	<p>center currently listed in the Draft EIS (Table L4.4-1 and Table L4.4-2).</p> <p>? Based on the most recent assessments of the local child care industry, current providers can only provide care for 46% of children at or below the age of 5. This is based on pre-pandemic data (at least 1 in 5 child care programs in King County were at least temporarily closed due to COVID impacts by the most recent count).</p> <p>? Alki Beach Academy is the only child care program on the peninsula that may be impacted by the project and is the largest child care provider in the Delridge corridor. The Delridge corridor (98106) is the lowest-income zip code, the most racially diverse zip code on the peninsula, and includes some of the lowest opportunity areas in the city. Removing ABA from this community would impose a disproportionate impact on these communities.</p> <p>? The alternatives that would require the program's relocation need to include this impact in their descriptions where appropriate.</p> <p>? The Draft EIS needs to include a detailed description of the barriers to relocating a program of this size (20,000 square feet).</p> <p>? The Draft EIS needs to include a detailed description of the impact to child care supply in 98106 if the program is relocated.</p> <p>? The Draft EIS needs to include language acknowledging that the program's relocation would conflict with the environmental justice and racial equity goals of Seattle, King County, the Puget Sound Regional Council, and Sound Transit.</p> <p>? Sound Transit is only required to pay \$50,000 in reestablishment expenses, which is about 3% of the estimated construction costs to reestablish Alki Beach Academy -- excluding moving expenses (Real Property Acquisitions and Relocation Policy, Sec. 9.4)</p>

<p>04/28/2022</p>	<p>Dear Council Members and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to hopefully taking their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>While I strongly support public mass transit I think Sound Transit and the King County government need to do more to minimize collateral damage from the use of eminent domain. In addition to knife makers this shop is important to the local chef, restaurant, and food lover community. There will be considerable ripple effects of collateral damage if this shop is forced to close or to move into a less desirable location.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>Bruce Blake</p>	<p>Bruce Blake</p>
<p>04/28/2022</p>	<p>I work in one of the office buildings above the current CID light rail station, and reading through the proposed plans, it seems like the 4th Ave plan is the best option. I see fewer displacements happening from that option and even though it looks like it will disrupt the parking access to the building I work in, I think in the long run having public transport there will be better, and it keeps the public transit options centralized. I think running it through the businesses on 5th Ave will hard hit a neighborhood that has already been disproportionately hit hard during the pandemic. The biggest difficulty I see with the construction on 4th is the moving of key express bus lines from their stops there, but I think again, in the long run, having those moved for a few years will be balanced out by the better and more centralized public transit.</p>	<p>Will Robinson</p>
<p>04/28/2022</p>	<p>Sound Transit must extend the comment period and address concerns from the C-ID community about lengthy disruptions in that neighborhood and displacement of minority-owned businesses/homes. This is a neighborhood that has historic value and has been disproportionately affected by infrastructure in the city. The community has been very vocal about their concerns, and Sound Transit has an obligation to listen if they care at all about equity.</p>	<p>Kiku Hughes</p>

04/28/2022	<p>I am writing to comment on the tunnel station project that will affect 4th or 5th ave in the CID. As far as I am aware, it is being decided to put a tunnel station either under 4th or 5th avenue, and I want to share my opinion that the tunnel should go up under 4th st, not 5th.</p> <p>I have this opinion because there are several businesses that will be affected that are set up around 5th st, while there are only a few businesses on 4th that may be affected. 4th is already where there is less foot traffic, so closing this area for construction would likely impact the CID the least.</p> <p>Choosing 4th over 5th would also affect less residents, so I think in the interest in preserving the culture and business of the CID, 4th street construction is really the best option. If 5th st is chosen, I would sincerely hope there is a strong explanation as to why this choice was made, when it seems like a clear choice in regards to which location would have the least impact to build on.</p>	Rina Maynard
04/28/2022	<p>The whole project will be an issue. This will close down many small business who are already struggling to keep opening and providing their unique presences to the CID. Those buildings and stores are a landmark to seattle and should not be demolished or changed.</p>	Alex Dong
04/28/2022	<p>I am a life long West Seattle resident, homeowner and current business owner/employer. The extension of light rail to our community is unnecessary, out of character, abusive to our community and environment, and impractical given the barrier of the river and topography. It is overly expensive, overbuilt and would be a perpetual and inflexible concrete eyesore.</p> <p>These considerations need much more analysis than currently contained in the EIS.</p> <p>Please reconsider your plans and consider alternatives such as the aerial solutions.</p>	William Larson
04/28/2022	<p>This project needs to be cancelled, the entire process will be very disruptive to the community at CID and to the small businesses that are a unique part of the culture in the area and as a landmark for seattle. Please cancel the project.</p>	Hai-Ming Dong
04/28/2022	<p>My name is Shomya and I am submitting a comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. As a community member who sometimes works in the CID ang is lucky enough to enjoy many of the local businesses in the neighborhood, I am disappointed to see the plans laid out by DEIS. Currently, five options have been put out by Sound Transit for potential CID Station expansion. All five of these plans, especially those with options on 5th Ave, displace historic CID businesses (at minimum 5 and more likely 19), detour thousands of vehicles through the neighborhood's pedestrian oriented streets , and create disruptive construction, including noise and air pollution, for the next 5-11 years. Some of these businesses that would be displaced like Chun Chun and Seattle's Best Tea are businesses that I have visisted for years. The CID station is the only Link station to be surrounded by a densely populated community of color. The neighborhood has already bore the brunt of the City's expansion with the construction of I-5. Why is that the CID must face the burden for other city residents to travel more accessibly? Why is accessible and affordable transit on the backs of the city's most historic neighborhood of color? It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. We urge Sound Transit to reconsider options on 4th or 5th ave and instead look to other options that will not displace our beloved residents and businesses in the CID.</p>	Shomya Tripathy
04/28/2022	<p>5th Ave alternatives (CID2a) will lead to much more community and economic disruption and displacement. Please do not move forward with this plan.</p>	Tresa B

04/28/2022	<p>My name is Jessica and I am submitting a comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. As a community member who frequently visits the CID for errands and community gatherings, I am disappointed to see the plans laid out by DEIS. Currently, five options have been put out by Sound Transit for potential CID Station expansion. All five of these plans, especially those with options on 5th Ave, displace historic CID businesses (at minimum 5 and more likely 19), detour thousands of vehicles through the neighborhood's pedestrian oriented streets, and create disruptive construction, including noise and air pollution, for the next 5-11 years. I'm very concerned for the wellbeing of local small businesses I love including Seattle's Best Tea, Ping's Dumplings, A+ Hong Kong Kitchen, and many more. The CID station is the only Link station to be surrounded by a densely populated community of color. It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. I urge Sound Transit to reconsider options on 4th or 5th Ave and instead look to other options that will not displace our beloved residents and businesses in the CID.</p>	Jessica Valdez
04/28/2022	The economic impact of the 5th Ave option is too great. Please choose the 4th ave option	Kathy Tran
04/28/2022	In favor of fourth Avenue option. Thank you	Susan Schlosser
04/28/2022	<p>My name is Erin Shigaki and I am a fourth generation member of the Chinatown International District. I am an artist and an activist and work out of the historic Jackson Building on 6th Avenue South and Jackson Street, and I have long working relationships with organizations, businesses and individuals that make our neighborhood thrive.</p> <p>My family emigrated to the United States from Japan in the early 1900s and the Chinatown International District (to them Japantown or Nihonmachi) was their destination for housing, shopping, socializing and everything in between due to the Redlining policies in place. Executive Order 9066 stripped from the Japanese American community what little they had built up, and Japantown was never the same, even as many people (including my family) returned to the region.</p> <p>The Draft Environmental Impact Statement for the West Seattle and Ballard Link Extensions Project presents like yet another attempt to remove and displace community members from the Chinatown International District. SoundTransit's data and research about the impact that this extension would have on our cultural resources, businesses and individuals living and working in our neighborhood is incomplete and inaccurate in many aspects. You have not studied the history of displacement, about which I cite one instance of many. You have not therefore taken into account the special legacy of this neighborhood and how your proposal goes completely against the City of Seattle's goals toward equitable development.</p> <p>You have not done the thorough research and work required to suggest such a massive change to such an important neighborhood in Seattle. Please partner more deeply with our able and experienced community members to better understand the kinds of damaging changes you are threatening to make.</p> <p>Sincerely, Erin Shigaki</p>	Erin Shigaki
04/28/2022	<p>After reading through the summary EIS, I learned that there would be a need for a second tunnel through downtown Seattle. Why not consider putting the transfer station for the Ballard/West Seattle line north of the CID and Pioneer Square.</p> <p>The impact on the CID will be enormous regardless- please select the option with the smallest impact on that community. If not moving the station further north is not possible, go for the 4 Avenue option. the</p>	Betty Lock
04/28/2022	Out of the proposed options, I recommend against the construction of new stations on 5th Ave as it will force the closure of many longstanding local businesses. I would also like the city to address and create some services to help the community stay afloat during the construction of the new station as it will cause a lot of traffic flow disruption in the CID.	Edwin Ong

<p>04/28/2022</p>	<p>The 14th & Leary Station and 14th Street NW route would be catastrophic for the Ballard Food Bank and the artist studios in 4818 14th Street NW by both the elevated version and ground version routes down 14th to that site.</p> <p>The Food Bank couldn't possibly function with 14th Street closed. This after just spending millions of dollars, years of fundraising and planning to make This permanent home. this permanent home. Closing that stretch of 14th Street during construction would destroy their ability to get food in and out as well as making it very tough for vulnerable clients to access the food bank.</p> <p>Ballard residents would be inconvenienced by having to run the gauntlet crossing 15th NW to get to any 14th station. Possibly dangerous.</p> <p>A 15th Street station would bridge the areas both east and west of 15th instead of dividing the neighborhood in the ugliest possible way the way it is now.</p> <p>In contrast, there is little on 15th street NW that would be impacted by a 15th Street NW station as they all have access from side streets.</p> <p>Carol Adelman</p>	<p>Carol Adelman</p>
<p>04/28/2022</p>	<p>Hello I'm putting my comment for this newly roughed routes for the transit area to be appalling to the small businesses and in business in general to build this.</p> <p>Covid -19 made a major impact in this area and now the need for a transit area in 2023 would surely impact some places I visited such as Oasis tea zone, Uwajimaya since I was a teenager. Construction for this through 5th would be catastrophic to these businesses that we have come to love. I believe the transit construction is a frowning concern because it seems to be priority over the safety of local businesses.</p> <p>The city of Seattle looks at who can travel more than who can stay and visit. It's not the same if people travel so see different cultures and getting to know them versus just traveling through. Chinatown is a staple for me to know I can enjoy something. Please do not choose 5th street or 4th street. There's no better alternative than doing it around or not doing it at all. And I choose - don't do it at all. Thank you</p>	<p>Marlana Ramirez</p>
<p>04/28/2022</p>	<p>Regarding EIS pages 36 to 44, particularly Dusty Strings, 3450 16th Ave W, Seattle, 98119.</p> <p>Dusty Strings is a Seattle based, family owned business since the 70's. The current route would not only wipe out their building but several others. The cost to Seattle would be extremely unfortunate if the building cannot be saved. Not only is it a relatively new building but is it custom designed for their type of manufacturing. It also houses several other businesses. With the current real estate situation and land value, they would, more than likely, have to move out of Seattle. Dusty hires local craftspeople for their unique business. And that business is global- Dusty Strings instruments are sold all over the world. They also need close proximity to their retail store in the Fremont district. The interruption for relocation of their business would not impact just the business on 16th but also their retail store as instruments are delivered back and forth every day. The owners of Dusty Strings have always welcomed world-wide visitors to their manufacturing facility and have given back to the community in many ways. I am urging Sound Transit - no, I am begging Sound Transit to consider alternative plans for their trains in the Interbay area. Any alternative plan would save not only Dusty but several other buildings and businesses as well. Thank you for the consideration.</p>	<p>Sally Verrinder</p>
<p>04/28/2022</p>	<p>Preference for alternatives 1a, 1b.</p> <p>My preference aligns with community concern over the unacceptable number of businesses displaced by the other alternatives. Losing those businesses would forever alter the fabric of this vibrant community. Bisecting this community once more with a years-long project would be an injustice I cannot support, I would rather see either of the 4th Avenue options. Thank you.</p>	<p>Michael Allen</p>

04/28/2022	I reside at 3636 14th Avenue W. Seattle, WA and strongly object to the current preferred 14th Avenue W. crossing over the ship canal. The elevated structure would disrupt the residential area and literally be next to our rooftops. 15th Avenue NW is the natural commercial corridor and any light rail extension should be coordinated with any Ballard Bridge replacement, which should require fewer bridge openings.	Gregg Hirakawa
04/28/2022	I'd like to comment on the DEIS for the West Seattle and Ballard Link Extensions. I grew up going to the C-ID with my family, currently live nearby, and frequent the neighborhood, going to my favorite spots such as Ping's Dumplings and Seattle's Best Tea. I am very disappointed with the current plans. All five options for the station, especially the 5th Ave option, displace historic and treasured businesses that serve as gathering places for the community. It will also detour thousands of vehicles through a neighborhood where many, including elders, walk and access their favorite spots from childhood and important resources such food banks that provide culturally relevant food. This project will cause incredibly disruptive construction, including noise and air pollution, for the next 5-11 years. The C-ID station is the only proposed Link station to be surrounded by a densely populated community of color. This neighborhood was created due to racist redlining policies and has continually been chosen as a spot for development and displacement by the city. It is problematic and unacceptable to not consider and adequately research other alternatives that would not once again put residents of the C-ID at risk of their livelihoods and safe and healthy living environment. I would choose 5th ave over 4th avenue to minimize displacement, but I call on Sound Transit to reconsider options on 4th or 5th ave and instead look to other options that will not displace our beloved residents and businesses in the C-ID.	Desiree Gomez
04/28/2022	I think the deep option on 4th Ave is the best - on 5th Ave there is too much impact to businesses in CID. Unless another better option can be found .	Kathy Lubetich
04/28/2022	Those businesses have been there for so long. Do not add a station there. Figure it out elsewhere. Those businesses do not deserve to be torn down for a station.	Georgina Chu
04/28/2022	My name is Hoa and I have lived in Seattle since I was one year old. I wanted to comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. The CID is very special to my Vietnamese and Chinese family, filled with historic and culture-rich buildings and businesses that would be unfairly displaced by moving forward with ANY of these proposed plans - especially those involving 5th Ave. Please don't destroy the livelihoods, safety, security, health, and happiness of this community.	Hoa Vo
04/28/2022	The CID neighborhood is a community vital to the vibrancy of Seattle. To displace businesses in the CID in order to facilitate the transit for people in Bellevue and West Seattle clearly is not taking a racial equity lens. As a Seattle resident, all of the proposal remain incredibly concerning to me. I urge Sound Transit to collaborate with the CID Coalition to find a more equitable solution to building this important and necessary infrastructure in a way that does not needlessly hurt communities of color. Seattle has a long history of displacing residents of the CID to make way for important infrastructure. Let us not repeat this shameful history.	Jesse Drucker
04/28/2022	The Ballard link extension is incredibly needed. This area has seen such a massive population boom and having this light rail extension will play an incredible role in taking cars off the road and fixing the embarrassing public transport infrastructure of our beautiful city. The environmental impact of this project will be immense, as taking away the need for individuals commuting from Ballard to downtown every day will cut down a LOT of carbon emissions. I think this is an incredible plan and I hope it moves forward!	Benjamin Gardner
04/28/2022	Please choose the shallow 4th Ave option for the tunnel through the C-ID. The 5th Ave options are too disruptive and destructive to the neighborhood, which has already undergone so much displacement and hardship. The shallow option allows an easier connection to the current International District-Chinatown station. Whatever you choose, please commit to mitigating the harm that will come from years of construction and disruption while this tunnel is built. I am looking forward to being able to ride the light rail to Ballard and West Seattle, but I don't want the C-ID to be further harmed in the process. Thank you.	Mikala Woodward

<p>04/28/2022</p>	<p>Lauren Swift Sound Transit 401 South Jackson Street Seattle, Washington 98104</p> <p>Subject: Comments on the WSBLE Draft EIS</p> <p>I am providing comments on the Draft EIS for the proposed West Seattle and Ballard Link Extensions Project. My comments are focused on the Delridge Segment Alternatives of the West Seattle Extension. The text of Section 6.0 (Alternatives Evaluation), particularly Section 6.2.2.1.3 (Delridge Segment), provides summary information on the potential impacts of the Delridge Segment Alternatives based on the more detailed information presented in the Environmental Consequences section. Table 6-3 further summarizes that information. The following bulleted comments focus on comparisons of the key environmental impacts of the Delridge Segment Alternatives presented in Table 6-3:</p> <ul style="list-style-type: none"> • Transportation impacts: although there would be about a 3 percent lower ridership with implementation of Alternatives DEL-5 and DEL-6 as compared to the projected ridership for the other Delridge Segment Alternatives, both Alternatives DEL-5 and DEL-6 would have lower impacts on roadways during construction. • Potential Displacements: DEL-6 would have the fewest residential displacements (48), with the impact of other alternatives ranging from 70 to 197 displacements. Alternatives DEL-5 and DEL-6 would have the most potential business displacements, but only a difference of 4 to 8 displacements (21 For DEL-5, 20 for DEL-6, and 13 to 16 for each of the other alternatives). The substantial difference in residential displacements seems significant in comparison to the small difference in potential business displacements. In addition, as stated in Section 6.2.2.1.3, "All alternatives except for Alternatives DEL-5 and DEL-6* would displace Washington State Department of Children, Youth, and Families offices; however, Alternative DEL-5 would displace a duplex owned by Transitional Resources, and Alternative DEL-6* would displace the Transitional Resources main office, onsite supportive housing, and adjacent apartment building." The importance of these differences is not addressed in the DEIS. • Length of Potential Operational Visual Impacts: Alternative DEL-5 would have a visual impact on 0.2 mile, Alternative DEL-6 would impact 0.1 mile. All other Delridge Segment Alternatives would impact 1.0 mile. This represents a substantial difference in impacts. Unfortunately, the table does not include the following statement that is presented in Sections 6.5.1 and ES.5.1: "Visual impacts from elevated guideway in the Delridge Segment (Preferred Alternative DEL-1a, Option DEL-1b, Preferred Alternative DEL-2a*, Option DEL-2b*, Alternative DEL-3, and Alternative DEL-4*)" would be "Permanent impacts that could be significant and unavoidable [emphasis mine] . . .". As further stated in Section 6.5.1, "Preferred Alternative DEL-1a, Option DEL-1b, Preferred Alternative DEL-2a*, and Option DEL2b* would have the most adverse effects to historic resources and the greatest change to community character. These alternatives, along with Alternatives DEL-3 and DEL-4*, would impact the most area with sensitive viewers, but impacts would differ among alternatives. Alternative DEL-6* would have the least potential for visual impacts because it would be closer to industrial areas and a lower height west of Avalon Way Southwest." • Potential Operational Noise and Groundborne Noise or Vibration Impacts before Mitigation: Although the DEIS states that "all impacts can be mitigated," there is ample evidence that many wheel squeels and other noise of vibration impacts are not mitigated. The important point is that once again, Alternative DEL-6 has substantially fewer impacts (102) versus the other alternatives (178 to 270). • Historic Properties with Adverse Effects: As for other elements of the environment, DEL-6 is the least objectionable, with no adverse impacts as compared to Alternative DEL-5 with 2 resources adversely affected, and the other alternatives adversely affecting 4 to 6 resources. Further, as stated in Section 6.5.1, "Preferred Alternative DEL-1a, Option DEL-1b, Preferred Alternative DEL-2a*, and Option DEL-2b* would have the most adverse effects to historic resources . . .". • Park and Recreational Resources Impacts: Alternatives DEL-5 and DEL-6 would avoid impacts to Park and Recreational Resources, whereas all of the other alternatives would have impacts on these resources during both construction and operation. Affected resources include: The West Seattle Golf Course (from temporary modifications during construction to long-term effect on use; as noted in Section 6.2.2.1.3, "Preferred Alternative DEL-2a and Alternative DEL-4 would have the greatest impacts on parks entering a tunnel on the west end of the West Seattle golf course. These alternatives would require modifying the golf course and would permanently reduce the playable area."), Delridge Playfield (from long-term use to temporary construction impacts), Longfellow Creek Natural Area (from long-term operational impact to temporary construction impacts), and The Longfellow Creek Legacy Trail (detour of the trail). 	<p>Bill Staeger</p>
-------------------	--	---------------------

	<p>The summary information presented in Table 4.2.18-3 (Summary of Preliminary Section 4(f) Use Determinations by Alternative for the Delridge Segment) indicates that both of the Preferred Alternatives would affect many Section 4(f) properties (including use of the West Seattle Golf Course with implementation of DEL-2a). Alternatives DEL-5 and DEL-6 would avoid those impacts, except for de minimus impacts to the Seattle Steel Company/Bethlehem Pacific Coast Steel Corporation.</p> <p>As noted in Table 6-9, the projected costs of Preferred Alternative DEL-1a (\$600 – 700 million) are substantially higher than those of Alternatives DEL-5 (\$500 million) and DEL-6 (\$400 million). Clearly there is not a financial advantage to the proponent’s Preferred Alternative DEL-1a. However, the projected cost of Preferred Alternative DEL-2a (\$400 million) is similar to those of Alternatives DEL-5 and DEL-6.</p> <p>The comparison of alternatives for the Delridge Segment presents summary information for each alternative but does not (1) compare the overall impacts of the alternatives, (2) identify the alternative with the least environmental impact, or (3) provide justification for selecting Alternatives DEL-1a and DEL-2a as the Preferred Alternatives. In short, the DEIS presents important data but does not answer the question: “So what?”.</p> <p>Based on my analysis of the summary information on the Delridge Segment Alternatives presented in Section 6.5, it seems clear that implementation of the Preferred Alternative and the other similar alternatives (Alternatives DEL-1, DEL-1a, DEL-1b, DEL-2a, DEL-2b, DEL-3, and DEL-4) would result in greater impacts than those of Alternatives DEL-5 and DEL-6. Importantly, the DEIS does not provide justification for selecting a Preferred Alternative that would result in significant impacts that cannot not be avoided or mitigated. There does not appear to be any justification for either Alternative DEL-1a or Alternative DEL-2a to be selected as the Agency-preferred Alternative in the Final EIS. Selection of the Agency-preferred Alternative will require a detailed analysis using the information on the impacts of the Delridge Segment Alternatives presented throughout the DEIS and any additional information made available after the DEIS was issued.</p> <p>Bill Staeger Bill.staeger@gmail.com 206-724-9992</p>	
04/28/2022	<p>Regarding Appendix J Draft Drawings for Interbay/Ballard: Tunnel option on 14th is best. The Interbay Station especially needs an area where passengers can get dropped off/picked up by cars (which will be nearly all electric by 2039!) Similar to lot at Husky Stadium station. The location is not easily reached by foot/bike for most Queen Anne/Magnolia residents. Both interbay and ballard stations are partially in, or adjacent to industrial zoned land which impedes transit oriented development. The industrial zoning code should be updated to take into account these stations and allow for more flexibility to create better transit friendly developments.</p>	Bryan Hester
04/28/2022	I oppose any of the alternatives along Genesee that impact the West Seattle Golf Course.	brennon leighton

<p>04/28/2022</p>	<p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p>	<p>Benjamin Rogers</p>
-------------------	---	------------------------

04/28/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p> <p>In addition:</p> <ul style="list-style-type: none"> ? The Draft EIS needs to be updated to include Alki Beach Academy as a social resource (Appendix L4.4, Table L4.4-1). ? At the time of relocation, Alki Beach Academy will care for nearly 100 more children than the largest center currently listed in the Draft EIS (Table L4.4-1 and Table L4.4-2). ? Based on the most recent assessments of the local child care industry, current providers can only provide care for 46% of children at or below the age of 5. This is based on pre-pandemic data (at least 1 in 5 child care programs in King County were at least temporarily closed due to COVID impacts by the most recent count). ? Alki Beach Academy is the only child care program on the peninsula that may be impacted by the project and is the largest child care provider in the Delridge corridor. The Delridge corridor (98106) is the lowest-income zip code, the most racially diverse zip code on the peninsula, and includes some of the lowest opportunity areas in the city. Removing ABA from this community would impose a disproportionate impact on these communities. ? The alternatives that would require the program's relocation need to include this impact in their descriptions where appropriate. ? The Draft EIS needs to include a detailed description of the barriers to relocating a program of this size (20,000 square feet). ? The Draft EIS needs to include a detailed description of the impact to child care supply in 98106 if the program is relocated. ? The Draft EIS needs to include language acknowledging that the program's relocation would conflict with the environmental justice and racial equity goals of Seattle, King County, the Puget Sound Regional Council, and Sound Transit. ? Sound Transit is only required to pay \$50,000 in reestablishment expenses, which is about 3% of the estimated construction costs to reestablish Alki Beach Academy -- excluding moving expenses (Real Property Acquisitions and Relocation Policy, Sec. 9.4) 	Sarah Mikhitarian
04/28/2022	<p>The current plans for the light rail extension for West Seattle link are inequitable and will displace multiple businesses and increase housing costs to low income CID residence. There needs to be a better way to address the need for transportation and not displace businesses that are already vulnerable due to the pandemic, ongoing racism and changing environment that has been a burden for so long. Please consider creating or adjusting a way to address the light rail extension to a different area that will not displace the current businesses that and address the need for public transportation. Displacing businesses that have been in the CID for 30 years is not the solution for finding transportation to affluent areas.</p>	Silver Lee

<p>04/28/2022</p>	<p>Ballard Link extension</p> <p>Please reopen study of the Ballard 20th/Thorndyke Tunnel Portal option, any of the alternative station options proposed (especially those east) of 15th Ave, would make me very reluctant to take the light rail to Ballard, as I would find myself far from where I want to go, and surrounded by dangerous high-speed arterials and industrial areas.</p> <p>Study pairing a high bridge with an elevated 15th Avenue Station and to continue to refine all tunnel options to put a station entrance west of 15th Ave to avoid the above problems.</p> <p>2. Interbay Area Please use the Thorndyke Retained-Cut station option[IBB-2a/IBB-2b], it will make access much faster for riders and provide excellent bus connection transfers, which I love for being able to reach Discovery Park quickly.</p> <p>3. Smith Cove I agree that the Galer Street Station [SIB-1] is the best option</p> <p>4. Uptown Please select the Reupican St station option for Uptown. The Mercer option is so much deeper and further from Seattle Center that is is obviously inferior to the Republican one.</p> <p>5. SLU It is embarrassing how poor the station options are here, none of them is in a central location to reach the actual places people will want to go in SLU like MOHAI. Please study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible.</p> <p>If you must choose from the bad options you've already presented, please use Harrison Street, as it's slightly less awful than the others.</p> <p>6. Denny Triangle The DT-1 on Westlake Avenue station looks like the best option to me, but please stop trying to make all of these stations so unnecessarily deep. Make this one shallower and provide updated vertical conveyance types.</p> <p>7. Westlake Please use 5th Ave Station [DT-1] option, but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers. This is going to be a major station so lets get the transfer situation right here.</p> <p>8. Midtown If open today, this would be my primary station to get to work, which is why I was shocked to see your pdf say that it would take 5 minutes(!) to reach the surface on the escalators. That is way too long, and totally unreasonable.</p> <p>Make the 5th Ave station as shallow as possible, and give us the most seamless, fast elevator options possible as well.</p> <p>9. Chinatown/ID The 4th Avenue Shallow Alternative (CID-1a) is the best choice, but I was shocked to see that despite being labled "shallow", it will still be 50 feet deeper than the existing Chinatown station! That's awful. I should be able to walk in between the two stations through a single hallway without having to wait on endless escalators.</p> <p>You should study a shallow cut and cover build over the existing Downtown Seattle Transit Tunnel to bring this station in alignment with the existing one. This station is going to be a huge hub, if you cheap out on it now, it will hurt the whole system for decades to come!</p> <p>10. SODO Please select the Mixed Profile Station [SoDo-2] and study construction further north at the existing SODO Station location to avoid having to pay for destroying the post office.</p> <p>11. Delridge I genuinely can't believe that the only realistic option you've provided here is mostly dwarfed by a steel plant... You need to go back to the drawing board and study better DEL-6 options that are compatible with</p>	<p>Eric Bronson</p>
-------------------	---	---------------------

	<p>the Medium 41st Avenue Tunnel [WSJ-5]. Please don't remove this station, I'm sure there is a solution here that can align it with the others without making it a terrible station location.</p> <p>12. Avalon Please choose the Retained Cut Station: Prefer WSJ-5 as it is shallower while allowing for a tunnel into the Junction</p> <p>13. Junction Please select the Medium Tunnel 41st Avenue Station option. It's another good, shallow station that will make bus transfers and just reaching the surface easier. Plus, it's nicely located centrally in the Junction but not too close the Avalon Station.</p> <p>Overall, I'm excited by the new extensions, but I'm worried about how deep you want to build these stations, and in some cases, where you're trying to put them. Ultimately, I think we need to build this expansion well to accommodate future extensions, rather than trying to blindly cut costs and appease the noisy minority that oppose public transit right now.</p>	
04/28/2022	<p>As a transplant from NYC to Seattle over 35 years ago, I have experienced two urban Chinatowns that have been and continue to be racially, culturally, politically, economically and socially marginalized. Along with Seattle born family members, friends, colleagues and community allies, I can also attest to the relentless government, state agency and corporate interests that have long encroached upon and erased this city's Chinatown-International District (C-ID). Sound Transit's Draft Environmental Impact Study must acknowledge this continuation of structural inequity, racism and devastation that would be enacted upon the C-ID with any of the options in the West Seattle and Ballard Link Extensions project proposals. Those that include buildings and spaces along 5th Avenue South are especially unacceptable. Finally, I fully support recommendations put forward by the Wing Luke Asian Museum for this DEIS to integrate more intentional and inclusive exploration of the impact on the Seattle Chinatown-International District.</p>	Christine Young
04/28/2022	<p>Please heavily take into consideration that Longfellow Creek is one of the last two salmon bearing streams in the city of Seattle. This project is a great opportunity to increase salmon habitat connectivity to the golf course so that spawning salmon are no longer stopped at Genessee street. In 1855 the Treaty of Point Elliot was signed and it states "The right of taking fish at usual and accustomed grounds and stations is further secured to said Indians in common with all citizens of the Territory."</p> <p>Any threat to the health of Longfellow Creek is in direct violation of this treaty, and by further reducing the already extremely dwindled numbers of salmon this area sees is an act of Indigenous Erasure. Please take into consideration the health of our green spaces and spawning salmon while making a decision on which route to pursue in this project.</p>	Bri Castilleja

04/28/2022	<p>?</p> <p>To: Sound Transit Board</p> <p>When you are making your final decision regarding the massive light rail construction project in the Chinatown International District CID please consider the serious impact it will have on the everyday lives of the CID community during construction. The Chinatown International District is Seattle's last ethnic neighborhood. The air pollution, noise pollution, street disruptions, displacement of businesses, displacement of residents on the blocks along 5th Ave S would severely hurt the already struggling neighborhood, which may not be able to recover. It is extremely unfair that this mega project is even in the CID neighborhood.</p> <p>Thank you, Jane Chan</p> <p>Sent from my iPad</p>	Jane Chan
04/28/2022	<p>I'm writing in support of the CID-1a, 4th Avenue shallow, alternative in the CID segment. CID-1a supports the project needs while avoiding the most significant property impacts in the CID neighborhood. While I support this alternative, I do understand the enormous impact that the construction will have on transit, particularly Metro and would ask ST to carefully consider ways to mitigate the transit impacts through construction management. No matter which option we choose, we're adding another large, city-wide construction project following the SR99 tunnel, viaduct demolition, and the bus tunnel conversion. I ask ST to consider the small businesses and neighborhoods facing another construction period, and find ways to save time, money, and impact.</p>	MaryKate Ryan
04/28/2022	<p>The "Ballard" station at 14th is way too far from the population center of Ballard (somewhere around 20-22nd & Market). If the station cannot be moved into Ballard itself, Sound Transit should look into other ways of serving Ballard, such as turning the Metro 44 into a subway connecting to Link at U-District station.</p>	Skylar Thompson
04/28/2022	<p>I'm a home owner in West Seattle and am very excited about the prospect of light rail coming to our area. I have a very strong preference to the short and medium tunnel options for the West Seattle Junction stop (WSJ-4 and WSJ-5). They're a great balance of reduced impact and minimization of displaced residents and business balanced with budget and schedule.</p> <p>If absolutely necessary to cover the budget increase, I'd be okay with dropping either of the other two West Seattle stops, making the remaining one more capable and increasing bus service to the remaining stops.</p>	Jeremy Kimball
04/28/2022	<p>Hi, my name is Rosanna and I live in Seattle. A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options.</p>	Rosanna Sze
04/28/2022	<p>Please do not build in Chinatown, it displaces so many important businesses and impacts the culture of Seattle's historic Chinatown.</p>	C Belai
04/28/2022	<p>The Sound Transit's link extensions for West Seattle and Ballard is proposed to connect in Chinatown-International District via 5 options. 3 of those options will be extremely disruptive to the community as it will displace businesses, causes traffic, construction and pollution in the CID for the next 11 or more years. There are a lot of elders who live in the CID and this is harmful to them. I see daily many families and elders who have made this their home. Not sure why this is being proposed as there's already the I5 that cuts across the international district too.</p> <p>Thanks for considering my comment.</p>	Krystle Ellis

04/28/2022	The underground 14th Ave w seems to be the most positive option. It displaces the least amount of residential homes. I want to know how Magnolia residents will be able to access this line. Would Metro improve their bus runs to bring residents to this line? Also, would there be some special student rates for Ballard High School students to make this more useable to them?0	Gale Shinozaki
04/28/2022	The 5th Avenue options for the CID light rail station will be detrimental to an area that has already been impacted by the construction of I-5 and the effects of gentrification. The community is supporting the 4th Avenue station option and i sincerely hope our voice will be heard.	Danielle Kuhlmann
04/28/2022	<p>Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings.</p> <p>Prefer WSJ-5 with a request to study a refined DEL-6 pairing.</p> <p>Request a study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].</p> <p>Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking.</p> <p>Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than four and a half minutes. This 4th Avenue choice is VITAL - respect the will of the Chinatown-ID community, and minimize construction and long-term impacts of a neighborhood that has been continually exploited and harmed by your agency and its partners.</p> <p>Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. What exactly should make me trust Sound Transit's ability to run escalators to such deep levels? I use the light rail daily, and daily, a minimum of one escalator and/or elevator is out of service on the stations I use, almost always without signage indicating that I need to alter my path midway through my descent. Current designs are a waste of time for abled folks, and a nightmare for disabled users, who should be the central priority for transit design.</p> <p>5th Avenue Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access.</p> <p>Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower. Same as above comments - these mega-deep tunnels are ableist.</p> <p>Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible.</p> <p>Prefer Republican Street Station and work to mitigate impacts to arts organizations to the extent possible.</p> <p>Preferred Galer Street Station [SIB-1].</p> <p>Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3].</p> <p>Ask Sound Transit to study pairing a high bridge with an elevated 15th Avenue Station and to continue to refine all tunnel options to put a station entrance west of 15th Avenue. Jettison the moveable bridge. Open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p>	Connor Descheemaker

04/28/2022	<p>I am commenting specifically on the West Seattle Junction alternatives. I have been a West Seattle homeowner for the past fifteen years, prior to COVID and the lockdown I commuted either by car or water taxi to downtown five days per week. For ten years I rode the bus daily. I voted in favor of light rail construction in 2016. The events of the last few years, however, have changed many of parameters of the Sound Transit West Seattle link project. The budget is of major concern; \$73 million cost overrun before the the project even starts definitely needs to be addressed. Also, the projected displacement of hundreds of people's homes, businesses, employment must be re- evaluated especially in light of the dearth of options for relocation. My concerns are many but the impacts to wetlands, waterways, parks, green spaces, tree canopy and the Longfellow Creek basin and West Seattle Green Belt are primary. I feel great despair reviewing this Sound Transit DEIS. I feel that it is vague and superficial, lacking in awareness for the possible loss of our homes, our neighborhoods, our businesses and jobs, all which has created a diverse subset of people and businesses in West Seattle. The topography of West Seattle is vastly different than other neighborhoods in Seattle and an elevated line running to Avalon and the Alaska Junction vs a tunnel alternative not only displaces an overtly large number of our neighbor's homes that they can't hope to acquire again in this neighborhood due to rising home costs. The luxury of living in an urban area that still has birds, salmon, big trees, and wildlife is rare. I realize we might need more public transportation in the future, but perhaps now (due to the pandemic, WS bridge closure, people wanting to continue working from home, etc.) the needs have shifted. The Sound Transit "spine" is still a good idea. But electric buses on expanded bus lanes and other "feeders" to that main line sound like more economically and environmentally practical. I will also point out that we removed a large concrete structure from downtown aka the viaduct for numerous reasons including increased pollution, noise, life expectancy and because it cutoff access to the waterfront. An elevated rail line in West Seattle comes with all of these same issues, especially in how it will transform our neighborhoods for the worse. It has been established that we need more housing not the displacement of 700 homes that will be completely wiped out.</p> <p>For the West Seattle Link Extension, please use:</p> <p>Pigeon Ridge/West Seattle Tunnel:</p> <ul style="list-style-type: none"> - Delridge station - DEL-6, Andover lower-height option: lowest residential and traffic impact. - No Avalon station - Too expensive, too much construction in a critical location, and too close to the other stations. - Junction station - WSJ-3b: The Junction Jefferson Square Station option #6, terminating underground. - Medium tunnel option - Smaller footprint, no longer a significant cost difference, in line with Beacon Hill, Capitol Hill, Roosevelt among other stations. 	Natalie Novak
04/28/2022	<p>I was born in Seattle and spent the last 60 years growing up and working in chinatown.. your current plan to add the lightrail tunnel along it's western border will disrupt the smal mon and pop business which are there now... I was around when i5 divided the community... we fought hard to keep big developers from coming in and destroying the historical core... why is it when the light-filled went through capital hill and up to Northgate there were minimal impact... even building the downtown core there was no problem but to develop this new line they need to dig up the cid... if you build the west seattle and Ballard line like what they did in South Seattle then ok but if not because white communities have the clout to fight back then please treat our community the same consideration...</p>	Rick Wong
04/28/2022	<p>Please move the route away from 5th street and over to 4th. 5th street options will destroy this community.</p>	Alisa Lee
04/28/2022	<p>Move it to the 4th. You are displacing more locals and shutting down local family businesses. You are doing everything that is against equity and inclusion. Placing the station on 5th is pure institutional racism.</p>	Kendy Trinh
04/28/2022	<p>Hello, Im writing today to comment that the proposed 5th avenue route is detrimental to the Chinatown community and I urge you to consider other options. The 5th Ave route will close down more businesses and force more people to lose their jobs. This community is still recovering from the pandemic and the increase in xenophobia that it has caused. Please reconsider. Thank you.</p>	Ian Nava
04/28/2022	<p>Please move forward with the '4th Ave' Option as the '5th Ave' option would greatly impact the quality of life for the C-ID. The 5th ave option will have more detrimental impacts on our neighborhood after a history of construction impacts, xenophobia, hate crimes, and the pandemic as well.</p>	Nikko Azucena

04/28/2022	<p>When deciding where to build a station in the CID segment, please move forward with the 4th Ave options only. Building on 5th Ave will negatively impact the local community by disrupting, displacing, and eliminating key businesses there. The 5th Ave plan will also subtract anywhere from 20 to nearly 200 parking spaces in our growing city, where parking is already competitive.</p> <p>I was devastated to learn that my favorite businesses, such as Oasis, could be permanently shut down and the buildings destroyed to make space for the station. As a youth community hub and multicultural space, Oasis and the many other shops along 5th Ave must be preserved. Uwajimaya will also be negatively impacted, as reduced or nonexistent business and load zone access will cause business owners more financial strife. With the numerous Asian hate crimes and COVID-related economic crises that have happened over the past couple of years, another economic issue for these businesses could be fatal.</p> <p>In section 3.2.1 of the Appendix G: Environmental Justice, SoundTransit states, "The Seattle Chinatown Historic District is listed in the National Register of Historic Places and is a City of Seattle Landmark District, and is historically and culturally important to the Asian community and the City of Seattle." Given that SoundTransit understands the great cultural importance of the CID, please understand that building along 5th Avenue will work against SoundTransit's mission to support the greater Seattle area. Avoid building along 5th at all costs. Thank you for your consideration.</p>	James Gray
04/28/2022	4th Ave not 5th Ave for the link to west seattle	Milana Barbosa
04/28/2022	<p>I realize that Sound Transit had a well-defined public comment period that ends today. However, I feel compelled to submit a plea for an extension to that deadline. What's been proposed is so disruptive and impacting upon immigrant and marginalized communities, that those communities are generally challenged by language and levels of education, and the level of detail to the EIS so thick and nuanced, it is unconscionable to treat this as business as usual. It is only within the last week that this even got picked up in the local press (International Examiner and NW Asian Weekly) and tipped awareness on the street. Most residents and stakeholders to the community were simply caught off guard and were, until very recently, unaware of what is coming. Given the number of people and businesses that will be impacted and how late this is coming to public share of mind, I plead with you to consider an extension of an additional 90 days for the public to comment.</p>	Tony Tsuboi
04/28/2022	<p>The Link Expansion should be developed on 4th Avenue, as 5th Avenue is a core part of the International District and it's cultural identity. Many small businesses have already been displaced due to the COVID-19 pandemic and past construction projects. Any large construction project in the area, such as the demolition of the Alaskan Way viaduct and the 99 Tunnel, have already affected this community negatively and with great impact. The ID has been neglected by our city over the recent years, and displacing its primarily Asian community further could mean it will be lost forever, unless it is given the resources to thrive again in the future. If the expansion is to go forward, do not allow it to come at a cost paid by the people of the ID.</p> <p>Develop the Link Station on 4th Avenue.</p>	Matthew Nguyen
04/28/2022	<p>For the segment of new light rail running under the Chinatown-International District, please select the alternative routes adjacent to 4th Avenue S so that fewer residents are displaced and businesses disturbed in a region that has already heavily suffered from transportation construction (I-5, in particular). For the Ballard segment, opening the stations as scheduled should be preferred more than delays caused by the tunnel alternative, which is only being considered due to the coast guard's height clearance recommendations for super-yachts. Please remember that super-yachts only serve wealthy individuals who don't live here, while the light rail will serve the people living in our Seattle communities and who would like to be able to rely on a better transit system within the next 10-15 years.</p>	Bryce Frisher

04/28/2022	<p>I am an owner of a condo at 909 5th Ave. (5th and Madison) and am very concerned about this project. Unless you choose to route this project along 6th Ave through downtown Seattle I fear that there will be damage to our building and to the library and the Bank of California as the tunnel is dug and the trains run through it. On a personal basis I fear that even without the building damage, the value of my condo will go down as people complain about the noise, vibrations and stops near our condo. We have already experienced a great deal of disruption due to the repair work being done on Madison and I fear that there will be years more disruption and loss of value if the light rail project is built on 5th Ave. Please select the 6th Ave. route.</p> <p>Thank you for allowing me to comment.</p> <p>Anne Repass</p>	Anne Repass
04/28/2022	<p>I'm glad to see the expansion of the CID station! As you consider options, urge you to heavily consider the expansion on 4th Ave S. instead of 5th Ave S., which would severely impact the lives of PEOPLE, business owners and those who frequent the CID. Historically, Chinatowns around the country have been areas where voices and opinions of the people have been routinely squashed in order to serve the greater majority. I urge you to be considerate of a segment of the population that has had ENOUGH. I also request that as you present information to the public, please refrain from painting the 5th Ave options as the most ideal. These options are not ideal for our community. As you expand this rail system in service to the people, please remember the backs upon which the original railway system in this country have been built.</p>	Bao Ng
04/28/2022	<p>I very much agree with the response of the Wing Luke Museum to this Draft Environmental Impact Statement, and find the 5th Avenue alternatives to be too high impact and the others to need revision with consideration for the recent fragility of the area and its historic vulnerability to projects like this.</p> <p>Given the history of the city of Seattle's infrastructure and development projects negatively affecting the residents of the CID, along with national events and legislation having similar impacts, more discretion and care is required to adequately assess the actual environmental impact of the new light rail extensions on the current residents, business owners, and visitors to the Chinatown International District.</p> <p>Anyone who has loved visiting the CID over the years knows that it has gone through some tough times and deteriorating transformations lately. It has been sad to feel less safe there than I did five years ago. There are many factors in these changes, but any new project with the potential to upset the atmosphere and stability even further needs to take them into earnest consideration.</p> <p>Please do not continue with these alternatives until these issues have been addressed as requested by the Wing Luke Museum, to at the least an earnest attempt to do right by the community that calls the CID home.</p>	Keegan O'Rourke
04/28/2022	<p>This is a terrible Idea I am a CRM specialist and doing this would disrupt so much history and not to mention active people.</p>	Jacob Waddington
04/28/2022	<p>ES-23: My proposed tunnel WSJ-5 looks to be the least impactful in terms of displacement, noise, and road closures. After looking at the simulated visuals it feels like the elevated options although the 'least' costly of the options it causes potential headaches for residents in terms of look, noise, and view. An elevated platform makes sense, preferably the DUW-2 option shown on ES-10. As this option seems to require the least amount of movement around obstacles. However, if the region is seeing an increase in marine traffic and trucks this options may not be workable and in that case DUW-1a is my other choice.</p>	Kelli Mazur
04/28/2022	<p>Highly recommend the option: Tunnel 4th Avenue Stations (Shallow and Deep) Tunnel station under 4th Avenue South, west of the existing International District/Chinatown Station between South Jackson Street and Seattle Blvd South (two different station depths are being studied)</p>	DENNY DANG

04/28/2022	Please do not build the train station in the CID. It will displace so many BIPOC owned businesses and residents, not to mention create a lot of pollution in the area. the CID is a space where so many Asian Pacific Islanders find community, and that block that you want to tear down will create more displacement. BIPOC households are already being displaced even further south. The CID is home to API community, building this train station and tearing down/redeveloping this block will further exacerbate the displacement. The CID has also already felt the economic impacts of the pandemic, with many businesses only now starting to start having more customers again. Many will either have to relocate or shut down for good with this development. Please find another space where a whole community will not be displaced or harmed. Treat this community with respect. BIPOCs have been redlined for ages. This continues that disparity. Sound transit should stand against this instead of furthering this inequity.	Gurdeep Gill
04/28/2022	This plan will impact so many lives and the disruption is so long that it was displace many people from their homes. This is not okay. To prioritize residents in West Seattle to increase convenience for them while causing inconvenience to Chinatown/International District is unacceptable. This is all we know as Asian Americans and you're taking a piece of what we, Seattle Asian Americans know. West Seattle is already getting a new bridge, they don't need a train as well. No one in the city is traveling to West Seattle. Only residents traveling to and from West Seattle would want this type of change.	Lina Le
04/28/2022	If you're aware that the negatives for the local community outweigh the positives and that this project will be deeply detrimental to businesses in the area then why continue? Residents of the city already have so many reasons to dislike city officials. Why give them more reasons? How about doing something that instills the community with faith in the system?	Hanan Diriye
04/28/2022	For the Ballard route I prefer the Preferred Tunnel 14th Avenue Alternative (IBB-2a)* choice. According to Table ES-8. Key Environmental Impacts of the Interbay/Ballard Segment Alternatives in the West Seattle and Ballard Link Extensions Draft Environmental Impact Statement, this route displaces the least amount of homes and businesses. Many of the apartments/condos in that area of Interbay provide more affordable housing options which we should not be taking away. Second, the visual and auditory landscape will be less busy and noisy with a tunnel option. Third, having the Ballard station on 14th allows for less disruption time on 15th Ave NW which is a main travel artery. Lastly, as a bonus, the cost for this option is one of the lesser expensive options.	Karine Dammer
04/28/2022	Please consider adding express buses from White Center, Roxhill, Arbor Heights, etc, that link up to the light rail, without stops in between. Or consider adding a foot passenger ferry from Fauntleroy to downtown.	Lauren Zondag
04/28/2022	I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support the Yancy/Avalon routes and oppose any alternatives that will impact the West Seattle Golf Course. The tunnel alternatives are unacceptable due to the loss of more than 3 acres of Park property. I prefer the Yancy/Avalon routes.	Jonathan Stroum
04/28/2022	With the NEW (recently announced) height limit requirement from the U.S. Coast Guard for a cross Ship Canal Bridge of 205 Feet of clearance, it is probably best to look at the Tunnel option. I wonder how far into Interbay and Ballard the bridge slope would extend? A Station Stop for the View at the Top for Tourists?? I could not find the New requirements for Width Clearance of a raised bridge such as a Bascule bridge. This, of course, is from the view of a Ballard resident. Over all Shallow stations would probably work better with most people.	Roy Pollock

04/28/2022	<p>Beginning on p 64, the Alaska Junction Station:</p> <p>1, there are four supermarkets in the neighborhood: QFC, Safeway, Trader Joe’s, and Whole Foods. All of your draft plans take out the immensely popular and well-loved Trader Joe’s, and, of the others, most of your station and route plans take out Safeway (as well as all the businesses located at Jefferson Square), as well as either QFC or Whole Foods. Being able to walk to supermarkets is one measure of a truly walkable neighborhood, and Sound Transit eliminates that.</p> <p>2, I don’t know about the cost, but would suggest an elevated line running down Fautleroy. I am sure that traffic engineers can figure out how to reconfigure the arterials, but if the line could run down the middle of the street, perhaps all the housing and businesses could be preserved. (Another more costly alternative would be to underground the line, but ST is already under budgetary constraints.)</p> <p>3, Convenience would be compromised, but if the Avalon Station is eliminated due to budgetary concerns, perhaps the WS line could be run along 35th SW., with ST taking care to avoid as much park land as possible. I know that topography would be challenging, but I think it might be worth considering.</p> <p>4, This new West Seattle resident strongly opposes the gondola idea. I think as a tourist attraction that it would have much merit, but as a means of transporting a large number of commuters, I think it would fall far short of what is needed.</p> <p>5, Finally, I admit that this is for entirely selfish purposes, but I implore you not to run the line down 41st, regardless of whether you are considering undergrounding it or constructing an elevated line. We are walking distance to everything (except our doctors), and, while I know that ST helps with relocation, I cannot imagine being able to find a neighborhood with anything close to everything here. It has been such a pleasure being able to walk nearly everywhere, and to hop on a bus to those places not within walking distance.</p> <p>Thank you for your consideration.</p>	Gayle Sommers
04/28/2022	<p>For the chinatown light rail expansion into W Seattle, the 4th Ave option is preferable. Disrupts fewer local businesses that have already been dealing with so much these last few years. Thank you for your time and consideration.</p>	Heejoon Choi
04/28/2022	<p>Please do NOT build the West Seattle/Ballard extension along 5th. Losing 5-19 historic businesses is unacceptable. The Chinatown/International District community has been hit hard by COVID-19 and the rising threat of gentrification. Building along 5th Ave would only increase the threat of displacement.</p> <p>Sound Transit should instead build the extension along 4th Ave in order to minimize harmful impacts to Chinatown/International District businesses. Please listen to the Chinatown/International District businesses and community groups asking you to build along 4th instead.</p>	Roslyn Hower
04/28/2022	<p>To whom it may concern,</p> <p>I’m going to spare you the cultural, historical, and personal significance of the ID, and the subsequent history of mistreatment of BIPOC. Because you obviously don’t really care.</p> <p>Let's just play with the facts. These blocks employ on the low-end around 100 people in the area where the median income is around 30K, in a city where on the conservative side is 65K on average.</p> <p>So are you really going to make 100+ poor people poorer in a time of unprecedented inflation for a link extension? That will take years to be up and running, and that will be only a few blocks from the current stations north, and that will not net you a financial loss in the future?</p> <p>-Kanoa Wong</p>	Kanoa Wong
04/28/2022	<p>Please do not destroy the small 5th Ave businesses. 4th Avenue location will be less impactful.</p>	David Escame
04/28/2022	<p>I urge the city to choose 4th Ave construction options that disrupt as few businesses as possible.</p>	Mairin Hackett

