washington is estimated to have ranked fourth, at 25.0% and is home to the nation's seventh largest CBD (Seattle). Metro Seattle is one of the nation's premier tech centers, in which many jobs can readily be done from home."

<https://www.newgeography.com/content/007272-tentative-work-home-estimates-based-ac-2020-experimental-data>

The DEIS in Ch. 1 fails to account for that strong employment trend and its negative implications for light rail transit ridership demand.

5. The DEIS disregards USDOT's admonitions against new infrastructure capital spending.

A U.S. Department of Transportation report warns local agencies against planning new transportation infrastructure capital spending absent "demonstrated demand:"

In the near term, the challenge for transportation will not be expanding capacity to accommodate growing demand but rather sustaining the infrastructure system and services so they do not diminish mobility and become an impediment to full economic recovery. Maintenance should take priority and funds should not be used to expand capacity unless there is demonstrated demand. Beyond the direct effects on travel demand from the pandemic and the behavior changes induced by or accelerated by the pandemic, secondary effects may include changes by individuals, businesses and governments in values and spending priorities as they adjust to a post COVID-19 world. While difficult to predict and highly speculative, the COVID-19 experience may well influence the ability and/or willingness of transportation consumers and transportation providers, including governments, to commit resources to transportation at the pre-COVID-19 levels. (Emphasis added).

USDOT report "COVID-19's Effects on The Future of Transportation" (2021)
<https://rosap.ntl.bts.gov/view/dot/54292>

Nothing in the DEIS "demonstrate[s] demand" for extraordinary light rail transit capacity in the WSBLE corridor.

6. The DEIS should have addressed the sharp drop-off in light rail transit demand here after March, 2020, as well as the fact that light rail ridership is not rebounding much here or in other U.S. metros.

Light rail ridership here is well below Sound Transit's projections. Last year ridership was about one-third of what it projected in September, 2020. The Sound Transit "Transit Development Plan 2020-2025" projected 32,000,000 boardings in 2021, but the actual figure was about 11,500,000 boardings.

Demand for bus transit service in this region also is substantially lower. The regional bus service provider is King County Metro. Bus ridership remains down about 50% from the same month in 2019:

King County Metro's Ridership: Average Weekday Transit Boardings Chart.
<https://docs.google.com/spreadsheets/d/1tFUsbWmfk3A6MdQjuxWg3JUys7vqbSt62JRQY1V3fKI/pubhtml?gid=1914679577&single=true>

All over the U.S. primarily-remote work practices replaced daily commutes on light rail to and from offices that previously had been crowded with workers using computers all day Monday through Friday. The American Public Transportation Association's light rail ridership reports show the widespread and substantial ridership reductions since March, 2020:

<https://www.apta.com/research-technical-resources/transit-statistics/ridership-report/ridership-report-archives/>

Those APTA reports also show Seattle's light rail ridership fell more than in other metros.

7. The DEIS should have addressed the prevalence of primarily-remote jobs in the Seattle area.

The Federal Reserve Bank of Minneapolis analyzed key issues relating to the changing daily travel patterns resulting from remote work practices around the U.S. Here is the report's Abstract:

"We show that cities with higher population density specialize in high-skill service jobs that can be done remotely. The urban and industry bias of remote work potential shaped the recent pandemic's economic impact. Many high-skill service workers started to work remotely, withdrawing spending from big-city consumer service industries dependent on their demand. As a result, low-skill service workers in big cities bore most of the recent pandemic's economic impact. Our findings have broader implications for the distributional consequences of the U.S. economy's transition to more remote work."

"The Geography of Remote Work," August, 2021. <https://www.minneapolisfed.org/research/institute-working-papers/the-geography-of-remote-work>

Many residents of the Seattle region have “high-skill service jobs” in fields including tech, corporate, public agency administration, and white-collar services. The DEIS ignores this region’s residents’ large-scale “transition to more remote work.”

The existing Seattle light rail system was designed with a commute-centric purpose. It is skewed to stations surrounded by office buildings. The WSBLE would increase that bias. Now the public has far less need for stations in such locations because of what that report calls the “distributional consequences of the U.S. economy’s transition to more remote work.” Seattle’s office districts served by existing and planned light rail stations no longer are significant commuter destinations:

“The number of office workers in downtown Seattle has hovered around 25% of 2019 levels for much of the last 12 months [], according to the Downtown Seattle Association.”

