<p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Congrui Li theturtleguy@gmail.com</p>	<p>Congrui Li</p>

Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Allen Clark allenclark1@hotmail.com</p>	<p>Allen Clark</p>

At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>WILLIAM DOUGLASS williamedouglass@gmail.com</p>	<p>William Douglass</p>

<p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties. When I talk to people about Link, the first critique they have is the escalators. Please don't become even more notorious by over reliance on underperforming vertical conveyances!</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel. The best transfers take seconds. Everything longer is a compromise than needs excellent justification, exponential with the time cost.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. <p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>I'm keeping what Seattle Subway put in below (as I'm sure they've thought this through more than me), but my own thoughts to emphasize are:</p> <ul style="list-style-type: none"> -No more escalators! They are broke all the damn time, and it adds time to a trip to ascend/descend from the bowels of the earth. Either a bunch of very fast elevators or put the station way closer to the surface (I have no idea how feasible this is). -Build stations where people are/will be. If you're going to ballard, go to the part people want to be in! Don't build any more stations that are just a giant parking lot. -And please look at accelerating the building schedule, if at all possible. <p>Thank you!</p> <p>-Jason Arends</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. <p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put humans first. The expansion must put pedestrians first. The extension must put accessibility first. The extension must provide a 21st century, century long service to our community. Because of its importance, I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>I write to SUPPORT:</p> <p>-Shallow stations to promote shorter travel times, accessibility, and reliability. Deep stations are setting Sound Transit up for future liability! Deep stations require much greater maintenance costs to ensure reliable, ADA compliant access. Shallow stations are setting Sound Transit up for success! Shallow stations better service short trips, and will attract a greater variety and number of riders.</p> <p>-For stations which must be below ground level: ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>-Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>I write to SUPPORT:</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: Open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. CID-1a is the better of the current alternatives. In Sodo: The Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>I write to SUPPORT future proofing the ST3 expansion by incorporating the following considerations:</p> <ol style="list-style-type: none"> (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien. <p>I write to OPPOSE:</p> <p>-Any elimination of stations from what voters approved with ST3 in 2016. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>I write to OPPOSE:</p> <p>In Ballard: All proposed 14th and 15th Ave station configurations. Neither 14th nor 15th ave serve the high density neighborhood that will provide a large portion of riders for this expansion. Neither 14th nor 15th proposed locations put riders first. In SLU: Both proposed station option locations. Neither proposed options serves the SLU neighborhood</p>	<p>Blair Steward</p>
-------------------	--	----------------------

ridership now, and will not serve the neighborhood for the rest of the 21st century.
In Chinatown/International District: All deep station alternatives (1b, 2a, and 2b)
In Sodo: The preferred alternative with the staggered station. This alternative doesn't support pedestrians and riders.

Thank you for your review of these comments.

<p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>I live in Ballard and have for about 10 years. I love it here, as I get to live in a dense urban neighborhood, with decent transit and a wonderful walkable life for me, my wife, and my dog. However, I would also love GREAT transit to downtown (where I now work) and to get around and explore my city. My comments largely agree with advocacy groups like Seattle Subway and The Urbanist, though I have edited them where I disagree or have more specific requests, so please review this and don't treat it as a simple copy/paste.</p> <p>My comments start with Ballard: A 14th station, especially with the latest cost refinement idea being to delete the west-side entrance, requires me crossing 24th (where I live, West side), 15th, 14th, and Market in order to reach the train. This is objectively absurd. While there is some medium-density going up in West Woodland/Brewery District it is nothing compared to the historical and continuing density in the Ballard Core.... ESPECIALLY along 24th. I would like a one seat ride to downtown and the airport and I could probably get ride of one of our cars as a family! That's the kind of thing we need to be incentivizing. 14th just doesn't cut it.</p> <p>I agree with the sentiments from Seattle Subway below: Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: Open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: Support Thorndyke Retained Cut [IBB-2a/IBB-2b]. In Smith Cove: Preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.</p>	<p>Tyler Doyle</p>

Manager DEIS Comments,

The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement

Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.

Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.

Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.

In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.

In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard.

In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1].

At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.

In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible.

At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower.

At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.

In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.

In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.

In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.

In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.

Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.

In order to future proof our growing system, we must design for expandability in four locations:

(1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).

(2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).

(3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.

(4) Midtown must be designed to accommodate future expansion to the east along Madison St.

(5) West Seattle should be built for future southern expansion to White Center and Burien.

--	---	--

<p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>I believe that the Ballard-West Seattle Link Extension is very important to the city of Seattle and the surrounding region. However, it's design must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement as I have significant concerns about the design of various aspects of this project.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>It is extremely important to make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: Putting the station on 14th or 15th Ave NW is a horrible choice and a complete waste of money. Not only is it too far from the core of Ballard but it requires crossing a busy, dangerous street in order to actually get there. I strongly urge Sound Transit to reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard.</p> <p>In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>In SLU: Reject both presented options as they aren't located in the heart of SLU. Study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible.</p> <p>At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower.</p> <p>At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access. Sound Transit needs to make every effort possible to reduce the depth of this station.</p> <p>In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>In Chinatown/International District: throw out the ridiculously deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a but closer to the surface, to improve transfer times at this critical regional transportation hub.</p> <p>In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.</p> <p>In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations:</p> <ol style="list-style-type: none"> (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). <p>04/14/2022</p>	<p>The DEIS is entirely lacking in the human costs of impacts to Chinatown, Japantown, Little Saigon. In the chapters/appendices on Social Justice, Environmental Justice and Economics, it finds no impacts to the CID.</p> <p>However, there are no details to back up this assertion of no impacts.</p> <p>Therefore, you need to do a cost analysis of the economies of the CID, broken down by neighborhood: Chinatown, Japantown, Little Saigon for:</p> <p>local economy: meaning businesses losses due to relocation or shut down, moving away from an established customer base—owners and employees, residents, and of the residents, the elderly limited English proficient; loss of tourism dollars</p> <p>Environment: analyze the air pushed out of the proposed 5th Ave. tunnel through the ventilation shafts, added to the already low air quality index established by the city for a total and the predicted toll on residents, businesses, customers, employees, including the predicted loss of 210 parking spaces.</p> <p>Societal Costs: Analyze and explain in dollars the effects of demolition adding to air and noise, vibration pollution and</p> <p>Quality of life for school kids, daycares, cultural community life</p> <p>Children and youth in daycares, schools, after school programs parents bring their kids to</p> <p>What are the dollars and cents losses as tourists and visitors avoid the area</p> <p>Measure emergency response times and how long it takes to get to an ER compared to closed streets, detours, poor road conditions—lives lost</p> <p>Measure and calculate costs of impacts to institutions: family association gatherings, tong socials, geographic and art and music clubs</p> <p>Measure and calculate impacts to parades, Dragonfest, Music in the Alley, Night Markets Moon Festival, Lunar New Year, lion dancing</p> <p>Impacts to family income of residents</p> <p>In short, you do to do a cost analysis in three ways: economy, environment and most importantly, societal costs..</p> <p>Comment #2 The Chinatown Gate--no details of the so called wrap material: bubble wrap? Styrofoam? Packing beads? Air pillows? Packing paper? All inadequate to protect it from getting hit & knocked over by large dump trucks, bulldozers, cranes. It will need something stronger, like a steel box equal to a tank's armor.</p> <p>Betty</p>	<p>Betty Lau</p>
<p>04/15/2022</p>	<p>For too long Magnolia has been ignored in transit plans, despite the high population of our neighborhood and our geographical separation from downtown and other neighborhoods. But consider:</p> <p>Ours is the ONLY neighborhood without a high school. Kids are assigned to Ballard, which means a first #24 or #33 bus ride south (the wrong direction) to exit across the street from Taco Time in Interbay, running across the street to the bus shelter, and catching a D Line north to Ballard High - then reversing the steps in the afternoon (standing room only, mind you, because there is no additional route at this time slot to accommodate them.</p> <p>Middle schoolers attending McClure on Queen Anne have NO route available via bus, or feasible bike/walk. Magnolia parents must drive them.</p> <p>Magnolians traveling to work or events downtown must rely on Metro, where service is often reduced and routes are cancelled.</p> <p>Magnolians traveling to class or games at UW, must rely on Metro + Sound Transit from downtown to UW ; the trips are unnecessarily long.</p> <p>Magnolians traveling to work on the east side could take a series of busses, but only if they want to spent half the day commuting.</p> <p>*When our fragile Magnolia Bridge is again sidelined for repairs, as it was after the Nisqually Quake, or there is an emergency requiring neighborhood evacuation, or even as Interbay businesses (Gentec, Amazon) grow, we will need a 4th exit path from our peninsula.</p> <p>Thank you for your consideration.</p>	<p>Suzanne Easters</p>

<p>04/15/2022</p>	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures. Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott Station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p> <p>Kari Girod Magnolia Resident</p>	<p>Kari Girod</p>
-------------------	--	-------------------

<p>04/20/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Mariah DeLeo mayaeayah@gmail.com</p>	<p>Mariah DeLeo</p>

04/20/2022	<p>Dear Ma'am or Sir,</p> <p>I also would like to offer my comment on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>I heard about the light railway project and how it will impact the possible loss off the Dusty String workshop and fine craftsmen/women, who manufactur wonderful harps and hammered dulcimers.</p> <p>Dusty String is a worldwide known address for their superb instruments with exceptionell craftsmanship and quality of work. Also their service is outstanding.</p> <p>Please consider the IBB-1b ALTERNATIVE, as the preferred solution, to ensure Dusty String can keep their workshop going and the brand Dusty String within Seattle (manufacturing/sale store).</p> <p>There are not so many exceptional skilled harp builders, but Dusty String is one of them, and worth saving. Their instruments are beautiful and loved in the harp community. Seattle will loose an icon, if the family-owned business needs to relocate out of Seattle or is otherwise negatively impacted by loosing their highly skilled Artisans [due to commuting/relocating outside of Seattle], which are the heart and soul of building such wonderful, precise, and magnificent sounding harps.</p> <p>Thank you for your time. A loyal Dysty String customer and harp-enthusiast.</p> <p>Manuela Walter</p>	Manuela Walter

04/21/2022	<p>I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE.</p> <p>Morley Harps is a small family harp business, established in 1816 in London. World War 1 & 2 caused massive disruption to both skilled employees who were called up to fight and during the Second World War the Blitz or bombing of inner-city areas. The end result was after about 130 years of skilled instrument making, employing local craftspeople making harps in London serving a world-wide customer base we ceased production as we could no longer be competitive – the net result was from having employed about 20 people with skills such as woodworking, metal work, polishing, regulation, and back-office staff we became a service / sales company employing 3 people – along the way losing years of skills.</p> <p>Since 2005 we have been a Dusty Strings dealer – and have sold over 1500 harps to customers across Europe and even further afield. Dusty Strings has an excellent reputation as an instrument maker with attention to detail and amazing customer service.</p> <p>I have had the opportunity to visit Seattle in 2011 and visit Ravenna Boulevard (where some of the earliest instruments were made by Ray Mooers in his home basement) , the retail shop in Fremont where instruments were also made, until they required their larger present site, the home of Dusty Strings Company at 3450 16th Ave W.</p> <p>The current site of Dusty Strings has been purposely designed to enable high quality instrument building in a safe modern environment – lumber can arrive on the ground floor and be stored and seasoned / wood cutting and shaping in a dust-controlled area / spraying and polishing in another specialised area / final assembly and regulation in a clean and noise free area. Their headquarters is not just any factory space or office building – but a building and space that has been specially designed to try to make the best lever harps in the World.</p> <p>As an importer of Dusty Strings instruments, we have had to deal with the massive impacts of Covid and resultant decrease in production, as correctly they have safeguarded their employees. Should Dusty Strings have to relocate due to the planned routes, the resultant disruption to their production would be significant and cause us supply problems too. I too fear that what has been a beacon of instrument making in Seattle, employing local people, investing in the good of the community (e.g., face shield production for local hospitals during the pandemic) could be lost.</p> <p>It is for this reason that I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE.</p> <p>Ben Morley, Director of Clive Morley Harps, England.</p> <p>Goodfellows, Filkins, Lechlade GL7 3JG, UK</p> <p>www.morleyharps.com</p> <p>Clive Morley Harps Ltd Goodfellows Filkins Lechlade Glos, GL7 3JG</p> <p>Tel: (44) 1367 860 493 www.morleyharps.com ben@morleyharps.com</p>	Ben Morley

<p>04/21/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Michelle Burce michelleburce@gmail.com</p>	<p>Michelle Burce</p>

04/21/2022	<p>o whom it may concern,</p> <p>My name is Conor Murphy, and I manage The Ascona at 200 5th Ave S. As both a resident and property manager in the Chinatown/International District neighborhood, and a longtime Seattleite, I know how much Sound Transit expansion is needed, and appreciated, throughout our city and the region. Connectivity brings people from across King County to our great city and especially the CID neighborhood.</p> <p>I want us to be as prudent as possible at the potential decade-long impact that the Ballard and West Seattle extensions will bring to 4th or 5th Avenue. Increased rapid transit will benefit all of us, but the impacts felt by residents, transit riders, business owners and property owners will be immense if this is not handled in a judicious or careful manner. I have reviewed the proposals for various stations in the CID neighborhood, and I am strongly recommending that Sound Transit chooses the 4th Avenue plan for the new station. In my mind, it would fit seamlessly in the corridor already occupied by Amtrak and Sounder trains, as well as the existing International District/Chinatown Station. The planned surface level interruptions seem to be minimal - compared to the other two proposals - and would have the smaller impact on existing businesses and structures in our neighborhood.</p> <p>By choosing instead either of the 5th Avenue plans, there would be long lasting disruption to the life and livelihood of what makes this neighborhood so special, and why thousands of our neighbors come down here every month. Demolishing existing businesses and structures to make way for proposed construction, as well as blocking off several blocks along 5th Avenue S, S King and S Jackson St and 6th Avenue S, would negatively impact our neighbors, both residents who've made their homes here, as well as business owners already decimated by the long economic tail of the COVID-19 pandemic. There seems to be little to no mitigation proposals to the housing and businesses which will be impacted during the eight to eleven year construction proposal, and I would strongly ask that Sound Transit look to community organizations in the neighborhood to have further discussions about how to best plan for even a slight disruption.</p> <p>Transit has helped both expand the region's accessibility and shrunk the distance between the most magnificent parts of our region. However, we must make sure to remember that expansion has a very real, human impact that can't be overstated. We must make the right decision both for our region, for our neighbors and for every transit rider in the greater Puget Sound region. I strongly ask that you choose the 4th Avenue connector option for the Ballard/West Seattle light rail expansion.</p> <p>Sincerely,</p> <p>Conor Murphy Property Manager at The Ascona</p> <p>Conor Murphy Property Manager of The Ascona Cell: (608) 957-3679 pronouns: he/him/his</p>	Conor Murphy

In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Dawn Tarpinian dawn.a.tarpinian@gmail.com</p>	<p>Dawn Tarpinian</p>

<p>04/21/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. <p>04/21/2022</p>	<p>Manager DEIS Comments,</p> <p>Hello! I left the generated statement from Seattle Subway because I think on the substance it nails the points I care about. I will say that as a layperson, I see Sound Transit making poor long-term choices with buried stations and/or stations located far from population centers and near freeways. Don't let short-termism degrade what will be a 200 year investment in the city's transportation infrastructure!</p> <p>Thank you for all your hard work, I know it's not easy.</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. 04/21/2022	<p>I'm just writing to strongly encourage the West Seattle project to be a tunnel rather than an above ground project. Most other communities in Seattle have tunnels and above ground projects disrupt businesses are noisy and would mean demolishing buildings and homes. It would definitely change the Alaska Wayne neighborhood and the surrounding neighborhoods in a negative way so please put my vote up for a tunnel extension which would be much less disruptive</p> <p>Thank you Bill Affolter</p>	Bill Affolter

In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Steve Shapiro shapiroasm@gmail.com</p>	<p>Steve Shapiro</p>

<p>04/20/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. 04/20/2022	<p>To Whom it May Concern:</p> <p>To be successful, it is critical that the Interbay-Ballard segment of ST3 expansion be located where residents and businesses can easily access it. That means we need two stations. One near Smith Cove Park easily accessible to Expedia employees, cruise ship passengers and resident on the southwestern part of Magnolia. Also I feel strongly that the light rail should pass through a tunnel under the ship canal and connect with a Ballard tunnel station at 17th, 20th or 22nd avenue NW.</p> <p>2) We need shuttles coordinated with the light rail schedule to make regular trips from key locations in Magnolia to the two light rail stations.</p> <p>3) Please avoid transit plans that require pedestrians to cross major roads such as 15th avenue west.</p> <p>4) Please avoid large stations. All we need aside from the platforms is shelter to wait for shuttles and an area where people can lock their bicycles.</p> <p>5) Please consider continuation of a tunnel route from Seattle Center through Smith Cover, Interbay and to Ballard. Longterm, the whole area, so close to the city, holds promise for potential development for affordable housing and small-scale manufacturing. Critical infrastructure should be placed underground to allow for dense development of the area.</p> <p>4) Regarding Smith Cove station (SIB-1):</p> <p>The station should be approached by tunneling and be placed on the West side of Elliot Street/15th ave. West and allow for easy access to Magnolia Bridge or its replacement.</p> <p>5) With respect to Interbay Station (IBB-2b):</p> <p>The station must be close to the Magnolia community so it can be easily accessed in the event of bridge failures. Trains should continue through a new ship canal tunnel.</p> <p>The station should be designed so all buses and passenger car pick-up and drop off are on the north side of Dravus or on 17th Ave. W</p> <p>Ballard station</p> <p>Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village</p> <p>Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p> <p>Leslie Helm</p>	Leslie Helm

Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Judy Blair judithblair@yahoo.com</p>	<p>Judy Blair</p>

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>I am a public transportation user, and being able to navigate around the city without a car is my number one issue as a voter.</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Daniel Newell DANIELNEWELL@GMAIL.COM</p>	<p>Daniel Newell</p>

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. <p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. <p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>The proposed location for the SLU stop is not actually located within South Lake Union, and therefore is not useful. There are many many residents of SLU, formerly myself included, and most live along Dexter and Fairview. Placing the stop near 99 will make it near useless - if you can walk to 99 from what is actually residential SLU, you can walk almost as easily to Westlake. Many people commuting into SLU are also commuting to Dexter, Boren, and Mercer, which are not exactly nearby the current proposed location for the SLU stop. This station must be moved to be (1) less deep to facilitate transfers, and (2) placed somewhere actually useful.</p> <p>If you want to increase ridership on public transit, it must be both accessible and reasonably placed. A station accessed by elevator only is not accessible unless the capacity of the elevators meets or exceeds the capacity of escalators. People WILL NOT use the stop if they have to wait for an elevator. Can you say missed transfers?</p> <p>I also support all commentary below from Seattle Subway:</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. -------------------	---	-----------------------

- In order to future proof our growing system, we must design for expandability in four locations:
- (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).
 - (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
 - (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
 - (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
 - (5) West Seattle should be built for future southern expansion to White Center and Burien.

<p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). <p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>I am a current Kirkland resident who used to live in SLU. I want to emphasize that the current plan for SLU station is woefully inadequate to serve the people who live and work there. The densest residential part of SLU is between Westlake and I5, and most of the big offices are within a few blocks of Westlake. The proposed SLU station placements are not easily walkable to either area. In order to keep the heart of the neighborhood within the walkshed of the station, the Link should tunnel from the proposed Denny station up to Republican street. Although that puts a new station close to Denny station, that is fully appropriate for a dense downtown area. Our closest peer is probably the BART which gets incredible ridership between relatively close downtown stations. The impacts to the Seattle streetcar during construction are acceptable since 1) this would be a vast, long term investment in SLU's transit access and 2) the streetcar has low ridership that can be substituted by existing buses. I urge you to reconsider the proposed options for SLU and draw up a new plan that best serves the residents and workers of SLU.</p> <p>Further, I fully support Seattle Subway's recommendations below:</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p>	<p>William Cromar</p>
-------------------	--	-----------------------

- In order to future proof our growing system, we must design for expandability in four locations:
- (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).
 - (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
 - (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
 - (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
 - (5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

<p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>Thank you for the opportunity to comment on the DEIS for the Sound Transit expansion. I am a super happy rider and can't wait for the additional expansion to Ballard and beyond.</p> <p>Please do not tunnel! I want to see Ballard when I go to Ballard and tunneling always has runaway costs that will burden not just the Ballard project but many other projects. Trains should be seen, hide the damn cars in a tunnel!</p> <p>The idea of putting the train up 15th street and clearing the car sewer is the best idea around.</p> <p>Please ensure all transfers are well thought through and that we do not end up taking many minutes to get to other platforms.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. <p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>graham golbuff grahamgolbuff@gmail.com</p>	<p>Graham Golbuff</p>

-------------------	---	-----------------------

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>Hello,</p> <p>I am including the statement from Seattle Subway below, but wanted to add a few of my own words as well. I fully agree with everything proposed by them, but also recognize that there is no perfect solution to an issue that's decades behind when it should have been built. What must be done now is whatever is possible to ensure maximum usage and convenience for riders. Deep stations, especially the one proposed in CID, seem almost like sabotage to the potential of this system. We need quick access, simple transfers, and ease of use for all involved. The system needs to be just as useful for folks moving around downtown exploring the city as it is for those commuting to work. It must connect all major neighborhoods, and be designed with future expansion in mind. This is an investment in the long term vitality of this city and will likely set the stage for how Seattle grows for the next century. It must be done right now, and it must be future proof to ensure the entire region benefits and is able to expand with rising demand for generations to come. Let's get it right.</p> <p>Thank you.</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure.  - (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
 - (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
 - (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
 - (5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>I am writing to submit my comments and thoughts to Sound Transit’s Draft Environmental Statement and strongly believe the Ballard-West Seattle Link Extension must put riders and increased ridership first.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. Sound Transit should view this as the mandate and failure to deliver on this puts further expansion at risk.</p> <p>There are a number of specifics that I want to be sure get highlighted:</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system’s growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office’s facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region’s mobility.</p> <p>In order to future proof our growing system, we must design for expansion and future-proof our investments in four locations:</p> <ol style="list-style-type: none"> (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien. <p>Thank you for your consideration and review of these comments.</p> <p>Brandon Berg</p>	<p>Brandon Berg</p>

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. This region is still growing, Ballard especially. More townhomes and density means we need all our stations, and we needed them 20 years ago.</p> <p>Other suggestions: Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. Some of the proposed station depths and access plans will increase travel times too much to be useful for short trips, which are essential to appeal to the broadest number of commuters. If you do deep stations, you MUST ensure escalators and elevators are fast, have enough capacity and redundancy to handle rushes, and above all be reliably maintained to minimize failures. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>2) Smooth transfers between the system's growing lines. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>3) Station suggestions: In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>4) The DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is much needed, but cannot be the end of rail expansion in Seattle. The state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility. It benefits transit riders and those who are dependent on cars. More people on transit is less traffic on the aging road infrastructure. Focus on transit first.</p> <p>5) Here are a few suggestions for expandability: a) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). b) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). c) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. d) Midtown must be designed to accommodate future expansion to the east along Madison St. e) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your time and consideration.</p> <p>Sincerely, Erin Watkins</p>	<p>Erin Watkins</p>

The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Ian Strader ian.strader@gmail.com</p>	<p>Ian Strader</p>

At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Jacob Struiksma jacobstruiksma@gmail.com</p>	<p>Jacob Struiksma</p>

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. <p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. Below are my comments to Sound Transit's Draft Environmental Statement</p> <p>Please do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean that we must build the most comprehensive rail network that we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Do make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Please ensure that escalators and elevators are:</p> <p>(1) fast, as well as (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure.</p> <p>Such elevators should go from street level straight to the platform level - without any mezzanines - in order to deliver passengers to trains as quickly as possible, without creating additional time and accessibility penalties.</p> <p>Having smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard.</p> <p>In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible.</p> <p>At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower.</p> <p>At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy. Additionally, find ways to speed up transfers and surface access.</p> <p>In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.</p> <p>In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.</p> <p>In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p>	<p>James Ferguson</p>
-------------------	---	-----------------------

In order to future proof our growing system, we must design for expandability in four locations:

(1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).

(2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).

(3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.

(4) Midtown must be designed to accommodate future expansion to the east along Madison St.

(5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you very much for your review of these comments.

04/14/2022	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement.</p> <p>It is clear that the last transit expansion, which saw light rail stations in the U District, Roosevelt, and North Gate regions, were poorly planned and have had horrible consequences for short range commuters who live within 1-2 miles of these stations.</p> <p>As an example of the serious flaws:</p> <p>Routes have been eliminated that contained critical connections within Seattle. For example: Upper and Lower Wallingford were connected to each other, Greenlake, and Belltown via the 26X, which was eliminated since the end and start stations overlapped with light rail. Yet these shorter range connections, necessary for maintaining access to grocery, pharmacy, medical and veterinary clinics, and similar necessities were not replaced and the Metro response has been "just walk further to another stop", which does not take into account mobility and accessibility needs.</p> <p>While a boon for long-range commuters for Northgate, Edmonds, etc., the short range commutes to and from UW from neighboring communities have more than tripled. It takes 45-60 minutes to travel less than 2 miles from Lower Wallingford to UW and back due to the route changes. Yet it takes coworkers in Edmonds and Columbia City 20 minutes to cover a 10-12 mile distance. The Metro priorities of "just walk" are ableist and deny access and services to low income multi-family housing in lower Wallingford but maintain direct and short bus connections for wealthier single-family housing areas in upper Wallingford and Ballard.</p> <p>Despite having planned and constructed these stations for years, the U District "transit hub" around the U District station is woefully inadequate. The hub transfer stops still lack seating, which is an accessibility issue. The roadways and sidewalks cannot handle the significant extra traffic.</p> <p>In constructing ST3 locations and stops and resulting transit changes, the following MUST be kept in mind:</p> <ol style="list-style-type: none">1.) Redundancies do not always exist because a bus line starts and stops at existing or future light rail stations. Consider the route and locations that fall between start and end points so that neighborhoods are not cut off from transit and important services.2.) Keep in mind that not everyone's destination requires taking light rail. Many short range 1-3 mile trips will start and end far away from stations and these connections must be preserved, not distorted or lengthened.3.) When designing stops and revisions, keep in mind the impact that will be had on traffic and build in sufficient space for seating at all bus and light rail transfer points. <p>In order to future proof our growing system, we must design for expandability in four locations:</p> <ol style="list-style-type: none">(1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east.(2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).(3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.(4) Midtown must be designed to accommodate future expansion to the east along Madison St.(5) West Seattle should be built for future southern expansion to White Center and Burien. <p>These expansions must not disrupt bus traffic or cut off neighborhoods.</p> <p>Thank you for your review of these comments.</p> <p>Jessica Blake jblake1350@gmail.com 3938 1st Ave Seattle, Washington 98105</p>	Jessica Blake
------------	---	---------------

<p>04/15/2022</p>	<p>Greetings, In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures. Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W Thank you for your consideration.</p>	<p>Candace Sikora</p>
<p>04/18/2022</p>	<p>I am a longtime patron of public transportation and follower of light rail since downtown Seattle and SODO helped fund the tunnel beneath the City through Local Improvement District (LID) funding. During my work years, not missing my connecting transfers was very important to me and my family.</p> <p>My comment is on the new Jackson Street Station hub where three link lines will eventually interconnect. I try to visualize scenarios on how patrons coming into or leaving Seattle by ST Rail, Links, ferry, bus or streetcar at the Hub would proceed to and from various parts of the city. The estimated daily boardings for the WSB Link is 30-34,000 for this station, the highest of any station on the line. I could not visualize how elevators in a deep bore station could accommodate these boardings using the existing Beacon Hill Station as reference.</p> <p>I urge the Sound Transit Board to carefully consider the 4th Avenue 1a (shallow cut and cover) for the Jackson Hub station for the Final EIS. This design seems appropriate for interconnecting travel over the next hundred years.</p> <p>Sincerely,</p> <p>Ron King, 84</p> <p>Long Time Transit Rider, and Military Veteran</p> <p>Member of WA State Pioneer Family</p>	<p>Ron King</p>

<p>04/21/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Christopher Gay criscolgate@mac.com</p>	<p>Christopher Gay</p>

<p>04/21/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>First, stop building train stations with parking lots, and build them with high density, low-income housing. When people have to get into a car to drive to the train station, it's already too late - (1) they're going to drive to their final destination, and (2) they are still contributing to congestion and pollution. I'm going to be starting a family in this decade, and I want my kids to grow up in a walkable city, not a congested polluted mess.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. --	--	--

04/20/2022	<p>Greetings:</p> <p>To be successful, it is critical that the stations in the Interbay-Ballard segment of ST3 expansion be located where residents and businesses can easily access them. That means we need two stations in Magnolia. One should be near Smith Cove Park, where it would be easily accessible to Expedia employees, cruise ship passengers and residents on the southwestern part of Magnolia. A second station should be near Dravus, where much of Magnolia's population resides. My preference is to have the light rail travel through an underground tunnel from Seattle Center to Smith Cove station then to Dravus station and under the ship canal to connect with a Ballard tunnel station at 17th, 20th or 22nd avenue NW.</p> <p>We must have shuttle buses coordinated with the light rail schedule that make regular trips from key locations in Magnolia to the two Magnolia light rail stations.</p> <p>Please avoid transit plans that require pedestrians to cross major roads such as 15th avenue West.</p> <p>Please avoid large, expensive stations. All we need are platforms, some shelter for passengers, a place for shuttles or drivers to drop people off and a place for people to lock their bicycles.</p> <p>The Interbay area is so close to the city, and contains so much open land, it holds great promise for potential development for affordable housing and small-scale manufacturing. Critical infrastructure should be placed underground to allow for dense development of the area in the future.</p> <p>Regarding Smith Cove station (SIB-1): The station should be approached by tunneling and be placed on the West side of Elliot Street/15th ave. West and allow for easy access to Magnolia Bridge or its replacement.</p> <p>With respect to Interbay Station (IBB-2b): The station must be close to the Magnolia community so it can be easily accessed in the event of bridge failures. The station should be designed so all buses and passenger car pick-ups and drop-offs are on the north side of Dravus or on 17th Ave. W. Trains should continue through a new ship canal tunnel.</p> <p>I am against the proposal to build only one station in the Interbay area and to place it close to the Armory.</p> <p>Thank you for your consideration.</p> <p>Joseph Krenetsky 2506 32nd Ave W, Seattle, WA 98199</p>	Joseph Krenetsky
------------	--	------------------

04/20/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <p>Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand</p> <p>Minimize transfer time from transit to platform</p> <p>Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures.</p> <p>Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Interbay Station (IBB-2b):</p> <p>Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures</p> <p>Station must lead to Ship Canal Tunnel</p> <p>No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Thank you for your consideration.</p> <p>Betty Sanders</p> <p>3012 West Eaton</p> <p>Seattle WA 98199</p>	Betty Sanders

Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Tshilaba Verite veketshian@gmail.com</p>	<p>Tshilaba Verite</p>

<p>04/20/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. 04/15/2022	<p>Hi,</p> <p>I attended the meeting on March 30 to make a public comment on the WS link extension options. I am a property owner on 40th Ave SW, and most of the tunnel options go directly underneath my property. However, given the large and destructive impact of the elevated infrastructure I tend to support a couple of the tunnel options at the moment.</p> <p>My question is, how can we be assured that we will not experience noise or vibration pollution from the potential tunnel options? We don't want to be in a situation where our real estate values (and quality of life) are negatively impacted by noticeable rail noise and vibration. Does Sound Transit have data on what impact home owners would see from a completed tunnel underneath 40th Ave SW? Another question we had is if via the ground work any of our houses experience foundation settling, and if Sound Transit has any assurances or data related to either of these potential issues.</p> <p>Thank you so much in advance,</p> <p>Jared</p>	Jared Thompson

04/15/2022	<p>I have been reading your comments and the various scenarios and I believe by scrapping the Avalon Station and saving that money for other projects in the future such as extensions into White Center and Burien would be the best approach. The Avalon Station is So close to Fauntleroy and 41st it doesn't make financial sense. If a Station could be placed where the Masonic Hall and Bank of America buildings are that would be more centralized and in a better location to capture more riders now and in the future.</p> <p>Thank you for listening. Edward Altemus</p>	Edward Altemus
04/15/2022	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).</p>	

(3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.

(4) Midtown must be designed to accommodate future expansion to the east along Madison St.

(5) West Seattle should be built for future southern expansion to White Center and Burien.

<p>04/15/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit’s Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region’s projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region’s voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system’s growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. <p>04/18/2022</p>	<p>DEIS Appendix L4.2 Land Use, Policies & Goals</p> <p>Disregard prior email. This is a re-send with an addition.</p> <p>CID Goal ID-G1: Support the thriving businesses, organizations, and cultural institutions of the Chinatown-International District and recognize the neighborhood's rich and vital history as home to and center of many of the city's immigrant communities including the Chinese, Filipino, Japanese, and Vietnamese communities and as a historic center of the Native American and African-American communities in the city.</p> <p>Comments:</p> <p>Error in goal name; should be CID-G1</p> <p>2. Goal discussion fails to consider unique community attractions as a regional draw for Asians (culturally appropriate medical services and in target languages, language programs, youth activities, cultural programs, etc.) and needs of the 1200+ elderly whose family members come to visit from afar and must use cars; also fails to recognize that emergency car transport needed as well as those about to give birth cannot get to a hospital on a bicycle, bus, on foot or by transit. Goals should be developed in partnership with community members, especially the large immigrant population that speaks little to no English, not those who claim to represent us.</p> <p>3. This goal is actually 4 goals packed into one. What is the goal? Supporting...? Or Recognition? How is recognition to be accomplished and how does one recognize a historic center? What's the evidence it's a historic center? Is that a true statement as settlement has ebbed and flowed? What about the Euroamerican business owners? The multi-racial ones? City owned properties?? Afro-Brazilian business owners? African immigrants? This may be helpful, a definition of a goal: Specific, Measurable, Achievable, Relevant, Time-bound.</p> <p>4. Where can one find the other CID and Policy goals? Goals should be developed with community input or knowledge they were being developed.</p> <p>Policy ID-P4: Encourage new business development and location within the neighborhood.</p> <p>The Ballard Link Extension would support mixed-use development in designated areas that could attract commercial and business uses and provide increased employment opportunities in the Chinatown-International District. The project would efficiently move large numbers of people, increase the capacity of existing facilities, and expand mobility for the corridor, which includes people of color. The WSBLE Project would increase the ability of employees, customers, and businesses to access areas within the project corridor, including the Chinatown-International District. TOD on surplus land owned by Sound Transit in station areas would follow the implementation strategy for Sound Transit's TOD program.</p> <p>Comments:</p> <p>Error in goal name; should be CID P-4 Where can one find the other policies? Discussion assumes the businesses and population would be the same after 10 years of displacement and construction. This assumption that life goes on with benefits does not apply to the CID as history tells us. Just look at the DC Chinatown when Metro went in. The businesses left and never came back (Wikipedia on DC Chinatown). The only survivors are the Chinatown Gate and one Chinese restaurant catering to tourists.</p> <p>3 Estimates of Impervious Surfaces</p> <p>3.2.2 Chinatown-International District Segment</p> <p>An existing planter strip would be removed along the Union Station Parking Garage for most of the alternatives. As seen in Table 3-2, Alternative CID-2a would add the most impervious surface....</p> <p>Comment: What is the mitigation for increasing impervious surfaces? Go 4th, NOT 5th is the best solution; that way Union Station can be ringed with planters inside and outside.</p>	<p>Betty Lau</p>
-------------------	--	------------------

04/17/2022	<p>I think that building more public transportation of any kind is a mistake. These projects typically take at least 5-10 years to complete. In 10 years, many of us will have self-driving cars. Those that don't will be able to rent them on an hourly basis. They will be electrical, very safe, energy efficient and very convenient. Ability to drive close to other cars will take pressure off of traffic. Energy should be directed towards building roads that accommodate self-driving cars not building expensive transit projects that won't be used.</p> <p>Allen Radant aradant@uw.edu</p>	Allen Radant
04/17/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <ul style="list-style-type: none"> Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures. Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements Ballard station Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges <p>Thank you for your consideration.</p> <p>Thomas Tanner Resident of Magnolia</p>	Thomas Tanner

04/17/2022	<p>The tables in this section Appendix 4.1 Acquisitions, Displacements, Relocations would be more helpful if business names were listed in a separate table.</p> <p>Betty</p>	Betty Lau

<p>04/17/2022</p>	<p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement.</p> <p>Systemwide:</p> <p>(1) Study Milan method cut and cover within the existing street right of way. (https://pedestrianobservations.com/2021/02/25/cut-and-cover-is-underrated/)</p> <p>(2) Study full automation. The increase in capacity from operating smaller trains at higher frequency automated operations reduces station size needs (greatly reducing costs) while providing better service. Automated operations also save labor costs.</p> <p>(3) Review global standards for fire/emergency issues. It's ridiculous a station cannot fit within the 80 ft Fauntleroy due to the local fire code. Sound Transit should plan from the basis of accepted global 'best practice' and seek code changes where they diverge. Updating archaic standards to save hundreds of millions is a no-brainer.</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth means we must build the most comprehensive rail network we can to promote transit-oriented development and decrease vehicle use. Eliminating planned stations is in direct opposition to what the region's voters want and need. Maximizing ridership and long-term growth are the goals. Short-term construction impacts can be mitigated and must not prevent the better options from being selected.</p> <p>Shallower stations reduce cost, and risk of project delay while promoting shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game-day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Ballard: Study pairing a high bridge with an elevated 15th Avenue station and continue to refine all tunnel options to put a station entrance west of 15th Avenue. Reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>Interbay: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed-down 15th Avenue Elevated Station [IBB-3]</p> <p>Smith Cove: Build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>Seattle Center: Build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>SLU: Reject both presented options, study a Westlake or similarly north-south aligned station within SLU boundaries and as centered on South Lake Union as possible. Harrison Street is preferred as the 'less bad' option currently under consideration.</p> <p>Denny: Build Westlake Ave Station [DT-1] to line up with an SLU station on Westlake further north, but update vertical conveyances and aim shallower.</p> <p>Westlake: Build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>Midtown: Build the station as shallow as possible, design the station for the surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>Chinatown/International District: Build the 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than four and a half minutes. Throw out deep tunnel options.</p> <p>Sodo: Choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.</p>	<p>Alvin Ko</p>
-------------------	---	-----------------

Delridge: Request a study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].

Avalon: Build WSJ-5 with a request to study a refined DEL-6 pairing.

Junction: Build Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings.

In order to future proof our growing system, we must design for expandability in five locations:

(1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).

(2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).

(3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.

(4) Midtown must be designed to accommodate future expansion to the east along Madison St.

(5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

<p>04/17/2022</p>	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <p>Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand</p> <p>Minimize transfer time from transit to platform</p> <p>Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures.</p> <p>Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Smith Cove (SIB-1):</p> <p>Approach station by tunneling under Elliott</p> <p>Station on West side of Elliott</p> <p>Minimize size, if elevated station, over Galer flyover/Magnolia Bridge</p> <p>Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b):</p> <p>Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures</p> <p>Station must lead to Ship Canal Tunnel</p> <p>No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station</p> <p>Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village</p> <p>Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p>	<p>Bruce Mitchell</p>
-------------------	---	-----------------------

<p>04/17/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Stefan Praszalowicz deubeulyou@gmail.com</p>	<p>Stefan Praszalowicz</p>
-------------------	--	----------------------------

	1414 12th avenue Unit 620 SEATTLE, Washington 98122	
--	--	--

04/16/2022

3.13.3.1.2

"No changes are proposed to the general purpose traffic circulation under Alternative CID-2a and Option CID-2b." Why are there no changes? If 5th is closed, the traffic has to be diverted somewhere. This section needs clarification.

3.13.3.3.3

Alternative CID-1a* and Option CID-1b* would affect the 4th Avenue South/Seattle Boulevard South intersection in the a.m. peak hour because of the rechannelization of 4th Avenue South associated with the removal of the northbound bus lane.

What does "rechannelization" mean? It should be defined for readers or use a commonly understood term.