04/28/2022	<p>Commenting on: section ES.3.1.2.2. -</p> <p>It's unfortunate that all of the options for the International District segment will have long term disruptions and displacement for the community. I think it's really important that we weigh the community and cultural impact of the different options in our final decision - for example, options 2a and 2b will disrupt a central area of the International District and displace a number of businesses that are core to the culture of our city and the district. The impact goes beyond the number of employees or businesses displaced, and will likely have a long term impact on the the culture of our city and will be disrupting communities beyond just the time of construction. We should make sure to weigh this negative impact against the positive impact on transportation that this station(s) will have and - for all four options - we should add in additional cost (if it has not been considered already) to support the people, businesses, and community so that they are justly compensated for the displacement.</p>	Jonathan Walsh
04/28/2022	<p>I recently bought a townhouse in the north Delridge area overlooking Longfellow creek. We moved to the area because we fell in love with Longfellow creek and the green spaces in the area. There are many birds and animals in the area (including beavers) and I fear the light rail will negatively impact the nature in our small neighborhood. It's only been in the last 10 years that people have poured resources in the area to invigorate these very things. I definitely believe the light rail is needed to connect west Seattle but I fear that what I loved about my area will be no more with intrusive overhead railways plowing through homes and green spaces. I would be a proponent of the light rail as long as it didn't impact Longfellow creek. Cutting through avalon by the steel factory seems like the best route. If possible underground stations like they have downtown and Capitol Hill would be best. I'm very concerned of the overhead blocking all the views and light in the neighborhood as well.</p>	Alexandra Casabar
04/28/2022	<p>If Sound Transit is truly "committed to centering communities along the project corridor", then you will center the Chinatown-International District community and NOT opt for the 5th avenue construction. Construction on 5th avenue will displace businesses that are of great significance to the C-ID, and will result in irreversible harm to the community and culture. The C-ID has already been negatively impacted via construction and development. This cannot go on. This city boasts diversity, but laws and policies are very much rooted in systemic racism and always disproportionately impact communities of color. Please do what is right and do NOT move forward with construction on 5th Ave.</p>	Grace Masaoka
04/28/2022	<p>I've seen the impacts of transit construction sites displace businesses, employees, and residents while fragmenting our neighborhoods decades. CID 1a and 1b are the ONLY Path forward that consider the cultural, economic and human implications of this project. Yes, transit is important but not at the cost of communities displaced to accommodate it.</p>	Shara Maurer

<p>04/28/2022</p>	<p>Hello Sound Transit Board & Staff,</p> <p>Yesterday, on April 27, the Chinatown International District (CID) community gathered at Oasis Tea Zone to learn and comment on the proposed station alternatives for the CID Station. We had 50+ attendees who submitted 25+ paper comments and countless online comments. We took turns asking questions, sharing our concerns, fears, and dreams for the CID. It was a really special place to be, amongst friends and community members who all cared for this neighborhood.</p> <p>Being able to gather in space together yesterday was everything. It reinforced for me why these places are so important, and why these spaces are the heart of the CID. Oasis isn't just a boba shop - it is where we catch up with friends, exchange information, have important conversations, and build relationships. These interactions also take place in our restaurants, cafes, bars, hair salons, grocery stores, herbal shops, and retail shops all across the CID.</p> <p>That was one of the reasons why COVID was so hard. We couldn't BE with each other in the same room. It speaks to the integral role of buildings, gathering spaces like small businesses, green spaces and parks, streets, and sidewalks. THIRD SPACES are the necessary facilitators of community.</p> <p>Many of our buildings are decades if not a century old. They hold memories and stories from generations of people who have called this place home. The 5th Ave S options would demolish, displace, or seriously threaten dozens of these places. If Sound Transit chooses any of the 5th Ave S options, especially when there is a viable option on 4th Ave S (CID-1a), you are deciding to tear apart the social, historic, and economic fabric of the CID.</p> <p>How will Sound Transit measure a loss of that scale when you tear down the Nagomi Teahouse, the Joe's Bar building, and Carpet King building? How will you account for all of the history that has taken place between those walls that you would bulldoze? You aren't just tearing down buildings. You are taking a wrecking ball to livelihoods, community gathering spaces, and a century's worth of community resilience and history.</p> <p>How will you put a mitigation price tag on the compounded harm that past construction and infrastructure projects have caused? The harm isn't just caused by Sound Transit tearing down these buildings in a few years or closing down these streets in a few years - the harm is done because we've barely had time to THINK about COVID recovery, barely had time to PROCESS the hate crimes that happened to our elders and friends in broad daylight. We've barely had time to catch our breath, and it feels like we are being knocked down again. How will you calculate for that compounded exhaustion and chronic fear that this community has had to bear?</p> <p>4th shallow (CID-1a) is the choice that minimizes direct harms to the CID. CID-1a will reactivate Union Station as a transit hub! CID-1a will create much needed pedestrian and public realm connections between pioneer square and the CID. CID-1a will require the rebuilding of 4th Ave S, which is probably needed anyways because it's the same age as the West Seattle Bridge and we know how that's going... CID-1a will have more regional construction impacts, but that is fair choice. The CID should not be sacrificed for the sake of the larger transit system.</p> <p>What message are we sending if we can't protect and uplift neighborhoods like the CID? What will our cities look like if we displace communities like the CID?</p> <p>Sound transit should pick CID-1a, 4th Ave Shallow, as its preferred alignment.</p> <p>Sincerely, An Huynh</p>	<p>An Huynh</p>

04/28/2022	<p>“My name is Jacqueline Nguyen and I am submitting a comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. As a community member and avid visitor of the CID, I am disappointed to see the plans laid out by DEIS. Currently, five options have been put out by Sound Transit for potential CID Station expansion. All five of these plans, especially those with options on 5th Ave, displace historic CID businesses (at minimum 5 and more likely 19), detour thousands of vehicles through the neighborhood’s pedestrian oriented streets , and create disruptive construction, including noise and air pollution, for the next 5-11 years. The CID station is the only Link station to be surrounded by a densely populated community of color. It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. We urge Sound Transit to reconsider options on 4th or 5th ave and instead look to other options that will not displace our beloved residents and businesses in the CID. Thank you.</p>	Jackie Nguyen
04/28/2022	<p>My name is Albert Wang and I am submitting a comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. As a community member, I am disappointed to see the plans laid out by DEIS. Currently, five options have been put out by Sound Transit for potential CID Station expansion. All five of these plans, especially those with options on 5th Ave, displace historic CID businesses (at minimum 5 and more likely 19), detour thousands of vehicles through the neighborhood’s pedestrian oriented streets , and create disruptive construction, including noise and air pollution, for the next 5-11 years. The CID station is the only Link station to be surrounded by a densely populated community of color. It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. We urge Sound Transit to reconsider options on 4th or 5th ave and instead look to other options that will not displace our beloved residents and businesses in the CID.</p>	Albert Wang
04/28/2022	<p>I am very concerned about the option that would impact 5th Avenue businesses. People that I love very much will be impacted. I am worried about the long term impact to businesses .</p> <p>I am also concerned about the negative impact that the noise and construction would cause. If the lightrail passes directly through the neighborhood, which includes parks the result would be very sad.</p>	Stephanie Greene
04/28/2022	<p>The DRAFT EIS and its impact on the CID- fail to fully address and account for the ways in which the displaced small and immigrant owned businesses, the disruptions to historical buildings and places and the overall construction plans will irreversibly change the neighborhood and decimate what is left of one of the few remaining Chinatowns in the country. Sound Transit needs to do better! If not, Sound Transit adds to the racist legacy of redlining, stadium parking spot paving, and freeway building through immigrant neighborhoods that the district has already endured. The impacts of all the "alternatives" are too disruptive on the CID.</p>	Michelle Benetua

04/28/2022	<p>Thank you all for the wonderful hard work you've done towards improving our region. This Draft EIS is a phenomenal product and I am proud to participate in this democratic process. As a long-time supporter of Sound Transit, however, I am deeply troubled by the alternatives we are considering for this project.</p> <p>From what I can tell, we're about to build a rail line whose cost will top \$12 billion only because it needs to go over and under existing rail lines. And nowhere in any official planning document is a consideration of the costs of utilizing those existing lines.</p> <p>I understand there are good reasons that make it difficult to work with BNSF and other vested interests on questions like track rights and infrastructure. But do these reasons truly outweigh the enormous financial expenditure and environmental impact we're about to commit in the twenty-year construction of the WSBLE?</p> <p>Because even a casual observer can note just how underutilized our existing heavy-rail infrastructure is. It's upwards of 20 minutes between trains travelling either direction on the Salmon Bay double track; there are over 16 tracks at the Interbay yard, and 15 on the Eliot Bay waterfront. The Great Northern tunnel—one the WSBLE will spend billions to build around—is hardly used. There are over twenty tracks, usually sitting empty, at the Argo yard on the Duwamish—to say nothing of the always-up West Seattle railroad bridge. Even the troublesome Ballard Terminal Railroad, long the bane of cyclists like myself, is easily reimaged as a trolley line with wonderful connections to Fremont, Shilshole, and Downtown.</p> <p>But rather than explore a public-private partnership to use, upgrade, and expand this existing infrastructure that already serves 80% of the target area, we're going to drill new tunnels with unusably deep stations (page 2-54), construct enormous and unsightly elevated lines, displace hundreds of residents and business, and squander billions of dollars that could be turned to the myriad issues facing our region. And to the best of my ability, I cannot find any consideration of using BNSF lines in this Draft EIS (even in Annex M) or in the original 2014 exploratory document.</p> <p>I am deeply supportive of expanding transit in our region, especially effort on Bus Rapid Transit, bicycle lanes, and congestion pricing. But the absurdity of this proposal—spending \$12 billion to build elevated train tracks over unused train tracks—demands reappraisal.</p> <p>Thank you again for your hard work, and I look forward to starting this conversation.</p>	Henry Pedersen
04/28/2022	<p>My name is Dillon Nishimoto and I am submitting a comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. As a community member with deep connections to the CID, I am disappointed to see the plans laid out by DEIS. Currently, five options have been put out by Sound Transit for potential CID Station expansion. All five of these plans, especially those with options on 5th Ave, displace historic CID businesses (at minimum 5 and more likely 19), detour thousands of vehicles through the neighborhood's pedestrian oriented streets, and create disruptive construction, including noise and air pollution, for the next 5-11 years. The CID station is the only Link station to be surrounded by a densely populated community of color. It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. We urge Sound Transit to reconsider options on 4th or 5th ave and instead look to other options that will not displace our beloved residents and businesses in the CID.</p>	Dillon Nishimoto

04/28/2022	<p>My name is Nate Baum and I am submitting a comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. As a community member who cares deeply about Chinatown/International District, I am disappointed to see the plans laid out by DEIS. Currently, five options have been put out by Sound Transit for potential CID Station expansion. All five of these plans, especially those with options on 5th Ave, displace historic CID businesses (at minimum 5 and more likely 19), detour thousands of vehicles through the neighborhood's pedestrian oriented streets, and create disruptive construction, including noise and air pollution, for the next 5-11 years. The CID station is the only Link station to be surrounded by a densely populated community of color. It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. We urge Sound Transit to reconsider options on 4th or 5th ave and instead look to other options that will not displace our beloved residents and businesses in the CID.</p> <p>It's phenomenally frustrating and disheartening that in 2022, the CID would have to continue to be massively threatened by government action.</p>	Nathaniel Baum
04/28/2022	<p>As a resident in CID, I am very concerned of Sound Transit's consideration to build a station on 5th (CID-2a and 2b). This station will heavily bite into CID, and I fear the impact the construction will have on the health and well-being of the elders and families in the community, along with the instant and gradual eradication of businesses and landmarks based on this decision.</p>	Jimmy Chung
04/28/2022	<p>The 4th Ave S alternatives are preferred as to not seriously impact businesses in the neighborhood. Let's do what we can to protect our community members and their livelihoods!</p>	Kaylyn Cardella
04/28/2022	<p>Junction: Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fautleroy Station that would reduce residential displacement and costly property takings.</p> <p>Avalon: Prefer WSJ-5 with a request to study a refined DEL-6 pairing.</p> <p>Delridge: Request a study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5]</p> <p>SoDo: Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking.</p> <p>Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than four and a half minutes.</p> <p>Midtown: Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>Westlake: 5th Avenue Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access.</p> <p>Denny: Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower.</p> <p>SLU: Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible.</p> <p>Uptown: Prefer Republican Street Station and work to mitigate impacts to arts organizations to the extent possible.</p> <p>Smith Cove: Preferred Galer Street Station [SIB-1].</p> <p>Interbay: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3].</p> <p>Ballard: Study pairing a high bridge with an elevated 15th Avenue Station and to continue to refine all tunnel options to put a station entrance west of 15th Avenue. Jettison the moveable bridge. Open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p>	Alec Georgoff

04/28/2022	<p>Hello,</p> <p>I am a newer resident to Seattle as of Oct 2021. I love the transit system this city currently employs, and I fully support the expansion of light rail throughout the city.</p> <p>I am also a resident in the International District/Chinatown. I fell in love with this neighborhood as soon as I toured it when I was searching for housing. I love its rich cultural history, the vibrant restaurant options, Hing Hay and Donnie Chin and Kobe Terrace parks - it's a district filled with small local businesses, and together, they make up the very soul of this neighborhood.</p> <p>Public transit expansion requires disruption to existing neighborhoods, there is no denying that. For the considered options for the Ballard Link extension in the ID/Chinatown, I implore you to opt for the 4th St options.</p> <p>The Chinatown-International District and by extension its Asian population, is one of most beleaguered communities affected by the ongoing pandemic, including but limiting to xenophobia, harassment, physical assault, loss of business/revenue. You mention yourself that a large population of C-ID is low income (Section 4.3.4.1.2, Demographics), and that in the grand scheme of the Ballard Link extension, the C-ID is the only affected community that is predominantly minority and low income (Appendix G Environmental Justice, page 7-1, Conclusion). The 5th St options for a new station would have the highest disruptive effect on our already struggling neighborhood, you would destroy the homes of Oasis Tea Zone, Ping's Dumpling House, Pacific HK Cafe, and many others. The businesses in the neighborhood would see a dramatic loss in revenue - we are already struggling.</p> <p>As you've noted on Page 4.3.4-8 West Seattle and Ballard Link Extensions Draft EIS, the C-ID "is listed in the National Register of Historic Places and as a Seattle Landmark, and is historically and culturally important to the Asian community and the city of Seattle. The Chinatown-International District has high neighborhood cohesion." The 5-11 years of construction for the 5th St station would permanently alter this historic place and scar the neighborhood cohesion you've so observed.</p> <p>Please, please elect for the 4th St option, and minimize the disruptive effect on our already struggling community.</p> <p>Thank you.</p>	Kevin Kim
04/28/2022	<p>My name is Melanie Kristoferson. I am submitting a comment on the proposal to expand light rail to Ballard and West Seattle. As a supporter of Seattle's AAPI community, I would like to see further engagement in asking affected CID community members how these 5 proposals will affect their residences, businesses and overall quality of life. I reviewed all 5 options and they all include displacing peoples homes and businesses for a significant period of time. I urge you to consider alternatives that are not disproportionately impacting the many POC who live and work in the CID.</p>	Melanie Kristoferson
04/28/2022	<p>Our community highly values our small businesses. The plan to build on 5th Avenue will displace a huge number of minority-owned small businesses that we hold close to our heart. If Sound Transit truly values diversity, please consider building on 4th Avenue so we can continue to preserve this historical part of the city.</p>	Carly Reni

04/28/2022	<p>When choosing where to build the extension tunnel, I strongly encourage the board to select one of the Fourth Avenue options to preserve the priceless cultural, social, historical, and economic legacies of the International District community--including the 19 to 27 businesses with 170 to 230 employees that would be negatively impacted. What will these small business owners and workers do if their livelihoods are lost? What will Seattle be without the vibrancy, charm, and unique contributions of the International District (ID)? Because if you decide to build the tunnel on Fifth Avenue, you are accepting to permanently destroy and alter this neighborhood for the rest of history. The ID has experienced several major changes throughout Seattle's history, and it won't survive such a massive project. So many ID residents, particularly seniors, are heavily reliant on local businesses and people they know and recognize, that speak their native Cantonese, Mandarin, or Vietnamese, etc. to get through their days and weeks.</p> <p>If you choose to build the tunnel on Fifth Avenue, the board will be making an inequitable choice that tells the people of Seattle that the ID neighborhood and community don't matter--that the mostly-people-of-color residents and businesses of the ID are (yet again) second- or third-class. And that erasing history and culture is acceptable or encouraged.</p> <p>Please do not build the extension tunnel on Fifth Avenue and choose one of the Fourth Avenue tunnel options. By doing so, you can feel peace in knowing that you did not destroy a major part of Seattle's history and culture, leaving it for current and future generations to enjoy.</p>	THANH-TAM VU
04/28/2022	<p>I am writing because I am STRONGLY OPPOSED to the CID segment being constructed on 5th Ave. Both CID-2a and CID-2b would be devastating to the neighborhood and force the closure of a number of historic businesses that are part of the heart of the CID. These businesses are part of what makes the CID the vibrant neighborhood that it is. It is unlikely that most of these businesses would be able to weather the disruption caused by the lengthy construction. Additionally, construction of a 5th Ave. station would be horribly disruptive to the daily lives of all the Seattelites who call the CID home. Please do not do this to the community here. The 4th Ave. options are much less disruptive to the people actually living in the neighborhood, the people who will be MOST affected by the decision made. The 4th Ave. option does far less damage to the heart and soul of the neighborhood. I implore you, go with 4th.</p>	Abigail Hert
04/28/2022	<p>Hello, I would like to submit a comment regarding the final placement for the proposed link station in china town. I think that the 4 th Ave S option would be the best placement because it would limit displacement and disruption of Asian owned businesses. I use the light rail weekly and I appreciate it but I would hate to see it's further development cause the closing and displacement of small businesses.</p>	Theodora Fanning
04/28/2022	<p>While I support the increased access to public transit, especially for the ease of access for those who live & work in the C-ID and the potential business it will bring to the C-ID community, I implore you to select the 4th Ave option which will have the smallest impact on the existing neighborhood and community. As someone who frequents businesses in the C-ID, I have seen the suffering caused by the pandemic and the increase in property damage and hate crime in the C-ID and our local AAPI community. Some of these businesses will not survive the disruptions from construction and would not gain the benefits from the transit expansion if a 5th Ave option is selected. The people and community of the C-ID do not need the extra burden the construction would cause. Choosing a 4th Ave option will have the least detrimental impact on the community and neighborhood.</p>	Janet Shaw

04/28/2022	<p>Dear Sound Transit,</p> <p>As a Board member of Delridge Neighborhoods Development Association (DNDA), I submit the following comments on the Draft Environmental Impact Study of ST3:</p> <p>For the Duwamish crossing, we urge you to choose the North Crossing (DUW-2), which is necessary to avoid cutting into the West Duwamish Greenbelt and the north end of Pigeon Point, where a critical hillside and a Great Blue Heron habitat are at risk. The North Crossing avoids loss of vital park resources (the West Duwamish Greenbelt, Seattle’s largest greenbelt) and avoids loss of a biodiversity area (Heron colony, et al). We believe these should be held paramount, and projected higher costs are worth the protection of these vital natural assets. Further, the North Crossing avoids residential displacements, and has the least number of displaced employees.</p> <p>For the Delridge Segment, we encourage you to choose the Preferred Dakota Street Station Lower Height (DEL-2a). Our priority is that any route traveling along SW Genesee Street should travel along the south side of Genesee, to avoid the north side of Genesee where Longfellow Creek remains one of two salmon-bearing creeks in the City of Seattle. The loss of parkland in this instance is from the West Seattle Golf Course, which should not be prioritized, as it is neither an environmental nor local community benefit. DEL-2a also provides high opportunity for equitable transit-oriented development around the Delridge station. As outlined in the Racial Equity Toolkit analysis, bus/rail integration should be prioritized, specifically in proximity to Delridge Way SW. Many transit riders will be accessing Sound Transit from South Delridge, White Center, Burien, and beyond, and the ST3 Delridge Station should be close to Delridge to provide an accessible transfer experience, inclusive of transit riders of all abilities. For this reason, the Andover Street Station options should not be considered.</p> <p>The lower height guideway through Delridge should be prioritized for easier transfers and to retain the character of Youngstown and North Delridge, a vibrant and historic neighborhood.</p> <p>We urge you to focus on investments to improve safety throughout the Delridge station area. Improvements to lighting and hillside staircases will be necessary to prioritize community safety and effectively serve Sound Transit’s ridership.</p> <p>There is an opportunity with ST3 to remove the culvert under SW Genesee to further restore Longfellow Creek, which could help Sound Transit mitigate other project impacts. DNDA would welcome partnership with Sound Transit here.</p> <p>Thank you for your consideration, and we look forward to continued partnership with Sound Transit.</p> <p>Aaron</p>	Aaron Edenshaw
04/28/2022	<p>I am writing to comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions (WSBLE) Project, notice of which was issued on January 28, 2022.</p> <p>The project proposes expansion within the Chinatown International District, and I believe that any expansion within the CID would be harmful to the local community. My grandparents, friends, and family reside in the CID, and I know well how negatively this expansion would effect them. I support the Wing Luke’s letter stating the effects and this expansion would have on the neighborhood. I ask that the impact is explored through research and considerations of the local community’s experiences and needs. What is best for the locals of the community should be prioritized and uplifted, especially with a careful consideration of the particulars of being an ethnic minority neighborhood with a long history of marginalization and discrimination. Even today, in 2022, the CID has faced especially hard sociopolitical circumstances due to Covid-19 and the associated anti-Asian racism that has increased due the pandemic. The neighborhood’s needs deserve to be prioritized, as to preserve and support an already struggling and marginalized area rich with culture and community.</p> <p>Regards, Madison</p>	Madison Zack-Wu

04/28/2022	<p>I request that you do not disrupt the elderly community living on Main Street that need to walk down 6th Ave to get to the grocery store - Uwajimaya.</p> <p>Please place the station on 4th Ave.!</p> <p>Or consider placing or researching another station location just south of the shell station, south of Uwajimaya where there is a lot more property that will not disrupt the living and working or commuters.</p> <p>Location options: property on the cross streets are Seattle BLVD/ Airport way and 6th Ave.</p> <p>property at 820 4th Ave S, Seattle, WA 98134</p> <p>These are more convenient to game traffic as well as extending the neighborhood opportunities south vs displacing the current community.</p>	Christa Thomas
04/28/2022	Have you thought of the impact for the community in this area? Please consider listening to the voices of many who are concerned about this project.	Julia Le
04/28/2022	Starting construction on 5th Ave to expand transit is not only harmful to the International District, but also unnecessary. Demolishing businesses in the neighborhood when there are alternative areas to achieve the same end makes no sense. As a resident of, and someone who works in, the ID I believe that construction on 5th Ave will do irreparable harm to the neighborhood and the livelihoods of many.	Sean Arakaki
04/28/2022	More exploration needs to be done to determine a CID station does not result in displacement. The cumulative impacts fall short of taking into consideration present-day displacement pressures in the CID. The conclusions in the neighborhood cohesion section need to take into account the current fragility of the neighborhood due to past public infrastructure projects.	Tera Beach
04/28/2022	I would like to lend my voice to the detailed and comprehensive statement composed by the Wing Luke Museum - I would strongly urge The Sound Transit Board of Directors to take into serious consideration of the oversights and historical contexts provided by Wing Luke Museum in their open letter and conduct a more thorough study on the impact this project could have to the local neighborhood and community's livelihood.	Lenny King
04/28/2022	The International District of Seattle is an important, culturally and historically significant neighborhood in Seattle that must be preserved. I am confident that arrangements can be made to accommodate the very real need to expanded transportation AND the small businesses in the area. They have already been through so much with the pandemic and the systemic oppression of racism, their needs must be prioritized when any decisions are made.	Diane Santiago
04/28/2022	Im excited for increased public transit options, especially for the ease of access for those who live & work in the C-ID and the potential business it will bring to the C-ID community. However the 4th Ave option is the responsible choice as it will have the smallest impact on the existing neighborhood and community. As someone who frequents businesses in the C-ID, I have seen the suffering caused by the pandemic and the increase in property damage and hate crime in the C-ID and our local AAPI community. Some of these businesses will not survive the disruptions from construction and would not gain the benefits from the transit expansion if a 5th Ave option is selected. The people and community of the C-ID do not need the extra burden the construction would cause. Choosing a 4th Ave option will have the least detrimental impact on the community and neighborhood."	Angela Hu

04/28/2022	<p>This comment is regarding the Avalon station planned for the West Seattle route. There have been mentions of removing this station in order to save money, but I wanted to say that doing so would only be more costly in the long term and an absolute mistake. Within the next 3 years there are an additional 800 apartment units planned to be built on the streets surrounding the station. The majority of these also do not offer parking. Removing these stations would affect all the current residents and future residents in the area. Walking a mile to the Junction station is unreasonable and inaccessible, and no buses take the drive to where the proposed station for the Junction will be. By removing this station the only thing being created is more inconvenience and more reasons for people to purchase a car and not use public transportation. In cities such as NYC and London. When looking at NYC subway stations are placed on average within 600-700 feet or each other, but the removal of the Avalon station would create a 5000 foot distance between it and the next closest station. Avalon is also already a hub for buses, so in removing it you would be adding an additional bus ride to use the light rail. The light rail should be built with thoughts of the future, especially the future within the next 10 years and not with the current cost savings in mind, only to be dealt with later generations to fix.</p> <p>The Junction station should also use the Preferred Tunnel 42nd Avenue Station Option (WSJ-3b)* route. The station would then take passengers directly to the Junction, which is where the majority of them would want to be, instead of requiring passengers to get off and walk up hill to the Junction. Once again, in NYC and London you see their stations exit directly at the points of interest, instead of requiring passengers to walk. For convenience and, once again, promotion of light rail use the route should be shown as a better option than driving.</p>	Paige Goldman
04/28/2022	<p>No matter the location, station construction will require nearly a decade of street closures, detours, loss of parking, and subject residents to construction noise throughout the day. Cumulative impacts around the community's ability to stay and thrive remain unaddressed. But if I am to pick an option, I would suggest that Sound Transit does not build the new link light rail station entrances on 5th avenue, but instead to build it on the 4th avenue. Because if you build it on the 5th avenue, it will displace many C-ID small businesses and result in the demolition of buildings that currently house Ping's Dumpling House, Joe's Bar, Pacific HK Cafe, and Oasis Tea Zone. Therefore, I would support the build of the new link light rail station entrance on the 4th avenue.</p>	Cindy Wang
04/28/2022	<p>The current proposal DOES NOTHING to benefit those that ALREADY live and work here. Yet again, city/county policy seems to benefit the future residents/business that will REPLACE the current residents and workers. We're tired of being selected to be in the red lines.</p>	Patrick Burke
04/28/2022	<p>My name is Stephen Jeong, and I am submitting a comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. As a community member who shops and visits the CID, I am disappointed to see the plans laid out by DEIS. Currently, five options have been put out by Sound Transit for potential CID Station expansion. All five of these plans, especially those with options on 5th Ave, displace historic CID businesses (at minimum 5 and more likely 19), detour thousands of vehicles through the neighborhood's pedestrian oriented streets, and create disruptive construction, including noise and air pollution, for the next 5-11 years. The CID station is the only Link station to be surrounded by a densely populated community of color. It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. When the streetcar came into this neighborhood, the businesses were adversely affected for several years, and with the disruptions experienced through COVID, this neighborhood cannot withstand another construction period that will disrupt retail and revenue. I urge Sound Transit to reconsider options on 4th or 5th ave and instead look to other options that will not displace our beloved residents and businesses in the CID.</p>	Stephen Jeong

04/28/2022	<p>I co-own and operate a business that is in the path of the preferred alternative route of the Ballard link extension. Our business has invested thousands into improving our space with the expectation that we will be there for many years to come. What sort of compensation will small businesses like mine be given in the event of a seizure of the buildings they occupy? Relocation costs will be immense, not to mention the loss of income for these businesses and their employees during relocation. It is my view that these sunken and future costs must be taken into account, especially after so many small businesses are struggling post COVID.</p>	Marshall Petryni
04/28/2022	<p>Please do not make China Town businesses close and/or inaccessible during this project. Anti-Asian hate has been rampant in this country, particularly since the pandemic began, and the international district has seen many construction disruptions over the past few decades of development.</p> <p>Shutting down streets, demolishing buildings, etc will only harm the Seattle Asian community that is a necessary part of the city of Seattle.</p> <p>Please do the right thing and choose the least harmful path. Please do not close down businesses or disrupt their opportunity for sales. Do the right thing.</p>	Jadyn Holmgren
04/28/2022	<p>I strongly oppose all proposed station alternatives for the Chinatown International District and urge Sound Transit not to move forward until you are able to create an alternative that does not disrupt and displace the neighborhood.</p> <p>I am a resident, worker, and organizer in the CID. This is my home. This is my community. As a Chinese American with familial roots here, it is my history as well. This is a neighborhood where people have lived for generations. We are STILL HERE. We've been fighting this same fight for decades! When is it our turn to thrive? Whether it's the I-5 freeway or King Dome, the city is cutting us smaller and smaller. A community member said, "every inch of land we give up is an inch we won't get back." The gentrification of the neighborhood is CURRENTLY devastating. Residents are getting priced out. Small businesses are competing with international chains. Houseless neighbors are being criminalized. These issues are happening NOW. Much of the neighborhood won't survive ST3. Street closures, traffic rerouting, and construction will drive away business and disrupt the lives of residents and workers. The environmental impacts of both construction and the stations proposed would decrease the quality of life for our neighborhood. This is environmental racism. Our neighborhood is home to elders and children who are most vulnerable to air and noise pollution. The current DEIS does not do enough to address this.</p> <p>The proposed sites on 5th Ave demolish buildings that are contributing buildings to the historic district. Even the buildings that aren't considered "contributing" by the city have a rich history. Demolition should not be an option.</p> <p>While ST has funds for businesses to relocate if their building is demolished, there is no foresight and support for long term adverse affects of a new station. Across the country, transit hubs are a sign of gentrification, displacing current residents. How is ST accounting for all the folks who will be priced out of their homes in the long run? For the businesses who are provided financial support, there's no guarantee that they would be able to reopen in the neighborhood. The DEIS does not address the loss of business throughout the neighborhood during the time of construction. A local business owner shared that the sidewalk in front of their business was under construction for 6 months and they lost 80% of their usual business. EVERY business in the neighborhood will feel the impact of ongoing closures and construction. How will ST compensate this?</p> <p>The DEIS is not at a stage where the community feels comfortable moving forward on any of the proposed locations. Fear and miseducation has led some to advocate for one of the 4th avenue sites because they thought you were making them choose. They know they're picking their own poison but think they don't have a choice due to a lifetime of discrimination, racism, and oppression. We have the right to self-determination. My community is asking you to listen to us, to truly consider the PEOPLE you will harm. I value the opportunity to give feedback and I urge Sound Transit to listen to the most concerned voices. We're scared for our homes, our neighbors, and our businesses. Please do not move forward with ANY of the options presented in the DEIS.</p>	Meilani Mandery

04/28/2022	<p>I echo the comments of the Wing Luke Museum. As the the designer of the museum, I learned first hand as a part of the design process the really hard work it has taken the CID to keep this vibrant community whole. It is a treasure locally, regionally and nationally.</p> <p>Please review carefully the issues the Museum brings discusses. I look forward to your response.</p> <p>I know that you all know this neighborhood well.</p> <p>Thank you, Rick</p>	richard sundberg
04/28/2022	<p>I will keep my comments short. First, I am not in favor of Sound Transit for West Seattle as I think the long term environmental impacts to the wonderful ecosystems here - loss of trees and the birds and wildlife they support particularly in the Delridge area are not worth it. Tree loss also means elevated urban heat island effects.. Since apparently this will happen anyway (I do support the Sky Link proposal but I realize that is not in Sound Transit's interest) then the option with the least ecosystem impact is the West Seattle Tunnel option. Please consider the harmful impacts from habitat loss to tree ecosystems as well as to Longfellow Creek of the other options. West Seattle is one of the most beautiful parts of the city of Seattle, with extensive tree cover. Those huge elevated columns and tracks will ruin the appeal of living here for people and creatures.</p>	Katherine Minsch
04/28/2022	<p>When deciding where to build a station in the CID segment, please move forward with the 4th Ave options only. Building on 5th Ave will negatively impact the local community by disrupting, displacing, and eliminating key businesses there. The 5th Ave plan will also subtract anywhere from 20 to nearly 200 parking spaces in our growing city, where parking is already competitive.</p> <p>I was devastated to learn that my favorite businesses, such as Oasis, could be permanently shut down and the buildings destroyed to make space for the station. As a youth community hub and multicultural space, Oasis and the many other shops along 5th Ave must be preserved. Uwajimaya will also be negatively impacted, as reduced or nonexistent business and load zone access will cause business owners more financial strife. With the numerous Asian hate crimes and COVID-related economic crises that have happened over the past couple of years, another economic issue for these businesses could be fatal.</p> <p>In section 3.2.1 of the Appendix G: Environmental Justice, SoundTransit states, "The Seattle Chinatown Historic District is listed in the National Register of Historic Places and is a City of Seattle Landmark District, and is historically and culturally important to the Asian community and the City of Seattle." Given that SoundTransit understands the great cultural importance of the CID, please understand that building along 5th Avenue will work against SoundTransit's mission to support the greater Seattle area. Avoid building along 5th at all costs. Thank you for your consideration.</p>	J. Maynard-Zhang
04/28/2022	Please don't move forward with the fifth Ave option. Respect the community in the area and their needs!	Abe Poultridge
04/28/2022	The sound transit proposed link work for 5th Ave. will cause a disproportionately negative effect for the international district and it's community (residents, businesses, etc.). Please consider instead the 4th Ave. location.	Anthony DiJulio

04/26/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <p>Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand</p> <p>Minimize transfer time from transit to platform</p> <p>Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures.</p> <p>Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Smith Cove (SIB-1):</p> <p>Approach station by tunneling under Elliott</p> <p>Station on West side of Elliott</p> <p>Minimize size, if elevated station, over Galer flyover/Magnolia Bridge</p> <p>Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>Thank you for your consideration.</p> <p>Stephanie Ballard 1524 Magnolia Way West Seattle, WA 98199 (702)767-8004</p>	Stephanie Ballard
04/28/2022	<p>West Seattle lines. Must be tunnel. Elevated routes will ruin neighborhoods and, frankly, will ruin West Seattle as a whole. The land acquisition costs St will pay, and the impact costs that ST must pay for properties not condemned, will far exceed those costs for a tunnel route. If you want to destroy West Seattle, go elevated. If you want to minimize impacts and perhaps even enhance quality of life in West Seattle, go tunnel.</p>	Dennis Greenlee
04/28/2022	<p>Hello,</p> <p>Thank you for the opportunity to comment on the draft EIS for the West-Seattle Ballard Link Extension. I highly encourage the policymakers and decision makers to choose the 4th Avenue Shallow Station option for the Chinatown International District (CID) station. This station has the least impacts on neighborhood businesses and future ridership. The opportunity to rebuild the viaduct/2nd Ave Extension and integrate with existing facilities at Union and King Street Stations make this the obvious choice to best support current and future riders, residents, and employees/business owners in the area.</p> <p>As a High Point resident, I am also interested in West Seattle options - clear and frequent connectivity between local bus routes and the future station will be needed for convenient transportation to and from our neighborhoods.</p> <p>Thank you, Katrina Nygaard High Point, West Seattle</p>	Katrina Nygaard

04/28/2022	<p>I am most concerned about how this project will affect the Chinatown-International District area (ES.3.1.2.2., executive summary page 25-29). In particular, I am strongly opposed to the 5th Avenue Shallow Alternative (CID-2a) and 5th Avenue Deep Station Option (CID-2b). They both bisect the C-ID neighborhood, will cause incredible disruptions during construction (noise, traffic diversions, etc.), and will displace 18 to 27 businesses - an unacceptably high number. The people who live and work in this neighborhood do not deserve to be so shamelessly exploited. Please consider other options, including avoiding construction in the C-ID neighborhood entirely. Thank you.</p>	Jeff Zhao
04/28/2022	<p>Look into a station that serves the heart of Ballard, in the vicinity of 20th Ave NW and NW Market St. I am concerned about access near 15th Ave NW or 14th Ave NW, as this will have great impacts on being able to get to actual Ballard. Additionally, the station should be designed as shallowly as reasonably possible. The impacts of construction should be weighted with significantly less importance than the impacts on operations and ridership. With a tunneled approach and station almost certainly being a requirement, a 20th Ave NW station seems very feasible, even if third-party funding is required.</p> <p>In South Lake Union, consider a shallower station located in the heart of the neighborhood, instead of along SR 99. A station could be located near Westlake and Republican, even if the right of way had to be used in its entirety. Again, the impacts of construction are significantly less important than the impact of a properly functioning system.</p> <p>For Denny station, consider a station farther to the east, near Minor Ave and Fairview. The positive impacts of a station at Westlake and Denny are minimal as they are within walking distance, and there is other transit such as the streetcar that cover the corridor. A station farther to the east would increase coverage immensely. Additionally, this station should be shallow as possible to positively impact station access.</p> <p>The additional Westlake station should consider any opportunities for a shallower station. The impact of poor transfers with a deeper station would be significant.</p> <p>Midtown station should consider the impacts of its depth on vertical conveyance.</p> <p>The CID station should be placed on 5th ave due to impacts on transfers to the existing station. Additionally, this presents the opportunity to use cut and cover to construct the tunnel north of the station.</p> <p>The alignment between Denny and International District should consider cut and cover construction methods to positively impact project cost and station access due to shallower stations.</p>	Casey Bryant
04/28/2022	<p>I would hope that Sound Transit decides on 4th street. Cutting up the ID and displacing residents must be avoided as much as possible.</p>	Rian Ruyle

04/28/2022	<p>I have lived in Seattle for about 8 years now, and the C-ID has always meant a lot to me. It has always been a community where I have felt at home. I regularly visit the neighborhood to buy groceries, eat at restaurants, attend events, and hang out. I also worked as an Interpretive Lead at the Wing Luke Museum of the APA Experience in 2018, sharing and teaching the history of the C-ID neighborhood and community.</p> <p>The current proposed DEIS alternatives for the Light Rail expansion in the C-ID are unacceptable. They do not support the community and are not just or equitable. I support accessible public transportation but not at the cost of displacing, disrupting, and gentrifying a historical and cultural treasure and community. These small businesses and restaurants, much of the heart of this community, that have already been through so much hurt and loss from the pandemic and anti-Asian racism cannot take years of construction disruption and displacement. The neighborhood is already facing so much gentrification; these alternatives would displace so many businesses, lay off too many employees, and make the neighborhood unaffordable and unwelcoming to the multigenerational families and elders, spurring even more rapid gentrification.</p> <p>The City of Seattle has a long history of hurting this community—i.e. anti-Chinese riots, Japanese incarceration, etc—and moving on with transit plans without the community’s input—i.e. I-5 cutting straight through, building the Stadiums where they are, etc. Please do not let this happen again. Please explore other options to the proposed alternatives to not result in displacement and irrevocable destruction to the C-ID’s history, culture, and character. There is nowhere else quite like this neighborhood, and I want it to there, as it is, in all its grit and beauty for the future.</p>	Justine Chan
04/28/2022	<p>My concern is largely with the options closest to Highland park and Delridge and ensuring that they allow for easy walking, biking and busing for residents of the south east portion of West Seattle. I am concerned that certain alternate options do not service this area well because of their position closer to the junction. I also do not understand why portions of the golf course owned by the city is not being used to mitigate house purchase costs and allow for the houses already there to stay. Seems like a missed opportunity.</p>	Kat Beame
04/28/2022	<p>Vulnerable and minority communities are continuously being affected greatly in the name of public good. These drafted plans will only continue to displace and threaten the existing vulnerable population in this area.</p> <p>I'm all in for support for increasing and expanding accessibility for public transportation as the population continues to increase in Seattle.</p> <p>But these plans in no way or shape made with consideration for the existing businesses and livelihood of this community. It will only damage the already threatened Chinatown-International District even more. From dealing with gentrification, hate crimes, vandalism and looting, this area does not need years of disruptive construction.</p> <p>These streets, these businesses, these people are what makes this community special. Please reconsider and think of a solution that will not displace and harm the existing businesses and people. These plans are not an acceptable solutions.</p>	Sandy Luu
04/28/2022	<p>Kicking out POC in the C-ID can't be the only option for Sound Transit. Destroying communities doesn't benefit anyone</p>	Trish Deignan
04/28/2022	<p>In short, I consider Seattle’s Chinatown-International District "my Chinatown." Having grown up in Honolulu, Chinatown has been my home away from home for more than 30 years. Chinatown went through a relocation and been severed in half, with the biggest concern being that Chinatown inhabitants may not survive Sound Transit's mega-project this time around, with the proposed decades long building timeframe.</p> <p>This is extremely disconcerting to me, a Native Hawaiian, aka Asian-Pacific Islander. More so, following the two-year long Covid-19 pandemic, then fast forward to my Asian acquaintances who were fearful leaving their homes after learning others were physically attacked in their own neighborhoods --- this neighborhood in Seattle's Chinatown, International District, a multi-ethnic community.</p> <p>I agree with Wing Luke's Chinn where she stated, "There were structures in place to disenfranchise Asian American communities."</p> <p>Whether it be 4th Avenue or 5th Avenue, I am equating this all to "redlining property", and it's inhabitants and businesses, that property being my Chinatown, Seattle, USA."</p>	NOEL WOODARD

04/28/2022	<p>I support the 4th Ave Shallow option, but I believe that more should be done to engage with the historic CID community to take this option from being the "least harmful" for the CID to "most helpful" for the CID.</p> <p>I believe that providing more public transportation to and from the CID will be overall beneficial, but the impact to the community and businesses from the construction of this new station could be detrimental. As you well know, there is a long history of transportation expansion being used to bisect and harm BIPOC communities and benefit white communities. As a resident of Seattle and a frequent patron of CID businesses, I hope Sound Transit can adjust the plans for construction to have a low impact on businesses in the short and long term. It's your job to make sure the CID remains alive and thriving through expanded access to public transportation, don't let this community down.</p>	Brittany Pham
04/28/2022	Please do not displace Ping's Dumpling House and Oasis with the new Light Rail construction project. The proposed 4th Avenue station is the best option by which to preserve all of the E&I goals of the project.	Natalie Gray
04/28/2022	<p>I am a property owner on 41st Avenue that will be directly impacted by several of the proposed alternative options for the light rail. I have major concerns of WSJ-1, which would put the light rail directly elevated above (or closely above) my home, greatly impacting ability to rent property in this area. WSJ-5 would require that my home be demolished altogether. This is also a significant concern to me given that I (and my neighbors) will have no control over the independent appraiser selected, nor can we say at this time what the market rate will be at the time of assessment. This places an incredibly unfair disadvantage to homeowners and removes their ability to exercise any discretion over the longevity of their own assets. Further, my home is also a duplex which houses two families. Many of the homes on 41st Avenue (and other direct paths) are the same. Housing, especially rental housing, is already in shortage. Removing housing is irresponsible and will have a direct impact on the vibrancy of the Alaska Junction, and the businesses who desperately rely on residents of this area to support their businesses. I urge Sound Transit to consider this and place emphasis on WSJ-3a or WSJ-3b as the preferred solutions. Thank you</p>	Elizabeth Armstrong
04/28/2022	How will property owners be made whole on lost and irreplaceable signage income? Our potentially affected properties have billboards based specifically on their location that generate revenue streams that will immediately dry up if our property is taken. Billboards cannot just be moved, neither practically nor legally within the City of Seattle. The DEIS has not addressed this.	William Lavaris

<p>04/25/2022</p>	<p>April 25th, 2022 WSBLE Draft Environmental Impact Statement Comment c/o Lauren Swift Sound Transit 401 S. Jackson St. Seattle, WA 98104 Dear Lauren,</p> <p>Thank you for the opportunity to comment on Sound Transit’s WSBLE DEIS issued on 1/19/2022. We have reviewed the DEIS and have the following comments. Our comments will be centered on the Duwamish, Delridge, and West Seattle Junction segments with a particular interest in the Delridge area.</p> <p>On the subject of Displacements: The human toll is lost in a sea of numbers, charts and diagrams. A) In tables (ES 2,3 & 4) potential displacements are listed as number of residential units, businesses, and employees. There is no calculation of the actual number of people (residents) being displaced. It is insufficient to calculate both a 350 sq’ studio apartment and a large 4 bedroom house each as 1 unit. B) It would be informative to understand and/or quantify the level of negative impact on potentially displaced individuals for each of the studied station sites. Examples could be anything from inconvenience of having to move, to children losing their spots in coveted schools, to low income senior home owners being forced into the rental market and losing the opportunity to pass down their only asset to the next generation. C) There looks to be no accounting for the current rapid conversion of single family home parcels into multiunit townhomes. In specific, table (4.2.1-3), as well as others, show only the current number of dwellings being displaced. In the past 10 years, in the area of the proposed “preferred alternatives” (Del 1a, 1b, 2a, 2b), many single home properties have been sold and redeveloped into townhomes, increasing the number of dwellings on each parcel by up to 6 times or more. These projects may not have met the threshold of 20 or more residential units as outlined in Appendix K (page 1 paragraph 1). The likelihood of much more of this kind of redevelopment is all but certain, yet could still be considered speculative and not accounted for as described in section 5.3 “Reasonably Foreseeable Future Actions”. This “organic” market led densification of the North Delridge Youngstown neighborhood is happening at a swift pace, benefiting the long time home owners who have spent decades working hard to create this vibrant and socially economic diverse community. We bring this up because ES 6.2 (Page ES-43 paragraph 5) states “The RET lays out a process and a set of questions to guide the development, implementation, and evaluation of the project to advance racial equity.”</p> <p>Table 4 in the Draft RET report (Page 57) shows projected displacements and potential new accommodations available from TOD, suggesting a net increase in the number of housing units. It would be more accurate to account for the total permanent loss of land available for residential development as reported in Land Use table (4.2.2.3). The table shows only the number of acres being permanently converted to transportation land use, so it would be more informative to add the total number of potential housing units that would have fit on that acreage into the table as well. Since the purported benefits of possible new housing due to building the project are speculative and being considered then it is prudent that we count the permanent loss of homes from potential new development from land use changes as well.</p> <p>Displacements conclusion: Units are not people and people are not units. More emphasis should be put on the immediate human toll of these station location alternatives. Some promise of possible potential benefits 7 to 10 years in the future should not and cannot supersede the current lives of the people this project is meant to serve. With the current housing shortage in Seattle, It would be wise to remove as few residences as possible during the build time. Let’s proceed with an eye on possible new residential development where there is currently none, such as in the proposed DEL6 station Alternative. Let’s gather the most and best information we can to plot the least destructive way forward, ensuring that the fewest people are harmed in order to facilitate this project.</p> <p>Overall thoughts: Re: Duwamish Segment (ES 3.1.1.2) We like that alternative DUW2 has the least impact on parks and greenbelts. We are in full support of Sound Transit working with the Port of Seattle to facilitate a robust restoration of terminal 25 while still allowing for the infrastructure of the DUW2 alternative guideway, in order to avoid potential degradation to the West Duwamish Greenbelt.</p> <p>Items associated with DUW2 in Table (ES-2) that stand out as priorities for us are: Impacts the fewest people, both residential and employees. Has 0 impact on parks and recreational resources</p>	<p>David Dow,Jon Lipka,Larry Wood</p>
-------------------	--	--

	<p>The least visual impact The least noise and vibration impacts</p> <p>This alternative may cost a bit more but it would be money well spent if it helps avoid harm to people and our natural environment.</p> <p>Re: Delridge Segment (ES 3.1.1.3) The “Preferred Alternative” (PA) for this segment seems harsh, cruel and just plain wrong for the members of the Youngstown community. Placing a mass transit facility right in the middle of an existing residential community drastically changes the living experiences of all those near by. The visual ,noise and lifestyle impacts would be profound.</p> <p>The “PA” also would convert the most residential land use area to transportation use (table 4.2.2.3), permanently removing this desperately needed future housing stock, whereas Del6 may actually increase the amount of land available for much needed housing.</p> <p>Items associated with DEL6 in table (ES-3) that stand out as priorities for us are: One of the least expensive alternatives Fewest number of people impacted, the far fewest residents and among the least number of employees Least amount of visual and noise impacts Has 0 impact on parks and recreational resources</p> <p>We believe that Sound Transit working with the city of Seattle can devise some creative solutions for providing safe and efficient pedestrian access for this station location. One idea is to create a dedicated entrance/exit for Nucor traffic on the north side of their facility.</p> <p>Placing the station 2 blocks north of the “PA” should have little impact on people coming to the station from further south in West Seattle and White Center as a majority are anticipated to be taking the bus. The most equitable way to provide better access to light rail for all is to build the line out farther south down Delridge Way.</p> <p>Re: West Seattle Junction Segment (ES 3.1.1.4) Items associated with WSJ5 in table (ES-4) that stand out as priorities for us are: Among the least expensive Fewest human displacements Least visual and noise impacts Has 0 impact on parks and recreational resources. When considering the information provided in the published WSBLE DEIS, in particular tables (ES 2, 3, 4) and information in section 4.2, the least harmful and among the most financially responsible route choices for moving forward would be DUW2 connecting to DEL6 connecting to WSJ5. We urge the Sound Transit board to reconsider it’s “Preferred Alternatives”.</p> <p>Thank you again for preparing such a detailed DEIS. We hope you find our comments constructive and look forward to participating where we can in future steps of the WSBLE.</p> <p>Sincerely, David Dow, Larry Wood, Jon Lipka 4200 - 26th Ave SW Seattle, WA 98106</p>	
04/28/2022	<p>Hello,</p> <p>I am writing to comment about the lightrail alternative route for the CID.</p> <p>I believe the 4th Ave deep route seems to be the least disruptive to a community that has been consistently and negatively impacted by city construction. The fact that no residents would be displaced, as well as fewer businesses, seems to be a better option for supporting community relationships and morale. Thank you for taking these considerations into account.</p>	Angela Feng
04/28/2022	I strongly oppose the whole WSBLE light rail project and am in favor of the NO BUILD ALTERNATIVE.	Richard Atalig