Seattle Times, Feb. 17, 2022, “From Amazon to Zillow, Seattle workers consider getting back to office. Or not”

That Federal Reserve Bank paper also notes the disappearance of jobs for “low-skill service workers in big cities.” That also happened in this region:

Between February 2020 & December 2021, the Seattle region had []: "A net loss of 54,600 total jobs ...Industries like manufacturing & hospitality have yet to recover, with respective net losses of 24,800 & 30,200 jobs"

Puget Sound Business Journal, Mar 9, 2022:

<https://www.bizjournals.com/seattle/news/2022/03/09/seattle-pandemic-tech-growth-spreading.html>

Many of the hospitality jobs that disappeared had been near light rail stations, including those at downtown hotels and restaurants.

The “Purpose and Need” chapter should have addressed the issues raised in that Federal Reserve Bank paper.

8. Low transit demand by commuters is expected in other metros due to factors also present in the Seattle region.

The Boston region’s workforce demographics and transportation patterns are comparable to the Seattle region’s. The State of Massachusetts analyzed issues relating to the future of work and transportation needs around Boston in a report (“Preparing for the Future of Work in the Commonwealth of Massachusetts”):

“The report concludes that changing ways of working – such as hybrid and remote work – may shift the ‘center of gravity’ away from the urban core.”

"The shifting center of gravity away from the urban core will be especially significant to Boston/Cambridge; of the 245,000 net-inflow of commuters into Boston in 2019, 34% work in roles that could be performed remotely – higher than most other cities"

"More time will be spent in residential areas as per our modeling up to 32% of workers in the state could shift to remote work 1-3 days per week, impacting the need for office space, surrounding infrastructure, & creating placemaking opportunities in residential areas"

"Within Massachusetts, the populace has been moving away from Boston & other urban areas into suburban or even rural areas, with vacation hubs such as Cape Cod & the Berkshires seeing net inflows at times when they previously had experienced population declines (Exhibit 16)"

<https://www.mass.gov/doc/future-of-work-in-massachusetts-report/download>

That report identifies a number of profound changes that bear on future transit ridership demand: 1) changed employment policies and expectations (work from home replacing daily commute demands), 2) new travel patterns and transportation needs throughout the region, 3) the economic “center of gravity” of the region shifting from the urban core to residences regionwide 4) static (or declining) population, and 5)

de-densification near current rail stations as suburban and exurban single family homes are more useful for highly paid knowledge workers who use extra bedrooms for home offices. The WSBLE DEIS does not acknowledge or account any of those shifts that suggest the WSBLE is not needed.

Other West Coast cities are experiencing comparable trends:

COVID shifted a substantial share of work activity to remote settings. Pre-COVID, about 5% of work was done remotely; the best estimates suggest that about 25% of future work will be done remotely. Remote work made it possible for more Californians to relocate during COVID, and it could create economic challenges in business districts like downtown San Francisco and Los Angeles. A large-scale return to office settings this year may smooth out some regional inequities, but given the changes in workplace preferences, the location of workers and businesses are likely to be forever changed. This shift will probably have an uneven impact: for example, remote work is expected to be most common in professions like IT and finance and least common in manufacturing, retail, and health.

The Public Policy Institute of California's March 9, 2022 report "How Did California's Economy Recover from COVID—and What Comes Next?" <https://www.ppic.org/blog/how-did-californias-economy-recover-from-covid-and-what-comes-next/>

The WSBLE DEIS avoids accounting for those employment changes and the trend of former commuters moving to residences away from urban cores that are better suited for remote working. What that report addresses also militates against sufficient light rail transit capacity demand ever arising in the subject corridor.

9. The DEIS disregards the economic and transportation changes other transit agency officials understand will decrease demand for commuter-centric transit.

Transit system officials in other metros explain why transit ridership demand is expected to decline in the future:

The nation's biggest commuter railroads are preparing for potentially permanent shifts in daily ridership, declines that in some cases could threaten their long-term viability.

The changes are based on expectations that many office workers will continue to work from home at least part-time for years after the Covid-19 pandemic subsides. Transit officials in some cities have shifted schedules away from traditional rush-hour periods [.]

...

Sebastian Petty, Caltrain's deputy chief of planning, said the agency, like the MBTA, was pivoting to focus less on the commuter market. "Our future is to be more of a regional rail provider. It's a significant challenge to our business model"

...