Table 3-4	Permanent Parking Loss	Temporary Losses
-----------	------------------------	------------------

5th Shallow 2a	50-65	155-195
----------------	-------	---------

Lose parking, lose business; how will relatives come visit elderly relatives without parking? How will out-of-towners staying at the Panama find parking? The Asian custom of caring for one's elders needs to be studied and included in the impacts. In the case of the CID, there are over 1200 elderly, limited English or no English, who need to be accounted for in Safety planning—they are especially leery of being hit by speeding bicyclists. Where will those coming by for take out park?]

3.15.3.3

All those planned increased bicycle usage fails to consider the high percentage of elderly going to Hing Hay Park for recreation and exercise or to just pass the time with friends. That is an impact that needs to be dealt with for mitigation.

3.15.4 Mitigation of Operation Impacts

Business re-locations are difficult and potentially devastating, will the customer base follow? And where would the business go? Another nearby space would be unsuitable due to being in a construction site area with construction and traffic diversions. There are no mitigations listed here nor community input sought for such.

3.16.3.3 "...minimizing interaction with vehicles."

What about all the expected bicycle traffic predicted?Lack of consideration for over 1200 elderly limited English residents who walk throughout the CID for exercise; needs to be remedied in final EIS

3.19.3 Chinatown-International District Segment 3.19.3.1 Arterial and Local Street Operations

Why can't traffic diversion from closure of 4th be distributed between waterfront, Pioneer Square and CID? Why all of it detoured into CID? It must be equally diverted throughout the area.

3.19.3.3 Parking

Unthinkable to remove 200 parking spaces from so many commercial streets in Chinatown: King, Weller, 5th, 6th, 8th! Go 4th, NOT 5th! What are the impacts to businesses and what are the mitigations for loss of revenue?

3.19.3.5 Safety

Slower moving elderly not considered, nor effects of bikes whizzing by them. Need to include planning for safety of over1200 elderly and hundreds of children in daycares, youths in schools and attending after school activities and Saturday programs. Section lacks mention of CID population in demolition, construction and how new plaza traffic will impact them.

3.19.7.1 Transit

Discussion does not include consideration of Limited English elderly or impacts to people, only vehicles and moving freight by truck or train, loss of business, visitors, relatives' visits due to loss of 200+ parking spaces, partial and full closure of CID streets. Unacceptable not to consider the human cost.

3.20.3 Mitigation for Indirect Impacts—none anticipated

Betty Lau

Loss of 200 parking spaces, detours and re-routing of traffic through a mixed residential-business neighborhood has no indirect impacts? Unbelievable! Loss of business revenue needs serious mitigation! Indirect impacts will be as severe as direct impacts on this largely low-income community. Consider collateral damage!

Above from Betty Lau

<p>04/15/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Oleg Pakhnyuk opakhnyuk@protonmail.com</p>	<p>Oleg Pakhnyuk</p>

In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>NOAM FINE noamjfine@gmail.com</p>	<p>Noam Fine</p>

<p>04/15/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. <p>04/15/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Michael DeWitt michael@dewitt.io</p>	<p>Michael DeWitt</p>

	6100 NE 60TH ST. Seattle, Washington 98115	
04/26/2022	I'm in support of either 15th Ave option, and against the 14th Ave options. 14th avenue has many businesses, including the new and vital food bank. Closure of the food bank would be devastating to many many families.	Ellery O'Darra
04/26/2022	<p>Please choose a light rail route that does NOT force Dusty Strings to have to relocate their manufacturing plant. Their plant is located at 3450 16th Ave W, Seattle, WA 98119.</p> <p>More specifically, I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration.</p>	Richard Menges
04/26/2022	The 4th Ave S alternative is preferred to the 5th Ave S proposal to minimize the impact on business in the CID neighborhood. Respecting Seattle's communities, especially when there is a less harmful alternative option, makes this decision a no-brainer!	Cleo Stannard

04/26/2022	The Genesee route is not an option, at all. I voted years and years ago on an Initiative that park property cannot be used for any purpose other than for what it was intended for, and we the people approved this as a passing Initiative. This option proposed to run up Genesee street and screw up Longfellow creek and the back 9 of the West Seattle golf course is utter nonsense. Please use your common sense and just follow the Yancy alternate route.	Robert Held
04/26/2022	As a longtime resident of a neighborhood in walking distance to the C-ID, I am disheartened by the possibility of major disruption to businesses and cultural assets I frequent. A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to a neighborhood and community that have been an important part of our city for decades. Disruption of access to landmarks like Hing Hay Park and the Chinatown Gate that draw tourists, as well as the risk of displacement for up to nineteen small businesses would be devastating to this neighborhood. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options. Thank you.	Venessa Goldberg
04/26/2022	Hi, my name is Ross Milne and I live in Seattle. A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options.	Ross Milne
04/26/2022	Hi, my name is Mary Pat5 and I live in the Central Area of Seattle. A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options	Mary Pat DiLeva
04/26/2022	Hi, my name is Candace Schomburg, and I live in the International District in Seattle. A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options.	Candace Schomburg
04/26/2022	Clearly a tunnel route is better than the proposed elevated options. The brutalist view of concrete pillars in EIS is dreadful. All one needs do is take a look at 5th Avenue Monorail to see what that does to a neighborhood. Given the new housing development near the steel mill up to Genessee I also find it hard to believe that an elevated portion will work there either. Please choose a tunnel option	Chris Jansen
04/26/2022	It's important to the surrounding community that our small businesses are protected. With this drafted plan, it'll be displacing 19 minority owned businesses that we hold close to our heart and is part of the rich history of Chinatown. If Sound Transit truly values diversity, please reconsider moving the plan to 4th Ave so we can preserve this historical part of the city.	Chelsea Consolacion
04/26/2022	The 4th Ave. construction would affect the businesses less than the proposed 5th Ave. construction site. Please do the construction via the 4th Ave site.	Adele Reynolds
04/26/2022	Please consider having the light rail run on 4th Ave vs 5th Ave to avoid displacing local businesses in the International District	Victoria Nguyen

04/26/2022	Any alternatives must consider the impact and minimize damages and disruptions to the community of the Chinatown International District. The community has suffered a long history of discrimination and injustice, including the building of Interstate 5 and the Kingdome, not to mention practices of redlining and other forms of racial discrimination. Data on economic and social costs must be presented and included in the cost-benefit analysis. Any alignment that did not take this issue into consideration is a blatant violation of the City of Seattle's Racial and Social Justice Initiative.	Jeff Hou
04/26/2022	We value the small businesses in our community. The plan to build on 5th avenue will displace a huge number of minority-owned small businesses that we hold close to our heart. If Sound Transit truly values diversity, please consider building on 4th avenue so we can continue to preserve this historical part of the city.	Hanna Kirk
04/26/2022	I love the community of the international district and do not want to see 19 small businesses displaced for the lightrail—which should prioritize the community and our access to businesses as well. Please seriously consider opting for 4th ave S as it will not disrupt any small businesses.	chelsea salvador
04/26/2022	For the new station in Chinatown/ID, I am here to advocate for the shallow station option on 4th Ave S which Chinatown/ID small businesses agree is the least harmful for the neighborhood and its existing residents/businesses. This neighborhood is historically and currently significant and already experiencing gentrification which is pushing long-time residents, particularly residents of color and low income residents, out. We need to do what we can to allow people to stay where they have made community and to allow small businesses owned by people of color to continue to thrive. Please listen to what the residents and business owners in the ID are asking for!	Emily Chu
04/26/2022	For Ballard Station and the ship canal crossing, please don't build the impactful elevated bridge crossing. This would impact fisherman's terminal and the aesthetics of the area. Instead, please use a tunnel under the ship canal to reach the station at 14th Ave NW or 15th Ave NW. Thanks for the opportunity to comment.	Omar Jepperson

04/25/2022	<p>Like so many of my neighbors who bike, I'm excited to ride the light rail trains further as the system grows. My bike is critical for last mile connections. That's why I'm providing the following comments in response to the West Seattle Ballard Link Extension DEIS Public Comment Period. As new stations open, I'm hopeful they will help me get to the places I need to go. But given the scale of the project and length of construction timelines, I'm concerned about the construction impacts to my mobility as a person who bikes.</p> <p>With that in mind, in the next phase of planning, please study the following areas:</p> <p>Study active transportation integration for all stations.</p> <p>Create a plan to identify and fund simple, safe, protected, bike connections to new stations. Invest in direct bike connections into the existing Seattle Bike Network so that people who want to can arrive safely by bike -- it's what the voter-approved System Access Fund is for.</p> <p>New station areas must improve the current biking conditions, not degrade them. That's only going to be possible by studying how the active transportation system will interact with the station area and other modes arriving at the station. Where new station areas border the existing bike network, consider how station access for transit, as well as pick up and drop off, could degrade the safety and comfort of the bike route; ensure the bike facility is meaningfully upgraded with physical separation from cars.</p> <p>2. Study construction impacts to the existing bike network, and mitigation plans.</p> <p>Make plans in the next phase to limit construction impacts to bike routes -- Partner with the city to ensure there are alternate biking options that don't require multiple mile bike detours or detours onto high traffic streets. For example, the SODO trail and West Seattle Bridge trail appear to pose notable challenges. Waiting until just ahead of the construction window is too late and leads to hastily put together detours that add an unreasonable distance, feel unsafe, or involve people biking on sidewalks for long distances without consideration of how bikes and pedestrians can co-exist safely.</p> <p>3. Study bike parking needs for the entire line. Develop a plan that reflects current and future needs, by station type, and is informed by how people integrate the bike into their regional transit trips.</p> <p>Develop a plan to accommodate the needs of people who want to "bike and park" at stations. Think beyond individual stations downtown. Perhaps a couple of downtown bike parking hubs will better serve people parking bikes downtown than the smaller amount of parking at each station. Bike parking should be free and abundant. The bike parking plan for this new line should include robust research to better understand the parking needs of people using bikes and Link Light Rail.</p> <p>Accept and embrace that people will continue to bring bikes on trains – and make it work for everyone. Necessity, not preference, typically dictates whether people will bring their bike aboard, and we need to build system capacity to reflect this reality. A region-wide system often requires people to transfer to another mode after their Link trip; for people who bike, that means they need to bring their bike along.</p> <p>Thank you for your thorough considerations of many alternatives, throughout the environmental and community input processes.</p> <p>Regards, Steven Ginsberg 3227 29th Ave W Seattle, WA 98199</p>	Steven Ginsberg
04/26/2022	<p>Throughout Seattle the modus operandi has been tearing down buildings and building multi-level apartments or condominiums with retail space on the ground floor. This has destroyed the flavor of individual neighborhoods that used to exist in the city. As a longtime resident and taxpayer I find it appalling that you want to destroy one of the last remaining distinct neighborhoods when it can be avoided. I urge you to choose the 4th Avenue option. Temporarily displacing one apartment building and a parking lot seems a much better choice than destroying the unique character of the CID. My children grew up visiting the culture of the CID , exploring the shops and restaurants. This is an experience future generations should also be able to experience.</p>	Paula Last
04/26/2022	<p>The link extension using the 4th Ave s alternative to the 5th Ave option will be better for the local community in the CID. Please consider the 4th Ave s option.</p>	Austin Bass

04/26/2022	<p>I am against the idea of building the station close to 5th and Madison. I am a resident here. It's gonna ruin our day-to-day life. Construction will involve excavation immediately adjacent to 5M tunneling immediately below 5M; adverse impacts on the 5M foundation are a concern. Gas lines are immediately adjacent to the proposed station entrance: shutoff gas leaks and the seismic shutoff's inadvertent tripping are concerns. Potential crime around the operational station.</p>	Ziyu Han
04/26/2022	<p>Hello, We live in 909 5th Ave, which is at 5th and Madison. We are concerned the proposal to have a new station building next to our condo building, which has over 200 residents. Specifically, we are concerned about the following factors: Madison St proposed street closures (partial or full) Madison garage entrance/exit access due to street closure Anticipated traffic gridlock around our Condo based on proposed full/partial 4th, 5th and Madison street closures Emergency Vehicle Access Temporary Parking for deliveries and vendors, including movers. We encourage you consider other options. Thank you. Sincerely, Kan Liang</p>	Kan Liang
04/26/2022	<p>The new expansion in the International District needs to go via 4th Avenue. Constructing the station in the heart of the ID will extinguish an already struggling neighborhood so that white people that live in Ballard can go to visit their white friends in West Seattle. People who don't live in the ID shouldn't have a say in where the people who do live and work there believe the station should go. The rich culture and vibrant businesses need to be preserved.</p> <p>Transportation should be about more than just moving people from one location to another, it should be about servicing a community.</p> <p>From the proposals I read at the pop-up event, the primary choice for the ID would not service the community. Instead, it would strangle its growth for nearly a decade.</p> <p>I love the light rail. I wish everyone had access to such a wonderful transportation system to a wonderful cultural neighborhood like the ID. However how could someone think it would be a good idea to kill an entire neighborhood in the name of progress?</p> <p>Not only would creating a station along 5th avenue and displace the current businesses that are already there, it will divide the ID making it more difficult for the remaining businesses to survive being cutoff from each other. The plans indicated the construction site would block off a fairly large area and force an already heavy pedestrian and tourist area to add more distance to their travel. For those of us with age or mobility issues this is very difficult to overcome and the choice to simply avoid it (for nearly a decade) wins out.</p> <p>I am white, I grew up in north Seattle and loved my trips to the ID growing up in the 80's and 90s. Over the past 10 years the ID has become my second home. I do most of my grocery shopping there, before Covid I spent most of my evenings there, now I take home food from a handful of different businesses at least once a week. I am privileged to be able to do so and I want this privilege to extend to others for generations to come.</p>	Erika Last

04/26/2022	<p>Dear Sound Transit Board of Directors,</p> <p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>We are grateful for all of your hard work at ensuring that Seattle residents have access to public transit options. We wanted to express our strong support for the IBB-1b alternative.</p> <p>We are a harp showroom and service center based in Massachusetts and yet are deeply concerned about the aspects of this project that affect the Dusty Strings Company at 3450 16th Ave W. Dusty Strings is a Seattle-based harp maker that over the past 20 years has become one of the pillars of the harp community and provides instruments to customers worldwide looking to source high quality instruments. As one of the largest harp showrooms and service centers in the country, we place an incredible number of Dusty Strings instruments in a year and without their instruments our shop would not be what it is today.</p> <p>As you can imagine, building a harp is an incredibly complicated task and the disruptions caused to this process if Dusty Strings needed to relocate could affect the world's harp supply; something that has already suffered due to supply chain issues and labor disruptions during the global pandemic.</p> <p>These handmade instruments provide peace and tranquility to amateur harpists in their homes, to friends and families who enjoy the music and to concert-goers, gig clients and hospital staff and patients who hear these beautiful instruments in harp therapy settings. There are thousands of threads linking Dusty Strings to the community of music makers around the world, as well as a staff of Seattle-based craftspeople employed at their factory who would be adversely affected by the need to relocate.</p> <p>Conversely, were the light rail project to move forward with the IBB-1b alternative, employees of this one-of-a-kind business would benefit by having public transit options available to them, and Dusty Strings could continue as a Seattle-based manufacturer of harps in their current location.</p> <p>Thank you for your consideration</p> <p>Warmly, Lily Assistant Manager The Harp Connection Rowley, MA</p>	Lily Press
04/26/2022	<p>We need to protect the CID and revive Union Station. She is beautiful and historic. I would prefer the CID1B so fewer people and businesses are displaced and we can use what our city already has. It's a historic site. 4th AVE deep is the best choice! I'd also encourage us to consider the Seattle riot of 1886 and how the CID community needs less disruption and more business. We should memorialize what happened to those who built much of our railroad system.</p>	Caroline Poole
04/26/2022	<p>I have a different viewpoint on this EIS project assessment. The alternative of 6th/Mercer should be better than 5th/Harrison, because</p> <p>It has the least traffic impacts during constructions, and this is essential to keep Seattle alive on daily basis.</p> <p>2. Despite the displacements on residential and business, and the effects on historic properties and parks are greater in 6th/Mercer, all these prove this alternative/route (6th/Harrison) is closer to where foot-traffics are and will be. Isn't this the main goal for light rail extensions?</p>	Cindy Yang
04/26/2022	<p>Please do not chose the west seattle options that cuts off the tip of tip of the pigeon point neighborhood please instead pursue the option that stays in the north side of the west seattle bridge.</p>	Kathryn Perkins

04/26/2022	<p>I'm a resident of Capitol Hill and a frequent shopper in the Chinatown-International District. As someone who is transit-dependent, I'm very excited about the prospect of using Light Rail service to go directly to West Seattle.</p> <p>However, I'm also deeply concerned about the negative impacts that construction of the 5th Avenue South option would have on the area's business community. I also worry about the impact on cultural resources such as the magnificent Wing Luke Museum, as well as the many seniors living in the area.</p> <p>This area has suffered tremendously during the pandemic. The seniors are finally starting to feel safer on the streets and businesses are just beginning to come back. There have been so many losses in the area that the idea of losing another 5-19 businesses is not acceptable.</p> <p>With this in mind, I suggest the best alternative for the C-ID is 4th Avenue Shallow (CID-1a); second would be the 4th Avenue Deep Station Option (CID-1b). These seem the least disruptive to the long established community.</p> <p>Thank you.</p>	Irene Svete
04/26/2022	<p>Comments on West Seattle/Interbay/Ballard light rail DEIS</p> <p>I support a tunnel under the Ship Canal and I think we should consider a tunnel all the way from downtown through Queen Anne and Interbay to Ballard. There are problems with bridges over the Ship Canal in this area, and we know how to build tunnels under the Canal. We've been doing that for years. A fixed bridge needs to be around 200ft high which means a very long run up for light rail to get up to that height as the trains need 4% grade or less. At this location we don't have the advantage of hills that make the Aurora bridge viable.</p> <p>Station placement and construction are critical. Light rail needs riders who won't walk long distances to get to a station. Too many changes also deters ridership. The stations at Galer (Smith Cove) will serve Expedia and potentially cruise passengers. This could be improved with a passenger bridge across Elliott at Prospect. There is a light and pedestrian crossing there but it's far from ideal - I have witnessed several near accidents with pedestrians and vehicles attempting to run the lights and get across.</p> <p>The station at Thorndyke/17th Ave has some issues, especially access from both Queen Anne and Magnolia. Passengers coming from Magnolia need to get across the railroad tracks or potentially face a long walk on both sides of the tracks. Passengers from Queen Anne also have a long walk and must cross 15th Ave at Dravus which is a difficulty intersection for pedestrians. Feeder buses to these stations need to be frequent and easy to access.</p> <p>The planned stations are large and have lots of glass. All that is needed in a station is a covered shelter and some seating, plus ticket machines. Reducing the size would reduce costs. Plus all that glass is dangerous for birds who will not see it as an obstacle and will fly into the glass. It's the city but we do have a lot of birds.</p> <p>Both of these station sites involve displacing businesses and residents. There would also be considerable noise during construction, which could take several years, and train noise when the line is operating.</p> <p>The best route currently being studied as part of the EIS is the one that goes west and then runs along the golf course, across Dravus to the Thorndyke/17th Ave station. The area across the golf course is either park land or BNSF property which may cause problems. The park land taken for light rail must be replaced by similar park land in the immediate area, which may be difficult to locate in this built up area. We also don't know what will happen at the Armory site.</p> <p>The other routes have more major problems. The route along 15th Ave (the representative route in ST3 legislation) assumes it's fine to build on a steep unstable slope which is also park property (Queen Anne Greenbelt) Plus then it goes down the center of 15th Ave, which is a major north-south freight route. The elevated 14th Ave seems to be presented because there is room on 14th Ave NW for a station but that is not the population center of Ballard, where is your ridership coming from?</p>	Carol Burton

04/26/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Michael Hirt
04/26/2022	<p>Our community highly values our small businesses. The plan to build on 5th Avenue will displace a huge number of minority-owned small businesses that we hold close to our heart. If Sound Transit truly values diversity, please consider building on 4th Avenue so we can continue to preserve this historical part of the city.</p>	Julia Berkman
04/26/2022	<p>Hi all,</p> <p>Please, please consider building the lightrail away from the businesses on 5th. I have grown up coming to all establishments here with my family and it would be a shame to lose that. Not to also mention the 19 family businesses that the lightrail would close down.</p> <p>I do appreciate the vision for the lightrail and how many people that will help, but please not at the risk of others lives when we have an alternative route to consider.</p> <p>Thank you, Dana</p>	Dana Dela Merced
04/26/2022	<p>A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options.</p>	Rachel Doyle

04/26/2022	<p>RE: Ballard Link Station/Route</p> <p>Elevated guideways and stations are a blight in this highly populated area. Find the funding for the Tunnel 15th Avenue NW route and station. The proliferation of high rise residences has left little wide-open skies overhead. Keeping a low-rise feel to the intersection of Market and 15th should be the preferred alternative. Build it once in a generation, and build it right!</p>	Steven Trampe
04/26/2022	<p>Since before the COVID-19 pandemic, the Chinatown-International District community has faced many obstacles to make ends meet. Demolishing their beloved buildings and further disrupting neighboring businesses in order to construct a 5th Ave S station is thoughtless and not beneficial for the community. PLEASE CONSIDER PUSHING THE NEW CONSTRUCTION TO A SHALLOW 4TH AVE S STATION. Thank you.</p>	Le-Vy Craig
04/26/2022	<p>Dear Sound Transit,</p> <p>The 5th Ave S expansion options will close or displace up to 19 local businesses in the CID. The construction in this area will seriously impact the entire neighborhood, causing noise, air pollution, and loss of business for years. Many of these businesses do not deserve to be demolished or displaced to make way for the transit expansion.</p> <p>Supporters of the CID are advocating the 4th Ave S option as the only option because while it will cause road closures, it will only displace 5-8 businesses. The 4th Ave shallow station will cause the least amount of harm to the CID'S historic buildings and community. The CID was greatly impacted by the pandemic and increased acts of violence and hatred towards the Asian American community and these businesses do not need any further hardships placed on them, especially when there are less disruptive alternatives on 4th Ave S.</p>	Lauren Cataldo
04/26/2022	<p>To whom it may concern,</p> <p>Please consider the 4th Ave S option as the best option for the Chinatown-International District station. This would help to preserve the Chinatown community and its small businesses. A lot of my family live and work within this community and depend on these businesses for their daily needs. The loss of 19 businesses along with constant construction for 11 years would severely impact their day-to-day lives.</p> <p>Please choose 4th Ave S as the best alternative.</p> <p>Thank you, Michelle Liu</p>	Michelle Liu

04/26/2022	<p>Seattle benefits most comprehensively from a tunnel on the Ballard Link extension, as opposed to an elevated option, as seen in the Draft Environmental Impact Statement (EIS). The Ballard tunnel options are patently better with less impact on people and businesses, no visual impact, less noise, similar cost, no impact on ship transport, little impact on waterfront-dependent businesses, less impact on bike paths, less adverse historic impact, and little vibrational impact (Page 51 of EIS, Table ES-8. Key Environmental Impacts of the Interbay/Ballard Segment Alternatives).</p> <p>The Draft EIS reads like both tunnel options both require third party funding. This is not the case. Preferred Tunnel 14th Avenue Alternative (IBB-2a), is roughly the same cost estimate, \$1.5B, as the "Preferred Elevated 14th Avenue Alternative (IBB-1a)" at \$1.5 B- \$1.6 B. A community engagement specialist at Sound Transit explained that for the Interbay-Ballard segment, one of the alternatives initially requiring third-party funding based on initial estimates (Preferred Tunnel 14th Avenue Alternative (IBB-2a)), now has a similar cost estimate to the Preferred Alternative based on updated cost estimates. It's important to note that although the cost estimates are updated, the official names of the alternatives identified by the Board's motion are not changed in the Draft EIS. In this case, why not the tunnel?</p> <p>On a personal level, our local, multigenerational family business prefers a tunnel option. If an elevated option is chosen, we will surely lose a commercial building currently housing local business tenants. Our company would bear additional cost and disruption following the pandemic where we assisted tenants who endured losses due to mandatory COVID-19 restrictions. Our family business cares about the future of Seattle and has roots in the community. Our ancestor, who started the family businesses, donated his ship the Valkyrie, a 106-foot retired World War II air-sea rescue vessel to be the very first Christmas Ship™ from 1949-1967. For us and our neighbors, losing buildings along Salmon Bay will change the feel and movement of Seattle permanently.</p> <p>We strongly recommend a tunnel option.</p> <p>Thank you for your consideration.</p> <p>Allison Zazzi</p>	Allison Zazzi
04/26/2022	<p>The 5th Avenue locations severely impact the Chinatown residents and businesses. This underserved community cannot take another hit. Please consider the 4th Avenue location for the new station as it will have the least amount of impact to the businesses growing in this community who are primarily people of color.</p>	Tyanne Faulkes

04/26/2022	<p>I downloaded all the documents in the EIS – it is a load of work. I appreciate all the effort it takes to complete a study that encompasses a large area. I am familiar with the process.</p> <p>Yet. I am concerned that I heard on the radio that you would not consider the gondola proposal as a viable alternative. I take the bus out of West Seattle to access health care and to see friends. I no longer drive because the traffic to get out of the area is horrific.</p> <p>The most important issue is that West Seattle has lived without the bridge for two years and our lives are highly impacted. Had the rail line already been constructed, we would be grateful, but now to deny consideration of an alternative means of getting across the Duwamish to connect with the Light Rail, seems highly bureaucratic and not considerate of our real needs in this community.</p> <p>Here are my reasons for the Sky Link proposal: The cost is less. The time to build it is shorter. The construction has less impact on my community. This pandemic or another will continue. The gondola offers less exposure to others. The issue of climate change was not as critical when you began this study. Now it is. The construction for the gondolas has less environmental impact. The time between gondolas is faster than the trains. Less wear and tear on the West Seattle bridge and the Port. The gondola offers a great opportunity to see the city, mountains, and our community. I think this would be a great way for community members to see their community and get involved in issues. You wouldn't lose the money that the Light Rail has experienced. Anyone boarding the gondola would have to pay. I will probably be dead by the time the Light Rail is built. What a shame. I never knew why they shut down the monorail construction.</p> <p>Not only have we had traffic going south to access the working bridges, but the building of apartments and schools have been intense in the past two years. I have witnessed whole blocks being transformed to build 3-story boxes. Now you propose four years of disruption, removal of homes and trees.</p> <p>I laugh because when I moved here in 1993, I attended a Transportation Summit at the Mountaineers Club where I met the Governor Mike Lowry and others. Whole presentations on Vancouver, Canada and Portland, Oregon were given. That is almost 30 years ago.</p> <p>Please consider Sky Link as a viable alternative. Thank you for your consideration of my comment.</p>	Karin Engstrom
04/26/2022	<p>Please choose the option to build on 4th Ave S for the Sound Transit expansion West. The option to build on 5th will displace so many in the CID, this is already an disproportionately affect communities of color. Building on 5th will have so many ramifications for those who live and work there, and will result on the demolition of historic shops and buildings. If creating access at the expense of marginalized and vulnerable populations (AAPI hate crimes have been drastically rising since COVID-19 pandemic), is it really beneficial for the folks you're trying to create opportunities for? I support accessibly public transportation, but make sure you are listening to the people who it will ultimately impact the most to have it done. Reparations and reconciliation must be made mandatory for any and all harm done to the communities you choose to build through.</p>	Katharnia Brinschwitz
04/26/2022	<p>To whom it may concern,</p> <p>Please consider the 4th ave south option for the new light rail station in Chinatown. The other options (5th & 6th) would be detrimental to the Chinatown/International District community and would negatively affect all of those who live and/or work there.</p> <p>Please choose the 4th ave option.</p>	Jacob Wadowski
04/26/2022	<p>Please reconsider how you are expanding the CID station. The local community needs to be involved otherwise you are just harming small business. The CID is a vital part of Seattle that needs to be protected.</p>	Maddy Berentson

04/26/2022	There is a lot of history, folks' livelihoods (that aren't being adequately compensated), and a food culture you haven't taken into account. Please reconsider construction until speaking with CID representatives/business owners/residents. This area should be preserved, and any improvements need to take into account the international cuisine influence & culture that sustains this historic neighborhood before initiating.	Emily T
04/26/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Benjamin Tang
04/26/2022	<p>As a resident of the Alaska Junction (homeowner 41st Ave) I am concerned about the options for the light rail in West Seattle. I have reviewed the provided materials from Sound Transit and the choices seem obvious. In almost every case, the tunnel option will have less community impact longterm as well as retaining the communities already in place. Options WSJ-3a and WSJ-3b make so much more sense than the above ground options. Less noise pollution, less community impact, less disruption to thousands of peoples lives.</p> <p>Please use common sense and approve tunneling options for as much of the WS Light Rail tracks as possible. We love WS, please help us keep it awesome.</p>	Grant Bowes
04/26/2022	<p>Having looked over the information provided by Sound Transit, it seems that tunneling is the way to go. From reduced noise pollution to community impact, the tunnels work. Most importantly, the light rail should be tunneled through the Avalon and Alaska Stations, following the WSL-3a and WSL-3b will be the most effective options. Having rail underground means that above ground space, at a premium in West Seattle, can be preserved.</p> <p>Please vote for a tunneled light rail system in West Seattle.</p>	RACHEL BOWES
04/26/2022	The CID 5th avenue has had enough construction for city projects, and the 5th avenue location for the west Seattle-Ballard light rail will negatively impact businesses and bikers. The 4th Ave option is better. However, having the link in downtown instead of the CID would be ideal for commuters.	Marlowe Zoller

04/26/2022	Please do not proceed with the 5th Ave option for the Chinatown-International District. Neither option is plausible, but the 4th Ave option is significantly better than the 5th Ave option.	Joshua Mann
04/26/2022	The extension will further damage the Chinatown small businesses and already neglected neighborhood. Has Seattle not done enough to devastate this wonderful, cultural diversified area with years of neglect? It has driven many small, colored owned businesses to close or move somewhere else. People who feel unsafe to walk or shop because of rampant drugs and violent. Now, it further decided to split the community in half and drive more businesses to close for whose benefits exactly? This is purposely targeted underrepresented areas to benefit the richer communities and it's frankly disgusting.	Huyen Do
04/26/2022	I do believe that opening a station right in international district will serve the Asian Community well. With all the riots/burglaries/property damage that has devastated the shops and now to have many of the places barely hanging on either displaced or inconvenienced with construction? The Asian hate and discrimination was enough. Please consider somewhere else to build this light rail station and not right in the heart of International District/Chinatown.	Risa Fukuda
04/26/2022	To add to my last comment, if you must build a light rail through International district/Chinatown. I would support the 4th avenue proposal the most. As this will have less of an impact.	Risa Fukuda
04/26/2022	Hi, move forward with the rail on 4th. It will be detrimental if you build on 5th with the long closures, the businesses it will close and the neighborhood impact on the asian community. I care deeply for our international district and want to see it thrive the best way those local there need. All the best, j	Jason Costales
04/26/2022	Please reject proposed light rail routes DEL-5 and DEL-6! It jeopardizes Transitional Resources. An organization that does so much good for the community. Thank you!	Rachel Martin
04/26/2022	I would like to comment on the proposed construction for the transit in the Seattle International District on 5th Ave. So many local businesses and communities would be displaced by such a large project compared to the alternative at 4th Ave, just a block away. I urge that the option with less harm to Seattle's Asian communities, which after a long period of fighting racism now has a large amount of support from the public, is not blatantly gentrified by the proposed 5th Ave option.	Marion Emme

04/26/2022	<p>Sound Transit poorly executed equitable community engagement; the Racial Equity Toolkit did little to make the residents, businesses, and community members of the CID feel like they understand the real impacts and the real ramifications of the new CID Link station - nonetheless, understand five different options on the table for us to understand on our own.</p> <p>The CID neighborhood has been a playground for outside development. The controversial construction of Kingdom and the severing of Japantown by I-5 are only a few examples of this. With history being a cycle, now, we are preparing to be the regional transit hub of the Puget Sound, without directly asking to be.</p> <p>The alternative I desire has the fewest impacts to the residents, businesses, and people of the CID neighborhood. This means the least amount of surface construction. The least amount of forced business displacement. The fewest number of forced resident displacement. The least amount of construction pollution (I already fear that the construction will prevent our children and elders from wanting to be outside).</p> <p>I also am thinking of the many elders that live outside the neighborhood in Beacon Hill/South Seattle, and know that they want to be able to have a smooth bus ride to get their groceries or meet their friends. So, I hope ST knows that the impact of this station will affect many folks outside this neighborhood too.</p> <p>From my most comprehensive understanding, this means abandoning the 5th Ave options. Building on 5th will destroy too many key businesses, and be too close to the heart of this neighborhood. Most people I know are not advocating for the 5th option.</p> <p>I can't help but think that making the CID a regional transportation hub might be a death sentence. I can't help but think that it will intensify gentrification, increase the rents, and in turn, displace residents.</p> <p>It's hard to choose a preferred alternative when all of them will drastically change the neighborhood you love forever.</p>	Carmen Hom
04/26/2022	<p>Asking that you please heavily consider the impacts to the CID businesses and cultural identity of adding the station in the proposed 5th Ave locations. The 4th Ave placements would be much less impactful to an already marginalized community.</p>	Tianyi Huang
04/26/2022	<p>The repercussions of adding the stop in Chinatown-International District are brutal and unfair. It is not acceptable to ask a community that has endured displacement, hate, and struggles throughout the pandemic to continue to bear the weight of more construction woes. 4th Avenue makes far more sense, affects far fewer people overall.</p> <p>Thank you for your time.</p>	Regina Aletto
04/26/2022	<p>When considering Chinatown International District (CID) options for the West Seattle and Ballard Link Extensions, please avoid the 5th Ave option where small business will be affected. The CID is a treasure and the small businesses in the CID are the heart of the neighborhood. The Asian community in Seattle has endured too much--especially within the last 2 years. The 5th Ave option is asking them to endure much more for YEARS to come. We should be uplifting this neighborhood--not demolishing or disrupting it. If you must, please minimize this disruption by moving forward with the 4th Ave alternative. Thank you!</p>	Mavina Lim
04/26/2022	<p>I believe the West Seattle community has a robust metro system at this time. The light rail would do more harm than good to this community. The number of homes or apartment units that would be demolished to make way for the light rail during a housing crisis is not acceptable. Especially as many newly constructed building would be demolished. What an unconscionable waste of resources. Instead invest the money to provide an expansion to water taxi services. Both transportation to the taxi and a more robust schedule year round.</p>	Kelsey White
04/26/2022	<p>Please build the Chinatown station on 4th so it will be less disruptive of businesses and parking. The businesses currently proposed to shut down for the 5th Ave station are important to the community's cultural heritage and identity.</p>	Julia Granstrom

04/26/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people. Every day we read of the critical need for high quality care for persons with serious mental illness, and the proposed plan would devastate one of the best models in this state.</p> <p>As a physician at Harborview, I am keenly aware of the need strong support more programs like those at Transitional Resources, and the notion that Sound Transit might take action to devastate such a program is truly unfathomable.</p> <p>I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	James LoGerfo, MD
04/26/2022	<p>Please consider my comments for the West Seattle and Ballard Link DEIS as follows:</p> <p>A. General Comments</p> <p>First and foremost, design the system for transit riders and the optimal rider experience. Traveling between the station platform and the surface should be quick, straightforward, and reliable. Transferring between transit lines should also be quick and easy, especially at the major transfer points at Westlake Station and International District/Chinatown Station.</p> <p>2. Build the system to maximize ridership. Design a good rider experience and ridership should follow. Still, even the most elegant station will struggle for riders if it's in the middle of nowhere, with few homes, jobs, activity centers, or transit connections nearby. Preliminary ridership projections aren't the be-all end-all, but all things being equal, the station alignment projected to get higher ridership does have a leg up.</p> <p>3. Design the system to be easy to expand. Ideally, West Seattle Junction will not be the southern terminus long as the line extends south to White Center and Burien. Likewise, Ballard should be planned to interface with a line east to Fremont, Wallingford, and the U District, and perhaps to extend north to Greenwood. Meanwhile, a future Aurora rail line may link up with the new Downtown light rail tunnel near South Lake Union Station. Planning with expandability in mind could save billions of dollars and numerous headaches down the road.</p> <p>4. Station locations should unlock transit-oriented development (TOD) opportunities to the highest extent possible. A station isn't just a transit stop, it can be a catalyst for neighborhood development and housing growth, both market-rate and affordable. Sound Transit has an Equitable Transit-Oriented Development program that has aided in the construction of hundreds of affordable homes on the agency's surplus properties. Alternatives more favorable to TOD have an edge and they will help the system attract more riders down the road by allowing more people to live in close proximity to light rail.</p> <p>5. Construction impacts are important but shouldn't determine a 100-year investment. Construction-related road closures weigh heavy on the mind of policymakers, but it is crucial we pick the right station for the future of Seattle and grapple with the construction impacts that entails. Closing a busy road for a few years is a small price to pay to add a light rail line that will last centuries. The priority in mitigating construction impacts should start with prioritizing pedestrian access, transit operations, and bike routes.</p> <p>6. Cost is an important factor, but we shouldn't shy away from big investments where there is a high return. Mostly we are worried about building this right, but we can't dismiss costs, especially since some high-ticket items will require third-party funding, which could be difficult to secure. Controlling costs is also key to avoiding delays to these much-needed transit lines.</p> <p>B. Detailed Comments</p> <p>West Seattle Link</p> <p>a. Junction - Short Tunnel 41st Avenue Station: Prefer Medium Tunnel 41st Avenue Station [WSJ-5]. Study a refined Elevated Fauntleroy Station that would use the right of way to reduce residential displacement and costly property takings.</p> <p>b. Avalon - Retained Cut: Prefer WSJ-5 with a request to study a refined DEL-6 pairing.</p> <p>c. Delridge - DEL-6: Study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5]. Push the Delridge station as far south and close to Delridge as possible. Construct a</p>	Jesse Simpson

pedestrian overpass with a direct mezzanine connection over Delridge to ease transfers for riders of the 120 bus/H line.

d. SoDo - Prefer the At-Grade Station for ease of transfers between West Seattle and South Seattle.

2. Second Downtown Tunnel, Chinatown-International District to Westlake.

Study options to avoid the duplicative and extremely expensive construction of a second downtown tunnel between Chinatown-International District and Westlake.

The EIS does not address the second downtown tunnel's impacts to riders on the existing light rail line from South Seattle and further south to Capitol Hill, UW, and points north. These riders will have to transfer at either the Chinatown-International District Station or Westlake Station as a result of the second downtown tunnel. Internal conveyance between stations is estimated at 3-5 minutes, in addition to the time required to wait for the transfer. The EIS does not estimate the negative impact on ridership as a result of this forced transfer. There are no mitigation measures identified in the EIS for this significant and permanent impact to tens of thousands of daily riders.

Please study an alternative option to interline all of the light rail lines through the existing tunnel, with signaling improvements to permit the tunnel to handle trains every 2 minutes.

As an additional alternative, please study constructing Ballard to Westlake as a standalone automated metro stub line (similar to Vancouver's Skytrain), with short, frequent trains. This would permit smaller and cheaper station footprints. Defer construction of a second downtown tunnel and study an alternative alignment that would increase the areas of Central Seattle served by grade-separated transit. The future extension of the Ballard to Westlake line could run from Westlake to Mount Baker via First Hill, Yesler Terrace, and Judkins Park, increasing transit access to these dense clusters of people and jobs that have a concentration of low-income affordable housing.

3 - Ballard Link

a. Denny - Prefer DT-1 on Westlake Avenue: Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower. Utilize the Denny Station entrance cost saving refinement, closing Lenora Street to cars.

b. South Lake Union - Harrison or Central SLU: Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible.

c. Do not consolidate Denny and South Lake Union stations as identified in the Downtown Community Advisory Group presentation. If station consolidation must happen for cost savings, place the consolidated SLU station around Terry and Thomas, in the center of the SLU neighborhood and near all of the highrises under construction. The walkshed of Dexter and Denny is limited by the 99 tunnel portal, Denny Park, the relatively lowrise zoning used to protect Space Needle views, and the need to cross the very busy 7th Ave N.

d. Uptown / Seattle Center - Republican Street: Prefer Republican Street Station and work to mitigate impacts to arts organizations to the extent possible.

e. Smith Cove - Galer Street: Prefer Galer Street Station [SIB-1].

f. Interbay - Retained Cut or Slimmed Down 15th Avenue Elevated: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3]. Refine Thorndyke Retained Cut to move the station as close to Dravus St as possible and include entrances on both sides of Dravus St for bus route integration.

g. Ballard: Advance the Elevated 15th Ave Station with a draw bridge, studying how frequently the bridge would need to open.