04/28/2022	<p>For me, Chinatown/International District has been the model locally for building solidarity and dismantling racism and also fighting large publicly funded projects that threaten to disrupt and destroy community economies, culture and livelihood.</p> <p>I support the Wing Luke Museum four summary conclusions common to all WSBLE alternatives (Wing Luke Museum DEIS Comment to Sound Transit, dated April 26, 2022.</p> <p>(My larger DEIS comments have been postal mailed to Sound Transit, dated April 28, 2022)</p>	Allan Davis
04/28/2022	<p>Please leave the Chinatown- International District INTACT!!!!</p> <p>*****The 4 Ave routes are preferable to the alternatives. *****</p> <p>It is important to me to keep the CID thriving and keeping off 5 Ave S and 6 Ave S can help with that.</p> <p>The negative financial effects, as well as further stress induced by the 5 and 6 Ave S routes (construction/noise/ demolition) would be detrimental to Seattle as a whole and the residents of the CID specifically.</p> <p>Go for either of the 4 Ave S routes.</p> <p>I work at Fire Station 10 and believe the proposed routes through the CID (5 & 6 Avs S) would also negatively impact our response routes and the timely care we provide to our neighbors in the CID - this is my own opinion and does not reflect the SFD in any way.</p> <p>Thank you, Ben!</p>	Benjamin Voigts

<p>04/28/2022</p>	<p>Hi,</p> <p>We live and have a small engineering business near the Ballard Fred Meyers. Our family's primary mode of transportation is public transit (routes 40/28E/44/D) and bikes. Our family has had (5) generations call Ballard home and we are super-excited to welcome the new light rail station coming to Ballard.</p> <p>Please avoid tunnel routes to and in Ballard. Even if the USCG requires a moveable bridge over the canal. Flying above the city, seeing all that happens and viewing the sites is an important part of riding transit. Gawking at Ballard, "God's Country" as my family calls it, is inspirational, really important (only in trains though!). It is paramount that transit riders gain a view of their city and equally important that all residents and visitors see ST light rail knitting our city together. Ballard needs to drastically reduce car-dependence for our own (cough!) sake and for the sake of our planet. The city of our future needs flying trains, trains that go over the Ballard Canal, beautiful bridges that span the Salmon Bay waterway and alight next to Market Street and then Ballard High... like the trolley cars of old over the Ballard Bridge (and Leary crossing) the preferred route restores to old Ballard what once was ours.</p> <p>The preferred elevated route (1BB-1a) on 14th is an ideal route and works well for the Ballard community. It uses a cost-effective (presumably) moveable bridge and a route that aligns with developed and developable corridors that can support affordable housing. The 1BB-1a route provides the ability to keep going to Ballard High School, Crown Hill, and beyond.</p> <p>The station at Seattle Center Station should ideally have entrances closer to the Seattle Center. Kudos for the entrance to Key arena and the Seattle Rep though a preferably station is right on the campus rather than at the edge of the campus. This station supports the tens of thousands of visitors, park users, concert goers, festival goers, school children, and us lazy parents who love to go to watch the fountain. It is surprising that the present design criteria omitted having a station right in the center of the Seattle Center campus itself. Perhaps just south of the fountain.</p> <p>Please do not eliminate any stations in South Lake Union or Interlake, that is short-sighted. Buried stations need to be as shallow as possible with a focus on making transfers and access to the station fast and easy. Do not bury stations 100' or more. It is acceptable for the light rail tunnel to graze the SR99 tunnel to stay close to the surface. It is not acceptable to have a labyrinth of stairs, escalators, and walkways to get to the train.</p> <p>Thank you for the wonderful work. We need more work to shallow-out some of those stations and refine but the preferred alternatives are my preference for both Ballard and South Lake Union. A bit off-topic:</p> <p>Speaking of escalators, not to pile-on, but the state of escalator repairs needs improvement.</p> <p>2. With as few people that the SR99 tunnel moves daily consider applying to WSDOT to take it over to make the Bertha-dug hole in the ground a transit thoroughfare that will finally make it worthy of the cost. There is no way that single-occupancy vehicles can ever justify the cost of the SR99 tunnel.</p> <p>Thank you for bringing ST light rail to Ballard!</p> <p>Jon Mathison</p>	<p>Jon Mathison</p>
<p>04/28/2022</p>	<p>I concur with my Tony Tsuboi's comments below. In addition, our parents, grandparents' livelihood and businesses were already sacrificed so much during WWII. In addition to the Pandemic, the Asian Community/CID has the additional layer of anti Asian sentiment/violence. Let's do this ST Light Rail right! "I realize that Sound Transit had a well-defined public comment period that ends today. However, I feel compelled to submit a plea for an extension to that deadline. What's been proposed is so disruptive and impacting upon immigrant and marginalized communities, that those communities are generally challenged by language and levels of education, and the level of detail to the EIS so thick and nuanced, it is unconscionable to treat this as business as usual. It is only within the last week that this even got picked up in the local press (International Examiner and NW Asian Weekly) and tipped awareness on the street. Most residents and stakeholders to the community were simply caught off guard and were, until very recently, unaware of what is coming. Given the number of people and businesses that will be impacted and how late this is coming to public share of mind, I plead with you to consider an extension of an additional 90 days for the public to comment."</p>	<p>Paul Wah B Chan</p>

04/28/2022	As a International District resident I believe the only viable options are the 4th Ave S options. Anything would be much too disruptive to the lives in the International District. No on any option on 5th ave.	Eric Fang
04/28/2022	This comment refers to page 58 of the executive Summary, Next Steps, Environmental Impact Statement Alternatives. Preferred alternatives are: Meet mass transport needs with Metro bus and Water Taxi by investing in existing infrastructure - No to light rail in West Seattle. It is also noted that concrete is an environmentally unfriendly building material.	Janet Jones
04/28/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St).</p> <p>Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Elizabeth Armstrong
04/28/2022	Our long-term tenants built their businesses around their proximity to the Port of Seattle as well as suppliers and complementary businesses in the neighborhood. These conditions cannot be simply recreated in a different location, putting these decades-old businesses in jeopardy if they are forced to relocate. The DEIS does not explain how Port of Seattle and neighborhood-dependent businesses can possibly continue to operate their location-specific and location-dependent businesses elsewhere if forced to relocate.	William Lavaris

04/28/2022	<p>Hello! I am a community member living in the Chinatown-International District, and I wanted to emphasize taking the CID-1a alternative over CID-2a and 2b, outlined un Chapter 4. Even though it is the only alternative displacing residents, it obviously doesn't impact as many small business located closer within the heart of the neighborhood. The other two alternatives, 2a and 2b, displace too many small businesses that have a long standing and rich history within the neighborhood. The environmental impact on the neighborhood would also be extremely negative with alternatives 2a and 2b, effectively destroying its walkability and accessibility as a place for people to enjoy, live in, and go through. Please consider the history of the Chinatown-International District — it has such a rich history of being a hub for so many Asian cultures, and it would be a shame to take alternatives 2a and 2b and displace so many people.</p>	Raychelle Duazo
04/28/2022	<p>I encourage you to focus on a few priorities that are important for equity and access:</p> <p>In the international district, avoid displacing iconic businesses, parks, and homes that are important parts of the international district and the Asian American community. Building on 4th Ave is preferable to 5th.</p> <p>In Interbay, avoid displacing small businesses where possible. If they are displaced, they should be compensated for both the value of the property and the expected infrastructure investments that would be required to re-establish operations elsewhere. An example is Greenwood Cider located at 1445 Elliot Ave W.</p> <p>In Ballard, seek to make the stations as accessible to as many Ballard residents as possible. Locations near populated areas and businesses should be prioritized over simple cost since Ballard is very isolated geographically and light rail should seek to truly connect as many people as possible as conveniently as possible.</p>	Stephanie Celt
04/24/2022	<p>My DEIS comments:</p> <p>Section 1.2.2.3 Overview</p> <p>Population growth estimates need to be revised. People are moving out of King County. https://www.seattletimes.com/seattle-news/data/king-county-lost-population-last-year-for-the-first-time-in-almost-50-years/</p> <p>Ridership estimates need to be revised taking into account work changes because of the pandemic. Many people work from home now and will continue to work at least partly from home into the future. People moved out of West Seattle when the WS Bridge closed because their commutes became unbearable. The people who replaced them aren't necessarily commuters.</p> <p>Riders = revenue. If you can't justify this project economically, perhaps it shouldn't go forward.</p> <p>1.2.2.6</p> <p>By law, the state of Washington is required to lower CO2 emissions by 45% below 1990 levels by 2030. https://ecology.wa.gov/Air-Climate/Climate-change/Tracking-greenhouse-gases</p> <p>A project this massive, requiring enormous amount of concrete, will actually increase emissions until the end of the 2030s, and most likely beyond. How specifically do you propose to mitigate the effects of construction? That plan should be described in detail in the final EIS.</p> <p>1.3.1</p> <p>The DEIS states: "The City of Seattle Transit Master Plan (City of Seattle 2016) identified extension of light rail to West Seattle as a top-priority project and included it in the long-range high-capacity transit vision. The plan specifically calls for a mixed surface and elevated alignment connecting to Alaska Junction or High Point, with the possibility for future phases to extend farther south." Why was the High Point option dropped? There doesn't seem to be any explanation offered. From an equity standpoint, High Point is a much better choice. It would provide easier access to light rail for low income and POC residents in West Seattle. Why choose the affluent Alaska Junction for light rail instead? Why weren't High Point alternatives given in the DEIS? That needs to be explained in the final EIS.</p> <p>Also, High Point is more centrally located in West Seattle. Creating a transit hub there just makes sense. For too long, the majority of peninsula traffic, including transit, has been funneled through the Alaska Junction area to get to a bridge of one sort or another. That has created a bottleneck for generations. Why keep doing that?</p> <p>A big lesson from the West Seattle Bridge closure is that residents need MULTIPLE ways in and out of the</p>	Marie McKinsey

neighborhood. That includes multiple corridors. Show us some alternatives to the Spokane St. corridor in the final EIS.

Don't say you don't have money for this. In August of last year, you awarded HNTB an additional \$4.2 million to: "... support the upcoming efforts to identify capital cost estimate reductions and would include a review of project design and construction efficiencies as well as potential major project definition changes for Board consideration."

Please ask HNTB to show us how High Point can be connected to the light rail spine without having to come through the Junction.

2.1.2.1.4 Alternatives

If you must bring light rail to the West Seattle Junction, one of the tunnel alternatives should be used. The elevated options are too destructive to be considered. Residents here are just beginning to realize how many homes and businesses we will lose. We are in shock.

Also, the bridge from SODO should follow the route north of the West Seattle Bridge. Pigeon Point is a sensitive area in terms of Tribal rights, green space, salmon runs and wildlife. Running a rail bridge over that area will be destructive, regardless of what it done to mitigate effects. Seattle has lost enough green space as it is. It isn't necessary to damage this natural area permanently.

The proposed route north of the West Seattle Bridge is quite rightly situated over an industrial area. That is where light rail belongs.

Also, building the route north of the WS Bridge makes it less likely that the bridge will have to be closed during construction. Both of the southern alternatives cross the car bridge. It will not be safe to build that section of the rail bridge with cars using it. West Seattle has suffered enough with that bridge being closed. We aren't going to be happy if you close it again.

4.2.3 Economics

The economics of bringing light rail to the Junction needs further examination in the EIS. The land the light rail project will occupy will be permanently lost to economic development and revenue generation. It doesn't matter if the businesses relocate and pay taxes elsewhere. That land has permanently lost its economic value. It will take years for transit-oriented development, if indeed that happens, to begin to offset that lost revenue. If interest rates continue to climb, and even if they stay where they are now, redevelopment will be slow.

When an alternative is chosen, the EIS should provide a list of all properties, business and residential, along with the amounts of real estate and property taxes that will be lost with their removal. The DEIS tries to ignore this responsibility, saying it is impossible to tell. But it IS possible. How much revenue did that land generate in the past year? That is an indicator of how much economic value is gone forever.

Sound Transit is dependent on property taxes, sales taxes, and RTA fees on car tabs for funding. This project will result in what amounts to a significant cut in pay. Therefore, the final EIS should give residents an estimate of what ongoing maintenance of the system is expected to cost and how Sound Transit will pay for it.

Sound Transit has a terrible reputation when it comes to the reliability of escalators and elevators. <https://mynorthwest.com/3299835/rantz-sound-transit-billion-escalators-dont-work/> Stations in West Seattle, whether elevated or deep underground, will be dependent on these systems to get people on and off trains. If they don't work, we'll have a giant broken system, and we'll be worse off than if we never had a train. Again, where will the money come from to maintain these systems? What plan does Sound Transit have to reduce down time? The final EIS should explain.

Furthermore, with construction planned to begin in 2025 and continue until 2032, existing businesses will struggle. Detours, road closures and other difficulties involved with this project will mean loss of revenue for businesses for years, and thus loss of revenue for Sound Transit.

One of the things we've learned from the WS Bridge closure is that as things drag on, people change their habits. If it is too difficult, for too long, to shop somewhere, they will try different businesses, or order online. In time, those work-arounds become routine. When the train is operational, how many shoppers will come back? How many businesses will have survived?

The claim that light rail will lead to more dense and mixed-use projects in West Seattle seems overly optimistic. West Seattle is primarily zoned for single family residences. Most of the land zoned for

commercial and multi-family purposes has already been developed, especially in the Junction. Light rail will demolish some fairly new apartment buildings. We have a housing shortage as it is, and with zoning what it is, we don't have much room to add new homes.

Again, high interest rates coupled with lack of room to build are more likely to lead to stagnation of the economy in the Junction, not growth.

4.2.5 Visual Effects

From an aesthetic point of view, the elevated alternatives for this project are way out of scale with the neighborhood, more likely to destroy the "small town charm," that has drawn people for generations, than to attract new residents or businesses.

The DEIS doesn't provide many renderings that give us an idea of what critical areas will look like. This is particularly true of the bridge coming from SODO to West Seattle. Few residents realize that the train will go over the top of the east end of the West Seattle Bridge. There should be a rendering showing what it will be like to drive under that bridge heading eastbound on the WS Bridge. (Also, how long will the bridge have to be closed during construction of the light rail bridge?)

A rendering showing what the bridge will look like from Pigeon Point would be helpful. And another one showing what it will look like coming off Pigeon Point and over Delridge Way.

Also, where are the renderings of what the stations will look like. A graphic showing the plan view doesn't give people a sense of scale. We need to be able to picture what the neighborhood will look like when this is done. The final EIS should have a series of architectural renderings of key elements so we know what to expect.

4.2.6.4.2 Greenhouse Gas Emissions

Table 4.2.6-3 gives a range of CO2 emissions during construction from 158,067 – 614,461 metric tons. However, this is just from equipment and vehicles.

This does not include the amount of CO2 produced in the manufacture of concrete required to build this massive bridge and other structures. The cement industry is a major producer of CO2.
https://en.wikipedia.org/wiki/Environmental_impact_of_concrete

How many cubic yards of concrete will be required for this project? You must know or you wouldn't have been able to calculate cost estimates.

It seems strange to leave something this critical out of an environmental impact statement! The final EIS should account for the total amount of CO2 the project will generate and a plan for mitigating that impact.

4.2.9 Ecosystems

From the DEIS: "The West Duwamish Greenbelt is within the Duwamish Segment. The greenbelt stretches 4 miles south from the West Seattle Bridge along the western side of the Duwamish Waterway. The Washington Department of Fish and Wildlife designates the greenbelt as a Biodiversity Area and Corridor (a priority habitat). It is primarily deciduous forest with bigleaf maples and red alders, and provides habitat elements such as mixed forest snags, downed woody debris, and areas with multi-layered canopy. The Delridge Segment includes the greenbelt around Longfellow Creek (also a Washington Department of Fish and Wildlife-designated Biodiversity Area and Corridor), as well as developed open space in the West Seattle Golf Course and the Delridge Playfield and Community Center park."

This description explains why light rail should be directed north of the West Seattle Bridge. There is no way to bring light rail over and through this area without seriously compromising the environment. Many species of birds and fish, already endangered, will have their homes threatened.

Construction for all alternatives will last 5 – 6 years, meaning ongoing disruption to natural areas and wildlife habitats. It is concerning that "Preferred Alternative WSJ-3a*" and Preferred Option WSJ-3b*" would include construction staging at the edge of a wetland buffer on existing paved surfaces that do not provide buffer functions or would occur in unpaved areas separated from the wetland by a paved road."

Will those wetlands recover after years of construction?

4.2.11 Geology and Soils

The location of the light rail system should be reevaluated on this basis alone.

This USGS seismic hazard map shows how likely we are to suffer serious damage in an earthquake. The light

	<p>rail bridge, starting in SODO, will be built in an area of highest risk. No one wants to be on a train, on a 150-foot tall bridge, in an earthquake!</p> <p>This was the reason we tore down the Alaskan Way viaduct. We were afraid that an earthquake would cause it to collapse. Why are we building an even bigger bridge in the same area?</p> <p>This map from the DEIS shows light rail crossing Pigeon Point. The bright red areas are known landslide areas. The pink slanted striped sections are potential landslide areas. Geotechnical engineering methods can keep structures stable in slide-prone areas, but they are no match for earthquakes.</p> <p>Appendix L.4.1 Supporting Information on Affected Environment and Environmental Impacts This section contains some of the most important information for West Seattle residents. This is where we find the addresses of properties that may be affected. This includes businesses, single-family homes, apartments, condos, and organizations that make up the fabric and character of our community. Sadly, this document is a perfect example of observing the letter, not the spirit, of the law. Light rail is a public project and therefore the names and addresses of those affected should be public information. Sound Transit is required to disclose that information, and you can say that you have.</p> <p>But instead of full disclosure, you BURIED those addresses in an appendix with a vague title. This appendix is like a mass grave: A collection of faceless, nameless properties piled into an unmarked document. No one would guess the contents of this appendix from the title. And that doesn't appear to be an accident. Is this an attempt to hide the impact this project will have on the lives of West Seattle residents?</p> <p>Because the names of businesses and apartment buildings are left out of the listings, we can't tell which ones are affected. To determine whether a business or apartment building might be lost, we have to google the property to get its address and then refer to pages and pages of addresses to see if that property is there.</p> <p>To be fair, you do mention names of some properties in the main text of the DEIS, but even that is deceptive. You say that a Safeway store might be eliminated, but fail to say that along with it will go the entirety of Jefferson Square – all of the businesses, all of the parking, all of the housing.</p> <p>The final EIS should have a clearly marked section titled "Affected Properties," that gives the names of ALL businesses, non-profits, and multi-family buildings that will be lost. For most people on the list, and those who have relationships with them, this will be like learning that they have a terminal illness. Please have respect for the lives involved.</p>	
04/28/2022	<p>As a residence of the West Seattle's Alaska Junction Neighborhood, I would like to voice my support for the "Medium Tunnel 41st Avenue Station/ Andover Street Station Lower Height" alternative. I believe this option may have the least impact on the existing residential and business properties, does not impact parks and it cost the least among the other alternatives.</p> <p>In addition, I believe there will be a merit to eliminate the proposed SW Avalon Way Station to get a more seamless and longer tunnel, which benefits the entire Sound Transit line. Lower Delridge station height, lower guideway along SW Genesee Street, and a better location for the Junction station at SW Alaska Street and 41st Avenue SW.</p> <p>Furthermore, the elimination of the Avalon station may provide savings into a tunnel with a station on Bank of America property at the corner of SW Alaska Street/ 41st Avenue SW.</p>	A. Farid
04/28/2022	<p>Ballard route: Any above-the-water crossing of the ship canal will destroy this thriving and historic community for generations. A tunnel crossing is the only acceptable option.</p> <p>International District: Fourth Avenue is the only marginally acceptable option for this thriving, historic, and threatened community. Sound Transit's behavior in favoring the 5th Avenue route is reprehensible and indefensible.</p>	Robert Drucker

<p>04/28/2022</p>	<p>Sound Transit DEIS Analysts:</p> <p>Attached is my comments, questions and concerns about the Ballard Extension and focus on the Chinatown International District (CID) segment. I sent my response earlier but just want to ensure I met the 4/28/22 deadline and used the correct recipient email address.</p> <p>I would want the 4th Avenue design due to enormous impact to the Chinatown/International neighborhood. My comments does not pertain to other neighborhoods of CID segment such as Pioneer Square and industrial portions.</p> <p>Please keep me informed of all future meetings, forums and communications.</p> <p>Thank you Mark Uomoto mwumoto@comcast.net</p> <p>Mark Uomoto On Behalf of Yoshia Uomoto Nikkei Manor Assisted Living 700 6th Avenue S. Seattle, WA 98101 RE: Sound Transit Light Rail Hub Ballard Extension/Chinatown-International District Segment Dear Sound Transit DEIS Analyst Context I am writing on behalf of my 99 year old mother who is frail and wheelchair bound. She lives at Nikkei Manor assisted living facility. I am writing to express my concerns over the DEIS where I feel is flawed in a couple areas. I probably missed relevant areas about the CID, but that is due to my ignorance of the structure of the DEIS. I will begin my acknowledging the long term need for improved mass transit to accommodate increased transportation needs of our continuously growing population and economic Central Puget Sound region. Literally funneling transit users through the Central Seattle area and particularly the Chinatown/International District (CID) is a huge challenge. My focus is the CID area per se and not Pioneer Square and other areas that are including in your "Chinatown-International District Segment" in section 4.3.2.1.2. Table 4.3.1-2 First Table 4.3.1-2 shows no Multifamily parcels affected. For the 5th Avenue options, isn't the housing above and around Uwajimaya and Nikkei Manor and other condo/apt units between 6th Ave and Maynard Avenue affected? If "affected" is defined as purely business impact, then "affected" must be expanded to include housing facilities. I am not savvy with the DEIS but no impact to multifamily parcels is outrageous. More points on this below. Economics 4.3.3 - Section 4.3.3.4.3 "Roads where traffic would be diverted include 1st Avenue South, 6th Avenue South, and Maynard Avenue South..." It does not say how long. Medic, wheelchair transport vehicles and resident families MUST have access to Nikkei Manor whose entrance is on Lane St and between 6th and Maynard Ave at ANY time. 4.3.14 Fire and Emergency Medical Services says "Temporary closures could affect access and response times for fire and emergency medical vehicles". I am positive it [can] affect access... QUESTION: (1) What assurances will be guaranteed for such access to Nikkei Manor? (2) This contradicts 4.3.14.3.3 where it states " would not have additional impacts to public services other than those discussed above" Social Resources, Community Facilities and Neighborhoods 4.3.4 CID Segment QUESTION: Why isn't Nikkei Manor and other housing facilities mentioned? Request their inclusion and recognition of adverse impact? Noise and Vibration 4.3.7 "The Chinatown-International District Segment does not have any noise-sensitive land uses where the project would be above-ground, and no noise analysis is required for proposed tunneled areas". It does not explicitly exclude during construction and this must be considered during construction. Section 4.3.7.1.1 implies transit use of the tunnel design. OBJECTION: (1) I am sure housing along 5th, 6th Avenues like Nikkei Manor would be extremely sensitive to construction noise and adversely affect sleep when at night.</p>	<p>Mark Uomoto, Yoshia Uomoto</p>
-------------------	--	---

	<p>(2) Recognition of vibration is noted in along 5th Avenue but given this entire area is formerly mud flats and would think vibration would be further than the area of the construction.</p> <p>4.3.7.4.1 Noise</p> <p>Good recognition of Noise in the CID. QUESTION:</p> <p>(1) What is the noise during the day and during at night where 6th Avenue is at, where Maynard Ave is at? What mitigation measure can be done?</p> <p>(2) What is the noise generated from massive trucks to/from the construction during the day and at night from 6th Ave, from Maynard Ave? What mitigation measure can be done?</p> <p>Historic and Archeological Resources 4.1.16</p> <p>OBJECTION:</p> <p>Why isn't Nikkei Manor included as they are 700 6th Ave S? (Or sorry if I missed it)</p> <p>Noise and Vibration Technical Report: N3</p> <p>This has details of both noise and vibration but want to see on a map of the CID levels of noise and comparable vibration indices increasing distance away from the project site. For example db from the project site during construction to 6th Ave, to Maynard Ave, etc.</p> <p>Vehicle air pollution and Particulate</p> <p>Why relatively little on this area? I remember the Puget Sound Air Quality (PSAQ) analysts came to the Nikkei Manor Family Forum of years ago expressing their concern of smoke and particulate matter in the CID per se (not CID Segment). They discussed the meters to be used and where they were to be installed. If PSAQ came to us to discuss air pollution and particulate matter, can't this DEIS analyze the construction's impact and post construction impact on the CID per se and showing levels from the project site to 6th Avenue and to Maynard Ave, etc?</p> <p>Bottom Line</p> <p>I appreciate the huge extensive analysis of this huge project. To me, the Chinatown/International District (not the Segment) is tiny as compared to this project. However, the district is very fragile and hate to see it disappear like the former Japan Town in Los Angeles. The residents living in Nikkei Manor and other similar housing facilities are frail and the thought of night light, construction noise, construction vibration, constant massive truck getting to/from the project site is appalling. I much rather have the 4th Avenue design adopted and mitigate all my concerns on the CID neighborhood.</p> <p>Thank you</p> <p>Mark Uomoto</p> <p>mwumoto@comcast.net</p>	
04/28/2022	This route option on 5th ave will disrupt businesses and residents in international district. Please consider 4th Ave as an alternative. Thanks!	Maggie Wong
04/28/2022	The CID has faced so many challenges with the unprecedented growth of the city and the consequences of the pandemic and anti Asian hate and violence in addition to many years of change and history. The 4th avenue option would be a better way to mitigate further harm to the culture, residents and businesses of this neighborhood. Gentrification has had terrible impact on the CID with increases in cost in housing and affordability for small businesses and the threat of the neighborhood gems is purely devastating. I am a 4th generation Japanese American community leader and grew up here my whole life following 2 generations of elders who endured displacement from WWII incarceration and were forced to rebuild their lives after resettlement because they lost their homes. That experience was traumatic and continues to effect my family today. To witness more of our cultural and historical buildings and businesses being displaced due to this project would be devastating to the character and history of our city. We need to focus more on preservation and historical efforts moving forward with this project. I hope the 4th avenue or 1A/1B options are considered more closely so that we can minimize the displacement of people and businesses that help our neighborhood grow and heal post pandemic.	Danielle Higa

04/28/2022	<p>My name is Zhiqi Zheng and I am submitting a comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. As a Chinese and a community member, I am disappointed to see the plans laid out by DEIS. Currently, five options have been put out by Sound Transit for potential CID Station expansion. All five of these plans, especially those with options on 5th Ave, displace historic CID businesses, detour thousands of vehicles through the neighborhood's pedestrian oriented streets, and create disruptive construction, including noise and air pollution, for the next 5-11 years. The CID station is the only Link station to be surrounded by a densely populated community of color. It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. We urge Sound Transit to reconsider options on 4th or 5th Ave and instead look to other options that will not displace our beloved residents and businesses in the CID.</p>	Zhiqi Zheng
04/28/2022	<p>Overall Feedback: Do not eliminate any stations. Work to make stations as shallow as possible. Improve transfer times wherever possible. Ensure escalators and elevators are (1) fast and (2) have enough redundancy to handle game day rushes and not fail riders in the event of failure. Use fast surface-to-platform elevators (no mezzanines) when stations are more than 100 feet deep and align station design so that it's possible. Plan to build for future expansion in Seattle.</p> <p>Neighborhood specific feedback: Ballard: Open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. Interbay: Support Thorndyke Retained Cut [IBB-2a/IBB-2b]. Smith Cove: Preferred Galer Street Station/Central Interbay [SIB-1]. SLU: Reject both presented options, study a Westlake or similar alignment oriented north/south within SLU boundaries and as centered on South Lake Union as possible. Denny Station: Westlake Ave Station [DT-1]. Update vertical conveyances and aim shallower. Westlake: 5th Ave Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. Midtown: Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. CID: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but it needs to be as shallow as existing station, study a shallow cut and cover option over existing Downtown Seattle Transit Tunnel. Sodo: Choose Mixed Profile Station [SoDo-2] and study construction further North at the existing SoDo Station location. West Seattle: Choose WSJ-5 with a request to study better DEL-6 that are compatible with WSJ-5.</p>	Erin Wieland
04/28/2022	<p>The 4th avenue proposal is less harmful than the 5th avenue one. Displacing restaurants and businesses on 5th ave would cause economic harm especially with today's cost of rental space. Adding a light rail station there might reduce the size of what is considered "Chinatown", thus reducing our cultural identity in Seattle.</p> <p>These restaurants are very beloved to me. I spent a lot of high school years at Oasis, shop at Uwajimaya now, go to Boiling Point with my family, grab takeout from Dough Zone, Chung Chun's Rice Dog, and Ping's Dumpling House. They're all vital and I can't imagine Chinatown without them.</p>	Christy Pham

<p>04/28/2022</p>	<p>To Sound Transit:</p> <p>I am commenting about the new train station planning to be built in the CID. I have concerns with the options being presented specifically the options that involve directly building on 5th Ave (CID 2-A and 2-B).</p> <p>Both of these options would permanently close small local owned businesses that are a loved and important part of the community acting as safe places to gather and hang out. Oasis in particular is a popular spot for young people. Are there options that would not affect these business and allow them to continue to be a part of the neighborhood?</p> <p>On another note, prolonged construction in the area would also negatively affect the remaining businesses in the area more than likely discouraging people from visiting due to reduced parking, closed roads etc. Has there been consideration given and thoughts about how to help those businesses through an extended period of construction?</p> <p>I am also concerned about how the environmental impacts of construction (noise, pollution, vibrations) which would be present for years at a time is going to affect the folks living in this area. It did not seem that this was presented or considered in these plans. Residents of the CID should be protected in these plans as well and I am concerned for my family and friends living in the CID and how this could potentially affect their health and livelihoods. What will be done (no matter what plan is picked) to ensure that they are being protected from any detrimental effects that come with major construction projects?</p> <p>The effects CID 2-A and 2-B would have on the CID, a historic and culturally neighborhood in Seattle, show to be much more harmful than good as well as permanent. This is a neighborhood that has also already been through in its history but especially so much in recent years because of anti Asian sentiments brought about by the pandemic.</p> <p>Finally, the CID is unique in that as a neighborhood it may be the only neighborhood in Seattle, where someone who is Asian might truly feel safe, seen and understood. As an Asian American, I know it plays that role for me. For the sake of the Asian community and our Seattle community as a whole, the CID must be preserved and protected as best as possible.</p> <p>I ask Sound Transit to rethink these options, either building only on 4th Ave OR coming with new options that would keep any negative impact on the CID down to a minimum. Thank you for your time.</p> <p>Sarah N First Hill</p>	<p>Sarah Nako</p>
<p>04/28/2022</p>	<p>I personally think that interlining throughout the current DSTT should be studied and considered. The current alternatives for a second downtown tunnel involve extremely deep stations with overly elaborate mezzanines that will be very inconvenient for riders. Investing in better signalling and upgrading signage, vertical conveyances and possibly adding center platforms would all greatly improve the experience for riders.</p> <p>If it's truly necessary to build a second downtown tunnel, stations should be as shallow as possible in order to minimize ingress/egress times, especially at CID and Westlake. If elevators are the only way to reach the platforms, there should be as small of a mezzanine as possible, and would ideally drop riders onto the platform directly.</p> <p>SODO Station is going to be one, if not the most important transfer stations throughout the system. A cross-platform interchange should be studied to improve transfer times and UX.</p>	<p>Ian Stern</p>

04/28/2022	<p>Please do whatever it takes to expedite delivery of light rail service to West Seattle. The sooner it gets here, the sooner the community starts realizing the benefits.</p> <p>This is the first time Sound Transit is running service through existing residential neighborhoods. Please take care to minimize the disruption in West Seattle during construction and once built. Tunneling wherever possible will reduce the impact.</p> <p>For the sake of station accessibility, please minimize station heights and depths.</p> <p>During construction, please be mindful of West Seattle's limited ingress/egress options and minimize cutting West Seattle off from the rest of the world.</p> <p>When siting stations, please maximize walksheds and transit-oriented development.</p>	Jon Wright
04/28/2022	<p>Our properties have been developed specifically for our long-term tenants and their very specific business needs and around their custom, irreplaceable equipment. The equipment relocation costs, if even technically feasible would far exceed the amounts listed in the DEIS. (Real Property Acquisitions and Relocation Policy, Sec. 9.4)</p>	William Lavaris
04/28/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	BELINDA RICHARDSON

04/28/2022	<p>I am writing to you in regards to the Ballard Link Extension (pg. 36) section of the Draft EIS, specifically involving the Chinatown-International District (CID) segment (pg. 37-41). I am supportive of expanding Seattle's public transportation system to build a robust city, but I believe that the proposed plan and alternative of building any station on 5th Avenue in the Chinatown-International District is detrimental to the wellbeing and livelihood of the CID community. I consider the CID community a core aspect of my life in Seattle, and I have witnessed firsthand how the community cares for each other and values each community member and business. Building any type of station on 5th Avenue will displace many businesses which are core members of the CID community. Some of these businesses include Ping's Dumpling House, Oasis Tea Zone, Pacific HK Cafe, and Joe's Bar. In addition, proposed construction plans for the stations located on 5th avenue will create detours and road closures that could last for over a decade, impacting the flow of income for the businesses in the CID. These businesses' revenue has already suffered due to the ongoing COVID-19 pandemic, and creating construction detours that could further reduce the amount of business they receive would be detrimental to their livelihoods. These businesses might not last long enough to then see the completion of a new station, and not benefit from the increased traffic and business a new rail station would bring.</p> <p>Although there is always some sort of displacement with the building of large structures, the CID community mostly consists of Asian-Americans, or Asian immigrants, who have created their homes within this community. Building a station on 5th Avenue and the displacement of these businesses within the CID will further perpetuate the historical injustices Asian-Americans have faced (incarceration of Japanese Americans during WWII, Chinese Exclusion Act, redlining) and the more recent COVID-19 Anti-Asian hate crimes occurring across the country.</p> <p>In regards to human health, the CID is also home to many residents who are older in age. The construction of a station anywhere on 5th avenue would create air quality issues and noise pollution in the surrounding community. Studies have shown the negative effect of air and noise pollution on individuals, especially those older in age (Paul et al., 2019). I urge you to consider the other options (4th Avenue stations) for a CID station on the Ballard Link Extension, rather than the 5th Avenue options being considered currently. Thank you for your time and consideration.</p> <p>Citation: Paul, K. C., Haan, M., Mayeda, E. R., & Ritz, B. R. (2019). Ambient Air Pollution, Noise, and Late-Life Cognitive Decline and Dementia Risk. Annual review of public health, 40, 203–220. https://doi.org/10.1146/annurev-publhealth-040218-044058</p>	Kristi Kimura
04/28/2022	The 42nd and 41st Street tunnel options are my preferred terminus for the line. Cut and cover or bored station.	Jeff Stiles
04/28/2022	I'm heat to echo what others have said. Please don't displace businesses of the ID. From my understanding 4th would be a better location for the station. Regards, Samuel Leeper	Samuel Leeper
04/28/2022	I object to wiping out homes and businesses in the international district of Seattle	nicola anderson
04/28/2022	The Chinatown International District hub should be on 4th Ave, a historical route for mass transit. Your own analysis shows significant impact to C-ID businesses, both large and small, which have just spent the last two years trying to survive a worldwide pandemic. The C-ID struggles to survive every day and the city and county must take the appropriate action to preserve it. Thank you.	Joni Nakagawa
04/28/2022	Our tenant's employees are dependent on mass transit. The DEIS shows the elimination of the SODO Busway, either permanently or for a minimum of 10 years. Even if our properties are spared, how will transit-dependent employees get to work? Rerouting buses will only worsen traffic and lengthen commutes, and no additional transit will be built to benefit the SODO neighborhood.	William Lavaris

04/28/2022	<p>As a resident of the Youngstown area, I'm very excited – yet concerned – about the construction of light rail in West Seattle. I ask Sound Transit to take into consideration the following when determining the final preferred alternative:</p> <p>If a route along SW Genesee Street is chosen, choosing to locate the tracks on the north side of the road (as illustrated in option DEL-1b) makes little sense. The north side is home to many townhomes, single-family residences and apartment buildings that house quite a few people across the income and cultural spectrum of the neighborhood. This would create unnecessary disruption and displacement. Placing the tracks on the south side of Genesee Street would instead put them within the West Seattle Golf Course, which is a much more suitable choice – the Golf Course, while a nice amenity, can much more easily loose land for this public use.</p> <p>I strongly ask Sound Transit not to choose any alternative that includes the loss of a roadway connection between 30th Ave SW and SW Genesee Street (such as Option DEL-2b). This is a vital pedestrian and vehicle intersection that allows for easy access to the Alaska Junction from the neighborhood. The neighborhood should not loose access to this connection, as it will create strong negative impacts on accessibility and walkability to the Alaska Junction.</p> <p>Myself and my neighbors are also deeply concerned about the impacts of a higher-height elevated track, as illustrated in the current preferred alternative (DEL-1a). Placing massive concrete pillars towering 150 feet into the air will dramatically alter the feeling and health of the neighborhood. This is a diverse community with much of the area's only remaining affordable housing stock – it doesn't deserve to feel entrapped underneath massive concrete infrastructure. These tracks will also stand directly between the southern sun and the Youngstown area, creating massive shadows on homes and blocking light throughout much of the year. Many of us are gravely concerned about losing this natural light, and I'm not aware of any discussion on these impacts being had in the process so far. An alternative that's lower to the ground (like DEL-2a or DEL-4) would help mitigate this and create a much more livable environment in the neighborhood.</p> <p>From a resident's perspective, alternatives DEL-5 and DEL-6 make the most sense. They place the tracks closer to current industrial use of the area and do not bisect the diverse residential streets of the neighborhood. It would be much less disruptive and harmful to the residents of Youngstown to have the tracks follow a path around the neighborhood (instead of dividing it) while still providing for easy access to stations at Andover Street and Avalon.</p> <p>I remain very excited to see this system expand to West Seattle, but I am also concerned about the convoluted nature of the public engagement process so far. To the layperson, a "draft environmental impact statement" does not translate to "see what the potential designs may do to the neighborhood" – I ask Sound Transit to more clearly communicate the designs and their potential impacts as well as create a clearer website experience for those who are seeking to know the basics about these potential designs and what they mean for the area. It should be clear and digestible, and easily accessed from the web. Right now, you have to download the 30mb document and scroll for pages to even see renderings.</p> <p>Thank you for reviewing my comments. I strongly urge Sound Transit to not choose an alternative that has tall elevated tracks along SW Genesee Street and instead choose one that better maintains the health, livability and environment of the Youngstown neighborhood.</p>	Mason Luvera
04/28/2022	<p>Please direct these comments to appendix M. The current preferred light rail option Del-3 and Del-4 are unsustainable for the residents of 23rd Ave SW. The passenger pick up-drop off platform would cause huge congestion for the whole street, as it is extremely narrow, and is also a dead end. There has already been a history of people driving way too fast on this road. Only one car can pass at a time, with oncoming cars needing to pull to the curb to let each other pass. This would also effectively trap the residents during construction, with no access to their homes as there is no outlet. Most of the current designs include ripping out the only source of food in a walkable distance. the Purple line needs to be reconsidered as an option, as the level of construction will completely clog up the main thoroughfare (Delridge) for several years. With the removal of the Delridge Deli Uptown espresso, Subway, and Skylark, we will truly be a food desert! When the purple line was dropped as an option it was because of expense. Now the homes that will need to be acquired are worth much much more than the ones that were there before. New high end construction and even ongoing construction, that has been uplifting the community that before was somewhat rundown.</p> <p>Please restore the Purple Line as an option. it will be cleaner, less intrusive to an already suffering community, visibly better looking, and keep the character that makes West Seattle such a popular place to live.</p>	Gina Karaba

04/28/2022	I support either of the plans for a Fourth Avenue station — it would likely result in less displacement for historically marginalized communities in the ID.	Nathaniel Penner
04/28/2022	<p>I'm a homeowner in Pigeon Point and opposed to the DUW 1a plan (described in Figure ES-10 on page 22 of the Draft EIS Executive Summary), which would not only require the demolition of the homes of many of my neighbors, but would also have a catastrophic impact on our local heron rookery. It would also destroy shared green space and the few retail businesses we have within walking distance of our neighborhood. Also: as someone who already finds the 120 bus to be a very convenient and quick way to get downtown, a light rail station at or north of Andover makes zero sense.</p> <p>I support a Delridge Station located to the south of Andover St, either the Preferred Dakota St Lower Height (DEL-2a) or Delridge Way Lower Height (DEL-4). I am opposed to putting a Delridge Station north of Andover St (DEL-5 or DEL-6). Particular concerns with the Andover St. station include:</p> <ol style="list-style-type: none"> (1) undesirable location of transit-oriented development adjacent to a steel mill and elevated highway ramp; (2) poor walkshed of station; (3) poor compatibility with racial equity toolkit; (4) bus transfer requiring buses to turn off of Delridge Way SW; (5) lack of community input from bus riders in south Delridge and Burien. <p>Thank you.</p>	Laurie Sander
04/28/2022	<p>Responding to the DEIS draft. Please direct these comments to appendix M. The current preferred light rail option Del-3 and Del-4 are unsustainable for the residents of 23rd Ave SW. The passenger pick up-drop off platform would cause huge congestion for the whole street, as it is extremely narrow, and is also a dead end. There has already been a history of people driving way too fast on this road. Only one car can pass at a time, with oncoming cars needing to pull to the curb to let each other pass. This would also effectively trap the residents during construction, with no access to their homes as there is no outlet. Most of the current designs include ripping out the only source of food in a walkable distance. the Purple line needs to be reconsidered as an option, as the level of construction will completely clog up the main thoroughfare (Delridge) for several years. With the removal of the Delridge Deli Uptown espresso, Subway, and Skylark, we will truly be a food desert! When the purple line was dropped as an option it was because of expense. Now the homes that will need to be acquired are worth much much more than the ones that were there before. New high end construction and even ongoing construction, that has been uplifting the community that before was somewhat rundown.</p> <p>Please restore the Purple Line as an option. it will be cleaner, less intrusive to an already suffering community, visibly better looking, and keep the character that makes West Seattle such a popular place to live.</p>	Gina Karaba
04/28/2022	<p>The proposed plan does not adequately address or mitigate the loss and impacts on the historic and archeological aspects of the International District. Nor does it adequately avoid the negative impacts of increased vibration, decreased parking, and increased traffic from a variety of sources.</p> <p>You MUST take into account the prior devastations upon the Chinese-International District historically...and, treat the remnants of it that remain as the treasures that they are. See the area as a priceless treasure... because it is.</p> <p>Please continue looking for alternatives that PROTECT the C-ID...not inflict more degradation.</p>	LISA PONDER
04/28/2022	<p>I am commenting specifically in support of a 4th Ave alignment for the Chinatown/International District station of the Ballard Link Extension.</p> <p>Specifically I favor the 4th Ave shallow station for reasons of station usability.</p> <p>I am not in favor of the 5th Ave options due to the proximity and burden placed on the adjacent community. The 4th Ave options, however more complicated, are more humane and completely within our capabilities.</p>	David Mahan

04/28/2022	<p>Thank you again for the opportunity to comment on the draft DEIS for the proposed West Seattle Ballard Link Extension. I previously commented my strong opposition to the DEL-5 and DEL-6 alignments and SW Andover St Station, which will be tremendously damaging to the Delridge and Avalon Neighborhoods and not properly serve those communities nor others to the south that are expected to connect there. It has since been emphasized to me that "No Build" is also an alternative, which I had not fully appreciated. Having now looked more widely at cost-benefit of the WSBLE based on the DEIS details I wish to add a comment strongly in favor of the No Build alternative. The most prominent reasons for this are detailed below:</p> <p>Transit Time Benefit and Reduction in Car Traffic is not significant enough to offset the environmental impact of the WSE construction and operation.</p> <p>The carbon cost of construction is estimated between 158,067 and 614,461 tons while the annual carbon saving from reduced vehicle traffic is estimated as only 10,941 (and only once connected to downtown in 2037 at the earliest). Indeed vehicle hours are expected to be reduced by just 0.1% (Table 3-2). This means it will take 42-168 years simply to break-even on the carbon cost of this project. Furthermore, the need to change trains at SODO in order to reach beyond the Delridge-West Seattle area, represents a major obstacle in benefiting transit times. Existing Rapid Bus C and G lines serve downtown in an impressive 30 minutes and the proposed benefit is likely just an 8 minute reduction, which could well be less when transfers, up multiple escalators to the elevated rail stations are considered. This is simply not adequate to offset the cost, environmental and community impacts.</p> <p>2) Equity. Those most in need of improved public transport systems are generally underserved communities far more prominent in areas South, such as George Town, South Park, Burien and White Center. This proposed extension seems to put the wealthy, whiter community of West Seattle before those more deserving. Furthermore, a route to those neighborhoods could be envisaged running along existing transit routes along the Duwamish water way, which is much flatter and easier terrain for mass transit construction than West Seattle. In light of the awakening in racial justice that has occurred since ST3 was agreed it is time to reconsider whether the WSBLE is truly an equitable policy.</p> <p>3) An estimated total cost of up to \$4 billion dollars (Chapter 2.8.2.1.1) in a high inflation economy with a city experiencing massive budget and policy shortfalls is simply too much to spend for the marginal gains detailed in the DEIS. As a further vote would be required to increase the budget from the \$1.7 billion originally earmarked it is time to seriously consider whether this project is cost-effective.</p> <p>I support further research of alternative options, such as the SkyLink Gondola that may provide some additional transit benefits and a lower environmental and economic cost.</p>	Andrew Johnson
------------	---	----------------

<p>04/28/2022</p>	<p>Hi,</p> <p>I sent in Comments via E-Mail at 3:20 PM Today, April 28th.</p> <p>This is just to serve as a back-up – to make sure the Comments get in.</p> <p>Thank you and I am looking forward to hearing more about this project.</p> <p>Jim</p> <p>West Seattle - Ballard Link DEIS Comments</p> <p>James McIntosh - Magnolia</p> <p>General Comments</p> <p>O Tunneling vs. Bridges</p> <p>In areas involving neighborhoods I favor tunneling as much as possible as opposed to overhead bridges. This especially includes the routing to Market Street in Ballard and to the Alaska Junction in West Seattle.</p> <p>In general, overhead trackage works in industrial areas or areas away from neighborhoods, but in areas where people will be living near the overhead trackage, the overhead tracks and bridges are not wanted.</p> <p>There have been many heated neighborhood discussions regarding bridges and overhead tracks. I do remember a public hearing in the early days of ST Phase 1 where several bridge options were being considered over Lake Union. There was quite a bit of public outcry against those bridges. With overhead bridges there could be long protracted neighborhood battles which would only delay the project and run up the costs.</p> <p>Pretty Bridge or Not - Nobody wants bridges in their front yard.</p> <p>Bridges ultimately have proven not to be as reliable as tunnels over time in our region. There have been several bridge collapses and failures. There are also Navigation concerns. There is always the possibility that a large boat can run into a bridge or pier causing long bridge closures and expensive repairs. This too has happened in our region in the past.</p> <p>While tunneling has traditionally been a more expensive option, the cost of tunneling seems to be coming down.</p> <p>I would highly encourage Sound Transit to look at all the possible sources of funding – Federal, State and Local - in order to meet the cost of additional tunneling. This especially applies to Ballard and West Seattle.</p> <p>O Retained Cut Stations</p> <p>Retained Cut stations are ideal in the hilly terrain as is found on several sections of the line including Interbay and West Seattle. These open-air box stations can be located in transitional locations where overhead tracks will enter into tunnels going into the hills. The stations provide an open-air environment for the riding public while at the same time providing limited access routing for the trains. The Retained Cut 17th Avenue Station in Interbay and Retained Cut Avalon Station in West Seattle are examples of this.</p> <p>Alignment Recommendations</p> <p>Here are my Alignment recommendations. Since I do live in Magnolia, I will be going from north to south.</p> <p>O Ballard - Interbay</p> <p>I favor the Tunnel 14th Avenue Station (Preferred alternative with third-party funding) option. There is great Transit Oriented Development potential in the neighborhood just east of the Ballard Bridge.</p> <p>Sound Transit should work with King County Metro and the City of Seattle to develop very frequent – 5-to-7-minute electric trolley service on Market Street between downtown Ballard and the new 14th Ave Link station.</p> <p>A bit of History is that an old streetcar line once ran on 14th Ave. W. Early streetcars ran on an old Ballard</p>	<p>James McIntosh</p>
-------------------	--	-----------------------

Bridge on 14th Ave. W. with various routings going as far back as the late 1800s.

Bus routes in Ballard, Magnolia, Queen Anne, and other areas could be re-worked serving the new Link stations in Ballard and Interbay.

O 17th Avenue Station in Interbay

I favor the Retained Cut 17th Avenue Station in Interbay.

O Prospect Street Station

A Sounder North connection should be developed at Prospect Street where people can transfer to and from the Sounder trains. Sounder North should be upgraded with service in both directions and mid-day and week-end service.

Busses using the station from Magnolia and elsewhere should have safe curbside connections at Prospect Street Station.

O Seattle Center

The Seattle Center and Lower Queen Anne neighborhood is an active area with close-in urban living, a major Activity Center and where public transportation can continue to be developed.

Sixth and Mercer Alignment

I favor the Sixth and Mercer alignment. This would allow for a station to be located closest in to the Lower Queen Anne neighborhood, and situated beneath Mercer Street between First Ave. N. and Queen Anne Ave. N. The Lower Queen Anne neighborhood is one of the highest densely populated neighborhoods in all of Seattle and with its close-in features, attractions and closeness to the water is very popular. The Mercer Street station location, between First Ave. N. and Queen Anne Ave. N. would offer extremely good connections to north / south and other local busses.