Massachusetts Bay Transportation Authority General Manager Steve Poftak: "You might come in for in-person meetings from 10 to 2, & then go home & finish the rest of your day virtually"

...

Commuter Railroads Face Murky Future After Pandemic

"We already know that the traditional commuting patterns have probably gone out the window," said Debra A. Johnson, CEO of Denver's Regional Transportation District

Wall Street Journal, March 6, 2022: <https://www.wsj.com/articles/the-pricey-future-of-commuter-railroads-for-the-post-pandemic-era-11646575383>

The WSBLE DEIS ignores all the significant employment-related transportation changes those transit officials reference. In the Seattle area the "traditional commuting pattern" also ended two years ago and demand for sufficient commuter ridership on light rail in the WSBLE arising in the late 2030's is unlikely because of "expectations that many office workers will continue to work from home at least part-time for years after the Covid-19 pandemic subsides."

	<p>Suggestion.</p> <p>The contents of the "Purpose and Need" chapter of the DEIS do not indicate enough demand would arise for the huge volume of light rail transit capacity the WSBL would provide in that corridor. If Chapter 1 is not augmented with a credible forecast of enough public need the Federal Transit Administration should determine the DEIS is insufficient pursuant to the NEPA criteria.</p>	
04/25/2022	<p>Ip refer the elevated structure. This will help move the project along faster. Also a perfect place to end the projecct is Alaska Junction. This will help keep transit safe and drug free! Thanks,</p>	
04/25/2022	<p>I support Sound Transit but I don't like when they come in like students. This must stop because we already paid the cost of the Sound Transit. I welcome a new light rail and it suppose to be done long time ago before East side.</p>	
04/25/2022	<p>This train is important in creations job opportunities. Provide transportation to people but you have to make sure the area is safe and there is a control on homelessness and parking usage, also preventions crime.</p>	
04/25/2022	<p>Environment issues we as a community will face in West Seattle is going to be having safe transit stops where crime and homeless needs to be a main priority. Since the new mayor has stepped in we have more police visibility which will deter criminals in robbing transit riders on their way to work. We need to work on not red lining the community because more opportunities coming that way. We eed to put more help give opportunities to the youth to feel involved. We need volunteer programs to keep the area clean from needles and garbage from taking over. West Seattle isn't a landfill.</p>	<p>Ardirchmar Mohamed</p>
04/25/2022	<p>Sound Transit will support community transit needs, decrease traffic, reduce the pollution. In terms of disadvantages, increase risk for safety residents especially elevated areas. I understand there is no space on teh ground back of land. It will increase rent and cost of living; displacement is my concern: I am transportation professional and I am afraid that we might lose income.</p>	<p>Hirsi Abdi</p>