Continue to refine all tunnel options to put a station entrance west of 15th Avenue. The EIS does not identify any mitigation measures for placing the Ballard station at 14th Ave, which is an additional 3 minute walk from the densest concentration of homes, jobs, and retail in Ballard around 20th and Market. There are no mitigation measures proposed to assist with pedestrian safety at 15th Ave NW and NW Market St.

Open study of a 20th Ave Station that would cross the Ship Canal in the 14th or 15th Ave tunnel alignment before turning west to serve the core of Ballard, with a station in the vicinity of 20th Ave and 56th St. I performed an isochrone analysis of different Ballard station alternatives using the 2020 Census block-level

	<p>data, and found that a station at 20th and 56th is within a 5 minute walk of 5,635 people, compared to only 3,074 for 14th Ave and 4,493 for 15th Ave. The EIS does not identify</p>	
--	---	--

<p>04/26/2022</p>	<p>The proposed Midtown Station needs a serious alternative. The Downtown Segment has only been considered as the cheapest connection for the proposed WSBLE between Westlake and International Stations. The preferred alignment is straight down 5th Avenue which is the shortest most direct route.</p> <p>However the existing tunnel is under 3rd Avenue. Midtown Station as proposed will be accessed from 4th Avenue through a pedestrian tunnel. Meaning, the new station entry will be only a couple of blocks from the existing University Street Station. How many new riders will the Midtown Station generate? Not many. Maybe a few hundred. Is that level of service worth the cost of a new station? Or should the Midtown Station be deleted?</p> <p>Yes, the funding proposal presented to voters and approved did include a downtown station without a very specific location. Downtown Segment Alternatives considered were only proposed to validate that 5th Avenue was to cheapest alignment.</p> <p>Why not seriously consider a Downtown Station that actually serves Downtown? A station on First Hill at Terry and Cherry would actually do that. Instead of generating a few hundred new riders, a First Hill Station would generate thousands, maybe ten thousand new riders, every day seven days a week and spread over the entire light rail operating schedule every day. Three hospitals, Seattle U, several retirement communities, Yesler Terrace low income housing, various community services, the Cathedral, residential and commercial developments would be served. Seattle continues to encourage additional high rise buildings in the First Hill neighborhood. The community deserves light rail service. Not just for the benefit to the community. The entire City, King County, the whole Metro service area would benefit since numerous regional services are located on First Hill. The First Hill Neighborhood is designated by Seattle as part of Downtown.</p> <p>First Hill service was originally included in the light rail extension proposed for Capitol Hill and Husky Stadium. It was found viable and property was actually bought to build it. Unfortunately crossing the Ship Canal was found to be much more expensive than estimated. The money to serve U of W had to be found somewhere. The First Hill Station was deleted. Correct decision for the time. Years have passed. Time to reconsider First Hill.</p> <p>Service to First Hill now will cost more now, and more than the proposed 5th Avenue alignment. But the benefit is also greater. A life cycle cost benefit analysis would be a worthwhile to draw a comparison.</p> <p>Several additional alternatives were developed and evaluated regarding service to West Seattle. Others were prepared for Ballard, and again for the University District Station. None of those new alternatives considered added a single new rider to the system. None reduced travel time by even one minute. But Sound Transit spent millions of additional dollars in studying these options solely for benefit to Seattle residents.</p> <p>A similar study of First Hill light rail service would benefit the entire region.</p> <p>Just consider. ST could acquire the entire block now occupied mostly by the Frye Art Museum. A deep station could be excavated and served by two banks of 3 or 4 elevators. No escalators. The excavation could provide an underground parking garage. Street level station access could include commercial businesses. Several upper floors could house the reconstructed Frye Art Museum. Upper floors of a 30 to 40 story high rise tower, or even taller, could be mixed use. Why not? It could include low income residential operated by say Plymouth Housing, offices, cultural, social, and market rate residences. A restaurant could be on top, The Top of the Town perhaps. The structure could be a signature architectural gem for the entire city and generate ST riders for itself.</p> <p>Just where do we get the money? Well, that is the key question for service to West Seattle and Ballard too. The First Hill concept described above might not cost ST more than what is proposed in 5th Avenue because of two factors:</p> <ul style="list-style-type: none"> • A large signature high rise could be mostly financed by private investment. • Substantially larger ridership would generate increased revenue over the life cycle of the facility. <p>It just might be a worthwhile investment for the community. Surely it is worth exploring. Certainly not too late. That is the point of a draft EIS. And time is not yet a factor.</p>	<p>John Wilson</p>
-------------------	---	--------------------

04/26/2022	<p>I would like to offer some input on the Interbay/Ballard Light Rail expansion segments currently being discussed. Having spent much time in Seattle, a portion of it living in Ballard, I see the need for and support a light rail project. Although I do not currently reside in Seattle, I do spend time there regularly. I am strongly connected to the community as I am a graduate of Seattle Pacific University and the University of Washington, and have family-owned vacation property in the San Juan Islands.</p> <p>Having said that, I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. I understand that there is much to consider, but one in particular is of importance to me and, literally, the world wide music community. I am specifically speaking of the DUSTY STRINGS COMPANY located at 3450 16th Avenue West.</p> <p>Dusty Strings is a local family built, owned and operated company that has become a significant and world renowned builder of concert class harps. They have been committed to the local community for 43 years (even when shut down for Covid, the owner personally created and manufactured mask/shields for the health care workers at all of the local hospitals) by hiring local, skilled craftsmen and remaining in Seattle, unlike many other small manufacturers who have been driven out by rising costs fueled by tech driven businesses.</p> <p>Dusty Strings built a specially designed manufacturing facility just 20 years ago that would be astronomically expensive to rebuild locally, especially considering the current real estate costs and lack of site availability, and would severely disrupt their manufacturing processes for a significant period of time.</p> <p>The IBB-1b Alternative would be the route that would not force The Dusty Strings Company, as well as a number of other small, owner-occupied businesses, to either close their doors or do a costly relocation. It would save well over 100 jobs, many the jobs of dedicated local craftsmen with many years of expertise in instrument building. Alternatively, it appears that the "Pink Line" - according to your published map - would negatively impact far more businesses and their employees than the IBB-1b route. I strongly believe that the IBB-1b route would be a far better solution than decimating a number of small businesses and putting many businesses and, consequently, their employees' livelihood in jeopardy.</p> <p>Thank you for your thoughtful consideration -</p>	Deette Bunn
04/26/2022	<p>I recommend the new link for West Seattle to Ballard to consider Pioneer Square vs CID. It would be great with regards to being closer to the Colman Dock ferry terminal for Seattle/Bremerton and Seattle/Bainbridge Island routes. This would facilitate even more passenger usage and transportation options to Waterfront and retail/business core. Thank you for your consideration.</p>	Marie Beltran
04/26/2022	<p>Please move forward with the other option and do not impact the lives and businesses living in the CID</p>	Michael Mercado
04/26/2022	<p>Please move forward with this project on 4th -- there will be considerable impact to the neighborhood with any solution but protecting the businesses and culture of the International District should be prioritized.</p>	Allyson Schneider
04/26/2022	<p>As much tunnel service as possible would be best for the West Seattle lines. Surface and elevated routes would be very disruptive both during and after building. Surface routes are the worst possible option.</p>	Kevin Graft

04/26/2022	<p>I am deeply concerned about the impacts of two proposed new Sound Transit light rail station locations on the CID community.</p> <p>Any station along 5th Avenue that demolishes beloved local small businesses and creates an environment of noise and traffic for other nearby stores and restaurants does not have CID's interests at heart. Linking two predominantly white neighborhoods (West Seattle & Ballard) should not take priority over quality of life and economic livelihood of CID residents and proprietors.</p> <p>Many small business in other areas where Sound Transit stations were built could not survive the years-long construction zones that made it difficult for customers to arrive and enjoy themselves. I watched this happen to my brothers and sisters, uncles and aunts, grandmothers and grandfathers of the CID, who all have given me so much over the past 25 years.</p> <p>The Fourth Avenue station option is the least invasive and community friendly and I hope that you will consider my comment when making a decision in this matter.</p> <p>Thank you.</p>	Stephanie Morris
04/26/2022	<p>A large source of my information has been from Table ES-5 from the EIS, as pertains to the CID. I am largely criticising the columns of data labeled CID-1a and CID-1b</p> <p>The central district is historic to many of the people who have inhabited it and whose family have a generational attachment to the district. Because the CID is populated by Asian and Asian-American families, any act to change the landscape will have a massive, overwhelming affect on the people who live there. This in itself, to me, is a questionable practice, to override the desires of the community who would most benefit from this station as is, and who have spoken against its moving north to 4th street, which is currently a bus depot.</p> <p>I see that there are clear, predicted issues in the data that will make transportation and safety less accessible to those who live in CID, and it will negatively impact both businesses and citizens in their daily life for a project which will most likely run past its predicted completion date. What I think is most problematic is that CID-1b projects a full closure of 4th Avenue South (South Jackson Street to Seattle Boulevard South) for 6.5 years. I assume this will run to at least 7 years as city projects are often behind and thus far the light rail project has not been most timely. My question is: Why select this station? What improvements really need to be made? What is wrong with the current light rail station?</p> <p>Removing a bus line seems like a choice that will also impact the safety of our bus drivers and passengers. The list of Construction Transportation Impacts is overwhelming in the CID-1a and CID-1b avenue data columns. Truly, the only part of this plan that I agree with is the removal of parking in the CID on streets to make room for more bike lanes or buses. You are looking to displace 200 employees, and I don't believe this information is veritable as it likely does not take into account business owners, or expanding businesses. Here, businesses will not even be permitted to expand and may need to move because of the years of work for transit in the CID. Even CID-2a estimates up to 230 employees, which cannot be better, though there is less construction and displacement plan overall.</p> <p>The CID-2a and 2b plans are what is best for transit and I hope you will consider this and the thoughtful comments being sent your way to help preserve the identity, culture, and community of CID.</p>	Jill Abruzzio
04/26/2022	<p>Hi there,</p> <p>Construction through Chinatown-International District via 5th Avenue would disrupt the neighborhood and businesses. Adding the train station on 4th Avenue would be much more preferable.</p> <p>Thanks so much!</p>	Marilyn Liu
04/26/2022	<p>4th Ave. Should be the option for sound transit. The impact the 5th Ave option the CID will practically kill any ethnic culture Seattle has left.</p>	Yenvy Pham

04/26/2022	<p>As density increases in Seattle, it is good to have an alternative to driving by using Sound Transit. Thank you for your work.</p> <p>I am in favor of Elevated 14th Ave. Option (IBB-1b) that will not affect the current operation of Dusty Strings at 3450 16th Ave. W. This route looks less congested by keeping Sound Transit roughly in line with 15th Ave. W. and may displace less homes and businesses.</p> <p>I am the brother of Ray Mooers. Twenty years ago, Ray and Sue Mooers, owners of Dusty Strings, designed and built their building to accommodate their rapidly growing harp and hammer dulcimer manufacturing business and their unique requirements. This is not an average building as it was specially designed for their artisan business. It has seismic upgrades, electrical upgrades, humidity controls, high ceilings, a dust collection system meeting fire department codes, a loading dock, elevator, and rental space that houses additional local businesses.</p> <p>If Dusty Strings is forced to leave, all of these conditions will need to be available at a new location and it would be a financial hardship to locate or rebuild in a city like Seattle.</p> <p>If this happens, it will be the third time our family has been forced off property due to eminent domain by a governmental entity.</p> <p>I feel it is important to save rare manufacturing jobs in tech-heavy Seattle and continue the revenue stream and taxes that benefit all.</p> <p>Dusty Strings is known worldwide for their handmade wooden instruments and the beautiful music they create. Relocating Dusty Strings would be a major financial hardship for this Seattle business of 43 years and their employees.</p> <p>Please use the IBB-1b route and protect the current Dusty Strings location.</p> <p>Sincerely, Kelley Mooers</p>	Kelley Mooers
04/26/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital and integrated services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>There is a crisis right now in mental health care and a large demand for the services TR provides. Uprooting the critical programs that they provide, as well as displacing the individuals they serve when the demand is already high, would put unnecessary pressure on the system. The results could be catastrophic, both to our clients and to the community at large.</p> <p>As someone who cares deeply about our community and the nonprofits that give to those in need, I strongly urge the committee to reject both the DEL-5 and DEL-6 alternative proposals.</p>	PRESTON HORNE-BRINE

04/26/2022	I think I prefer the 4th ave option because it displace people in newer buildings with bigger businesses that can handle that expense and bounce back. Plus logisticaly it makes sense. It's a road that can easily be rerouted where 5th can't	Simone Childs
04/26/2022	Please do not build this station on 5th. The alternative on 4th would benefit the community best. The closures of many businesses in this area would be detrimental. The disadvantaged would be impacted negatively with closures of businesses like Uwajimaya.	Ivette Alvarado
04/26/2022	Don't put a station in the international Distric. It is a historic neighborhood with irreplaceable important cultural landmarks. Many elders live there as well and the displacement would be cruel and life threatening. Plus the pollution, noise and bad air quality would have a negative impact on an already vulnerable community. Plus there is already a light rail station, TONS of city busses, an amtrack station and a greyhound station nearby. Seems like a literal waste of money to dump this resource on an area with highly dense transportation resources. Like how about put it somewhere where it's hard to get to by public transit, u know somewhere usefull.	Georgia Smith
04/26/2022	Hi there, After reviewing the pros and cons of each of the station options, it's clear that there is a winning option. The 1a and 1b proposal clearly impacts fewer people, businesses, and parking to economically fuel the non-demolished or closed surrounding businesses. I think giving the general public a choice makes folks feel heard to weigh in on two options, but it's time for this option to be removed as something we might consider! Be well, Kirsten	Kirsten Zoba
04/26/2022	I have been a volunteer at Ballard Food Bank for many years. The light rail options on 14th Ave would require closure for three years which would be devastating to our clients. I do not support any light rail options on 14th but do support options on 15th.	Patty Curtiss
04/26/2022	As a user experience professional at a Seattle-based software company in the ID, it's my job to advocate for users. Just like in software, if the solution is too hard to use or takes too long, people are less likely to use it, damping growth of future ridership and lowering customer satisfaction. So I hope that ST3 alignments and stations are decided with the needs of future riders in mind, which, to me, means short travel times (including time to get from street level to the trains), easy wayfinding, and convenient transfers. It was somewhat disappointing for me as someone who voted for ST3 that the proposed stations are so deep, which to me means longer total travel times, less reliability (since elevators/escalators often break), and inconvenient transfers. In the ID, a shallow station on 4th would be the fastest for me to get to work. My partner works in South Lake Union. It's striking that none of the options serve the core of SLU, and so I'd urge considering a station around Westlake & Harrison. Lastly, I think a Ballard station on 14th is less of a Ballard station and more of a Freeland station. It's too far from the main part of Ballard and means crossing car-heavy 15th on foot to get to actual Ballard. I hope a station on 20th could be considered, but a station on 15th (with entrances on all 4 corners) is a good compromise and is a good setup for future extension up 15th.	Gerry Chu
04/26/2022	Regarding Sound Transit choosing a route to build a new station in the CID that links West Seattle to Ballard - I am against the 5th Ave option because it will have a detrimental impact on our neighborhood after a history of construction impacts, xenophobia, hate crimes, and the pandemic.	EunJean Song

04/26/2022	<p>I am so proud to live in a city so committed to public transit! While it is important to connect neighborhoods, it is also important not to destroy neighborhoods in the process. Please listen to the residents of the CID and move the proposed station to 4th Ave. The CID is already suffering from xenophobia, racism and a global pandemic- demolishing beloved businesses and making the neighborhood inaccessible with construction will quite possibly kill it.</p> <p>Save the CID Move onto 4th ave</p> <p>Thank you</p>	Amy Lowrance
04/26/2022	<p>It would be much better if the light rail in the international district was on fourth ave rather than fifth. The fifth ave location will displace valued small business that bring nothing but goodness to the community.</p>	Lila Zeichner
04/26/2022	<p>Please first consider the livelihoods of the people who will be impacted by this planned construction, before money. As your report shows, many people who live and work in Chinatown-International District are low-income families, many of whom are immigrants. As someone who cares deeply about this community, I think it would be an injustice to subject families and businesses to more physical and health disturbances through more long-term and consistent noise pollution and air pollution, in addition to uprooting businesses they have poured their lives into. The ID means so much to so many people who aren't welcomed in other places of Seattle.</p>	Christina Guevara
04/26/2022	<p>I am a resident at 5th & Madison Condos, basically on top of the proposed Midtown station. While I generally support the location of the line in the preferred alternative and the location of the station centered at 5th and Marion with entrances at 4th & Madison and 5th & Columbia, I do have concerns about 1) depth of station, 2) construction effects in the neighborhood, and 3) effects of the on-going station operations. 1. I am sure you will hear many comments about the station depth, including the "shallow" option, and the need to get right the efficient movement of people in and out of the station. I know the depth of the Midtown station is contingent on the depth of CID station, so I support any CID station that is not deep. 2) Given that only the station entrances are being constructed at the surface, I'm still perplexed why the draft EIS calls for so many street closures and for so long. And for whatever reason the shallower the station, the less impact there is on the surface streets. This is another reason I support the shallowest tunnel possible. ST can destroy downtown through years of gridlock. Clearly that must be avoided. 3. Sound Transit needs to ensure the community that these station entrances don't end-up like the one at 3rd and Cherry.</p>	Michael Amend
04/26/2022	<p>I am deeply concerned about the proposal to engage in lightrail construction on 5th Ave, and advocate for engaging in construction on 4th Ave instead. Chinatown/International District is an important site for community, cultural revitalization, organizing, and much more. It is already facing the pressures of ongoing gentrification, the rise of Asian violence due to COVID-19, and displacement. These small family businesses are integral to what makes the CID community so rich and diverse, and construction would displace over 20 businesses. Construction and years of road closures/detours would impact businesses greatly, and knowing that elders make up a significant portion of the CID community brings up concerns about not just accessibility, but health as well (i.e. noise, air pollution for years). For a city that prides itself on equity, diversity, and inclusion, building a lightrail station on 5th Ave would undermine that. The CID is not just a community hub with family businesses, but also a home to so many people and the disruption from the lightrail construction would cause so many levels of harm. Sustainable infrastructure for public transit is needed, but it can't be at the expense of an already marginalized community; we deserve better.</p>	Ammara Touch
04/26/2022	<p>I prefer the 4th Ave option. The 5th Ave option will have undo negative impact on an already negatively affected area.</p>	Chad Pemberton

04/26/2022	<p>Chapter 4.2.1.3 states that more than a thousand people may be displaced from their residences and commercial enterprises, stores and other services will be demolished and possibly relocated outside of West Seattle. The disruption to neighborhoods and of the greater West Seattle community will be significant, destroying the character unique to this area.</p> <p>Chapter 4.2.1.7 and 4.2.1.8 greatly understates the housing situation in West Seattle. While Redfin practically shows very little home inventory in West Seattle, the DEIS states: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify based on their income or credit rating. Commercial real-estate is very limited in West Seattle which means displaced businesses may have to relocate causing them to lose their customer base if clients have to travel longer distances to get services.</p> <p>Chapter 4.2.10 states that the energy related impacts during construction would be short term and not have an adverse effect. Current standards for what are considered sustainable building projects calculate the carbon footprint of both short and long term impacts including the removal and replacement of residences and businesses. Appendix L4.6 references carbon consumption, citing that "general FTA estimates" were applied, but energy consumption during construction has not been taken into account.</p> <p>Clearly these concerns and many others addressing the true impact of the proposed project have not been adequately addressed and understood by those residing and working in West Seattle.</p> <p>Paul Tankel RA, LEED AP Architect / Campus Planner 2449 55th Ave SW Seattle, WA 98116</p>	Paul Tankel
04/26/2022	Hi there, I wanted to advocate for the new lightrail station in the International district to be located on 4th St instead of 5th. 5th St would displace and severely impact small biz there, some of my fave places.	Ashley Skjordahl
04/26/2022	<p>Hi!</p> <p>I would like to say that out of the 5 potential locations for the new station in CID, the one on 4th Ave will cause the least amount of harm to the community and businesses. Because CID is already such a busy place and is being negatively impacted by gentrification and rising costs of living, any construction would even further disrupt daily lives and businesses. However, constructing a station on 4th Ave would only displace 5-8 businesses as opposed to the other options where it would displace over 15. On top of that, these businesses are extremely popular and bring a lot of customers to CID every day. If these businesses on 5th were to close down, the livelihood of CID would suffer as well.</p> <p>Please consider constructing on 4th Ave only.</p> <p>Thank you, CE</p>	Catherine Evangelista
04/26/2022	Your 4th and 5th Ave options will have long standing and permanent implications in the international district that will devastate or even demolish long standing Seattle businesses. Construction progress in transit far too often comes at the cost of Seattle's international district and seems especially egregious when considering the cultural identity of the area. Seattle has done more than enough to devastate communities of color and has the responsibility to do the work to repair and rebuild those communities rather than quite literally demolish another one and cause grievance to community members, businesses, and visitors to the ID.	Lindsay Malatesta

04/26/2022	The 4th Ave Alternatives will have much fewer detrimental impacts to the already marginalized community in the Chinatown-ID area. As a Seattle native, I've continued to witness decades of growth which impact the poorest communities the hardest. Combined with the racial disparities exacerbated by the pandemic, the residents and business owners of Chinatown-ID need to be the primary focus of the expansion. Please do the right thing and choose the 4th Ave option.	Michelle Huynh
04/26/2022	I believe that the "4th Street Deep" alternative for the Chinatown-International District would be the least disruptive to the neighborhood. None are ideal options given that every alternative causes a number of disruptions to the area, minimizing the negative impacts of the light rail expansions should be paramount. The local community has already had to endure years of hardships, especially in recent years due to the global pandemic and uptick in hate crimes and xenophobia. While businesses and residents persevere through these difficult times, I believe that if given the opportunity, many would be able to recover and thrive. In order for that to happen, I believe that limiting the number of impacted businesses and housing units is key and while the "4th Street Deep" alternative may be more expensive than some of the others, the estimated impact towards local businesses is also the least of the five options. Ultimately, if the light rail expansions are to have meaning, they must connect the various communities of the Puget Sound region. If too many businesses and residents are impacted and driven out in the process, that defeats the point of these expansions...	Raymond Lam
04/26/2022	Hello, I am writing to recommend the fourth Ave stop instead of any fifth Ave options in the CID. I am excited for the expansion of the light rail. I recently was able to use a stop to get to the mariners game and back home as it begins to expand to where I live. As someone who frequents the CID, I understand the challenges of business to find affordable spaces to launch or continue. While either spot will displace businesses the fifth Ave option impacts considerably more. I am excited for a stop to be there help bring in foot traffic to the CID, but the current community there should also be considered. Thank you for your time, Devin	Devin Arceo
04/26/2022	4th Ave S is the only option that should be considered for the international district!	jjiayang li
04/26/2022	Would like to support the plans for the station on 4th Ave in the C-ID. Alternatives (5th Ave) cause much more disruption and negative impact to the vulnerable businesses and folks in the area.	Hannah F
04/26/2022	While there are many benefits to the West Seattle and Ballard stations the effects of the construction of these stations will directly impact many businesses and jobs within the International District. Many businesses will have to close during construction that may last years and many people and jobs will also be displaced. Finding alternative routes for construction may be more beneficial to a broader population which can have a positive effect for people now and in the future.	Ysabelle Gardon
04/26/2022	Hello, I'm writing out of concern for the proposed project developments on 4th and 5th ave in the CID. While both will impact the local businesses, community organizations/events and history of the area, the impacts of the 5th ave proposals are more detrimental. A number of workers would be displaced, along with multiple businesses. This is a central part of the CID that would be drastically transformed by the station. I'm concerned about the impact on the culture and community which has already weathered numerous challenges. Please help us preserve a precious area to the community and city!!!! With care, Alyssa	Alyssa Reyes

04/26/2022	As an individual who lived for years blocks off of S Jackson St, it breaks my heart that alternatives CID-2a and CID-2b (the 5th Ave options) are under consideration in section ES.3.1.2.2. The destruction of a large plurality of beloved, neighborhood-defining restaurants and storefronts would be a shameful and detrimental blow to Seattle's Chinatown-International District. Though I will not have to live with the daily consequences of years of 5th Ave construction as cherished sidewalks give way to clouds of dust, among those who would be some of my dearest friends, treasured establishments, and most respected local heroes. This neighborhood, after a history of construction impacts, xenophobia, hate crimes, and deep losses from the pandemic, should not have to bear the fragmentation and hurdles to healing that the CID-2a and CID-2b alternatives entail. Thank you for your consideration.	Brent Schroeter
04/26/2022	I strongly suggest not to establish the station on 5th Ave in the international district as it will largely impact many local businesses that were already hurt by the pandemic. Please consider moving forward on 4th Ave instead.	Amy Tsang
04/26/2022	Please choose 4TH to build the light rail. All options will cause road closures and impact to the CID in a significant way. However, the 5th Ave S options will close or displace up to 19 local businesses. The construction in this area will seriously impact the entire neighborhood. The 4th Ave S will cause road closures and displace only 5-8 businesses. We believe the 4th Ave shallow station will cause the least amount of harm to our historic buildings and community.	Belén Herrera
04/26/2022	Please consider the community and businesses that will be affected by your construction and routing decision for the International District light rail. The 4th Avenue option for CID link/light rail will be much less damaging to the community than the 5th Ave alternative. Please choose the 4th Avenue option for the light rail in the International District!	Hilary Northcraft
04/26/2022	As a third generation Seattleite who has witnessed profound change and displacement in our city, I was dismayed to learn that plans to expand the light rail would impact local businesses in the CID - even when it was promised early in the process that ST would work with community on this. The CID has endured so much with Covid, crime, rents—we owe it to this vibrant neighborhood to ensure that smart transit expansion benefits everyone. Please reconsider plans that do not route through 5th avenue.	Anna Goren
04/26/2022	Despite Sound transit's recent goals of "equitable engagement and racial equity," it is clear that the planning of the WSBLE project is a complete disregard of such pursuits. Every possible iteration of WSBLE promises to demolish, disrupt, and displace the ethnic communities and small businesses that make up the CID, a neighborhood that has already faced the consequences of major city construction projects. Further, the CID carries with it Seattle's history of racially exclusive and discriminatory practices against minority communities. Sound transit's plans to expand the existing station is an irresponsible and harmful decision that counters every other effort to preserve the CID's communities.	Miran Kim
04/26/2022	Please, on behalf of the disadvantaged in our community and everyone who tries to help them, do not route the light rail on 14th NW. All of the 14th NW alternatives require closing 14th NW during construction. Not only clients but suppliers would be unable to get to Ballard Food Bank. Although the community does as much as we can with individual donations, most of the food comes by the semi truckload from area groceries and distribution warehouses. It would be devastating to have that supply threatened. We worked and saved for years to buy and build a new home for Ballard Food Bank. Please do not cut off access to it. Of course, we are talking about something that will supposedly happen in the 2030s, when I will likely be dead or close to it. And ideally, there will be no more need for Food Banks at all, because all food supply and distribution will be equitable and freely available everywhere. In that case the situation would be a lot different, but we have to assume conditions as they are today. So please, route down 15th NW, or find ways to ensure continued truck, van, and bus access to Ballard Food Bank during all phases of light rail construction.	Theano Petersen

04/26/2022	<p>Hello,</p> <p>Hope your day is well.</p> <p>As a resident of Seattle I'd like cast my vote for the new station in the International District to be constructed on 4th Ave(options 1A/1B). My reasoning behind this is because I think it will cause less disruption in the surrounding area, lead to a smaller displacement of employees and overall affect less people. Not only is 5th very central to the CID but there is already transportation along 4th so to me, this would seem like the best course of action.</p> <p>Thank you, Zachary Somerscales</p>	Zachary Somerscales
04/26/2022	Please move transit plans to 4th Ave to prevent a lot of small businesses from having to close. The CID community has already been through so much the last couple years.	Nancy Taing
04/26/2022	<p>With regards to the Chinatown International District, I urge you to move forward with the 4th street location instead of the 5th street options to minimize the impact on local businesses, residents and visitors to the area which has already suffered so from the pandemic, other major construction projects and xenophobia.</p> <p>Thank you for your consideration and work to expand public transportation options for the citizens of Seattle.</p>	Brianna Jensen
04/26/2022	my comments relate only to Duwammish and West Seattle portions. I prefer the fewest housing and business displacements for the fewest dollars. which means tunnels over elevated tracks. less impact visually and divisionally to the respective neighborhoods.	Hallidie Haid
04/26/2022	<p>I have lived in Seattle for 33 years, and twice a week I go to the CID, to get groceries and eat out, with my family. I oppose the expansion of the Sound Transit center in the CID.</p> <p>I saw images of the proposed train station expansion in the CID. Looking at all the options, I see that the option on 5th Ave S will displace many CID small businesses, around 15 at least as I count. I oppose the expansion because I believe the construction will either totally remove small businesses, or will impact them negatively over the course of the construction period. There are options on 4th avenue that will expand into the train station and while I understand that all the construction options will close small businesses, I ask that Sound Transit consider the 4th Ave S option and NOT the options closer to the China Gate. Though I hope the the expansion could be stopped and placed somewhere else entirely.</p> <p>The CID is a neighborhood that many of us have cultural and ancestral ties to. It is both a place where people live--who would be impacted by the noise, and is also a place with many beloved small businesses. I think that this expansion will negatively affect both business, and residents. And it reminds us of the feeling of having been redlined into undesirable real estate, only to have disruptive public infrastructure built over top of us when convenient for the city--I am thinking of I-5. Please don't build this if the Chinatown residents did not ask for it, and if small businesses and community members oppose it.</p>	Chloe Huber
04/26/2022	I strongly feel that the tunnel option is the best option. It is unacceptable to displace people from their homes given how unaffordable housing is with home prices and rents up roughly 20% in just the last year. Even if they are fairly compensated, housing inventory is extremely low and puts an extremely unnecessary strain on these households.	Steven DeSouza
04/26/2022	Please do not allow for the rail station to be build on 5th Avenue, where many important businesses within the CID have been rooted. Building on 5th would be destructive to the community, please place the station on 4th Avenue.	Anna Hanson
04/26/2022	We are in support of the tunnel option as it has the least negative impact on the residents, businesses, and environment.	Heather Tabler

04/26/2022	<p>I would like to comment on the proposed routes for the link to go through international district. Please avoid all 5th avenue alternative routes. The ID is such an integral part to the heart of Seattle's culture. The impact of new lines and stations cutting through the center of the ID will have on the (already suffering) community will be detrimental.</p> <p>It may seem as if the 4th Ave alternatives carry more negative affects when it comes to considering construction issues, but these effects are temporary compared to what would happen to the soul of ID. I urge those whom it may concern to choose other alternatives over construction in ID.</p> <p>Thank you for your time.</p>	Jessica Nguyen
04/26/2022	Prefer 4th over 5th	Kassidy Gerber
04/26/2022	Please consider the 4th Ave option as it will have a significantly lesser impact on the businesses I go to regularly.	Clare Mengebier
04/26/2022	We should be doing the least invasive route. As terrible as it is that we will be displacing any business during this construction, we should be trying to minimize that impact. For that reason we should push efforts into the 4th Avenue option instead of the 5th Ave ones. The only reason to do the 5th avenue location is if you are trying to get rid of older businesses and Chinatown's business history. We already have an option that has minimal impact, so we should be going with that one so we do not harm the smaller business more than COVID already has.	Jessica Paz
04/26/2022	CID businesses and residents have already been disproportionately burdened throughout the pandemic. Whether that is through violence or slow business, we must all prevent further harm. A 5th ave placement impacts people living there, businesses operating there, and people who obtain services there. My favorite coffee shop only just remodeled their space and I swear to god if you push them out of this community I will lose it!! Placing the rail on 4th mitigates harm the most. Let's do the right thing.	Daysha Gunther
04/26/2022	Please uphold your statements about equity and listen to CID community members by building along 4th Ave instead of 5th. The ID has already been cut up for the sake of infrastructure and at the sacrifice of businesses and the community. Please don't exacerbate that further by displacing business and demolishing buildings of cultural relevance. Please build on 4th, as the community is requesting.	Anna Berman
04/26/2022	Please build the new rails on 4th and do not impact the local businesses in the international district. They are mostly family run and are essential to the development and culture of the Asian American and Pacific Islander communities in Seattle. Building the rails through the ID will cause immeasurable impact by removing jobs and businesses that have been around forever and a staple to our AA/PI community. Thank you for your consideration.	Mai Vo
04/26/2022	I'm not against improvements to public transportation - it's clearly a plus for small businesses in the long run. However, there must be other locations the station could be built rather than demolishing the present small businesses that have been in the district since its early days and really represent the long-standing culture of the community. My parents were also small business owners and were evicted with no compensation to demolish the building they were in, to build a hotel. They worked day and night knowing that they wouldn't leave with a cent. Please consider the anxiety the businessowners must be feeling about their families' future, and the legacy that will be no more. What is the International District without its culture?	Dami Song
04/26/2022	This train should align with 4th Ave. S and skirt around International District as much as possible. Any other option will disrupt the daily lives of many more thousands of people, not to mention the dozens of small business owners! The train is a good idea but let's minimize collateral damage as much as possible.	Eden Medhane
04/26/2022	Please don't build on 5th it impacts so many businesses and homes. It will make getting in and out of CID so much harder. We have historic buildings and businesses to think about. To maintain the integrity of our international district please consider building on 4th instead.	Elizabeth Sabogal
04/26/2022	I support the Ballard extension to be built on 15th as it's closer to downtown Ballard and wouldn't affect the Ballard Food Bank as much. Although, I actually think an option on 20th makes the most sense in terms of location and would prefer that as an option if possible.	Maddy Gremaud

04/26/2022	<p>Hello,</p> <p>I would like to add my suggestion to keep the Interbay station in Interbay. With multi family housing, Ballard FC & Seattle Pacific's stadium and the new Storm facility located off 15th and Dravus. A station for the Interbay area should not be scraped nor moved more than .5 miles for those off 15th - 20th. Our transit development must be focused on developing both quickly and for the city's growth in the future.</p>	Sean McDonald
04/26/2022	<p>Any of the 5th Ave Options (CID-2a,2b and CID-2a diagonal) surely create the most detriment to the community. Not only is it displacing citizens of Seattle who live in these buildings, it is also harming commerce to the International District/Chinatown businesses. 4th Ave Options (CID-1a, 1b) should be the only option in consideration for the West Seattle/Ballard line. 4th Ave, at its current status, is most commonly used for public transportation lines. Creating this next extension should not come at the cost of lost business and displacement of innocent citizens.</p>	Hannah Luu
04/26/2022	<p>I have lived here all my life and this is where my immigrant parents built their community and where I found others from my same upbringing. This would be wiping out the asian community and our businesses for gentrification and is unfair to the community. Please support the owners and those living there in keeping these stores in business.</p>	Larissa Phan
04/26/2022	<p>Alternatives CID-2a and CID-2b displaces so many businesses that are essential to the Asian American community. An estimated 19-27 businesses will be displaced but that does not include the surrounding businesses affected by noise pollution and lack of foot traffic in the area may lead for additional closures. I would like to proceed with the 4th Avenue alternatives CID-1a or more preferably CID-1b</p>	Jasmine Le
04/26/2022	<p>I am concerned about the CID stations that have the potential to disrupt this neighborhood. I highly encourage this project to prioritize the CID's integrity as a historical neighborhood. While I am super excited about this project, I think it can be done thoughtfully so as not to disrupt the core of the CID, which has already been impacted by I5's construction.</p>	Ardina Boll
04/26/2022	<p>This development will affect the C-ID community in many ways for many years. Moving forward with this development will negatively affect the residents here and doing so would be a mistake.</p>	Ari Au
04/26/2022	<p>Please keep the community safe!</p>	Amy Kim
04/26/2022	<p>Sound Transit should NOT move forward with the 5th ave options, the 4th ave options will have the smaller impact on the businesses and residents in the Chinatown - International District. The CID has been negatively impacted by so many construction projects in past years, Sound Transit needs to go with the option that will displace the fewest number of businesses and buildings, which is the 4th ave option.</p>	Evan Shigaya
04/26/2022	<p>I hope the sound transit board will make the best decision for the community and build the tunnel option because it displaces the least amount of businesses and residents and also has the least negative environmental impact to our land and water.</p>	Carrie Wooldridge
04/26/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property. The Genesee routes violate a City ordinance driven by citizen initiative that Park property cannot be used for purposes other than what it was intended for. The Parks Department supports the Yancy alternatives. Personally, I live in a condo on Avalon Way. The roadway has already been drastically restricted in order to creat bicycle lanes and further restricted parking. Where in the world do you plan to put light rail?????????</p>	Grady Irvin
04/26/2022	<p>I would like to comment o the IBB-In proposed section of the light rail. I have long been a devoted customer of Dusty Strings, having purchased several harps from them. I hope you'll choose an alternate route for the light rail that will preserve their building.</p>	LeighAnn Bekemeyer
04/26/2022	<p>Please put this on 5th avenue. It's otherwise going to demolish and displace historic ID businesses we all know and love. It is also already a mich quieter area than 4th ave</p>	Daniel Onufer

04/26/2022	Build this on 4th street. It is the most obvious plan that impacts the least amount of people. After all the years of construction that the CID has gone through this is a choice that can lessen the impact. Save 5th St and move forward on 4th.	Halleli Zacher
04/26/2022	Please choose the 4th ave extension through the International District! 5th ave is too detrimental	Caitlin Collins
04/26/2022	I am a neighbor to the CID and a proud supporter of the community's businesses. The plan will not just negatively impact businesses, it will impact generations of people (many of whom have experienced displacement). Please utilize the 4th Avenue alternatives.	Emily Schorr Lesnick
04/26/2022	<p>ES-20 Delridge Segment - Andover Street Station Alternative DEL-5 Visual Simulation of Alternative DEL-5 Southwest Avalon Way: The photo in the EIS is misleading and would best reflect reality with a real-time photo of the buildings that are present. This is a design that seems to be based on the appearance of SW Avalon Way when it was lower density prior to 2016. This small space is now an up-zoned area with 36 new townhomes all within the space that appears like green grass in the photo. These buildings all opened in 2021. One construction project is currently underway. Each townhome is valued at \$600k to \$900k in the current market. At the low end, this is \$21M in additional property acquisition costs that do not appear to be accounted for. The people in these locations have not received acquisition notices...</p> <p>The photo additionally shows a large rail post set in the only southbound traffic lane of SW Avalon Way. This design simply would never function. The EIS fails to address how critical traffic flow on SW Avalon Way would be maintained. The EIS fails to add the cost of the 2020 re-design of SW Avalon Way into the total cost, as the road clearly will need to be re-designed a second time. The city of Seattle has deemed SW Avalon Way as a critical parking area due to up-zoning. The EIS fails to address how the same volume of parking will be maintained for SW Avalon Way.</p> <p>Delridge Segment - DEL 5 is not a viable design option. To remove such a high volume of the brand new homes on SW Avalon Way (and in the Delridge area) begs the question --- Who would be left in the Avalon neighborhood, for the Avalon stop to serve?</p>	Jenny Zielke
04/26/2022	I would hope the sound transit board would make the best decision for the community and build the tunnel option because it displaces the least amount of businesses and residents and also has the least negative environmental impact to our land and water.	Zachary McGhee
04/26/2022	I want to express my support for the Ballard extension to Locate the Ballard station on 20th Ave, a location central to both the commercial and densest housing in Ballard Prioritize the use of a tunnel over a bridge.	Daniel Johnston
04/26/2022	Strongly advocate for one of the tunnel options, preferably WSJ3a. This option creates less impact in terms of displacing residents from their homes and avoids the visual and noise impacts of an elevated guideway. Elevated is the absolute wrong scale for the pedestrian-heavy Junction and would absolutely destroy the character of the heart and soul of West Seattle. If it's elevated, it's better not to build Link to West Seattle at all.	Jennifer Babuca
04/26/2022	This is for section ES.3.1.2.2. Chinatown-International District Segment. Please don't create more stations in C-ID, this will shutdown businesses, people will loose jobs and the it will create horrible traffic in the area that is meant to be walkable. C-ID businesses have suffered enough through pandemic and racism and the homelessness issues and crime. As a resident of C-ID I want an authentic neighborhood that is walkable and safe from crime, drugs and homelessness. Thank you.	Diana Mayorga