Continued Operation of Seattle Center Monorail

The Seattle Center Monorail connects two major activity centers, the Seattle Center and the Westlake Center and does it well. The Monorail is in good working order.

As well, it is of Historic Transportation interest and is on the National Register of Historic Places. The Seattle Center Monorail is a unique tourist attraction visited by people from all over the world. The Seattle Center is a major Arts, Cultural and Activity center in the Northwest. The Monorail can sustainably carry 12,000 passengers an hour and with restoration of the Center Platform at the Westlake Station complex it could carry even more.

This will offer two choices of travel to Seattle Center and Lower Queen Anne. For travel to the heart of the Seattle Center it would be the Monorail. For Lower Queen Anne and Seattle Center West it would be Ballard Link. The Mercer Street station location would be a two and a half block walk from the west side entrance of the Climate Pledge Arena.

Sound Transit should work with the City of Seattle on the continued operation of the Seattle Center Monorail.

O Midtown Station

Since this station is to be built in a location involving steep hills, access to it will have to involve many level entryways and elevators and escalators. If the station is built under 6th Ave., then entrances with level walkways should be built on 5th Ave to allow access to this station.

O International District Station

This location is the major transportation hub for the region. People will be transferring between Amtrak, Sounder, the two Link lines, streetcars, busses, and taxis. There must be a good pedestrian concourse between King Street, Union – the current International District station, and the new Link station. It could be either an overhead or underground concourse. If underground, it should be more than just another concrete underground walkway. It should be well lit, sound dampened, secure and provide a pleasant environment. This would provide an efficient way for accessing the various sections in this multi-station

	<p>complex.</p> <p>Sound Transit should work with Amtrak, King County Metro, the City of Seattle and other governmental agencies in the development and operation of this multi-station complex.</p> <p>O West Seattle</p> <p>I favor alternatives that involve tunneling between Avalon, the Alaska Junction and beyond.</p> <p>Not being from West Seattle though, I am not as familiar with the details or the possible routes and station locations, so I will divert to West Seattle people who know more about their own neighborhood.</p> <p>The Retained Cut Avalon Station appears to be a good alternative.</p> <p>The Tunnel 42nd Avenue Station (Preferred alternative with third-party funding) does seem like a workable option.</p> <p>Conclusion</p> <p>The West Seattle - Ballard Link Line will be a valuable link in our regions overall transportation system. I will be looking forward to further community involvement in the development of this line.</p> <p>These comments on the West Seattle - Ballard Link Draft Environmental Impact Statement are here-by submitted.</p> <p>Thank you for the opportunity to comment.</p> <p>Sincerely,</p> <p>James McIntosh Magnolia</p>	
04/28/2022	The option on 4th will cause less disruption the CID neighborhood. Neighborhood culture, history, and well-being needs to be at the forefront of this project.	Meredith Jones
04/28/2022	The impact running through the 5th Ave option will be too detrimental to the local businesses. The cost increase does not surpass the impact it will have to the soul and heart of the area.	Roberto R Lopez-Ibanez
04/28/2022	I am a member of the Wing Luke Museum. I fully support their analysis and ask you to look in more detail, the impact of the new lines and station to this very historic district.	Toni Okada
04/28/2022	Although both 4th and 5th Ave options for the link extension to connect West Seattle and Ballard will have major impacts to the CID, the 5th Ave option will have more of an impact. The 5th Ave option will result in the closure of more than 30 long standing businesses between 5th, 6th, King and Weller St. and subject the community to another decade of nonstop construction and road closures. The 4th Ave option is the preferable option as its impact on the community and businesses are much less - disrupting up to 8 businesses and affecting access to parking lots.	Alaena Ponce
04/28/2022	Construction along 5th Ave risks detrimental harm being done to a community that has already borne the brunt of both current and historical trauma.	Elizabeth Thompson

04/28/2022	<p>Regarding ES.3.1.2.2 (ES pages 25-27), I have a strong preference AGAINST the 5th Avenue alternative for the CID. The displacement of 19+ businesses and 200+ employees would cause irreparable harm to a neighborhood that has already suffered greatly from other transit-related construction and is still recovering from the effects of COVID and anti-Asian hate. Even with substantial mitigation to these businesses, which is not guaranteed in these plans, it will be impossible for the small businesses being forced out of their locations to relocate and recover. The traffic, construction, and parking impacts on the remaining businesses in the CID are also much greater with the 5th Avenue plan. I believe the 4th Avenue shallow alternative is in the best interest of the businesses in the CID, which are the heart and soul of the neighborhood.</p>	Leeching Tran
04/28/2022	<p>We need options for this transit station that don't negatively impact the CID. We owe it to the community that lives/works here, but also it's a jewel in Seattle that we must invest in, not disrupt and cut it off with bad transit choices. I just to work in this area and it's like no other part of Seattle. The businesses and retail and history is unique. I loved walking to lots of different restaurants with coworkers for lunch. It's a tourist destination, critical to our local economy. I want to see location options that preserve this special neighborhood and serve its residents.</p>	Katy Klein
04/28/2022	<p>Dear Sound Transit,</p> <p>I'd like to start off by saying that I'm a new public transit enthusiast and would be using the Light Rail daily when it expands to West Seattle. As a resident of Pigeon Point. I'd like to express my opinion based on the facts and research listed in the EIS Executive Summary.</p> <p>I'm in favor of the North Crossing (DUW-2) as it has the least amount of impact to our Pigeon Point community with no residents displaced, least impact to employees in the surrounding area, lowest levels of noise and visual impacts, and reduced environmental impact to the Duwamish Waterway and the Great Blue Herons nesting on the northeast corner who call Pigeon Point their home. While this is a more expensive option, it can be offset by DEL-6 and WSJ-5. (Table ES-2, page ES-18)</p> <p>Similarly, I'm supportive of the Andover Street Station Lower Height Alternative (DEL-6) because of the least amount of impact to residents, employees, and visuals/noise comparatively. This station would have the least impact on the surrounding North Delridge neighborhood. This Stations alternative's height is reduced to 90ft instead of the preferred alternative's proposed 120ft station. Which would be a visual dominance on the surrounding neighborhoods. It's also the cheapest option. (Table ES-3, page ES-18)</p> <p>The West Seattle Junction Segment's Medium Tunnel 41st Avenue Station Alternative (WSJ-5) appears to be the best choice with its tunnel below the West Seattle Junction, having the least amount of impact on residents, businesses, and employees. This option has the minimal impact on noise, visuals, historic districts, and parks, and costs less than its alternatives. (Table ES-4, page ES-23)</p> <p>With all of the above options combined, the total cost (\$3 billion) would be in the middle of the estimated range of the preferred alternative routes (\$2.7 - \$3.3 billion).</p> <p>Sound Transit's decisions shouldn't be based on money alone since these designs will have a lasting impact on Pigeon Point and West Seattle communities for generations to come. Please consider the impacts to our neighbors homes, employees, visual/noise levels, and the environment.</p> <p>Thank you for taking the time to read my comment. I look forward to seeing light rail in West Seattle!</p> <p>Ryan Cousins</p>	Ryan Cousins

04/28/2022	<p>As someone who often commutes to and from the international district for work and recreation, I highly recommend that the station be built on the 4th Avenue alternatives instead of the 5th Avenue alternatives, in order to lessen the impact that the new station will have on the neighborhood and it's businesses. Given that 5th Avenue is a busier street that is highly trafficked. This foot and car traffic is essential for the businesses to succeed. The negative financial impact of construction, especially after COVID lockdowns, would be detrimental to these business and to the neighborhood. The International District has a long history of having disruptive or harmful treatment from the city, so it is of outmost importance to prioritize the community as this project proceeds.</p>	Grecia Leal
04/28/2022	<p>I'm reassured that the ES.6.2. Environmental Justice section in the Draft EIS seems to capture the importance of protecting the ID, a precious and irreplaceable part of our city's character. Based on reading the probable impacts (ES-27 through ES-29), it seems incredibly clear to me that one of the two 4th Avenue options (CID-1a or CID-1b) should be the preferred alternative, because they will preserve the most businesses and character, honoring everything that residents have invested here. (Or as Betty Lau, a leader of the Chong Wa Benevolent Association, says, "We have nowhere else to go in Seattle. We've always taken the least desirable land, and as soon as it becomes valuable, we get pushed out.")</p> <p>I say this as a 15-year resident of Pioneer Square, raising a son here all that time. We travel up Jackson every day on our way to Garfield, where's he's a freshman, and we're in the ID and traversing the areas discussed in this proposal daily. We are deeply invested in our neighborhood and the ID and we will be living here well beyond the horizon of this project.</p>	Paul Hughes
04/28/2022	<p>Greetings,</p> <p>I am a resident of the north Delridge neighborhood and I'm writing to support for the Duwamish Waterway North Crossing Alternative (DUW-2) because it has the least impact to the heron rookeries near the West Seattle Bridge, and the wetlands in that same area (Appendix N4, Ecosystem Resources Map, page 28)</p> <p>I'm also writing to support the alternatives which utilize SW Genesee St in the Delridge segment, DEL- 1 thru DEL-4, because it appears that this location is better connected to the bicycle master plan, shown in map 4-10 in Appendix N-4G, and it may also afford easier pedestrian access to a larger number of neighborhood residents as compared to the SW Andover St alternatives, DEL-5 and DEL-6.</p> <p>Thanks you for the opportunity to comment on this Draft EIS.</p> <p>Sincerely, Danielle Devier</p>	Danielle Devier
04/28/2022	<p>I support the 4th Ave Deep alternative. Fewest International Central District businesses and residents impacted. It's design includes an elevator which gives the station wheelchair access. This route does not impact the stadium station for big events. I understand 4th Ave is an important north/south route for daily traffic and this design, temporarily, would displace a lot of traffic during construction. However I and my family deeply treasure the cultural organizations & events, restaurants, shops, businesses and deep Seattle history of the International Central District and want it to be preserved. It is a community that offers so much to our city and deserves our care and respect. Thank you from a West Seattle resident.</p>	Andrea Olsheskie-Gray
04/28/2022	<p>please do not move forward with this expansion! funds would be so much more productive if allocated elsewhere, this expansion is unnecessary and harmful to small businesses and our unhoused neighbors.</p>	Rachel Sun

04/28/2022	<p>The proposed plan to build the expanded light rail line on 5th in Chinatown-International District will displace many businesses and community members. Demolishing these businesses would damage the community and displace people who have already been cast aside by the City of Seattle. We all understand the importance of transit but going with the plan to build on 5th shows that maintaining the history and land of Seattle's CID is not a priority. Protect the neighborhood and go with the plan to expand on 4th.</p> <p>Thank you, Sofia</p>	Sofia Simonton Siegel
04/28/2022	<p>I'm a West Seattle resident who doesn't have a driver's license (and doesn't plan ever to, for many reasons) so the future of light rail to West Seattle is of vital importance to me. I hope you realize that light rail expansion is a once-in-a-lifetime investment that we cannot afford to get wrong. Every time a segment of light rail has opened it has been revolutionary for the communities involved. It will continue to be so but only if we make smart, future-thinking, climate-forward choices.</p> <p>Ballard: Open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. Interbay: Support Thorndyke Retained Cut [IBB-2a/IBB-2b]. Smith Cove: Preferred Galer Street Station/Central Interbay [SIB-1]. Seattle Center: STRONGLY prefer Republican Street Station and work to mitigate impacts to arts organizations as much as possible. Moving the station off campus would be a historic mistake that Seattle will regret for a century. SLU: Reject both presented options, study a Westlake or similar alignment oriented north/south within SLU boundaries and as centered on South Lake Union as possible. Denny: Westlake Ave Station [DT-1]. Update vertical conveyances and aim shallower. Westlake: 5th Ave Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. Midtown: Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. CID: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but it needs to be as shallow as existing station, study a shallow cut and cover option over existing Downtown Seattle Transit Tunnel. SODO: Choose Mixed Profile Station [SoDo-2] and study construction further North at the existing SoDo Station location. West Seattle: Choose WSJ-5 with a request to study better DEL-6 that are compatible with WSJ-5.</p> <p>In general: Do not eliminate any stations. Work to make stations as shallow as possible. Improve transfer times wherever possible. This cannot be stressed enough!!! Ensure escalators and elevators are (1) fast and (2) have enough redundancy to handle game day rushes and not fail riders in the event of failure. Use fast surface-to-platform elevators (no mezzanines) when stations are more than 100 feet deep and align station design so that it's possible. Plan to build for future expansion in Seattle.</p> <p>Thank you!</p>	Patrick Lennon
04/28/2022	<p>I encourage Sound Transit to choose the 5th Avenue alternative for light rail construction. The CID has gone through decades of urban development and displacement and the further development of Sound Transit on 4th Avenue would cause major disruptions to the community's ability to thrive economically and socially, especially being one of the oldest and most diverse demographic communities in Seattle.</p>	Jules Travis

<p>04/28/2022</p>	<p>I am commenting on the DEIS for Sound Transit, specifically the West Seattle extension. While I've reviewed the DEIS and many of the Conceptual Design drawings and other items included in the DEIS, I do not have a comprehensive understanding of which WS station options can be combined with the others. I also attended the public online meeting on March 30, 2022</p> <p>I recognize that West Seattle does not have the density of other Seattle areas, but much of that has changed in the recent past. The light rail proposed should reflect the developing character of the area; West Seattle is not a sprawling suburb. Many of the sections/ elevations that I have seen in the concept documents show light rail lines that are 70 feet in the air. That's taller than many of the surrounding West Seattle buildings and is more in character with the light rail lines running along I-5 (to Mountlake Terrace) and 509/599 (to Tukwila and the airport). If denser areas like Capitol Hill and the U-district have tunnel routes with correspondingly scaled stations, I believe the West Seattle neighborhood should as well, recognizing the increasing density and development in the area.</p> <p>Regarding the density of West Seattle, many of the Delridge options greatly impact the neighborhood to the north of SW Genesee St, west of Delridge Way SW, and east of SW Avalon Way. This area has many single family lots that have been upzoned to more dense zoning. Many of these properties have been redeveloped in recent years. Where there was once a single family home, there are 8 townhomes; this is the case throughout the neighborhood. During the March 30, 2022 public meeting, I asked, specifically, when were the housing displacements calculated, before or after all of this recent development? This question was not answered during the meeting.</p> <p>The Viaduct was removed from the West Seattle waterfront. While it was primarily due to the highway's structural deterioration and inability to withstand significant seismic events, it was also considered an improvement to the urban environment of the waterfront. West Seattle's densest commercial areas will suffer with a looming concrete structure through the active areas. I recognize that some redevelopment in that area would be improved by a light rail station, the remaining character of the West Seattle junction will be changed drastically with light rail lines above. Likewise, many of the concepts depict a light rail line 50 feet in the air, running alongside the golf course, and alongside of North Delridge's best and most used parks, with skate parks, wading pool, playground, and community center.</p> <p>The three West Seattle stations, so closely sited, do not make sense. I support the recommendations to remove the Avalon station, in order to allow a tunnel option (and additional funding) to move forward. DEL-5 and DEL-6 offer options to site the station such that the walk area of an Avalon station could easily access the Delridge station.</p> <p>While there is a light rail station proposed for North Delridge, the light rail line is not positioned to extend further south. It will not serve the larger Delridge and White Center community. Those coming from South Delridge areas will use the bus, currently 120, but a future Rapid Ride line, which has prompted many improvements in the area. This bus is very fast and efficient. The last stop in North Delridge is in close proximity to the proposed Delridge stations. It is the last stop before heading downtown. Because downtown Seattle is less than 10 minutes away from that last stop at Delridge and Andover, I don't believe that many riders will make the choice to transition to light rail. Transitioning to light rail will require them to change light rail trains in SoDo to even get downtown. That light rail option will not be preferable over the fast bus access to downtown (changing from a bus, to a light rail, to another light rail, to make a trip that can be done in 10 minutes if you stay on the bus????) I've headed downtown from the last stop of the current 120 and it is very efficient and fast. The Rapid Line C is very similar. There are Metro stops nearest the proposed Avalon light rail station; beyond that stop, it is a very quick ride to downtown.</p> <p>While I am not speaking for the office, I am sharing my opinions specifically about the impacts to our office. I work in a professional architecture office at the intersection of Delridge and Andover. It will be difficult for Sound Transit to find a comparable office location. Our office was constructed in 2004, and is still a very new building, in good condition. Ironically, our site was chosen for its proximity for a future monorail station. Our office reflects our architecture firm's design character and aesthetic. Three-quarters of the employees in our office live in the West Seattle area. Our office is also well positioned, near the West Seattle Bridge, to access the highway, to head to sites of our many clients in the region. In addition to our small architecture firm, there are three other professional offices in the building, with many other employees who live in the West Seattle area.</p> <p>I support DEL-5 and DEL-6, a tunnel, and a station near the West Seattle junction that respects the scale and character of the junction. I do not support an Avalon station.</p>	<p>Sally Crone</p>
-------------------	--	--------------------

04/28/2022	<p>Hello, I'm reaching out in response to the proposed location of the West Seattle Ballard link extension going through the international district/Chinatown. The current proposed location on 5th Ave will impact and displace some of my favorite businesses - specifically, Oasis Tea Zone, which has been a cornerstone of the community for more than 10 years and an establishment I frequent with my friends and family. It's worth noting that the owner of Oasis has been immensely helpful investing in and supporting other local small businesses throughout Seattle, and a blow like this to his business would be unfair and would serve to hurt our community.</p> <p>Please strongly consider the alternative route which would go through 4th Ave and would not impact any local businesses! Thank you for your time and consideration. We must do everything we can to protect small business owners in Chinatown/International District! Historically, not enough people in positions of power have advocated for them, and many businesses there (Oasis included) are doing great work to help the homeless and keep the neighborhood safe and clean.</p>	Patrick Hayes
04/28/2022	<p>Hello, my name is Autumn. I went to high school in the ID/CT and I spent pretty much every single one of my days visiting one of these business's that are being put in jeopardy. Oasis was one of my most visited business's during my high school years and it very important to that part of town. I'd hate to see such an important business and other very important business's go out of business because of a transit plan! Thank you for reading, I hope you highly consider not going through with this plan.</p>	Autumn Wolff
04/28/2022	<p>Please use the 4th Ave alternative as to go on 5th Ave would be a death blow for the historic Chinatown neighborhood. As a resident of Pioneer Square I know we need to treasure our historic neighborhoods.</p>	Adele Avant
04/28/2022	<p>This comment is on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. I am a community member who has worked and continues to shop in the CID. I am very concerned and unhappy with the DEIS plans and their impacts to the CID. I am especially against the options on 4th or 5th Ave. The 5th Ave options will displace critical and thriving business and effectively close off access to the CID for many people. I cannot believe that this is even an option given the history of community disruption and isolation caused by transportation and other development projects. I am disappointed that leadership is willing to sacrifice another historic community that continues to be plagued by some of the worst air pollution in the city. The 5- 10 years of construction, loss of business revenue, loss of visitors will lead to long term harm. It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. We urge Sound Transit to reconsider options on 4th or 5th Ave and instead look to other options that will not displace our beloved residents and businesses in the CID.</p>	Jocelyn lui
04/28/2022	<p>Amendment to my previous comment: I made an unfortunate typo. I encourage Sound Transit to move forward with 4th Avenue alternatives to preserve businesses and community vitality on 5th.</p>	Jules Travis
04/28/2022	<p>No second tunnel. It doesn't add anything to this and will just add more costs to the project that is overbudget. Prepare for it in the future, but for now stick to the current downtown tunnel.</p> <p>Also, speed this up! The city of Seattle wants this sped up! Push to have this escalated, especially when the citizens of Seattle will have your back.</p>	Robert DeMacon
04/28/2022	<p>Evaluations by Sound Transit have failed to address the impacts this will have on the CID, and how large developments inequitably place additional burdens on communities of color, who have already been impacted by policies such as redlining.</p>	Jenelle Ebisu

04/28/2022	<p>Greetings,</p> <p>While I understand that times change and improvements need to be made, it is my feeling that the utmost care should be observed when these changes need to occur. The International District is a vital and historic part of the city and all reasonable efforts should be made to preserve it and keep it intact. In that light, regarding the proposed changes for the Chinatown-International District segment of the West Seattle light rail extension, I would prefer to see one of the 4th Ave options selected, preferably option CID-1b. The 5th Ave options would be highly disruptive to the community and I strongly oppose them. The loss of the building(s) and businesses in such an active part of the community would have significant consequences.</p> <p>Thank you for your time.</p>	Peter Loh
04/28/2022	<p>There is an opportunity to develop a station alternative site at the empty surface parking lots adjacent to Tilikum plaza where the belltown/Denny/ seattle center corridors converge. This triangular site in particular (bound by Denny/5th avenue/ and vine st) provides a tremendous opportunity for attracting even more ridership from the residents of Seattle's most dense neighborhood: Belltown (more than 56,000 residents per kilometer) as according to the downtown seattle association.</p> <p>I have read, Sound Transit is considering consolidating the Denny/ south lake union stations. I was present to hear the feedback from the Seattle center arts organizations strongly opposing the current alignment during a public forum. I believe this site provides a tremendous opportunity for compromise with far less disruption.</p> <p>Every other alternative proposed would involve demolition of existing structures, whereas this site across from Tilikum plaza is a rare location in downtown seattle; as it sits on empty surface parking lots across from a historic site and plaza. The station could even be called "Tilikum plaza" honoring this nearly century old plaza and commemorating our native history. All while being within steps of the space needle, the heart of belltown, AND Denny park. Three birds with one stone, I think!</p> <p>Please consider this site as it provides many opportunities for study. It would be a failure to not include the most residentially dense neighborhood (belltown) in a downtown alignment when considering ridership. This site gets the alignment closer to belltown, away from disruption to seattle center, and within walking distance of the growing Denny developments. Thank you for listening. See attached photo.</p>	Christiano Martinez
04/28/2022	<p>Hello — I'm a concerned citizen and user of Sound Transit, I seriously ask the Sound Transit Board to please reconsider the the 5th Ave alternative route. As a frequent customer/consumer of the international district (CID) I recommend the 4th Ave Alternative District as it impacts fewer businesses and historic buildings/landmarks. I understand the impact of transportation and traffic along with potential prolonged construction, but I fail to see the impact of a 20 minute more commute within a city with already a high volume of traffic than the uplifting and impact of centuries of history and family businesses that thrive in the area the 5th Ave Alternative route would take.</p> <p>Thank you</p>	Sami Everhart
04/28/2022	Hands off China Town. Wasn't the pandemic enough to destroy this wonderful historic community?	MaryAnne Reichle
04/28/2022	The light rail station should not negatively impact the very community it is trying to serve in this way. Preserve Seattle's Historical International District and choose one of the other locations for the light rail station!!	Gwendolyn McKenzie

<p>04/28/2022</p>	<p>My name is Mark Jessup and I'm a proud member of our Beacon Hill community.</p> <p>I understand that the ICD Light Rail station needs expansion and there are two main routes being considered. While the 5th Avenue route offers a faster and financially less-expensive option, it would come at great cost to the residents of the IDC. The neighborhood has already suffered disproportionately throughout the Covid crisis and continues to battle anti-Asian sentiment and active vandalism to this day.</p> <p>Displacing successful local businesses, which are also cultural touchstones with deep community ties, sends a terrible message to our friends and neighbors there. It would be yet another blow to an area of rich cultural heritage which has had to overcome far too much already. Recently and throughout our checkered past.</p> <p>I implore you to consider the people first, and make the ostensibly harder, but ultimately far more just, decision. Choose 4th Ave.</p> <p>Thank you for your time,</p> <p>Mark Jessup</p> <p>5052 28th Ave S Beacon Hill</p>	<p>Mark Jessup</p>
<p>04/28/2022</p>	<p>Hi there!</p> <p>As one who voted for the transit centers to be built I couldn't be more excited about this endeavor to a more accessible and sustainable place! This recent issue on whether to add the railways to SODO or our international district however is concerning to say the least. I would like to advise against building further into our Chinatown/ International district for numerous reasons.</p> <p>Per your charts in the proposal it was stated that 600+ businesses and homes would be demolished during construction in the International District, vs only 200 businesses in SODO. While neither are convenient, especially with having to move a large mail center, I do believe that with our current climate and with homelessness being rampant in our city that demolishing homes that people can actually afford is one of the worst mistakes you could make. Not to mention that this one of the last cultural hubs largely unaffected by the large tech companies in the area as well as the people who have moved here in search of these better jobs.</p> <p>While SODO is beneficial to our commerce it is also to note that to get into the area by anything other than cars is ridiculous. 4th Ave close to HWY 509 for instance, while technically walkable, isn't convenient for travel unless in a motorized vehicle. Walkways there have construction, a large road that could be potentially unsafe for pedestrians and bikes, and not to mention the bus system comes infrequently. You would not only be saving a tight community of people from having their entire livelihood demolished, but would also be improving a different part of Seattle in a way it really needed to be improved.</p> <p>Please think of our people when making this decision. We can't put money in your pockets with intense lobbying, but you were put into office to assist in making our area a wonderful place. I appreciate you listening, and hope that you will make the right decision!</p>	<p>Loni Rains</p>

<p>04/28/2022</p>	<p>Hello -</p> <p>While I am very excited to see planning moving forward on the new West Seattle-Ballard Link Extensions, I am concerned about the alignments and impacts of the C-ID station and the Ballard station.</p> <p>For the Ballard Station, I do not think the 14th Avenue alignment should be considered. The already-disrupted MIC would be further eroded by the introduction of more non-industrial traffic into the area.</p> <p>For the C-ID station, I would strongly urge Sound Transit to abandon the 5th Avenue station options and look instead at alternatives around the 4th Avenue station. In assessing that alignment, I think more attention should be paid for minimizing impacts and providing support to the businesses, organizations, and residents in the neighborhood.</p> <p>Some ideas that could be considered: prohibition of thru traffic on C-ID streets, except buses; reduced speeds for buses to limit vibrations that could impact the surrounding buildings; and extending the reroute options west to Alaskan Way and east to 12th Avenue. The more that traffic can be dispersed or discouraged from passing through the neighborhood, the better. Could investments be made, along the lines of Milepost 31 in Pioneer Square, which was meant to offset the impact of the AWV replacement project, that would help the neighborhood weather the construction project?</p> <p>The C-ID has borne the brunt of I-5's construction, the disruption created by the stadiums' construction, and the impact of the pandemic, amplified by racism. A neighborhood with the C-ID's history and deep sense of community is like an old-growth forest. Once it is damaged or removed, it will take generations to regrow. Why undermine one of the strengths Seattle has at a time when we need everything we have to rebuild after the pandemic?</p> <p>Finally, please do everything you can to prevent the construction of the ventilation structure in front of Union Station. That will make that chaotic corner even more so and ruin the experience of the facade of the station and the experience of the pair of train depots flanking 4th Avenue. I realize that the real estate available for such a structure is limited, but I think every other option should be explored.</p> <p>Thank you, Jennifer Ott</p>	<p>Jennifer Ott</p>
<p>04/28/2022</p>	<p>RE: DEIS for West Seattle and Ballard Link Extensions Project</p> <p>The DEIS does not adequately encompass the historic reality of past public policies and actions that impact the C-ID, the everyday lived legacy of those actions to the present-day and the subsequent real threats to future survival of our neighborhood. The final EIS requires greater clarification on multiple fronts to better assess construction impacts:</p> <ul style="list-style-type: none"> adequate consideration of re-routing of traffic and buses through the C-ID. This impacts pedestrian safety and neighborhood access for residents (many of whom are elders), visitors and school groups. consideration of vibration impacts in noise and vibrations analysis. consideration of impacts of stadium events in transportation analysis. accurate estimation of impacts of parking losses. accurate understanding of visual and noise impacts. <p>I join Wing Luke Museum in calling for exploration of options for refinements to the proposed alternatives beyond what typically occurs from a DEIS to Final EIS that will not result in displacement within the C-ID, as well as for additional study by external consultants, working with community partners, to address the numerous requests for additional information or exploration, whether related to historic and archaeological resources or the multiple fronts for construction impacts.</p>	<p>Nanette Fok</p>

04/28/2022	<p>Hello, I would like to express concern for the noise and vibration impacts of the SIB segment, and express a strong preference for the SIB-3 option for the South Interbay segment of the Link Light Rail expansion, instead of the SIB-1 and SIB-2 options. Here I am referencing Executive Summary sections ES.3.1.2.4, Figure ES-42, and Table ES-7 of the West Seattle and Ballard Link Extensions Draft Environmental Impact Statement.</p> <p>I am writing as a Lower Queen Anne / Interbay resident and homeowner. I would like the South Interbay segment to be on underground tracks in the tunnel instead of any of the above-ground tracks. This area along Elliott Ave W is a residential area, and I would like to minimize the noise level and vibration, both during initial construction and during regular operation.</p> <p>This area is already quite noisy and even vibrating all day and night due to car traffic, bus traffic, emergency vehicles, freight trains, airplanes, ships/ferries, and also the Pier 86 Grain Terminal in that area. This is already too much noise, and we don't need an above-ground light rail line adding to so much noise in this residential area when it could be avoided by the SIB-3 option of an underground track in a tunnel.</p> <p>The SIB-3 option will have both the greatest long-term benefit and greatest short-term benefit to the neighborhood, and is absolutely worth the investment. Thank you for your thoughtful consideration of this neighborhood and the people living in it.</p>	Namrata Kothari
04/28/2022	<p>Hi, I would like to express concern for the residential displacement impacts of the SIB segment, and express a strong preference for the SIB-3 option for the South Interbay segment of the Link Light Rail expansion, instead of the SIB-1 and SIB-2 options. Here I am referencing Executive Summary sections ES.3.1.2.4, Figure ES-42, and Table ES-7 of the West Seattle and Ballard Link Extensions Draft Environmental Impact Statement.</p> <p>I am writing as a Lower Queen Anne / Interbay resident and homeowner. I would like the South Interbay segment to be on underground tracks in the tunnel instead of any of the above-ground tracks.</p> <p>The SIB-3 option has the least residential displacement, which is an absolutely critical consideration now and in the future. This area of Lower Queen Anne / Interbay is one of the very few Seattle neighborhoods with walkable access to the city, while still being affordable for family-friendly, 2+ bedroom homes. Furthermore, the other options of SIB-1 and SIB-2 would also displace the tiny-house shelters for people who are already in need.</p> <p>We don't need to send people out of already-limited housing options in this residential area when it could be avoided by the SIB-3 option of an underground track in a tunnel.</p> <p>The SIB-3 option will have both the greatest long-term benefit and greatest short-term benefit to the neighborhood, and is absolutely worth the investment. Thank you for your thoughtful consideration of this neighborhood and the people living in it.</p>	Namrata Kothari
04/28/2022	I support the 4th Ave station which would have less impact upon the Chinatown international district community in general.	Erin Wolf
04/28/2022	<p>Please do not go forward with the 5th Ave option. Seattle's Chinatown has already been negatively impacted by the building of freeways and stadiums, to the detriment of residents and businesses. To build through this neighborhood would be a continuation of a long record of inequitable and callous decisions which only harm our neighbors.</p> <p>The thought of going forward with a plan that would require the closing of multiple cornerstone small businesses who've been enduring through the pandemic & a large increase in anti-Asian harassment should not be an option at all. Please look back at your options and center equity and the needs of this vibrant neighborhood in your decision-making.</p> <p>Thank you.</p>	Michelle Tong

04/28/2022	The 5th Ave WSBLE options will displace many CID local businesses as well as make the CID area hard to access. This will be another major hit, on top of COVID-19, to the businesses that I would like to visit and support. I prefer the 4th Ave options, CID-1a and 1b, because it would result in less disruption to the businesses and residents.	Naphat Lertratanakul
04/28/2022	I believe if the public had known 1) how many people would be displaced 2) how expensive this project would be 2) environmental impacts we would NOT have voted for bringing light rail into West Seattle. Please face the fact that the elevation gain from the port to the Junction is UNFEASIBLE. Scrape this project! We are no longer supporting it NOW THAT WE KNOW. Find property along West Marginal Way (does Alaska Marine Line really need all that space? Displacing a business or two is way more feasible than displacing all the homes) to put a station along there, then run EV shuttles all around WS to bring people to the station.	Cinda Stenger
04/28/2022	None of the options are great as they have detrimental impacts to the CID small business and rich history it holds. Considering all options, the 4th options are more ideal, as they have less impact to the businesses and communities. It will displace less business and disupte less community activities.	Jena Gerry
04/28/2022	I strongly recommend ST listens to the C-ID community and stakeholders. We need stronger and deeper evaluation of other possible sites and choices that do not cause harm to our neighborhood and community of the C-ID. Far to long the C-ID and other Chinatowns across the country have lived through the negative displacement and push from their leaders - all in the face of advancement. We are a community, a culture and a place. We matter. Do not shrink us or continue to cause harm in the sake of development. Instead, ask us all to the table to think of additional and unique ways we can all make a change for the better. We are a community of daughters, sons, parents, grandparents, aunties and uncles who are business owners, patrons, stakeholders, activists, professional and donors. We care and love the C-ID.	Vivian Chan
04/28/2022	The expansion of the CID light rail will disrupt and displace 5-19 historic businesses. This is unacceptable. Sound transit must help these businesses relocate with financial assistance, as this is incredibly harmful to the community in the ID. If you actually cared about equity, you would work to help the businesses there.	Debby Tran
04/28/2022	I am worried about the impact this project with have on the Chinatown-ID, a neighborhood that has already suffered financial losses because of the transportation needs of the city. Please use the route that displaces the fewest amount of small businesses and residents.	Brooke Hanson

<p>04/28/2022</p>	<p>I applaud the plan to provide mass transit for this region, but I'm dismayed that the CID Station plan (project alternatives CID2a and CID 2b) will further disenfranchise some of the most vulnerable citizens in an area of the city that has repeatedly been subjected to division, reduction and neglect, and permanently displace or close down the small businesses who have historically been relegated to this district because of redlining in Seattle and surrounding areas. Sound Transit should not tear into this district as it is an historic area that instead needs to be preserved and protected.</p> <p>Although this comment is not too suggest another neighborhood for this development, I strongly believe that there are areas nearby that don't have such a dense population of elders, mixed income housing, community organizations and social agencies that have built up a viable and urgently needed community. For example, there are more industrial areas near the stadiums and to the south of the stadiums which seem not to be residential areas.</p> <p>Specific sections that note irreparable and negative impact for the CID include:</p> <p>5.4.1 Transportation: "The project would either remove or convert some street parking to bus (or other transit) loading zones; however, the project would also be removing some of the residential or commercial land uses that created demand for parking in these areas." And, "Social and community resources within the Chinatown-International District Segment have historically faced multiple construction-related interruptions, delays, and accessibility issues associated with recent redevelopment and infrastructure projects, such as the First Hill Streetcar. " The businesses in this area have already been devastated by the pandemic. Many businesses are small and family owned and are still rebuilding. The disruption of construction and loss of parking would further exacerbate the ability to rebuild.</p> <p>5.4.2 Acquisitions, Displacements, Relocations: "... Sound Transit's study of available and vacant properties within the WSBLE study area indicates that most, if not all, displaced entities could be relocated within the city, although not necessarily within the same neighborhood." The very reason that the CID exists is to provide a safe and culturally appropriate neighborhood with the services needed by new Americans who arrive speaking an Asian language, or elderly who rely upon the culturally relevant services provided by social service agencies created through grassroots activism, or others who have found housing within multi-income apartments, often made possible by ongoing planning and negotiation with the city of Seattle.</p> <p>5.4.5 Social Resources, Community Facilities and Neighborhoods "... the Chinatown-International District was identified by the City as having a high displacement risk to residents and businesses. ...These efforts are in early phases and will continue during the Final Environmental Impact Statement and final design phases, guided by the community and informed by the actions of the Sound Transit Board to identify the light rail project to be built." The long term impacts of alternatives CID2a and CID2b need to be determined more fully and more extensive work with CID businesses and CID stakeholders who have strong ties to the neighborhood and fully value it as an integral, vibrant, irreplaceable, but fragile, neighborhood.</p> <p>I thank you for this opportunity to comment on this DEIS. I urge you to continue work on alternatives that do not threaten any part of this Chinatown-International District and the people who live and work here.</p>	<p>Charlene Mano</p>
-------------------	---	----------------------

04/28/2022	<p>I am writing as a concerned community member with deep multi-generational and family and cultural ties to the Chinatown International District and a clear eye for how the community and neighborhood have absorbed the negative construction impacts decided by federal, state, and city governments over generations, including the I-5 construction, which split the neighborhood in half, the Kingdome, then Safeco Field, the CenturyLink Field. Additionally, key infrastructure projects like the SR-99 deep bore tunnel, Seawall, Seattle Waterfront, Alaskan Way Viaduct demolition, and the First Hill Streetcar construction have put extraordinary pressure on the neighborhood for generations. The costs are shouldered by a treasured cultural community with residents and businesses currently hanging on by a thread due to the COVID-19 pandemic and extreme rise in anti-Asian hate.</p> <p>Now, I am alarmed to see that Sound Transit's Draft EIS for CID puts the community, its residents and businesses, who are already so vulnerable, in the crosshairs yet again. While I certainly understand and believe in connecting our communities with public transit, I urge Sound Transit's Board of Directors to reconsider its draft plans. Of most concern are the 5th Avenue Options, which include: construction and street closures for up to 11 years; demolition of buildings where treasured businesses like Ping's Dumpling House, Pacific HK Cafe and more are located; and extremely disruptive construction impacts including years of street closures, detours and loud machinery in the CID for up at 16 hours per day, along with poor air and sound quality. Our elders and other fragile community members live here and businesses rely on those outside the neighborhood to come for our favorite treats and family meals. CID-2a will displace 19-27 businesses and 170-230 employees. On street parking will be lost (which is already severely limited) and the loading dock and plaza, as well as garage for Uwajimaya will be impacted. The CID-21 Diagonal station will have similar impact, including temporary impacts to businesses and parking, as well as temporary displacement of the American Hotel and retail, and additional on-street parking. Finally, CID-2b will result in 18 business displacements and 170 employee displacements, as well as 40-50 on-street spots at least temporarily. While CID-1a and 1b are also impactful, they are less so.</p> <p>In sum, I urge the Board to consider the vitality and future of the CID community and make community-informed decisions that ensure our residents and businesses are cared for and supported as we move into this next phase of the pandemic and try to rebuild. As a public agency, please seize the opportunity to lead by putting first the needs of those furthest from justice and influence on decisions of long lasting consequence to the ability of this local treasure to survive and thrive--for the CID community, its residents and businesses, all of us who consider CID home, and for the future of our beloved city, which is only made stronger by the people and place of the Chinatown International District as a contributor to our history, our present and our future.</p>	Anne Katahira

<p>04/28/2022</p>	<p>Hello, I hope these are concise and to the point but at the end of everything the Ballard-West Seattle Link Extension must put riders and increased ridership first.</p> <p>Your target should be to build a solution that would help a single parent who speaks English as a second language, has a bad back, and is holding down 2 part-time jobs.</p> <p>We must not eliminate ANY stations from what voters approved with ST3 in 2016. If planned stations are removed, that is in direct opposition to what the region's voters want and need.</p> <p>All stations should be built as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters.</p> <p>-Deep and high-capacity stations also call for excellent vertical conveyances, which is proven to have not been a priority in the past. This pattern has to be broken. Elevators and escalators cannot fail riders or trap them from alternatives in the event of mechanical failure.</p> <p>Creating large capacity areas other than elevators will allow optimal use of the elevators by less physically able-bodied individuals, allowing them to still use our transit to the fullest extent. Ensure escalators and elevators are both fast while having enough capacity and redundancy to handle traffic like game-day rushes.</p> <p>Elevators should go from street level straight to the platform level, without mezzanines to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. If we are to anticipate expanding our transit system off of this current expansion, we need a better and more flexible solution.</p> <p>In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard.</p> <p>In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. The organizations here have had to deal with quite a bit of disruption from the pandemic and Climate Arena's construction, and additional disruption and impacts should be heavily weighed and avoided when possible.</p> <p>In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. This will allow better expansion opportunities and quicker transfers which will increase usage.</p> <p>At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. Having to navigate 3-4 different mezzanines to reach your</p> <p>At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.</p> <p>In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.</p> <p>In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p>	<p>Alex McGuire</p>
-------------------	--	---------------------

Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.

In order to future proof our growing system, we must design for expandability in four locations:

- (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).
- (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
- (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
- (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
- (5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

04/28/2022	<p>As excited as I am for a light rail connection to intersect between International District and Ballard, we must also consider the impact that current construction has. Chinatown has been heavily targeted and was even more so attacked with the lockdown and COVID. Traffic through the blocks are already congested and the businesses are holding on to what they can. If construction were to occur and displace people, there would be significantly less foot traffic, reducing the profitability for businesses. With construction and road blockages, car traffic will definitely increase, and with that, a decrease in people wanting to travel through. There is always the promise of "in a few years, it'll be so much better and these businesses will thrive". But what about now? If these businesses can barely make it through Covid, how can we expect them to make it through construction? Please consider the impact on you have on these families that work 16 hour days, 7 days a week, that can't shift to another workplace as easily.</p>	Melissa Huang
04/28/2022	<p>CID-1A or CID-1B would be the better options because those would create the least amount of construction disturbance to the area. The Chinatown-International District has already been hard hit over the past few years, and we do not want to lose any beloved international district businesses/institutions due to displacement or other negative disturbances to the neighborhood.</p>	Isabella Sun

<p>04/28/2022</p>	<p>As many of the Sound Transit staff and Board Members know, I have been a staunch advocate of selecting the Yancy/Andover alternative, connecting to a light rail route that then follows/parallels the automobile arterial of Avalon Way.</p> <p>Sound Transit's two stated objections to the Yancy/Andover route are the Delridge station location and the truck traffic going in and out of Nucor Steel</p> <p>Both objections can be ameliorated:</p> <p>The station location could be moved 600 feet to the west, onto Andover. Here it would be adjacent to open land (surface parking lots) that can be made into a transit hub and TOD. If I am recalling correctly, Metro shared estimates 80 to 85 percent of light rail riders using the Delridge station will result from/to bus transfers.</p> <p>The truck entrance for Nucor can be moved to the northeast corner of the Nucor property where trucks can enter and leave the Nucor plant on lower Spokane Street. This move would eliminate truck traffic interference with the Delridge Sound Transit station.</p> <p>This access alternative was looked at by a team consisting of Sound Transit representatives, Metro, The City of Seattle, and Walter Reese, an executive at Nucor Steel. The solution was deemed workable. The two parties that would need to work out the details of this solution are: 1. The City of Seattle and 2. Nucor. I'd like to see housing in Youngstown preserved. Youngstown is a vibrant, growing community. Nothing stands still. Starting in 2017 and during the years following, Youngstown sprang to life. Approximately 100 homes were built in a two-block area; all this, during the time light rail options were being studied. Many of these homes are squarely in the path of the two preferred alternatives. Youngstown is a vibrant mix of the old and the new; it remains relatively affordable when compared to other parts of Seattle.</p> <p>Please respect these families and homeowners and choose Yancy/Andover as the line to be built.</p> <p>Respectfully, Dennis Noland</p>	<p>Dennis Noland</p>
<p>04/28/2022</p>	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years, with increased noise & air pollution, dust, dirt, vibrations in the CID is unacceptable. Not to mention disruptions to 30 immigrant businesses permanently closed or forced to move due to 5th Avenue construction. To do so feels violently harmful to marginalized communities and I wholeheartedly oppose this plan.</p> <p>Sound Transit, please take 5th Ave. off the table. 4th Ave Tunnel Station avoids 5th Ave impacts! Move Forward on 4th!</p> <p>Sincerely, Lauren Hipp -Seattle-born and -raised -Current South Seattle Resident (going on 6 years) -Lifelong supporter of Chinatown International District</p>	<p>Lauren Hipp</p>

<p>04/22/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Ted Hastings twhastings@gmail.com</p>	<p>Ted Hastings</p>

<p>04/22/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle peak loading and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a station with entrances near the intersection of Westlake and Mercer. At Denny: Consider shifting the station to the west, in the vicinity of Fairview and Denny. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. Consider design alternatives that would allow the proposed station to be shallower. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. 04/22/2022	<p>Manager DEIS Comments,</p> <p>I realize voters decided on an option from West Seattle to Ballard, but ST3 is taking that route too literally since it was the only option given to voters.</p> <p>It makes very little practical sense to run a north/south line from Interbay to Ballard since there's already a north south line at I-5. With Seattle's unique geography being so narrow between two bodies of water, the entire north city could be serviced with east/west lines crossing the north/south line.</p> <p>Instead of doing a line up Interbay, which serves very few, it would make far more sense to run a line from Montlake & Leschi to Magnolia, with stops at the Seattle Center, under the mid part of Queen Ann, then Interbay, Magnolia, and north Magnolia. Forget about doing a bridge which makes no practical sense whatsoever.</p> <p>For Ballard, do crossing east west lines every 20 blocks, so that you transfer onto the main n/s line. You could do all of those as surface streetcar lines or even bus lines.</p> <p>I would suggest presenting more options to voters on which to choose, because running a line up Interbay makes no sense, since the population centers are east and west of that corridor. You really think all these people are going to walk several miles to Interbay?</p> <p>Phil Caldwell pc2143@yahoo.com 1810 Day Island Blvd West University Place , Washington 98466</p>	Phil Caldwell

--	--	--

<p>04/24/2022</p>	<p>Dear Sound Transit-I love to go to West Seattle to visit friends and for an exercise class, among other reasons. I look forward to a faster and more reliable way to get there via mass transit. At age 75, I would strongly prefer an option that is more quickly achieved. I also figure that a light rail feeder would be too destructive, and ineffective, and would take way too long, causing traffic to be worse rather than better for such a long time. I prefer a serious look at a gondola system. I also question the sincerity of the effort for a quality EIS if the Ballard and W. Seattle feeder lines are considered as one.</p> <p>Structure of the DEIS Project Chapter 1.3 addresses West Seattle and Ballard (incl. downtown) as one project. While many chapters are separate for each portion, others are combined. Why are these two separate project treated together when they do not even connect directly and are built on different timelines? A lot of detail has been lost by treating the separate segments as one and this should be rectified for the final EIS.</p> <p>Environmental Impact Chapter 1.2.2.6 points out the need to reduce vehicle miles by 30 percent by 2035. However light rail will not connect West Seattle to the SODO light rail station until 2032 and won't be extended farther until at least 2037. That won't provide much incentive for drivers to switch to public transit (as stated in Table 4.2.6). Even after 2037 the expected savings in vehicle miles are minuscule while there will be a huge carbon impact caused by the construction. Light rail's carbon footprint should be considered, and a proper (outside expert) study done to compare gondola and light rail carbon footprints in construction and operation. Appendix L4.6 references carbon consumption, citing that "general FTA estimates" were applied. However, no federal project has ever been as large as the 2+ mile, 8 to 16-story tall elevated light rail guideway planned for West Seattle. Energy consumption during construction was not even considered. (Chapter 4.2.10 says "The FTA Greenhouse Gas Emissions Estimator was not used.") Therefore, the carbon figures for the elevated alternatives will be much higher than general FTA estimates. A proper impact evaluation for various alignments and possible other modes, such as bus and gondola, would involve using tools such as the Embodied Carbon in Construction Calculator (EC3) (developed by the nonprofit, Building Transparency) and be conducted in close consultation with objective environmental science organizations like the Carbon Leadership Forum (CLF), a nonprofit, industry-academic organization at the University of Washington. Calculations also need to account for any displacement of existing structures which ultimately have to be replaced in some way. Chapter 4.2.6.3 fails to explain why a reduction of 400 trips on the West Seattle bridge (see Table 2-9 of App. N) would contribute to savings of 117,000 miles per day in the region. Even if calculations were accurate, the construction related carbon as estimated in Appendix L4.6D is between 158,067 and 614,461 tons, and the regional, annual carbon reduction from vehicles (Table 4.2.6-2) 10,941 tons once the light rail connects directly downtown in 2037 as the earliest. Approximately a third of this would be attributable to West Seattle. It may take between 42 to 168 years to offset the West Seattle light rail construction related carbon emissions. The DEIS fails to mention that a gondola could provide reliable, grade separate public transit a decade earlier than light rail while generating substantially fewer greenhouse gases during construction. That would significantly contribute to meeting the goal for 30% reduction by 2035.</p> <p>Acquisitions, Displacements, and Relocations Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the "Least Harm Analysis" test in 4.2.18.5. As stated previously, a 2014 Sound Transit paper on mode choices for the regional transit network said: "Several of the technologies that have moderate to high HCT capabilities, but are generally less suitable for Sound Transit, could be considered for some service if that service would operate on principally exclusive rights-of-way and is not intended to interline (i.e., share the same tracks) with the light rail 'spine,' which extends from Everett to Tacoma, and from Seattle to Redmond." When Sound Transit issued the April 7, 2022 Gondola Feasibility Report, it reiterated this statement in dismissing "SkyLink's" proposal from consideration. SkyLink is proposing a gondola to serve not as the primary mode of the regional network but as a feeder from the ST3 designated station locations to the main spine of the light rail system. An urban gondola could provide the capacity needed, could be constructed with minimal disruption, displacement, and damage to the environment and established community. Specifically, it would avoid the following problems caused by proposed light rail alternatives: Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore. Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin practically shows NO available home inventory in West Seattle, the DEIS just says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner</p>	<p>John Birnel</p>
-------------------	--	--------------------

	<p>cannot qualify for a new home based on current social status / credit rating. Commercial real-estate is very limited in West Seattle which mean displaced businesses may have to relocate causing them to lose their customer base and West Seattle residents may have to travel longer distances to get services.</p> <p>Chapter 4.2.3.3 includes several pages of huge impacts. It talks about the fact that light rail will destroy businesses, reduce the city’s tax base and may affect tribal fishing rights. It fails to address the social impact for the employees and owners affected by this destruction, many of them small businesses whose livelihood is affected. It does not address the strain on the social services. Even more importantly it does not address the impact to the community which has grown around these services and the businesses and families which will be impacted indirectly. Alki Beach Academy for example provides daycare services to 300 children; affected parents may need to quit their jobs or move elsewhere if they lose affordable daycare.</p> <p>Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, it claims it is “consistent with existing views.” While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The norther bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway will be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther.</p> <p>Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRide-H. Now all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) will be impacted by multi-year construction and related detours. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours.</p> <p>Figure 4.2.5-4 does not show any coverings over the station therefore making it appear lower than it is. It only shows the destruction of homes directly adjacent to the station, but not along the guideway which again provides a distorted impression of what will happen.</p> <p>John Birnel 719 N. 68th St. Seattle, Wa. 98103</p>	
04/24/2022	<p>My name is Nat West and I appreciate having the opportunity to comment on Sound Transit’s possible light rail track’s location. I am fortunate to own a 650 Dusty Strings hammered dulcimer, the best hammered dulcimer in the World, manufactured in Seattle. It is my understanding one option for the track will cut through the Dusty String building and force them to relocate. The small, family owned manufacturing business is unique and well known throughout the World for hammered dulcimers and harps. They have done business in Seattle for over 43 years and I am hopeful there may be other options for the track that will not effect them. I feel sure they want to stay in Seattle and I’m hopeful they can do just that by staying in their current location.</p> <p>Thank you for your consideration. Nat</p>	Nat West