04/25/2022	West Seattle Ballard light rail make wasy access to travel and beyond. It's wonderful oppportunity for me and my community. I don't worry about traffic congestion, downtown parking and other issues. There are businesses and high rise buildings I am concerned about displacement. we have public buses and I don't see space for Sound Transit unless elevated that will save communities. West Seattle is narrow land neighborhood. Safey is my concern and I am afraid accidents.	Fozia Comment Form
04/25/2022	Although I'm not one of the beneficiaries of this new project, I would suggest this project being implemented as it facilitates accessibility to the areas and help economic benefit by rding this Sound Transit.	Ali Comment Form
04/25/2022	I live Westwood neighborhood and I am senior. I would like to see Sound Transit in my neighborhood. That make my travel easy. Current stations on Delridge and area are not close to my areas. Sound Transit increase mobility and its affordable even long jas it takes. I am not familiar safety risk and I cannot comment.	
04/25/2022	I support the Link connection to the West Seattle.	Gulid Mohamed
04/25/2022	I am taxi driver at airport. I am supporting WSBLE though I will lose taxi business but it's good for the environmental, helps low income communities/people to travel for long trips instead of paying uber/taxi. This project should be expanded to all communities or areas in Washington. Less pollution, less traffic.	Saeed Ali
04/25/2022	Very good for small businesses and that is great. I am small business owner and I welcome such development. It has sound and would supress sound control. Less traffic with transit access to city and other neighborhoods. I have such investment.	
04/25/2022	I think skyline will be good option.	Ali Warsame
04/25/2022	I Sidi Said think that to have train coming to West Seattle is really good idea. I am really welcoming the idea of elevated is really safe for everyone. No one will lose their properties. No safety risk. I also think the train route should be on either SW Delrdige ay or 35th Ave SW because those two routes can handle better any other streets. Also, South Seattle College and other big neighborhoods like High Point, Westwood, and G-Bridge can benefit. Really needed 35th Ave can be central place for all SW addresses.	Sidi Said
04/25/2022	I live in Othello station area, but I work at West Seattle. It's good thing that public transit to be accessible to the West Seattle especially in Link at the same time I'm worrying about low income community and how can they stay in their neighborhood after Link extensions or they will be gentrified.	Ahmed Ibrahim
04/25/2022	My perspective, this project isn't worth to build for few important reaons. First and foremost, is excessively expensive. Second, there's huge environmental impact since this route will go through the inner city area. There are other options such as to re-build the West Seattle Bridge and expand expansion of Ballard bridge without dislocating neighborhoods and at the same wasting billions of tax payer money. Thanks, Said Musse smusse@yahoo.com	Said Musse
04/25/2022	My concern is transit station safety especially women riders. Muslim riders get harrassment, especially women. In general, I am pro transit and access of transportation.	Burhan Comment Form
04/25/2022	Highpoint resident for 8 years. Sound Transit is really important and it will improve community mobility. There is no space in West Seattle. I welcome elevated. I have disability and it's good for my family. Thanks Abdi for reaching the community.	Osman Comment Form
04/27/2022	Hi. This is doctor Thomas Rees and my wife Janice Rees. Our e-mail number is kentrees@comcast.net, and I'm commenting about the new extension of the light rail options to Ballard. We're both volunteers at the Ballard Food Bank, and the 14th Avenue options would devastate the new Ballard Food Bank which is located on the 14th. It would require 14th being closed for three years and that is going to make it impossible people to get food. So, I'm strongly against this option and for the 15th Street option, because otherwise, you're going to put food bank in Ballard out of business. That will be devastating to our underserved and malnourished are clients. Thank you	Thomas Rees
04/28/2022	I support building the station on the 4th Ave. I oppose 5th options since it would bring adverse impact towards the built and (natural) environment, as well as impacting people's daily life especially for the people who live here.	
04/27/2022	Our Chinatown supports the 4th Ave option	
04/27/2022	Our Chinatown supports the 4th Ave option	Su Fang Juan
04/27/2022	Our Chinatown supports the 4th Ave option	

04/27/2022	Support 4th Ave option for our Chinatown	Hui Lan Huang
04/27/2022	Do not demolish the bank, put the rail on 4th	
04/27/2022	Put it somewhere close by and make it convenient. Reduce noise disruption. Establish the station name "Chinatown Station"	
04/27/2022	Convenience. Safe for riders and pedestrians. Put it on 4th Ave so there is less disruptions. Make public safety a priority with actionable measures. Call it the "Chinatown Station"	
04/27/2022	Prefer 4th Ave option. Putting it on 5th Ave will eliminate recreational/public space for seniors. Also, construction on 5th will be disruptive to the neighborhood. If construction happens at night, make sure the noise level is as low as possible. Call it the "Chinatown Station"	
04/27/2022	Support 4th Ave option	Wai Tse
04/27/2022	Support 4th Ave option	Poon Chow Tse
04/27/2022	Do not dismantle any bank, the station should go on the 4th	
04/27/2022	Do not dismantle any bank, the station should go to the 4th	Kuang Ying Mei
04/27/2022	I personally think building the station on the 4th would be beneficial to a safer environment and better environmental hygiene.	Lih Zhsiu
04/27/2022	I request building the station on the 4th Ave	
04/27/2022	Do not dismantle any bank, the station should go to the 4th	
04/27/2022	I request building the station on the 4th Ave	
04/27/2022	Do not dismantle any bank, the station should go to the 4th	
04/27/2022	Do not dismantle any bank, the station should go to the 4th	
04/26/2022	[translated from chinese] Many Chinese elderlies live in Chinatown, where it is the base for seniors to live and do things here. It would be a serious impact on our daily life if Chinatown is lost.	
04/26/2022	[translated from chinese] Against building a station in Chinatown.	
04/26/2022	[translated from chinese] The historic heritages in Chinatown must preserve; therefore, you should not build a station in Chinatown.	
04/26/2022	[translated from Chinese] The historic and cultural heritage of Chinatown must all be respected and preserved. For the sake of building a new light rail station to hurt the entire community, which we strongly oppose it.	
04/26/2022	[translated from Chinese] Except for 5th Ave, building the station elsewhere is fine.	
04/26/2022	[translated from Chinese] I go to (Hing Hay Park) the park to do exercise, play chess, bask in the sun, and play ping-pong every day, except it rains. I hope my life enjoyment won't be affected; therefore, I oppose building the light rail station on the 5th.	
04/26/2022	[translated from Chinese] Oppose building the station on the 5th Ave.	
04/26/2022	[Translated from Chinese] A large number of elderly with impaired mobility issue lives near Chinatown. If building the station in Chinatown, those businesses would move farther away, which causing us hard to fulfill our daily needs. I oppose building the station in Chinatown.	