04/26/2022	<p>after reading over the proposed options for the station in the international district i would highly encourage you all to think about the cultural and economic impact this will have in one of the most marginalized neighborhoods in seattle. i hope you can access the humanity to see the impact this has and listen to those you're impacting.</p> <p>to build a train station on 5th avenue would be a detriment to the community and their quality of life for so many years. the options on 5th avenue would displace so many in a neighborhood that has seen so many pushed out already.</p> <p>i really hope you take into consideration the community's needs you're ultimately uprooting.</p> <p>thank you,</p> <p>renee shure columbia city resident</p>	renee shure
04/26/2022	<p>Hi! Considering the impacts of both the 4th Ave options and the 5th Ave options, it is clear the 4th Ave option has the least negative impact on the existing infrastructure and businesses than that compared to the 5th Ave options. As an employee who works in the CID, please consider my comment on this issue.</p> <p>Thank you.</p>	Raiza de Vera
04/26/2022	<p>Hi, I'm commenting specifically on 2-56 and 2-57, referring to the 5th Avenue alternatives for CID.</p> <p>Compared to the 4th Avenue alternative, the 5th Avenue alternatives will significantly disrupt the neighborhood and its businesses, and have more detrimental impacts.</p> <p>This alternative affects significant portions of the CID neighborhood along 5th Ave S, 6th Ave S., King St., and Weller St - major streets that house businesses and residents core to the community. The 5th Avenue alternative will cause 19-27 business displacements (and in some instances, building demolition), and in turn, an upwards of 200+ employee displacements. Especially given that this project could last up to 11 years, the community would need to weather the construction and demolition, and the poor sound and air quality that will follow.</p> <p>This neighborhood has already been affected by previous government projects - I'd seriously consider the impacts of the 5th Avenue alternatives and generally this project, and how it will come at a cost to the CID community and its cultural identity.</p>	Trinh Nguyen
04/26/2022	<p>Hi, my name is Christy Bear and I live in Bellevue. A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options. ** Please don't marginalize this wonderful community further!</p>	Christy Bear
04/26/2022	<p>Regarding the light rail extension that runs through the CID, I strongly favor one of the proposed lines that runs along 4th avenue. This route has the least impact on existing business. The proposed routes along 5th have an unnecessary, detrimental impact on an historic neighborhood and busy economic center that it would not bounce back from. Many of those businesses would not come back and be replaced by others that do not have the history and connection with the neighborhood.</p>	James Lenon

04/26/2022	<p>While I am a very enthusiastic supporter of Sound Transit, (and any public transportation), I am opposed to the DEL-5 and DEL-6 alternative proposals for the light rail expansion. These two proposals would directly and negatively impact 3 Transitional Resources properties. Transitional Properties are critically needed for a very vulnerable segment of our population. Our society desperately needs more of these facilities, not less. This expansion would be a devastation. Please do not consider DEL-5 and DEL-6 in your expansion plans.</p> <p>Thank you for your kind consideration, Brenda Paull Olympia, WA</p>	Brenda Paull
04/26/2022	<p>I strongly oppose the construction of a 5th Ave (both shallow & deep) Station in the C-ID.</p> <p>The effects of the proposed 5th Ave (both shallow & deep) Station on the C-ID would be devastating. Those buildings hold businesses that are a core part of the community, and to demolish those buildings and permanently displace those businesses would be a horrific tragedy. There is no reason the station needs to exit right next to the Chinatown Gate and go under these blocks with many businesses.</p> <p>Please reconsider these plans based on the damaging and lasting effects on the community of the C-ID.</p>	Shannon Lubetich
04/26/2022	<p>Please consider the tunnel option as the best option. It displaces the least amount of residents and businesses. It is also the most environmentally friendly option and is a lesser threat to the land and surrounding water of these neighborhoods. Thank you.</p>	Lesley Rabago
04/26/2022	<p>I urge you to not move forward on the production of the 5th AVE light rail transit station as it will cause many businesses in Chinatown International District to move to another location and ultimately change Chinatown forever. I have been living in Washington my entire life and it would be devastating to see my favorite local businesses to move to different locations and for Chinatown to become an entirely different place.</p>	Dan O
04/26/2022	<p>Dig baby dig! Tunnels at both Ballard and West Seattle Junction. Build the preferred 5th Avenue alignment. In the Chinatown-International District build a shallow tunnel at 4th Avenue S as that's the least impact to the ID and best for transfers. Make sure the South Lake Union Station will be able to accommodate or connect to a future Aurora rail line by placing it between Dexter and Westlake.</p>	Andrew Baker

<p>04/26/2022</p>	<p>Dear Sound Transit Board Members,</p> <p>Thank you for the opportunity to comment on the WSBLE Draft Environmental Impact Statement. My spouse and I have lived in the Avalon neighborhood at 4026 32nd Ave SW since 2018 - a wonderful neighborhood of single family homes, and within the walkshed of both the proposed Delridge and Avalon Stations and many businesses. We are excited about the potential for light rail expansion to our neighborhood, and strongly recommend the board select the options that will best respect the existing built and natural environment while creating potential sustainable West Seattle development in and around our neighborhood. We strongly believe that the best option available - and the only one that we support - is the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b).</p> <p>Avalon Station:</p> <p>First and foremost, we do not believe the Avalon Station will add significant value to the overall West Seattle community given its proximity (only ~.5 miles) from the Alaska Junction Station. There isn't any other place along the Sound Transit line that has such a significant station density as these two proposed stations as those in Pioneer Square, and Pioneer square has significantly higher population density than our combined neighborhoods in West Seattle. Furthermore, I regularly walk to the location of the proposed Alaska Junction Station in less than 15 minutes. Given our strong support for the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b), but the uncertainty of 3rd party funding, we consider the Avalon station to be a lower priority than the longer tunnel and support dropping the Avalon Station (and all its associated costs and impacts) in exchange for a longer tunnel.</p> <p>Delridge Station:</p> <p>We strongly support a Delridge Station located to the south of Andover St, either the Preferred Dakota St Lower Height (DEL-2a) or Delridge Way Lower Height (DEL-4).</p> <p>We do not support locating the Delridge Station north of Andover St (DEL-5 or DEL-6). We believe that the Andover station alternatives (Del 5 and Del 6) are poorly designed to serve the community due to</p> <ol style="list-style-type: none"> (1) poor walkability for the Delridge community, and overall for walkshed of the station. Having regularly walked from Delridge up SW Yancy St, we know how steep the grade is on that street and we are very skeptical this "uphill walk" location will serve the Delridge community. (2) undesirable location of transit-oriented development adjacent to a steel mill and elevated highway ramp; (3) poor compatibility with racial equity toolkit; (4) poor compatibility with existing bus routes along Delridge Way SW; (5) lack of community input <p>Furthermore, we believe it is an irresponsible use of public funding to continue to allocate resources - time, funding, and effort for additional studies around the Andover station. We have been consistently disappointed throughout this process by the last minute additions and alternatives that are proposed around the Andover station, with no details or additional information to allow neighborhood response that is shared proactively with the community. These changes erode our trust in Sound Transit, and any confidence that a logical and data-informed approach is being used to evaluate all options.</p> <p>Alignment:</p> <p>Of the options available, we strongly support choosing the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b) as the best overall option. We would support that option with or without the inclusion of the Avalon station, and would advocate for lowering the cost of this alternative by dropping/removing the Avalon station altogether.</p> <p>We strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5), both of which would result in significant displacement and environmental impacts in the Yancy/Avalon/32nd Ave corridor. Particular concerns with the "Medium Tunnel" alternatives include:</p> <ol style="list-style-type: none"> (1) displacement of Transitional Resources and childcare on Avalon Way; (2) more housing displacements on and adjacent to 32nd Ave SW than preferred alternatives; (3) accessibility of remaining residences given alignment of guideway near the corner of 32nd Ave SW and SW Andover St; (4) construction impacts from excavation of retained cut; and (5) operational visual/noise impacts to remaining residences along 32nd Ave SW, SW Andover St, and SW Genesee St. <p>Additional alternatives to study:</p>	<p>Megan Zamora</p>
-------------------	--	---------------------

	<p>We strongly encourage Sound Transit to study removal of the Avalon Station from the "long tunnel" alternatives (WSJ-3a/WSJ-3b). This option is similar to cost savings proposals presented to the CAG in April 2021 but with lesser displacements and impacts in the Avalon neighborhood.</p> <p>Sincerely, Megan Zamora Neighborhood Resident 4026 32nd Ave SW Seattle WA 98126</p>	
04/26/2022	<p>I am in favor of the 4th avenue exit as I want the least disruption to CID businesses. I have been a patron of those businesses for most of my life and do not want them to move. They provide traditional foods of my home country and cultural backgrounds. In addition, those businesses have already suffered greatly due to the pandemic, crime, and homelessness. They should not be made to suffer more.</p>	Minh-Tam Pham
04/26/2022	<p>Looking at the alternative options, it seems like 4th Ave would have less an impact on businesses in the CID which have struggled in the pandemic. I travel 4th Ave up by Jackson regularly and think a new station there would make more sense with less impact to businesses.</p>	Natalie Shields
04/26/2022	<p>Please heavily consider the impact of the 5th Avenue construction will have on the CID. This option causes temporary or permanent displacement of multiple small businesses. While the 4th Avenue options will disrupt traffic and take a longer period of time for construction, based on the draft I believe that in the long term, the 4th Avenue option is better suited and better serves our community. Thank you!</p>	Kelsey Hegg

<p>04/26/2022</p>	<p>Sound Transit Board Members,</p> <p>Thank you for the opportunity to comment on the WSBLE Draft Environmental Impact Statement. My spouse and I have lived in the Avalon neighborhood at 4026 32nd Ave SW since 2018. I am excited about the potential for light rail expansion to our neighborhood, and strongly recommend the board select the options that will best respect the existing built and natural environment while creating potential sustainable West Seattle development in and around our neighborhood. This option is similar to cost savings proposals presented to the CAG in April 2021 but with lesser displacements and impacts in the Avalon neighborhood.</p>	<p>Sergio Zamora</p>
-------------------	--	----------------------

	<p>Sincerely, Sergio Zamora Neighborhood Resident 4026 32nd Ave SW Seattle WA 98126</p>	
04/26/2022	The new station needs to be on 4th instead of 5th for the least amount of negative impact to small businesses.	Kristin Boyle
04/26/2022	I am writing to express my concern about the multi-year construction project of a new Link station along the Chinatown-International District 5th Ave S that would be tremendously disruptive to the neighborhood and community. Up to nineteen businesses would be at risk of displacement, not to mention the disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and current communities in the Chinatown-International District by staying away from the 5th Ave S options. Thank you.	Barbara Fristoe
04/26/2022	ES.2.1 states "Expand mobility for the corridor and the region's residents, which include transit-dependent people, low-income populations, and communities of color." However, the alternatives remove housing in low income areas, remove apartment housing and overall housing availability in a geographic-limited area. The alternatives do not provide specific stops to low-income and communities of color focus more along Delridge south of Genesee.	Aaron Zielke
04/26/2022	It is most important that Sound Transit consider the 4th Ave alternative for the Chinatown International District station. This alternative will minimize the disruption and conserve businesses in Chinatown. Furthermore, it will help to preserve Chinatown in its current state, where the 5th ave alternative would certainly bring significant disruption to the community. Make the right choice and select the 4th Ave alternative.	Joseph Esteban

04/26/2022	ES.2.1 states "Encourage equitable and sustainable urban growth in station areas". However, all above-ground alternatives in ES.3.1.1.3 and ES.3.1.1.4 remove apartment housing along Fauntleroy and near Alaska junction, with no opportunity to replace this housing. Figures show potential displacements, but do not factor in cost to residents to relocate in West Seattle (at increasing competitive prices), and does not appear to factor that land for new development in West Seattle is extremely limited. Residential and commercial impacts will likely force residents and businesses out of West Seattle completely, and/or drive up costs for relocating (and existing) residents.	Aaron Zielke
04/26/2022	Bring farther-west locations for the Ballard station back into consideration. A station near 20th or 22nd Ave NW would best serve the established commercial and residential core of Ballard.	Corey Ford
04/26/2022	I am a West Seattle homeowner in Delridge. Elevated tracks are a bad idea and have huge, negative impact on neighborhood and environment, including the displacement of residential housing and businesses. The best approach is the Medium Tunnel 41st Ave (MSJ-5) pairing with WSJ-2. Thank you	Sara Mason
04/26/2022	Please do the north alternative. I live in Pigeon Point, and do not want the north end of this beautiful neighborhood taken away or for neighbors to lose their homes. Again please go with the north alternative that preserves the historic Pigeon Point neighborhood.	Rachel Seligman
04/26/2022	There is a real need for safe ways for pedestrians and cyclists to cross the Ship Canal west of the Fremont Bridge. Although the Bicycle Master Plan envisions a multi-use trail on the Ballard Bridge (figure 3-13), no project to implement this is planned (figure K-15), and crossing that bridge remains a highly unpleasant experience. I would encourage exploring opportunities to address this need as part of the Link extension, such as by designing a multimodal transit/pedestrian/bike crossing or even simply allowing fare-free rides between the Ballard and Interbay stations.	Corey Ford
04/26/2022	ES.3.1.1.2 states "alternative DUW-2 would displace the most water-dependent businesses. ...As a result, there could be a broader effect on regional jobs and income than the jobs and businesses displaced directly by the WSBLE Project." This impact is not specified as part of the Duwamish segment. It is not reasonable to use this impact as a factor for not choosing DUW-2 unless some estimate of future impact is done. This estimate of future impact must be weighed against the proposed impact to the neighborhoods impacted by the other DUW alternatives.	Aaron Zielke
04/26/2022	Please do not run major line through the CID. The heart of Chinatown is the community, the ability to walk around, to feel the community. Running a line either 4th or 5th would take away the spirit of Chinatown for over a decade during construction. This will not add to the community but take away from it. There's already a trolley. Chinatown is historic and the construction and crime that can be introduced to the community will be detrimental. Please listen to our community and do not run a line through any part of Chinatown.	Theary Chhim
04/26/2022	Please do not choose the 5th avenue alternative. Please do not destroy a sacred and vibrant neighborhood and community that is CID. Growing up in Seattle, this neighborhood truly felt like this was a city I wanted to be a part of, what diversity and inclusion stood for. Time and time again, construction and demolition in and around this area has shown the resiliency of culture and what 'diversity' means to this city. Seattle has done a poor job at saving, restoring, rectifying damage done multiple times to not only this neighborhood, but to others in the area. My grandfather was born here in the Great Depression; driving around with him, he would point out and tell different stories of what this magnificent city looked while it was being built and cultivated. I grew up going to the bake shop and tea zone creating memories that bring so much joy to me and others. This plan is only thinking of commuting and revenue, not of community and equity. Fix the west Seattle bridge. Fix the bus routes. Fix what's already there instead of creating a new problem that will last 11 years. Building on 5th avenue would result in MASSIVE negative impact to the Seattle economy, culture, and community. Construction and street closures for up to 11 years (closed stores, squatting, unemployment going up). Historic building will be demolished, decrease in air quality and increase pollution which can result in wildlife impact, CO2 rising, increase in health impairments, and negative impact on tourism into area (also economic).	Allison Yanak

04/26/2022	In S.3.1.1.3, DEL-5 alternative would remove all improvements done to Avalon Way in 2019-2020, and impacts brand new construction (still in progress in 2022). This demolition of new construction and housing should be included in environmental impacts. Additionally, there is no mention of impact to parking on Avalon Way, a "critical parking zone" per the city of Seattle. While we all want to encourage taking transit whenever possible, we cannot ignore that most people in West Seattle need a car for at least occasional travel. Impacts to residents ability to park, and the related impact to guests, vendors, ride share, etc., must be included in any impact assessment.	Aaron Zielke
04/26/2022	City of Seattle and Sound Transit, I find it hard to believe that you don't see how problematic it is to displace historically marginalized communities in order to build a transit line that connects to one of the whitest areas of Seattle. And if you do in fact see how problematic it is, you are instead making the proactive choice to do it anyway. The CID is a neighborhood that has thriving culture and life and has already been severely, negatively impacted by the city's construction projects. There has to be other options that will not continue to harm the communities that have always been mistreated and ignored. Please, do not let this project continue under its current plan.	Maddie Maguire
04/26/2022	The addition of a new station in the CID would affect the neighborhood greatly. These changes could be detrimental to many people and businesses. The CID is an important cultural and historical part of the city of Seattle. It is a safe space for many people of color. If the 4th Ave and 5th Ave stations are the only options for the new station. Please move forward with the 4th Ave plans. It will displace less people and businesses and make less of a footprint on the CID.	Angela Nako
04/26/2022	I'm advocating for the new ID light rail station to be on 4th instead of 5th. Fifth would severely impact small businesses in the area. Thank you	Megan Swanson
04/26/2022	Please move forward with the 4th Ave expansion alternatives (1a and 1b) rather than the 5th Ave expansion options (2a and 2b) - the 4th Ave options, while still detrimental to the CID and businesses there, impact and displace fewer CID businesses and would overall be less of a negative impact to the community. Please do not hurt the community more than it already has been impacted!	Jenny Mohrig
04/26/2022	Don't shut down the CID, move to 4th!	Angelica Sanchez
04/26/2022	Creating a new station is great but displacing a huge portion of international district does not outweigh the pros of the station. These businesses have struggled through the pandemic and now you are going to just bulldoze their buildings and livelihood.	John Lim
04/26/2022	The 4th Ave options for the new/expanded CID station are clearly much, much better than the options on 5th, which seem to necessitate destruction of some historic buildings and will be a major disruption to residents and businesses. The 4th Ave options have the potential to knit together pioneer square and the CID with pedestrian connections and increased activity (and potentially mitigate the danger to pedestrians at the intersection of 4th and Jackson) while disrupting only roadways and infrastructure. And given Sound Transit's record with escalators, a shallow dig seems advisable.	Evan Chakroff
04/26/2022	Please do not build the new Link Light Rail for the CID expansion through 5th ave. It would disrupt the CID community and have a significant impact on businesses in that area and the people who live there. Building the light rail along 4th ave would be a better alternative.	Grace Rathbone
04/26/2022	Do not build a second light rail stop in the international district. Not only will it be detrimental to the local businesses, it will create unsafe conditions for the local residents and visitors. Instead, build a line through the waterfront area	Laura Escalona-Flores

04/26/2022	<p>Please minimize the construction time spent in Chinatown and pick a route with no displacement of businesses.</p> <p>My friends and I are in graduate school and learned so much about so many cultures in Chinatown. One particular instance was during February when we were watching the Mak Fai Kung Fu team perform lion dances to bless the businesses. I was educated on the culture and understood how it was such a big part of the culture to ring in the lunar new year. Everyone should have the opportunity to learn about other cultures in Chinatown. The community's gathering at places like Oasis Tea is important to exchange cultural knowledge. Please consider minimizing construction and please do not displace any businesses.</p>	Kelli Yamada
04/26/2022	<p>For the stop at CID, please consider the 4th Ave options (not 5th Ave) as it would impact less businesses. In addition, the light rail station and street car have impacted so much already.</p>	JI LEE
04/26/2022	<p>As an Asian American, I'm tired of seeing asian businesses get destroyed or pushed out of Chinatown. We should be preserving this vital part of American history, and expanding the business and culture in the area, not shrinking it. I highly disagree with the invasive 5th avenue options, as it would displace beloved CID businesses and also make it incredibly difficult to do business in CID for 10+ years. Construction of public transportation is important, but it should not be done at the expense of CID. There are huge parking lots near the football and baseball fields, if anything, those should be replaced by public transportation options to significantly reduce the need to even drive and park. Having lived in New York for years, there can be long walkway tunnels that connect stations together. There is no need to force expanding an existing station, when less invasive alternative options are available and we've seen these patterns used by other cities with well established metro systems.</p>	Sherry Liao
04/26/2022	<p>I'm in support of the least invasive route through CID which in my opinion would be the 4th Ave Option which displaces less businesses and residents. With the widespread damage that has occurred in the CID due to the pandemic and public safety issues due to decreased patrols, moving forward on a 5th Ave option would be yet another blow to an already marginalized population who are constantly having to adapt to the changing landscape of Seattle's economy as an afterthought.</p>	Cynthia Ting

04/26/2022	<p>I'm writing regarding route proposals for the West Seattle/Ballard link extension (ES.3.1.2.5. Interbay/Ballard Segment, page ES-36). I am concerned in particular about the impact on the building at: 3450 16th Ave W Seattle, WA 98119</p> <p>Two of the three proposed routes go directly through the building at this address, which houses Dusty Strings Company, as well as our tenants (four other small businesses).</p> <p>Although I voted for the light rail and have looked forward to its completion for years, I'm saddened to see that my long-time workplace (Dusty Strings) may be unnecessarily demolished in the process.</p> <p>Since 1979, Dusty Stings has employed local, skilled craftspeople to build harps and hammered dulcimers, earning worldwide recognition and respect. By the turn of this century, we had outgrown our original location in Fremont, and were able to construct and move into our own new building, which has space for four tenants in addition to our own customize-designed, state-of-the-art workshop, unique to the manufacturing of handcrafted harps and hammered dulcimers.</p> <p>Through excellent management and foresight, we've continued to thrive in Seattle, even through very tough times such as the 2008 turndown and the recent pandemic. After surviving those two major challenges, what a shame it would be to end up losing our building to the light rail! If forced to relocate, roughly 65 workers would be displaced from the five businesses in this building. It would be very difficult to find another commercial space within Seattle that would meet our unique needs, as well as the needs of our tenants. Moving outside of Seattle would not only cause a major disruption to our operations but may also cause us to lose long-time, highly skilled craftspeople who have put down roots in Seattle.</p> <p>For these reasons, I strongly urge you to choose option IBB-1b ("Elevated 14th Avenue, from Prospect/15th)" which would save our building.</p> <p>Another option has been presented by Dusty Strings owner and founder Ray Mooers, which just slightly modifies the path of the other options to swing past our building instead of right through it. We understand that there may be reasons why this isn't a feasible plan, but please consider it!</p> <p>Thank you very much, Karen Ford 206-446-3291 potterford@hotmail.com</p>	Karen Ford
04/26/2022	As a strong supporter of public transit and of the communities that make public transit so valuable, I urge ST to move forward on 4th to minimize the disruption to historic, family-owned businesses that drive the International District's importance.	Enne Shah
04/26/2022	<p>I am a nearby resident, an architect, and I have lived in rail-centric cities in asia and am very familiar with rail in a dense urban environment. This comment is in relation to ES.3.1.1.4 West Seattle Junction.</p> <p>ES-23 (WSJ-1) is overly severe to the residents along 42nd, and the elevation at that point is also very high. I do not think it is the best solution, and it is the most expensive elevated solution. ES-24 (WSJ-2) is a better elevated option, but the residential character is not well suited to elevated track.</p> <p>ES-26 (WSJ-3b) is a good below grade option, and both WSJ-2 & WSJ-3b will remove/replace the Safeway (underutilized parcel) which is a positive. Both ES-27 (WSJ-5) & ES-28 (WSJ-6) are good options that would help reduce the budget, but would required the Delridge segment to be elevated.</p> <p>I would rank them from hight to low: WSJ-3b, WSJ-3a, WSJ-5/6 (tie), WSJ-2, WSJ-1</p>	Sam Scarmardo
04/26/2022	Don't build this transit because it will cause the destruction of small business. Also the xenophobic environment that it will be built in should not be tolerated	Jc Aquino

04/26/2022	<p>The new light rail station should be built on either 4th Ave option. All of the other options on 5th Ave disrupt or eliminate far more small businesses and jobs and bring all of the construction noise and dust closer to the heart of the ID.</p> <p>This neighborhood has already dealt with numerous massive construction projects (Kingdome, Safeco, Century Link/Lumen, SR99 tunnel and the street car to name a few). Years of construction will cause residents and businesses to leave and ruin the amazing character of this neighborhood. Those that stay will have to endure years of noise, dust and disruption.</p> <p>Infrastructure projects like this negatively impact communities of color disproportionately to this day. Transit projects must be equitable and in order to meet that bar, transit authorities must listen to the communities that will be most impacted by a project.</p>	Julia Heitz
04/26/2022	<p>Figure ES-33 CID-2a CID-2b</p> <p>No construction on 5th Avenue! Our community has been through so much during this pandemic. This plan adds insult to injury. Air quality, parking, and traffic issues will negatively affect my family's livelihood and quality of life as we live and own a business within two blocks of 5th Ave. I write this comment as I nurse my young son who will breath in the dust from the construction as he lives, plays, and will go to daycare in the central CID. We love the businesses that will be displaced, and it's unacceptable after all they have been through.</p>	Morgan Harkness
04/26/2022	<p>Please do not take away an entire neighborhood and countless small businesses with the proposed West Seattle-Ballard light rail expansion! The expansion would threaten not only the community but several historic buildings too. The choice is clear; lay tracks under 4th avenue to avoid taking away Chinatown Historic District land.</p>	Isabel Lay
04/26/2022	<p>Please continue with the 4th Street Station options. Time and time again, the Chinese-International District has been cut into and divided to make way for transit. This cuts into the rich, diverse proud culture that is part of Seattle. The 5th Street and Diagonal options will destroy and displace businesses and people that have made the CID so rich with culture. Leave the Chinese-International District the way it is.</p>	Amelia Gunn
04/26/2022	<p>I would like for Sound Transit to move forward with one of the proposed locations on 4th Ave for the new Chinatown/ID light rail station. I'm concerned about the negative impacts on local businesses in the area during construction, and believe that the locations on 5th Ave will cause more harm than the locations on 4th. Please move forward with the shallow station option for 4th Ave S.</p>	ALEXANDRA MARIANI
04/26/2022	<p>I understand that a number of businesses are concerned about the potential impacts of the 5th Avenue options for the CID stations on local businesses and the ongoing displacement and gentrification of the area. Hopefully these concerns will be listened to, I know increased transit in the area will be beneficial but hope it can be built in a way that minimizes damage to Seattle's historic ID.</p>	Eva Power
04/26/2022	<p>Please proceed with the 4th avenue option in CID to minimize impact to & closure of important local businesses.</p>	Xuewei Cheng
04/26/2022	<p>Hi,</p> <p>I'm writing about the station that will link Ballard and West Seattle, but run through International District.</p> <p>I would recommend using 4th street as it affects less businesses and employment. Utilizing 4th Avenue would run into the already vacant area where the Salvation Army was located.</p> <p>I am hoping that small businesses won't need to be closed down to build and update the International District station.</p>	Tara Hixson

<p>04/26/2022</p>	<p>I am a West Seattle / N. Delridge resident, and have several concerns about SoundTransit's proposed options for light rail extension. I and several members in my N. Delridge neighborhood strongly favor the SkyLink option vs. train, and ask that Sound Transit consider this efficient, cost effective, lower environmental impact alternative.</p> <p>I have personally ridden and seen gondola technology in urban markets work extremely well. They are highly efficient, attractive modes of transport in both Bogota and Medellin, Colombia; Hong Kong; and Singapore. They are especially effective in mixed terrain and hills, as is the case between West Seattle and SODO.</p> <p>While there are numerous advantages to gondola technology's solution for West Seattle, 3 principal reasons stand out for electing this option:</p> <ol style="list-style-type: none"> 1- significant taxpayer cost savings 2- speed of development with FAR LESS environmental impact 3- less community disruption <p>1: Project funding/cost Chapter 2.8.2.1.1 lists the many alternatives contemplated in the DEIS and the associated total costs between \$3 billion and \$4.7 billion which is about double or triple the amount approved by voters in ST3 (\$1.7 billion). Before the pandemic, three West Seattle buses (RapidRide-C, #121, #21) already provided 25,500 trips daily. The DEIS projects 27,000 trips on light rail by 2042, only 1500 more than buses were providing in early 2020. There will be little improvement in travel time for many riders, given the likely need to take a bus to a West Seattle light rail station and then disembark at SODO and wait for another light rail train to go anywhere else for at least the next 15 years. See Transit Time category that follows.</p> <p>Table 2-9 of App. N indicates Sound Transit estimates light rail to reduce 400 vehicle trips on the West Seattle Bridge by 2042. At a light rail cost of almost \$10 million per additional daily trip (plus the building of additional OMF capacity and train acquisition) and an annual operating cost of \$35 to \$40 million this investment does not seem worthwhile – and that's without considering the cost to the environment of greenhouse gases emitted during construction.</p> <p>Gondola technology has been proposed by citizens since 2015 but always ignored or dismissed as incapable of serving regional transit needs despite the fact that it is being suggested, not as a regional mode, but as a high-capacity feeder for a densely developed terrain with hills and water obstacles where light rail is difficult, expensive, and damaging to build. Other light rail corridors such as from SODO to Georgetown/South Park could provide a more economical way (both in construction and annual operation) to provide light rail to the Duwamish peninsula.</p> <p>2-3: Acquisitions, Displacements, and Relocations Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the "Least Harm Analysis" test in 4.2.18.5. A 2014 Sound Transit paper on mode choices for the regional transit network stated: "Several of the technologies that have moderate to high HCT capabilities, but are generally less suitable for Sound Transit, could be considered for some service if that service would operate on principally exclusive rights-of-way and is not intended to interline (i.e., share the same tracks) with the light rail 'spine,' which extends from Everett to Tacoma, and from Seattle to Redmond." When Sound Transit issued the April 7, 2022 Gondola Feasibility Report, it reiterated this statement in dismissing "SkyLink's" proposal from consideration. SkyLink is proposing a gondola to serve not as the primary mode of the regional network but as a feeder from the ST3 designated station locations to the main spine of the light rail system. An urban gondola could provide the capacity needed, could be constructed with minimal disruption, displacement, and damage to the environment and established community. Specifically, it would avoid the following problems caused by proposed light rail alternatives: Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore. Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin practically shows NO available home inventory in West Seattle, the DEIS just says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify for a new home based on current social status / credit rating. Commercial real-estate is very limited in West Seattle which means displaced businesses may have to relocate causing them to lose their customer base and West Seattle residents may have to travel longer distances to get services.</p>	<p>Hans Theisen</p>
-------------------	---	---------------------

	<p>Chapter 4.2.3.3 includes several pages of huge impacts. It talks about the fact that light rail will destroy businesses, reduce the city’s tax base and may affect tribal fishing rights. It fails to address the social impact for the employees and owners affected by this destruction, many of them small businesses whose livelihood is affected. It does not address the strain on the social services. Even more importantly it does not address the impact to the community which has grown around these services and the businesses and families which will be impacted indirectly. Alki Beach Academy for example provides daycare services to 300 children; affected parents may need to quit their jobs or move elsewhere if they lose affordable daycare.</p> <p>Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, it claims it is “consistent with existing views.” While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The northern bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway will be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther.</p> <p>Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRide-H. Now all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fautleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) will be impacted by multi-year construction and related detours. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours.</p> <p>Figure 4.2.5-4 does not show any coverings over the station therefore making it appear lower than it is. It only shows the destruction of homes directly adjacent to the station, but not along the guideway which again provides a distorted impression of what will happen.</p> <p>Chapter 4.2.5.3.3 fails to mention that Olmsted already suggested to preserve the view from Pigeon Point which any of the southern alignments would destroy, for details: Pigeon Point - West Duwamish Greenbelt – Friends of Seattle's Olmsted Parks (seattleolmsted.org).</p> <p>Please consider what is a smarter, safer, faster and far more economical option than light rail -- SkyLink is the right choice for this area.</p> <p>Thank you.</p>	
04/26/2022	the option on 5th Ave S will displace many CID small businesses - these construction and street closures for up to 11 years will impact many of the families of minorities (not to mention, who already face many systemic oppression). This action will literally force these business to be pushed in the corner. The dramatic loss of revenue for these family is not worth the whole construction!	Sophie Chun
04/26/2022	I hope the sound transit board would make the best decision for the community and build the tunnel option because it displaces the least amount of businesses and residents and also has the least negative environmental impact to our land and water.	Bethlehem Zergaw
04/26/2022	I would prefer the shallow station on fourth because businesses like Seattle Best Tea, Chung Chun, Fuji Bakery, and many more, would be adversely affected by any of the 5th avenue options. I am drawn to CID to patronize those businesses and feel they also contribute positively to the community. I am enthusiastic about mass transit and extensions of light rail service, and I will be happiest if this can be done thoughtfully.	Ginger Woo
04/26/2022	Sound Transit has an obligation to factor in the community it serves, and to work with groups that make Seattle a unique and vibrant place. While there must have been logistic factors that lead Sound Transit to consider the ID/Chinatown district as the prime location for these expansion, it’s important to remember how many times this area’s community has been lowest on the city’s priority list. Given the history of neglect towards the ID, I encourage more discussion on this expansion. This isn’t a light matter, and “expansion” should not mean another loss for a cultural hotspot of Seattle.	Daphne Maiden
04/26/2022	I’m writing to encourage you to put the new Chinatown station on 4th Ave instead of 5th. Businesses and residents in the area seem to really prefer that option, and some places I personally love would be negatively affected by the current plans for construction on 5th. Please listen to the people who live and work there!	Lauren McClain

04/26/2022	I do not believe that the build of sound transit in the CID 5th Ave will be conducive to the community. This interrupts multiple small businesses owned by people of color. This project is not equitable, it further pushes the City of Seattle's economical quota for high income persons, with no regards to the working class. This project, in my opinion, should not happen. It is my hope that the matter of public opinion holds enough weight to make change, and to stop the follow through of this project.	Haley Johnson
04/26/2022	Please do not choose an option that disrupts business in Chinatown/International District. The Asian American community has suffered enough in past two years. Please be mindful of these small businesses and this community.	Jamie Prins
04/26/2022	<p>The following is support for selecting the 6th/Mercer DT-2 and the Prospect Street Station/Central Interbay SIB-3 segments.</p> <p>According to Tables 6-6 and 6-7, the 6th/Mercer DT-2 option connecting to the Prospect Street Station/Central Interbay SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground. This combination of segments should be selected to help maintain our residential communities.</p> <p>According to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP. Therefore, the 6th/Mercer DT-2 should be selected.</p> <p>According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access to the parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. This should be a consideration to proceed with the 6th/Mercer DT-2 option instead.</p>	Josiah Manson
04/26/2022	Please do not build the Chinatown/ID transit on 5th Ave!! Businesses located in that area would be demolished if the light rail was built on 5th. The businesses not only makes ID what it is, it represents Seattle as a whole, which would be a huge loss for Seattle.	Terri Tran

<p>04/26/2022</p>	<p>I am a West Seattle / N. Delridge resident, and have several concerns about SoundTransit's proposed options for light rail extension. I and several members in my N. Delridge neighborhood strongly favor the SkyLink option vs. train, and ask that Sound Transit consider this efficient, cost effective, lower environmental impact alternative.</p> <p>I have personally ridden and seen gondola technology in urban markets work extremely well. They are highly efficient, attractive modes of transport in both Bogota and Medellin, Colombia; Hong Kong; and Singapore. They are especially effective in mixed terrain and hills, as is the case between West Seattle and SODO.</p> <p>While there are numerous advantages to gondola technology's solution for West Seattle, 3 principal reasons stand out for electing this option:</p> <ul style="list-style-type: none"> 1- significant taxpayer cost savings 2- speed of development with FAR LESS environmental impact 3- less community disruption <p>1: Project funding/cost Chapter 2.8.2.1.1 lists the many alternatives contemplated in the DEIS and the associated total costs between \$3 billion and \$4.7 billion which is about double or triple the amount approved by voters in ST3 (\$1.7 billion). Before the pandemic, three West Seattle buses (RapidRide-C, #121, #21) already provided 25,500 trips daily. The DEIS projects 27,000 trips on light rail by 2042, only 1500 more than buses were providing in early 2020. There will be little improvement in travel time for many riders, given the likely need to take a bus to a West Seattle light rail station and then disembark at SODO and wait for another light rail train to go anywhere else for at least the next 15 years. See Transit Time category that follows.</p> <p>Table 2-9 of App. N indicates Sound Transit estimates light rail to reduce 400 vehicle trips on the West Seattle Bridge by 2042. At a light rail cost of almost \$10 million per additional daily trip (plus the building of additional OMF capacity and train acquisition) and an annual operating cost of \$35 to \$40 million this investment does not seem worthwhile – and that’s without considering the cost to the environment of greenhouse gases emitted during construction.</p> <p>Gondola technology has been proposed by citizens since 2015 but always ignored or dismissed as incapable of serving regional transit needs despite the fact that it is being suggested, not as a regional mode, but as a high-capacity feeder for a densely developed terrain with hills and water obstacles where light rail is difficult, expensive, and damaging to build. 04/26/2022	<p>I live in Seattle. A multi-year construction project of a new Link station along the Chinatown-International District’s 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options.</p>	Ilana c
04/26/2022	<p>To whom it concerns,</p> <p>I am an Asian American, Seattle native that has grown up in the Chinatown-ID area and am commenting to urge Sound Transit to consider the 4th Ave routes for the new station. The 4th Ave alternative will impact the least amount of businesses in the CID, which we all know have been effected heavily in the last 2 years of the pandemic and the rise of anti-Asian rhetoric, racism, and hate crimes. The businesses that still stand and that will be affected by the 5th Ave route are beloved and standing testaments to our Chinatown. The CID neighborhoods and the Asian American community there has been heavily disrupted by prior such as Safeco Field and Centurylink Field; moving forward with the 5th Ave routes would be a blatant disservice to the culture and the residents of the CID. Please consider building the new station on 4th Ave.</p> <p>Thank you.</p>	Amica Huynh

04/26/2022	<p>The 4th Ave S alternatives should be used. I am against the 5th Ave plan.</p> <p>The neighborhood has experienced the construction impacts of the Kingdome, then Safeco Field, and then CenturyLink Field. Chinatown-ID has felt the pressure of construction impacts from the SR-99 deep bore tunnel, Seawall, Seattle Waterfront, and demolition of the Alaskan Way Viaduct in adjacent Pioneer Square. In recent years, the construction of the First Hill Streetcar impacted the neighborhood for years. Time and time again, government's role in implementing projects have come with a cost to Chinatown-ID, its residents, businesses, and its cultural identity.</p>	Kassandra Escalera
04/26/2022	<p>Do NOT demolish restaurants in the CID! This is not helpful and we lose valuable cultural sites in Seattle! Find another place to put the site!</p>	Erin Campbell
04/26/2022	<p>The plans for the Chinatown-ID station will displace several businesses. I think many of the residents and small businesses that we travel to this area for would appreciate a station that does not have as severe of an impact on their living. Something a bit further away from the main business center might be better.</p>	Sophia Howard
04/26/2022	<p>Hello! I wanted to give input that I think placing the new CID station on 5th and impacting the CID would be a massive mistake. The residents of the CID have always borne the brunt of Seattle's expansion, and razing over some of the businesses and having such a massive impact with construction would take away the reason folks go to the CID in the first place. The 4th Ave is a much better option and will only minority inconvenience drivers (and Seattle honestly needs to consider pushing people to drive less anyway), and if the Alaska Way Viaduct should be any lesson, drivers will screech about traffic but taking away some lanes doesn't really impact them much. .</p>	Weng-Ching Cheung Cheung
04/26/2022	<p>As a resident of Magnolia, I am strongly in favor of a tunnel for the Interbay/Ballard segment, and I ask you to reopen consideration of the tunnel from around Fishermens Terminal to central Ballard (around 20th Ave).</p> <p>A tunnel is vastly more desirable than a low bridge for reliability in the face of ship traffic, and far more desirable than any bridge but especially a very tall one, with regards to the space occupied by the structure and number of people and businesses displaced by it.</p> <p>My understanding is that the rise in property values has largely or completely closed the gap in cost between these options. (Especially if it's a non-openable bridge, which the Coast Guard would require be much taller than previously expected.) Obviously this doesn't make the tunnel less expensive, but if the bridge option is a similar cost, it seems to me difficult to justify going with the much less desirable option of a bridge.</p> <p>And the tunnel to downtown Ballard seems to me to be much more desirable than 14th or 15th. The decision was harder when the bridge was so much cheaper than a tunnel, but that's no longer true, and I would much prefer the much better access to all the businesses and venues around Ballard Ave., including the theatre on Market street and the library, especially when 15th Ave is already so well served by buses. It seems to me that a station along 20th would be at least as good as 15th, and far better than 14th, for access to the hospital.</p> <p>I like the fact that the Galer Street Station option (SIB-1) has significantly less impact on 15th Ave, and doesn't cut off access to the Queen Anne greenbelt trails. It seems to me like it would be much better for access to the cruise terminal either for walking or perhaps the cruise companies would supply shuttles. (Perhaps I'm wrong about how much better that would serve the cruise terminal.) I am however very concerned about the possibility of it displacing the tiny village shelter.</p> <p>Downtown Segment: I worked in South Lake Union until fairly recently, and I don't love the proposed SLU station options. I've seen a suggestion that Westlake could be a better alternative in SLU, and I like the idea a lot if it's feasible. South Lake Union really warrants good service, and Westlake would be far better for access to the SLU park in addition to the various restaurants and employers in that area. But perhaps the proposed station options have really good connections to buses on 99?</p> <p>Thank you.</p>	Andrew Abernathy