<p>04/24/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Michael Thomas thomas.mike@gmail.com</p>	<p>Michael Thomas</p>

04/25/2022	<p data-bbox="261 100 610 128">2.6.6 Tunnel Light Rail Construction</p> <p data-bbox="261 159 1300 243">For all proposed tunnel construction methods, the need for fresh air requires that a mechanical ventilation system and fans be in place. Fans could run for 24 hours a day and could be audible at tunnel portals, stations, or access locations.</p> <p data-bbox="261 275 1300 359">Comment: For CID/SODO segment, need to state locations of the vent systems and fans; need to clarify are these separate from the ones going onto the BoA property and the Naomi Teahouse property; how audible will they be?</p> <p data-bbox="261 390 1300 537">Excavated material would be removed and hauled to a permitted disposal site. Truck hauling would require a loading area, staging space for trucks awaiting loading, and provisions to prevent tracking soil on public streets. Truck haul routes and trucking hours would require approval by the City of Seattle. Surface hauling could occur at night during off-peak traffic periods or could be concentrated during the day to minimize noise in noise-sensitive areas.</p> <p data-bbox="261 621 1300 768">Comment: Where is the staging space for trucks awaiting hauling or CID 2a and diagonal? Haul routes not given for CID 2a or 2b. Measure noise of surface hauling at night when people are trying to sleep and/or leave windows open. What is the fugitive dust plan? How will impacts to Chinatown night businesses be mitigated? Especially the cultural imperative of "siu yeh" or "eat late at night." The closest equivalent in English is "midnight snack."</p> <p data-bbox="261 831 318 858">Betty</p>	Betty Lau

<p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Liz Dodds 4545 Sand Point Way NE Seattle, WA 98105</p>	<p>Liz Dodds</p>

<p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. 04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last mile connections. That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough considerations of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Max Morley 22415 69th Pl W Mountlake Terrace, WA 98043</p>	Max Morley
------------	---	------------

<p>04/25/2022</p>	<p>Hi folks,</p> <p>I've reviewed the Draft Environmental Impact Statement executive summary and I'm concerned with the extraordinary amount of displacement involved with the WS light rail extension. Particularly because the demographics in many of the proposed routes have a disproportionately high number of lower income and/or BIPOC communities. I'm also concerned that the Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for. I'm a long time golfer as well and the loss of revenue and loss of recreation opportunity due to the impact at the West Seattle golf course would impact for over 60,000 golfers each year.</p> <p>Please take another look at the gondola option. I understand it's not your default modality, but this really does make a ton of sense.</p> <p>Cheers, Michael O'Brien michaeltimothyobrien@gmail.com (206) 245-6534</p>	<p>Michael O'Brien</p>
<p>04/25/2022</p>	<p>The construction and operation of light rail within West Seattle will necessarily have negative visual and experiential impacts on West Seattle. It is critical that these impacts be minimized by routing considerations and limited use of elevated track. The use of fully elevated track for this portion of the light rail system would be unique within the overall system in its relationship to residential neighborhoods, and would be extremely destructive to said neighborhoods. Elevated track is acceptable when adjacent to freeways, or when necessary to cross waterways, but cannot be allowed within dense, pedestrian-oriented urban neighborhoods, where it prevents uses below the track and aggressively depresses uses adjacent.</p> <p>For the Delridge segment, most of the alternatives create extremely divisive and imposing overhead structures that will permanently scar the neighborhood. DEL-6 is far preferred in its limited use of elevated track, its alignment along a natural boundary between industrial and residential uses along Andover, and adjacency with the Fautleroy Way right-of-way.</p> <p>For the West Seattle Junction segment, both of the elevated alternatives create a physical and visual barrier between the Junction and the Triangle neighborhoods -- the gateway to West Seattle -- at a time when development is progressing towards knitting these areas together. WSJ-1 is the most destructive alternative to the existing neighborhood, with the potential for further damage with future expansion to the south. The WSJ-2 station is too far removed from the heart of the Junction, and too close to the Avalon station. WSJ-5 provides for the most beneficial station locations, limits its above-grade impact to the area already compromised by a freeway approach road, and presents a sensible balance of cost considerations relative to other tunnel alternatives.</p> <p>Thank you,</p> <p>Casey Borgen</p>	<p>Casey Borgen</p>

04/25/2022	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>Construction on 5th Avenue in Chinatown to Japantown means: Full closure of King Street, S. Weller and 5th Avenue for several years. Disruptions to 300 businesses already battered by the pandemic, higher than ever anti-Asian hate crimes, criminal violence. Disruptions to 30 immigrant businesses permanently closed or forced to move. Disruptions to schools, daycares, programs serving thousands of children and youth. Disruptions to programs, classes, recreation for 1,200 elderly non-English speakers.</p> <p>Therefore, please take 5th Ave. (option 2a and 2b) off the table. "Move Forward on 4th!" (Option 1a or 1b).</p> <p>Thank you for your consideration, Zhi Zhou</p>	Zhi Zhou
04/25/2022	<p>Construction on 5th Avenue in Chinatown to Japantown means: Full closure of King Street, S. Weller and 5th Avenue for several years. 04/25/2022	<p>In this day and age, all projects of this nature around the world are tunnels for the least longterm future impact. The west seattle bridge is a perfect example of imminent failure with any other option.</p>	MJ Feiner
04/25/2022	<p>More on below 2.6.6:</p> <p>Need to establish baseline of noise, haul truck noise, vibration, air quality for CID/SODO Segments 2a, 2b, diagonal. Then if 5th Avenue is chosen, re-measure for differences for mitigation spending. Need to establish photo inventory of what historic buildings look like pre construction, during construction and post construction to correlate to changes in measurements in #1 Perhaps computers could be used to predict future noise, air quality, vibration effects of demolition and tunnel construction activities.</p> <p>Betty</p>	Betty Lau

<p>04/26/2022</p>	<p>3.15.4 Mitigation for Operation Impacts .</p> <p>The following locations have pedestrian facilities that would experience L.O.S. F conditions and be substantially impacted by the project:</p> <p>Sidewalk on the east side of 5th Avenue South between South Jackson Street and South King Street for Alternative CID-2a and Option CID-2b</p> <ul style="list-style-type: none"> · Pedestrian facilities unexplained. · Omission of pedestrian facilities discussion for proposed King, Weller, 6th Avenue closures <p>Any other L.O.S sidewalks?</p> <p>Comments:</p> <p>Define "rechannelization" slated for 4th Avenue. Define "Pedestrian facilities." What about the sidewalks on the closed part of King Street, Weller Street and 6th Avenue from Jackson to Weller? Note: Presentation stated one block of 6th Avenue adjacent to HHP. Would be closed but DEIS says 2 blocks will be closed. Discrepancy needs to be addressed.</p>	<p>Betty Lau</p>
<p>04/26/2022</p>	<p>3.16.3.3 Chinatown-International District Segment</p> <p>Most of the pedestrian activity with the International District/Chinatown Station with any of the alternatives would be underground or within the plaza area, minimizing interaction with vehicles.</p> <ul style="list-style-type: none"> · Bicycle traffic lacks consideration for over 1,200 elderly limited English residents who walk slowly throughout the CID and daily to Hing Hay Park for exercise and. socializing · Develop a safety plan to control bicycle speed to avoid elderly pedestrian interactions with bicyclists 	<p>Betty Lau</p>

04/26/2022	<p>3.19.3 Chinatown-International District Segment 3.19.3.1 Arterial and Local Street Operations</p> <p>Table 3-29. Key Construction Roadway Closures – Chinatown-International District Segment</p> <p>CID 2a: 5th Ave. from Jackson to Weller-- Partial closure, 2.5 years Full closure, 9 months (includes 6-month partial closure of intersection at South Jackson Street)</p> <p>CID 2b: 5th Ave. from Jackson to Weller—partial closure, 1 year</p> <p>CID 2a: 5th and Jackson-- Partial closure, 6 months for intersection at 5th Avenue South</p> <p>Comments:</p> <ul style="list-style-type: none"> · Traffic diversion from closure of 4th Avenue should be equitably distributed between waterfront, Pioneer Square and CID. · ST plans to detour all 4th Avenue detour traffic into CID, unreasonable and unfair. · Equitable distribution out to the waterfront needed · Street closures need to include pedestrian facilities discussion for sake of the businesses; no sidewalk, no business 	Betty Lau
04/26/2022	<p>3.19.3.2 Transit</p> <p>Trolley buses could potentially be rerouted through the Chinatown-International District on 7th Avenue South or 8th Avenue South.</p> <p>Comment: Re-route to James or Madison via waterfront; re-route to 12thh and King then loop over to Rainier, north on Dearborn to First Hill; get some creative ideas going</p>	Betty Lau
04/26/2022	<p>3.19.3.3 Parking</p> <p>Alternative CID-2a could temporarily remove 155 to 195 on-street parking spaces on 6th Avenue South, South Weller Street, 5th Avenue South, and South King Street, and could eliminate additional parking along 8th Avenue South with the relocation of the trolley bus system. Option CID-2b could temporarily remove 40 to 50 on-street parking spaces on 6th Avenue South and South Weller Street during construction. These parking impacts would not occur with the diagonal station configuration for Alternative CID-2a, but 10 to 20 on-street parking spaces on 5th Avenue South and South King Street would be temporarily removed.</p> <ul style="list-style-type: none"> · Incalculable business losses and severe adverse effects to those trying to see elderly relatives; need to analyze cost benefit socially to the community · Severe im[pacts to local visitors since CID is a major regional draw for Asian Americans and tourists as the former home of Bruce Lee and hub of Asian American cultures · Remove equivalent number of parking spaces from The Ave or Market Street or California Avenue or from the UVillage because of the expectation that everyone will walk, bicycle or take transit there. 	Betty Lau

04/26/2022	<p>3.19.3.4 Non-motorized Facilities (Bikes & Pedestrians)</p> <p>The closure of South King Street and South Weller Street would also affect pedestrian movements to and from the existing light rail station. The diagonal station configuration for Alternative CID-2a would reduce the duration of the 5th Avenue South partial closure and would allow South Jackson Street to remain open for pedestrians.</p> <p>Comment: Remember 1200 of those pedestrians will be slow moving elderly non English speaking residents with various challenging conditions. Move Forward on 4th for their sakes. DEIS needs to plan for their safety during demolition, construction and post construction, particularly for those using assistive devices and those in cognitive decline or poor mental health. What are the mitigations for them in the new station plaza; perhaps ban bicycles, scooters and have all riders walk their bicycles and scooters in.</p>	Betty Lau
04/26/2022	<p>3.19.3.5 Safety</p> <p>Comments:</p> <ul style="list-style-type: none"> · Again, lack of plan to protect elderly from bicycle and scooter crashes <p>No mention of daycare or elementary children protections from bikes and scooters</p>	Betty Lau
04/26/2022	<p>3.20.3 Mitigation for Indirect Impacts</p> <p>No mitigation for indirect impacts is anticipated.</p> <p>Comment: Indirect impacts to the community need to be listed and analyzed for impacts to residents and businesses. If there aren't any, ask community to contribute to the list.</p>	Betty Lau

<p>04/25/2022</p>	<p>Overview: Integrity & Trust</p> <p>ST has shown a cavalier disregard for the legitimate benefits of gondola versus light rail in West Seattle, including eschewing an open-minded review by experts qualified to speak to gondola technical feasibility, obfuscating facts in the DEIS, and failing to acknowledge contemporary advances in transit modes highlighting gondolas as an area of extreme opportunity, especially for highly dense, hilly areas with commercial waterways such as many places in the Seattle metropolitan area and such as a growing number of communities are considering world-wide.</p> <p>A reasonable, transparent staff would take a solid, due-diligence look at gondola, and nearly guaranteed would see that this better serves the WS peninsula in virtually EVERY way; preserves our precious real estate and habitats; vastly reduces our carbon footprint; delivers a DECADE earlier; and frees up \$2B to serve other urgent transit needs especially in under-served communities.</p> <p>WHY would ST not opt for a superior solution that lays groundwork to serve expanded communities?</p> <p>Real Estate costs</p> <p>LR (light rail) downplays devastation on 1000-2000+ residents & business demolitions and lack of local relocation ability (4.2.1.3, 4.2.1.7/8), wildlife (including protected heron & osprey populations and other wetland, bird and salmon habitats) and green spaces, ALL nearly entirely mitigated by aerial gondola system.</p> <p>Homes/businesses will not easily/feasibly re-locate nearby ('within the project vicinity) due to Relocation will likely impact their credit scores/business forecast, reduce borrowing</p> <p>Property value estimates will likely be far below actual market prices in our historically hot real estate market</p> <p>Virtually no real estate inventory for nearby relocation</p> <p>Relocation outside the immediate area puts MORE transportation burden on the beleaguered WS community</p> <p>Those remaining in the area will have a massive up to 150' rail grade carting travelers across their City/Sound views with resulting privacy loss; gondola has mist-able windows for privacy taking up a tiny fraction of the visual landscape, with a fraction of the noise pollution both in construction and operation (4.2.11, 4.2.4.3, 4.2.5.3.3)</p> <p>Though hard to decipher from ST's vague notices, many beloved businesses likely to be demolished – Trader Joes, beautiful 'new' YMCA building, Skylark Café, Tom's Auto, to name a scant few. Others, such as very new apartment buildings, would be razed at significant replacement cost. NONE of this is necessary with a gondola system.</p> <p>Environmental Impact, (1.2.2.6)</p> <p>Appendix L4.6 carbon footprint estimates are extremely under-stated as they omit sizable construction and rebuilding of displaced structures.</p> <p>SkyLink would provide reliable, grade separate public transit some TEN YEARS earlier than LR for a fraction of carbon footprint strongly aiding 30% reduction by 2035 goal.</p> <p>Removing trees, physical disturbance of construction and soil on the Pigeon Point hill will increase instability and likelihood of landslides compared to vastly lighter weight gondola system (4.2.9, 4.2.11, 4.2.17)</p> <p>Likewise, soil impacts with the high-impact LR construction (4.2.11) have major risk of shifting in general and in an earthquake; Lighter weight gondola is safer in virtually all contexts including floods, ice/snow.</p> <p>Equity</p> <p>ST ignores high-capacity transit needs in lower income/BIPOC areas (eg South Park, Westwood, White Center). LR along Duwamish paired with gondola to WS hilly, dense areas (Alaska Jcn, Avaln, N. Delridge) could be done for same price as LR into those WS areas with vastly improved transit services</p> <p>Transit Mode review: Chapter 2 ignores compelling options</p> <p>Since 2014 feeder lines are considered connecting areas to LR spine via gondola such as Kirkland's current review.</p> <p>Chapter 2.8.2.1.1: costs have skyrocketed 2-3x from earlier estimates, triggering vote-free realignment consideration (Section 2)</p> <p>Does not address extending the travel burden added to years of no usable high bridge (4.2.4.4)</p> <p>Does not compare station footprints such as in the Alaska Junction to a fraction of the space needed for gondola station (4.2.5.4)</p> <p>Traveler experience (3.4.3.3.1) inaccurate depiction; per gondola experts, fewer stories to traverse at stations.</p> <p>PLEASE LISTEN AND ACT for the best interested of the West Seattle Peninsula.</p> <p>Best regards,</p> <p>Terese Machmiller 206.890.2277 3rd Generation West Seattleite</p>	<p>Therese Machmiller</p>
-------------------	--	---------------------------

04/25/2022	<p>Chapter 2 fails to address mode selection. In addition to the alignment reevaluation, Sound Transit should also review the choice of transit modes to meet West Seattle objectives. In 2014 Sound Transit evaluated different, high-capacity transit choices to serve as the spine of the regional network (from Everett to Tacoma and east from Seattle to Redmond.) This was before shorter, “feeder” lines to connect neighborhoods like West Seattle were being considered. When West Seattle was added to the ST3 measure, a gondola was not considered even though the 2014 high capacity mode study stated that it “could be considered for off-spine service that would operate on principally exclusive rights-of-way and would not interline (share the same tracks) with the spine.” But instead, it was assumed West Seattle would be served by light rail, although no planning was done before the costs were determined and the measure put to vote.</p> <p>Sue Luke 4545 42nd Ave SW #501 Seattle, WA 98116 206-265-3175 seattle.subee@gmail.com</p>	Sue Luke
04/25/2022	<p>Please do seriously consider putting any rail and stations underground in this limited space, almost quaint, neighborhood of West Seattle. The crowding has become quite noticeable in the past 10 years, and the addition of a rail plus stations overhead would pollute the ears, yet alone the eyes. Please do seriously think about this impact.</p> <p>Thank you for the opportunity to respond.</p> <p>Mrs. Sharon Chafin</p>	Sharon Chafin

<p>04/25/2022</p>	<p>Manager DEIS Comments,</p> <p>INSTALL TURNSTILES AT ALL STOPS STARTING TODAY AND INTO THE FUTURE!!! - IT IS UNFAIR TO PEOPLE LIKE MYSELF, WHO PAYS, THAT OTHERS DON'T PAY AND RIDE LIGHT RAIL FOR FREE. ALTERNATIVELY, MAKE LIGHT RAIL, AND PERHAPS ALL OF KING COUNTY METRO AND SOUND TRANSIT.</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p>	<p>Jeffrey Wolf</p>

In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>WILLIAM WHITE willcwhite@aol.com</p>	<p>William White</p>

04/25/2022	<p>I am a homeowner and a taxpayer and a Seattle voter. I take the light rail every single day by choice. It's an incredible amenity for our city and sets us apart from so many other places in this country. I'd like you to avoid making incredibly shortsighted decisions. Please consider my following comment:</p> <p>This is a historic investment in our city and I think we need to avoid shortcuts so that this infrastructure is actually functional for the next 100 years. Spend the money and do it right. I would so much rather we pour money into this than countless other things we insist on spending money on. Good transit is what creates a vibrant, attractive, accessible, healthy city. Let's continue to lead the country by example and put down good rail. Employ creativity and fortitude against difficult budget shortfalls and be courageous against politically difficult choices - money will be tight and people will be angry no matter what. So let's just do it right.</p> <p>First of all, AVOID THE VERY DEEP STATIONS at all costs. This is absurd. It should not take 6 minutes to enter a station. High traffic downtown transit stops should NOT be elevator-only. We are smart enough to figure out proper business and traffic mitigation - build a cut-and-cover tunnel on 6th. Do not take the politically easy option by destroying the practicality of this transit. It should be quick and easy to enter these stations and to transfer between lines at ID and Westlake. Otherwise there is no point in the second downtown tunnel.</p> <p>Second, DO NOT consolidate Denny and South Lake Union stations. These are stations at the core of our city. They will serve tens of thousands of people. South Lake Union is a huge place and will already be under-served by the one station. Denny is adjacent to the downtown core and extremely dense. Consolidating them into a location not near either of those neighborhoods is criminally lazy and shortsighted. Cut a station in West Seattle, sure, but NOT AT THE MOST DENSE AREA OF OUR CITY. An infill station is not possible here, we will be stuck with that stupid mistake forever. Find the funding.</p> <p>Third, Ballard is one of the most prominent and busy neighborhoods in our city, and is one of the most notoriously difficult to access. We should absolutely be considering a station at 20th in Ballard to be actually in the center of the neighborhood. The ridership would be so much higher. It would be one of the busiest stations in the system. So often we have stations so far from the actual neighborhood core and it's incredibly frustrating. At the very least, there needs to be a station entrance on the West side of 15th so we are not required to cross a dangerous huge vehicle thoroughfare, after walking a half mile from the actual neighborhood, to reach this station. And build a tunnel because a giant bridge will be effectively the same cost and it will look ridiculous with the height requirements. If we are going to spend the money, do it right.</p> <p>If we need to trim project scope the clear answer would be West Seattle. This is an area that barely wants light rail, will probably only ever be a sea of single family homes, and the logistics of getting up the severe slope is insane considering the low ridership it will get. Cut a station or two to find your savings. In the dense areas where we really need good transit, such as downtown, SLU, Seattle Center, Ballard, provide the stations we need. Do not create yet another example where in 20 years we look at what we have and ask how we were so shortsighted.</p> <p>Thanks, Nils Hostage</p>	Nils Hostage

04/25/2022	<p>Dear Sound Transit,</p> <p>Please accept this public comment concerning the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions (WSBLE). As someone who supports nonprofit organizations in Chinatown / International District, I am deeply concerned about the impacts of this project on our neighborhood.</p> <p>I would like to urge Sound Transit to prioritize the 4th Avenue shallow option as the preferred alternative through Chinatown / International District, and that it discontinue consideration of all 5th Avenue alternatives.</p> <p>There are many reasons why I believe the 4th Avenue shallow option is the best alternative: The 4th Avenue option will minimize impact to businesses, including many small businesses, in the CID. The CID is a neighborhood that is already at high risk for gentrification and displacement, and it is also a neighborhood that has historically bore the brunt of large-scale infrastructure projects (e.g. I-5, sports stadiums). Sound Transit now has an opportunity to address these racially-motivated historical harms and choose an option that will protect small businesses and cultural heritage.</p> <p>Through conversations with community partners who have much deeper roots in the neighborhood than our organization does, I have heard repeatedly that there is significant fear that the neighborhood will be irreparably harmed if one of the 5th Avenue options is chosen. I believe that the people most rooted in a community should have the most power in choosing the future of that community, and so I want to amplify the voice of other CID organizations and individuals advocating for the 4th Avenue option.</p> <p>When comparing the 4th Avenue deep and shallow alternatives, it seems clear that the deep alternative will create significant access challenges to the new station (not to mention challenges for people transferring between lines), which risks turning people off from visiting the CID and limiting the economic benefits that the new station could bring.</p> <p>We all know that the decisions made in the next few months will affect the CID for the next 100 years. I strongly urge Sound Transit to prioritize the current and future needs of residents of the CID by choosing the 4th Avenue shallow alternative.</p> <p>Sincerely, Sam McVeety</p>	Sam McVeety

<p>04/25/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). 04/25/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Neha Nariya</p>	Civic Hotel

<p>04/25/2022</p>	<p>Hello,</p> <p>I'm writing to encourage Sound Transit to re-consider SkyLink as a viable alternative to light rail expansions in West Seattle.</p> <p>This will be a faster (available sooner), more cost effective, with fewer displacements of WS residents and businesses. Please see comments below.</p> <p>Acquisitions, Displacements, and Relocations Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the "Least Harm Analysis" test in 4.2.18.5. As stated previously, a 2014 Sound Transit paper on mode choices for the regional transit network said:</p> <p>"Several of the technologies that have moderate to high HCT capabilities, but are generally less suitable for Sound Transit, could be considered for some service if that service would operate on principally exclusive rights-of-way and is not intended to interline (i.e., share the same tracks) with the light rail 'spine,' which extends from Everett to Tacoma, and from Seattle to Redmond." When Sound Transit issued the April 7, 2022 Gondola Feasibility Report, it reiterated this statement in dismissing "SkyLink's" proposal from consideration. SkyLink is proposing a gondola to serve not as the primary mode of the regional network but as a feeder from the ST3 designated station locations to the main spine of the light rail system. An urban gondola could provide the capacity needed, could be constructed with minimal disruption, displacement, and damage to the environment and established community.</p> <p>Specifically, it would avoid the following problems caused by proposed light rail alternatives: Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore.</p> <p>Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin practically shows NO available home inventory in West Seattle, the DEIS just says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify for a new home based on current social status / credit rating. Commercial real-estate is very limited in West Seattle which means displaced businesses may have to relocate causing them to lose their customer base and West Seattle residents may have to travel longer distances to get services.</p> <p>Chapter 4.2.3.3 includes several pages of huge impacts. It talks about the fact that light rail will destroy businesses, reduce the city's tax base and may affect tribal fishing rights. It fails to address the social impact for the employees and owners affected by this destruction, many of them small businesses whose livelihood is affected. It does not address the strain on the social services. Even more importantly it does not address the impact to the community which has grown around these services and the businesses and families which will be impacted indirectly. Alki Beach Academy for example provides daycare services to 300 children; affected parents may need to quit their jobs or move elsewhere if they lose affordable daycare.</p> <p>Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, it claims it is "consistent with existing views." While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The northern bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway will be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther.</p> <p>Project funding/cost Chapter 2.8.2.1.1 lists the many alternatives contemplated in the DEIS and the associated total costs</p>	<p>Taylor Pangallo</p>
-------------------	---	------------------------

	<p>between \$3 billion and \$4.7 billion which is about double or triple the amount approved by voters in ST3 (\$1.7 billion). Before the pandemic, three West Seattle buses (RapidRide-C, #121, #21) already provided 25,500 trips daily. The DEIS projects 27,000 trips on light rail by 2042, only 1500 more than buses were providing in early 2020. There will be little improvement in travel time for many riders, given the likely need to take a bus to a West Seattle light rail station and then disembark at SODO and wait for another light rail train to go anywhere else for at least the next 15 years. See Transit Time category that follows. Table 2-9 of App. N indicates Sound Transit estimates light rail to reduce 400 vehicle trips on the West Seattle Bridge by 2042. At a light rail cost of almost \$10 million per additional daily trip (plus the building of additional OMF capacity and train acquisition) and an annual operating cost of \$35 to \$40 million this investment does not seem worthwhile – and that’s without considering the cost to the environment of greenhouse gases emitted during construction.</p> <p>Gondola technology has been proposed by citizens since 2015 but always ignored or dismissed as incapable of serving regional transit needs despite the fact that it is being suggested, not as a regional mode, but as a high-capacity feeder for a densely developed terrain with hills and water obstacles where light rail is difficult, expensive, and damaging to build. Other light rail corridors such as from SODO to Georgetown/South Park could provide a more economical way (both in construction and annual operation) to provide light rail to the Duwamish peninsula.</p>

04/25/2022	<p>Manager DEIS Comments,</p> <p>Executive summary: I support everything Seattle Subway has to say on this subject.</p> <p>We need to think long term and get this right. That means prioritizing good transfers and good station placement. Particularly with the very real possibility of extra funding from a Seattle-only ballot initiative in 2024, this is not the time to cheap out.</p> <p>Some of the depths for the downtown stations are ridiculous. Please actually consider the perspective of the people who will be using the system!</p> <p>The recent news of the minimum bridge height set by the Coast Guard provides an excellent opportunity to revisit a Ballard tunnel to 20th, putting the station where it would be the most useful. Have you ever walked from 14th to Ballard proper? It's a pain. We should be reinforcing our existing urban villages, not hoping to recreate them on their outskirts after another decade of development.</p> <p>This is one of the most important projects currently underway for the future of the region. I implore you to make sure we get it right, while we still can.</p> <p>Thank you for your time.</p> <p>Matthew Dockrey mrd@cyphertext.net 11220 Fremont Ave N Seattle, Washington 98133</p>	Matthew Dockrey
------------	---	-----------------

<p>04/25/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Divya Jayaraman divya_jayaraman@hotmail.com</p>	<p>Divya Jayaraman</p>

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last mile connections. That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains – and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough considerations of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Rebecca Ralston 9209 187th St SW Edmonds, WA 98020</p>	Rebecca Ralston
------------	---	-----------------

<p>04/25/2022</p>	<p>Why don't you delete the Avalon station and tunnel all the way from Delridge to the junction. Del 5 and 6 are poor design; the idea of closing off our street (32nd) is dumb. SDOT has already taken away our ability to turn left off Avalon up Genesee, and now you want to close off our only other exit and one of our entrances? What happens when you are in construction and close off Genesee from Avalon and/or 35th? The cost won't matter because you will just put it to another tax increase; as everyone does. After you relocate my 86 year old Father and after he dies, I will be leaving Seattle because of businesses like you.</p> <p>Thank you, Myra 206-818-8746</p>	<p>Myra Ferriols</p>

Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Bryant Mason 3966 Phinney Ave N Seattle, WA 98103</p>	<p>Bryant Mason</p>
-------------------	---	---------------------

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. 04/25/2022	<p>Manager DEIS Comments,</p> <p>My comments on Sound Transit's Draft Environmental Statement:</p> <p>Central District resident here. Do not eliminate any stations from what voters approved with ST3 in 2016. Build the most robust rail network possible! Eliminating planned stations is in direct opposition to what local voters want and need.</p> <p>Also, stop prioritizing parking and cars around stations! Retail and housing should be what is in the immediate vicinity of a stop, not a highway or an ugly parking garage and/or lot. The idea is for people to LIVE near light rail, not drive and park. Ugh! (Also not to have to dodge traffic, hit beg buttons, cross bridges to get to the station!!!!)</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters.</p> <p>It's bonkers how deep, cavernous, and soulless the stations are. Take Capitol Hill. It's a damn maze to get down to the platform, like something out of MC Escher or Rube Goldberg. Frankly, it's a little creepy and unsafe-feeling. Also, some retail would be a good idea. (Though I loath people eating and drinking on public transit, particularly in these COVID-19 times, but that's a battle already well-lost.)</p> <p>Also, it is shocking to see the number of constantly broken escalators. They, along with elevators, need to be fast and have the capacity and redundancy to handle peak traffic times and events.</p> <p>And elevators should go from street level straight to the platform level, without any mezzanines. It's a bummer to take an elevator down to a station only to realize...you're not there yet. And may face a broken escalator. Surprise!</p> <p>Transfers must minimize walking time and vertical travel.</p> <p>To summarize: Expand, expand, expand! And keep in mind the transit user experience. Make it logical, convenient, and efficient.</p> <p>Thank you for reading and your consideration.</p> <p>Jameson Fink jamesonf@yahoo.com 1109 17th Ave #101 Seattle , Washington 98122</p>	Jameson Fink

As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Jay Gerken 35803 21st Pl S Federal Way, WA 98003</p>	<p>Jay Gerken</p>

<p>04/25/2022</p>	<p>To whom it may concern,</p> <p>As a resident of West Seattle, I am in favor of a gondola, either in addition to, or in lieu of, the Light Rail for several reasons: not having to displace and relocate people from their homes, the environmental impact, the monetary cost and the transit time.</p> <p>Thank you for your consideration, Jon</p>	<p>Jon Bartick</p>

<p>04/23/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Branon Lyle branonlyle@gmail.com</p>	<p>Branon Lyle</p>

04/23/2022	<p>I'm most concerned about the impacts of construction and displacement of homes and businesses. A key purpose of mass transit is enabling more density, more housing, and more businesses. Destroying more homes and businesses for construction is thus entirely counterproductive. It seems intuitive, but the final EIS should quantify this rigorously, that rank ordered from least to most impact along this axis would be: a gondola, tunnels, a raised guideway. In particular:</p> <p>Chapter 4.2.1.3 says more than a thousand people may have to find new homes. 1,000 people!! It talks about destroying brand new buildings and removing grocery stores.</p> <p>Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. Inventory is incredibly hard to come by and things will only get worse as interest rates rise and no one is willing to sell their house because they can't afford a new mortgage at higher rates. It's already too hard and too long of a process to build. Until that problem is fixed we shouldn't be destroying buildings unless we're replacing them with bigger ones. We should have tunnels with underground stations or a gondola with very small stations and small-footprint poles.</p> <p>Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Elevated light rail lines are large and block sight lights and generally gross looking. Tunnels can't be seen at all. Gondolas look dope and modern.</p> <p>The average wait time in chapter 3.4.3.3.1 does not accurately reflect what wait times might be. Figuring out wait times during transfers is a complicated statistical process and wait times balloon quickly when times between arrivals grow. A key problem with trains and busses is that times can be lengthened at any time. A subtle benefit of a Gondola is not only that that cars come every few seconds, which means there's never a wait, but also that they can't really be spaced out. Once it's built a really good service interval is guaranteed, which puts an upper bound on transfer times and makes trips more predictable. Predictability is as important as travel times for mass transit. It's what enables low-income people to use it to get to work on time and what high-income people will need before they'll choose it over one of their cars.</p> <p>Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore</p>	Adam Wuerl
04/23/2022	<p>I am writing Sound Transit as a concerned Asian American resident of Seattle. The proposed construction in the Chinatown/International District on 5th Avenue would disrupt many businesses in the international district.</p> <p>These businesses have existed in the area for a long time and are an important part of the Asian American cultural identity in Seattle. Forcing these businesses to move would cause irreparable damage to Asian Americans in Seattle for years to come.</p> <p>I am advocating for the West Seattle Ballard Link Extension to instead be built on 4th avenue. This would impact fewer Chinatown/International District businesses and help preserve vital businesses that make up the DNA of Seattle.</p> <p>Sincerely,</p> <p>Tim Ho</p>	Timothy Ho

04/23/2022	<p>To Whom it may Concern:</p> <p>Environmental Impact Statements Comments</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement.</p> <p>Systemwide:</p> <p>(1) Study Milan method cut and cover within the existing street right of way. (https://pedestrianobservations.com/2021/02/25/cut-and-cover-is-underrated/)</p> <p>(2) Study full automation. The increase in capacity from operating smaller trains at higher frequency automated operations reduces station size needs (greatly reducing costs) while providing better service. Automated operations also save labor costs.</p> <p>(3) Review global standards for fire/emergency issues. It's ridiculous a station cannot fit within the 80 ft Fauntleroy due to the local fire code. Sound Transit should plan from the basis of accepted global 'best practice' and seek code changes where they diverge. Updating archaic standards to save hundreds of millions is a no-brainer.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth means we must build the most comprehensive rail network we can to promote transit-oriented development and decrease vehicle use. Eliminating planned stations is in direct opposition to what the region's voters want and need. Maximizing ridership and long-term growth are the goals. Short-term construction impacts can be mitigated and must not prevent the better options from being selected.</p> <p>Shallower stations reduce cost, and risk of project delay while promoting shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game-day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Ballard: Study pairing a high bridge with an elevated 15th Avenue station and continue to refine all tunnel options to put a station entrance west of 15th Avenue. Reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>Interbay: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed-down 15th Avenue Elevated Station [IBB-3]</p> <p>Smith Cove: Build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>Seattle Center: Build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>SLU: Reject both presented options, study a Westlake or similarly north-south aligned station within SLU boundaries and as centered on South Lake Union as possible. Harrison Street is preferred as the 'less bad' option currently under consideration.</p> <p>Denny: Build Westlake Ave Station [DT-1] to line up with an SLU station on Westlake further north, but update vertical conveyances and aim shallower.</p> <p>Westlake: Build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>Midtown: Build the station as shallow as possible, design the station for the surface to platform elevators,</p>	Tana Reed
------------	--	-----------

build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.

Chinatown/International District: Build the 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than four and a half minutes. Throw out deep tunnel options.

Sodo: Choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.

Delridge: Request a study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].

Avalon: Build WSJ-5 with a request to study a refined DEL-6 pairing.

Junction: Build Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fautleroy Station that would reduce residential displacement and costly property takings.

In order to future proof our growing system, we must design for expandability in five locations:

- (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).
- (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
- (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
- (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
- (5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

<p>04/22/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Derek Flora d_flo17@yahoo.com</p>	<p>Derek Flora</p>

<p>04/21/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Leandro Pettino leanjpettino@gmail.com</p>	<p>Leandro Pettino</p>

04/20/2022	<p>The CID does not need any additional negative impacts to their neighborhood, business, or residents. And, the CID definitely should not lose any buildings or property for the Sound Transit expansion when there is a viable option under 4th Ave.</p> <p>The long term impacts for not using 4th Ave. are irrevocable and are not reversible.</p> <p>The CID is a historical and vibrant part of Seattle supporting a strong business community, long term residents, and destination point for locals and tourists alike.</p> <p>Since there is less impacting options for the new station and track – do that – use 4th Ave.! Do not use 5th Ave and cause more harm when it’s not necessary to do so.</p> <p>Honestly, I don’t know how the City of Seattle and Sound Transit can put saving a few dollars ahead of the CID livelihoods and CID community that is striving to keep it’s small yet important place in our city. Instead of being a negative impact, Seattle and Sound Transit should be doing all they can to bolster the CID!</p> <p>Thank you - and please make the right decision.</p> <p>Others have echoed the same sentiments: https://southseattleemerald.com/2022/03/17/new-light-rail-threatens-chinatown-historic-district-community-pushes-back/?fbclid=IwAR3FtPL1pfJOWXv2JSHPg2XVvE43DSA8dzcr2RiIWT0XRwE-5aIsm3adLE</p> <p>Diana Robbins, long time CID visitor as well as volunteer for CID Community Night Watch</p> <p>206-571-0073</p>	Diana Robbins

<p>04/20/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement.</p> <p>I cannot drive because I never got a driver's license, because I could never afford the cost of buying even a used car, let alone afford the cost of maintaining it. I have lived for three decades seeing the results of transit planning that doesn't actually put the mobility needs of people like me first, costing us time, energy, and economic and social opportunity. It's important for me that the system is built out to prioritize riders like me who have historically been put last instead of first. It will be very hard to keep voting for future ST measures if the board continues to make decisions that are confounding and not focused on riders.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters.*</p> <p>Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Yaroslav Dvinov yd43@cornell.edu</p>	<p>Yaroslav Dvinov</p>

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. <p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). SEATTLE, Washington 98116

04/14/2022	<p>Hello,</p> <p>Successful transit systems benefit from accessibility to stations. They also benefit from intuitively locating stations. We see this throughout the world - where stations are located at natural hubs and main arterials. This makes them easy to find, easy to access, and easily able to link up with other modes of transport. I struggle to find this knowledge applied to the preferred routes of the Ballard link in this EIS.</p> <p>To begin, DT-1 routing on Harrison goes against this logic and will confuse non-locals, reduce accessibility, and eliminate the added benefit of having 2 stations west of aurora (a prohibitive boundary) that can serve Seattle Center during large events. We see this work well at Century Link Stadium, where both the ID station and the stadium station both serve major events there. Would be a shame to miss this opportunity here.</p> <p>Again, as the route transitions into Interbay, SIB-1 and SIB-3 similarly part from this transit logic. Some of the best reasons to locate the lines along major arterials is to allow for future station additions and linkability with bus routes. SIB-1 and SIB-3 run the lines far from an arterial and along a virtual 'no man's land' between rows of railways and a golf course. In other words, this isn't even close to a hub or arterial. SIB-2 on the other hand serves a major arterial, is close to the Dravus/15th hub, and serves more housing density.</p> <p>As the route continues on (IBB-1a, IBB-2a, and IBB-2b), it is a struggle to find much density anywhere close to the Interbay station location. IBB-1b and IBB-3, on the other hand, clearly are more accessible and have a superior connection to other transit options. Further, IBB-3 stands out because it is closer to the main Ballard hub and Old Ballard.</p> <p>Finally, there seems to be some interchangeability here, whereas some of this routing looks exclusive to the preferred or alternate routing. For example, 5th Ave looks exclusive to DT-1 or 6th Ave exclusive to DT-2, but these actually seem interchangeable. Indeed, the routes touch near Virginia and 7th. Couldn't the accessibility advantages of the 5th Ave route be combined with the accessibility advantages of the Mercer route? Would be great if it could.</p> <p>To conclude, Seattle imagines itself as a 21st-century city. We should produce a transit system that looks like it - not one full of compromises. Let's do this right and choose DT-2, SIB-2, and IBB-3.</p> <p>Thank you, Robert Ernst</p>	Robert Ernst

Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Erica Clawson blargle.ragequit@gmail.com</p>	<p>Erica Clawson</p>

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. <p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. -------------------	--	-------------------

04/14/2022	<p>Manager DEIS Comments,</p> <p>Reopen the study of a 20th Avenue Station in Ballard so that the location serves the the actual center of Ballard and not a disappointingly far walk from the areas people want to go. This is a no-brainer and it seems almost absurd to consider a station on 14th or 15th at all, which is a major car arterial with very low business and residential densities compared to the areas around Ballard Ave and 24th. Don't make a foolish decision that will be regretted for generations, just to save a small amount of money and appease industrial special interests.</p> <p>2) Make stations as shallow as possible with fast transfers and access to the surface.</p> <p>3) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).</p> <p>Thank you for considering these comments.</p> <p>James Pasko jbpasko@gmail.com 7006 34th Ave NW Seattle, Washington 98117</p>	James Pasko
04/14/2022	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing</p>	Gavin Greco

SoDo Station location to save the SoDo busway and avoid the Post Office's facility.
In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.

Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.

In order to future proof our growing system, we must design for expandability in four locations:

- (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).
- (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
- (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
- (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
- (5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

04/08/2022	We support WSJ-3a or 3b Thank you!	Hilda Reyes

04/27/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Allie Marr</p>	Allie Marr

<p>04/27/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Nicholas Efthimiadis nicholas246@gmail.com</p>	<p>Nicholas Efthimiadia</p>

	<p>6923 57th Ave NE Seattle, Washington 98115</p>	
04/27/2022	<p>Hello,</p> <p>I am reaching out with comments for the proposed Ballard Link Expansion. Don't let lowest cost be the sole determinant of plan of action— expanding the link is a great opportunity, but must be done with thought and care for the impacts on riders, pedestrians, and local businesses.</p> <p>I would highly encourage Sound Transit to consider pursuing the 4th shallow tunnel alternative the CID to avoid displacing local businesses.</p> <p>Regarding the Ballard station, although the option of having a tunnel on 14th would be cheaper, please consider the impact of having a station so far from the core of Ballard. Please study pairing a high bridge with an elevated 15th Avenue station and consider adding station entrance west of 15th, and consider what having a station closer to 20th— a hot residential area in Ballard would do for the expansion.</p> <p>Thank you,</p> <p>Kate</p>	Kate Dufek

04/01/2022	<p>Dear Nicole Kistler,</p> <p>Hello, my name is Bradley Yen. I am an eighth-grade student at Westside School in West Seattle. Throughout our course of study in Mandarin and Social Studies, we have learned about the rich history of the International District, the history of redlining in the City of Seattle, the Chinese Exclusion Act and Seattle Chinese Expulsion of 1886, the Japanese Internment, and the effects of the Covid-19 Pandemic on our Asian-American community members in the Seattle-Metro area. Most recently, we have spent some time with Betty Lau in the International District, learning about the history of Immigration Reform in the state of Washington.</p> <p>It is our understanding that the International District and, specifically, Chinatown, continues to experience destruction, gentrification, and Anti-Asian racism once again. Sound Transit cannot select the Fifth Avenue corridor as a future light rail route. If Fifth Avenue is selected, it will have a grave effect on our older Asian-American population in South Seattle and, specifically, the economy of Little Saigon, Chinatown, and Japantown. Road closures, re-routes, gas, water, electrical shut-offs, and noise pollution will severely affect the nearly 300 businesses already battered by the pandemic.</p> <p>As a multicultural student community that values equity and social justice, we cannot stand for a forced displacement of non-English speaking elderly, the acquisition and demolition of National Register Chinatown Historic properties, and the closure of schools, daycare, and elderly programs that serve thousands of Asian-American residents.</p> <p>The monetary and logistical expedience of big business and capitalism can not be prioritized over the rich history and vibrance of a historic bedrock of Asian-American culture in Washington State.</p> <p>We implore you, our local government representatives, to lobby to use Fourth Avenue, not Fifth Avenue, for the future Sound Transit Route. Equity, transparency, social justice, and inclusion are on the line. Do you want to be remembered for safeguarding Chinatown? Do you want to be recognized for inclusive city practices and policies? If so, protect Chinatown, Chinese Community History, and stop continued anti-Asian exclusion in the city of Seattle. Invaluable cultural heritage can not and should never be weighed on the same scale as economic or political interest.</p> <p>Sincerely,</p> <p>Bradley K. Yen</p> <p>Westside School, Class of 2022</p>	Bradley Yen

<p>04/27/2022</p>	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p>	<p>J. Calcaterra</p>

03/16/2022	<p>Dear transit board members, city council members and all,</p> <p>We are Chinatown ID residents, employees and most of us don't speak English and it is hard for us to participate in the Zoom meetings on 3/17/2022. We would like to express our will for the new Growing transit project at 4th Ave. is preferable as it minimizes the impact to our community.</p> <p>The 5th Ave. S. project would greatly impact/harmful for our community as 30 of small businesses have to closed and many streets would be blocked, noises, dusty etc...would be harmful to all the local businesses, residents (around 2 thousand of residents including seniors and lost of children activities) school transportations, visitors.....according to the history that our community being cut and minimized by "New Projects" for the decades and we are really disappointed with it. We don't want to get any further cut or removed from the history due to this new project again. Our history being registered needs to be protected and respected as well !!</p> <p>As Chinese residents and employees we are working hard and fighting for a good, active and vibrant community and contribute to the city as well as the country. We love the country, love City of Seattle, love our Chinatown ID area and we don't want to see any further cuts to our community, our history.</p> <p>Please consider the 4th Ave. project instead of 5th Ave. which is killing our community !</p> <p>We respect all of you and we wish you could hear our broken heart voice and respect by returning to our peaceful life, our community, and our contributions !! We always support all the good projects in the country, however we need to be treated fairly to be respected like others as we are a harmonious community. We don't like to fight aggressively but our voices need to be heard. Thank you very much!</p> <p>Respectfully and salute,</p> <p>Beth</p> <p>Representative for the majority of Chinese residents and employees</p> <p>at Chinatown ID area</p>	Beth K.

04/26/2022	<p>I am writing as a harp player who owns two harps made by the Dusty Strings company in the Seattle area. While I understand the need for light rail and wish we had more here in the Houston area, please consider the alternative which would spare this vital company which has helped the harp community for nearly 50 years. This harp builder has created some of the best instruments in the country and they hire local people . Their handmade harps have gone all over the world. The route you are considering would be disastrous to the Dusty Strings company and the current facility has been built especially for the company in the last 20 years.</p> <p>I realize these are not easy decisions, but this company is one of a kind and it cannot be replaced.</p> <p>Thank you for your consideration.</p> <p>Miriam Freiter, Kingwood, Texas 77339</p>	Miriam Freiter
04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).

Sincerely,

Cristina Quinn

<p>04/26/2022</p>	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p>	<p>Amy Campbell</p>

<p>04/26/2022</p>	<p>Hello,</p> <p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>Thank you for building this section of light rail! I very much appreciate the need for this project.</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE.</p> <p>While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected builder of harps and other instruments. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option.</p> <p>This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives.</p> <p>While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration.</p> <p>Randall Groves</p>	<p>Randall Groves</p>

04/27/2022	<p>Please note my comments to the DEIS:</p> <p>Chapter 4.2.1.3 states that more than a thousand people may be displaced from their residences and commercial enterprises, stores and other services will be demolished and possibly relocated outside of West Seattle. The disruption to neighborhoods and of the greater West Seattle community will be significant, destroying the character unique to this area.</p> <p>Chapter 4.2.1.7 and 4.2.1.8 greatly understates the housing situation in West Seattle. While Redfin practically shows very little home inventory in West Seattle, the DEIS states: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity."</p> <p>It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify based on their income or credit rating. Commercial real-estate is very limited in West Seattle which means displaced businesses may have to relocate causing them to lose their customer base if clients have to travel longer distances to get services.</p> <p>Chapter 4.2.10 states that the energy related impacts during construction would be short term and not have an adverse effect. Current standards for what are considered sustainable building projects calculate the carbon footprint of both short and long term impacts including the removal and replacement of residences and businesses. Appendix L4.6 references carbon consumption, citing that "general FTA estimates" were applied, but energy consumption during construction has not been taken into account.</p> <p>Clearly these concerns and many others addressing the true impact of the proposed project have not been adequately addressed and understood by those residing and working in West Seattle.</p> <p>Paul Tankel RA, LEED AP Architect / Campus Planner 2449 55th Ave SW Seattle, WA 98116</p>	Paul Tankel

04/26/2022	<p>I am a 77 year old West Seattle resident who has long appreciated the community feel of West Seattle. We are a very densely populated area and our business area provides almost every commodity or service one could wish within walking distance. This is a great benefit to those who live here. The scale of the impact that the proposed light rail links would have in our community is enormous. I have listed some of the impacts as they relate to the DEIS chapters below:</p> <p>Chapter 2: There are many changing situations that should require a discussion of mode selection but that discussion is not included in this section, Cost is one factor that requires serious consideration of other alternatives. Since the pandemic, there is much less commuter traffic and it may be moving toward the Eastside rather than downtown and Sodo. Rather than being stuck in a plan that is unable to respond to change, I would prefer an option with less costs and a smaller footprint such as a gondola system which could not only meet our transportation requirements but would be perceived as an attraction and amenity in the area.</p> <p>Chapter 4: It would displace a large number of businesses and residences at a time when mortgage rate increases as well as lack of supply would make it almost impossible for relocation in this area. The DEIS does not state this accurately.</p> <p>We are already a community under duress. Two years of detours around the West Seattle bridge closure has had a huge impact on stress. The construction proposed for the West Seattle link would lead to extensive additional closures and details just when we are trying to return to normal. Again, I beg you to do a serious study of the gondola as a West Seattle feeder link. It would displace fewer people and businesses, cost less, and require fewer traffic disturbances than the proposed links.</p> <p>Thank you for your consideration. Sincerely,</p> <p>Virginia Johnson 4545 42nd Ave, SW #306 Seattle, WA 98116 (206) 938-4643</p>	Virginia Johnson

<p>04/26/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Steven Cochran ch_noir@hotmail.com</p>	<p>Steven Cochran</p>

04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. ------------	--	---------------

<p>04/26/2022</p>	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>I'm a West Seattle resident and Kraken season ticket holder. Prior to moving to the Belvedere/Admiral area in 2019, I lived in Queen Anne for 6 years and commuted to Pioneer Square. Prior to that, I lived in East Lake. For the 11 years I've lived in Seattle, I've wasted countless hours sitting in traffic due to the poor planning, execution, and management of road closures due to major infrastructure projects -- Mercer, 99 tunnel, and West Seattle bridge. I've lived in and navigated major metros around the world with subway, train, and monorail systems.</p> <p>I support expansion of connected, safe, & efficient lightrail transportation throughout Seattle and the Puget Sound.</p> <p>However, the proposed route for the West Seattle to Ballard extension plan fails to consider impact to the general public -- causing undue harm to local businesses, disregard to drivers during construction, and once complete provides inconvenient access points for riders.</p> <p>Civic Hotel Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Impact to 99 Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Interbay vs Westlake A route along Nickerson and then Dexter/Westlake, connects riders to SPU, Fremont, rapidly redeveloping high density residential area of Westlake (west side of Lake Union), and SLU.</p> <p>I understand the commercial pressure to connect the new Zillow, Climate Pledge Arena, and cruise terminal. Amazon between SLU and Denny is underserved by the light rail.</p> <p>Connecting Interbay but skipping the waterfront area and Belltown fails to consider actual pedestrian presence.</p> <p>Moreover, one of those Interbay routes appears to go through the greenway rather than the industrial area directly area across the street. Building alongside BNSF is the only sensible option.</p> <p>This line is better suited as 2 separate parallel lines with connection points in Ballard and the West Seattle Bridge. 1) Ballard, along the BNSF line stopping at the cruise terminal, new waterfront area, stadium/water taxis, and then connecting to West Seattle. 2) Ballard, Westlake, SLU, Denny, Westlake, Midtown, ID, Stadium, West Seattle.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the</p>	<p>Rachel Goldberg</p>
-------------------	--	------------------------

adverse traffic impacts during and after construction are untenable for the neighborhood and the region.

Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).

Finally, serve the largest proportion of riders in residential, educational, and working communities best suited to take advantage and actually utilize the light rail.

Sincerely,
Rachel Goldberg
3457 38th Ave Sw
Seattle, WA 98126

<p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Genevieve Harrison 3801 N 19th St Tacoma, WA 98406</p>	<p>Genevieve Harrison</p>

Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes. Thank you for considering my safety and mobility as part of this exciting community and transit expansion project.</p> <p>Regards, Amber Marcu 27232 NE Union Hill Rd Redmond, WA 98053</p>	<p>Amber Marcu</p>
-------------------	---	--------------------

04/28/2022	<p>Like so many who bike, I'm excited to ride the light rail trains further as the system grows. Being able to explore new bike routes using the light rail. Wish there was more of this when I was working.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I want to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. <p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Eugene Kramer eugenekramer@hotmail.com</p>	<p>Eugene Kramer</p>

--	--	--

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely,</p> <p>Lisa B Hammond she/her https://www.lisabhammond.com/ WIF Seattle Production Chair http://womeninfilmseattle.org/ IATSE 488 E-Board Norte https://www.iatse.net/</p>	Lisa B. Hammon
------------	---	----------------

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction, especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely,</p> <p>Prady Misra</p> <p>Mercer Island, WA</p>	Prady Misra

04/28/2022	<p>Hi,</p> <p>I support the 15th Ave NW or 20th Ave NW for the Ballard link, not the 14th. I also prefer the tunnel to another fixed bridge.</p> <p>14th is too far from actual Ballard core.</p> <p>Also would be nice to get this link at the same time as the West Seattle link.</p> <p>Thanks, Tracy</p>	Tracy McAlpin
04/28/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <ul style="list-style-type: none"> Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures. Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements <p>For Interbay Station (IBB-2b):</p> <ul style="list-style-type: none"> Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W <p>Thank you for your consideration.</p>	A. Burgunder

<p>04/28/2022</p>	<p>I am a (pre-COVID) 12 year bike commuter - Bainbridge Island to Seattle destinations. My husband and I also are touring cycle enthusiasts - we often take transit to a destination, then take 1-2 days to ride home.</p> <p>We are looking forward to riding the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>As a decades long transit user (Colman Dock to UW and SeaTac) I offer comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. Connecting cycling to transit is absolutely important for community issues of safety, health and climate response.</p> <p>I request that transit planning at all phases, from construction to mobility integration, include bikes and cycling. In particular:</p> <p>Study active transportation integration for all stations. Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network -- it's what the voter-approved System Access Fund is for.</p> <p>2. Study bike parking needs for the entire line. As people arrive at stations provide effective bike facilities and parking that is upgraded from mere physical separation from cars (e.g. covered parking, high security parking and storage). Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>3. Provide adequate space and access to bring bikes on trains. Combined cycling and transit is an effective way to reduce vehicle trips - if the combined mobility is convenient and efficient.</p> <p>4. Limit construction impacts to the existing bike network, and prepare mitigation plans. Limit lengthy detours within the existing bike network, and assure that riding surfaces are smooth and safe.</p> <p>Thank you for considering these recommendations for strengthening the transit/bike opportunities for active transportation in our region.</p> <p>Regards, Kathleen Wolf 11224 Parkhill PI NE Bainbridge Island, WA 98110</p>	<p>Kathleen Wolf</p>
-------------------	---	----------------------

<p>04/28/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes. Bike accessibility is an important addendum to light rail accessibility.</p> <p>Regards, Carl Woestwin 9608 25th Ave NE Seattle, WA 98115</p>	<p>Carl Woestwin</p>
-------------------	---	----------------------

04/28/2022	<p>I work at the University of Washington and for 15 years I have commuted by bike from my home in Ballard. My family also uses bicycles for many of our shorter trips within the neighborhood. Like so many of my neighbors who bike, I'm thrilled to add light rail to my transportation options as the system grows. My bike is critical for last mile connections. That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. 04/28/2022	<p>I look forward to supporting the continuing growth of our light rail system. For the system to be useful and valuable to me, however, my bike is critical for last-mile connections. That fact - for me and many other current and potential supporters of light rail - underlies these comments in connection with the West Seattle Ballard Link Extension DEIS Public Comment Period.</p> <p>As you continue and refine planning, please incorporate these factors:</p> <p>Integrate active transportation - and especially biking - for all stations.</p> <p>Identify and fund safe bike connections between new stations and the existing Seattle-area Bike Network so that people can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>2. Identify construction impacts to the existing bike network, and eliminate or mitigate them.</p> <p>For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to poorly considered detours. They can add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, and accommodates how people integrate their bikes into their regional transit trips.</p> <p>Accept and embrace that people will continue to bring bikes on trains – and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Develop a plan to accommodate the needs of people who want to “bike and park” at stations. 04/28/2022	<p>Dear Councilmembers and Sound Transit,</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <ul style="list-style-type: none">· BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.o The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.o They also offer a high-performance sharpening service for home and professional chefs.o I'm looking forward to their classes aimed at established knifemakers and beginners.· BladeGallery Inc is a small business that currently supports 8 employee households.· BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>I would also add that like Ballard, the SODO district needs to remain quirky and keep its artisan appeal. This uniqueness is a nationally known Washington state quality and value. We all know that mass transit is important, however, the cultural value-added businesses and locations need to be taken into consideration as well, not just as businesses or land parcels, but also as destination experiences that are the fabric of our state's tourist appeal.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>BladeGallery Inc Customer: Jarod Owen</p> <p>Home address: 505 S 31st St Renton WA 98039</p> <p>Email: Jarodowen@gmail.com</p> <p>Phone:206 335 6682</p>	Jarod Owen

04/28/2022	<p>To whom it may concern,</p> <p>My name is Kade Krichko and I have been an off and on Seattle resident for a decade. The CID has formed an integral part of my time here in this beautiful city, a link between past and present and a place that has helped me grow and learn about culture, history and identity more than anywhere else in the area.</p> <p>I hope I am one of thousands of voices asking you to please reconsider building the light rail along 5th Ave. This is an area that has already been ripped and torn apart by the growth of this city, and a community that has worked hard to survive and adapt to the changes around it. It's also such an important piece of our collective fabric here in Seattle, and should be protected at any cost.</p> <p>I know that personally, the CID has given me a sense of home that I haven't had during so many years of my life. The community deserves a chance to maintain that sense of home, and I really hope that the city understands the importance of that need.</p> <p>Again, I am one of thousands, and appreciate your time and consideration.</p> <p>Best, Kade Krichko</p>	Kade Krichko

04/28/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. I'm looking forward to their classes aimed at established knifemakers and beginners. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, Javier Romero</p> <p>BladeGallery Inc Customer:</p> <p>Home address: 9787 Katy Freeway Houston TX. 77024</p> <p>Email: ralexanderj@gmail.com</p> <p>Phone: 713-213-0582</p> <p>JAVIER ROMERO</p> <p>chef de' cuisine</p> <p>HOUSTON MEMORIAL CITY DALLAS UPTOWN AUSTIN DOWNTOWN HOUSTON MUSEUM DISTRICT</p> <p>DIRECT: 713-213-0582 MAIN: 713.465.9292 FAX: 713.821.1916</p> <p>9787 KATY FREEWAY, HOUSTON, TX 77024</p> <p>JROMERO@HOTELZAZA.COM HOTELZAZA.COM</p>	Javier Romero

04/28/2022	<p>Hello,</p> <p>I'm very excited that we're working toward adding light rail access between West Seattle, Queen Anne, Magnolia and Ballard. Thank you all for helping to make this happen.</p> <p>I've reviewed several of the options that have been presented, and I generally support the choices endorsed by the Magnolia Community Council.</p> <p>My biggest concerns are:</p> <p>Easy access to stations with ample, safe parking nearby OR a reliable (ideally free) neighborhood shuttle to stations. I think this is the biggest hurdle faced by mass transit ... if it's not easy and inexpensive to get to the station, then it's far more convenient to just take my own car. The light rail needs to make travel easier, not harder.</p> <p>Reliable schedules across waterways and through car traffic</p> <p>It sounds like much of the new light rail will run through underground tunnels, which is wonderful. I'd like to avoid adding a lot of raised tracks blocking views of mountains, water, etc. along 15th if at all possible.</p> <p>Maintaining industry and recreation through the Fisherman's Terminal and the locks is also of critical importance.</p> <p>Thank you for your time and consideration on this matter!</p> <p>Best, Kim Carmel, north Magnolia resident</p> <p>https://www.kimcarmel.com (206) 235-0761 : kimcarmel.com</p>	Kimberly Carmel
------------	---	-----------------

<p>04/28/2022</p>	<p>To whom it may concern</p> <p>Thank you for the opportunity to comment on this very important topic. I support the idea of light rail coming to West Seattle. My Family have been active in the WS community for over 100 years. My Great Grandfather established Alki Lumber in 1921. He supplied building materials to the community around Alki Beach. The West Seattle Ferry terminal became Alki Lumber's first home when the ferry service ended. 36th Avenue Southwest and SW. Avalon Way became their permanent location and serving West Seattle and the Seattle community. Alki Lumber's contributions to the west Seattle community our second to none. The Avalon Station is very important connection location for moving the community in and out of West Seattle. Our families plan to develop the Alki Lumber property is perfect for connection to an Avalon station for light rail. Please consider only the WSJ-3 Line. While this consideration is the more costly plan, it keeps West Seattle less disrupted. WSJ-1 is NOT the way to go ! Keep the West Seattle Community Whole. Please don't ruin West Seattle with WSJ -1s ugly scar.</p> <p>Sincerely Bill McCambridge</p> <p>Grandson of Bill Sweeney Nephew of Jim Sweeney Son of Lorraine Sweeney McCambridge Sent from my iPhone</p>	<p>Bill McCambridge</p>
<p>04/28/2022</p>	<p>To Sound Transit Board Members and Seattle City Council Members:</p> <p>My name is Caroline Fuentes and I am a local resident of Seattle. This is my formal comment in opposition to the Sound Transit project continuing on 5th Avenue in Chinatown-International District. I stand with the movement to keep the transit project on 4th avenue. I stand with the immigrant-owned businesses that will be forced to close. I stand with the other businesses and residents of the district that have already been heavily impacted by the COVID-19 pandemic on top of a history of hate crime and oppression. I stand with the youth of Seattle, many of whom participate in and benefit from the schools, youth programs, and historical and cultural significance of the area.</p> <p>I stand to move the Sound Transit project onto 4th Ave.</p> <p>Thank you.</p> <p>Caroline Fuentes</p>	<p>Caroline Fuentes</p>

<p>04/22/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Shane Myrick accounts@shanemyrick.com</p>	<p>Shane Myrick</p>

--	---	--

04/23/2022	<p>Good Day,</p> <p>I have so many comments about this flawed document so bear with me.</p> <p>Chapter 1.3 Why are West Seattle and Ballard included as a single project when they are so far apart and not connected? That makes no sense.</p> <p>Chapter 1.2.2.6 If we need to reduce vehicle miles, the West Seattle light rail will not do much for this for over a decade. A gondola solution could be built in less time, for less money, and be up and running sooner. Plus the added attraction as a tourist destination should be considered.</p> <p>Carbon Impact The carbon emissions of construction will be significant and need to be taken into account. The production of concrete is a huge CO2 emitter and the 8-16 story tall support structures will require a huge amount of concrete. Gondola towers will not require anywhere near the same amount.</p> <p>Transit Time if you live south of the N. Delridge light rail station and want to take the light rail to Bellevue, you would take a bus to the North Delridge station, get in line to ride up 2-3 escalators or 2 elevators, wait up to 12min for a train to SODO, get up and down stairs/escalators at SODO to get to the platform for the 1 Line light rail, wait for a train to the International District (ID) transit hub, and walk and traverse escalators to get to a tunnel platform to wait for a train to Bellevue. The average wait time in chapter 3.4.3.3.1 does not accurately reflect any of this. Gondola stations would be much more accessible and reduce transit time.</p> <p>Acquisitions, Displacements, and Relocations Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such. SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the "Least Harm Analysis" test in 4.2.18.5 Chapter 4.2.1.3 More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore. It is clear that this DEIS is flawed and overlooks many important issues that make the light rail extension too expensive, too polluting (GHG emissions), too disruptive, and too unsightly to consider.</p> <p>I urge the panel to reconsider the Gondola Sky-Link as a favorable option that will serve the community better at a lower cost, in a more timely manner, and contribute lower GHG emissions. Plus it will be a tourist attraction to our level city.</p> <p>Regards, Marco Mazzoni Burien, WA</p>	Marco Mazzoni
------------	---	---------------

<p>04/25/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Brian Gillespie bng1290@gmail.com</p>	<p>Brian Gillespie</p>

04/25/2022	<p>Dear Sirs and Madams,</p> <p>we write to you on behalf of the planned expansion of the Sound Transit light rail system and its effects to our business regarding harps. We are located in Germany and can't say what the best solution for Seattle might be, but we'd like to offer a point of view to the unique business of Dusty Strings, which is located at 3450 16th Ave W, Seattle, WA 98119 - on one of the possible routes of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>We trade with several brands in our Harp-Store in Germany, Dusty Strings being one of them. They are among the four biggest harp-building companies in the world, their instruments are renowned and loved all over the world. Covid has already left its impact on the availability of their harps, a further interruption of their business would tighten the situation even more, and it would be a great loss for the harp-playing-world, as there simply is no equal in sound and durability to the so well manufactured instruments from Dusty Strings.</p> <p>As we are also crafting harps, we have some insight view into this business. Harp building is not a business where you can move 100 machines and 65 employees into a factory hall and start the process. For the building of fine-crafted musical instruments you still need a wide range of manual work, and a clever way of connecting the work-space of machine-work and manual work. To build up those chains of drying wood, the right ambience for milling, glueing, stringing, storing, etc. is not easy and needs certain circumstances:</p> <p>Dusty Strings (as we learned by visiting them in Seattle) has a unique, perfect and highly effective way to build harps at a reasonable price, thanks to a tailor-made building for their business, they built in 2002.</p> <p>A lot of musical instruments are built in Asia in these times. To interrupt a "grown to perfection" production, that can compete on the world-market, with really perfect instruments, could endanger this business.</p> <p>Dusty Strings might not be among the biggest companies that you have to deal with when you realize your railway, but for sure among the finest and of worldwide importance for a huge community of harp players.</p> <p>If you have alternatives for the trail, we would be very glad if you considered and preferred them. As we understood it, that would be the Elevated 14th Avenue Option (from Prospect/15th), IBB-1b.</p> <p>Thank you! Klaus & Annika Regelsberger</p> <p>artefakt Instrumentenbau Annika & Klaus Regelsberger Wolfsgrubengasse 11 91126 Schwabach Tel. 09122 6947854 info@artefakt-musik.de</p>	Klaus Regelsberger

In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Lara Hale littlebitlara@gmail.com</p>	<p>Lara Hale</p>

<p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Bill Warren 13042 42nd Ave NE Seattle, WA 98125</p>	<p>Bill Warren</p>
-------------------	---	--------------------

<p>04/25/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). ------------	---	-------------

<p>04/25/2022</p>	<p>Hello,</p> <p>I have three main questions regarding ridership projections, the elevated rail in West Seattle between the Delridge and Avalon stations, and the concept of a seamless transfer.</p> <p>Firstly, the DEIS page ES-3 footnote states, "Puget Sound Regional Council's VISION 2050 anticipates population and employment in the Puget Sound region will continue to grow over the next 30 years. The current long-range growth forecasts from Puget Sound Regional Council inform elements of the Draft Environmental Impact Statement analyses, such as ridership forecasts, projected vehicle trips and non-motorized activities. Puget Sound Regional Council acknowledges that the current pandemic may have effects on the economy that could alter long-range forecasts. Puget Sound Regional Council's next regional forecast is expected no earlier than 2023. For the purposes of this Draft Environmental Impact Statement, Puget Sound Regional Council's current forecasts are applied to the analysis."</p> <p>The pandemic has severely changed both ridership projections and peak travel times. We do not yet know what the new normal is, nor is it appropriate to try to predict ridership and peak times until the effects of work-from-home and hybrid workplace models are more settled. At this point, it appears that Sound Transit is planning transit for the past instead of the future.</p> <p>Why continue to plan with pre-pandemic numbers, when a long-range forecast is most likely not applicable?</p> <p>Secondly, the drawings in Appendix J, specifically drawing L50-GSP824 (page 39), show that the elevated light rail line from the Delridge Station to the Avalon Station will be approximately 150 feet above street level. The topography of West Seattle is particularly difficult with its hills, and an elevated line at that height would require an enormous amount of concrete and steel for construction and maintenance. These materials are becoming increasingly scarce and expensive, and as we have learned with the West Seattle Bridge repair, they may not always be readily available.</p> <p>2) Has an analysis been done regarding the actual cost of this elevated line, as well as estimated emissions impacts of construction? Energy consumption during construction was not even considered. (Chapter 4.2.10 says "The FTA Greenhouse Gas Emissions Estimator was not used.") How does the cost of the construction of the 150-foot elevated line compare to alternate methods, such as a gondola? If this analysis has not been done, when will it be done?</p> <p>With both of these topics in mind, my main concern is that Sound Transit is pushing forward with a costly construction that may not align with ridership in a post-pandemic world.</p> <p>According to Appendix L4.1-2 to 1-39, is it worth the destruction of local businesses: Ounces at 3809 Delridge Way SW, Skylark Cafe at 3805 Delridge Way SW, the Frye Commerce Center at 2414 SW Andover St (which is what keeps admission to the Frye Museum free!), West Seattle Brewing Company at 4415 Fauntleroy Way SW, and many more businesses and homes that will be affected by all alternatives, if ridership cannot be accurately forecast at this point and costs have not been examined and compared to alternatives that use less concrete?</p> <p>Thirdly, the concept of a seamless transfer from light rail line to light rail line has been mentioned in many meetings with Sound Transit. However, the West Seattle extension would still require most riders to take a bus to one of the proposed stations at Delridge, Avalon, or Alaska Junction before boarding a train. That train would then only go to SoDO in 2032, requiring a transfer to a new train. From there, additional transfers would be required in downtown in 2037 and beyond, for which record-deep stations are being considered. Having to ride elevator-only access several stories to the shallower downtown stations is not the same as stepping across the platform to a new line. The idea of "seamless" appears to only mean train to train, and is not at all indicative of time-saving measures for riders.</p>	<p>Mariana Huben</p>
-------------------	--	----------------------

3) While I understand the investment in a singular mode of transit (light rail), why is Sound Transit not looking at alternatives that would allow for simpler transfers at existing stations? The phrase "seamless" is quite loosely defined in this situation, where transfers between extremely deep (135+ feet) stations that are accessible only by elevators will incur additional travel time. If transfers are already required to access light rail, why is Sound Transit not pursuing alternatives that could be built both more quickly and cheaper than the elevated lines in West Seattle?

Thank you for your consideration.

The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Matthew Munson 7651 Latona Ave NE Seattle, WA 98115</p>	<p>Matthew Munson</p>
-------------------	---	-----------------------

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. <p>04/26/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Geoffrey Wolf 9526 6th Ave NW Seattle, WA 98117</p>	<p>Geoffrey Wolf</p>

04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. 04/26/2022

Dear Sound Transit Board,

Henry Walters

I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.

Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.

To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.

Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.

This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.

Request:

Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.

Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).

Sincerely,

Henry Walters

<p>04/26/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Hudson Bloom hbloom1783@gmail.com</p>	<p>Hudson Bloom</p>

<p>04/26/2022</p>	<p>I strongly oppose tunnel alterations that take away acreage from the West Seattle Golf Course. The Andover/ Yancy/ Avalon routes are cheaper and do not damage a lovely park and green area.</p> <p>Sincerely, Terrence Whaley</p>	<p>Terrence Whaley</p>

04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>The Civic Hotel has been serving the Seattle community since 1962. Throughout the Covid-19 pandemic due to Covid it continues to serve the community as the local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also facilitated a number of people to transition into permanent housing, which has been documented in a University of Washington study. The Civic Hotel is the type of business we want to retain in our community that will be displaced according to the project proposal.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but lives in the city as well. You would be destroying one of the last few remaining buildings that is still family owned and operated, thereby forever changing the fabric of the neighborhood.</p> <p>Furthermore, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel along with the onramp to SR-99 N.</p> <p>This will have a significant negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but also because the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered along with locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Sandeep Reddy</p>	Sandeep Reddy

04/27/2022	<p>Hello,</p> <p>I am a West Seattle resident and would like the gondola alternative to be studied and considered In place of the west Seattle light rail extension.</p> <p>Chapter 4.2.4.4 in the DEIS does not address the impact the WS Bridge has had on West Seattle over the last 2+ years. With the continued construction for the light rail we are looking at years of additional construction and road closures, not to mention the destruction of many houses and businesses in the area. West Seattle has already had a very difficult 2+ Years, enduring commutes that route all traffic through our neighborhoods and almost doubles our commute time in comparison to the bridge. We are paying Seattle housing prices yet we are so disconnected from the city we avoid going altogether when possible. If the gondola alternative provides an opportunity to connect us to downtown Seattle sooner while avoiding: destruction of homes, destruction of businesses, extended road closures, as well as a reduced cost compared to the light rail (a budget that is already triple the original estimate) then the gondola option is something that needs to be studied and seriously considered.</p> <p>Brittney Carter</p>	Brittney Carter

<p>04/27/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>jordanvvv@gmail.com</p>	<p>Jordan VVVV</p>

04/27/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Michael Beetham 9230 Interlake Ave N Seattle, WA 98103</p>	Michael Beetham

<p>04/28/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>I have been a homeowner in Columbia City for 21 years. My kids and us started using light rail on the very first day Columbia station opened up. It got my kids through high school. It continues to get me and my spouse to work every day—to Capitol Hill, the U District and soon-to-be Downtown. We have a walk of 1 mile+ in the morning and evening to get to/from the station. We are all also cyclists! And the two don't work well together for us.</p> <p>There could easily be a short dedicated bike car for those of us holding our bikes. The vertical parking doesn't work—it's usually too unwieldy to park there, subject to theft or with blocked access.</p> <p>Frankly, I don't worry too much about the pleas for access from Ballard right now. The system could have been made much more bike friendly years ago! But if planning there results in systemwide change, do it!</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Daphne Adair 7732 25th Ave NW Seattle, WA 98117</p>	<p>Daphne Adair</p>

<p>04/28/2022</p>	<p>Please, please integrate bicycle commuting in your planning for Sound transit.</p> <p>I spend about half of each year living in Medellín, Colombia. We from the US consider Colombia to be a “third world” country but it has a first class metro. Every station is connected to a bike path and every station has an attended corral where bikes can be safely stored.</p> <p>I am always amazed at how many people in Medellín use bikes to get that “last mile” to and from the metro system. This is not an accident--it is because the city consciously incorporated bikes into its transit planning.</p> <p>If a “third world” city like Medellín can do it, so can a “world class” city like Seattle.</p> <p>Thank you, Tom</p> <p>Regards, Tom Ternes 215 20th Ave E Seattle, WA 98112</p>	<p>Tom Ternes</p>

------------	---	--------------

04/28/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. 04/28/2022	<p>Hello, Please consider this my public comment on the Chinatown-International District Station EIS.</p> <p>I support the C-ID community (specifically the Asian Pacific American Advocates Greater Seattle Chapter (OCA)) in advocating for a station alignment along 4th Avenue.</p> <p>As a transportation planner and frequent transit and bicycle commuter, this station location makes the most sense long-term to keep transit facilities close together. 4th Avenue supports intermodal connections while a 5th Avenue station only adds distance and hassle to a trip.</p> <p>Please consider this long-marginalized community and consider maintaining existing businesses and cultural institutions in the C-ID neighborhood.</p> <p>Thank you,</p> <p>Bry Osmonson, AICP</p>	Bry Osmonson
04/28/2022	<p>I am writing to voice grave concerns about the ST Light Rail extension proposed for West Seattle. As a 25 year resident of this area, I have come to know the unique challenges West Seattle poses to mass transit design - and the challenges mass transit poses to this neighborhood.</p> <p>Among the many concerns I have, the biggest relates to Chapter 4: Acquisitions, Replacements and Displacements. The negative impacts by this proposed Light Rail extension would outweigh any benefit and would destroy valuable housing, small business as well as negative impacts on our environment and overall quality of life. There is another alternative that many of our community citizens are advocating and I urge you to do a feasibility study on the Gondola proposal instead. Please see comments below:</p> <p>Acquisitions, Displacements, and Relocations Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the "Least Harm Analysis" test in 4.2.18.5.</p> <p>As stated previously, a 2014 Sound Transit paper on mode choices for the regional transit network said: "Several of the technologies that have moderate to high HCT capabilities, but are generally less suitable for Sound Transit, could be considered for some service if that service would operate on principally exclusive rights-of-way and is not intended to interline (i.e., share the same tracks) with the light rail 'spine,' which extends from Everett to Tacoma, and from Seattle to Redmond." When Sound Transit issued the April 7, 2022 Gondola Feasibility Report, it reiterated this statement in dismissing "SkyLink's" proposal from consideration. SkyLink is proposing a gondola to serve not as the primary mode of the regional network but as a feeder from the ST3 designated station locations to the main spine of the light rail system. An urban gondola could provide the capacity needed, could be constructed with minimal disruption, displacement, and damage to the environment and established community. Specifically, it would avoid the following problems caused by proposed light rail alternatives:</p> <p>Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore.</p> <p>Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin practically shows NO available home inventory in West Seattle, the DEIS just says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify for a new home based on current social status / credit rating. Commercial real-estate is very limited in West Seattle which mean displaced businesses may have to relocate causing them to lose their customer base and West Seattle residents may have to travel longer distances to get services.</p> <p>Chapter 4.2.3.3 includes several pages of huge impacts. It talks about the fact that light rail will destroy businesses, reduce the city's tax base and may affect tribal fishing rights. It fails to address the social impact for the employees and owners affected by this destruction, many of them small businesses whose livelihood is affected. It does not address the strain on the social services. Even more importantly it does not address the impact to the</p>	Charlene Kahn

community which has grown around these services and the businesses and families which will be impacted indirectly. Alki Beach Academy for example provides daycare services to 300 children; affected parents may need to quit their jobs or move elsewhere if they lose affordable daycare.

Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, it claims it is "consistent with existing views." While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The norther bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway will be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther.

Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRide-H. Now all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) will be impacted by multi-year construction and related detours. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours.

Figure 4.2.5-4 does not show any coverings over the station therefore making it appear lower than it is. It only shows the destruction of homes directly adjacent to the station, but not along the guideway which again provides a distorted impression of what will happen. Chapter 4.2.5.3.3 fails to mention that Olmsted already suggested to preserve the view from Pigeon Point which any of the southern alignments would destroy, for details: Pigeon Point - West Duwamish Greenbelt – Friends of Seattle's Olmsted Parks (seattleolmsted.org)

Thank you for your review and consideration.

Sincerely,

Charlene Kahn & Steve Epstein

I am writing to voice grave concerns about the ST Light Rail extension proposed for West Seattle. As a 25 year resident of this area, I have come to know the unique challenges West Seattle poses to mass transit design - and the challenges mass transit poses to this neighborhood.

Among the many concerns I have, the biggest relates to Chapter 4: Acquisitions, Replacements and Displacements. The negative impacts by this proposed Light Rail extension would outweigh any benefit and would destroy valuable housing, small business as well as negative impacts on our environment and overall quality of life. There is another alternative that many of our community citizens are advocating and I urge you to do a feasibility study on the Gondola proposal instead. Please see comments below:

Acquisitions, Displacements, and Relocations

Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the "Least Harm Analysis" test in 4.2.18.5.

As stated previously, a 2014 Sound Transit paper on mode choices for the regional transit network said: "Several of the technologies that have moderate to high HCT capabilities, but are generally less suitable for Sound Transit, could be considered for some service if that service would operate on principally exclusive rights-of-way and is not intended to interline (i.e., share the same tracks) with the light rail

'spine,' which extends from Everett to Tacoma, and from Seattle to Redmond." When Sound Transit issued the April 7, 2022 Gondola Feasibility Report, it reiterated this statement in dismissing "SkyLink's" proposal from consideration. SkyLink is proposing a gondola to serve not as the primary mode of the regional network but as a feeder from the ST3 designated station locations to the main spine of the light rail system. An urban gondola could provide the capacity needed, could be constructed with minimal disruption, displacement, and damage to the environment and established community. Specifically, it would avoid the following problems caused by proposed light rail alternatives:

Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore.

Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin practically shows NO available home inventory in West Seattle, the DEIS just says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify for a new home based on current social status / credit rating. Commercial real-estate is very limited in

West Seattle which mean displaced businesses may have to relocate causing them to lose their customer base and West Seattle residents may have to travel longer distances to get services.

Chapter 4.2.3.3 includes several pages of huge impacts. It talks about the fact that light rail will destroy businesses, reduce the city's tax base and may affect tribal fishing rights. It fails to address the social impact for the employees and owners affected by this destruction, many of them small businesses whose livelihood is affected. It does not address the strain on the social services. Even more importantly it does not address the impact to the community which has grown around these services and the businesses and families which will be impacted indirectly. Alki Beach Academy for example provides daycare services to 300 children; affected parents may need to quit their jobs or move elsewhere if they lose affordable daycare.

Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, it claims it is "consistent with existing views." While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The norther bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway will be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther.

Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRide-H. Now all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) will be impacted by multi-year construction and related detours. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours.

Figure 4.2.5-4 does not show any coverings over the station therefore making it appear lower than it is. It only shows the destruction of homes directly adjacent to the station, but not along the guideway which again provides a distorted impression of what will happen.

Chapter 4.2.5.3.3 fails to mention that Olmsted already suggested to preserve the view from Pigeon Point which any of the southern alignments would destroy, for details: Pigeon Point - West Duwamish Greenbelt – Friends of Seattle's Olmsted Parks (seattleolmsted.org)

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7 th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6 th Ave N and 7 th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7 th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5 th Ave N and Harrison St and the corner of 7 th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Philip Nash</p>	Philip Nash

04/28/2022	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years, with increased noise & air pollution, dust, dirt, vibrations in the CID is unacceptable. Not to mention disruptions to 30 immigrant businesses permanently closed or forced to move due to 5th Avenue construction. It is inappropriate to continue to disrupt our vulnerable BIPOC communities. Not only will it expose them to environmental hazardous to their health it will further degrade the social fabric and displace the community that also has detrimental impacts to their health.</p> <ul style="list-style-type: none">· Disruptions to 300 businesses already battered by the pandemic, higher than ever anti-Asian hate crimes, criminal violence.· Disruptions to 30 immigrant businesses permanently closed or forced to move.· Disruptions to schools, daycares, programs serving thousands of children and youth.· Disruptions to programs, classes, recreation for 1,200 elderly non-English speakers. <p>Sound Transit, take 5th Ave. off the table. 4th Ave Tunnel Station avoids 5th Ave impacts! Move Forward on 4th!</p> <p>Sincerely,</p> <p>Megann Karch</p>	Megann Karch
------------	---	--------------

<p>04/28/2022</p>	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. -------------------	---	----------------------

04/28/2022	<p>To whom it may concern,</p> <p>I am concerned about the health impacts on the residents and elders. I am concerned about the fact that as a community member and business owner, what the impact will be on displaced businesses, and the ability to get to CID as it is already difficult enough. I am concerned that this construction will displace historical businesses and spaces without ever acknowledging or remembering their presence and importance to the neighborhood.</p> <p>Plan CID 1a, CID 1b, CID 2a, CID 2b, will all be absolutely terrible for the neighborhood. This needs to be anywhere else outside of the CID. This is the only cultural community as a link light rail stop, and you are deciding to kill the neighborhood, its' business, its' residents, its' rich culture, and history.</p> <p>What do you plan to do for the businesses that are impacted? Why did Sound Transit only provide us two options that will both be deadly to us? How will you make sure that CID and its residents are protected from the environmental impacts? How can you ensure that the years of construction will not impact the wellbeing of the many elders and seniors living here? Haven't you done enough of cutting through our neighborhood?</p> <p>So'le Celestial (they/them)</p>	So'le Celestial
04/28/2022	<p>I own property in Interbay at 3426 16th Avenue W, Seattle, WA which is very close to where Sound Transit is planning an option to start a tunnel to transit under Salmon Bay to the Ballard side for its Light Rail Routes. I feel that the construction would highly impact all of us property owners down in that area and would, of course, cause huge disruptions to the businesses there, like daily access or even some business having to actually move out. Most of us there bought or already owned when Interbay was thought of as a crappy part of town, but we also built small new buildings and made improvements as well as we were happy to see other new enterprises move in like the Seattle Storm which continues to brighten up our community. We are seeing a desire for small businesses to renew their leases and show their customers and neighbors their desire to stay. I feel that Sound Transit would better serve the Interbay community by deviating the tunnel to a less invasive area. Thank you Rod Olsen</p>	Rod Olsen

<p>04/28/2022</p>	<p>Good morning,</p> <p>On April 21, I sent the following email to the Board:</p> <p>"Good morning.</p> <p>The elevator at Barbara Bailey Way and Nagle remains nonfunctioning. Thus inaccessible for those who may be carrying heavier goods, suitcases, strollers, bikes, or mobility devices such as wheelchairs. There is not even prominent signage directing people to accessible working entrances.</p> <p>I write the board because even as Sound Transit remains unable to keep elevators and escalators in working order, you are considering putting future stations incredibly far underground. In addition to ST's questionable track record on "vertical conveyance" it's a huge time sink to have to wait for elevators for deep stations. Do you find it reasonable to wait 5 minutes to get on or off the freeway at all hours, as a baseline? This is the baseline you'd create for link riders.</p> <p>I hope it's obvious why the board needs to act promptly to fix current issues as well as plan for a future system that prioritizes riders much much better.</p> <p>Thank you."</p> <p>Although this was not a formal comment on the DEIS, staff surmised correctly it was related. But instead of simply including in it formal comments about the DEIS, which I think would not have taken more of SoundTransit's time or my own time, I was emailed back (see the forward below) and provided this address to make "formal" comment to. It's these many seemingly minor barriers in the comment and public engagement process that cumulatively create significant barriers to participation, and cultivate cynicism.</p> <p>We desperately need climate-friendly transportation options. That means making it easier to ride transit and making it easier to ask for transit that serves existing transit-reliant riders better, which in turn invites more people to ride. And it also means making it easier to participate in the public comment process.</p> <p>Thank you.</p> <p>Kimberly Kinchen transittrekker.com</p>	<p>Kimberly Kinchen</p>
<p>04/28/2022</p>	<p>Please do not take the 5th Ave option, where it will have huge impacts on 3 neighborhoods. Further, Chinatown has had a long history of being pushed out, particularly when the land becomes valuable. The CID is a historical neighborhood and should be preserved as such.</p> <p>Sincerely,</p> <p>Amy Chen Lozano</p>	<p>Amy Cehn Lozano</p>

04/28/2022	<p>Dear Sound Transit Board,</p> <p>We are a family located at 4009 32nd Ave SW which is directly in the path of the "Medium Tunnel" alternative (DEL-6/WSJ-5). We strongly support the letter that we submitted on behalf of the Avalon neighborhood and our recommendations are reflected in that letter. In short, there is a strong consensus to select a long tunnel alternative with a portal to the east of Avalon Way. In this letter we wanted to give some additional context.</p> <p>Our family is established in West Seattle. We have performed extensive renovations on our house to fit our needs. Our one-year-old daughter is enrolled in daycare in West Seattle. We have extended family living next door to us, a single mother and her 9-year-old daughter who attends Lafayette Elementary School. We are surrounded by our support network of close friends and neighbors. We are one block from a C-line stop that we use to commute. Given the difficulty of finding a replacement home that matches these attributes, forced relocation would lead to significant emotional and financial hardship. All 60+ of our neighbors who have signed the letter have similar stories to tell about how their lives will be upended if they are displaced by WSBLE construction.</p> <p>The Avalon neighborhood has a history of being fragmented by large-scale transportation projects. In the early 1960s, a freeway ramp was constructed from 35th and Fauntleroy to the Spokane St drawbridge. Dozens of homes were demolished, SW Andover St was permanently closed west of SW 32nd St, and the Avalon/Belvidere neighborhood was permanently split into two pieces. The destruction of homes and businesses for freeway construction is now widely considered to have been a mistake.</p> <p>The proposed elevated alternatives amount to doubling down on the mistake that was made sixty years ago. All of the elevated alternatives will result in the demolition of dozens of homes in the Avalon neighborhood and a further fracturing of the neighborhood into pieces.</p> <p>Fortunately, the board can make an easy choice to bring fast, rapid transit to our neighborhood while avoiding unnecessary demolition and relocation. Longer tunnel options offer additional advantages including a lower guideway over Longfellow Creek and a lower height of the Delridge Station. Therefore, we recommend the following:</p> <ol style="list-style-type: none">(1) We request that Sound Transit study a longer tunnel alternative along the Yancy-Avalon routing, with a tunnel portal located to the east of Avalon Way and to the north of Yancy St. Combined with the removal of the Avalon Station, we expect that this alternative will be cost competitive with the Medium Tunnel/41st St alternative.(2) We request that the preferred tunnel alternative be considered without the Avalon Station, to avoid the excessive cost of two underground stations.(3) We recommend that the Sound Transit board select a long tunnel preferred alternative.(4) We support an underground Avalon Station, but recognize that it is the most logical component to drop, especially given the overlapping walkshed with the Junction station. <p>Signed,</p> <p>Joe + Beth Boomgard-Zagrodnik 4009 32nd Ave SW</p>	Joe Boomgard-Zagrodnik
------------	---	------------------------

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Sarah Dallosto sarah_dallosto@hotmail.com</p>	<p>Sarah Dallosto</p>

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. <p>04/15/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). --	---	--

<p>04/15/2022</p>	<p>In my view, the Interbay-Ballard segment of ST3 expansion will be most successful if is built with several key principles in mind: 1) it must be located where residents and businesses can access it, 2) it takes us where we need to go, 3) it doesn't unduly disrupt existing infrastructure. For these reasons, a tunnel under the Ship Canal is imperative and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>Accessibility in general will require Metro circulators to run frequently and schedule alignment between bus connectors and light rail. Smaller, more frequent connectors are preferable to large but infrequent buses, though larger vehicles may be needed at peak times. This will minimize transfer time from transit to platform and maximize ridership.</p> <p>Accessibly also means avoid, to the greatest extent possible, transit plans that require pedestrian crossing of major thoroughfares. This will improve passenger safety and avoid traffic congestion.</p> <p>Save costs by right-sizing stations. Keep them simple and functional, without huge mezzanines or massive structures. Improve safety by ensuring stations are well-lit and don't have nooks, columns, etc for people to loiter in/behind.</p> <p>Please consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott and place station on West side of Elliott. If station is elevated, minimize size over Galer flyover/Magnolia Bridge. Ensure that buses pick up and drop off on west side of Elliott so there are no pedestrians crossing Elliott for bus connections.</p> <p>For Interbay Station (IBB-2b): The most important issue is location, as the station must be proximate to Magnolia peninsula for emergency access in event of bridge failures. It should be designed so all buses and passenger cars pick up and drop off on the north side of Dravus or on 17th Ave and not require any pedestrians to cross Dravus. This station must lead to Ship Canal Tunnel</p> <p>Ballard station: Please re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village. Re-examine and study Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges.</p> <p>Thank you for your consideration.</p>	<p>Heather MacClintock</p>

--	--	--

<p>04/15/2022</p>	<p>Manager DEIS Comments,</p> <p>Like so many others, I'm excited about light rail finally connecting Ballard and West Seattle to other neighborhoods (to MY neighborhood). I appreciate the opportunity to comment on the draft environmental impact statement. It's so important to get this right.</p> <p>The experience and convenience of riders -- and the potential for ridership growth -- need to be prioritized as we strive to move people out of private vehicles and reduce greenhouse gas emissions -- as well as all the other harms that come from driving.</p> <p>Continue to move forward with all stations voters approved with ST3 in 2016. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent and reliable escalators and elevators, which has been a huge problem in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. They also need to handle bicycles, assistive devices, and other bulky or oversized equipment well. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth, quick, effortless transfers are essential. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>I join with Seattle Subway in the following requests:</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. 	<p>1820 S Weller St Seattle, Washington 98144</p>	
--	---	--

<p>04/28/2022</p>	<p>BALLARD:</p> <p>I urge Sound Transit to reopen study of the Ballard 20th/Thorndyke Tunnel Portal option. The other DEIS options fail to serve Central Ballard and are fenced in by industrial zones. Ballard needs a station that truly serves its most productive small business strongholds along 24th Ave and Ballard Ave. This station is the only Ballard station in ST3 and the furthest west. The 14th and 15th options do not truly serve Ballard.</p> <p>INTERBAY:</p> <p>I support the Thorndyke Retained Cut option [IBB-2a/IBB-2b].</p> <p>Thorndyke Retained-cut is a shallow station that provides quick station access for riders, good TOD potential, perfect location for great bus transfers from both Magnolia and North Queen Anne/Seattle Pacific University, and allows for continued consideration of a tunnel option to 20th for Ballard.</p> <p>SMITH COVE:</p> <p>I support Sound Transit's preferred Galer Street Station option [SIB-1].</p> <p>SEATTLE CENTER STATION:</p> <p>I prefer a Republican Street Station option.</p> <p>While arts community stakeholders may be concerned about construction impacts, a Republican location will produce long-term benefits for them in terms of access and operational efficiency. I believe Sound Transit can mitigate short-term construction impacts while primarily focusing on serving future transit riders and arts patrons with a good station at Republican.</p> <p>SOUTH LAKE UNION (SLU):</p> <p>Neither "final" SLU station option serves the neighborhood well. SLU station needs to serve SLU. Both options should be rejected and Sound Transit should reopen study for an SLU station on Westlake Avenue. A north/south oriented station on Westlake will enable a shallower crossing of SR-99/Aurora and will likely be cheaper and faster to build, as well as make future expandability easier as well.</p> <p>DENNY STATION:</p> <p>I support Westlake Ave Station option DT-1.</p> <p>However, I do not understand why the station is required to be over 100 feet deep, despite the fact that it lies directly under an unobstructed street right-of-way. Sound Transit should seek to make the station shallower.</p> <p>WESTLAKE:</p> <p>I support 5th Avenue Station option DT-1.</p> <p>However, the elevator and escalator plan must be improved for better ease of use and redundancy and additional ways should be found to speed up transfers and surface access at this future central hub of the Link system.</p> <p>MIDTOWN:</p> <p>The Midtown Station is too deep as currently designed. Sound Transit must find a way to make the station shallower. A depth between 140 and 170 feet will make reliable access extremely difficult and slow access will make it difficult to attract a robust ridership. Elevators should be designed to travel directly from the surface to platform level, and multiple elevator redundancy will be essential.</p> <p>CHINATOWN/INTERNATIONAL DISTRICT (CID):</p> <p>Chinatown/International District (CID) Station will be the Puget Sound's single most important central station for its confluence of multimodal connections and transfers. Of the options presented, the "least bad" option is the 4th Avenue "Shallow" Alternativ [ID-1a].</p> <p>However, the excessively long transfer times with the current design are unacceptable.</p>	<p>Darryl Sclater</p>
-------------------	--	-----------------------

A tunnel at the same depth as the existing CID Station along 4th Ave would be a far better option. I urge Sound Transit to find a way to make this happen at this critical transit station and regional transportation hub. We only have one chance to get this right.

SODO:

I prefer Mixed Profile Station option SoDo-2.

However, Sound Transit should study citing the Mixed Profile Station further north at the existing SoDo Station location to prevent demolishing the Post Office and the associated added expense.

WEST SEATTLE (DELRIDGE, AVALON, AND ALASKA JUNCTION):

I support 41st Ave Medium Tunnel option WSJ-5.

However, the associated Delridge station option DEL-6 is unsatisfactory in terms of bus connectivity.

Sound Transit should proceed with WSJ-5 while reopening study on DEL-6 to improve bus connectivity.

GENERAL COMMENTS:

Sound Transit should not eliminate any stations from the plan.

2) All underground stations should be as shallow as possible.

3) Fast transfer times at transfer points must be a top priority.

4) Escalators and elevators must (a) be fast and (b) have enough redundancy to handle game day rushes and not fail riders in the event of breakdown.

5) Fast surface-to-platform elevators (no mezzanines) should be used when stations are more than 100 feet deep.

6) Future expansion in Seattle must be a top priority.

7) Bicycle commuter connectivity should be a top priority in all station locations and designs, including free and abundant bike parking at stations. Bike parking and connections to local bike facilities (bike lanes and bike paths) should be included at the very earliest stages of the design process, with dedicated funds committed as early as possible.

<p>04/15/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Jacob Lee jacoblee@gmail.com</p>	<p>Jacob Lee</p>
-------------------	--	------------------

	<p>220 24th Ave Seattle, Washington 98122</p>	
--	---	--

<p>04/15/2022</p>	<p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement.</p> <p>Systemwide:</p> <p>(1) Study Milan method cut and cover within the existing street right of way. (https://pedestrianobservations.com/2021/02/25/cut-and-cover-is-underrated/)</p> <p>(2) Study full automation. The increase in capacity from operating smaller trains at higher frequency automated operations reduces station size needs (greatly reducing costs) while providing better service. Automated operations also save labor costs.</p> <p>(3) Review global standards for fire/emergency issues. It's ridiculous a station cannot fit within the 80 ft Fauntleroy due to the local fire code. Sound Transit should plan from the basis of accepted global 'best practice' and seek code changes where they diverge. Updating archaic standards to save hundreds of millions is a no-brainer.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth means we must build the most comprehensive rail network we can to promote transit-oriented development and decrease vehicle use. Eliminating planned stations is in direct opposition to what the region's voters want and need. Maximizing ridership and long-term growth are the goals. Short-term construction impacts can be mitigated and must not prevent the better options from being selected.</p> <p>Shallower stations reduce cost, and risk of project delay while promoting shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game-day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Ballard: Study pairing a high bridge with an elevated 15th Avenue station and continue to refine all tunnel options to put a station entrance west of 15th Avenue. Reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>Interbay: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed-down 15th Avenue Elevated Station [IBB-3]</p> <p>Smith Cove: Build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>Seattle Center: Build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>SLU: Reject both presented options, study a Westlake or similarly north-south aligned station within SLU boundaries and as centered on South Lake Union as possible. Harrison Street is preferred as the 'less bad' option currently under consideration.</p> <p>Denny: Build Westlake Ave Station [DT-1] to line up with an SLU station on Westlake further north, but update vertical conveyances and aim shallower.</p> <p>Westlake: Build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>Midtown: Build the station as shallow as possible, design the station for the surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>Chinatown/International District: Build the 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than four and a half minutes. Throw out deep tunnel options.</p> <p>Sodo: Choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.</p>	<p>Trevor Reed</p>
-------------------	---	--------------------

Delridge: Request a study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].

Avalon: Build WSJ-5 with a request to study a refined DEL-6 pairing.

Junction: Build Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings.

In order to future proof our growing system, we must design for expandability in five locations:

(1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).

(2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).

(3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.

(4) Midtown must be designed to accommodate future expansion to the east along Madison St.

(5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Ian Brown ibrown1779@gmail.com</p>	<p>Ian Brown</p>

04/15/2022	<p>Greetings,</p> <p>I strongly support the views of the Magnolia Community Council about the nature and location of the Interbay-Ballard segment of the light rail.</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <ul style="list-style-type: none">Metro circulators must run at frequencies to connect with light rail schedule, and respond to demandMinimize transfer time from transit to platformAvoid transit plans that require pedestrian crossing of major thoroughfaresMinimize size of stations for cost saving. We don't need huge mezzanines or massive structures.Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NWConsider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements <p>Ballard station</p> <ul style="list-style-type: none">Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban VillageRe-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges <p>Thank you for your consideration.</p>	Bruce Cross
------------	---	-------------

<p>04/15/2022</p>	<p>Manager DEIS Comments,</p> <p>I am writing to submit my comments to Sound Transit’s Draft Environmental Statement on the Ballard-West Seattle Link Extension.</p> <p>The current plan does not put riders and increasing ridership first. It must. We did not pass a tens of billions of dollars pan so Sound Transit could build stations with difficult, unreliable transfers, or in the middle of industrial areas.</p> <p>First, do not cut any of the stations from the ST3 list approved by voters in 2016. I was on the Sound Transit Citizen Oversight Panel - I have seen firsthand how some of the most senior executives in Sound Transit use "voter approval" requirements to protect foolish projects they want to keep, like parking garages. If you want the confidence of the voters and the riders, you dare not set aside something as fundamental as our station choices, lest you show yourself hypocritical.</p> <p>This is all for good reason. We know the region has experienced explosive growth, far beyond projection, that most of our emissions are from transportation, and that this is the biggest tool we currently have for reducing emissions. Eliminating stations would not only fly in the face of voter expectations, but it ignore the basic needs of our region and environment.</p> <p>Next, the many of the transfers at the stations are problematic. In part, this is due to the large number of deep stations. Riders must come first, prioritizing short travel times, accessibility and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters.</p> <p>In fact, ignoring the experience of short-trip, urban riders, particularly in spots like the international district, is a serious assault on equity, showing Sound Transit's continuing indifference to people who don't and earn like their senior staff members. The history of cities and planning agencies, including sound transit, glossing over equity concerns is morally appalling and embarrassing. Let's get it right this time.</p> <p>Next, if there absolutely must be any deep stations, the vertical experience needs to be substantially better than it is currently in your other stations. There must be enough capacity and redundancy (please stop with the single points of failure) for rushes and crush periods, including big stuff like game days and concerns.</p> <p>Elevators should go directly to the platform level, multiple should be callable at once, and they should have plenty of excess capacity and redundancy. Escalators should not be involved in deep stations and frankly, generally not relied upon, given ST's long inability to manage them.</p> <p>All should be built to aggressively minimize time to transfer or board, and to significantly reduce variance on this too. Even Short boardings, when unreliable, are a serious problem for people who need to plan around transit and transfers.</p> <p>In general, short and smooth transfers have been given short shrift in the DEIS. It continues to feel like ST designs with the mindset of rail as a nice-to-have augmentation for the real stuff that happens in cars and parking garages. This is unacceptable in a city that is going to drastically grow but cannot handle more car trips, that wants to increase its quality of life and wants to reduce its carbon impact.</p> <p>Transfers must feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel. Specific transfers comments</p> <ul style="list-style-type: none"> -In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. -In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. -In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. -At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. -In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. -At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. 	<p>Ron Davis</p>
-------------------	---	------------------

-At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.