04/26/2022	[translated from Chinese] Build the station elsewhere except in Chinatown	
04/26/2022	[translated from Chinese] No approval is needed if building the station on the 4th.	
04/28/2022	[translated from Chinese] Building the station in Chinatown would bring more homeless people to come here; consequently, it causes this place to become more disorderly. Please move the station father away from the Chinatown.	
04/22/2022	I think that light rail is an economic way for everyone that walks everyday and have jobs in Downtown. I also like it. I also think it's safer than taking the public buses and it's way faster.	Cindy Santos
04/22/2022	I unfortunately don't care for the train. I love open transit for the community however it has caused far more of the homeless encampments in my area. Hopefully they are well monitored.	Denise Arevalo
04/22/2022	The train in LA (metro - Downtown LA) is bad because it goes through crime infested, so the train has crime. It helps with the traffic flow and with helping the environment. However, it is not kept up.	Kristai Marie
04/22/2022	I oppose this project because it's unsafe for passengers that are attacked, violated, murdered by the antisocial criminals that the authorities let roam free to attack and destroy public and private property and citizen. Also, this project raises our property taxes, sales taxes, drivers licenses, car tab cost, and also most parts for this program are imported from foreign countries.	Anonymous
04/22/2022	I think that the light rail is a good form of transportation. It help those who often times can't have access to afford a car or private transportation, also I personally think that it's safer than riding the bus, and very economic too!	Cesia Sevillana
04/22/2022	Stations are well designed and easy to travel through. I'd like to see more bathrooms or at least more accessible restrooms. I would like to see more parking at stations and maybe access to transportation that will drive up to the station from Burien. I'm happy to see the timeline shortened and the project under budget. Way to go Engineers!	Peter
04/26/2022	[translated from Chinese] For the sake of protecting the historic and cultural heritage in Chinatown, I am opposing Sound Transit to build the station on 5th Ave.	
04/26/2022	[translated from Chinese] Oppose building a station in Chinatown. It destroys buildings in the entire community.	
04/26/2022	[translated from Chinese] To preserve the original appearance of Chinatown from destruction, oppose the construction of a light rail station on 5th Ave	
04/26/2022	[translated from Chinese] To preserve the original appearance of Chinatown from destruction, oppose the construction of a light rail station on 5th Ave	
04/26/2022	[translated from Chinese] Oppose the construction of a light rail station on 5th Ave	
04/26/2022	[translated from Chinese] Oppose the construction of a light rail station on 5th Ave	

04/26/2022	[translated from Chinese] Chinatown is the community we have lived in for decades or even generations. Cannot destroy our living space. Oppose the construction of a light rail station on 5th Ave.	
04/26/2022	[translated from Chinese] I only agree to build a light rail station on 4th Ave in Chinatown	
04/26/2022	[translated from Chinese] The light rail station cannot be built on 5th Ave. Less impacts on 4th.	
04/26/2022	[translated from Chinese] I disagree building a light rail station on 5th Ave in Chinatown. I have poor eyesight and can't read the pictures; I don't know where is the best location.	
04/26/2022	[translated from Chinese] In order to maintain and preserve the long history and culture of Chinatown, the architectural style, and neighborhood living habits and lived environment, we hope that every corner will be protected and cherished, and will not be damaged under any circumstances; buildings not be damaged or demolished; roads and shops not be occupied or taken. That our living space and safety will not be affected by people from various parties coming and going. We will resolutely preserve the old appearance and shops, and the traffic will not be blocked, and to promote economy prosperity. In order to allow future generations to live and work in peace and contentment, recognize the historical and cultural development of Chinatown and its contribution to society, it is absolutely not allowed to occupy an inch of land in Chinatown. Thank you for your understanding and cooperation!	
04/26/2022	[translated from Chinese] Do not build a new station in Chinatown. You can build the station elsewhere. No further comment.	
04/26/2022	[translated from Chinese] Oppose the construction of a light rail station on 5th Ave	
04/26/2022	[translated from Chinese] Not only Chinatown, choosing a place that has less impact on the residence to build the station is fine.	
04/26/2022	[translated from Chinese] I like all the living facilities and equipment that Chinatown provides that are so convenient. The light rail station should not build in Chinatown, which will hurt and affect our daily life. I oppose it!	
04/26/2022	[translated from Chinese] Strongly oppose building a new light rail station in Chinatown. It would disrupt our daily life.	
04/26/2022	[translated from Chinese] We hope to live in a safe environment with a safe neighborhood in Chinatown. Strongly oppose building a station in Chinatown.	
04/26/2022	[translated from Chinese] Against building a station on the 5th Ave.	
04/26/2022	[translated from Chinese] Against building the station on the 5th Ave, as it will severely hurt the community.	