04/26/2022	Please do not build the light rail station in the International District. I am very worried about increasing rates of xenophobia against the Asian community and know many Asian elders who spend large, important amounts of time in the ID. This neighborhood has felt enough impact from construction over the past decade and does not deserve further street and business shutdowns.	Sarah Eusebio
04/26/2022	The history in CID is so important and vital to the Asian American community in Seattle. The livelihood of the small businesses there would be impacted negatively. We care deeply about the businesses there and the families who own them. Please route the lightrail somewhere else where it won't affect these businesses as much. They have already been impacted by covid.	Judith Reyes
04/26/2022	Don't put the international District/Chinatown station near 5th!!!!	Renard Burnett
04/26/2022	I am extremely concerned that construction on 4th avenue will have a severely negative impact on businesses and residences in the CID. The businesses and residents that are not displaced will be subjected to 16 hour days of noise and air pollution for up to 11 years. Post covid many small businesses are struggling to maintain themselves, the massive disruption caused by this development could be detrimental to their preservation. The CID has a legacy of such historical and cultural significance in Seattle measures should be taken to protect it as we do with registered landmarks. Building the station in 5th is a better alternative. Please seriously consider all the potential consequences and impact this construction will have on tenants and business owners.	Nicola Kretschmer
04/26/2022	From my understanding of the proposal Sound transit has offered two options in building the another light rail station: along 4th Ave and 5th Ave. I am highly disappointed and upset in these two options especially the 5th Ave option. This is highly destructive to the Chinatown-International District (CID) Community. This will not only shut down small businesses in the area but will displace elders and families who have lived in the neighborhood for multiple generations. The CID has a long history of having local government ignoring and building through this area and not truly thinking about the harmful impact it has on the people. CID has barely recovered from the economic hit during this pandemic. Then to have this long-term construction come through to closed down these small family of color owned businesses does not live up the equity statement Sound Transit says it values. Prior to the pandemic key community leaders/elders told Sound Transit to NOT build along 5th Ave due to the reasons listed above and how traumatic this will be to the local community not to those who live in the area but those who work and shop and rely on some of these small businesses. Community leaders were told that it would be more costly and more work for the engineers to figure out how to build along 4th Ave which translates to Sound Transit not wanting to put in the hard work to make sure the CID and its local community are protected. This is another example of institutional oppression of focusing more on money vs people. This is truly disgusting and I do not approve of the option to build on 5th Ave.	Tagoipah Mathno
04/26/2022	For the CID portion of the plan, please move forward with either of the 4th Ave. options. The impact on CID businesses for the 5th Ave. options is far too severe, especially when the CID is just starting to feel vibrant again after the pandemic and the anti-Asian sentiment that came to the surface in these last few years. The 4th Ave. options will help the CID continue its economic recovery while still allowing for important progress in our public transit and light rail connections. Move forward on 4th.	Quynh Tran
04/26/2022	I do not support the plans for the 5th Ave Chinatown line. This new construction will be detrimental to the community and negatively impact the local businesses and economy.	Cindy Tian
04/26/2022	I plead not to build the sound transit based on the 5th Ave alternative option, because that would negatively impact the businesses in the area greatly. There's also so much history that should be preserved and prioritized when making these decisions.	Yoona Chang
04/27/2022	Regarding the location of the new CID station: I have been a frequenter of 5th Avenue in the ID for the past 20 years, since I was a teenager. There are few parts of Seattle that have not become completely unrecognizable in that time, but around 5th Ave there are still many of the same local businesses and the same feeling of community. It would be devastating to lose this space in the heart of the ID, which has already survived so much in the last several years. I urge Sound Transit to consider the 4th avenue alternative in order to preserve this vital community hub for years to come.	Caitlin Wood

04/27/2022	To propose any of these plans through the CID just shows how out of touch with the area these developers are. Do you understand the toll these past years have taken on the businesses in this area? These proposals will ultimately crush the economy- and for what? It feels that the location is convenient only for those who attend athletic events. Please hear those who live and work in the area when they say this will be catastrophic.	Jessica Bartel
04/27/2022	Between the options of building the Sound Transit on 4th Ave or 5th Ave, it is blatant to build a connecting line on 4th. Although both options seem to impact businesses and people, it will be more detrimental if the Sound Transit were to construct on 5th Ave. These plans will displace 19-27 businesses, eliminates 20-30 parking spaces, and disrupts the lives of over 250 employees to find new jobs or start over. The CID is a historically rich neighborhood, home to the Asian American community and many of the businesses are family owned and stood the test of time nevertheless the during the pandemic. Please consider "moving forward on 4th!"	Annabel Lee
04/27/2022	Building transit in the International District on the 5th Ave would be detrimental and disruptive to the community, small business owners, and employees who have already been impacted by the pandemic. It impacts a larger amount of local businesses than if the city were to build on 4th Ave. Part of Seattle's vibrancy is it's support for small and diverse businesses. For the sake of the community and historic ID, we demand the city moves forward with 4th Ave to build this light rail station.	Micaela Curley
04/27/2022	Regarding the West Seattle Junction station location: I am incredibly excited for light rail to arrive in West Seattle but we cannot gain transit access at the expense of our community identity. The elevated alternatives would completely disrupt the neighborhoods along the alignment in numerous ways, both in the short term, with negative effects of construction, as well as long term, with permanent displacement and visual impacts. Between the West Seattle Bridge closure and the COVID-19 pandemic, the past few years have brought serious infrastructure frustration, countless business closures, and forced resident displacement to West Seattle. On the heels of all this, selecting an elevated alignment alternative that would potentially displace more than three times the number of residents and businesses as a tunnel alternative , as well as bring several years of surface level construction impacts, would be incredibly onerous on West Seattle residents. Plus, with a spike in employees working from home, daytime construction noise would be more impactful than ever. Please consider this comment a strong vote in support of seeking partner funding and moving forward with Alternative WSJ-3a.	Taylor Knowles
04/27/2022	Please do not build through 5th AVE, there are many detrimental effects and i believe there is a better alternative. Not only will this lead to closure for years— the businesses nearby will be forced to closed and possible even relocate. With everything going on because of Asian hate crimes, this will continue to make things more difficult/worse.	Victoria Le
04/27/2022	Hi, I love the current neighborhood in the ID and it would definitely impact it if the 5th Ave route was chosen. Please don't do this, it's taken so long for CID to even come close to what it was before COVID and even for all the Asian hate to die down. If a route had to be chosen, the 4th one would be much better and have less impact on such historic neighborhood.	Marian Yang
04/27/2022	Please favor the options that are on 15th NW rather than 14th: the Ballard Food Bank located on the corner of Leary Way and 14th is a very important part of Ballard. I volunteer there and construction that would involve long-term closing of nearby parts of 14th NW would make it difficult for the food bank to get deliveries by truck and make home deliveries of food, plus making it more difficult for our clients to access our services. More people than ever are relying on us for their food.	Robin Cowan

04/27/2022	<p>Hi,</p> <p>I want to say, is that I do not support the West Seattle and Ballard Extensions especially of where you folks plan to place it. This will have a huge impact for the Chinatown International District! This will cause harm to the community and the local business as well for our elders in the community! I urge you to replan and move it else where that won't cause any issue with the community! This is a community is very close to my heart and I don't want to see any more business go out..</p> <p>I do however want safer bus/link stops but this is not the way to go. I urge you folks to reach to the community of the CID not just the local business but to our elders for their input and to make sure you have them in multiple languages as most of them do not read or speak very little English!</p> <p>Again I do not support the West Seattle and Ballard Extensions, especially of where you folks plan to place it, I urge you to replan it and move it where it will not have a impact in the CID! And to reach out to the CID community for input of where it should go!</p> <p>Thank you!</p>	Ann Wong
04/27/2022	<p>Sound Transit should not move forward with the 5th Ave light rail route through the Chinatown-International District, and instead should opt for the 4th Ave route. If the 5th Ave route was chosen, it would lead to up to 11 years of construction and street closures, which would in turn lead to poor air and sound quality due to the loud machinery being operated and detours by cars, disturbing businesses and residents, as well as being the very opposite of Seattle's commitment to combatting climate change. But most importantly, the construction of the 5th Ave route would destroy many local businesses in the Chinatown-International District (CID), such as Oasis Tea Zone, Ping's Dumpling House, Joe's Bar, and Pacific HK Cafe, literally splitting the neighborhood in half. The CID already has experienced the brunt of development projects, housing and transportation, and it is having a detrimental impact on a community that has decades of history in Seattle. Instead of destroying more of the neighborhood, efforts should be put towards preserving it. The 5th Ave route would not only be an act of demolition, but of xenophobia and racism, especially during an unprecedented rise in hate crimes against Asian people. If the City of Seattle truly cares about small businesses and the lives of its Asian Pacific Islander residents, this project would be reconsidered.</p>	Julie Tan
04/27/2022	<p>Commenting to vote for 4th Avenue options (CID-1a, CID-1b) when building the sound transit station linking west Seattle to Ballard. This option will have less economic impact on small businesses, residents, workers, guests, and overall well being of the CID. Thank you for considering.</p>	Caroline Cho
04/27/2022	<p>Dear Sound Transit Board of Directors:</p> <p>I urge you to find an alternative to the Chinatown - International District (CID) station that will not disturb that neighborhood by demolishing beloved food and drink institutions and bringing bear around-the-clock construction to the area for years to come. The CID has put up with disruptive infrastructure project after disruptive infrastructure project, from I-5 to stadiums. In other words, this neighborhood has long been dealing with racism in urban planning. Please do your part to end that and find an alternative in SODO or elsewhere.</p> <p>Sincerely, Celia</p>	Celia Gurney
04/27/2022	<p>Planning Light rail going through Chinatown/ international district will impact its residents, small businesses, workers, guests, and the overall well being of Chinatown/International District. Please find alternative route and stop interrupt the peace and the historic landmarks of Chinatown/International District.</p>	Sean Dong

04/27/2022	<p>The plan should be to use 4th Ave in order to build the link between West Seattle and Ballard. This affects far less businesses and does not uproot nearly as much culture that exists within 5th Ave! Seattle has a long history of treating Indigenous and Asian American citizens with less than ideal values, we need to showcase that we appreciate and respect and most importantly value that culture!!</p> <p>More so, the impact for a 4th Ave train station would be FAR less than a 5th Ave train station!</p>	Austin Fowler
04/27/2022	<p>Regarding the West Seattle Extension: The Avalon station is unnecessary and should be deleted from the preferred alternative plan. Its deletion would allow a lower elevation for the Delridge station, thereby saving costs and increasing accessibility. Frequent bus service should be made available between the dense Avalon neighborhood and the two West Seattle stations. The Delridge station is imperative for transit access to southern BIPOC and low-income communities and South Seattle College (need to ensure frequent bus service from these areas to the station). This station is also the logical connection for future rail service to the south (White Center, Burien). Locating this station on Dakota, just south of the DSHS building, would preserve the commercial area to the north, which has become an important community resource and gathering place (Delridge Deli Mart, Uptown Espresso, Ounces Taproom, Skylark Cafe). Please ensure that access to the bridge via Delridge is kept open during construction! I support the elevated Fauntleroy (Les Schwab/Shell station) location for the second station. 41st/42nd would be fine but more expensive. This station is the logical connection for transit to the southwest/Vashon ferry/Arbor Heights.</p>	Brian Ruff
04/27/2022	<p>I've lived in West Seattle since 2004 and I fully support adding light rail to our community. However, elevated solutions are both an eye sore and displace too many businesses and residents. I am writing to advocate for underground solutions as so many other communities have. If I read this correctly, I believe underground solutions require third party funding. My question is: in other communities where tunnels are used, did those also require third party funding? It's been tough these last two years of the WS bridge being down to not feel like second class citizens. The city has done a terrible job managing this disastrous situation. Please help WS residents feel their lives matter and prioritize a solution that is least disruptive to our community and find the funding. Thank you.</p>	Karen Corsica
04/27/2022	<p>Please consider the potential negative impact this will have on the employees, residents, and visitors of the ID if the station is built on 5th. The option to build on 4th is so much less disruptive to this fragile community. The option on 4th is also demolishing vacant lots rather than booming small businesses.</p>	Lane Harmon
04/27/2022	<p>Please do not go with the 5th Ave option. Selecting that option will close down businesses and impact the neighborhood of CID. Some of these businesses might not be able to afford to move and will impact the minority community as these kinds of projects usually do. There is no benefit to the 5th Ave route, please use the 4th Ave option.</p>	Chris Giordano
04/27/2022	<p>Please do not displace people and businesses of the beloved Chinatown-ID on 5th. Choose the least disruptive option when possible-the 4th Ave option as there is enough space to do that type of construction. No destruction of actual living and vibrant neighborhoods!</p>	Leah Bui
04/27/2022	<p>I am concerned about the displacement of people in the International District who are already vulnerable. This would affect not only housing but existing business, and there does not seem to be an adequate plan on how to aid these people in a transition.</p>	Alyssa Villablanca

04/27/2022	<p>The best long-term option for West Seattle is to build the LONG TUNNEL (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b). This option is the only one that will alleviate significant and irreversible impacts on the neighborhoods and environment that is in the path and around the proposed light rail.</p> <p>2. I fully support the removal of the Avalon Station. The cost savings in doing so can help support the costs of the long tunnel. Additionally, the need to purchase properties will be decreased, also allowing extra funds to migrate towards a long tunnel. An Avalon Station would be so close to the Junction Station, and with only 1200 riders projected, it seems like a waste when removing it could shift funding towards a rail line that would be immensely less impactful on residents, businesses, and the natural environment. And yet it would still serve the community. Residents in and around Avalon can walk to the Junction station easily - if you look around this community, lots of folks are walking to Trader Joe's, Whole Foods, and the gym. For those that cannot walk, buses go there as well. Community members who are on the East side of Avalon Way can easily access the Delridge Station. Our city is so hyper focused on bike lanes and removing vehicles, we should also be encouraging those who can walk, to walk. If Avalon cannot be removed, then it should be an underground station, otherwise this location at the entrance to West Seattle will be greatly compromised.</p> <p>3. I believe the Delridge station closest to Nucor is problematic. It seems like a poor walk shed and wouldn't allow for transit-orientated development so close to the steel mill and the city/state building nearby that has offices for the foster care system. It also seems like a poor location for buses to terminate. DEL-2a or DEL-4 appear to be more user-friendly locations and it is ideal to have a lower guideway for folks who live and work adjacent to this area.</p> <p>4. Please study additional long tunnel alternatives. Perhaps with the removal of Avalon Station, and less property acquisition, a long tunnel might not require 3rd party funding. Property values continue to increase each month, so that is also a barrier to going above ground. Perhaps the Yancy/Andover alternative (WSJ-4/WSJ-5) with a tunnel East of Avalon would allow lower guideway and cost savings. And finally, the Pigeon Point Tunnel alternative (appendix M) would place the Delridge station in a better location and reduce property acquisition costs.</p>	Lisa Zerkowitz
------------	--	----------------

04/27/2022	<p>After looking through the alternatives for stations in Chinatown/ID, I'm shocked at the disruption to minority-owned businesses (and others), homes, traffic, street cars, historical buildings, and length of construction. There has to be a better place to add a station to connect routes if not having the different routes use the same platform as the current one line. I don't care how "crowded" the current platforms would be if all routes used them. It would be better than dealing with seemingly-endless construction and disruptions in the community. I've used other transit systems across the country and they have similarly-sized stations used by several different lines and they're not over-capacity (notably Washington, DC subway) and I'm pretty sure they have a higher number of people coming in and out of the stations. I haven't even had a chance to review the other stations yet. The horrendous Chinatown/ID station construction plans were only brought to my attention because several small businesses that I regularly patronize posted them asking people to comment. So I'm afraid all the other stations are going to have the same terrible impact as this one. If this is the cost of adding the confusing mish-mash of routes and stations to add trains zig-zagging across the city, I don't want it at all. How about we just focus on completing the main North-South light rail spine we already started. Finish the lines to Tacoma and Everett quicker and just improve East-West travel by upgrading buses and bus routes. I'm a life long resident of Puget Sound (and seven years downtown Seattle) and I have never complained about traveling to Ballard and West Seattle by bus. The scattering of extra stations and routes, I fear, are too confusing to navigate, especially for visitors. The extra cost, time, and disruption in the daily city life are too great. If I absolutely had to choose an option for Chinatown/ID, it would be one of the two 4th Avenue options only because they appear to have the smallest business impact. But the street car disruption and residential relocating are absolutely unnecessary. Like I said before, I would rather have no more East-West routes at all. After Capitol Hill, First Hill, Chinatown-ID, and other neighborhoods endured never ending construction of light rail stations and at-grade street cars, the coming years and decades of more disruptive construction are unacceptable. I feel these neighborhoods are just barely beginning to recover and benefit from the seemingly just completed light rail and street cars. I also don't think you advertised this comment period well enough. I'm only now learning about this the week of the deadline and I ride Sound Transit every day of the week. Now I'm afraid I won't have time to review the other options for the other neighborhoods being impacted before the comment period ends. I will no longer be voting for any mass/rapid transit that goes beyond completing the North-South spine quicker and more efficiently if this is the cost we have to pay for "better" transit..</p>	Michael Webber
04/27/2022	<p>I am writing in support of business owners and other community members of the Chinatown International District to urge Sound Transit to move forward with the 4th Avenue alternative (CID-1a or 1b) for the new train station. The higher impact of 5th Avenue options (CID-2a and 2b) on the CID and it's small businesses in both the short and long terms is clear and avoidable. Please center the most deeply impacted in this decision-making process and move forward with one of the 4th Avenue options.</p>	Cecil Seferos
04/27/2022	<p>Hello, I'm writing today to provide comments on the Chinatown-ID station alternatives for 4th & 5th Aves. I've been a resident of the Pacific Northwest and frequent visitor of Seattle for nearly my entire 32 years of life. In Dec 2019, I moved to the Magnolia neighborhood, then I moved to the North Beacon Hill neighborhood last Nov to be closer to friends and fellow Asian American community members. The Chinatown-ID neighborhood is important to me and so many other members of our community. It has already seen much change and displacement due to other construction projects in the vicinity, such as the I-5, Kingdome, Safeco Field, CenturyLink Field, SR-99 deep bore tunnel, Seawall, Seattle Waterfront, Alaskan Way Viaduct demolition, and the First Hill Streetcar. As a member of this community who frequents the businesses of Chinatown-ID and cares deeply about preserving the livelihoods and cultural identity of its residents, I strongly urge the city to consider the 4th Ave alternatives only. Thank you, and take care.</p>	Jase Moon

04/27/2022	<p>I am a resident of the Avalon neighborhood in West Seattle. I think that the light rail between Delridge station and Avalon station should utilize a tunnel. This is important to maintain the walkability of the region and ensure future development. There are few examples of modern transit systems that are building elevated lines through residential areas, because it ultimately reduces future opportunities and restricts mobility.</p> <p>Also, Andover station (Del 5 and Del 6) is badly designed and should not merit further examination. It is poorly places compared to the other options in Delridge.</p>	Timothy Wright
04/27/2022	<p>Hello!</p> <p>My name is Cecilia Carroll and I have been a Seattle resident for all 19 years of my life and want to add my comments about the ideas of construction that will affect Chinatown/International District. I believe that whatever option Sound Transit decides on, it needs to be one that does not negatively impact the CID community.</p> <p>Multiple of the options, especially the 5th avenue options, will create permanent impact on the businesses in the CID. Leading too, at best, temporary damage on the businesses located there due to construction, or, at worst, completely demolish significant local businesses.</p> <p>As someone who has lived in Seattle for my entire life, I would hate to see any part of this community damaged. Every business in the CID has significance. While I do not live in the CID, I travel there very frequently and have more positive memories there than I can count. Going to Oasis Tea Zone before a theater performance with my friends, spending Mothers' Day at Purple Dot Café, and the many, many times I've gone to Uwajimaya and Daiso. Walking past every small business, finding a place I've never tried before, and even just returning to a place I know and love so well is unforgettable. To demolish any business would be to impact the entire district negatively, both financially and culturally. Listen to the community, we do not want to see any business in the CID demolished or lose revenue due to construction.</p> <p>I urge Sound Transit to chose whichever construction option will have the least amount of negative impact on the CID community, even if this means coming up with a new station alternative that hasn't been mapped yet. While I support the expansion of public transit, it should never come with needing to sacrifice parts of the community.</p>	Cecilia Carroll
04/27/2022	<p>I vote for a tunnel 14th Ave.</p> <p>Compared to other options, it is cost effective, will be easier on citizens and traffic during construction, and it will preserve the lovely views.</p> <p>Thanks</p>	Virginia Newman
04/27/2022	<p>The proposed CID station MUST be put on 4th ave! Both of the 5th ave options would carve into our neighborhood, shutting down beloved local businesses and further gentrifying a place with great character. The 4th ave option is the only real option.</p>	Mike Batzer
04/27/2022	<p>I'm opposed to the 4th avenue option as it would disrupt too many lives and endanger iconic portions of the International District. Currently, 4th and King is the main public entrance into the ID, when ever the neighborhood comes up in conversation the archway and business right there are brought up as it's the first thing you see when coming off the current Link. Disturbing those iconic sites; the archway, Pings, Mushasi's, Fuji Bakery, the model store and the historic landmark Publix Hotel is a crime. The ID has had it so hard the last few years and this is one of the few safe places people still want to visit, please don't ruin our neighborhood.</p>	Lauren Batzer
04/27/2022	<p>Please minimize continuing disintegration of the international district. 4th avenue alignment would be best.</p>	Sky King

04/27/2022	<p>Most of us in Seattle want more public transportation, that is no question. However, historically only our most marginalized communities face the negative impacts of this development. While more affluent neighborhoods continue to advocate and benefit from public transportation, they do not bear the fair burden of developing it. With the new station proposal in the CID on 5th Ave, the CID community is once again being told (not asked) to allow its community to be subject to years of construction pollution, business displacement, and permanent damage. I am asking Sound Transit to move forward with the 4th Ave station proposal and reduce the impact on the CID. I am also asking that in future developments, Sound Transit actually engaged the residents of these communities and takes into account their concerns, the same way you take into account the concerns of folks in Ballard.</p> <p>Thank you</p>	Jeffrey Yu
04/27/2022	<p>Hello,</p> <p>As a person living in WS I am with the crowd that cannot wait to have an alternative way to get off “the island”, but how it’s done matters. Displacing businesses is one thing, but displacing cultural community is on a whole other level. The 4th avenue option leaves the ID intact and although it affects 5 business it will have the least impact on the AAPI community. Providing transit for a community should not cost our city one.</p>	Andrea Cravioto
04/27/2022	<p>Dear Sir/Madam,</p> <p>Please choose CID-1a which bests preserve Chinatown's culture and history. Other options would have a big impact on businesses and residents in the area.</p> <p>Thanks!</p>	Zhen Zhang
04/27/2022	<p>I am always an advocate for extending public transit. Seattle really has the potential to be like the BART or METRO. However, many businesses, majority are BIPOC small owned business, will be impacted by this decision. What is the city doing to ensure that one of our more diverse neighborhoods in King County are not financially impacted by this decision. The businesses that are being demolished for this transit build, are they going to be provided new spaces for business (without putting money from their own pockets?). Is the health of the people being considered provided that the construction will impact air quality? I’m unsure if equity was really examined, at least for BIPOC folx, during the planning of this transit expansion. I hope that further thought is being addressed after reading this comment.</p>	Mary Tran

04/27/2022	<p>I am concerned that not enough documentation was provided in the DEIS establishing a rationale for construction of a second downtown Seattle transit tunnel. In Appendix D, Attachment N.1.B, "Existing and Future Transit Routes and Levels of Service," each of the three Link lines is projected to have a 6-minute peak headway in 2042, equivalent of a combined volume of 30 trains per hour/per direction. This volume is not high enough to warrant the construction of a second downtown tunnel. Two existing U.S. light rail systems, the San Francisco Muni Metro and Boston's MBTA Green Line, routinely exceed 30 trains per hour/per direction in their downtown subways. These two systems have the highest volume of light rail passengers per mile in North America. The Muni Metro consists of five lines operating in a double-track downtown subway, with a scheduled 2019 volume of 37 trains per hour/per direction. Safe spacing between trains is maintained by the use of an Automatic Train Operation (ATO) system, which controls the acceleration and braking of the trains within the downtown subway; the operator only opens and closes the doors within this segment. The downtown volume of MBTA Green Line trains is even higher than in San Francisco, and an ATO system is currently being installed in the subway to increase capacity and safety. If the West Seattle and Ballard lines were to use the existing downtown tunnel, a new track junction would be needed underneath the intersection of 3rd Avenue and Pine Street. While construction of this junction would be complex and disruptive, this is true of all of the alternatives currently being considered, and the overall scope of the project would be reduced substantially by eliminating construction work at the other proposed station sites.</p> <p>Given the experience of other light rail systems and the steady advancement of signal technology, a second downtown Seattle transit tunnel appears unnecessary for many years beyond 2042. Construction of a new tunnel would have major negative impacts for downtown neighborhoods as well as substantial capital costs. Other individuals have already noted that some of the alternatives have extremely deep stations, reducing accessibility and minimizing the service advantages of subway operation.</p> <p>Sound Transit should take another look at how the Ballard and West Seattle lines could be developed using the existing downtown tunnel. The analysis should consider the experience of other light rail systems and develop revised future estimates of downtown passenger volumes using an updated ridership forecasting model.</p> <p>Thank you for the opportunity to comment.</p>	Michael Bergman
04/27/2022	<p>I'm looking forward to having so many more options for transit in these areas! However I am not looking forward to the impact that you would have on the neighborhoods as you work your projects within existing buildings that house people and businesses. Please consider the lower impactful 4th ave design for the CID. Thank you</p>	Christa Hastings
04/27/2022	<p>I am in favor of the preferred alternative through Interbay and Smith Cove. I live at 22nd Ave W & Dravus, a short walk from the proposed Interbay Station at 17th Ave W.</p> <p>Rather than connecting the Interbay station to Magnolia with improved bike and pedestrian lanes across W Dravus Bridge, I suggest a pedestrian (or bus only) bridge at W Bertona St to connect to BNSF and 20th Ave W (see SDOT study). I support connecting directly to the Ship Canal Trail under W Emerson. Fishermen's Terminal needs that access.</p>	William Slivers
04/27/2022	<p>Seattle is already a tough city for small business. Please try not to disrupt more of them. 4th Ave S is the best option for the extension.</p>	Alex Kahler
04/27/2022	<p>While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood. As someone who grew up nearby and frequents the businesses, I have seen the suffering caused by the pandemic and increase in property and hate crime. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the C-ID do not need the extra burden construction will cause. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.</p>	TJ Okamura

04/27/2022	<p>Howdy,</p> <p>I urge Sound Transit to please consider a route that does not require Dusty Strings Company at at 3450 16th Ave W to relocate.</p> <p>I have lived in the Seattle area for over twenty years, road one of the first Rapid Ride "A" busses to Highline Community College, road one of the first Light Rail cars to volunteer at Bike Works in Columbia city, and continue to be a proponent of public transit. That said, I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE to avoid the Dusty Strings company to relocate. Dusty Strings' current building is purpose built for local manufacturing. I am an employee here because I strongly believe in local manufacturing in Seattle.</p> <p>I hope to see Sound Transit consider a route that does not require Dusty Strings to relocate.</p> <p>Thank you, --Mitch</p>	Mitchell Wittenberg
04/27/2022	<p>A station on 5th ave will prove to be very detrimental to residents, business owners, and visitors in Chinatown International District. Years of construction will negatively impact those in the area that have already been horribly impacted by xenophobia and the pandemic. Please reconsider building a station at another location and save one of the most important and cultural neighborhoods in Seattle. The people of chinatown ID have already contributed so much to Seattle and do not deserve this. Thanks for your consideration.</p>	Cindy Chen
04/27/2022	<p>4th Ave route will displace less people and help preserve peace for a larger portion of the ID downtown</p>	Marisa Ragozino
04/27/2022	<p>I am writing to urge Sound Transit to consider the new International District station to be built on 4th Ave instead of 5th Ave. The 4th Ave option would displace fewer businesses and have less of an effect on the surrounding neighborhood.</p>	Elisa Dore
04/27/2022	<p>To the Sound Transit Team,</p> <p>Thank you for opening up the floor to comments. As a West Seattle neighbor who is at risk of displacement, my comment is to spare the Avalon Way station's construction and instead consider that area already bustling with the West Seattle bridge and bus use. If it is not completely necessary, please consider the cost savings to do away with the Avalon station and plenty a bus route can compensate. While most neighborhoods that have a stop only have one, surely West Seattle can suffice with two. My family and I have established our roots in this community and in the neighborhood school and have saved for many years to obtain a forever home. This home will celebrate its centennial in less than a decade. A tidbit that-in a time of forward planning-deserves its acknowledgement; to celebrate and cultivate what has lasted the test of time; to ponder the perch from where our home sits, with Mt. Rainier popping up from the skyline, Delridge and down and uphill away and downtown lighting up the evening sky. What would happen to our mature cherry trees that line both sides of the street along Genesee? Thank you for listening. While your team's projects are highly complicated and technical, please consider this comment as an opt to simplify.</p>	Shannon Saulter
04/27/2022	<p>In regards to Chinatown International district CID 1a-2b The 4th Avenue and 5th Avenue area - these plans would directly impact the heart of CID businesses negatively. Oasis Tea Zone, Uwajimaya, and other businesses are the main draw to visit the area. The International district is struggling as is and I find it thoroughly embarrassing that Seattle does not have a larger more robust area of Korean/Chinese/Japanese etc businesses compared to similar large metropolitan areas. Yes, public transit expansion is important to the growth of the city, but if all the key reasons to visit the city are destroyed in the process - then what is the point of expanding?</p>	Heather Carlton
04/27/2022	<p>After reviewing plans on www.Southdowntown.org, it seems to me that the 4th Ave 1a or 1b would be the better option to preserve the main CID aesthetic. It displaces fewer businesses in the CID area. Major flow disruptions will occur with either plan. Thank you for allowing public comments.</p>	Nelson Nako

04/27/2022	The plans for the Chinatown/International District station are going to tear down treasured local businesses. In this pandemic, more than ever, we need to support our brothers and sisters who have been running their own businesses. We should not construct a new station that will tear up important places of business in the International District.	Fahimah Zaman
04/27/2022	<p>As a home owner and resident in the Interbay area within the project scope. I'm writing to express my sincere concerns on the Draft Environment Impact Statement for the proposed Ballard/Interbay Light Rail. The communication about affected properties has been very poor and I did not receive the notification letter of the possibility that my property could be subject to Eminent Domain. You would think for such a large project with such a serious impact to over 155 homeowners there would be more thorough delivery of notices. The proposed alternative has the greatest impact on residents and their properties, businesses, and the local marine community. As stated in your survey, "all of the bridge alternatives (Preferred Alternative IBB-1a, Option IBB-1b, and Alternative IBB-3) in this segment would displace businesses (and their employees) that are water-dependent or that support water-dependent businesses, which could be difficult to relocate. The displacement of these businesses could impair the operations of waterway transportation and shipment of goods. As a result, there could be a broader effect on regional jobs and income than the jobs and businesses displaced directly by the project". All of the alternatives would adversely affect historic properties such as Fishermen's Terminal Historic District and others. Furthermore, the impact of this construction on traffic to the Interbay and Ballard areas will be devastating for all residents and businesses. If you've ever seen the how long the back-up is when the bridge is, up you know how this has implications for several surrounding areas.</p> <p>My preference is the No Build Alternative to wait and conduct a further review the impacts on local businesses, our transportation, and environment needs. Why is the existing BNSF railway not being incorporated instead of building a new tunnel or bridge? In terms of the wants/needs for this route, the ridership estimates provided in this report don't reflect the changing needs of post-pandemic life and commuter shifts. Every metro bus I see has little if any riders, even at the busiest of commute times. With more companies allowing for remote workers than ever before a new study needs to be conducted for Ballard/Interbay. Again, I don't think any of the alternatives proposed in this scope meet the needs or address the preservation of our local Ballard and Interbay communities.</p>	Alison Hudders
04/27/2022	Currently you plan on displacing many businesses at the cost of greatly affecting the International District. I am hoping you go forward with 4th avenue instead of 5th avenue, it will greatly reduce the number of businesses impacted by the closure. The construction will also interrupt daily life of the CID, and the 4th avenue route will not interrupt as much as it is more pushed away, compared to 5th, which is in the middle of CID. If you plan on going forward with the 5th plan, you can expect great downturns in the economy of CID, as businesses will be forced away and turnout of tourists and customers will cause the CID to have less and less of an economy. I am very deeply hoping that you will consider the community's opinion of where the disruption will be with great consideration, as this is the very community which will be impacted greatly.	Alex DeForrest
04/27/2022	Do not build in 5th in the International District, there needs to be more consideration to the communities that have been constantly affected, especially recently with xenophobia and racism	Tiffany Palomino
04/27/2022	The plans for 5th avenue negatively impact many businesses I grew up frequenting as a child and still do to this day. By building the light rail on either of the 5th Ave options, it would be detrimental to the community of the international district. I highly support the 4th avenue options for light rail expansion so that these businesses in the community are not harmed in the process.	Renee Chiang

04/27/2022	<p>I urge everyone on this selection panel to put aside the bureaucracy and red tape you're accustomed to and look at this proposal for what it is: a knife in the heart of the CID, a cultural center of Seattle that has been shaved down time and time again. This station, no matter which proposed block you choose, could very well be the end of the area as we know it. There is something fundamentally wrong with this plan, and I hope everyone involved realizes it before it's too late. Imagine if plans went through and the Pike Place Market was destroyed in the 70's for the sake of "urban renewal"? Seattle's growing pains are not an excuse to throw out what matters most to its people. "I'm just doing my job" is not an excuse either. Scrap it, send it back, and fight the urge to go along with any of these proposals. You will be remembered fondly for it.</p>	Daphne Maiden
04/27/2022	<p>While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood. As someone works in, commutes to, and frequents the businesses in the C-ID, I've have seen the suffering caused by the pandemic and increase in property and hate crime. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the C-ID do not need the extra burden construction will cause. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.</p>	Lauren Moores

04/27/2022	<p data-bbox="261 100 321 128">Hello,</p> <p data-bbox="261 159 1305 275">I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes (Del-5 or Del-6). I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p data-bbox="261 306 558 333">The reasons are the following:</p> <p data-bbox="261 365 1032 392">The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol data-bbox="261 424 1284 1031" style="list-style-type: none"><li data-bbox="261 424 932 451">2) The business disruption is closely similar for both of these options<li data-bbox="261 483 1284 537">3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487<li data-bbox="261 569 1279 623">4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for<li data-bbox="261 655 1279 709">5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year<li data-bbox="261 741 802 768">6) There would be no risk of golf balls hitting the trains<li data-bbox="261 800 1271 854">7) The Parks Department supports the Yancy alternatives . ------------	--	--------------

<p>04/27/2022</p>	<p>I am a West Seattle / N. Delridge resident and have several concerns about SoundTransit's proposed options for light rail extension. I and several members in my N. Delridge neighborhood strongly favor the SkyLink option vs. train, and ask that Sound Transit consider this efficient, cost effective, lower environmental impact alternative.</p> <p>While there are numerous advantages to gondola technology's solution for West Seattle, 3 principal reasons stand out for electing this option: 1- significant taxpayer cost savings 2- speed of development with FAR LESS environmental impact 3- less community disruption</p> <p>1: Project funding/cost Chapter 2.8.2.1.1 lists the many alternatives contemplated in the DEIS and the associated total costs between \$3 billion and \$4.7 billion which is about double or triple the amount approved by voters in ST3 (\$1.7 billion). Before the pandemic, three West Seattle buses (RapidRide-C, #121, #21) already provided 25,500 trips daily. The DEIS projects 27,000 trips on light rail by 2042, only 1500 more than buses were providing in early 2020. There will be little improvement in travel time for many riders, given the likely need to take a bus to a West Seattle light rail station and then disembark at SODO and wait for another light rail train to go anywhere else for at least the next 15 years. See Transit Time category that follows.</p> <p>Table 2-9 of App. N indicates Sound Transit estimates light rail to reduce 400 vehicle trips on the West Seattle Bridge by 2042. At a light rail cost of almost \$10 million per additional daily trip (plus the building of additional OMF capacity and train acquisition) and an annual operating cost of \$35 to \$40 million this investment does not seem worthwhile – and that's without considering the cost to the environment of greenhouse gases emitted during construction.</p> <p>Gondola technology has been proposed by citizens since 2015 but always ignored or dismissed as incapable of serving regional transit needs despite the fact that it is being suggested, not as a regional mode, but as a high-capacity feeder for a densely developed terrain with hills and water obstacles where light rail is difficult, expensive, and damaging to build. Other light rail corridors such as from SODO to Georgetown/South Park could provide a more economical way (both in construction and annual operation) to provide light rail to the Duwamish peninsula.</p> <p>2-3: Acquisitions, Displacements, and Relocations Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the "Least Harm Analysis" test in 4.2.18.5.</p> <p>A 2014 Sound Transit paper on mode choices for the regional transit network stated: "Several of the technologies that have moderate to high HCT capabilities, but are generally less suitable for Sound Transit, could be considered for some service if that service would operate on principally exclusive rights-of-way and is not intended to interline (i.e., share the same tracks) with the light rail 'spine,' which extends from Everett to Tacoma, and from Seattle to Redmond." When Sound Transit issued the April 7, 2022 Gondola Feasibility Report, it reiterated this statement in dismissing "SkyLink's" proposal from consideration. SkyLink is proposing a gondola to serve not as the primary mode of the regional network but as a feeder from the ST3 designated station locations to the main spine of the light rail system. An urban gondola could provide the capacity needed, could be constructed with minimal disruption, displacement, and damage to the environment and established community. Specifically, it would avoid the following problems caused by proposed light rail alternatives: Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore. Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin practically shows NO available home inventory in West Seattle, the DEIS just says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify for a new home based on current social status / credit rating. Commercial real-estate is very limited in West Seattle which mean displaced businesses may have to relocate causing them to lose their customer base and West Seattle residents may have to travel longer distances to get services. Chapter 4.2.3.3 includes several pages of huge impacts. It talks about the fact that light rail will destroy businesses, reduce the city's tax base and may affect tribal fishing rights. It fails to address the social impact for the employees and owners affected by this destruction, many of them small businesses whose livelihood is affected. It does not address the strain on the social services. Even more importantly it does</p>	<p>Tran Truong</p>
-------------------	--	--------------------