-In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.

-In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.

-In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.

-In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.

Finally, the agency and the DEIS must set up Sound Transit for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.

In order to enable a growing future for our system and avoid locking in limited reach, we must we must design with near-readiness to expand in four key spots:

(1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).

(2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).

(3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.

(4) Midtown must be designed to accommodate future expansion to the east along Madison St.

(5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you. Please don't let us down.

--	---	--

<p>04/23/2022</p>	<p>Dear Sound Transit,</p> <p>When I attended the World Harp Congress in Sydney, Australia in 2014, and mentioned that I played a Dusty, anyone who heard me knew that I wasn't saying that my harp needed the attention of a dustrag. They knew it was a Dusty Strings harp and that it was made in Seattle. After all, there are now 17,000 Dusty Strings harps out in the world, all from here.</p> <p>We had moved to Seattle and Queen Anne in 1995 and, as a harpist, I was delighted to learn that a harp store was nearby in Fremont, and quickly made new friends there. At that time the harps (and hammered dulcimers) were made in a warren of little rooms two stories below the Fremont Street level. By then, though, owners Ray and Sue Mooers were realizing that the business they'd been growing since 1979 into a worldwide one needed more space. With valued, skilled employees who bike, bus or walk to work, they felt that they had a substantial investment in keeping the company in Seattle rather than moving to potentially cheaper digs out of town.</p> <p>After five years of searching they built a wonderful harp-making facility in Interbay at 3450 16th Ave W. No more windowless, cramped areas but big windows and light, and special exhausts to better protect workers from lacquer fumes, and an enormous exterior vacuum cleaner draws sawdust-laden air into 150 cloth bags inside it. Special precision-made tools, concert and showroom areas, and enough space to conduct tours and hold workshops, make the Interbay Dusty Strings factory a special place.</p> <p>It is a world-class harp-making facility that would be a shame to lose in favor of a light rail route. I hope you will take it into consideration and choose another route such as IBB1b.</p> <p>Sincerely,</p> <p>Joyce Rice, lifelong harpist</p>	<p>Joyce Rice</p>
<p>04/23/2022</p>	<p>Hello. I am a long time resident of West Seattle and I would like to comment on the Draft EIS WSJ-1 as it affects our community. After the joy, for some, of the removal of the Alaskan Way Viaduct, I don't understand how the city can conceive of putting all of Fauntleroy Avenue under a dark and oppressive bridge. WSJ-1 will create, essentially, a dark tunnel where there were once light and airy apartments and businesses. And consider the gray and rainy months of our long winters? Oppressive.</p> <p>WSJ-3a, the tunnel, should be the preferred option. It affords the least disruption and displacement of businesses. In addition, the station should be at 41st Ave SW. Fewer businesses would be impacted. To build the station at 42nd Ave SW would have a seriously negative impact on the Alaska Junction businesses as it is already a congested area. The businesses have been blasted by covid. To make them incur further disruption and loss of business is unconscionable.</p> <p>For pure fun, I think having the Gondola to West Seattle would be great. It would be an attraction for the city of Seattle, like the Big Wheel, and would bring tourists to West Seattle. A win-win situation.</p> <p>But please, NO WSJ-1.</p> <p>Julia Sweeney</p>	<p>Judy Sweeney</p>

<p>04/23/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Andrew Mullenix andrewmullenix@outlook.com</p>	<p>Andrew Mullenix</p>

<p>04/25/2022</p>	<p>I am writing to express concern that the recent EIS regarding the proposed West Seattle lightrail is inadequate. It doesn't talk about tree removal, stormwater retention, carbon sequestration, air purification or all the impervious surfaces that would be entailed with a light rail.</p> <p>I encourage you to include these in your study and make the info.available to the public.</p> <p>Thank you, Christie Skoorsmith, resident of West Seattle</p>	<p>Christie Skoor</p>

04/27/2022	<p>Dear Councilmembers and Sound Transit</p> <p>Even though I live three hours away from their shop, I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). They are master sharpeners in demand by the finest chefs around the world, and they stock an incredible selection of blades for the kitchen for all price levels. It's astonishing to me that their expertise is available—and affordable—for the likes of me, a humble home chef. I've purchased products from them, and have used their sharpening service. Since I learned about them and their community after moving to Washington several years back, I have become a customer for life. They are truly a treasure.</p> <p>This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new, larger, and more convenient storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <ul style="list-style-type: none">• BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.• The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.• They also offer a high performance sharpening service for home and professional chefs.• I'm looking forward to their classes aimed at established knifemakers and beginners.• BladeGallery Inc is a small business that currently supports 8 employee households.• BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at: BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Sincerely, Scott Woodham 1136 S. 04/27/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Karan</p>	Karan Daftary
------------	---	---------------

04/27/2022	<p>Sound Transit Board of Directors and Sound Transit Staff:</p> <p>I write to you as a West Seattle resident, a member of the Sound Transit Stakeholder Advisory Group (SAG) from 2018-2019, and a current member of the Sound Transit Community Advisory Group (CAG). In the summer of 2017, as member of the Board of the West Seattle Transportation Coalition (WSTC), I helped plan the first community outreach of the WSBLE in a WSTC Light Rail workshop. This was the first opportunity for the West Seattle community to see what the DEIS issued on January 29, 2022 addresses.</p> <p>Needless to say, I've been closely following the ST3 WSBLE process for the last 6 years through the SAG and the CAG and through other comment opportunities provided along the way. I've enjoyed connecting with SAG/CAG members throughout the City, associating with dedicated ST staff, and introducing the WSBLE concepts to my community. That includes revealing (literally) to the Avalon/32nd Avenue SW community that a Yancy/Avalon alignment added by the ST Board in October 2019 could end up running through their residential neighborhood. (Introduced Sound Transit staff to the Avalon/32nd Avenue SW community in the spring of 2020).</p> <p>Thank you for the opportunity to comment on the WSBLE DEIS.</p> <p>I urge the Sound Transit Board to:</p> <ul style="list-style-type: none">· Select a long tunnel alignment into the West Seattle Junction as it is the best option for the existing and future West Seattle. Any elevated alignment within the West Seattle Junction Urban Village is contrary to Community and Comprehensive Plans for this large area. Further, any elevated alignment within West Seattle's Urban Village stands in stark contrast to Ballard's Urban Village tunnel alternative(s). In brief - if Sound Transit tunnels into Ballard's Market Street, Sound Transit must tunnel into the West Seattle Junction - period. WSJ-1 complies with stated purposes and is the ideal solution to station integration within a developed active Urban Village as it allows for premier system access of bicycle and pedestrian connections and multimodal linkages while not endangering economic conditions within the crucial West Seattle Junction.· Reinstate the Purple line for consideration. Among the many alignments initially floated by ST, the Purple line did something Sound Transit has rarely experienced – it had massive community support because of the following:<ul style="list-style-type: none">· The Purple line avoided fragile wildlife habitat areas and steep slope critical areas,· The Purple line sidestepped the West Seattle Bridge corridor, the Spokane Bridge corridor and Port of Seattle high voltage corridor by crossing the Duwamish River in a less constrained area.· The Purple line represented true Environmental Justice as it prevented the destruction of dense affordable residential neighborhoods that are occupied by first-time homeowners and People of Color. (It is assumed that these same residents will be subject to Sound Transit's relocation policies, yet it is doubtful that they will be able to afford to return to their community). <p>Although the Purple line was perceived as too costly an alternative when the Sound Transit Board removed it from consideration in 2019, the Sound Transit Board must revisit this alignment and evaluate its costs against the current costs of excessive over-engineering, infrastructure disruption, business and residential real estate takings and Environmental Justice offenses.</p>	Deborah Barker
------------	--	----------------

· Focus on sustainable opportunities for Transit Oriented Development (TOD). Proposed Del5 and Del6 alignments allow for TOD opportunities that feature immediate adjacency to a working steel mill. This robust business has a 24/7 schedule which includes semi-truck deliveries, train car decoupling, heat blasts, steaming geysers, and steel loading. If one wanted to create TOD opportunities that are doomed to failure because no one wants to develop them, this has to be the place.

Fortunately, there is Del2a which proposes a centrally located station area, features tracts that are large enough to establish sustainable and equitable TOD projects which could include well-situated commercial uses (i.e.: grocery and restaurants) that are surrounded by dense mixed-income housing. Further, such TOD would certainly comply with goals identified in the Sound Transit's Adopting an Equitable Oriented Development Policy (Sound Transit 2018) and Sustainability Plan (Sound Transit 2019), as referenced in the Purpose and Need of the WSBLE Project. Ideally, Del2a should continue with a low SW Genesee Street guideway and east of Avalon Way SW, enter a tunnel portal to the Junction Station.

· Eliminate the Avalon Station and utilize the funds within the Delridge and West Seattle Junction planning areas for optimal TOD opportunities and multimodal integration.

Thank you again for the opportunity to comment on WSBLE DEIS. I charge the Sound Transit Board with honoring your commitment to Sound Transit's strategic priorities which are built upon a commitment to equity and fairness, environmental stewardship, partnerships and the communities you serve - while ensuring parity is maintained for West Seattle and Ballard.

Sincerely,

Deb Barker

West Seattle Resident

04/27/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to COVID it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County.</p> <p>Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. <p>04/27/2022</p>	<p>?To whom it may concern,</p> <p>?Of the preferred alternatives, I believe tunnel alternative WSJ-3a should be advanced with modifications as the final preferred alternative. WSJ-3a reduces the issues with neighborhood cohesion and displacement compared to the above-grade alternatives, and the future station option on 41st Avenue SW is a better location compared to 42nd Avenue SW as it will have less impact on existing established businesses in the heart of the Junction during construction.</p> <p>I further believe the DEIS currently represents inadequate study of cumulative impacts, and provides insufficient mitigation information, in several areas including the lack of sufficient information on cumulative impacts of transportation and road closures -- including paths of temporary and permanent-term closures and re-routes -- as well as the lack of sufficient information on separate and cumulative impacts of tunnel routes on the businesses and residents above them.</p> <p>Thank you for your consideration.</p> <p>John Wright</p> <p>John L Wright (425) 466-3554 johnwright737@gmail.com</p>	<p>John Wright</p>
<p>04/27/2022</p>	<p>Hello ST folks!</p> <p>I love Link, and am very excited that it is coming to Ballard!</p> <p>Please reconsider the elimination of the “West of BNSF/20th/Tunnel” alternative for the Interbay/Ballard Segment of Ballard Link.</p> <p>The train should take people to where they want to go, not where they have to cross a major intersection and then walk another half mile to get to where they want to go.</p> <p>Nobody considers the intersection of market and 14th to be a destination. The destinations are the restaurants on Ballard Ave, the movie theater, the library, the hospital. Appendix M says that this is what the stakeholders wanted, and I agree. As a resident of the neighborhood, I think that putting the station as far east as 14th would be declaring that the station would be some sort of “Greater Ballard Area Station”, not an actual “Ballard Station” to bring people to what they think of when they think of Ballard.</p> <p>Putting it further west, possibly even as far as 22nd would make it right where community and commerce are. It even makes the station within a reasonable walk of the Nordic Museum and the locks. At 14th, the heart of Ballard is downgraded to that “reasonable walk” and the locks is downgraded to wanting a different last-mile mode of transportation.</p> <p>I love what you folks have done so far, please keep up the good work. We only get to place this station once. Please put the best option back on the table!</p> <p>Sincerely, Sam Calandra sam@samcalandra.com Ballard, WA</p>	<p>Sam Calandra</p>

04/27/2022	<p>To whom it may concern,</p> <p>I am in support of SIB-3 on the proposed Ballard Light Rail Extension (and against SIB-1 and SIB-2). The city has decided to knock down the viaduct and beautify the waterfront in downtown. This priority should extend to the northern part of Elliott Bay too! Don't put up a new elevated track that will dominate the visual space where a tunnel & retained cut will serve the same purpose. Additionally, SIB-3 will impact the fewest residents and businesses out of the three alternatives.</p> <p>Best,</p> <p>Noah Wasser</p>	Noah Wasser
04/27/2022	<p>I am in support of SIB-3 on the proposed Ballard Light Rail Extension (and against SIB-1 and SIB-2).</p> <p>The city has decided to knock down the viaduct and beautify the waterfront in downtown. 04/27/2022	<p>My home is at: 3112 SW Avalon Way Unit 202 98126</p> <p>I strongly support choosing the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b). I strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5), both of which would result in significant displacement and environmental impacts in the Yancy/Avalon/32nd Ave corridor. Particular concerns with the "Medium Tunnel" alternatives include:</p> <ul style="list-style-type: none"> (1) displacement of Transitional Resources on Avalon Way; (2) more housing displacements on and adjacent to 32nd Ave SW than preferred alternatives; (3) accessibility of remaining residences given the alignment of guideway near the corner of 32nd Ave SW and SW Andover St; (4) construction impacts from excavation of retained cut; and (5) operational visual/noise impacts to remaining residences along 32nd Ave SW, SW Andover St, and SW Genesee St. (6) mitigation of construction and noise impacts for the residents of 32nd Ave. SW. and Fautleroy Way, SW. will require expensive concrete barriers for noise mitigation from the onset of the project and also to protect the residential neighborhoods from the train noise ongoing. <p>Re: Avalon Station</p> <p>Further, I suggest the removal of the Avalon station as it combines a high foot/bike/transit traffic location with the entrance to the West Seattle Bridge making it dangerous for people coming to and from such a station.</p> <p>Additionally, the Avalon station will further add traffic and parking impacts to our Avalon neighborhood, already inundated with a lack of parking, resulting in crosswalks being blocked by vehicles, making pedestrians less visible and at elevated risk with crossing the street. Adding 1200 daily boardings to the Avalon station will further put families and their children at increased risk in our Avalon neighborhood. Adding 1200 daily boardings will add an undetermined increased amount of cars driving to the area in a hurry to make sure somebody catches the train.</p> <p>Sincerely,</p> <p>Kathryn Welch Vitelli kvitelli@comcast.net</p>	Kathryn Vitelli

Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Furthermore, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Sanjay Sagar</p>	Sanjay Sagar

04/27/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>BladeGallery Inc Customer: Richard Willis</p> <p>Home address: 1705 Belmont Ave, Apt 102, Seattle, WA 98122</p> <p>Email: richard.willis89@yahoo.com</p>	Richard Willis

04/27/2022	<p>Hello,</p> <p>I live at 3070 SW Avalon Way Unit F.</p> <p>I strongly support choosing the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b).</p> <p>I strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5) and I strongly oppose alternatives DEL-5 and DEL-6, all of which would result in significant displacement and environmental impacts in the Yancy/Avalon/32nd Ave corridor. Particular concerns with the "Medium Tunnel" alternatives include:</p> <ul style="list-style-type: none">(1) displacement of Transitional Resources on Avalon Way;(2) more housing displacements on and adjacent to 32nd Ave SW than preferred alternatives;(3) accessibility of remaining residences given the alignment of guideway near the corner of 32nd Ave SW and SW Andover St;(4) construction impacts from excavation of retained cut; and(5) operational visual/noise impacts to remaining residences along 32nd Ave SW, SW Andover St, and SW Genesee St.(6) mitigation of construction and noise impacts for the residents of 32nd Ave. SW. and Fautleroy Way, SW. will require expensive concrete barriers for noise mitigation from the onset of the project and also to protect the residential neighborhoods from the train noise ongoing. <p>Thank you for your consideration, Sean Tamon 3070 SW Avalon Way Unit F</p>	Sean Tamon

04/27/2022	<p>Good evening, Lauren Swift & Sound Transit!</p> <p>I would like to make a comment on the West Seattle Ballard Link Extension (WSBLE) project that will be impacting the Chinatown-International District (CID) neighborhood in Seattle, WA.</p> <p>My name is Jessie, and I am a graduate student at the University of Washington. I am also a frequent patron of the CID businesses as well as a worker who worked close to, if not in, the CID prior to the onset of COVID-19. On my days off, I enjoy visiting the CID to patronize small businesses like Sairen, Chengdu Memory, Jade Garden, and Hood Famous Cafe + Bar, as well as larger stores like Kinokuniya (bookstore) inside Uwajimaya (grocery store).</p> <p>After reading about the project, I oppose the construction of the Link Extension on the 5th Ave S, as this would directly impact more than 15 businesses and alter the registry of historical buildings in the CID. Moreover, it would change the way that the elderly and families live and work in the CID as they would have to endure construction noise, air pollution, and other effects of construction so close to their homes and workplaces, as well as reduced access to emergency vehicles due to roads being blocked off. COVID-19, anti-Asian racism, and rising crime activities already have harmed small businesses in the CID. Small business owners must find ways to be creative and survive, providing for their families and communities. I have done my part to support these businesses.</p> <p>Instead, I — along with many others in the CID community — support the 4th Ave S as a preferred alternative, as this would not impact businesses in the neighborhood as much. I am supportive of the needs and desires of the people most impacted by Sound Transit's decision, and I hope you would take this position into consideration to minimize grievous harm and unintended consequences for the community. The CID community is precious and vulnerable, and I strongly encourage us to preserve their space and way of life as much as we can.</p> <p>Thank you very much for your time.</p> <p>Thanks, Jessie Zhang</p>	Jessie Zhang

<p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Lisa Pfeiffer 2410 E Highland Dr Seattle, WA 98112</p>	<p>Lisa Pfeiffer</p>

The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough considerations of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Alexa Vanselow 2801 E Yesler Way Seattle, WA 98122</p>	Alexa Vanselow
------------	---	----------------

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last mile connections. That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains – and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough considerations of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Ruth Maule 47308 SE 153rd St North Bend, WA 98045</p>	Ruth Maule

<p>04/25/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>David Guiland Hardwater1000@gmail.com</p>	<p>David Guiland</p>

<p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, tadd hsie 15134 SE 46th Way Bellevue, WA 98006</p>	<p>Tadd Hsie</p>

My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Jesse Diller 3418 Hunter Blvd S Seattle, WA 98144</p>	<p>Jesse Diller</p>

-------------------	--	------------------------

<p>04/27/2022</p>	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Kathleen O'Leary</p>	<p>Kathleen O'Leary</p>
<p>04/22/2022</p>	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years, with increased noise & air pollution, dust, dirt, and vibrations in the CID is completely unacceptable. Not to mention disruptions to 30 immigrant businesses permanently closed or forced to move due to 5th Avenue construction. These businesses do not need this stress especially coming out of a 2+ year pandemic.</p> <p>Sound Transit, take 5th Ave. off the table. 4th Ave Tunnel Station avoids 5th Ave impacts! Move Forward on 4th!</p> <p>Sincerely, Gina Chaleunphonh</p>	<p>Gina Chaleunphonh</p>

------------	---	----------------

<p>04/27/2022</p>	<p>I am writing because I do not believe the Draft EIS for West Seattle Light Rail adequately captures the carbon footprint of the project, or addresses alternatives to that footprint. It also does not clearly state the true cost of traffic reduction associated with construction and ongoing operations compared to alternatives.</p> <p>ENVIRONMENTAL IMPACT COMMENTS</p> <p>Chapter 1.2.2.6 points out the need to reduce vehicle miles by 30 percent by 2035. However light rail will not connect West Seattle to the SODO light rail station until 2032 and won't be extended farther until at least 2037. That won't provide much incentive for drivers to switch to public transit (as stated in Table 4.2.6). Even after 2037 the expected savings in vehicle miles are minuscule while there will be a large carbon impact caused by the construction that is not captured in the document. Light rail's carbon footprint should be considered, and a proper (outside expert) study done to compare an aerial gondola alternative and light rail carbon footprints in construction and operation.</p> <p>Appendix L4.6 references carbon consumption, citing that "general FTA estimates" were applied. However, no federal project has ever been as large as the 2+ mile, 8 to 16-story tall elevated light rail guideway planned for West Seattle. Energy consumption during construction was not even considered. (Chapter 4.2.10 says "The FTA Greenhouse Gas Emissions Estimator was not used.") Therefore, the carbon figures for the elevated alternatives will be much higher than general FTA estimates. A proper impact evaluation for various alignments and possible other modes, such as bus and gondola, would involve using tools such as the Embodied Carbon in Construction Calculator (EC3) (developed by the nonprofit, Building Transparency) and be conducted in close consultation with objective environmental science organizations like the Carbon Leadership Forum (CLF), a nonprofit, industry-academic organization at the University of Washington. Calculations also need to account for any displacement of existing structures which ultimately have to be replaced in some way.</p> <p>Chapter 4.2.6.3 fails to explain why a reduction of 400 trips on the West Seattle bridge (see Table 2-9 of App. N) would contribute to savings of 117,000 miles per day in the region. That would be 293 miles per trip per day which is nonsensical.</p> <p>Even if calculations were accurate, the construction related carbon as estimated in Appendix L4.6D is between 158,067 and 614,461 tons, and the regional, annual carbon reduction from vehicles (Table 4.2.6-2) 10,941 tons once the light rail connects directly downtown in 2037 as the earliest. Approximately a third of this would be attributable to West Seattle. It may take between 42 to 168 years to offset the West Seattle light rail construction related carbon emissions. Since the light rail construction carbon footprints are underestimated, the payback is even longer.</p> <p>The DEIS fails to mention that a gondola could provide reliable, grade separate public transit a decade earlier than light rail while generating substantially fewer greenhouse gases during construction. That would significantly contribute to meeting the goal for 30% reduction by 2035. A direct comparison of the carbon footprints and offsets of alternatives should be performed.</p> <p>PROJECT FUNDING/COST COMMENTS</p> <p>Chapter 2.8.2.1.1 lists the many alternatives contemplated in the DEIS and the associated total costs between \$3 billion and \$4.7 billion which is about double or triple the amount approved by voters in ST3 (\$1.7 billion). Before the pandemic, three West Seattle buses (RapidRide-C, #121, #21) already provided 25,500 trips daily. The DEIS projects 27,000 trips on light rail by 2042, only 1500 more than buses were providing in early 2020. There will be little improvement in travel time for many riders, given the likely need to take a bus to a West Seattle light rail station and then disembark at SODO and wait for another light rail train to go anywhere else for at least the next 15 years.</p> <p>Table 2-9 of App. N indicates Sound Transit estimates light rail to reduce 400 vehicle trips on the West Seattle Bridge by 2042. At a light rail cost of almost \$10 million per additional daily trip (plus the building of additional operating capacity and train acquisition) and an annual operating cost of \$35 to \$40 million this investment does not seem worthwhile.</p> <p>Gondola technology has been proposed by citizens since 2015 but always ignored or dismissed as incapable of serving regional transit needs despite the fact that it is being suggested, not as a regional mode, but as a high-capacity feeder for a densely developed terrain with hills and water obstacles where light rail is difficult, expensive, and damaging to build. Other light rail corridors such as from SODO to Georgetown/South Park could provide a more economical way (both in construction and annual operation) to provide light rail to the Duwamish peninsula.</p>	<p>Gary Lai</p>

04/26/2022	<p>Hi Seattle Transit folks,</p> <p>I'd like to strongly throw in my preference for a tunnel option underneath Salmon Bay on the Ballard line. I live in North Queen Anne on 14th ave W. Our building would likely be in the way of the preferred option for a bridge. That is not the reason I am in favor of a tunnel.</p> <p>I have been keeping up with this and am finally confident to share my opinion. Here is my thinking.</p> <p>Cost The cost estimate for a tunnel is not greatly more than the elevated option, as it had originally been thought, especially given that the original tunnel option right to old town Ballard would have been far more costly than the preferred tunnel options in the Draft EIS currently. I for one would be willing to see the Seattle government invest in a more sustainable modern transit option. For me, that's a tunnel.</p> <p>The City My opinion is also based on comparisons with everywhere else we have bridges. The Aurora bridge, the Ballard Bridge, and the Ship Canal Bridge are three reasons why I prefer a tunnel. The cityscape we have is already bridge-frenzied. Ballard and Queen Anne are quiet neighborhoods. If you want to foster a neighborhood that retains the kind of allure that can be brought to bear in convincing investment in this city, then hide the unsightly transit--preserve the sky and what catches your eyeline for the beauty of the sky and its buildings.</p> <p>Modern transit The future of fast transit within a cityscape that we can be proud of demands that we emulate the subways of the great cities. Every modern city uses the untapped space beneath our feet, where it doesn't interfere with our senses. But more importantly, think very long-term. Connecting more lines in the latter half of the 21st century should be done by tunneling because underground is a blank canvas. And we should be willing to make the investment in a true subway system wherever there is not already a large avenue to follow along.</p> <p>Topography I live on 14th Ave. It's a hill. The bridge is going to have to be a mammoth, with large sustaining structures like the Aurora bridge has. But while Aurora bridge is a large thoroughfare, this bridge supporting the Ballard connection is not a massive thoroughfare so there is not an equivalency. The seismic impact of such a structure should be justified by its purpose and I'm not convinced that the purpose is equivalent.</p> <p>Residential impact vs. keeping transit where transit belongs There are very large buildings that would have to be torn down, including my own (Newell Square). I'm tired of seeing this happen. It's wasteful. If the costs are not prohibitive (in my opinion the Draft EIS shows that they are very achievable), even if third party funding is needed, then I ask you to do the work to get those funds and build a tunnel. Don't do the expedient easy thing by building yet another cluttering bridge. Don't tear down peoples homes.</p> <p>Bridge=old thinking, ugly, intrusive, loud Tunnel=modern, clean, unobstructive</p> <p>Build a tunnel.</p> <p>Chael Graham</p>	Chael Graham

04/26/2022	<p>Dear Sound Transit Board of Directors,</p> <p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>We are grateful for all of your hard work at ensuring that Seattle residents have access to public transit options. We wanted to express our strong support for the IBB-1b alternative.</p> <p>We are a harp showroom and service center based in Massachusetts and yet are deeply concerned about the aspects of this project that affect the Dusty Strings Company at 3450 16th Ave W. Dusty Strings is a Seattle-based harp maker that over the past 20 years has become one of the pillars of the harp community and provides instruments to customers worldwide looking to source high quality instruments. As one of the largest harp showrooms and service centers in the country, we place an incredible number of Dusty Strings instruments in a year and without their instruments our shop would not be what it is today.</p> <p>As you can imagine, building a harp is an incredibly complicated task and the disruptions caused to this process if Dusty Strings needed to relocate could affect the world's harp supply; something that has already suffered due to supply chain issues and labor disruptions during the global pandemic.</p> <p>These handmade instruments provide peace and tranquility to amateur harpists in their homes, to friends and families who enjoy the music and to concert-goers, gig clients and hospital staff and patients who hear these beautiful instruments in harp therapy settings. There are thousands of threads linking Dusty Strings to the community of music makers around the world, as well as a staff of Seattle-based craftspeople employed at their factory who would be adversely affected by the need to relocate.</p> <p>Conversely, were the light rail project to move forward with the IBB-1b alternative, employees of this one-of-a-kind business would benefit by having public transit options available to them, and Dusty Strings could continue as a Seattle-based manufacturer of harps in their current location.</p> <p>Thank you for your consideration</p> <p>Warmly,</p> <p>Lily</p> <p>Assistant Manager</p> <p>The Harp Connection</p> <p>Rowley MA</p>	Lily Press

04/26/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely,</p> <p>Chris Tudor, CHA</p>	Chris Tudor
------------	--	-------------

04/26/2022

Dear Sound Transit Board,

Juergen Oswald

I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.

Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.

To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.

Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.

This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.

Request:

Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.

Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).

Sincerely,

JUERGEN OSWALD
GENERAL MANAGER

<p>04/26/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Daniel Perelman anyone.eb@gmail.com</p>	<p>Daniel Perelman</p>

<p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Shannon Markley 19107 15th Ave NW Shoreline, WA 98177</p>	<p>Shannon Markley</p>

The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, John West 12104 95th PI NE Kirkland, WA 98034</p>	John West
------------	--	-----------

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. -------------------	---	-------------------------

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, John Birnel 719 N 68th St Seattle, WA 98103</p>	John Birnel

<p>04/28/2022</p>	<p>All of the Sound Transit options for the Transit Hub in the draft Environmental Impact Statement will adversely affect and encroach into a City of Seattle designated Historic District, Chinatown/International district. This neighborhood is an important cultural asset to our city and region and must be preserved and protected.</p> <p>Please consider other locations and options farther south away from the CID that do not impact this important historic landmark district. All the 5th Ave options are unacceptable and would devastate the CID. Although the 4th Ave options will seriously impact the CID, this would be preferable over the destructive 5th Ave proposals.</p>	<p>Christine Lambert</p>

-------------------	--	---------------------

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Loc Trinh hbxlucky@gmail.com</p>	<p>Loc Trinh</p>

04/28/2022	<p>Hello,</p> <p>I hope the person reading this is well. I just wanted to send an email in regards to the new proposed light rail station that will go through the Chinatown District. As someone from the Seattle area and an Asian American, I understand how vital the small businesses in the Chinatown International District are to the community not just in the ID, but in Seattle. Tearing through years of Asian and Asian American culture and history would devastate marginalized communities and harmfully impact our communities.</p> <p>I am pleading with you to save the Chinatown International District by not going through with this route.</p> <p>Thank you.</p> <p>Jadenne Radoc Cabahug (she/her)</p> <p>[jay-dEEen] [rah-DOCK] [ka-ba-hug]</p> <p>Student at the University of Washington Seattle B.A. in Communications: Journalism in the Public Interest. <p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>I am writing to echo the sentiments listed below by Seattle subway. In particular, I think the super deep system is a bad idea as it will make the light rail much harder to use and add tons of upkeep cost with maintaining an elevator. I also think it would be great to have an extension to Freemont!</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p>	<p>Ian Brobin</p>

	<p>2807 NW 58th st Seattle, Washington 98107</p>	
<p>04/28/2022</p>	<p>Hello, I am writing to express my concerns for the plan for Sound Transit moving through Chinatown International District. As a current resident of CID, the 5th Ave S. shops and restaurants are a staple of the historic and present culture of CID and should be valued. Having transit run through this strip will limit the accessibility for community members to access these locations, and will prevent the CID from maintaining its historic charm and rich history.</p> <p>Our community is asking that you instead route new transit routes through 4th Ave. South. I am very eager to see transportation options grow for our community, but it is pertinent that they work FOR the community, not against its needs.</p> <p>Thank you for taking the needs of this community seriously.</p> <p>With gratitude, Isabella Kent</p>	<p>Isabella Kent</p>

04/28/2022	<p>Greetings to Transit Planners; I am 80 years old and can recall memories of playing in a building in the old Chinatown when it was located near the waterfront on 4th Ave. and Washington St. The city of Seattle and transit projects has steadily encroached upon the Chinatown in six major ways in my memory.</p> <p>The 2nd Avenue Access road cut through to gain quicker access from downtown to the Train Station. That road helped dismantle the old Chinatown neighborhood. Chinatown then moved and built in current blocks, now affected by the new transit plans.</p> <p>2) King Dome - the stadium dismantled a swath of housing for the Asian elders and brought constant periodic traffic to the CID. With an additional stadium built, encroachment of traffic and pollution largely doubled. These two stadiums do not bring people to eat and shop in the Chinatown/International District (CID.) Instead, the CID is used as a parking lot! And folks who are not sports fans, but want to eat or shop in the CID will skip the trip because they cannot find parking. Some cultural and historic activities have been terminated because of the dearth of parking.</p> <p>3) I-5 Freeway cut through the Eastern half of the CID, bringing heavy, never ending car fumes, pollution, and constantly affecting air quality to the residents and visitors in the CID. This harmful encroachment continues with endless heavy traffic, day and night.</p> <p>4) A few years ago, a rail was installed down 8th Avenue S. from Jackson St. to Dearborn Ave. so busses could travel to the Bus Barn off Dearborn Ave. The rail and the traffic create safety and walking issues. There are Elder Housing units and Health Service clinics on both sides of that rail in the street. I walk with a walking stick and every time I cross that section of 8th Avenue, I have to step carefully, so I do not fall. Additionally, 8th Ave. became a one-way street going South. Access was affected to the CID, since that cut off one more street of entry from Dearborn St. into the CID.</p> <p>5) A building on 12th Ave. and Weller St. was turned into Homeless housing, bringing traffic of people who were not associated and not interested in business and community in the CID. Safety issues became an increasing problem to the elders, community organizations, businesses and visitors wanting to eat and shop in the CID.</p> <p>6) 12th Ave. and Jackson St. intersection is the North East corner of CID. Is there a busier intersection in Seattle? On all four corners of that intersection, is a Bus Stop. Day and night, busses incessantly criss cross in all directions, bringing more pollution, gas fumes, safety and walking issues as an unending encroachment.</p> <p>So now, you are making plans on the North West corner of the CID. All CID encroachments are characterized by benefit to the mainstream at a heavy cost to those in the CID. ENOUGH! These encroachments would not happen to the Downtown District and destroy so many businesses. These encroachments would not happen to a white neighborhood! If you are going to step on us again, at least use a smaller footprint! So 4th AVENUE IT IS! The 5th Avenue choices would destroy so many CID businesses and the prolonged construction would create further obstacles to restaurants, shops, businesses, events, organizations and cultural preservation. I urgently ask that you choose a 4th AVENUE station design.</p> <p>Most sincerely, Bettie Luke 9241 36th Ave. S. Seattle, WA 98118 206-465-4600</p>	Bettie Luke

<p>04/28/2022</p>	<p>Thank you for the opportunity to comment on the Ballard - West Seattle Draft EIS as Sound Transit seeks community input on the proposed light rail line.</p> <p>I am a resident of downtown Seattle, residing in the 5th and Madison Condominium Tower located at 5th and Madison. Note that the intersection of 5th and Madison, the location of our condominium tower, is the nexus for extensive street closure and adjacent to a proposed station at 4th and Madison (currently Bartell Drugs).</p> <p>I am a staunch proponent of light rail and have been a frequent user of the Link line from downtown Seattle to SeaTac and return.</p> <p>I offer the following general comments on the project as well as specific comments as to potential impacts on our residential condominium.</p> <p>General</p> <p>The need and design of the West Seattle - Ballard line has been predicated on the daily commute of a downtown workforce that most likely no longer exists as remote work has become an accepted and even promoted acceptable form of work.</p> <p>Do the ridership calculations and therefore project justification hold up in the new work environment? If there are major changes in ridership projections is a different approach more viable---such as rapid bus service from a SODO station to Westlake Center (THE Station common to the Northgate-SeaTac line, the Eastside Line, and a Ballard line).</p> <p>The various ST Link light rail projects have been significantly impacted by ongoing supply chain and escalating cost issues.</p> <p>Given this and the likelihood such issues will continue for an extended period of time is a deep or even shallow bore tunnel the best return on investment of taxpayer dollars?</p> <p>ST lists the 5th Ave tunnel as the preferred alternative to the 6th Ave tunnel. However, I note the 6th Ave tunnel is rough of order of magnitude similar in cost, much less disruptive to downtown traffic due to fewer and shorter closures involving main arterials, and a midtown station is much closer to the high population growth First Hill area where medical facility workers cannot work remotely as they are needed to staff the growing medical campuses. Additionally, planned construction and closures along 5th Ave will significantly adversely impact some the important Seattle attractions that remain crucial to reviving downtown---such as the 5th Ave Theater. Thus, I urge ST and the ST Board to more seriously consider the benefits of the 6th Ave routing.</p> <p>Specific</p> <p>The potential adverse impacts on the approximately 200 residents of the 5th and Madison condominium are significant.</p> <p>Ingress/Egress to Our Parking Garage</p> <p>Depending the depth of tunnel chosen the potential extended partial and or full street closures for both Madison Ave and 5th Ave if the preferred alternative is chosen limit our ability to access our parking garage. Additional access questions are raised for utility vehicles such as sanitation and recycling pick up, work vendors, moving vans, and emergency responders.</p> <p>Construction Noise</p> <p>ST needs to consider the impact of construction noise on both the commercial and residential occupants in the area. The timeline of the Link light rail construction impact is years in length and subject to extended delays. The 5M community is already experiencing increased noise from the delays in completing the the Metro Madison Rapid Ride Line---the potential for extended delays with the Link light rail project is much higher as the project is more complex.</p> <p>Environmental</p> <p>ST is planning to have ventilation exhaust stacks directly above the preferred alternative station planned at 4th and Madison (the current Bartell's location). These ventilation stacks have the potential to both disrupt</p>	<p>Michael Kopp</p>
-------------------	---	---------------------

the current open plaza as well as vent polluted air into the environment immediately adjacent to a residential building. If the preferred alternative is chosen with the station located at 4th and Madison ST should be required to mitigate environmental air concerns with scrubbers as well as address any noise issues from the running of exhaust fans.

Public Safety

Crime in the greater downtown area is significantly increased from several years ago. The number of downtown residents living on the streets has also dramatically increased---with many more sidewalk tent encampments crowding downtown sidewalks. The areas surrounding the main King County Library, immediately adjacent to the proposed 4th and Madison station access point is an overnight sleeping destination for many downtown residents without alternative housing. All this points to the potential for more crime in the area of the proposed 4th and Madison station. ST along with the City of Seattle police and government need to plan for and be committed to not allowing this area to be a nexus of crime committed against Link users.

Thank you again for the opportunity to comment.

<p>04/28/2022</p>	<p>Very nice.</p> <p>Tina Huston</p> <p>On Apr 28, 2022, at 10:51 AM, gina100@comcast.net wrote:</p> <p>?</p> <p>To: Sound Transit and Sound Transit Board</p> <p>Opening Statement:</p> <p>Generally agree with the future of Light Rail for West Seattle (Delridge to WS Junction).</p> <p>Note: Sound Transit originally proposed an actual Junction Station. In some of the alignment options, including the Preferred Option WSJ-2, Sound Transit is proposing to shift the "Junction Station" east of Fauntleroy which is outside of the "Junction" area. This seems to be in conflict with the original proposed intent for the Junction Station.</p> <p>Concerns with Draft EIS Alternatives:</p> <p>The Draft EIS is focused on Construction Costs for its preferred alternatives versus Total Cost based on community impacts. The impacts of non-construction costs should be quantified in monetary terms and added to each of the options to represent a clear "Total Cost" (Construction Cost and Non Construction Cost Value). Light Rail is a long term investment! This evaluation should not be shortsighted and based on Construction Costs alone! Low cost does not translate to being the best alternative. The non-construction impact costs include, but are not limited, to the following:</p> <p>Impact to existing and/or adjoining residential neighborhood areas in terms housing demo. Elimination of livability for adjoining neighborhoods in terms of noise, view obstructions (guideway locations and guideway heights). Loss of existing and/or established housing and/or living units (condos/apts.). Loss of Rental Assisted Housing (RAH). Cost and Timeframe to replace housing eliminated by each alignment option especially RAH.</p> <p>Recommendations:</p> <p>Pursue alignment options that are largely in existing commercial and industrial zoned areas that are largely underutilized and/or under developed. These areas exist as buffers from residential/housing areas and should be targeted and used as such for the purposes of light rail alignment and station locations. Pursue alignment options that have lower level stations for ease of accessibility. Pursue alignment options that lessen the impact/livability to existing (including adjoining) residential/neighborhood areas by reducing infrastructure obstructions as much as possible. Pursue alignment options that do not substantially reduce the existing built housing inventory. The Tunnel alternatives in the draft EIS mitigate/reduce several of the negative impacts listed above.</p> <p>Conclusion:</p> <p>This is an opportunity to preserve and enhance West Seattle for the long term! Sound Transit and the Sound Transit Board should pursue alignment and station location options that mitigate/reduce negative impacts of light rail infrastructure to the community as a whole. The Tunnel options (WSJ-3a, WSJ-3b, WSJ-4 and WSJ-5) substantially reduce the negative impacts and should be pursued.</p> <p>Thank you for the opportunity to comment.</p> <p>Sincerely,</p> <p>Mike Campagnaro,</p> <p>Family living within 4700 Block of 38th Avenue SW. Also have received notice from Sound Transit that certain other owned properties may be potentially affected.</p> <p>206-354-5235</p>	<p>Mike Campagnaro</p>

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request:</p> <p>Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely,</p> <p>Jasmeet Singh</p>	Jasmeet Singh

04/28/2022	<p data-bbox="261 100 513 128">To Whom It May Concern</p> <p data-bbox="261 159 1308 216">I am writing to advocate for choosing one of the 4th Avenue alternatives for the C-ID lightrail station linking West Seattle to Ballard (4th Avenue Alternatives CID-1a and 1b).</p> <p data-bbox="261 247 1276 331">All of the options will impact the C-ID district deeply. However, while the 4th avenue alternatives will impact traffic and transportation in Seattle during the construction timeframe, I am much more worried about the long-term impact to businesses that would occur with the 5th Avenue alternatives.</p> <p data-bbox="261 363 1308 625">Chinatown-ID is a neighborhood that is close to my heart since moving to Seattle. C-ID is the community I spend the most time outside of my home community. I visit grocery shops every weekend and frequently visit the restaurants and shops. Since moving I have seen the amount of people dwindling from a variety of factors like COVID, safety, homelessness, violence, etc. I fear that the 5th ave options will only make this worse. There is no doubt that the 5th av options will displace businesses, employees and customers as it would require multiple street closures and eliminate the already few parking options. The sound from the construction would be torture to the residents and further prevent people from wanting to visit. This would be a huge negative economic impact that spans years. I also worry about permanent noise and vibration impacts due to the passing of the light rail directly through the neighborhood.</p> <p data-bbox="261 657 683 684">Thank you for your time and consideration.</p> <p data-bbox="261 716 313 743">Best,</p> <p data-bbox="261 774 326 802">Dustin</p>	Dustin Lee

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>James Wu jameswu@hey.com</p>	<p>James Wu</p>

	<p>905 Dexter Ave North L445 Seattle, Washington 98109</p>	
<p>04/28/2022</p>	<p>Hello,</p> <p>I know discussion is happening around where the CID lightrail will be going. 5th Ave St houses and employs so many Asian Americans that gives richness to what makes the Chinese International District special. It would be much preferred if the lightrail station was instead moved to 4th Ave where it will cause much less displacement and disruption.</p> <p>Thank you for your time, Chanelle Geveshausen</p>	<p>Chanelle Geveshausen</p>

04/28/2022	<p>Dear Council members and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving the bladesmithing community, that truly is a one of a kind establishment. I'm writing to personally ask for your help to support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop. I am a customer that holds this business in high regard. It is difficult to start any business but it is especially challenging to do what they have done in such a niche market. My heart goes out to them in having to potentially take on additional challenges that may occur if they were forced to move. This isn't a big corporate backed business... it's like an extension of the mom & pop shop for the international community.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Sincerely, David Kim</p> <p>BladeGallery Inc Customer:</p> <p>31915 Rancho California Rd #200-232 Temecula, CA 92591</p> <p>urbstone@gmail.com</p> <p>808-294-2545</p>	David Kim
------------	---	-----------

<p>04/28/2022</p>	<p>re-sending, meant to send from my personal email: Overview: Integrity & Trust ST has shown a cavalier disregard for the legitimate benefits of gondola versus light rail in West Seattle, including eschewing an open-minded review by experts qualified to speak to gondola technical feasibility, obfuscating facts in the DEIS, and failing to acknowledge contemporary advances in transit modes highlighting gondolas as an area of extreme opportunity, especially for highly dense, hilly areas with commercial waterways such as many places in the Seattle metropolitan area and such as a growing number of communities are considering world-wide. A reasonable, transparent staff would take a solid, due-diligence look at gondola, and nearly guaranteed would see that this better serves the WS peninsula in virtually EVERY way; preserves our precious real estate and habitats; vastly reduces our carbon footprint; delivers a DECADE earlier; and frees up \$2B to serve other urgent transit needs especially in under-served communities. WHY would ST not opt for a superior solution that lays groundwork to serve expanded communities? Real Estate costs LR (light rail) downplays devastation on 1000-2000+ residents & business demolitions and lack of local relocation ability (4.2.1.3, 4.2.1.7/8), wildlife (including protected heron & osprey populations and other wetland, bird and salmon habitats) and green spaces, ALL nearly entirely mitigated by aerial gondola system. Homes/businesses will not easily/feasibly re-locate nearby ('within the project vicinity) due to Relocation will likely impact their credit scores/business forecast, reduce borrowing Property value estimates will likely be far below actual market prices in our historically hot real estate market Virtually no real estate inventory for nearby relocation Relocation outside the immediate area puts MORE transportation burden on the beleaguered WS community Those remaining in the area will have a massive up to 150' rail guide carting travelers across their City/Sound views with resulting privacy loss; gondola has mist-able windows for privacy taking up a tiny fraction of the visual landscape, with a fraction of the noise pollution both in construction and operation (4.2.11, 4.2.4.3, 4.2.5.3.3) Though hard to decipher from ST's vague notices, many beloved businesses likely to be demolished – Trader Joes, beautiful 'new' YMCA building, Skylark Café, Tom's Auto, to name a scant few. Others, such as very new apartment buildings, would be razed at significant replacement cost. NONE of this is necessary with a gondola system. Environmental Impact, (1.2.2.6) Appendix L4.6 carbon footprint estimates are extremely under-stated as they omit sizable construction and rebuilding of displaced structures. SkyLink would provide reliable, grade separate public transit some TEN YEARS earlier than LR for a fraction of carbon footprint strongly aiding 30% reduction by 2035 goal. Removing trees, physical disturbance of construction and soil on the Pigeon Point hill will increase instability and likelihood of landslides compared to vastly lighter weight gondola system (4.2.9, 4.2.11, 4.2.17) Likewise, soil impacts with the high-impact LR construction (4.2.11) have major risk of shifting in general and in an earthquake; Lighter weight gondola is safer in virtually all contexts including floods, ice/snow. Equity ST ignores high-capacity transit needs in lower income/BIPOC areas (eg South Park, Westwood, White Center). LR along Duwamish paired with gondola to WS hilly, dense areas (Alaska Jcn, Avaln, N. Delridge) could be done for same price as LR into those WS areas with vastly improved transit services Transit Mode review: Chapter 2 ignores compelling options Since 2014 feeder lines are considered connecting areas to LR spine via gondola such as Kirkland's current review. Chapter 2.8.2.1.1: costs have skyrocketed 2-3x from earlier estimates, triggering vote-free realignment consideration (Section 2) Does not address extending the travel burden added to years of no usable high bridge (4.2.4.4) Does not compare station footprints such as in the Alaska Junction to a fraction of the space needed for gondola station (4.2.5.4) Traveler experience (3.4.3.3.1) inaccurate depiction; per gondola experts, fewer stories to traverse at stations.</p> <p>PLEASE LISTEN AND ACT for the best interested of the West Seattle Peninsula.</p> <p>Terese Machmiller Cell 206.890.2277</p>	<p>Terese Machmiller</p>
-------------------	---	--------------------------

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>First of all, I'm a huge supporter of Sound Transit. Your work has dramatically increased my quality of life by allowing me to bypass traffic and easily travel around the region.</p> <p>In that spirit, I urge ST to reconsider the Ballard station at 20th. This station will serve generations to come, and now that the elevated crossing is going to be more expensive than expected, it makes sense to reconsider the most desirable location again. It actually serves Ballard (instead of the edge of Ballard, separated by the barrier of 15th).</p> <p>Also, I think there is a real thirst for public transport, especially now that Seattle sees how transformative it can be in connecting neighborhoods. I think a Seattle-based levy for Seattle-based stations would likely be passed by the voters.</p> <p>Thank you for your review of these comments.</p> <p>Rebeckah Johnson beckjohnson@gmail.com 8523 16th Ave NW Seattle, Washington 98117</p>	<p>Rebeckah Johnson</p>
<p>04/28/2022</p>	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city, but also lives in the city. You would be destroying one of the few last remaining buildings that is still family owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Manmeet</p>	<p>Manmeet Dhami</p>

<p>04/28/2022</p>	<p>Please consider my comments for the West Seattle and Ballard Link DEIS as follows:</p> <p>A. General Comments</p> <p>As a recent resident of the Cascade neighborhood, the alignment for the South Lake Union station is disappointing to me. As one of the densest residential neighborhoods within the city, it seems that the residents here are being treated as an afterthought with station alignments as far west as SR99. Placing the stations this far west removes a huge residential population from the 10-minute station walk shed, and unless King County Metro opens a east-west transit route along the Mercer Street corridor, keeps the Cascade and Eastlake population segregated from reasonable light rail connection. I urge Sound Transit to consider station alignments closer to the intersection of Westlake and Mercer to have more reasonable transit connections for the residents of the Cascade neighborhood. I believe doing so would increase ridership and help the Puget Sound region to achieve its climate goals by getting more single-occupancy vehicles off of the road in an already transit-starved area.</p> <p>2. I would also like to address station transfers downtown. Current alignments have extremely deep stations that create long transfer and/or surface-to-platform times. I believe that this is the wrong move, and that Sound Transit should reconsider its deep-bore stations to create the best experience for riders. Furthermore, station access should be designed with pedestrians and cyclists in mind first, as well as connections to existing transit in station areas.</p> <p>3. Additionally, I would ask that Sound Transit design the system with future expansion in mind. I would like to see terminal stations along the lines designed in such a way that should future light rail projects be approved by voters, work can easily begin to connect and expand existing lines. Ballard station should be able to accommodate a northern expansion to Greenwood, or east to Wallingford, and beyond. This would save the agency time, money, and effort during future system expansion design.</p> <p>B. Detailed Comments</p> <p>West Seattle Link</p> <p>a. Junction - Medium Tunnel 41st Avenue Station: Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings.</p> <p>b. Avalon - Retained Cut: Prefer WSJ-5 with a request to study a refined DEL-6 pairing.</p> <p>c. Delridge - DEL-6: Study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].</p> <p>d. SoDo - Mixed Profile Station: Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking.</p> <p>2. Ballard Link</p> <p>a. Chinatown-International District - 4th Avenue: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than 4.5 minutes.</p> <p>b. Midtown - 5th Avenue: Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>c. Westlake - 5th Avenue: 5th Avenue Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access.</p> <p>d. Denny - DT-1 on Westlake Avenue: Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower.</p> <p>e. South Lake Union - Harrison or Central SLU: Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible.</p> <p>f. Uptown / Seattle Center - Republican Street: Prefer Republican Street Station and work to mitigate impacts to arts organizations to the extent possible.</p> <p>g. Smith Cove - Galer Street: Preferred Galer Street Station [SIB-1].</p> <p>h. Interbay - Retained Cut or Slimmed Down 15th Avenue Elevated: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3].</p> <p>i. Ballard: Continue to refine all tunnel options to put a station entrance west of 15th Avenue. Open additional study of the 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>Thank you,</p> <p>Jeff Meyer</p>	<p>Jeff Meyer</p>
-------------------	--	-------------------