04/26/2022	[translated from Chinese] We will no longer be able to live in Chinatown if building the station on the 5th; therefore, I am opposing it.	
04/26/2022	[translated from Chinese] Bus reroute would bring serious impact and challenge to people with impaired mobility. I oppose building a station in Chinatown	
04/26/2022	Not being able to travel to and from work. The noise + pollution it would bring to the neighborhoods. Being unsafe for children to travel to and from school. L	L
04/26/2022	Displacement concerns on small businesses: heard the Panama Hotel, a historic building, would be affected. Public transportation is good but if businesses are to be displaced, I hope it does not include the historic ones. Also, businesses that do get displaced should be given adequate support for their newly relocated business. Thanks! (:	Michelle Villafuerte
04/26/2022	Transportation, mobility, small business closing, parking	Anonymous
04/26/2022	Housing costs Parking issues Construction impacts Displacing small businesses	Anonymous
04/26/2022	Effecting for pick up at drop off. This place is slowly not a full Asian place as where it belong and called Chinatown/International District. Will it also cost the travel fares by public transportations, etc. Thanks.	Anonymous
04/26/2022	Examples: -Concerned about construction safety -Impacts on walkways, traffic, transit -Displaced residences, businesses -Noise, dust/air quality -Relocation efforts? -Children walking home	Anonymous
04/26/2022	The West Seattle and Ballard Link will be a great help and opportunity for people moving both ways. It can move people faster and conveniently. It can avoid traffic and delay going home, going work & any other purpose of one's trip. I am grateful that this will soon be built and can be an ease to one's burden of traveling.	Anonymous
04/26/2022	[translated from Vietnamese] 5th Shallow Moving businesses/ enterprise Effective businesses 5th shallow diagonal 4th shallow	Long Bui
04/26/2022	As a CID resident I am excited for anew station but I dread the construction. Its constant noise is awful and stressful & those projects always take a long time. The longer it goes on the more awful it becomes. Those projects also usually tear up our great local neighborhood businesses - we are a real neighborhood & we need these businesses. Whichever station is built, it should minimise the effects of noise construction & remaining businesses. -John	John
04/26/2022	I am against the light rail being on south main street. There is a pre-school on the same block and I believe that the safety of children come before the installation of a light rail system.	Juanita Smith