	<p>not address the impact to the community which has grown around these services and the businesses and families which will be impacted indirectly. Alki Beach Academy for example provides daycare services to 300 children; affected parents may need to quit their jobs or move elsewhere if they lose affordable daycare.</p> <p>Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, it claims it is “consistent with existing views.” While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The northern bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway will be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther.</p> <p>Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRide-H. Now all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) will be impacted by multi-year construction and related detours. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours.</p> <p>Figure 4.2.5-4 does not show any coverings over the station therefore making it appear lower than it is. It only shows the destruction of homes directly adjacent to the station, but not along the guideway which again provides a distorted impression of what will happen.</p> <p>Chapter 4.2.5.3.3 fails to mention that Olmsted already suggested to preserve the view from Pigeon Point which any of the southern alignments would destroy, for details: Pigeon Point - West Duwamish Greenbelt – Friends of Seattle’s Olmsted Parks (seattleolmsted.org).</p> <p>Please consider what is a smarter, safer, faster and far more economical option than light rail -- SkyLink is the right choice for this area.</p> <p>Thank you.</p> <p>Tran Truong</p>	
04/27/2022	<p>Seattle’s Chinatown International District is not just any neighborhood/district, it contains Seattle’s innumerable years of history for the Japanese, Chinese and Vietnamese. Especially when the new Links that are planned will cause important landmarks to be demolished and overblown such as the Chinatown Gate and Hing Hay Park. Rather it’s landmarks or not, every inch of CID contains a lot of bygone days and memories to us. In addition, demolishing a large percentage of CID will inconvenience a considerable number of people and eliminate a lot of business that people enjoy going to, it causes huge damages to business owners and employees there. As far as how I see it CID’s Link station is user oriented. It’s not new Links that should be built; I think the major problem here is how hazardous it’s been lately around the CID, if the city really want to help out their citizens they should find solutions to fixing that first.</p>	angela deng
04/27/2022	<p>Light rail is needed in West Seattle, however displacement of people, apartments, condos, businesses, etc. is not. A tunnel would be much preferred over an above ground and worse - elevated train.</p> <p>SW Avalon Way would especially suffer since it is lined with apartments and condos, some of which are fairly affordable with easy access to the rest of the city. Most of these apartments and condos include underground parking which is so hard to come by in new builds.</p> <p>I can only foresee if we did anything but a tunnel, it would cause more harm in the long-term.</p>	Nikkie Jabro

04/27/2022	We are hopeful the sound transit board will make the best decision for the community and build the tunnel option because it displaces the least amount of businesses and residents and also has the least negative environmental impact to our land and water. Thank you.	Hana Jacob
04/27/2022	In reference to ES 3.1.2.2: Please do not continue construction on 5th Avenue in the Chinatown International district. As indicated in the summary, the construction would impact up to 27 businesses (about 20 of which are small, locally run businesses) and up to 230 employees. I am a 4th Generation Japanese American and am active in the Japanese and Asian community in Seattle. 5th Avenue is a hub for Asians and Asian Americans with beloved restaurants that I frequently bring my friends from out of town to. In addition, a historic and beautiful gate (pictured in the executive summary) is an iconic spot for photos and draws more people into the community. I don't want constructions to mar the iconic photo spot. Please consider pursuing construction at another location as to not displace the small, Asian American businesses in the International District. I hope the city does not continue to displace Asian Americans as it allowed the US government to once before.	Karissa Yamaguchi
04/27/2022	Hello - I am very concerned about the negative impact the 4th & 5th Ave options would have on our Chinatown-International District. This community has suffered the negative consequences of various construction projects surrounding the area now for decades. Beyond construction, the C-ID has also regularly suffered from xenophobia on a local and systemic level. If the City of Seattle is committed to supporting it's thriving C-ID community, committed to an equitable future, and preserving Seattle's relationship with it's key members, you will not consider the 4th & 5th Ave options for this project. Thank you, Anna	Anna Martinez
04/27/2022	I am very concerned about the effect of Del 5 and Del 6 on Transitional Resources. That organization needs to operate as a campus, just as many hospitals do. If the three buildings can remain operating together TR can continue their great work for the community. Please consider their circumstances in your design plans. Thank you.	ANNE Noonan
04/27/2022	Between the pandemic closures, homelessness crisis, and anti-Asian hate crimes the POC owned businesses in the ID have been through enough the past three years. I strongly believe that this important infrastructure projects should not be located on 4th ave because of the disproportionate impact it would have on local POC owned businesses in the area. These critical projects should not come at the expense of the ID. I hope that the 5th ave options are the ones that are chosen for this project.	Martell Hesketh
04/27/2022	Continuing forward with this project will see a mass loss of valued small businesses in the community. These businesses is what makes the international district unique and roots the unique cultural identity of being an Asian American living in seattle.	Emily Dao
04/27/2022	Please do not use alternatives that impact 5th Avenue South. This would demolish several buildings that contain small business and impact the CID, which has struggled with gentrification and survival through the COVID-19 pandemic, for more than 10 years. Please prioritize those alternatives that will not impact the economic and cultural resources of marginalized communities.	Roxanne Robles

04/27/2022	<p>In Ballard: prefer 14th Ave Tunnel option [IBB-2a] In Smith Cove: South Interbay Segment - Prospect Street Station/ Central Interbay Alternative [SIB-3] Downtown: 5th/Harrison [DT-1] In CID: [CID-1b] In Sodo: choose the Mixed Profile Station [SoDo-2] In West Seattle, Avalon, and Delridge: Build WSJ-5 with a South Crossing Alternative</p> <p>These have the least effects on residents who will be utilizing the transportation the most</p>	Bryan Green
04/27/2022	Select alternative CID-1a or CID-1b	Laura Arpin
04/27/2022	I do not approve of light rail as I think it will destroy too many neighborhoods. I believe improved transit system would serve the area better. I also do not think 3 stations or elevated track should be considered.	Pearl Dubry
04/27/2022	The new transit construction will literally rip through the heart of the CID community. This community has already faced severe hardship, including other construction and racism during the pandemic. Communities, especially marginalized ones, deserve a safe space to come together. We are strengthened by this community. Please don't do this.	Megan Antony
04/27/2022	I am concerned with several of the proposals for the ID, specifically the diagonal restructuring of 5th Avenue to cut straight through it. My concern is for the livelihood of the workers in the ID and preserving the historical character of the neighborhood, which is irreplaceable and cannot withstand a year plus of messy construction and multiple building demolishing sites. I know I don't live there, but it's still my city and I hope the ID is not considered disposable. Please consider plans that will minimize damage to this and isolation of important and historic neighborhood.	Anne Bean
04/27/2022	<p>I am writing to encourage the selection of either Alternative CID-1a or CID-1b per the Draft EIS, over any of the CID-2 alternatives, to minimize impacts on ID businesses. Building on 4th Avenue will impact significantly fewer local businesses compared to doing so on 5th Avenue. These businesses were hit hard during the pandemic and don't deserve the impacts that many years of construction will have. Let's make this project as equitable as possible!</p> <p>As a local civil engineer and someone who grew up in West Seattle, I'm excited to see this light rail extension come to fruition! I hope that Sound Transit makes the best decisions for the communities that will be most severely impacted by this construction.</p>	Emma Van Orden
04/27/2022	Please move forward with the 4th Ave station options (CID-1a or 1b) and REJECT the 5th Ave options (CID-2a, 2a-diagonal, and 2b) to reduce construction impacts on residents and business owners within the CID.	Elyse Lewis
04/27/2022	<p>Hello! I am writing to advocate that the proposed C-ID station be located on 4th Avenue rather than on 5th Avenue. The detrimental impacts that the proposed 5th Ave Station would have on local businesses and community, greatly outweigh the negative impact of the proposed 4th Ave site. Please prioritize local community input and racial justice in this decision-making process, and move forward with the 4th Ave Station, to better benefit and support this beloved and essential Seattle community!</p> <p>Thank you, Ellie Deal, MSW, LICSW</p>	Ellie Deal
04/27/2022	<p>While i am excited for the increase ability to travel around seattle, the construction disrupting 4th/5th and a couple blocks around that make me very concerned. As a disabled person it is hard enough to travel. The link itself in its current state is questionable at best when it comes to working elevators and escalators. More obstructions would be counter productive to what the link expansion is supposed to do. Additionally the link to northgate took around 4 years or so to complete. If it follows a similar time line, that's around 4 years of diverting traffic away from the international district. increase chemical risk, noise pollution, and general hazards to the people that live and work there. The ID is full of small businesses and family owned businesses. are you really prepared to exchange those shops for transit? To have that area devoid of businesses ? To push out generations of family and history? If the answer is yes, than i am ashamed of the transit board.</p>	Khai Vano-Penalosa

04/27/2022	I strongly prefer that the new light rail station be located on 4th Avenue, to protect the neighborhood and businesses in the International District	Oscar McNary
04/27/2022	The international district is an important piece of Seattle's history and should not be erased. While we need to advance our light rail, please consider building on 4th to preserve this historic community.	Daniel Lew
04/27/2022	I am commenting regarding the Delridge segment of the West Seattle Link extension. As a parent of a preschooler, I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. Quality child care is already difficult to find, which has been worsened by the pandemic. While I am excited about the expansion and support mass transit efforts the last thing we should be doing is displacing child care programs that provide this type of high-quality early learning opportunities our children and parents desperately need. This is one of the best and most affordably preschools in the area. The cost of the relocation would drive up the tuition cost and make it unaffordable for many families and leave us without care.. Please consider all other alternatives.	Rachel Tanner
04/27/2022	I think it is crucially important to re-open study of the Ballard 20th/Thorndyke Tunnel Portal. The Ballard station should be where people want to go. While Market and 14th could be made into a destination, it will never have the historic buildings of downtown Ballard that attract so many visitors each year. The walk from 14th Ave (across 15th!) to downtown Ballard is too far for most people. Additionally, a station around 20th (or even 22nd or 24th!) would be within walking distance of the Nordic Heritage Museum and the Locks. There is unlikely to ever be a station west of the Ballard station, while there very well could be stations east of it, so the Ballard station should be as far west as practicable. Tunneling from Interbay would avoid maritime traffic and destruction of historic buildings and waterfront businesses. Thank you for your consideration. Jeff Manson 123 N 103rd St Unit W101 Seattle, WA 98133	Jeffrey Manson
04/27/2022	While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I strongly encourage you to choose the 4th Ave option so that you will have the smallest impact on the neighborhood. These businesses have already experienced so much suffering caused by the pandemic and increase in property and hate crime. Many of these businesses would not survive the disruptions this project would cause to benefit from its completion if a 5th Ave option is chosen. It is not right to place extra burden on the people of the C-ID for 5th Avenue construction. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood and should be selected.	Stephanie Thurner
04/27/2022	I am very concerned about the impact of the proposed stations for the Chinatown/International District Stations on 5th avenue. Construction that close to the center of the CID threatens the community itself, and those 5th Avenue locations should not be chosen.	Clara Manahan
04/27/2022	For the new station being added in the International District, I believe that either 4th Avenue option would be much better than any of the 5th Avenue options. The 5th Avenue options would displace a lot of local businesses that are an important part of the International District and the great city of Seattle.	Christopher Schenck
04/27/2022	Move forward on 4th! The effects of the routes on 5th will negatively impact the businesses of an already disadvantaged neighborhood.	Cami Shigaya

04/27/2022	<p>As someone who grew up frequenting the C-ID and has family who's local business will be detrimentally impacted by this project - I urge you to choose the 4th Ave option. Having seen the impacts caused by the pandemic (increased hate and property crimes), full closure of King Street, S. Weller and 5th Ave will disrupt and force permanent closure of many immigrant small businesses. While I support the increased access of public transportation, we cannot continue to sacrifice the C-ID for the sake of another major transportation/construction project. Move forward on 4th Ave and protect the C-ID.</p>	Priscilla L
04/27/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Neal Schmidt

04/27/2022	<p>ES.3.1.1.1. SODO Segment: Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking.</p> <p>ES.3.1.1.3. Delridge Segment: Study improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].</p> <p>ES.3.1.1.4. West Seattle Junction Segment: Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fautleroy Station that would reduce residential displacement and costly property takings.</p> <p>ES.3.1.2.2. Chinatown/International District Segment: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than four and a half minutes.</p> <p>ES.3.1.2.3. Downtown Segment: 5th Avenue Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access. Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower. Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible. Prefer Republican Street Station and work to mitigate impacts to arts organizations to the extent possible.</p> <p>ES.3.1.2.4 South Interbay Segment: Preferred Galer Street Station [SIB-1].</p> <p>ES.3.1.2.5. Interbay/Ballard Segment: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3]. Study pairing a high bridge with an elevated 15th Avenue Station and to continue to refine all tunnel options to put a station entrance west of 15th Avenue. Jettison the moveable bridge. Open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p>	Emrys Harper
04/27/2022	<p>I think sound transit should prioritize transit quality, location (e.g., I'd prefer the more western alignment in Ballard), and time to completion over business impacts, in particular wrt to station depth, distance between stations, and cut and cover vs tunneling. Additionally, the existing at grade light rail is miserable, we should never build like that again.</p>	David Shorten

<p>04/27/2022</p>	<p>I am a West Seattle resident, and have several concerns about SoundTransit's proposed options for light rail extension. I and several members in my 16th Ave SW Homeowners Association strongly favor the SkyLink option vs. train, and ask that SoundTransit consider this efficient, cost effective, lower environmental impact alternative.</p> <p>I have personally ridden and seen gondola technology in urban markets work extremely well. They are especially effective in mixed terrain areas, as is the case between West Seattle and SODO.</p> <p>While there are numerous advantages to gondola technology's solution for West Seattle, 3 principal reasons stand out for electing this option:</p> <ul style="list-style-type: none"> 1- significant taxpayer cost savings 2- FAR LESS environmental impact 3- less community disruption and faster speed of development <p>1: Project funding/cost</p> <p>Chapter 2.8.2.1.1 lists the many alternatives contemplated in the DEIS and the associated total costs between \$3 billion and \$4.7 billion which is about double or triple the amount approved by voters in ST3 (\$1.7 billion). Before the pandemic, three West Seattle buses (RapidRide-C, #121, #21) already provided 25,500 trips daily. The DEIS projects 27,000 trips on light rail by 2042, only 1500 more than buses were providing in early 2020. There will be little improvement in travel time for many riders, given the likely need to take a bus to a West Seattle light rail station and then disembark at SODO and wait for another light rail train to go anywhere else for at least the next 15 years. See Transit Time category that follows.</p> <p>Table 2-9 of App. N indicates Sound Transit estimates light rail to reduce 400 vehicle trips on the West Seattle Bridge by 2042. At a light rail cost of almost \$10 million per additional daily trip (plus the building of additional OMF capacity and train acquisition) and an annual operating cost of \$35 to \$40 million this investment does not seem worthwhile – and that’s without considering the cost to the environment of greenhouse gases emitted during construction.</p> <p>Gondola technology has been proposed by citizens since 2015 but always ignored or dismissed as incapable of serving regional transit needs despite the fact that it is being suggested, not as a regional mode, but as a high-capacity feeder for a densely developed terrain with hills and water obstacles where light rail is difficult, expensive, and damaging to build. Other light rail corridors such as from SODO to Georgetown/South Park could provide a more economical way (both in construction and annual operation) to provide light rail to the Duwamish peninsula.</p> <p>2-3: Acquisitions, Displacements, and Relocations</p> <p>Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the “Least Harm Analysis” test in 4.2.18.5.</p> <p>A 2014 Sound Transit paper on mode choices for the regional transit network stated: “Several of the technologies that have moderate to high HCT capabilities, but are generally less suitable for Sound Transit, could be considered for some service if that service would operate on principally exclusive rights-of-way and is not intended to interline (i.e., share the same tracks) with the light rail ‘spine,’ which extends from Everett to Tacoma, and from Seattle to Redmond.” When Sound Transit issued the April 7, 2022 Gondola Feasibility Report, it reiterated this statement in dismissing “SkyLink’s” proposal from consideration. SkyLink is proposing a gondola to serve not as the primary mode of the regional network but as a feeder from the ST3 designated station locations to the main spine of the light rail system. An urban gondola could provide the capacity needed, could be constructed with minimal disruption, displacement, and damage to the environment and established community. Specifically, it would avoid the following problems caused by proposed light rail alternatives:</p> <p>Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore.</p> <p>Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin practically shows NO available home inventory in West Seattle, the DEIS just says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify for a new home based on current social status / credit rating. Commercial real-estate is very limited in West Seattle which means displaced businesses may have to relocate causing them to lose their customer base and West Seattle residents may have to travel longer distances to get services.</p> <p>Chapter 4.2.3.3 includes several pages of huge impacts. It talks about the fact that light rail will destroy</p>	<p>richard hemmerling</p>
-------------------	---	---------------------------

	<p>businesses, reduce the city's tax base and may affect tribal fishing rights. It fails to address the social impact for the employees and owners affected by this destruction, many of them small businesses whose livelihood is affected. It does not address the strain on the social services. Even more importantly it does not address the impact to the community which has grown around these services and the businesses and families which will be impacted indirectly.</p> <p>Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, it claims it is "consistent with existing views." While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The northern bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway will be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther.</p> <p>Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRide-H. Now all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) will be impacted by multi-year construction and related detours. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours.</p> <p>Figure 4.2.5-4 does not show any coverings over the station therefore making it appear lower than it is. It only shows the destruction of homes directly adjacent to the station, but not along the guideway which again provides a distorted impression of what will happen.</p> <p>Chapter 4.2.5.3.3 fails to mention that Olmsted already suggested to preserve the view from Pigeon Point which any of the southern alignments would destroy, for details: Pigeon Point - West Duwamish Greenbelt – Friends of Seattle's Olmsted Parks (seattleolmsted.org).</p> <p>Please consider what is a smarter, safer, faster and far more economical option than light rail -- SkyLink is the right choice for this area.</p> <p>Thank you.</p>	
04/27/2022	<p>While I think connecting the CID to sound transit will have great long terms effects, it is undeniable that to go forward with this project will negatively impact the community in the present. After such a long and hard coming on three years of the pandemic, which included a huge increase in Asian hate crimes, to displace the community with any of the fifth street station options is a mistake of monumental proportions. It will include displacing up to 27 businesses with construction, which will in turn put hundreds of people out of business. After Seattle has lost so much in terms of small businesses downtown over the course of the pandemic and with the huge increase in the homeless population, doing this will only worsen our city and all the things that make it great. I urge you all to go with the plan on the fourth, to minimize the impact on the community you claim this will be helping.</p>	Abigail Buchman
04/27/2022	<p>Looking at the draft EIS I'm heartened to see that tunnel options are commensurate with the bridge options. I think a tunnel is clearly the superior rider experience over an elevated bridge. I'm disappointed to see that the only available options are on 14th or 15th and none closer to 22nd or 24th. That's where the community amenities and businesses are. I have two small children and often use transit, light rail especially, to get around as a family. If the transit option to go to the farmers market/library/brunch as a family includes a half-mile walk we'll probably just drive instead.</p>	Kyle Long

04/27/2022	The International District is a historical neighborhood that needs to be preserved. While I support the increased access of public transportation, I implore you to choose 4th Ave to build the new Light Rail line in order to have the smallest impact on the neighborhood. Having survived the economic challenges of the Covid-19 Pandemic, the small businesses in that area will be further economically impacted if the city chooses to build on 5th. Choosing 4th Ave will have the least amount of impact on the neighborhood.	Regina Quiban
04/27/2022	Please move forward on the 4th alternative for the C-ID project as the 5th alternative will have more drastic consequences for the surrounding community.	Alexie Walker
04/27/2022	Regarding the Ballard Station west of 15th Ave NW, the Draft EIS only includes the Ballard station alternatives at or east of 15th when it should be on the west side of the road. Please reopen study of the Ballard 20th/Thorndyke Tunnel Portal, because the core of downtown Ballard is several blocks to the west. 2. I support Thorndyke Retained Cut Alternative: This alternative for an Interbay Station facilitates a tunnel under the ship canal to Ballard, which would reduce displacement from construction and avoid maritime traffic. Support Galer Street Station at Smith Cove: The Galer Street Station provides the most access for buses serving Magnolia, local businesses, and any new development at the Armory.	Randall Collins
04/27/2022	Please put the International District alignment along 4th Avenue under the current viaduct (or whatever it's called) and connect the Sounder, West Seattle-Ballard line, and Central line together, through a corridor utilizing the existing Union Station Building. This alignment causes the least disruption to the already burdened ID and makes the most sense for transit riders. Please please please!!! Yes, I know it will cost more money, but long term, it's worth it. Thank you! Scott Mayhew	Scott Mayhew
04/27/2022	Please consider not expanding the light rail tunnel through the Seattle Chinatown International District on 5th Ave S, which will impact up to 19 small businesses. These businesses have been apart of Seattle history. By extending the light rail system through the purposed route, it will significantly impact the Asian-American community, including numerous families who have worked so hard to carve a path for their current and future generations. Seattle has had enough gentrification throughout the communities of color, let's not destroy another meaningful part of Seattle that many Seattleites grew up with. If the light rail expands through here, what would be the point of giving people access to the place if numerous small businesses are no longer running? What is the point of accessing this beautiful place if there is not much to do? What is the point of accessing Chinatown if it is no longer the historical Chinatown that everybody knew it as? Please consider saving this piece of cultural diversity that Seattle is known for and find alternative routes, such as 4th Ave S, to give the public access to this beautiful Chinatown International District	Catherine Le

04/27/2022	<p>My comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44:</p> <p>First: Thank you for building this section of light rail! I've lived in Seattle for over 40 years, most of that time in Ballard. We need more transit options!</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago. It would cause massive disruption to their operations for some years if they have to move and rebuild.</p> <p>It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p>	Robin Kessler
04/27/2022	I beg the transit authority to proceed with the 4th street station. The proposed 5th street will decimate local history, culture, and businesses belonging to our local communities of color. The international district is critical to the vibrant fibers of our multicultural community here in Seattle, and it seems senseless to wipe out staples of this great neighborhood. Please do not proceed with 5th street planning. Thank you.	Shona Kerrick
04/27/2022	I hope that you will keep tourism and day trips in mind and design bus routes to stop at beaches during the summer and at large city or county parks. This also includes waterfront restaurant areas. People need transit to leisure activities, not just work and shopping, especially the ability to take children to beaches and parks when they live in an apartment.	Linda Seltzer
04/27/2022	I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, but it is very important to choose the 4th Ave station option to have the smallest impact on the neighborhood. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.	Helen Chyz

04/27/2022	<p>Hello,</p> <p>I am a current resident of the CID, as well as someone who has grown up in this community. I have seen how construction has negatively impacted foot traffic and the small businesses that are apart of of this neighborhood. Many of these businesses are are still doing their best to survive despite the pandemic closures, anti-Asian discrimination, and boarding up of windows. If the city moves forward with the 5th Ave options they will be actively displacing businesses in the Chinatown core as well as the livelihood of those employees. Our chinatown is small and a long term construction project of this size and with that noise level will be a huge disruption to our communities businesses and residents.</p> <p>Growing up in Seattle the CID has always been a neighborhood where those of us in the Asian community can come together and celebrate not only our cultural heritage, but also understand and learn from the historic significance this place holds for many generations of Asian American Seattleites. From this we grow stronger, and build a space where our heritage is celebrated. It might not seem like a huge issue for those who don't live or spend time in the CID, but for us that make this neighborhood our home it will have an extreme negative impact and change our Historic Chinatown forever.</p> <p>I understand the need for expansion on the station and plead with the city to please consider the 4th Ave Option and instead.</p> <p>Thank you Angelica Felix</p>	Angelica Felix
04/27/2022	<p>Regarding the West Seattle Extension: The Avalon station is an unnecessary expense that should be removed from the preferred alternative plan. This would allow for the lowering of the Delridge station. A lowered Delridge station decreases not only the costs, but allows for greater accessibility. Frequent bus service should be made available between the dense Avalon neighborhood and the two West Seattle stations.</p> <p>The Delridge station is imperative for transit access to southern BIPOC and low-income communities and South Seattle College (need to ensure frequent bus service from these areas to the station). This station is also the logical connection for future rail service to the south (White Center, Burien). Locating this station on Dakota, just south of the DSHS building, would preserve the commercial area to the north, which has become an important community resource and gathering place (Delridge Deli Mart, Uptown Espresso, Ounces Taproom, Skylark Cafe). Please ensure that access to the bridge via Delridge is kept open during construction!</p> <p>I support the elevated Fauntleroy (Les Schwab/Shell station) location for the second station. 41st/42nd would be fine but more expensive. This station is the logical connection for transit to the southwest/Vashon ferry/Arbor Heights.</p>	Christa Zinke
04/27/2022	Please work with the Chinatown community to create the best transit system to serve the public. Choose the least disruptive 4th Ave option!	Daljit Grewal
04/27/2022	<p>I'm writing to encourage Sound Transit to construct their new stations in Seattle's CID along 4th Ave, instead of on 5th ave.</p> <p>I'm a huge fan of public transit and am really grateful that we're expanding this resource in our region. I think this work is really important.</p> <p>At the same time, we have a real history in this country of large infrastructure projects being done in ways that harm historical communities of color. This is a moment where we can try to limit that harm, by choosing construction options that limit disturbances to historic local businesses.</p> <p>The CID has fought many battles over it's history to protect it's community and it's cultural legacy. Change is inevitable, and while there are many ways to view change and how it's done, forcefully displacing tenants, businesses and community fixtures should never be a part of that process.</p>	KENJI STOLL

04/27/2022	Please move the line in Ballard from 14th street to 15th. The impact on the Ballard Food Bank and their customers would be extremely impactful.	Kathie Hopkins
04/27/2022	Since Sound Transit doesn't believe that our city's 3 main hospitals deserve to be directly served, I implore Sound Transit to build fully accessible station entrances and exits(with redundant elevators / stairs / escalators) for the Midtown Station on 5th ave at both Madison and Spring Streets for best connections to the Rapid Ride G line that is under construction. Thank you	Gordon Werner
04/27/2022	It is not abundantly clear which communities will undergo the greater impact. to bring light rail to West Seattle. There is still tremendous concern about habitat, and riparian intrusion to get this to wrk, as will as tree mitigation. Like Ballard, West Seattle has a abundant tee canopy. Also, what is the most significant impact on salmon waterways. The Duwamish river is a reminder to us all what happens when the environment is ignored, but being thoughtful about and honest about the true environmental impact is important. The district that is impacted by light raiing advancing to Wes Seattle has requested an impact study of a gondola - the is just one example of the community concern around light rail in and out of West Seattle. Also, is there true equity in service, that is to say do communities of color have a similar level of access to light rail, and have we not overburden these communities with the impact to bring light rail to West Seattle.	Chris Porter
04/27/2022	Re: Chapter 4 The proposed changes would absolutely demolish the cohesion of the neighborhood, which within the last 20 years still held incarcerated detainees in the INS building. This community is still healing from a history of detainment, racism, and mistreatment, and the disruption caused by the duration and intensity of the proposed construction would destroy the largest respite in the city for Asian and Asian American Seattleites. It is one of the few places in the city where I as a Chinese immigrant feel a sense of safety and belonging. This community is already facing social inequity, gentrification, and hate crimes. Please do not contribute to the further erasure of this community.	Yintong Cheng
04/27/2022	The proposed options for Ballard all seem to fall short of serving Ballard itself, and I believe organizations and citizens have been pointing this out for some time. When building such a future looking system, we need to build it in the best way possible. And that definitely means putting station more centrally in Ballard itself, like the 20th street station considered previously. Please revisit options like this.	James Flynn
04/27/2022	Please use the 4th Ave option to prevent displacing 19 businesses.	Jane Seo
04/27/2022	Please move forward with building on 4th Ave instead of 5th. The gentrification of the CID and the displacement of businesses and communities of color has already been so devastating. Please do not further this harm. Building on 5th will have awful consequences on our elders, small business owners, and the culture of the CID. In the wake of increased anti Asian sentiment, it's more critical than ever to preserve these communities, their culture, and to stop gentrifying and building government projects. Asian folks have been displaced and lost businesses, homes and communities time and time again in Seattle. Please do not do this!!!!!!	Zahra Masaoka
04/27/2022	I think this is an excellent plan - please proceed with speed! Do not consider additional amendments to the current plan that will delay progress.	Kimberly Decker
04/27/2022	Please consider and prioritize the impact to residents and businesses in the Chinatown/International District over concerns of event goers or other transient users of the area. The number of businesses impacted/lost by the various options and the number of residences impacted/lost should take precedence over other concerns. The C/ID continues to suffer from neglect by the city and impacts from large-scale infrastructure projects.	Michael Jacobson

04/27/2022	I support public transportation, however, the impacts of the 5th Ave option will have a greater impact on the majority of the neighborhood, especially how the area has endured in the past construction projects of the I-5 construction, Kingdome, Safeco Field, and Centurylink Field. In addition to recent years, the impacts of the SR-99 tunnel, Seawall, Seattle Waterfront, and the demolition of the Alaskan Way Viaduct. This is the city I grew up in and the 5th Ave option would cause the utmost consequences in the neighborhood. Chinatown-ID has been impacted year after year with a cost affecting its residents, businesses, cultural identity, guests, an increase in property, and hate crimes. I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood.	Jana Chieu
04/27/2022	None of the Ballard station options serve the existing population center of the neighborhood, and there is unlikely to be density growth at the 14th/15th St corridors due to industrial and commercial zoning. Additionally, the Coast Guard has stated that the current bridge plans are inadequate. I request that the Board reopen study of a 20th St. station in Ballard, with a tunnel, to better address rider usage, current user density, and a crossing of the ship canal that does not conflict with canal use. It is the best choice for the long-term functionality of Light Rail to NW Seattle.	Day Frostenson
04/27/2022	Please, do not build on 5th Ave of the CID. The international district has already suffered enough throughout the pandemic, and the shops on 5th are an integral part of the community. Please consider building on 4th Ave instead for the least detrimental community impact.	Leanna Keith
04/27/2022	I prefer DEL-2a or DEL-1a that routes the line on the south edge of SW Genesee St (i.e. through the golf course).	Karin Bauer
04/27/2022	I live in Ballard and want the light rail line to follow 14th Ave. It makes perfect sense. There's already room for it. It's the least disruptive. It's only a block away from 15th. Going along 15th would just add to the mess of that street. It's not pedestrian friendly. Traffic goes too fast.	Mary Peterson
04/27/2022	Hearing from those most deeply impacted by this project. I believe the 4th Ave option is more preferable than the 5th Ave. please listen to the folks on this neighborhood most effected.	Elizabeth Mustard
04/27/2022	As someone who supports small businesses in CID, building on 5th ave is harmful to my community. There are peoples' livelihood that will be shut down. Build on 4th ave instead. The CID is slowly deteriorating because of bad choices like this. Building on 4th ave is closer to the stadiums as well.	Errol Costales
04/27/2022	Please choose the 4th Avenue option. Community members have spoken about how the 5th ave option disrupts far more businesses, which is not something any community should be forced to bear during a pandemic, and particularly Chinatown given the rise of anti-Asian hate crimes due to the hysteria around covid. Please listen to what the community has to say and make the choice that lessens impact on local community members. Do not prioritize the convenience of outside interests.	Max Dightman
04/27/2022	Sound Transit is choosing a route to build a new station in the CID that links West Seattle to Ballard. Although all options will affect our neighborhood, the 5th Ave options will have more detrimental impacts that our neighborhood after a history of construction impacts, xenophobia, hate crimes, and the pandemic should not bear.	Fiona Dang
04/27/2022	Please reconsider building a new train station at Chinatown-ID, specifically on 5th ave. My biggest concern would be cost of local/ beloved businesses around that area. The impact will be far less detrimental to the community if it's on 4th ave or if there is another alternative. Thank you for your understanding	Elizabeth Ong

04/27/2022	I spent over 20 years acquiring real estate as a Senior Real Property Agent (1990 - 2012) for the Seattle Parks Open Space Program. From my perspective as a former 'land-man' for Seattle Parks, I think the 14th NW route is historically superior because there was (is) an old rail R-O-W from Ballard High School down to and (I think) across the ship canal. And 14th was where the bridge was located before the "new" 15th NW was built. 14th NW already has clear ROW access down the middle. The boat launch on the north side of the canal can be redesigned. The south side of the canal is a bit more complicated but those business uses no longer function well in today's economic environment. Moving to the WEST of 15th NW will involve a years-long negotiation with the Port and those outcomes ultimately are uncertain and will certainly cost more for acquiring land and redesigning streets and moorage. If the Port loses the net sheds (those warehouses) Fisherman's Terminal would no longer be functional for its intended purpose.	Richard Frith
04/27/2022	Please take the voices of business owners in the CID seriously and do the 4th Avenue route not 5th Avenue route. Either way will be impactful, but the 4th Ave route will be far less detrimental to AAPI owned businesses in the CID!	Elyse Gordon
04/27/2022	Please choose the CID station to be on 4th Ave!!! It displaces far fewer people and businesses and protects the CID from further disruption to community, business, every day life and generational experience. The impacts of splitting the neighborhood with I-5, the construction of the bore hole, and the demolition of the viaduct are still being felt by this fragile community. It is our responsibility to care for all people of the city and the CID deserves a break. PUT THE NEW C-ID LIGHT RAIL STATION ON 4TH AVE.	Erin Rowand
04/27/2022	As the need for public transportation increases, it is crucial to know that 4th Ave construction is best. The preservation of the International District is not only important to myself, but the many local businesses that would be demolished and disrupted if construction were to continue across 5th ave. 4th ave construction offers little disruption to businesses as they are still recovering from the pandemic that started 2 years ago. The history of the International District is another one to point out as it is home for many folks who immigrated to Seattle. Many businesses, family owned. Many hotels, shared memories dating back to WWII. The community of South Asian and Pacific immigrants that gather and seek refuge in this neighborhood that is the C-ID. As the city continues to grow, and many outsiders come into our city. There are also many people who were born and raised in the area, that find comfort in the same local businesses they knew once before. I am one of these people. Transportation access is wonderful, but not at the cost of history, displacement of families, communities, and businesses that have been established for years, only to accommodate to folks who know nothing about the importance and history of the C-ID.	Edmel Ronquillo
04/27/2022	I would prefer the 4th Ave option for project.	Raymond Diwag
04/27/2022	The ID is a very significant area in Seattle and this proposed location would disrupt the very core. This plan to build goes against what's best for the community it's attempting to serve. Please don't destroy this important and historic community.	Kate Bailey
04/27/2022	An extension is idealistic at best but to displace businesses and to make the Chinatown-International District be a construction zone for several years is not. I currently live in the CID and enjoy visiting all of the local shops and restaurants with ease.	Jennifer Dela Cruz
04/27/2022	Please choose the 4th Avenue alignment. This will improve Sounder & Amtrak connections. The 4th Ave viaduct also needs to be rebuilt anyways. Please avoid 5th avenue. It will displace and disrupt the core businesses of the CID district.	John Guanlao
04/27/2022	Hello - Accessibility to public transportation is important but what is also important is preserving the culture and minority-owned businesses in the Chinatown International District. The light rail extension and the options on 5th Ave S will displace up to 19 small businesses on top of how much COVID has already negatively impacted this area. If Sound Transit truly values inclusion, please listen to the community that is being impacted and know that the 4th Ave S alternatives are preferred because they will not impact any business in the neighborhood.	Ann Nguyen

04/27/2022	<p>The proposed 5th Ave station would be another example of the C/ID neighborhood being forced to accept an unfair level of disruption and destruction for the benefit of other wealthy, predominantly white neighborhoods. After suffering the brunt of the disruptions from the stadiums (Kingdome, T-Mobile & CLink) and the current C/ID Link station, displacing and disrupting more C/ID residents & businesses is unconscionable given that the 4th Ave proposal is better for all surrounding neighborhoods.</p>	Steven Shigaya
04/11/2022	<p>Thank you for the opportunity to comment on the DRAFT EIS for the WSBLE project. This is an important project for the people of Seattle, and especially for the residents of West Seattle and Ballard.</p> <p>My comments cover the West Seattle portion of the project in three general areas: 1) NEPA process issues, 2) fairness, and 3) adherence to Sound Transit's goals for sustainability. Finally, I have some concerns relative to litigation and its implications for project costs and timelines.</p> <p>--- NEPA process issues</p> <p>Significant Environmental Impacts</p> <p>The WSBLE Draft Environmental Impact Statement has been prepared pursuant to the National Environmental Policy Act (42 United States Code 4321 to 4370e) and the State Environmental Policy Act (Chapter 43.21C Revised Code of Washington).</p> <p>WA SEPA is intended to "ensure that environmental values are considered during decisionmaking by state and local agencies." The environmental values change over time and should include issue relevant to current environmental concerns.</p> <p>Similarly US NEPA seeks a discussion of environmental effects and their significance. The latest NEPA revisions as described in 40 CFR V A part 1502.1:</p> <p>"It shall provide full and fair discussion of significant environmental impacts and shall inform decision makers and the public of reasonable alternatives that would avoid or minimize adverse impacts or enhance the quality of the human environment.... Statements shall be concise, clear, and to the point, and shall be supported by evidence that the agency has made the necessary environmental analyses."</p> <p>Further, 1502.2 states:</p> <p>"Environmental impact statements shall discuss impacts in proportion to their significance.</p> <p>"Environmental impact statements shall serve as the means of assessing the environmental impact of proposed agency actions, rather than justifying decisions already made."</p> <p>Recent statements by Washington's governor and the UN IPCC series of climate reports released this April (2022) clearly indicate the critical importance of greenhouse gas (GHG) emissions as a local to global issue. GHG emissions result from the construction of any project (e.g. a ton of concrete yields a ton of carbon emissions) and its continued operation (e.g. energy needed to power the transport mode and the source of the energy). The WSBLE draft EIS is notably deficient in its project-specific assessment and alternatives analyses. The Federal Transit Administration in its 2017 report (Greenhouse Gas Emissions from Transit Projects: Programmatic Assessment, Report 0097) states that it "considers it practicable to assess the effects of GHG emissions and climate change for transit projects at a programmatic level" including a full or "partial lifecycle GHG emissions" analysis. However, estimation of the GHG consequences of the entire Sound Transit system (ST3) are insufficient to properly evaluate the project alternatives proposed in this DEIS. The FTA report goes on to conclude that "in cases where a light rail project is expected to have a lower ratio of displaced VMT to annual transit VMT, then conducting a project-specific analysis using the Matrix or another locally recommended approach may be appropriate."</p> <p>As warned by the UN report, to limit drastic global impacts, it is crucial to all of humanity to reduce GHG emissions through innovative and timely planning and design in the next decade. This is the same time frame as the WSBLE project, so omission of serious analysis seems counter to emerging societal needs.</p> <p>Reasonable Alternatives</p>	Deane Wang

The WSBLE DEIS should not "justify decisions already made" at the initiation of the Sound Transit project or at the time of ST3 in 2016. As stated in 1502.14 (a):

The DEIS should "Evaluate reasonable alternatives to the proposed action, and, for alternatives that the agency eliminated from detailed study, briefly discuss the reasons for their elimination."

The evaluation of two alternatives suggested in the scoping process "for consideration by the lead and cooperating agencies in developing the environmental impact statement" (1502.17) seems inadequate. Appendix M, Table 6-1 in the DEIS cites as a "Reason Not Evaluated in Draft Environmental Impact Statement:" - "The mode (bus) was considered in the Level 1 analysis but was not carried forward since it was not identified and analyzed in the Sound Transit 3 Plan." Given the high cost, long implementation time frame, destruction of hundreds of residences, elimination of many businesses in the Junction, and investment of billions of dollars of public funds, the evaluation of innovative uses of electric busways (e.g. commuter hours priority roadways with hybrid or electric buses) as a "reasonable alternative" should have been included. The rationale provided seems precisely what NEPA authorization seeks to avoid - the "justifying decisions already made."

A second alternative suggested in the scoping process was an aerial tram. The reason provided ((Table 6-1) for exclusion was Sound Transit's 2014 "High-Capacity Transit Technologies Issue Paper," which "identified that gondolas and aerial trams are not considered regional highcapacity transit" (Table 6-1). Even in 2014 this was not an accurate statement, especially given that the level of anticipated ridership to West Seattle at high commute times is well within the hourly capacity of aerial transport. I was not able to access the Issue Paper, but studies demonstrating the potential of aerial transport to meet the requirements were available at the time (e.g. Alshalalfah et al. 2014 Experiences with Aerial Ropeway Transportation Systems in the Urban Environment, J. Urban Planning & Development). In 2021, the DEIS could have accessed even more data with respect to the feasibility of aerial transit to meet public needs.

Comparative Merits

1502.14 (b) Requires that the DEIS "Discuss each alternative considered in detail, including the proposed action, so that reviewers may evaluate their comparative merits."

The lack of detail about specific project GHG emissions, climate resilience, earthquake resilience, etc. in combination with the omission of reasonable alternatives raised in the scoping process is problematic.

Furthermore, Section 1502.17 requires that:

"The draft environmental impact statement shall include a summary that identifies all alternatives, information, and analyses submitted by State, Tribal, and local governments and other public commenters during the scoping process for consideration by the lead and cooperating agencies in developing the environmental impact statement."