04/28/2022	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years, with increased noise & air pollution, dust, dirt, vibrations in the CID is unacceptable. Not to mention disruptions to 30 immigrant businesses permanently closed or forced to move due to 5th Avenue construction.</p> <p>Sound Transit, take 5th Ave. off the table. 4th Ave Tunnel Station avoids 5th Ave impacts! Move Forward on 4th!</p> <p>Sincerely,</p> <p>Noryany Mabanta</p>	Noryany Mabanta
04/28/2022	<p>Please do not take the 5th Ave option, where it will have huge impacts on 3 already disenfranchised neighborhoods. Further, Chinatown has had a long history of being pushed out, particularly when the land becomes valuable. The CID is a historical neighborhood and should be preserved as such.</p> <p>Sincerely Ed Lozano</p>	Edward Lozano
04/27/2022	<p>To Sound Transit Board Members and Seattle City Councilmembers:</p> <p>My name is Jessie, and I'm a graduate student at the University of Washington. I'm also a Seattle resident and a frequent patron of the Chinatown-International District businesses and community events.</p> <p>I've been hearing about the impacts of potentially building the Link light rail as part of the West Seattle and Ballard Link Extensions?(WSBLE) project on the 5th Ave S in the CID. I cannot imagine witnessing the closure of King Street, S. Weller, and 5th Ave for several years, as this will restrict my ability to access small businesses and community events like the annual night market in the CID. As I understand it, the 5th Ave S option would also result in the loss of three blocks and fundamentally alter the historical nature of the CID in the National Register of Historical Places. As a second generation Chinese American, I value the history of immigrants and refugees in the United States. Preserving history (and thus, memory) is important for future generations to come to terms with their identity and place in the world.</p> <p>I understand that Chinatown-International District is not just a neighborhood full of businesses; it's also home to many elders and families, whose first language is often not English. It's a community where aunties and uncles come together to play a game or watch people play ping-pong in good weather. The air pollution and construction noises will endanger the lively character of the neighborhood — one that historically comprises Asian and Pacific Islander immigrants and their descendants — for the next few years.</p> <p>I oppose the 5th Ave S option; please consider taking it off the table. Instead, I support the 4th Ave S option as the preferred alternative if we must construct the Link and preserve the vibrant way of life of the historical Chinatown-International District. I would love to keep this a viable space for future generations to live, play, work, and visit.</p> <p>Thank you for your time and consideration.</p> <p>Thanks,</p> <p>Jessie Zhang</p>	Jessie Zhang

04/28/2022	<p>Please do not take the 5th Ave option, where it will have huge impacts on 3 already disenfranchised neighborhoods. Further, Chinatown has had a long history of being pushed out, particularly when the land becomes valuable. The CID is a historical neighborhood and should be preserved as such.</p> <p>Sincerely,</p> <p>Andi Kang</p>	Andrea Kang
04/28/2022	<p>As it is, small business owners are facing a lot of struggles just to make ends meet. Please listen to the community and do what is right to not only support these businesses but help them grow. The last few years have been tough for so many, tougher minority business owners such as in China Town. The 5th Avenue option is definitely going to have a negative impact.</p> <p>Please uplift the vibrant historic neighborhood, do not dismantle it!</p> <p>Thank you!</p>	Fanna Kebede
04/27/2022	<p>Hello,</p> <p>My name is Abigail, I'm a University of Washington student. I represent the opinion of countless peers when I deliver this. Please choose construction on 4th Avenue rather than 5th, for the sake of the city and it's residents. The point of these public projects would be in dissonance with building on fifth. Choosing to build on 5th would be a betrayal of local resident's trust and support. Building on 5th would cause severe disruptions to: International District businesses that have already battered by {the pandemic, anti-Asian hate crimes, and criminal activity}; thousands of k-12 youths in schools, daycares, community centers; 1,000+ elderly residents endangered by street closures as well as detours slowing access and exit by emergency vehicles.</p> <p>If the city chooses to build on 5th Avenue in the CID, you will be responsible for displacing dozens of families, eliminating hundreds of jobs, and otherwise aggressively detrimentally impacting local residents in an irreversible, horribly life-altering way. Public transportation is so important for strengthening this city's communities, but making the wrong choice on this project will harm communities in a debilitating way. Think of the residents of Seattle and choose to build on 4th avenue instead of 5th. In the words of other intelligent, highly valued, and well-informed locals: full closure of King Street; direct demolition/construction noise; air pollution; gas, water, electrical shut offs; historic properties leaving a community of color; displacement of up to 30 businesses on 5th Avenue and King streets would shatter community social life and economic livelihoods, already hammered by over two years of COVID-19, rising criminal activity and spikes in anti-Asian hate crimes.</p> <p>Construct on 4th Avenue rather than 5th.</p> <p>Thank you very much, -Abigail and other passionate UW students</p>	Abigail Larson
04/28/2022	<p>Please do not take the 5th Ave option, where it will have huge impacts on 3 already disenfranchised neighborhoods. Further, Chinatown has had a long history of being pushed out, particularly when the land becomes valuable. The CID is a historical neighborhood and should be preserved as such.</p> <p>Sincerely,</p> <p>Jian Chen</p>	Jian Chen
04/27/2022	<p>Move Forward on 4th Ave Tunnel Station to avoid 5th Ave impacts</p> <p>Stop Asian Hate!</p> <p>With appreciation,</p> <p>Billy Dang</p>	Billy Dang

04/28/2022	<p>Please do not take the 5th Ave option, where it will have huge impacts on 3 already disenfranchised neighborhoods. Further, Chinatown has had a long history of being pushed out, particularly when the land becomes valuable. 04/27/2022	<p>errata: meant east-west in Ballard sentence. thanks</p> <p>On Wed, Apr 27, 2022 at 11:18 AM Jack Whisner jackewhisner@gmail.com wrote: Sound Transit,</p> <p>Please consider the following comments. This is my third note. I may color outside the lines in this one.</p> <p>Overall, please strive to consider the overall network travel times, even though the ridership model may not be sensitive enough to forecast different ridership. We should know that minutes matter. In the EIS options, it seemed too little weight was given to the following: the access time of Link passengers as they transfer to and from buses and between the two lines; the deviation times of bus routes that may travel past Link stations onto other markets. These factors could lead the final design to perhaps spend more in up front capital but attract more ridership over the decades. My earlier note included the concept of stations providing a grade separated crossing of busy arterials (e.g., 35th Avenue SW, Delridge Way SW, Elliott Avenue West, West Dravus Street, and NW Market Street. Please make good network choices.</p> <p>For the access time rationale above and for construction costs, shallow alignments may be better than deep ones. So, even though it does concern the neighborhood activists, please consider a shallow ID station under 5th Avenue South. I expect ST, Seattle, and Metro could mitigate its construction impacts. The long term benefits of improved access and transfers would be well worthwhile. The 4th Avenue South alignment would not attract many riders from the BNSFRR right of way and the viaduct is old and flawed.</p> <p>In Ballard, please reopen study of a more westernly alignment that serves the heart of the business district and considers a tunnel. The stations should serve pedestrian centers. ST made a great choice in Roosevelt. I read of a concept that includes a east-west tail track for a station in downtown Ballard.</p> <p>If the very costly second Link tunnel in downtown Seattle is not done well, should it be done at all? ST3 was approved by the voters; the voters want better transit. (Sound Move was changed significantly in response to fiscal constraints). As ST works to perfect its ST3 project, could Link headway and waits in the DSTT be much shorter? Suppose both the East and South lines are limited to six (or five) minute headway. During the pre-WSBLE period, could a third line be run from the South Forest Street base? SDOT and Metro could provide transit priority and very short headway service in the West Seattle market that now has the South Lander Street overcrossing.</p> <p>Thank you for considering these comments.</p> <p>Jack Whisner 8325 11th Avenue NW, 98117 PCO 36-2168</p>	Jack Whisner

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>David Alvarez davialejandroal@gmail.com</p>	<p>David Alvarez</p>

	<p>718 a north 95th street Seattle, WA, Washington 98103</p>	
--	--	--

04/28/2022	<p>Dear Sound Transit Board,</p> <p>I am writing today in response to the West Seattle and Ballard Link Extension (WSBLE) Draft Environmental Impact Statement (DEIS) with a particular focus on the South Lake Union station.</p> <p>Civic Hotel has been serving the community since 1962. Even during a pandemic due to Covid it is still serving the community. The local BIPOC family that owns the hotel has temporarily converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during this pandemic, it has also helped and allowed a number of people to transition into permanent housing. Which has been documented in the University of Washington study. It is the type of business we want to have in our community that will be displaced.</p> <p>To acquire and destroy this property, you would be displacing the livelihood of a family of color that not only works in the city but also lives in the city. You would be destroying one of the few last remaining buildings that is still family-owned and operated and forever changing the fabric of the neighborhood.</p> <p>Further, this route also negatively impacts access in and around Seattle and South Lake Union. The off-ramp from SR-99 onto 7th Ave N already creates a backup on SR-99 all the way up to Ship Canal Bridge, and traffic wanting to merge onto SR-99 N and S backs up all the way down 6th Ave N and 7th Ave N. As the population continues to grow and offices start to bring back employees, this will only get worse. To block the intersection of 7th Ave N and Harrison St for 18+ months off and on, means you will be blocking the off-ramp on SR-99 S before entering the Bore Tunnel and the onramp to SR-99 N.</p> <p>This will have a considerable negative impact on traffic congestion given the route blocks access to a major freeway and will only push street traffic back to Mercer and Denny, two roads that are already heavily congested.</p> <p>Request: Acquiring the Civic Hotel should be a non-starter for the South Lake Union station. Not only because it will be displacing one of the last few family-owned and operated businesses in South Lake Union, but the adverse traffic impacts during and after construction are untenable for the neighborhood and the region.</p> <p>Advance the Harrison Street station by exploring alternative locations such as the corner of 5th Ave N and Harrison St and the corner of 7th Avenue N and Thomas Street. Alternative options that don't displace minority-owned local businesses should be considered and locations that avoid large traffic impacts during construction. Especially traffic impacts that block access to SR-99, I-5, and the East-West arterials in the city (Mercer St, Harrison St, Denny St, Madison St).</p> <p>Sincerely, Jenny Koenig</p>	Jenny Koenig

<p>04/28/2022</p>	<p>Following are some points I believe strongly support Sound Transit taking far more seriously a gondola system versus light rail for connecting West Seattle to the SODO light rail spine.</p> <p>Transparency and Truthfulness</p> <p>a) Sound Transit is obstructing fair, full and truthful discussion among the public on the gondola option, instead opting to bulldoze the way forward with their original proposal, which no longer makes the best sense for the best interest of the West Seattle peninsula. They have done the least amount of effort possible to make it seem they have given the gondola system a fair review, when the opposite is true. Sound Transit owes it to West Seattle residents, workers and business owners to hire a reputable firm with legitimate expertise in traffic solutions that include gondola systems. If the feasibility comes in as outlined on the West Seattle SkyLink chart comparing gondola to light rail for West Seattle, Sound Transit would be remiss in their duty to not move to that option.</p> <p>2) Environment:</p> <p>a) Light rail's tree removal, physical disturbance of construction and soil on the steeply hilly terrain will decrease stability, raising risks of landslides. Not a concern with the gondola system (4.2.9, 4.2.11, 4.2.17)</p> <p>b) This will also increase risks of damage to properties, rail riders and travelers from flooding, ice and snow. (4.2.11)</p> <p>c) Gondola would serve more reliably, safely, independently from competing traffic, and ten years earlier a fraction of every measurable cost.</p> <p>d) Gondola carbon neutral footprint will materially aid the City's goal of reducing carbon footprint by 30% by 2035.</p> <p>e) Sound Transit ignores the impact on wildlife (heron, osprey, other wetland bird and sea life habitats) and green spaces. The gondola will have minimal to no such impact.</p> <p>3) Comparing light rail to gondola:</p> <p>a) Sound Transit misguides readers: In fact, the gondola is being recommended for local, not regional connections, such as what Kirkland is seriously considering.</p> <p>b) Sound Transit is exceedingly vague on 1000-2000 people losing their home, business or job. The Gondola has zero such cost, from every angle this is huge: human stress and suffering in lost space, more upheaval in unnecessary extra construction, more stuck traffic. (4.2.1.3, 4.2.1.7/8)</p> <p>c) Sound Transit ignores major costs such as light stations taking two half blocks versus one quarter block for gondola – and the latter can be constructed among existing infrastructure – a critical factor in dense spots such as the Alaska Junction. (4.2.5.4)</p> <p>d) Sound Transit misleads the public by saying a new vote would be required: with light rail cost estimates now spiked up by 200-300%, realignment has been triggered (Section 2). No voter input required.</p> <p>e) Sound Transit inaccurately describes light rail as easier for travelers. In fact, the gondola would have fewer stories at loading stations. (3.4.3.3.1)</p> <p>f) Sound Transit ignores the increased traffic nightmares West Seattle travelers will suffer for many extra years, nor acknowledges that a gondola would represent a vastly less degree of traffic impacts in both construction and operation, and be ready ten years earlier. (4.2.4.4)</p> <p>4) Real Estate costs</p> <p>a) Sound Transit falsely suggests that displaced victims will be able to re-locate 'within the project vicinity' – their businesses will take a severe hit in the disruption and relocation which will affect their customer service and credit attractiveness; they won't be reimbursed at what value the live market would escalate to; and there's a historically low real estate inventory now and for the foreseeable future.</p> <p>b) Sound Transit is pitching a rail guide up to 15 stories which will be a massive view-stealer all over the city; will be significantly noisier in its operation, and steal privacy from remaining dwellers. These costs will greatly impact property values, especially in West Seattle, all vastly minimized with the gondola which has misting privacy glass, a fraction of the mass and noise to build and operate. (4.2.11, 4.2.4.3, 4.2.5.3.3)</p>	<p>Wayne Machmiller</p>
-------------------	---	-------------------------

c) Sound Transit has made it very hard for the public to understand who will be displaced, by vaguely posing several potential options, and listing addresses instead of business names. If the likely property victims were to spend precious hours weeding through the fine print to learn their status, and would then lobby for public support, the outcry would be much greater sooner than later. All a non-issue with the gondola system.

5) Maximizing Services

a) If Sound Transit cared for the best travel mode for the most people, the gondola system would free up \$2 billion to apply towards other high-need areas, such as White Center, Westwood Village, Highland Park, South Seattle College, Georgetown.

Wayne Machmiller, 35 year resident of West Seattle, Director of Construction Services, Transforming Age

04/28/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense. Re-open the study of a Ballard tunnel - Thorndyke portal station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, and Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements.</p> <p>I oppose any consolidation or deletion of stations in the Interbay segment. I encourage Sound Transit to achieve cost savings by minimizing the size of stations, entry plazas and mezzanines.</p> <p>For all stations: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott. Elevate train on Elliot will be an eyesore. Locate station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Ballard station should take us to where we want and need to go: medical center, dining, shopping, Historic Ballard. Avoid 14th Ave NW alignment - it disrupts Ballard Food Bank. Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration. Suzanne Grant 2723 4th Ave W Seattle WA 98119</p>	Suzanne Grant
04/28/2022	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>The CID has already been through enough, both historically and during the current pandemic. Full closure of King Street, S. Weller and 5th Avenue for several years, with increased noise & air pollution, dust, dirt, vibrations in the CID is unacceptable. Not to mention disruptions to 30 immigrant businesses permanently closed or forced to move due to 5th Avenue construction.</p> <p>Sound Transit, take 5th Ave. off the table. 4th Ave Tunnel Station avoids 5th Ave impacts! Move Forward on 4th!</p> <p>Sincerely,</p> <p>Catherine Karlak</p>	Catherine Karlak

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Federico Gonzalez flgonzalez24@outlook.com</p>	<p>Federico Gonzalez</p>

<p>04/28/2022</p>	<p>Thank you for the opportunity to comment on the West Seattle Ballard Link Extension Draft Environmental Impact Statement. This comment includes three parts: DEIS Process and Document Comments, General Design Comments, and Specific Station Comments, followed by a summary conclusion.</p> <p>DEIS Process and Document Comments:</p> <p>The point of an EIS is for an agency to pause and show its work. WAC 197-11-400 (4) states “The EIS process enables government agencies and interested citizens to review and comment on proposed government actions, including government approval of private projects and their environmental effects. This process is intended to assist the agencies and applicants to improve their plans and decisions, and to encourage the resolution of potential concerns or problems prior to issuing a final statement. An environmental impact statement is more than a disclosure document. It shall be used by agency officials in conjunction with other relevant materials and considerations to plan actions and make decisions.” The code mentions that an EIS is not performative, it should be concise and clear. “The volume of an EIS does not bear on its adequacy. Larger documents may even hinder the decision making process.”</p> <p>The WSBLE DEIS is comprised of 2,300 pages. Electronically, that’s 300MB spread across 21 files. There’s not just an executive summary, but also a summary of that as Front Matter and fact sheet.</p> <p>I am an advocate for Ballard and writer for The Urbanist. For the last four months, I’ve been working to get people to respond to this document. My first comment is: it should not have been this hard. Re-release the WSBLE Draft EIS with clear, concise images and descriptions that fulfill the intent of SEPA and show Sound Transit’s work to develop these alternatives.</p> <p>Sound Transit did a lot of work to put the details in front of folks, including meetings and broadcasts. But the outreach paled in comparison to the heft of the document itself. The document was unclear on three very important points:</p> <p>Light Rail extensions to West Seattle and Ballard are two separate projects. Completion of the extensions will result in a significant realignment of the existing Link line, essentially “breaking the backbone” of the system and sending Ballard to Tacoma and West Seattle to Everett via downtown. This document will be amended and supplemented as designs are refined.</p> <p>Such important information is lost in the 2,300 pages. Without those top-line descriptions, it is very difficult to understand why the new downtown tunnel has to start so deep and chase topography up the hill. It’s difficult to parse out the weird diagrams of splicing lines together with existing lines. And it’s hard to care when it feels like impossible to navigate stations in the center of the earth are a fait accompli.</p> <p>When someone asked “what will a Ballard station look like?” I could not direct them to a single website or page specifying options for each station. I had to direct them to download one of those 21 documents, turn to page whatever, and start reading. This is not accessible. The page with those 21 separate documents was very thin on the information inside each one. And there was nothing that gave a clear, concise description of the whole project, or to be truthful, pair of projects.</p> <p>Sound Transit has not helped itself with access to information and responses to questions about these topics. Through The Urbanist and Seattle Subway, advocates have requested clarification on the DEIS. Specific requests were made to clarify how Sound Transit determined the new routes had to go under the existing routes, what was used to determine transfer times between stations, and what factors brought tunnels to cost parity with bridges. We were met with incomplete or non-existent answers. And we were trying to help get people to comment, which is kind of a slap in the face.</p> <p>The overall result is a draft EIS that doesn’t fulfill the letter, spirit, or stated intent of SEPA, as stated in WAC 197-11-400. The WSBLE draft EIS obscures instead of clarifies, blocks instead of reveals, and fails to provide the most basic information to the public.</p> <p>General Design Comments:</p> <p>I want to echo The Urbanist and Seattle Subway in the design principles that should be guiding Sound Transit’s work on developing the West Seattle Ballard Link Extension.</p> <p>First and foremost, design the system for transit riders and the optimal rider experience. Traveling between the station platform and the surface should be quick, straightforward, and reliable. Transferring between transit lines should also be quick and easy, especially at the major transfer points at Westlake Station and International District/Chinatown Station.</p>	<p>Ray Dubicki</p>
-------------------	--	--------------------

Build the system to maximize ridership. Design a good rider experience and ridership will follow. The most elegant station will struggle for riders if it's in the middle of nowhere, with few homes, jobs, activity centers, or transit connections nearby.

Design the system to be easy to expand. Ideally, ST3 is not the end. Planning with expandability in mind could save billions of dollars and numerous headaches down the road.

Station locations should unlock transit-oriented development (TOD) opportunities to the highest extent possible. A station isn't just a transit stop, it can be a catalyst for neighborhood development and housing growth, both market-rate and affordable. Sound Transit has an Equitable Transit-Oriented Development (TOD) program that has aided in the construction of hundreds of affordable homes on the agency's surplus properties. Alternatives more favorable to TOD have an edge and they will help the system attract more riders down the road by allowing more people to live in close proximity to light rail.

Construction impacts are important but shouldn't solely determine a 100-year investment. Construction-related road closures weigh heavy on the mind of policymakers, but it is crucial we pick the right station for the future of Seattle and grapple with the construction impacts that entails. Closing a busy road for a few years is a small price to pay to add a light rail line that will last centuries. The priority in mitigating construction impacts should start with prioritizing pedestrian access, transit operations, and bike routes. Don't shy away from big investments where there is a high return. We are most concerned building this correctly. Without completely dismissing costs, it is very possible to build a strong system with generational impacts. Controlling costs, not avoiding them, is key to avoiding delays to these much-needed transit lines.

Specific Station comments:

My work has been on areas around stations in the north end of the Ballard extension, so I will focus my comments on those. As a resident of Ballard, I firmly believe that light rail in this area will be transformative, particularly if it is completed correctly and soon. As an advocate for smart, forward-looking development in this neighborhood, I firmly endorse a bold vision for extending light rail to Northwest Seattle. That should include keeping the trains as a visible, integrated part of the neighborhood.

Most importantly, these three stations cannot become terminus stations. They cannot be sited or developed in a way that allows drivers to come in from a wide area, park, and get on the train to downtown. An example of such stations are the Branch Avenue, Suitland, Naylor Road, and Southern Avenue stations on the Washington DC Green Line. While those stations have some employment around them, they are often packed with people coming in from the suburbs to park and ride into downtown. Though Branch Avenue is the technical terminus, overflow parkers would cascade to the next stations if the Branch lots were full.

Since 15th Avenue is currently a commuter corridor towards downtown, poor design of Ballard, Interbay, and Smith Cove would put these stations at similar risk. Refinements in the station design must look to limit automobile parking, connect the stations with the neighborhoods instead of the streets, and make the bus transfers seamless without rolling walls of idling buses.

Ballard: Elevated 15th Avenue Station [IBB-3]. Combined with a high bridge, an elevated Ballard station at 15th Avenue will stitch together Ballard and the nascent neighborhood forming around Gilman Park, provide future expandability north to Crown Hill and beyond, and create a new landmark for the city. While the core of Ballard is ostensibly Market Street and Ballard Avenue, the core of housing is moving eastward as hundreds of new apartments are developing between 8th and 15th Avenues. This station must plan for the future. Additionally, the Ballard Brewery district and industrial employers are all located east of 15th Avenue.

Tunnel options limit the ability to continue the line north. As seen in the neighborhood's other bridges and the Locks, Ballard is not afraid of visible infrastructure. So there is no need to hide a bridge. Design refinements for IBB-3 should make the station and bridge beautiful. And coordinate the new bridge with the replacement of the Ballard Bridge. 14th Avenue is not terrible, but limits the options on connecting both sides of 15th Avenue.

Interbay: 15th Avenue Elevated Station [IBB-3]. 15th Avenue is a dangerous, oppressive scar through Interbay and Northwest Seattle. Partially lidding that scar with transit would provide an opportunity to stitch the now divided neighborhood back together. This includes accessing the station from both east and west side of the highway. The location maximizes then number of existing and potential residents in the station's walk circle. Refinements to the IBB-3 station design must concentrate on improvements to the Dravus Street bridge pedestrian experience, and describing the east station entrance in a way that explains why it is at the top of a tower.

An argument can be made that this would be the least convenient station location for Magnolia. However, the other options don't improve access to Magnolia because residents still would use Dravus to cross the

BNSF rail yard, then turn north on 17th Avenue to enter the station. This is almost the same distance as it takes for a Magnolia resident to access a 15th Avenue station.

Smith Cove: Preferred Galer Street Station [SIB-1]. The Smith Cove station would operate best on the west side of 15th Avenue, south of the Magnolia Bridge. This will access the Expedia Campus, as well as offices along that area. Additionally, future development at the Armory site will have good access to the station albeit not perfect. Alternatives east of 15th Ave would take out all development on that side, and limit utility by squeezing the station between the busy, dangerous highway and protected greenspace. Refining the SIB-1 station design should emphasize connections to the areas north of the Magnolia Bridge and avoid

There are noises being made by Sound Transit about combining the two Interbay stations. This would be a destructive error. A combined Interbay station ignores the hard divisions that separate the neighborhood in two. It is not a straight corridor because the golf course, rail yard, and topography squeeze the area into two separate clusters. Picking the south cluster sacrifices all of the riders not just from Dravus, but also from west Queen Anne. Ignoring such divisions would make the combined station an inaccessible terminus station. Instead of integrating stations with the clusters of homes and businesses, a combined station would draw drivers to park. It would consolidate all buses currently planned to be divided among two station, wasting space for idling.

While there's potential that the a combined station could anchor development at the Armory, it would underserve existing development at Dravus and Expedia. Also it will pressure a certain style of dense development at the Armory which we do not know if the site (a liquefaction zone next to a rail yard) can support. If anything goes wrong, at the Armory, a combined station is worthless. A consolidated station has to get everything correct, both in and around the station. A failure of the station (or its escalators) has no escape valve because the next one is on the other side of the ship canal or up the hill at Seattle Center. We need two stations in the Interbay corridor.

Downtown Stations: Share the alternatives that were eliminated before the deep tunnel station options were developed. While it appears that there are several options for the downtown stations, most of them rely on a single concept for detaching the Tacoma line and shifting it to connect with Ballard. All of that dives underneath the existing downtown tunnel. Please help us understand why this cannot be improved. Sound Transit has very smart engineers on staff, and we trust they can think creatively. Please show that work so we can understand why the downtown tunnels must be so oppressively deep.

Conclusion

In summary, please amend the WSBLE Draft Environmental Impact Statement to address the following issues:

Re-release the WSBLE Draft EIS with clear, concise images and descriptions that fulfill the intent of SEPA and show Sound Transit's work to develop these alternatives.
Share the station and alignment alternatives that were eliminated before the deep tunnel station options were developed.

And please move forward with approving the following station alignment alternatives, with the comments for refinement as recommended above.

Ballard: Elevated 15th Avenue Station [IBB-3].
Interbay: 15th Avenue Elevated Station [IBB-3].
Smith Cove: Preferred Galer Street Station [SIB-1].

Thank you again for the opportunity to comment.

Ray Dubicki
Ballard

04/28/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 8 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>BladeGallery Inc Customer: Patrick Giloi</p> <p>Home address: 107 Cherry St APT 1006 Seattle WA 98104</p> <p>Email: pgiloi@hotmail.com</p> <p>Phone: 4254401844</p>	Patrick Giloi

	<p>1408 NW 64th St. APT C Seattle, Washington 98107</p>	
--	---	--

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>My comments on the Ballard-West Seattle Link Draft Environmental Impact Statement.</p> <p>Slow down the EIS and consider more rider-friendly, pedestrian-friendly, and lower-cost alternatives. When we voted for ST3 there was no inkling that the downtown stations would 100 feet deep or more, require several minutes to transfer between trains, or that Ballard Station might be east of 15th Ave NW, or that the system would cost so much. This requires a rethink and a wider range of solutions.</p> <p>The hallmark of a good metro network is short train-to-train transfers so that riders can access the entire network easily, but the alternatives in the DEIS are the opposite, making it an ordeal to transfer and ride one or two stations more, or from the Eastside to the airport. Don't choose an alignment that fails at its primary purposes.</p> <p>If the downtown stations can't be moved closer to the existing platforms and to the surface, and if they will cost so much more to build than expected, then it's time to consider alternatives to the second tunnel. Several come to mind:</p> <p>(A) improve the existing tunnel to increase frequency from 3 minutes to 1.5 minutes. (B) interline Ballard/SLU into the existing tunnel. (C) terminate Ballard/SLU at Westlake until a better downtown solution can be found. (D) build an inexpensive cut-and-cover tunnel under 5th Avenue or elsewhere. (D) swing downtown segment further east to transfer at Capitol Hill instead of Westlake and serve First Hill (E) consider BRT alternatives for West Seattle and Ballard.</p> <p>Improving the existing tunnel is feasible; Sound Transit considered it in the run-up to ST3. Without the large cost of the second tunnel, there would be plenty of money to improve the first tunnel and service to West Seattle and Ballard.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Take another look at a 20th Ave NW station in Ballard. That has the best walkshed for the urban village, which is centered between 17th and 22nd. The representative alignment at 15th is already at the eastern edge of the village and a significant walk to most of the businesses and apartments. 14th would be unprecedentedly worse, and the east side of 14th even worse than that. There's a saying now: "14th doesn't serve Ballard the same way International District/Chinatown Station doesn't serve Westlake." They're both the same distance, yet Westlake has its own station and there are two more stations between it and International District/Chinatown. Yet people are supposed to walk that distance from Ballard station to Ballard proper? On paper it sounds like 14th or 15th is close to 17th or 20th, but the distance between 14th and 15th is unusually wide, more like three blocks instead of one.</p> <p>For West Seattle, BRT was always a better idea. West Seattle's steep hills make it difficult to get from one part of it to another, so travel tends to be in isolated north-south corridors. The Link plan would connect three of those to downtown (California Ave SW, 35th Ave SW, and Delridge Ave SW). But only a tiny part of those areas are within walking distance of Link, and only one of them has an urban village at the station. Most West Seattle residents will have to transfer from a north-south bus to Link, and both segments of the transfer are rather short. It would be better to have BRT fanning from the Westlake Bridge to all of those corridors both north and south.</p> <p>Consider putting Link on Fautleroy Way SW in West Seattle. That would cost less than the current alternatives, minimize property takings, and maximize the number of destinations within walking distance. Fautleroy is a wide arterial through the middle of Link's coverage area, and the destinations are either right on it or a block or two away.</p> <p>Establish a riders' review board alongside the stakeholders review board and the electeds review board. Riders' concerns aren't getting enough consideration.</p>	<p>Mike Orr</p>
-------------------	---	-----------------

In SLU: Reject both presented options, study an alignment on Westlake Ave N or similar, oriented north-south in the village. That would better serve the many highrises and pedestrian destinations throughout SLU. It would be less expensive than tunneling around the Highway 99 tunnel entrance.

The Harrison station location on Aurora Ave N is not as useful as it seems. People traveling on the RapidRide E bus line would likely stay on the bus one more mile to get downtown, and that bus segment is reasonably fast. Likewise, people coming from the south end to Aurora can transfer to the E just as easily downtown as at Harrison. It would be better to serve the thousands of pedestrians in SLU than a few hundred RapidRide E riders who probably won't transfer there anyway.

In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.

Look at train-to-train transfers in SODO. That could be an attractive alternative to avoid the deep stations and long transfer distance downtown.

In order to future proof our growing system, we must design for expandability in four locations:

- (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).
- (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
- (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
- (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
- (5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

<p>04/28/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Chloe Williams cocowilliams.cw@gmail.com</p>	<p>Chloe Williams</p>

04/28/2022	I visit Seattle frequently for work (I work at Amazon). I'm concerned about this plan disrupting the livelihoods and character of the international district. After a decade of living in NYC I know how much value having these districts brings to the character of a city and makes it worth visiting. From what I understand, this would be devastating for local mom and pop shops - after two years of a pandemic making it incredibly hard for businesses that make neighborhoods like this worth visiting, I would strongly suggest the city adjust and rethink this plan so 20 odd businesses don't close down due to excessive noise, construction, and other related shutdowns. Maybe a phased approach or something that is less impactful to the character of this lovely neighborhood.	Daniel Sircar
04/28/2022	The 5th Avenue options would be very disruptive and detrimental to the neighborhood and should not be considered further.	Mayumi Holly
04/28/2022	Please don't disrupt and displace the CID with a he 5th Ave. plan. The fourth Ave option is better for the community and better for businesses. The CID has already suffered enough during the pandemic. This would mark the end to our beloved CID.	Kevin Nguyen
04/28/2022	I strongly oppose the 5th Ave option that will result in the forced closure or relocation of so many small businesses within the heart of the ID. The 4th Ave underground station will save the integrity of the ID. Sincerely, Rick Holly	Richard Holly

04/28/2022	<p>Context of my comments are alternatives SIB-1, SIB-2 and SIB-3. SIB-1 is identified as preferred route (page 2-63), followed by SIB-2 (p. 2-65) and then SIB-3 (p. 2-66). As discussed in section 2.1.2.2.4, both SIB-1 and SIB-2 require creating a tunnel portal for exit from downtown portal along W. Republican St. along with a transition to cross to Elliott Ave. along what the City has designated a sensitive slope. Page 4.3.11-2 identifies the difficult nature of this terrain and specifically references 2 documented landslides (1960 and 2006) at this junction.</p> <p>In contrast, SIB-3 locates a tunnel portal to exist the downtown/Mercer St. tunnel along the edge of Kinnear Park. This is a much better location and more suitable approach.</p> <p>I raised a question about this choice, and how creating a tunnel and associated tunnel exit portal on a sensitive slope with a history of landslides during the initial public meeting for the Ballard Interbay extension. At the time I was essentially dismissed by the Sound Transit representatives with a cursory hand wave answer: “we’re confident we can find engineering solutions...”</p> <p>This poses a significant risk, and will clearly lead to cost changes and overruns to what is being positioned in the Draft EIS as the “least expensive” alternative. And the neighborhood deserves a more thorough consideration of the question, and a reasoned response.</p>	Gary Roshak
04/28/2022	<p>My role in advocating for our community and interacting with Sound Transit staff and members of the Sound Transit Board has been challenging but very rewarding. My comments are numbered below: As planning has progressed, the longer tunnel options (portal east of Avalon) are closing the financial gap between some of the less-desirable elevated options. It seems that members of the public and the Board have been greatly influenced by the differences in cost only to find out the differences aren't looking as large as they did. I'm afraid we've disregarded what I consider objectively superior plans (Pigeon Point Tunnel with ideal Youngstown station location) due to scary ROM estimates. This is unfortunate and has the potential to result in an inferior project with little or no cost savings. I view this outcome as tragic. In conversations I've had with other members of the public, I have a grave concern that the EJ communities south of the Delridge Station that will make up a significant percentage of the ridership estimates have had insufficient interaction and influence on the routing and station planning. I know what my preferences are for a Delridge station and what an ideal transfer environment would look like, but I don't know what the people that will actually use it think.</p> <p>If an Avalon station were built I would use it. It should not be built. There is no sense or precedent for having three stations this close together and I think there is a valid argument that this spacing would reduce the overall rider experience. The low ridership estimates speak for themselves. People travelling up the 35th Ave corridor by bus will be accommodated by inevitable bus routing changes. The already small walkshed is largely overlapped by the walksheds of the other two stations. The elimination of an Avalon station should also have a large impact on the cost of a long tunnel, further bringing those options into cost parity. Lastly, I have trouble imagining ANY responsible way to mitigate the traffic impacts of an Avalon station during construction. Please, West Seattle does not need another bottleneck.</p> <p>It is my understanding that Sound Transit is only responsible for providing the construction (including property acquisitions), maintenance, and operational costs of the project. This makes sense but I believe it also leaves out critical calculations to be born by other agencies, jurisdictions, and localities. If the Sound Transit cost estimates do not factor in permanent losses of tax base for the county due to property acquisitions, does it at least make sense for the County to provide a public estimation for ST and the public to base their decisions on. This is a long way of saying, my instinct is that the "cheaper now" options have the potential to be more costly in the long run. Isn't this important to consider?</p> <p>Thank you to all in the community, within Sound Transit, and to the Board for all your hard work. Collectively, we're drawing near an immensely critical set of decisions. Hopefully the multifaceted process of bringing this project through the EIS is going to eventually lead to the best project possible, serving the system, community, and region; enhancing each.</p>	Tighe Urelius

<p>04/25/2022</p>	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last-mile connections.</p> <p>That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains -- and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough consideration of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Mike Herlihy 18305 NE 153rd St Woodinville, WA 98072</p>	<p>Mike Herlihy</p>
<p>04/28/2022</p>	<p>This will negatively impact the community.</p> <p>There needs to be a plan that will preserve and nurture the current community of businesses and tax paying residents in the area.</p>	<p>Aiyoko Ishida</p>

------------	--	--------------

<p>04/28/2022</p>	<p>As a resident of West Seattle I'm concerned about the following points made by West Seattle Skylink: the cost of \$3.2 billion estimate to bring the light rail feeder approximately 4.7 miles from the SODO Station to West Seattle. By comparison, the cost to build an aerial gondola feeder connecting to both SODO and the International District may be as low as \$200 million and the total project cost certainly less than \$1 billion. Sound Transit estimates a light rail feeder may open by 2032 to SODO while the information SkyLink has obtained from engineering firms indicates that an aerial gondola feeder could be operational much sooner. The Report by the Sound Transit agency did not rise to the level of a feasibility study.</p> <p>"There are several US firms qualified to undertake a feasibility study for an urban gondola feeder. In fact, there is a firm very near Seattle that has undertaken many such studies: SCJ Alliance located in Lacey, Washington and focuses on using gondola technology for regional lines.</p> <p>Because of the costs and environmental impacts I would like to see Sound Transit pay for a 3rd party to conduct a complete feasibility study for a Gondola.</p> <p>Carla Reynolds</p>	<p>Carla Reynolds</p>
<p>04/26/2022</p>	<p>[thumbs up emoji]</p> <p>Sent from my iPhone</p> <p>On Apr 26, 2022, at 1:38 AM, Betty Lau Betty.lau47@gmail.com wrote:</p> <p>?</p> <p>3.19.3.4 Non-motorized Facilities (Bikes & Pedestrians)</p> <p>The closure of South King Street and South Weller Street would also affect pedestrian movements to and from the existing light rail station. The diagonal station configuration for Alternative CID-2a would reduce the duration of the 5th Avenue South partial closure and would allow South Jackson Street to remain open for pedestrians.</p> <p>Comment: Remember 1200 of those pedestrians will be slow moving elderly non English speaking residents with various challenging conditions. Move Forward on 4th for their sakes. DEIS needs to plan for their safety during demolition, construction and post construction, particularly for those using assistive devices and those in cognitive decline or poor mental health. What are the mitigations for them in the new station plaza; perhaps ban bicycles, scooters and have all riders walk their bicycles and scooters in.</p>	<p>Brien Chow</p>
<p>04/28/2022</p>	<p>Please reconsider placing a Sound Transit tunnel station at 5th Avenue in the CID. Choosing a 5th Avenue station will create serious disruption to this immigrant rich business community. Closures or forced relocation of immigrant businesses that result from the closure in a full closure of King Street, S. Weller and 5th Avenue for several years seems unnecessary. The 4th Avenue tunnel option will avoid these disruptions. The disruption of the tunnel construction that includes increases in noise, air pollution, dust, dirt and vibrations in the CID is not acceptable. Choosing the 5th Avenue station option appears thoughtless, cruel and harmful marginalized communities that make this area home. I wholeheartedly oppose this plan.</p> <p>Sound Transit, please take 5th Ave. off the table. 4th Ave Tunnel Station avoids 5th Ave impacts! Move Forward on 4th!</p> <p>Sincerely, Julie Holly</p>	<p>Julie Holly</p>

04/28/2022	For several years I have been part of the advisory committee working with the Wing Luke Museum to develop the Redlining Heritage Trail through the CID and Central District. It is heartbreaking to anticipate further years of disruption to the Chinatown-International District, as all of the proposed alternatives envision. If Uncle Bob Santos were alive, I'm sure he'd find a witty way to say STOP! The CID is already struggling to overcome the impact of COVID-19 related restrictions and shocking levels of anti-Asian violence, after surviving freeway construction and three sports arenas. Please reconsider these plans and save the Chinatown International District.	Merlin Rainwater
04/28/2022	Chinatown-ID has long been a second home to myself and my family. I have very serious concerns about the impacts already identified for constructing the route along 5th Avenue, and the amount of anticipated displacement of people and business for such an extended period of time. I am not fully confident that Sound Transit has truly provided justification supporting this route, and strongly encourage the development along 4th Avenue instead where the impact to an neighborhood already under threat of gentrification will be lesser. Please remember the long history of development in and around the ID and the long-standing impacts of things like stadiums and freeways. Please, keep my neighborhood alive. Do not build on 5th Avenue.	Mahealani Smith
04/28/2022	Please consider routing the CID light rail along 4th instead of 5th Ave. The CID has already been a victim of redlining and other urban planning projects that divided and left the residents and small businesses behind and/or out of business.	Andrew Chin
04/28/2022	Please choose a route on 4th Avenue. Chinatown is a very special neighborhood and since it is small and under threat from development of various types, it can ill afford losing buildings and territory around the edges, which seems to be the plan if a 5th Avenue route is chosen. This is not the kind of "investment" the CID needs right now. Thank you- Larry Jost	Lawrence Jost
04/28/2022	Please favor a tunnel option under the Ship Canal continuing to the core of Ballard. By now, local contractors should know how to build them! Ensure sufficient drop off/ pick up areas to facilitate use of the train for nearby residents/workers that are not close enough to walk to the Ballard and Interbay stations & for whom transit access is too cumbersome. Keep the stations simple and functional and ensure the installation of escalators and elevators with proven track records for not breaking down.	Irene Wall
04/28/2022	I strongly urge you not to construct the CID sound transit station on any of the three locations at/near 5th ave. These potential locations will displace many local businesses in the surrounding area, forcing a few to close down and leading to a lack of business for them as construction continuously occurs. Please consider these implications when deciding on a location for the CID, and strongly consider going with the two options on 4th avenue as they would cause the least harm. Thank you.	Aditi Rana
04/28/2022	I strongly oppose all plans that affect the Chinatown International District, and in particular, the 3 that affect 5th Ave. There plans involve decimating a few of the existing historic blocks with mom and pop shops who have survived for years and also shutting down a good portion of the CID for the next 11 years. The CID was originally created because of racist redlining policies and has been disrupted and forcibly moved on 3 major occasions already because the city has decided that our communities and neighborhoods aren't wealthy or important enough to not be demolished every single time. The CID neighborhood loves and uses as much public transit as possible, but not at the cost of community, livelihoods, and forcing the residents of the neighborhood to live in a construction zone for the next decade.	Rachel Blazevic
04/28/2022	The economic impact, business impact, employee displacement, and overall construction of this new station should be weighed heavily. International district has already faced many challenges the last few years with the pandemic, increased xenophobia, and with several businesses already closing. The 4th avenue option is overall less disruptive to the area for locals and businesses, less work for sound transit, and overall widely helpful for the transit link. Thanks for your time.	Jessica Kezele
04/28/2022	Please preserve the Chinatown International District and use the 4th Ave option - not 5th Ave. this unique community is essential for the city's character and should be protected at all costs.	Debra Doyle
04/28/2022	I do not support this route that puts our Chinatown neighborhood in jeopardy	Stephanie Gustafson

04/28/2022	The 5th Ave WSBLE options will displace many CID local businesses as well as make the CID area hard to access. This will be another major hit, on top of COVID-19, to the businesses that I would like to visit and support. I prefer the 4th Ave options, CID-1a and 1b, because it would result in less disruption to the businesses and residents.	Saurabh Mishra
04/28/2022	My mother is in her seventies and still lives in the Chinatown-International District. Please do not add extra harm/hardship on the elderly in this neighborhood. I am in support of the options on 4th Ave. Please protect our elderly citizens.	Janny Woo
04/28/2022	<p>Hello,</p> <p>This comment is primarily focused on the Delridge segment since this is the neighborhood where we live. In our opinion, the "Andover St (Lower Height)/Medium Tunnel 41st" option is clearly the optimal alignment. It has the fewest residential displacements, a lower guideway and includes a tunnel segment to get closer to the heart of the Junction, all at a competitive cost. In fact, among all of the categories on your comparison chart (project cost, residential displacements, business displacements and park effects), this alignment ranks as the "highest performing" in all of them. We have a very hard time supporting any of the Genesee Street alignment options. The Delridge station placement would essentially wipe out a quarter of our entire neighborhood, including many brand new townhouse developments, which is absurd, not to mention the 150-foot tall guideway, which would be wildly out of proportion with the rest of the low-rise residential neighborhood. With the "Andover St (Lower Height)/Medium Tunnel 41st" option, you can avoid most of the negative impacts while achieving a superior outcome.</p> <p>Thanks,</p> <p>Mark Kumpula & Anne Rush SW Nevada Street</p>	Mark Kumpula
04/28/2022	As a life-long Seattle resident, I implore Sound Transit to prioritize the Chinatown-International District neighborhood and go with the 4th avenue option. It is one of the most historically important parts of Seattle and construction on 5th avenue could have a devastating impact. We owe it to this community.	Hanna Welch
04/28/2022	<p>Dear Sound Transit Board of Directors,</p> <p>Time and time again, people of color have been pushed out of their land, their communities, and their homes. Although I have only been a Seattle resident for six years, this same narrative has played out in every city across America, including my hometown of Los Angeles. Sound Transit is now in a unique position to support their communities that have been historically disenfranchised. After reading the executive summary and feedback from residents, I believe a station on 5th in the Chinatown International District (CID-2a and CID-2b) would disrupt a community's ability to preserve their history for future generations. For this reason, I support building a station on 4th instead (CID-1a and CID-1b) as it limits day-to-day disruptions and preserves businesses and centers that community members consider integral to their identity.</p> <p>I will admit that although I am a regular rider of the Light Rail, I am not an expert on building public transit. I am simply listening to community members and learning about why they believe this would damage their community irreparably. I sincerely hope Sound Transit does the same.</p>	Sarah Garcia
04/28/2022	I believe in keeping CID intact. I as a citizen of Seattle for 20+ years have seen detrimental impact to the community. Such as homelessness due to displacement. Can you please listen to us. I believe going through 4th Ave makes more sense due the direct connection to West Seattle.	Marlon Tabasan

04/28/2022	<p>I would really like to see an EIS for the gondola option. This option would seem to displace the least residents and businesses, be less intrusive, and be more environmentally friendly. Please consider it!</p> <p>Of the options presented here in your EIS, I would prefer DUW-2 north crossing option for the Duwamish segment; it impacts wildlife, public parks/resources, and residents the least.</p> <p>For the Delridge segment I would love to see an option that travels on Andover and begins tunneling under on the east side of Avalon Way all the way to the junction. BUT of the options you give, I would prefer DEL-6 for its lower height, less noise, less impact on displacing residents, and no impact on wildlife and parks/Rec areas.</p> <p>For the Junction segment, I prefer either tunnel option WSJ-3a or WSJ-3b. A tunnel in the junction area would have the least impact on our beautiful community and its businesses, and would maintain the small-town tranquility of our shopping area.</p> <p>Thank you.</p>	Nancy Fry
04/28/2022	<p>ES3.1.2.2 Chinatown International District Segment</p> <p>The 5th Ave. option would destroy a historical neighborhood, a cultural centerpiece, a key tourist attraction in Seattle, and have a highly negative impact on small business owners from underserved populations. Please engage with the local community in Chinatown International District as you explore options.</p>	Myra Tanita
04/28/2022	<p>It is clear that Sound Transit should build its Ballard extension via tunnel under Salmon Bay to an underground station at either 14th or 15th Ave. NW. Here is my reasoning:</p> <p>(For the sake of full disclosure, I own a townhouse near the intersection of 14th Ave. NW and NW 59th St., just off Gemenskap Park.)</p> <p>Quality of life for the residents, businesses, employees, and visitors presently in south Ballard: an above-ground bridge over 14th or 15th would displace far more businesses and residences than a tunnel under either street. In addition, a bridge would disrupt more traffic for a longer period of time, would be out of proportion to the rest of the structures in the neighborhood, and -- most importantly -- would result in noise that could not be mitigated with current techniques.</p> <p>This is especially important because an above-ground station would include tie tracks that would extend north of Market Street, into an area that is almost entirely residential if the 14th Ave. option were chosen. The resulting incursion would be extremely detrimental to the quality of life for people living on and around the intersections of 14th and Market Street.</p> <p>2) Quality of life for future residents, businesses, and employees of south Ballard: it is likely that Sound Transit will want to extend the Ballard line north toward Finney Ridge and east toward the U District. Both these would be more easily accomplished if the tracks and station were underground.</p> <p>Land prices in Seattle are increasing exponentially, and an above-ground station and tracks (both for the current ST3 project and any future projects) would cost an exorbitant amount for ST, and would push hundreds -- if not thousands -- of people out of their homes. An underground track would do more to preserve what is already a moderately-dense, cohesive community.</p> <p>3) Cost: as mentioned, land prices in Seattle are high and will continue to grow. Since the EIS draft has concluded that (as of early 2022) building a bridge is now nearly as costly as building a tunnel (and will only become more costly as time goes on), the only logical thing to do is to choose the option that would not negatively impact quality of life for the residents and riders: the tunnel.</p> <p>Moreover, the Coast Guard is now recommending that any bridge over Salmon Bay be either moveable or built to a minimum height of 205 feet. Those specifications, if followed, would put a bridge over 14th or 15th essentially out of the question.</p> <p>4) A final note on the current proposals: there is some community pressure to rethink the 14th or 15th Ave. station placement in favor of one further west. I favor the 14th or 15th Ave. station location (as long as the tracks and station are underground), since such a placement will do a great deal to even out development to the east and west of 15th Ave. NW, which currently acts as a barrier dividing Ballard in half. Right now, west Ballard has more amenities such as cafes, restaurants, bars, shops, etc. East Ballard is committing to increased density, especially along Market Street, and placing a light rail station mid-way between "old" Ballard in the west and the newer development in the east will bring more parity to the neighborhood,</p>	Kristin Doll

	<p>allowing the new residents of east Market Street more transit options and encouraging people to both create and patronize new establishments along the eastern Market corridor.</p>

04/28/2022	<p>I urge the Board to select the 4th Ave route under Chinatown/ International District. This community has suffered disruptions and damage from transit projects since the construction of I-5.</p> <p>This may seem like a budgetary decision - chose the less costly option. But, it is in fact, an equity decision. Once again a community of color is expensed at the convenience of the white population to be served, miles away.</p>	Tommer Peterson
04/28/2022	<p>Like all transit riders, I strongly prefer shallow stations over deep stations! This system will be around 100 years from now, so we should design it with that in mind. The shoppers and commuters of today can suffer a few minutes of inconvenience to help future generations.</p>	Clyde McQueen
04/28/2022	<p>Please consider the 4th Ave option!!! Do not spill over into hardworking Chinatown/ID businesses. Please show you care about the diversity of Seattle by protecting important landmarks and businesses.</p>	Ashley Caldejon