04/26/2022	Affordable housing and safety is the main priority!	LaNecia Weatherspoon
04/26/2022	Road closures in my living place. Long walks because of construction. Safety walking to my living place. Impacts that this construction might create. Might affect my time longer going to work. Might affect my shopping places.	MT
04/26/2022	My main concern is safety. Will this change & major construction effect the stability of the building? And how the construction will effect the residents? Will there be another oppportunity to give feedback once the construction has started? If so, I will think of any further questions or concerns that may come up. Thank you -	Alganesh Tewelde
04/26/2022	-Lack of other major languages: Tagalog Ethiopian languages Korean	Amanda Kim
04/26/2022	-Noise -Displacement	Amanda B
03/17/2022	I'm excited about this but also worried about impact to my neighborhood (i live on 41st). I'm mainly concerned about possible impacts to my street if they have an ST4 some day. I would love the line to stop on a main street (fauntleroy, california) so it can continue south without wiping out a neighborhood in the future. Thanks!	Carey Nickels
03/17/2022	Build the next segment to be separate from the roads so the train can go faster and cut [illegible] trains.	Saudia Yhann
03/17/2022	Excited for the extension! Hoping we can get an expanded budget to extend to West Seattle. This is very much needed.	
03/17/2022	Please add a park and ride near the sodo light rail station. The area does not feel safe to walk long distances to the station.	Marie Day
03/17/2022	I am so excited for the West Seattle Link Extension! It will make it so much easier to get downtown and the airport	Kelsey Jones
03/17/2022	We are so excited for light rail and support the elevated Fauntleroy option.	Emily Calkins
04/27/2022	A lady - senior About the vibration impact during operation, no matter it's shallow or deep options, she only cares about if the vibration would be worsen. Even now she can feel the vibration when the train arrives.	
04/27/2022	Elevators are important, must improve usability and better maintenance. Be responsive to calls. Important for the elderly!	Su Juan Chen
04/27/2022	I prefer options that don't impact Chinatown. That's it. [comment taken by Stanley Tsao]	Yaming Ding
04/27/2022	4th Ave options Yes! 5th Ave options No!	
04/27/2022	I prefer the 4th Ave Options. No big construction impacting chinatown faster and speedy construction [illegible] [Stanley Tsao]	Zhang Hou
04/27/2022	I prefer 4th Ave options. I think it's better for public safety with traffic on the other side. [comments taken by Stanley Tsao]	
04/27/2022	I pick the option of 4th shallow. It will less affect Chinatown and is good to be close to the train station. Thank you	Florette Lam
04/27/2022	I prefer 4th Ave options. 5th Ave options will impact Chinatown greatly [comments taken by Stanley Tsao]	

04/27/2022	I prefer the 4th Ave options.	Su Fang Juan
04/27/2022	For the sake of the next generation, the station should be built nicely. Should be more convenient to the people who use the train.	
04/27/2022	I prefer 4th Ave options. [comment taken by Stanley Tsao]	Jin Zhuan Wu
04/27/2022	I prefer 4th ave options, will impact me less and businesses less also. [comments taken by Stanley Tsao]	
04/27/2022	I prefer 4th options. It's easier for me. [comments taken by Stanley Tsao]	
04/27/2022	Don't destroy Chinatown! [comments taken by Stanley Tsao]	
04/27/2022	Prefer 4th. Keep and safe CID, once the CID shrink, it will go away. no matter what cost, the station should not impact the CID. No displace Bank of America	
04/27/2022	Translation: They prefer the 4th option. The station should be built far away from the CID. Concerns about air polution during construction impacting the people who live here. Don't move or tear down the Bank of America building. It would be a huge concern to the seniors. During construction, concerns about safety, and how construction debris and gravel will disturb people's daily life.	Wang Li Juan,Sou Mei Mei,Su Ping
04/27/2022	Prefer 4th, if the station build on 5th it will damage it. CID is the historic preserved place, we should protect them. ST should consider all the aspects, including the historical aspect, cultural aspect, and more, all tourists come to see/visit the CID.	Jessie Wang
04/27/2022	I prefer 4th Ave options, because 5th ave options will impact me and a lot more as a senior. [comments by Stanley Tsao]	Juan Cai Chen
04/27/2022	Prefer 4th, also to save money, the station can be built on the surface.	
04/27/2022	Use Chinese name for station Sound Problem [illegible] Too many bicycles, Chinese only has 4 streets, 3 used for bicycles. Too much NOT enough parking Prefer 5th Ave	
04/27/2022	Prefer 4th. Station should be built on the surface for the sake of saving money.	Cai Cheng
04/27/2022	Prefer 4th. There's nothing on the 4th to be displaced. Not like to the 5th. Too many businesses get impacted.	
04/27/2022	Prefer 4th. Don't impact the CID and don't impact the daily life of the residents who live here.	
04/27/2022	I prefer the 2 4th Ave options because I am concerned about construction on 5th, safety & the destruction of local businesses on 5th Ave. *Comments taken by Stanley Tsao	Zhen Tao Li
04/27/2022	Sound Transit should listen to the people and Chinese people [illegible] prefer to 4th Ave.	Ai Xih Ci
04/27/2022	I prefer the 4th Ave options. I am worried about the loss of local businesses. *Comments taken by Stanley [illegible]	
04/27/2022	I prefer 4th Ave options. Don't destroy my Bank of America. *Comment taken by Stanley Tsao	
04/27/2022	80s Seniors in CID Prefer 4th Ave Don't impact CID, don't impact Bank of America	
04/27/2022	Jan Johnson Panama Hotel - 4th Ave [illegible]	Jan Johnson
04/27/2022	Please do not build on 5th	Fuji Bakery,Emma Bird