The West Seattle portion of the WSBLE project will be a major disruption to the Alaska Junction area -- taking six years or more to construct, potentially displacing over 100 businesses and over 500 residences, and impacting many more businesses and residents in the area. Thus, the project deserves and NEPA requires (1502.16) the comparative consideration of:

"Energy requirements and conservation potential of various alternatives and mitigation measures.

Urban quality, historic and cultural resources, and the design of the built environment, including the reuse and conservation potential of various alternatives and mitigation measures."

Affordable housing, single family housing, rental apartments (prior to the West Seattle bridge closure) and parking are all in short supply in the impacted area. Thus the comparative merits of reasonable alternatives is an essential component of an adequate impact analysis.

Supplemental Draft

The lack of an adequate analysis of any major public project hinders decision-makers ability to make wise choices on behalf of the public. The proponents of NEPA anticipated this in section

1502.9:

"To the fullest extent practicable, the draft statement must meet the requirements established for final statements in section 102(2)(C) of NEPA as interpreted in the regulations in this subchapter. If a draft statement is so inadequate as to preclude meaningful analysis, the agency shall prepare and publish a supplemental draft of the appropriate portion."

--- Fairness

The differential impacts on the public of any project of this scale are unavoidable. In the case of improved rapid transit for West Seattle, each reasonable alternative has implications for different groups. While difficult to analyze for the many subgroups of the public, some preliminary assessment is possible.

For example, implementation of certain alternatives does discriminate on the basis of age. Long vs. short implementation times discriminates against older groups in West Seattle. The average lifespan of a Washington resident (according to the CDC 2019) is 80.2 years. 12.5% of Seattle residents are over 65. More specifically, 7.6% of "West Seattle" residents (the 11 census tracts north of Myrtle) are 70 or over (2010 census). This group of West Seattle citizens will have passed away prior to the anticipated light rail completion in 2032 (assuming no construction or funding delays), having paid 16 years of property tax, car tabs sales tax, etc. to support ST3.

As the closure of the West Seattle bridge has demonstrated, differential impacts on less affluent residents living near transportation corridors is unavoidable, but capable of some mitigation. Heavy traffic and its associated air and noise pollution, lowered property values, and pedestrian safety are just some of the impacts. The time frame and mode of transport selected for West Seattle's rapid transit connection to the rest of Seattle has implications for the less affluent that could be evaluated and included in the analysis.

--- Sound Transit's goals for sustainability

In its 2019 Sustainability Plan update, Sound Transit commits itself to "development of an environmental management system to guide organizational attitude and action." This is an institutional cultural change that is often difficult to implement. The ISO Plan-Do-Check-Act model for continued organizational improvement requires serious organizational introspection with respect to its goals and ISO's various standards including (SIO14001-2015):

"protecting the environment by preventing or mitigating adverse environmental impacts"

"achieving financial and operational benefits that can result from implementing environmentally sound alternatives that strengthen the organization's market position"

Sound Transit has committed itself to "consideration of carbon emissions from project construction and operation - full consideration of reasonable options."

It also states: "As regional transportation planning and implementation organization, Sound Transit aspires to find the best possible outcomes for the Puget Sound people-planet ecosystem."

This level of integrative planning at the ecosystem-level, in concert with its many project partners, is a goal that is complex and difficult to achieve. However, as an aspiration for Sound Transit, it is commendable. The ISO Environmental Management System approach requires an organization to document its own internal processes to meet stated goals. This assists the organization to pursue "continued organization improvement."

The pursuit of ST3 and even the recent "realignment" process can benefit from rigorous and "out-of-the-box" thinking and planning.

--- Litigation on process grounds

Inadequate adherence to the NEPA process unnecessarily exposes Sound Transit to litigation relative to eminent domain seizures and other aspects of project implementation. These court processes can both delay the project and exacerbate the already difficult funding situation.

	<p>Rapid transit for West Seattle residents has many social, economic and environmental benefits relative to the "no action" alternative. To avoid living with "no action" for the coming decade, providing a rigorous supplemental draft including issues not considered or dismissed based on inadequate analyses might keep the dream of fast and efficient connection to the rest of Seattle alive for the near term.</p> <p>GHG emissions climate resilience earthquake resilience integration of multi-modal strategies with partner organizations, including: electric buses on dedicated busways high capacity aerial transport covered pedestrian paths and bikeways enhanced over water transport regional coordination of flex hours and remote work data coordination of multi-modal transit schedules</p> <p>Again, thank you for the opportunity to comment on the WSBLE DEIS and participate in this important project for the Seattle region. Sincerely, Deane Wang 5247 42nd Ave SW, Seattle</p>	
04/27/2022	<p>Hi there, please build the new Sound Transit station on 4th Ave, not on 5th. 5th Ave has a lot of local businesses that are important to the history and the vibrancy of the Chinatown International District and by building on 5th Ave you are taking that away.</p> <p>The Chinatown International District has already been through a lot the past two years, after a history of construction impacts, xenophobia, hate crimes and the pandemic. Please don't make this worse for this beautiful community found in the Chinatown International District.</p>	Mel M
04/27/2022	<p>Hi,</p> <p>As a resident of over 20 years on 42nd Ave SW, I feel if you are NOT going to give West Seattle a tunnel, you must have your elevated stations on a main arterial like Fauntleroy Way and/or Delridge. PLEASE do not disrupt our beautiful neighborhoods with UGLY, ELEVATED CONCRETE STRUCTURES! That is not acceptable! We want a TUNNEL! We deserve a TUNNEL. The environmental impact on our city neighborhoods should be kept to a minimal. Our homes and properties should be kept intact. You have taken away everything that makes this city functional. Please don't take away our neighborhoods. Sincerely, Michelle Nelson</p>	Michelle Nelson
04/27/2022	<p>The International District is a historic landmark of Seattle and must be preserved at all costs. The damage demolishing all these small businesses that are part of the Asian American community cannot be understated. Please consider other means of establishing a Link Station.</p>	Justin Diep
04/27/2022	<p>I am concerned about the negative economic impact this project could bring to Chinatown/the International District.</p>	Benjamin Fritz

04/27/2022	It is important to NOT build the new public transit station on 5th ave in the CID. The community will suffer greatly if this decision is made. Public transport is important, but this would cause avoidable harm against the very people it is supposed to be serving.	AshaAung Helmstetter
04/27/2022	I am writing in solidarity with the International District neighborhood and community. I urge the city of Seattle to select the 4th Ave options for the new light rail station, as this will be least disruptive to the International district community and the many businesses in this neighborhood that are owned by persons of color that celebrate and support the diverse population. It is time that we listen and lift up the voices of people of color who will be most impacted by this choice and I am here to amplify their urging to select the 4th Ave options. Thank you for your time!	Larissa Grieves
04/27/2022	The short tunnel, 41st Avenue Station is my preference. I strongly favor one of the tunnel options. Every other comparable Seattle neighborhood has built light rail underground. An elevated rail system would bring unwanted noise and ugliness and totally and unnecessarily degrade what is now a very nice residential family neighborhood. The option also would appear to have the least impact on existing businesses and homes. Thank you, Suzanne Tedesko	Suzanne Tedesko
04/27/2022	I am writing on the Chinatown International District station proposals. Chinatown International District is a Seattle treasure. A treasure. The fifth avenue options would destroy or devastate many more businesses than a fourth avenue station. The 5th Ave options would create a lasting detrimental change to the CID. You claim equity, so stand for this BIPOC community and this Seattle treasure. The fourth Avenue option is the ONLY option for equity and for our city's strengths and values.	Sarah Rafton
04/27/2022	I strongly urge you to consider building the CID light rail station at one of the 4th ave options rather than 5th avenue. The 5th ave options will be devastating to local businesses and residents, many of whom are still trying to recover from the pandemic and the xenophobia that resulted in many targeted attacks on the CID community. 4 ave make sense - it's already the main street for so much public transit though downtown and is far less disruptive to businesses.	Lea Bouma
04/27/2022	I am writing to advocate for the International District station to be built on the 4th street deep alternative route as this will not displace residents nor businesses. Although I recognize this route is more costly and causes more traffic disruptions, I still believe that we should prioritize not disrupting that people and businesses that have already been in the area. I grew up going to International district every weekend to go grocery shopping with my parents and seeing how people and businesses suffered as a result of the pandemic breaks my heart. I hope that this project will not cause any more distress for them.	Elizabeth Tran
04/27/2022	Seattle has shown time and time again that they prioritize regions of wealthy residents over regions of minority residents. The new CID station must be built on 4th Avenue to avoid further burden on the International District. Moreover, if the Sound Transit system is committed to providing equitable transportation, it should avoid the 5th Avenue options, thereby preserving much of the district's communal integrity.	Kelly Quinn
04/27/2022	The current trains in use are horribly uncomfortable for children and short people! These were clearly designed by men and they have not been able to think of anyone else but their own needs. The trains in Switzerland and Italy are wonderful, why can't our trains be designed after those? For God's sake FIX the seating!	Linda Rieland
04/27/2022	The Sound Transit option on 5th Ave S will displace up to 19 small businesses in the International District. Small businesses are essential to the community, providing employment and support local economy directly. The 4th Ave S alternatives are preferred because they won't impact any businesses in the neighborhood.	Kelsey Kaplan
04/27/2022	PLEASE go with the 4th Ave option. The small business there have been through a lot, especially during Covid.	Donna Dao

04/27/2022	I urge Sound Transit to NOT build on 5th avenue. Doing so will displace a number of small businesses. Building new transit should NOT result in doing harm to community. I strongly urge Sound Transit to consider building on 4th avenue instead. Thank you.	Min Lee
04/27/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Charlene Robins
04/27/2022	<p>There are currently two proposed sites for the new bus depot in the CID, one on 4th ave, and one on 5th ave. I support the 4th ave option because it impacts the vibrancy and importance of the CID to a slightly lesser extent. This community has been harmed in so many ways so in an effort to minimize the impact of this significant decision, I support the 4th ave location.</p> <p>Thank you.</p>	Anna Strick

<p>04/27/2022</p>	<p>I am a West Seattle / N. Delridge resident, and have several concerns about SoundTransit's proposed options for light rail extension. I and several members in my N. Delridge neighborhood strongly favor the SkyLink option vs. train, and ask that SoundTransit consider this efficient, cost effective, lower environmental impact alternative.</p> <p>I have personally ridden and seen gondola technology in urban markets work extremely well. They are highly efficient, attractive modes of transport in both Bogota and Medellin, Colombia; Hong Kong; and Singapore. They are especially effective in mixed terrain areas, as is the case between West Seattle and SODO.</p> <p>While there are numerous advantages to gondola technology's solution for West Seattle, 3 principal reasons stand out for electing this option:</p> <ul style="list-style-type: none"> 1- significant taxpayer cost savings 2- FAR LESS environmental impact 3- less community disruption and faster speed of development <p>1: Project funding/cost Chapter 2.8.2.1.1 lists the many alternatives contemplated in the DEIS and the associated total costs between \$3 billion and \$4.7 billion which is about double or triple the amount approved by voters in ST3 (\$1.7 billion). Before the pandemic, three West Seattle buses (RapidRide-C, #121, #21) already provided 25,500 trips daily. The DEIS projects 27,000 trips on light rail by 2042, only 1500 more than buses were providing in early 2020. There will be little improvement in travel time for many riders, given the likely need to take a bus to a West Seattle light rail station and then disembark at SODO and wait for another light rail train to go anywhere else for at least the next 15 years. See Transit Time category that follows.</p> <p>Table 2-9 of App. N indicates Sound Transit estimates light rail to reduce 400 vehicle trips on the West Seattle Bridge by 2042. At a light rail cost of almost \$10 million per additional daily trip (plus the building of additional OMF capacity and train acquisition) and an annual operating cost of \$35 to \$40 million this investment does not seem worthwhile – and that’s without considering the cost to the environment of greenhouse gases emitted during construction.</p> <p>Gondola technology has been proposed by citizens since 2015 but always ignored or dismissed as incapable of serving regional transit needs despite the fact that it is being suggested, not as a regional mode, but as a high-capacity feeder for a densely developed terrain with hills and water obstacles where light rail is difficult, expensive, and damaging to build. Other light rail corridors such as from SODO to Georgetown/South Park could provide a more economical way (both in construction and annual operation) to provide light rail to the Duwamish peninsula.</p> <p>2-3: Acquisitions, Displacements, and Relocations Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the “Least Harm Analysis” test in 4.2.18.5.</p> <p>A 2014 Sound Transit paper on mode choices for the regional transit network stated: “Several of the technologies that have moderate to high HCT capabilities, but are generally less suitable for Sound Transit, could be considered for some service if that service would operate on principally exclusive rights-of-way and is not intended to interline (i.e., share the same tracks) with the light rail ‘spine,’ which extends from Everett to Tacoma, and from Seattle to Redmond.” When Sound Transit issued the April 7, 2022 Gondola Feasibility Report, it reiterated this statement in dismissing “SkyLink’s” proposal from consideration. SkyLink is proposing a gondola to serve not as the primary mode of the regional network but as a feeder from the ST3 designated station locations to the main spine of the light rail system. An urban gondola could provide the capacity needed, could be constructed with minimal disruption, displacement, and damage to the environment and established community. Specifically, it would avoid the following problems caused by proposed light rail alternatives:</p> <p>Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore.</p> <p>Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin practically shows NO available home inventory in West Seattle, the DEIS just says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify for a new home based on current social status / credit rating. Commercial real-estate is very limited in West Seattle which mean displaced businesses may have to relocate causing them to lose their customer base and West</p>	<p>christine clark</p>
-------------------	---	------------------------

	<p>Seattle residents may have to travel longer distances to get services.</p> <p>Chapter 4.2.3.3 includes several pages of huge impacts. It talks about the fact that light rail will destroy businesses, reduce the city's tax base and may affect tribal fishing rights. It fails to address the social impact for the employees and owners affected by this destruction, many of them small businesses whose livelihood is affected. It does not address the strain on the social services. Even more importantly it does not address the impact to the community which has grown around these services and the businesses and families which will be impacted indirectly. Alki Beach Academy for example provides daycare services to 300 children; affected parents may need to quit their jobs or move elsewhere if they lose affordable daycare.</p> <p>Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, it claims it is "consistent with existing views." While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The northern bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway will be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther.</p> <p>Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRide-H. Now all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) will be impacted by multi-year construction and related detours. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours.</p> <p>Figure 4.2.5-4 does not show any coverings over the station therefore making it appear lower than it is. It only shows the destruction of homes directly adjacent to the station, but not along the guideway which again provides a distorted impression of what will happen.</p> <p>Chapter 4.2.5.3.3 fails to mention that Olmsted already suggested to preserve the view from Pigeon Point which any of the southern alignments would destroy, for details: Pigeon Point - West Duwamish Greenbelt – Friends of Seattle's Olmsted Parks (seattleolmsted.org).</p> <p>Please consider what is a smarter, safer, faster and far more economical option than light rail -- SkyLink is the right choice for this area.</p> <p>Thank you. christine</p>	
04/27/2022	<p>The 4th avenue options are much better for this neighborhood than the 5th avenue options. Either project will cause disruption but if done through 5th avenue it will displace/demolish many POC owned businesses, cause street closures for up to 11 years, and cause noise and air pollution in neighborhoods for many years. The 4th avenue does not disturb as many peoples livelihoods, mostly just empty lots/parking lots, only 5 -8 business and between 170-200 employees. Putting the 5th avenue options in would also likely lead to more distribution of CID in terms of splitting the neighborhood and causing more racism, xenophobia, hate crimes, and covid exposure to at risk populations . 4th Ave CID 1a is generally better for everyone and has least impact overall. Please listen to the voices of those who live and work in the CID and will be most impacted not just the business with the most money and lease to loose.</p>	Temple Loveli

04/27/2022	<p>I am writing to urge you to select the 4th Avenue alternatives and save the Chinatown-International District.</p> <p>Table 4.3.4-1 "Ballard Link Extension Study Area Demographics" shows that compared to the other areas impacted by the construction, the CID Segment has the highest percentage of people of color, low-income households, residents over the age of 65 and households with no vehicle. It is imperative to move forward with one of the 4th Avenue alternatives to minimize the displacement of buildings and businesses that these residents depend on. Streets at the heart of the CID including 5th and 6th Avenues and King and Weller Streets must not be closed or occupied by construction activity for years. It will simply be unlivable if residents are not able to walk to Uwajimaya for groceries or visit with their neighbors at Hing Hay Park. Small businesses will not be able to endure upwards of 10 years of construction. Choosing one of the 5th Avenue alternatives will mean the death of the CID.</p> <p>As an Asian American, the CID neighborhood is a vital place for me to find community. Having lived in Seattle for more than 12 years, I visit the CID on a weekly basis, shopping for groceries at Uwajimaya, stationery at Kinokuniya, and gifts at Sairen. I love the shokupan at Fuji Bakery, visiting with the owner of International Model Toys, eating the salt and pepper tofu at Pacific HK Cafe, the almond cookies at Homestyle Dim Sum and coconut tarts at Cake House My Favorite, and comparing the bubble tea options at Oasis, Young Tea, Jardin and more. I've volunteered at Helping Link and the ACRS food bank, and attended numerous festivals, food walks and community rallies at Hing Hay Park.</p> <p>I am also a strong supporter of public transit for Seattle, and that is why we must move forward with the 4th Avenue alternatives. Alternatives CID-1a and option CID-1b are the right choice because they would not displace critical buildings and businesses that are essential to the community and its residents. The CID is an important historic and cultural neighborhood that must be preserved and supported, not destroyed.</p>	Kayla Kitamorn
04/27/2022	<p>I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people. We need these facilities and services now more than ever.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed.</p> <p>While we desperately need rail, these options are not viable options for our community</p>	jacqueline koch
04/27/2022	4th avenue is the only option. Do as little harm to the neighborhood as possible and displace fewer businesses!	Pam Gassman

04/27/2022	<p>Hello,</p> <p>I am writing regarding the Chinatown-International District alternatives. I believe strongly that any of the 5th ave options will permanently damage the culture, community, businesses and people of the entire neighborhood. These businesses will not be "displaced" - many will likely never return. New ones will eventually take its place, but the damage to the community will be done. Invasive projects to the CID cannot be compared to any other neighborhood as it provides a cultural dynamic that cannot be found anywhere else in Washington. The impact of intrusive changes must be kept to a minimum.</p> <p>The 5th ave options in particular not only impact the immediate businesses, but will also permanently split the CID, shrinking both its size and its cultural strength.</p> <p>I request that you do not move forward with the 5th ave options, and either choose one of the 4th ave or investigate other alternatives.</p> <p>Thank you, Andrew Yang</p>	Andrew Yang
04/27/2022	<p>While I support the increased access to public transportation, especially for the ease of access for those that work and the potential business it will bring to the CID, I implore you to choose the option that has the smallest impact on the neighborhood. As a community member who lived near the CID and in some ways grew up around there, I have witnessed the vitality and strength of this community which has been essential for marginalized community members. Disrupting this community through displacement and extended street closures would be irresponsible. We cannot continue to sacrifice the CID for the sake of another major transportation or construction project. Please continue to consider options that would create minimal impact on this important neighborhood.</p>	Ricki Lieu
04/27/2022	<p>Please choose a Light Rail station on 4th and not 5th so that businesses and people are not as heavily impacted by the ~11 years of construction, air pollution, noise pollution, and negative business impact.</p>	Kenzie Bailey
04/27/2022	<p>Now that a more expensive bridge would be required for the drawbridge option and matches the cost of the tunnel, Please consider reopening the study for a tunneled 20th Ave station! Thank you!</p>	Alex Parsons

<p>04/21/2022</p>	<p>Greetings:</p> <p>To be successful, it is critical that the Interbay-Ballard segment of ST3 expansion must be located where residents and businesses can easily access it. That means we need two stations! One near Smith Cove Park easily accessible to Expedia employees, cruise ship passengers and resident on the southwestern part of Magnolia. And a second near Dravus, where much of Magnolia's population resides. My preference is to have the light rail travel through an underground tunnel from Seattle Center to Smith Cove station then to Dravus station and under the ship canal to connect with a Ballard tunnel station at 17th, 20th or 22nd avenue NW. Please note that reducing the number of stations to one at Armory means that most Magnolians cannot access the station easily!</p> <p>2) We must have shuttle buses coordinated with the light rail schedule that make regular trips from key locations in Magnolia to the two Magnolia light rail stations.</p> <p>**3) Please avoid transit plans that **require pedestrians to cross major roads such as 15th Avenue West.</p> <p>4) Please avoid large stations. All we need are platforms, some shelter for passengers, a place for shuttles or drivers to drop people of and a place for people to lock their bicycles.</p> <p>5) The Interbay area is so close to the city, and contains so much open land, it holds great promise for potential development for affordable housing and small-scale manufacturing. Critical infrastructure should be placed underground to allow for dense development of the area.</p> <p>6)** Regarding Smith Cove station (SIB-1)**:</p> <p>The station should be approached by tunneling and be placed on the West side of Elliot Street/15th ave. West and allow for easy access to Magnolia Bridge or its replacement.</p> <p>7) With respect to Interbay Station (IBB-2b):</p> <p>**The station must be close to the Magnolia community so it can be easily accessed in the event of **bridge failures. Trains should continue through a new ship canal tunnel.</p> <p>The station should be designed so all buses and passenger car pick-up and drop off are on the north side of Dravus or on 17th Ave. W</p> <p>Thank you for taking the time to understand what a Magnolia person such as me feels we need.</p> <p>Marie Anchordoguy, who voted for Andrew Lewis in last election 29th Avenue West</p>	<p>Marie Anchordoguy</p>
<p>04/27/2022</p>	<p>Hello,</p> <p>My comments address the construction of a new Sound Transit station in the CID. The options offered are a 4th ave station or 5th Ave stations that will negatively impact business and the unique character of the CID. The 4th Ave alternatives are preferable because they would involve displacing parking spots rather than businesses. I assert that this is the smartest and most ethical choice.</p> <p>Construction on 5th Ave and tearing down businesses in the CID is unnecessary and cruel. The CID has suffered many construction interruptions throughout its history and it needs to stop. These businesses are lifelines for Seattle's AAPI and immigrant populations. The CID is historically rich and is one of the most culturally diverse interesting neighborhoods in Seattle. 5th Ave construction will eliminate businesses that have struggled through so much but continue to thrive. Don't kneecap AAPI owned businesses that are just now starting to recover from the pandemic. Build the station on 4th Ave and prioritize businesses over parking spaces.</p> <p>Perhaps people will use transit more if there are thriving businesses to visit and parking isn't ideal. That's how big cities work. The value is in the character, the history, the diversity, the products, not the parking.</p> <p>Regards, Corr</p>	<p>Corr Ash</p>

04/21/2022	<p>Hi,</p> <p>I read in the DEIS that the Chinatown Gate will be wrapped. There needs to be detail about how this will be accomplished and what the wrap materials will be. Will the “wrap” blow off in a rain storm? Tear? Flap around if it loosens? If too tight, will it knock of ornamental features?</p> <p>Can the wrap withstand getting hit by a haul truck or other construction vehicle/equipment?</p> <p>Betty</p>	Betty Lau
04/27/2022	<p>Regarding the CID component, the 4th Ave option seems preferable to the small local business that are most at risk. Please highly consider doing whatever you can to support them as they are VERY vulnerable. I vote 4th Ave plan.</p>	Renin Cassidy
04/25/2022	<p>Thank you for the opportunity to comment on the DEIS.</p> <p>Attached are my comments, questions and requests. I am available for responses.</p> <p>Thank you Mark Uomoto</p> <p>Mark Uomoto On Behalf of Yoshia Uomoto Nikkei Manor Assisted Living 700 6th Avenue S. Seattle, WA 98101</p> <p>RE: Sound Transit Light Rail Hub Ballard Extension/Chinatown-International District Segment</p> <p>Dear Sound Transit DEIS Analyst</p> <p>Context</p> <p>I am writing on behalf of my 99 year old mother who is frail and wheelchair bound. She lives at Nikkei Manor assisted living facility. I am writing to express my concerns over the DEIS where I feel is flawed in a couple areas. I probably missed relevant areas about the CID, but that is due to my ignorance of the structure of the DEIS.</p> <p>I will begin my acknowledging the long term need for improved mass transit to accommodate increased transportation needs of our continuously growing population and economic Central Puget Sound region. Literally funneling transit users through the Central Seattle area and particularly the Chinatown/International District (CID) is a huge challenge. My focus is the CID area per se and not Pioneer Square and other areas that are including in your “Chinatown-International District Segment” in section 4.3.2.1.2.</p> <p>Table 4.3.1-2</p> <p>First Table 4.3.1-2 shows no Multifamily parcels affected. For the 5th Avenue options, isn’t the housing above and around Uwajimaya and Nikkei Manor and other condo/apt units between 6th Ave and Maynard Avenue affected? If “affected” is defined as purely business impact, then “affected” must be expanded to include housing facilities. I am not savvy with the DEIS but no impact to multifamily parcels is outrageous. More points on this below.</p>	Sound Transit Board, Mark Uomoto, Yoshia Uomoto

Economics 4.3.3 - Section 4.3.3.4.3

"Roads where traffic would be diverted include 1st Avenue South, 6th Avenue South, and Maynard Avenue South..." It does not say how long. Medic, wheelchair transport vehicles and resident families MUST have access to Nikkei Manor whose entrance is on Lane St and between 6th and Maynard Ave at ANY time. 4.3.14 Fire and Emergency Medical Services says "Temporary closures could affect access and response times for fire and emergency medical vehicles". I am positive it [can] affect access...

QUESTION:

- (1) What assurances will be guaranteed for such access to Nikkei Manor?
- (2) This contradicts 4.3.14.3.3 where it states " would not have additional impacts to public services other than those discussed above"

Social Resources, Community Facilities and Neighborhoods 4.3.4 CID Segment

QUESTION: Why isn't Nikkei Manor and other housing facilities mentioned? Request their inclusion and recognition of adverse impact?

Noise and Vibration 4.3.7

"The Chinatown-International District Segment does not have any noise-sensitive land uses where the project would be above-ground, and no noise analysis is required for proposed tunneled areas". It does not explicitly exclude during construction and this must be considered during construction. Section 4.3.7.1.1 implies transit use of the tunnel design.

OBJECTION:

- (1) I am sure housing along 5th, 6th Avenues like Nikkei Manor would be extremely sensitive to construction noise and adversely affect sleep when at night.
- (2) Recognition of vibration is noted in along 5th Avenue but given this entire area is formerly mud flats and would think vibration would be further than the area of the construction.

4.3.7.4.1 Noise

Good recognition of Noise in the CID.

QUESTION:

- (1) What is the noise during the day and during at night where 6th Avenue is at, where Maynard Ave is at? What mitigation measure can be done?
- (2) What is the noise generated from massive trucks to/from the construction during the day and at night from 6th Ave, from Maynard Ave? What mitigation measure can be done?

Historic and Archeological Resources 4.1.16

OBJECTION:

Why isn't Nikkei Manor included as they are 700 6th Ave S? (Or sorry if I missed it)

Noise and Vibration Technical Report: N3

This has details of both noise and vibration but want to see on a map of the CID levels of noise and comparable vibration indices increasing distance away from the project site. For example db from the project site during construction to 6th Ave, to Maynard Ave, etc.

Vehicle air pollution and Particulate

Why relatively little on this area? I remember the Puget Sound Air Quality (PSAQ) analysts came to the Nikkei Manor Family Forum of years ago expressing their concern of smoke and particulate matter in the CID per se (not CID Segment). They discussed the meters to be used and where they were to be installed.

If PSAQ came to us to discuss air pollution and particulate matter, can't this DEIS analyze the construction's

	<p>impact and post construction impact on the CID per se and showing levels from the project site to 6th Avenue and to Maynard Ave, etc?</p> <p>Bottom Line</p> <p>I appreciate the huge extensive analysis of this huge project. To me, the Chinatown/International District (not the Segment) is tiny as compared to this project. However, the district is very fragile and hate to see it disappear like the former Japan Town in Los Angeles. The residents living in Nikkei Manor and other similar housing facilities are frail and the thought of night light, construction noise, construction vibration, constant massive truck getting to/from the project site is appalling. I much rather have the 4th Avenue design adopted and mitigate all my concerns on the CID neighborhood.</p> <p>Thank you Mark Uomoto mwumoto@comcast.net</p>	
04/27/2022	The International district has gone through enough construction! Let the people continue to build their lives. I vote no	Alexander Hartanov

<p>04/23/2022</p>	<p>Hello:</p> <p>1) To be successful, it is critical that the stations in the Interbay-Ballard segment of ST3 expansion be located where residents and businesses can easily access them. That means we need two stations in Magnolia. One should be near Smith Cove Park, where it would be easily accessible to Expedia employees, cruise ship passengers and residents on the southwestern part of Magnolia. A second station should be near Dravus, where much of Magnolia's population resides. My preference is to have the light rail travel through an underground tunnel from Seattle Center to Smith Cove station then to Dravus station and under the ship canal to connect with a Ballard tunnel station at 17th, 20th or 22nd avenue NW.</p> <p>2) We must have shuttle buses coordinated with the light rail schedule that make regular trips from key locations in Magnolia to the two Magnolia light rail stations.</p> <p>3) Please avoid transit plans that require pedestrians to cross major roads such as 15th avenue West.</p> <p>**4) Please avoid large, expensive stations. All we need are platforms, some shelter for passengers, a place for shuttles or drivers to drop people off and a place for people to lock their bicycles. **</p> <p>5) The Interbay area is so close to the city, and contains so much open land, it holds great promise for potential development for affordable housing and small-scale manufacturing. Critical infrastructure should be placed underground to allow for dense development of the area in the future.</p> <p>6) Regarding Smith Cove station (SIB-1): The station should be approached by tunneling and be placed on the West side of Elliot Street/15th ave. West and allow for easy access to Magnolia Bridge or its replacement.</p> <p>**7) With respect to Interbay Station (IBB-2b): The station must be close to the Magnolia community so it can be easily accessed in the event of bridge failures. The station should be designed so all buses and passenger car pick-ups and drop-offs are on the north side of Dravus or on 17th Ave. W. Trains should continue through a new ship canal tunnel. ****</p> <p>I am against the proposal to build only one station in the Interbay area and to place it close to the Armory.**</p> <p>Thank you for your consideration.</p> <p>Randa Minkarah 206-877-2410 randam2@comcast.net</p>	<p>Sound Transit Board, Andrew Lewis, Sara Maxana, Randa Minkarah</p>
<p>04/27/2022</p>	<p>The current plans for light rail station in the International District will harm the district, the businesses, the people, and the culture there. The ID is a jewel of Seattle and needs to be preserved and protected. Please step back from your current plans and do a more thorough impact statement.</p> <p>In case you are interested, I am not of Asian descent. However, I am very much committed to protecting and valuing the ID. The current plan does not do that.</p> <p>I look forward to the planning group working more closely with representatives of the ID to develop a new plan that shows the ID and its residents the respect they deserve.</p>	<p>Mary Fischer</p>

04/23/2022	<p>Hi Sound Transit Board Members and Seattle City Council Members,</p> <p>I am strongly against the construction on 5th Avenue in Chinatown to Japantown as it will have adverse impact the following:</p> <ul style="list-style-type: none"> -Permanent changes to National Register Seattle Chinatown Historic District—loss of 3 blocks, in addition to prior loss of 3 blocks for Transit Tunnel; -Disruptions to 300 businesses already battered by the pandemic, higher than ever anti-Asian hate crimes, criminal violence. -Disruptions to schools, daycares, programs serving thousands of children and youth. <p>Please take 5th Ave. (Option 2a and 2b) off the table and Move Forward on 4th(Option 1a or 1b)!</p> <p>Thank you.</p> <p>Jun</p>	Seattle City Council,Sound Transit Board,Jessica Brand,Magda Hogness,Nicole Kistler,Jun Qian
04/27/2022	<p>The 4th option for the new Sound Transit station in Chinatown is a better option in comparison to 5th. I've been using Sound Transit for over a year now and have been a frequent visitor of Chinatown. Please save more businesses by going with the 4th option.</p>	Amanda Blue
04/27/2022	<p>Dear Sound Transit Board and Seattle City Council,</p> <p>I urge you not to build the new station on 5th Ave. The multi-year closure of King Street, S. Weller, and 5th Avenue will be detrimental to the businesses and people of the Chinatown International District. Many immigrants who contribute to the good of our city and help grow our diversity will have to close their businesses. Additionally, we cannot put more people of color in Seattle at risk of air pollution, dust, and dirt. Building on 5th would shatter social life and economic livelihoods for a community that has dealt with rising criminal activity and spikes in anti-Asian hate crimes.</p> <p>Sound Transit, please take 5th Ave. off the table and move forward with 4th Ave.</p>	Faye Kim
04/27/2022	<p>Do NOT build new stations in Chinatown. This community is so economically and physically sensitive to any changes, i.e. the pandemic restrictions, building changes, that you are ruining so many lives and putting them at danger of ruining local businesses and displacing current residents WHOM MOST ARE ELDERLY. Don't do this to the Chinatown community.</p>	Sophia Huynh
04/27/2022	<p>Hello,</p> <p>I am reaching out to ask you to save the CID neighborhood.</p> <p>The proposed stations are damaging to our neighborhood, please do not continue a history of public policy that destroys BIPOC communities. Listen to the Executive Team and the Wing Luke Museum and take their counsel regarding how light rail plans can go forward while preserving our valuable BIPOC community.</p> <p>Thank you, Corinne Wilson</p>	Corinne Wilson
04/27/2022	<p>Move the HUB down into SoDo, NOT the International District/Chinatown! SoDo has multiple locations that are now underused, and/or vacant. SoDo location also has plenty of bus service (both current and future) that can be expanded to provide access to/from the new HUB.</p> <p>The ID cannot afford to lose any more historic and new businesses and/or buildings. It's only a fraction of it's original size as it is, let alone to lose years of access and closure of businesses. The previously red-lined areas of the Central District and the ID/Chinatown are finally beginning to gain ground with their historic culture and businesses.</p> <p>DO NOT undo the progress that is being made in it's culture, access, and safety.</p>	Dawn Counts

04/27/2022	<p>On January 28th of this year, Sound Transit released a Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions (WSBLE) Project to inform the public about proposed Seattle Light Rail expansions, local impact, and proposed construction options.</p> <p>Currently, five options have been put forward by Sound Transit for expansion of Chinatown-International District Station: three options place new station entrances on 5th Avenue S, and two place entrances on 4th Avenue S. Options on 5th Avenue will displace many C-ID small businesses and result in the demolition of buildings that currently house Ping's Dumpling House, Joe's Bar, Pacific HK Cafe, and Oasis Tea Zone. No matter the location, station construction will require nearly a decade of street closures, detours, loss of parking, and subject residents to construction noise throughout the day. Cumulative impacts around the community's ability to stay and thrive remain unaddressed.</p> <p>The economic impact of the pandemic and anti-Asian American sentiment has hit the C-ID neighborhood harder and longer than most. Many of the small businesses that struggle to survive today will be hit even harder, our Museum included. We have determined that evaluations by Sound Transit have ultimately failed to fully address and account for the ways in which the expansion will irreversibly change the neighborhood.</p>	Christopher Olsen
04/27/2022	The 5th Ave CID options are most concerning due to the displacement of small and mostly minority-owned businesses, and the disruption to the community of mostly people of color and marginalized folks.	Amy T
04/20/2022	<p>Hi Comments Department,</p> <p>I saw in the attachments lists of consulting partners. It would be helpful to have an explanation of how they were chosen and their roles. The list I saw was heavy on historic preservation groups and two housing non profits. I didn't see a single organization that does social services.</p> <p>Interim was listed as holding several community forums, but this may not be as comprehensive as needed for ST purposes because of their "selective engagement" policy.</p> <p>Betty</p>	Brien Chow, Nicole Kistler, Betty Lau
04/27/2022	<p>Access to public transportation is vital to the livability of our city during this time of unprecedented growth and expansion but, as history shows, consequences from public infrastructure projects like this have disproportionately burdened communities of color.</p> <p>Currently, five options have been put forward by Sound Transit for expansion of Chinatown-International District Station: three options place new station entrances on 5th Avenue S, and two place entrances on 4th Avenue S. Options on 5th Avenue will displace many C-ID small businesses and result in the demolition of buildings that currently house Ping's Dumpling House, Joe's Bar, Pacific HK Cafe, and Oasis Tea Zone. No matter the location, station construction will require nearly a decade of street closures, detours, loss of parking, and subject residents to construction noise throughout the day. Cumulative impacts around the community's ability to stay and thrive remain unaddressed.</p> <p>This is unacceptable. This neighborhood is already at risk of gentrification and having been hit hard with anti Asian hate crimes, and loss of business due to the COVID-19 shutdown.</p>	Josie Baltan

04/20/2022	<p>Dear Comments Department: **Discrepancy: ** **In one of the workshop presentations, ST speaker said only one block of 6th would be impacted, from Jackson to King, adjacent to Hing Hay Park. However, according to the Table below, the partial closure will be for two blocks instead. ** Table N.1E.26***5th Avenue Shallow Alternative (CID-2a) – Chinatown-International District Segment</p> <p>6th Avenue South between South Jackson St. and South Weller St. partial closure 1 year</p> <p>Betty</p>	Brien Chow,Nicole Kistler,Betty Lau
04/27/2022	<p>Hi,</p> <p>I would like to ask that you consult carefully with business and community leaders in the Chinatown International District about any plans to extend light rail in their community. There seems to be a history of displacing brown folks to stimulate wealth and although it might slow or change your plans, I am a voter who would be willing to put up with traffic jams and other hassles to center those voices. Please do your best to lend weight to the concerns of those community members as you make your plans. Thanks!</p>	Carey Christie
04/27/2022	<p>As a person whose heritage is English/German, I know that it is imperative to maintain the viability of the C/ID for now and for the future. This is an area that has absorbed an inordinate amount of infrastructure upset, with the construction of I-5, the stadiums, the construction of the bus terminal -- now light rail. I enjoy walking the streets of the C/ID, and would hate to see the loss of any of the businesses in danger. As the child of a mom-and-pop business myself, I know from experience how damaging to individual businesses and to entire business areas a project of this magnitude can be. Sometimes large entities tend to run roughshod over small businesses -- who do you think will support light rail in the future? Certainly not the large entities. Some more careful thought as to repercussions seems needed.</p>	Joanne Branch
04/27/2022	<p>Please consider an alternative when it comes to this project. Displacing residents and vital businesses in the International District, after decades of racist acts and policies, will only further damage the integrity of the community in the ID. The time is now to stop negatively impacting these already struggling minority communities. I absolutely oppose the station options as the currently exist.</p> <p>Thank you,</p> <p>Ross Laing</p>	Ross Laing
04/27/2022	<p>The existing Lightrail station at Chinatown-Internationaal District is good. The entersecting line, north to Ballard and west to West Seattle should be no more destructive of the C-ID. Don't destroy existing buisnesses. Put it under UNIon STation, or under the existing Lightrail station, or whatever is least disruptive.</p>	Jean Durning

04/15/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <p>Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand</p> <p>Minimize transfer time from transit to platform</p> <p>Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures.</p> <p>Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Smith Cove (SIB-1):</p> <p>Approach station by tunneling under Elliott</p> <p>Station on West side of Elliott</p> <p>Minimize size, if elevated station, over Galer flyover/Magnolia Bridge</p> <p>Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b):</p> <p>Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures</p> <p>Station must lead to Ship Canal Tunnel</p> <p>No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station</p> <p>Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village</p> <p>Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p>	Sound Transit Board, Marcelle Graves, Andrew Lewis, Sara Maxana
04/27/2022	As a former staff member of The Wing, I believe the study executed does not provide a comprehensive impact to the International District neighborhood. You are causing more harm than good to the residents and business owners.	Jennifer La Rue

<p>04/15/2022</p>	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. <p>04/27/2022</p>	<p>I want to voice my support for the 4th Avenue location for the international district / Chinatown station, as well as my opposition to the 5th Avenue / diagonally situated location proposals. As a longtime Seattle, now Shoreline/ North City resident, I am so excited for the new transit options that will allow myself and others to quickly and easily move around our wonderful city. As the light rail connects this disparate corners of the city, it's important that we also consider and preserve the businesses and communities that currently exist. The 4th Avenue location for the international district/Chinatown location is the best proposal to connect this culturally and historically unique neighborhood without totally disrupting or erasing it. Please choose the 4th Avenue option!</p>	<p>Erin Millman</p>