04/27/2022	I prefer 4th Ave options because it's better for my community. I am also worried about the loss of my [illegible]. *Comments taken by Stanley Tsao	Qiu Xiang Wu
04/27/2022	I prefer the 4th Ave options. I am concerned about construction on 5th Ave. *Comments taken by Stanley Tsao	Detin Li
04/27/2022	I prefer the 4th Ave options. I am concerned the loss of my bank & local businesses. *Comments taken by Stanley Tsao	Biru Tan
04/27/2022	Improving public safety is a must	Luo Bie
04/27/2022	Prefer 4th. If 5th, too many buildings get dismantled. Even though the station is farther to the CID in the future. It doesn't matter to them. Also, concerns about the noise and air pollution during construction.	
04/27/2022	Improve security Any option is okay	Gai Yang
04/27/2022	I prefer the 4th Ave options. That's it. I am concerned about air quality during construction. *Comments taken by Stanley Tsao	Yu Tang Lei
04/27/2022	Prefer 4th. Don't dismantle don't impact the Bank of America. All the seniors use the same Bank of America and the other Chinese Bank.	Huang,Chen Jin Feng,Zhu Zhan Xiang
04/27/2022	I prefer 4th Ave options. The 5th Ave options will destroy my bank. *Comments taken by Stanley Tsao	
04/27/2022	Don't displace the bank of America	Chan Yiu Tan
04/27/2022	Have to protect China gate 5th Ave options are most convenient it's better	Jiu
04/27/2022	The station should be built on 4th. It will turn east to the 4th. DO NOT displace the bank!!	
04/27/2022	Must pay attention to economic development in CID	
04/27/2022	I prefer 4th Ave options. *Comment taken by Stanley Tsao	Yue E Huang
04/27/2022	Elevators must be improved, must improve security. I'm an elderly person.	Chen Cuideng
04/27/2022	I prefer 4th Ave options. Less impact on seniors/walking *Comments by Stanley Tsao	Cai Di Lao
04/27/2022	I prefer the 4th Ave options. Easier for me and less impact [comment taken by Stanley Tsao]	

Date received	Communication	Contacts
04/28/2022	<p>I love carbon-free transportation and I love public transit, but I don't feel comfortable biking on city streets unless there is the proper physical infrastructure to keep me and my kid safe.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go, but I want to make sure we're taking advantage of this opportunity to ensure that it is safe to bike to the new transit stations.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <ol style="list-style-type: none"> 1. Study active transportation integration for all stations. <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <ol style="list-style-type: none"> 2. Study construction impacts to the existing bike network, and mitigation plans. <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <ol style="list-style-type: none"> 3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips. <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station.</p> <p>Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains – and make it</p>	Erin Malick

	<p>work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Erin Malick 9424 37th Ave SW Seattle, WA 98126</p>	
04/28/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. I do not own a car and use bicycling and transit as my primary modes of transportation. I am a Ballard homeowner and am so excited about the increasing transit options the lightrail will provide. In particular, the Ballard station is planned to be near the missing link of the the world-class Burke-Gilman trail and effectively connecting these two routes is crucial.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <ol style="list-style-type: none"> 1. Study active transportation integration for all stations. <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. 04/28/2022	<p>One of the great joys of life is being independent. I love riding my bike to exactly where I am going, leaving when I want, and not having to worry about traffic or parking. I can't always do that on bike power alone. I rely on bike-bus combos and bike-light rail combos when I can.</p> <p>Sadly, biking can also be terrifying. Last weekend I rode my bike on 15th Ave right where a drunk driver killed a pedestrian about 10 hours later. Nothing you can do about drunk drivers. But we can always do more to keep pedestrians and bikes safe from cars.</p> <p>Safety has to come first.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period.</p> <p>In the next phase of planning, please study the following areas:</p> <ol style="list-style-type: none"> 1. Study active transportation integration for all stations. <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Nicholas Silberstein 8445 Seward Park Ave S Seattle, WA 98118</p>	
04/28/2022	Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections and everything else.	Nick Wood

That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.

With that in mind, in the next phase of planning, please study the following areas:

1. Study active transportation integration for all stations.

Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.

New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.

2. Study construction impacts to the existing bike network, and mitigation plans.

Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.

3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.

Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station.

Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.

Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.

Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.

Regards,
Nick Wood