<p>04/14/2022</p>	<p>Sound Transit Board and DEIS team —</p> <p>I'm concerned that Sound Transit does not report green house gas emissions due to construction activities. The Sound Transit 2020 Sustainability Progress Report states explicitly: "(This report does not include the resource use of the agency's construction activities.)"</p> <p>I am also concerned that Sound Transit is biased in evaluating new transit technologies, lacking the necessary capabilities to do so.</p> <p>First issue: I have been unable to locate embodied green house emissions data within the West Seattle / Ballard extension DEIS — for each design option. Is this data available, disclosed? (Please direct me to the appropriate pages if I missed the analysis and comparisons. The "best" mention was some language "...not using estimators for construction GHG emissions". This is disturbing... if that is all ST can do or cares to do for us.)</p> <p>I believe — required by law or not — any and all EIS should focus attention upon and dedicate an entire section to embodied green house emissions due to the use of high emission construction materials (e.g. production of steel, cement/concrete, etc.) and actual construction activities (e.g. local and long distance transport, etc.). Highlight this section, feature this EIS section, actively solicit critical public discourse and critique of the section!</p> <p>Every kg of GHG emissions released over the next 7-10 years is critical — please note and read recent IPCC reports!</p> <p>Has ST funded an independent, and rigorous, analysis and report detailing the impact of current emissions due to construction NOW (over the next 7-10 years), the a relationship to purported emissions "avoided" in the future, and the overall heating potential of various segments added to the system? (I stumbled upon an years old white paper discussing concrete options for ST — fly ash, green concrete/cement, etc. — but was unable to find any publicly disclosed followup by ST, no documented/codified dedication to use low/zero carbon building materials — perhaps the reason for the wording in the 2020 Sustainability Progress Report.)</p> <p>For a given segment of the system — a GHG analysis may show that from a GHG emission standpoint, use of "light rail" as the ONLY mode of transit will result in a net positive heating potential (BAD) vs. other methods/modes of transportation implemented or selected (e.g. dedicated electric buses, gondola, rubber/high traction monorail, 3 or 4 day work weeks, high EV adoption and use, etc.). Let's' put some effort into this issue, not simplistically show "how we build light rail" and ignore this critical environmental criteria. [BTW — The loss of houses in the DEIS seemed to extremely high. What was the direct cost assumption to the extension options, i.e. to purchase these homes and impact on housing stock / home prices.]</p> <p>Each link segment added — all segments — must consider and calculate total GHG ("cradle to grave", embodied emissions, etc.).</p> <p>Second issue: Sound Transit should NOT be a "one size fits all" light rail system — though at times ST behaves that way. Efficiencies can only be achieved with a road surface bus (fully electrified some day, I hope) and light rail system?</p> <p>The recent Sound Transit "feasibility report" regarding potential consideration of gondola technology for the West Seattle link appears to be nothing more than a position paper stating / reiterating Sound Transit's inability to design, construct, manage a 21st century transit system in a geographically diverse environment that requires something other than ST's "one size fits all" / "this is all we can do" transit system. (Please see LA or other cities evaluations and their progress, particularly regarding gondola tech.) The ST "report" does not appear to be rigorous from engineering, financial, or environmental points of view — at all. The ST Board should reject and be ashamed of such "reports". The dollar savings alone should be enough for the board to seriously, critically, evaluate non-light rail, non-bus modes of transit to West Seattle (and Ballard).</p> <p>In summary, a "transit system" that simply adds to our immediate GHG emission problem is NOT a good transit solution. I do not support a transit system (or segment of that system) with extremely high upfront GHG emissions, leaving those GHG to be "offset" or "abated" in the future (you hope, based upon what fluctuating assumptions or models). A transit system with high upfront GHG costs (emissions, heating potential) that also never achieves net zero GHG status operationally would be the ultimate insult and misuse of taxpayer funds. Mass EV use might have been a better solution for the health of the planet. ST — "We build a transit system to move people; trust us, ignore our initial GHG emissions."</p>	<p>Mark Leahy, Joe McDermott</p>
-------------------	--	----------------------------------

	<p>Don't ignore embodied carbon, address it directly, open to public critique! ST needs to address embodied carbon and be upfront about it by including it in its annual Sustainability Progress Report and when evaluating, choosing system extensions (not to mention cost).</p> <p>Our Sound Transit system is intended to benefit all communities both economically and environmentally. Our communities are dispersed geographically and yet ST can only "manage" two modes of transport? Transit engineers globally have only two ideas — rail or roads? The ST Board must require a serious, rigorous, and fair evaluation of gondola technology (by a non-ST, independent, knowledgeable firm). Criteria for this real feasibility study must include detailed construction costs, embodied carbon totals, time to operation (and all benefits therein), and lastly - operational ease of implementation. Give voters a fair evaluation to review/choose — if necessary; show us that you are good fiduciaries.</p> <p>Regards, Mark Leahy</p> <p>Mark R. Leahy 6741 38th AVE SW Seattle, WA 98126 Ph: 206-735-7954 email: markrleahy@leahymail.net</p>	
04/27/2022	Move through with 4th!!! Moving to 5th with cause so much detrimental impact upon residents, small businesses, and the CID overall. The CID is such an important community to Seattle. Do not move through with 5th, save our precious community. Keep Seattle rich with culture by moving through with 4th, NOT 5th.	Abby Brescia
04/27/2022	I am writing on the Chinatown International District station proposals. Chinatown International District is a Seattle treasure. A treasure. The fifth avenue options would destroy or devastate many more businesses than a fourth avenue station. The 5th Ave options would create a lasting detrimental change to the CID. You claim equity, so stand for this BIPOC community and this Seattle treasure. The fourth Avenue option is the ONLY option for equity and for our city's strengths and values.	Melissa Baerwald

04/27/2022	<p>I am writing in conjunction with the Wing Luke Museum's objection to the lack of alternatives in the Draft EIS for expanding the Chinatown-International District station that do not displace and/or damage the vital community of the Chinatown-International District.</p> <p>I have worked as a contractor with the Wing Luke Museum to gather oral histories from immigrant and refugee communities, and worked to tell their stories through exhibits and installations in and around the C-ID. Many of these experiences are not well known, and are not well understood by the larger Seattle community. The C-ID area is unique in Seattle, the only neighborhood that holds both the history and present of many different immigrant communities that contribute culturally and economically to the city.</p> <p>Sound Transit's Draft EIS does not adequately work to understand the history of the area, the depth of immigrant and refugee roots in the neighborhood, and the impact of expanding transit on those communities. The Museum's letter specifically addresses many ways in which the Draft EIS has failed to document and analyze historic and cultural aspects of the neighborhood, as well as its current precarious state. This research is essential to truly evaluate the history and the importance of the present communities, as well as the impact of expansion on their futures, before moving forward with any expansion of ST facilities. ST must engage the community more deeply, and work to determine how to expand without displacing or damaging this important community.</p>	Dori Cahn
04/27/2022	Please use the 4th AVE option for the creation of transportation in international district. The other two locations would greatly disrupt workers/businesses.	Maria Wang
04/27/2022	I love the International District and used to work at a business there for several years. That the neighborhood's community was never consulted about this plan is unacceptable, and that must happen before this plan is even considered.	Daniel Glauber
04/27/2022	the 5th Ave option for the expansion of the CID station will have more detrimental effects on the neighborhood. the 4th avenue option is better for the long-term health of the neighborhood and small businesses	Katherine Yang
04/27/2022	The CID extension needs to be on 4th. Do not disturb my neighborhood please.	Melody Hirsch
04/27/2022	Please do not implement the 5th Ave alternative options. This plan will disrupt so many more business and lives of Asian minorities in the CID that have already been negatively impacted by COVID19 and hate crimes against Asians.	Erina Matsui
04/27/2022	<p>For the rail station in Chinatown-International District, choose 4th Ave.</p> <p>Do NOT pursue 5th Ave options as these will displace many businesses and be more economically harmful to the district.</p>	Catherine Chase
04/27/2022	<p>For years I've been lucky to support the many restaurants and vibrant community in the I.D. and it breaks my heart to see it negatively impacted by development projects that only serve to improve the lives of other neighborhoods. PLEASE, PLEASE, PLEASE do NOT pursue any of the 5th Ave development options. They will have detrimental impacts on the I.D.; a neighborhood which has already dealt with too much in recent years - between a history of construction, xenophobia, hate crimes, and the pandemic, this is a time for compassion, respect and a commitment to listen to the many Seattle families and businesses that call the I.D. home. Thank you!</p>	Kirstin Small

04/27/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p>	Steve Banfield
04/27/2022	I oppose the station options as they currently exist. The EIS must include and prioritize plans that minimize disruptions to existing homes, businesses, and cultural hubs.	Gregory Moy
04/27/2022	I deeply support increased access to public transportation in the C-ID. However, I implore you to move forward with the 4th Ave option to have the smallest impact on the neighborhood and the plethora of vital small businesses in the area. These businesses are a vital part of the community and many would not survive if a 5th ave option is chosen. The ID community does not need this extra burden on top of the stresses of the pandemic. Choosing the 4th ave option will have the least detrimental impact on the community while still setting the stage for more efficient public transportation in Seattle. Please proceed on 4th.	marion reader
04/27/2022	<p>I am writing in solidarity with the Wing Luke Museum's evaluation and suggestions in response to the Draft EIS. The Wing Luke recommends Sound Transit undertake additional study by external consultants and to work with additional community partners. I urge Sound Transit to explore more options that will NOT result in displacement within the CID.</p> <p>The CID is a crucial and vulnerable piece of our identity as a city. It is critical that we protect it and the people and institutions that make it.</p>	Allison Ong
04/27/2022	Please please please build the station thing on 4th ave. We cannot afford to disrupt the international district community which has already been ravaged by other city projects like I5 and the king dome. To even consider destroying an area like that with such a big community impact is honestly crazy. I visit and enjoy many businesses along that strip and it would be awful to see them go. The station being built on 4th makes the most sense and will have the least impact on the community. Please stop destroying the international district for the purpose of serving the white people that live in Ballard and west Seattle. Thank you	Quinnan Mack
04/27/2022	The CID extension should go on 4th avenue because the proposed 5th avenue construction would drastically affect the community and small businesses there. This community, its people, and its businesses have already bore the brunt of development without their input to their detriment, and that ends now. This project would interrupt the community and businesses for over a decade, contributing to lower economic activity, poorer quality of life, and air and noise pollution. There is another sound alternative, 4th avenue, that would be less disruptive to the community.	Talia Alongi
04/27/2022	Please do not demolish businesses on the 5th ave, these are businesses that have worked so hard during the pandemic and are part of Seattle's culture. It would so disappointing to see them having to move because of this installation when it could happen on 4th street.	Natalie Mendez

04/27/2022	<p>For the Delridge Segment, we encourage you to choose the Dakota Street Station Lower Height (DEL-2a) or Delridge Way Station Lower Height (DEL-4). My priority is that any route traveling along SW Genesee Street should travel along the south side of Genesee, to avoid the north side of Genesee where Longfellow Creek remains one of two salmon-bearing creeks in the City of Seattle. Impact on this creek should be avoided at all costs.</p> <p>In contrast, the loss of "parkland" on the south side of Genesee is from the West Seattle Golf Course, which has neither environmental nor local community benefit. Indeed, golf courses are of such low environmental value that any mitigation for impacts to the course might actually be a net ecological gain. The discussed impacts on rendering the golf course "less desirable" to play are wildly inconsequential in comparison to effects on a salmonid-bearing stream and are costs that would anyway be borne by the most privileged members of society who can afford to pay exorbitant prices for access to a private (yet subsidized) city park.</p> <p>As outlined in the Racial Equity Toolkit analysis, bus/rail integration should be prioritized, specifically in proximity to Delridge Way SW. Despite being labeled a Delridge station, the station options are all so far north as to be in the walkshed of only a small fraction of the Delridge community. As a result, usage of this station will be highly dependent on intermodal transit from Central and South Delridge, White Center, Burien, and beyond, and the ST3 Delridge Station should provide an accessible transfer experience, inclusive of transit riders of all abilities.</p> <p>For similar reasons as stated above, the Andover Street Station options should be excluded entirely -- as it is scarcely in the Delridge neighborhood at all and serves virtually nobody in the community.</p> <p>The lower height guideway through Delridge should be prioritized for easier transfers and to retain the character of Youngstown and North Delridge, a vibrant and historic neighborhood.</p> <p>We urge you to focus on investments to improve safety throughout the Delridge station area. Improvements to lighting and hillside staircases will be necessary to prioritize community safety and effectively serve Sound Transit's ridership.</p> <p>There is an opportunity with ST3 to remove the culvert under SW Genesee to further restore Longfellow Creek, which could help Sound Transit mitigate other project impacts.</p> <p>In International District, my priority is simply to avoid any deep bore stations that will be dependent on elevators and lengthen the time to access the station. Thus, the shallow cut-and-cover options should be the priority.</p>	Ben Antonius
04/27/2022	<p>I am submitting my comment in regard to Alternatives Considered for the Ballard Link Extension; specifically the impact of the build on the Chinatown-International District (ES.3.1.2.2; pages 25-29 of the EIS Draft).</p> <p>City infrastructure projects inevitably impact the communities they are built in/around/under. They can disrupt, displace, and even destroy elements and people within a community. I believe in the value of public transit, but I do not support the build options on 5th Avenue. This route would have a more detrimental affect to the CID community (residents, businesses, historical sites).</p> <p>The build options on 4th Avenue skirt the edge of the neighborhood whereas the 5th Avenue build goes straight through.</p> <p>Please move forward with the 4th Avenue build.</p>	amanda mead
04/27/2022	<p>Five to eleven years of construction would be incredibly disruptive to the CID community. People live and work here, and the city has a duty to them. Don't turn this community into a construction site!</p>	Anna Carlson-Ziegler

04/27/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p> <p>Thank you, Stephen Mitchell, MPA, BSN, RN Vice President, Transitional Resources' Board of Directors</p>	Stephen Mitchell
04/27/2022	<p>While I support increased access to public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood. Knowing the history of how development through the C-ID has rarely taken the value of the community into consideration, I am asking that we do not repeat history and continue to develop at the cost of communities with rich cultural history, valuable local businesses, and services for those most hardest hit by the current pandemic and historical institutionalized racism. As someone who works in the C-ID and frequents the businesses, I have seen the suffering caused by the pandemic and increase in property and hate crime. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the C-ID do not need the extra burden construction will cause. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.</p>	Kimberly Yu
04/27/2022	<p>Dear Sound Transit,</p> <p>I am a community member that works, organizes, and enjoys time in the Chinatown International District. It is a historic neighborhood (even listed in National Register of Historic Places) and deserves to be preserved and protected. The WSBLE would have huge impacts on the neighborhood, and short of re-routing the project to another area that is not already disenfranchised and been forced to stomach so many infrastructure projects that have gutted the neighborhood (I-5, Kingdome), I would like to advocate for the less impactful option. I AM IN SUPPORT OF THE 4TH AVE (SHALLOW) OPTION. Please do better in conducting outreach to the community, as this last week was the first I heard about this project, and the comment period ends tomorrow... Seriously, y'all need to do better by the community and just be more intentional about how you collect feedback and implement those recommendations.</p> <p>Chris Liu</p>	Chris Liu

04/27/2022	Please do not build on 5th Avenue.	Johnny Nguyen
04/27/2022	The stores alongside on 5th Ave is the staple of international district. It's our historic status, please do not ruin our culture and removing our gates and install a light rail. Construction n futures light rail service will disturb the peaceful environment we have in the ID. You will be taking out new restaurants that has establish their customer base and residents living in the area. You are taking about revenues to ID and bit by bit taking l'd away. Please do not ruin our historic features and our culture.	Tammie Luc
04/27/2022	I fully support the Wing Luke Museum's position on the future transit station at the Chinatown ID. I hope you will engage all of us who are invested in this project, as transit users and as people who have a very real interest in this future for all of us.	Alan Aoki
04/27/2022	4th ave alternative is the one you must choose for said light-rail expansion. Do not i repeat, do not choose the 5th avenue alternative.	Qristaan Terry
04/27/2022	Please move forward with the 4th Ave location! The 5th Ave location will be way too detrimental to our community in the CID	Bailey Smith
04/27/2022	Please consider exploring other options for construction. The CID has suffered not only the past 2 years of racist attacks & businesses closing during the pandemic, but also has a history of displacement. Ignoring CID community voices only continues this legacy of displacement. The current proposal includes demolition of businesses cherished by many. This is about more than just construction and it being annoying, it's about interrupting the legacy of displacement & ignoring community voices.	Jules Estacio
04/27/2022	The 4th ave. option is a better option then the 5th ave. as it displaces less businesses, employees, and residents. Since the 5th ave option would cut through more of the established CID it would cause more environmental issues through demolition.	Anya Atkins
04/27/2022	DO NOT build the new link rail station in the middle of Chinatown. It would displace so many businesses, many of which have been around for decades, as well as disrupt residents and community members for many, many years. There is already a Link station in the ID, and the other proposed route on 4th avenue would not be nearly as disruptive. The idea that our transit system would disregard the communities they are demolishing is dehumanizing.	Teresa Tsang
04/27/2022	Building transit through 4th Ave would have detrimental impacts on the CID community. Please reconsider moving this transit initiative out of this historic neighborhood.	Cynthia Chiou

04/27/2022	<p>I implore Sound Transit to put riders and increased ridership first. These must be elevated above any concerns for short term construction impacts, cost, or business interests. I am writing to submit my comments to Sound Transit's Draft Environmental Statement.</p> <p>Do not eliminate any stations from what voters approved with the ST3 vote back in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines are paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>To future proof our growing system, we must design for expandability in four key locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p>	Ian Deneen
04/27/2022	You got to do a better evaluation works!	Henry PAN

04/27/2022	<p>The new station in the international district should be placed on 4th Avenue. This alternative would result in fewer impacts to businesses and socioeconomic resources in the project area. The community is comprised of a high proportion of minority populations and the 5th Avenue alternative would result in unreasonable impacts to the community and individuals within the project area. The community has experienced a myriad social and economic impacts over the past two years due to the COVID-19 pandemic and rise in anti-Asian sentiment. While the 4th Avenue station would still impact the community, the impacts would be substantially less than those of the 5th Avenue alternative.</p>	James Kralj
04/27/2022	<p>My name is Janet and I wanted to express my preference for alternative CID-1a/1b on 4th ave over CID-2a/2b on 5th ave during the Ballard Link extension in the China-International District Segment. I am a Washington native and have visited many times Chinatown, where I have seen the community flourish. Using alternative 4th ave would displace less businesses, which are mostly minority owned, and destroy landmarks eligible for national registry.</p> <p>Building 5th ave stations seems attractive in it's cheaper costs and after the station is built, surplus land could be developed though Sound Transit's equitable TOD program. However, the decade-long interruption on 5th ave could also wipe out a generation of businesses in the blocks affected. Additionally, construction this close inevitably would drive up living costs for Asian residents and may permanently displace them. Any intentional construction in this area would be in the very least committing gross negligence towards the Asian community. Instead, 4th ave required only a temporary closure of Icon Apartments and Bartell's, which would reopen after foundation and shoring work is completed.</p> <p>Please consider 4th ave CID station over 5th ave. Thank you for reading this message.</p>	Suhjung Janet Lee
04/27/2022	<p>Hi, my name is Josh Hou and I live in Seattle. As an Asian American, much of my community centers around the C-ID neighborhood. A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID, many of them long-standing cultural pillars, would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options.</p>	Josh Hou
04/27/2022	<p>I am writing on the Chinatown International District station proposals. Chinatown International District is a Seattle treasure. It is a vibrant community that is diverse, flawed and delicate. It needs our support to maintain its traditions and vitality. The fifth avenue station options would destroy or devastate many more businesses than a fourth avenue station. The 5th Ave options would create a lasting detrimental change to the CID. Seattle claims to support equity, so stand for this BIPOC community and this Seattle neighborhood. Don't repeat the past mistakes of tearing apart a yet another vibrant hub of diversity, lower socio-economic Areas just because they are easier targets. Shame on Seattle. The fourth Avenue option is the ONLY option for equity and for our city's strengths and values.</p>	Courtney Story
04/27/2022	<p>Don't do it on 5th Ave , that will negatively affect a lot of folks and small businesses. Nobody likes 4th Ave anyways</p>	Ivan Chacon
04/27/2022	<p>I am concerned about the impacts to the CID neighborhood overall. The alternatives on 5th Ave are most concerning because of the required demolition of multiple buildings. Small business owners have already been adjusting to the pandemic and are struggling.</p> <p>The 4th Ave options would have fewer disruptions to residents and visitors to the CID.</p> <p>I would like to know what plans are in place to compensate and support businesses and households who are in this area.</p>	Pamela Lim

04/27/2022	<p>I am emailing in regards to the proposed station in the International District. I go down to the International District almost every weekend to sit at Hing Hay Park, buy books at Kinokuniya on, eat at the Dough Zone, and visit my partner's Grandma. I am intimately familiar with the neighborhood and know how disruptive the station on 5th avenue would be to the community.</p> <p>I am commenting to ask that the light rail is placed on 4th avenue instead of 5th. If the light rail was placed on 5th avenue, it would displace ~19-28 small businesses that have worked hard to bounce back from the devastating effects that the COVID-19 pandemic. The years of construction required to place the station there would contribute to noise and air pollution and completely disrupt the communities effected.</p> <p>I am urging you to place the station on 4th to save the international district from more harm. The voices of Seattle have spoken and we care for our international district neighbors. 4th Avenue would be the best option for this route. If it is not placed on 4th, this will have irreversible harm on the community.</p>	Alex Rutherford
04/27/2022	<p>I am commenting on the new proposal for the CID transit center construction. While I believe public transit is important, I believe the city could find a better location that does not displace residents and businesses in the CID. This community has already faced gentrification and infrastructure changes that have split the neighborhood, as well as blowback from recent incidents of Asian hate and racism. I urge you to consider another option that does not harmfully impact this community. The Chinatown International District is one of the few remaining areas of Seattle with cultural significance, let's strive to sustain it.</p>	Paige Witmer
04/27/2022	<p>For a neighborhood that exists due to historically racist policies such as redlining and lack of city services, our neighborhood once again faces an uncertain destiny.</p> <p>Currently, five options have been put forward by Sound Transit for expansion of Chinatown-International District Station: three options place new station entrances on 5th Avenue S, and two place entrances on 4th Avenue S. Options on 5th Avenue will displace many C-ID small businesses and result in the demolition of buildings that currently house Ping's Dumpling House, Joe's Bar, Pacific HK Cafe, and Oasis Tea Zone. No matter the location, station construction will require nearly a decade of street closures, detours, loss of parking, and subject residents to construction noise throughout the day. Cumulative impacts around the community's ability to stay and thrive remain unaddressed.</p> <p>The economic impact of the pandemic and anti-Asian American sentiment has hit the C-ID neighborhood harder and longer than most. Many of the small businesses that struggle to survive today will be hit even harder. I have determined that evaluations by Sound Transit have ultimately failed to fully address and account for the ways in which the expansion will irreversibly change the neighborhood.</p>	Tiffany Barber
04/27/2022	<p>I support the no build alternative! What was voted on in 2016 does not apply now. We do not need loss of business and housing and building would sadly eliminate so much of the West Seattle area we know and love. No more building of light rail or tunnels in West Seattle.</p>	Tanya Hurst

04/27/2022	<p>Dear Sound Transit, I am writing as a concerned community member regarding the proposed plans to expand the CID station. Upon review of the DEIS for the WSBLE project, I believe that it is critical to take into account the severe impact the expansion will have on residents, small businesses, and the well-being of the CID.</p> <p>I am writing to urge Sound Transit to heed the warnings of community leaders that the proposed plan will harm cultural resources and social cohesiveness in the CID. Due to the direct proximity of the 5th Avenue South alternatives within the CID and along its King Street core, we find the 5th Avenue South alternatives unacceptable and call of the options for refinements to move away from the cultural, economic heartline of the CID.</p> <p>I urge Sound Transit to commit to further exploration of options for refinements to the proposed alternatives beyond what typically occurs from a DEIS to Final EIS that will not result in the displacement within the CID.</p> <p>As a community member and Asian woman of color, I share the lived experience of this neighborhood and resonate with the historic realities that past public policies and actions have excluded community voices from critical public infrastructure projects.</p> <p>Sound Transit has an opportunity and responsibility to center the voices of a community that has been historically excluded and most impacted by historical, institutional racism.</p> <p>Thank you for your time and consideration. Celine</p>	Celine Dorion
04/27/2022	<p>Thanks for reviewing the following: 1. In a perfect world everyone would take the light rail. But although I have a car and can easily get to the light rail, my elderly neighbors do not. And my neighbors with small children need to use a stroller. It is much, much easier for them to take one bus (such as for example, the 522. But it no longer goes downtown - why? it stops at Roosevelt Station now. I'm guessing people with a car will now drive downtown instead of taking a bus to Northgate or Roosevelt, it's way faster) than a bus to the light rail. By removing and shortening bus lines you are making downtown and the rest of Seattle inaccessible to elderly, families with small children, disabled individuals who find it difficult to use public transit. Why punish them? Why not install light rail but continue with bus service? Now people without cars have to take several buses and now their commute time is increased. Why punish them? Buses are great, please continue and reinstall bus service throughout Seattle. Other cities complement their light rail with great bus service. Seattle can do this too. Thanks for your time.</p>	Andrea Bennett
04/27/2022	<p>I suggest that ST select the 4th Avenue Shallow Alternative (CID-1a) as the route that goes through the International District for the following reasons. In addition to having the least projected impacts to the existing businesses in the International District, it will have the best potential for providing a more seamless connection to the Link 1/2 Lines, Sounder, and Amtrak. The more shallow the station can be, the time spent making transfers will be minimized, especially for the surface transit including the streetcar and will make transit even more attractive. It will provide an opportunity to connect King Street Station and the existing downtown tunnel with an underground connection via the new tunnel, and make it a truly intermodal stop. It will also provide an opportunity to rebuild the 4th Avenue Viaduct that meets current seismic standards and improve the pedestrian environment at the street level. As a once in a lifetime investment, I feel that the higher costs and interruption to existing transit services is worth it for the long term benefits.</p>	Howard Wu
04/27/2022	<p>Historically, the Chinatown/International District (CID) has been a haven for United States citizens of Japanese, Chinese, Filipino, Vietnamese, and others. Recently, the incidents of anti-Asian hate crimes has placed further demands on the CID. Sound Transit's plans for the CID are unfair to the people who live and work in the CID. The CID has always been subject to the plans of outsiders who do not consider the residents of the CID. It is time for the burden of Sound Transit's plans to be borne by other communities that have thus far avoided the impacts on their neighborhoods. Please consider plans that do not negatively impact the CID.</p>	Gregory Tuai

<p>04/27/2022</p>	<p>I'll start with four basic observations that inform my more detailed comments below.</p> <p>The entirety of these light rail expansions should be in a tunnel. This is the perhaps the more expensive option, but in the long-run, this will be the best option for the region. A majority of the proposed lines are already in tunnels and perhaps certain parts can be elevated instead (EG Duwamish), but in general, I fully support a tunnel for the entire length of the extensions.</p> <p>Displace noone. While some disruptions are inevitable, this project should strive to displace no homes. This can be achieved primarily by using tunnel options for the entirety of the project. But as is, the number of homes and properties that become unbuildable is too many.</p> <p>Place stations in the most central areas in a neighborhood. This mainly applies to the main stations in both Ballard and West Seattle where they are proposed in places that aren't the center of the neighborhood. Also in South Lake Union. A main principle should be to place stations where the most destinations are. If build in tunnels, stations should be easily built into the public right of way and not require entire buildings to be demolished for the tunnel entrances. This is how subways were built 100 years ago and they work perfectly (and they are still built like this in many other cities).</p> <p>Make transfers easy. Since Westlake and CID are the main transfer points in this proposal, these stations need to be build in a way that connect seamlessly to the existing stations. Without seamless transfers, riders will be forever frustrated and it will turn away riders who don't want to spend the time to transfer.</p> <p>Now some specific comments on the different segments:</p> <p>Downtown. A tunnel is great. That being said, the transfers between the lines need to be as efficient as possible. This means having the new Westlake station and new CID station as close to the existing ones as possible. A one block differences between the existing line and the new one isn't terrible, so either the 4th or 5th Ave options seem good, but only with the shallow option. A deep station will only increase overall travel time, which is less desirable.</p> <p>In South Lake Union, the station being north of Denny Way seems preferable, but why isn't there an option for this station to be on Westlake north of Denny Way?? A station on Mercer and 8th also seems preferable as does the station on Mercer and Queen Anne. So generally, the DT2 option seems better north of Westlake, but at Westlake, the DT-1 option is preferable.</p> <p>The south Interbay segment begs the question why. Obviously, the right of way acquisition is likely the main reason and not the overall utility of the route to anyone who lives near it. In general, I wish the line would turn north on Queen Anne Ave and have a stop in the Queen Anne neighborhood core before then proceeding under the bay to a stop in Fremont, then on to Ballard. This seems far more useful to people who would actually benefit from the light rail than the current proposal through Interbay. This route provides little added benefit.</p> <p>That being said, since the Interbay route is the decided option, it makes little difference which one is chosen. The option on 15th is perhaps a bit more preferable, but again, this should be a tunnel and not elevated. Therefore IBB-2a is by far the preferred option for this route. The current preferred option is the worst of all the options. It places the station further away from the center of the Ballard commercial center and is a bridge. And if the Coast Guard pushes the requirement for this bridge to be even higher than proposed, this will become an even more expensive option than the tunnel will likely be. So, my preferred option (of existing options) is for the IBB-3 stop at Dravus connecting to option IBB-2b. But a station in Ballard at Market and 20th street would make even more sense as this is the center of the neighborhood. If this connected from Fremont, the alignment would be easy to achieve. Additionally, a tunnel (or even bridge) crossing in Fremont would likely be easier since the water crossing is much less. But short of this major change, a tunnel under Salmon Bay makes the most sense, preferably to a station west of 15th Ave. Since the tunnel option is only projected to cost 100-200 million more than the bridge, it doesn't make much sense why this isn't the preferred option. We're already investing billions in the light rail expansion, so lets do it right... 200 million \$ more is a small price to pay for a significantly better option.</p> <p>On to SODO and Duwamish Segments: After the station in SODO, elevating this section of track makes sense, particularly as there are no stations. Any of the options seem fine for these segments.</p> <p>Delridge: Why are all the options so tall? In most cities with elevated rail, its a couple stories above the ground... maybe 30 feet. So why is the lowest option putting the station 60 feet above ground? It seems there could be a way to lower this more and perhaps reduce the cost of construction. DEL-3 is my preferred placement of the station, but at a lower height than currently proposed. The light rail station should not be the tallest thing around. If they could achieve this in NYC 100 years ago, we can do it today in Seattle. This would then go into a tunnel to West Seattle Junction. This makes DEL-2a the best option, although perhaps with the station at the placement of option DEL-3. This is of course assuming that a shallow tunnel here has been completely ruled out, which I still think would be preferable. A tunnel option even here would prevent the displacement of several dozen homes and enable this area to densify more and become a more vibrant</p>	<p>Devon McAslan</p>
-------------------	--	----------------------

commercial hub centered on the station. Displacing noone should be a main goal of this project. And at the very least, minimizing this.

Lastly, West Seattle Junction: The best option here is WSJ-3b, with the station at 42nd and Alaska St. Of course, why the station isn't planned for California St is beyond me since this is the main commercial street in the neighborhood. This alignment would also make future extensions down California more attractive. I imagine part of the problem has to do with Sound Transit needing to build stations under property and not under the street as it done in nearly every other city. The public right of way has plenty of space for tunnels under it, and if needed, entrances can be built in the right of way as they are in NYC or any other major city. The way Sound Transit builds makes stations more expensive and take up valuable space that could instead be used for housing. Here I'm thinking particularly of the terrible Capital Hill station placement where the stations take up valuable space instead of being more integrated into the public right of way. In any case, a tunnel option in West Seattle Junction is highly preferred and should be as shallow as possible. And if possible, ST should explore placement of the station on California, not on 42nd Ave.

04/27/2022	<p>To Whom it May Concern:</p> <p>Sound Transit has tough choices to make. Dusty Strings is a unique business in Seattle that is one of the largest manufacturers of folk harps and hammered dulcimers that are well respected worldwide. They fill a particular niche in the music world.</p> <p>As currently proposed, the only route that would not force Dusty Strings to move is the Elevated 14th Avenue Option (from Prospect/15th), also known as IBB-1b. Other routes could possibly be adjusted in order to spare our building and five other buildings, and follow a public street instead.</p> <p>Dusty Strings was founded in Seattle in 1979 and has remained a family-owned and operated local business for the past 43 years. They make globally-recognized musical instruments have been handcrafted in Seattle since the beginning.</p> <p>As manufacturers of high-quality harps and hammered dulcimers, they are a critical member of Seattle's dwindling manufacturing community, which is important to business diversity in an increasingly tech-dominated city. They employ local skilled craftspeople, many of whom have made Dusty Strings their lifelong career.</p> <p>Approximately 60-70 workers would be displaced from this building alone, which houses Dusty Strings as well as four other small businesses.</p> <p>If they are forced to relocate, it could be very difficult to find another space within Seattle that will meet their needs as a unique manufacturer and small business. Their custom-designed building and owner-occupied model have made it possible to stay in Seattle as the costs of operating in Seattle have driven other manufacturers out of the city. Having to move outside of Seattle would certainly mean a major disruption to their instrument-building operations. It could also mean losing 20 to 30 years of instrument building expertise if their longtime employees are forced to leave their chosen careers in order to stay close to their families in Seattle.</p> <p>Dusty Strings has connections with instrument owners around the world, and many of them know of Seattle because that's where their harp was made. Dusty Strings instruments are an important part of the livelihood of local, independent music stores all across the country, as well as in the UK, Europe, Asia, Australia, Canada, and New Zealand.</p> <p>Thank you for considering how this decision will potentially impact this business that supplies highly sought after musical instruments to the world. Thank you for considering their employees and the potential loss of a unique skills that the employees possess.</p> <p>As currently proposed, the only route that would not force them to move is the Elevated 14th Avenue Option (from Prospect/15th), also known as IBB-1b. Other routes could possibly be adjusted in order to spare their building and five other buildings, and follow a public street instead.</p> <p>Sincerely, Denise Grupp-Verbon Harpist</p>	Denise Grupp-Verbon
04/27/2022	<p>Please do whatever you can to save Alki Beach Academy from being pulled from our community. Quality childcare is difficult to obtain in West Seattle and up to possibly 275 children will be displaced. This center serves a major need in our Community</p>	Julieann Donohue
04/27/2022	<p>Please consider placing the proposed Chinatown station on 4th Ave.</p> <p>Building the station on 5th Ave would displace small businesses in the Chinatown neighborhood.</p> <p>Thank you.</p>	Rowena Dutton

04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Annika Ittes

04/27/2022	<p>CID should not be used for the new transit route. It is a cherished and special part of our city and to destroy it permanently, which is exactly what will happen if you route through there with years of construction and infrastructure changes, would harm not only those who live in the neighborhood but those who patron the establishments both locally and for tourism.</p>	Rehn Aubrey
04/27/2022	<p>I share the concerns expressed by the Wing Luke Museum about the inadequacies of the draft EIS for the West Seattle and Ballard link extensions impact on the Chinatown-International District (CID) light rail station and its surrounding community. The CID is a unique, culturally rich community within the City of Seattle. Its value to the City should not be discounted, as it appears to be. It is primarily composed of small businesses and includes a very cohesive resident neighborhood, as well as frequent shoppers and/or loyal restaurant customers. The draft EIS does not take into account the controversial decisions of the past that have impacted the present and the compounding effect on the CID community's future. Racial equity values require community inclusion in decision making. I believe additional study by an external consultant working with CID community partners is necessary to address the numerous requests for additional information related to historic and archaeological resources and the construction impacts.</p>	Toni Long

04/27/2022	<p>Access to public transportation is vital to the livability of our city during this time of unprecedented growth and expansion but, as history shows, consequences from public infrastructure projects like this have disproportionately burdened communities of color.</p> <p>As the largest transit hub in the city, this neighborhood currently serves as the primary regional gateway into Seattle’s downtown core and stadium district. Simultaneously, it also sits at the doorstep of the Chinatown-International District - a vibrant historic neighborhood that is home to multi-generational families, preserved buildings, family-owned businesses, and community organizations that provide vital services to its residents and serves as a cultural destination and place of belonging for many throughout the region.</p> <p>Currently, five options have been put forward by you for expansion of Chinatown-International District Station: three options place new station entrances on 5th Avenue S, and two place entrances on 4th Avenue S. Options on 5th Avenue will displace many C-ID small businesses and result in the demolition of buildings that currently house Ping’s Dumpling House, Joe’s Bar, Pacific HK Cafe, and Oasis Tea Zone. No matter the location, station construction will require nearly a decade of street closures, detours, loss of parking, and subject residents to construction noise throughout the day. Cumulative impacts around the community's ability to stay and thrive remain unaddressed.</p> <p>I ask that you look into the best way to expand public transportation and not displace local businesses and community members.</p>	Mandy Kwan
04/27/2022	<p>I am writing to express my strong support for the light-rail options that run along 15th Avenue, and strong opposition to those that would run along 14th Avenue NW.</p> <p>The Ballard Food Bank is an essential service provider for those in need in our community, and the proposed 14th Avenue options would create major obstacles to their ability to serve our community, by reducing access to their brand new facility and hindering ease of delivery for needed food and supplies.</p> <p>Please reconsider 14th Avenue alternatives, and ensure this preventable harm from being inflicted on our community and its members in need.</p> <p>Many thanks, Carol Wallace</p>	Carol Wallace
04/27/2022	<p>Please do not build a new transit station in the CID. Government projects and transit renovations have negatively impacted Chinatown and the Internatioanl District for generations. Do not displace CID residents and community members by going forward with the 4th and 5th Ave renovations.</p>	Nicole Zeller

<p>04/27/2022</p>	<p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p>	<p>Hannah Deneen</p>
-------------------	---	----------------------

04/27/2022	<p>Please do not move forward with the 5th avenue location. These small businesses have been through enough. They don't need to be destroyed when there is a legitimate alternative a block away.</p> <p>I am writing in favor of the 4th avenue location.</p>	Denni Stobin
04/27/2022	<p>I fully support the specific recommendations and requests for further exploration in the statement submitted by the Wing Luke Museum, with a particular concern for racial equity in protecting the very fragile community of Chinatown/International District.</p>	Katharine Blackman
04/27/2022	<p>am commenting regarding the Delridge segment of the West Seattle Link extension. The only way my husband and I were able to work full time was because of Alki Beach Academy. They also stayed open during the pandemic through huge efforts on their part for safety and health. This also allowed us to continue working. I don't know of any other daycare in West Seattle that did that. Their location is perfect for us to commute (by bike) to downtown. No other daycare is as perfectly located near the upper and lower bridges. They are uniquely positioned to provide the most reliable and convenient care in this area. Their space is well thought out and special and I would hate to think my daughter would not get to enjoy it. Alki Beach Academy is incredibly important to working families in Seattle!</p> <p>Thank you for protecting this community asset!</p> <p>Eleanor</p>	Eleanor Walstad
04/27/2022	<p>Seeing the plans for the extension, I noticed that it will be going right through the heart of Chinatown International District. Dividing the an already fractured neighborhood will inevitably drive out the already struggling businesses that are fighting to keep the vibrant culture of their people alive in Seattle. It is a cultural hub for Seattle with a ton of public transportation all around. Without the stations there, people can easily walk to the nearest station to connect and walk through CID. CID won't survive a decade of construction.</p>	Annie Trinh
04/27/2022	<p>Please don't build through the ID which will put a lot of strain and destabilize many local small business and peoples living arrangements.</p> <p>Please find an alternative route that will minimize the amount of impacted people and minimize the damage to the community.</p> <p>Thank you,</p>	Nat Weld

04/27/2022	The obvious choice here is 4th avenue. There are no businesses on it, it's already a big high-traffic road. I would be heartbroken to see beloved small shops close because of this station's construction	Morgan Cole
04/27/2022	There's no need to destroy international district. Build the tracks along the i5 or near the stadiums.	Patrick Wang

04/27/2022	<p>Thank for the opportunity to comment.</p> <p>To begin, my husband and I strongly support the Preferred Alternative Route for the following reasons:</p> <p>1] A great deal of time and money and expertise were put into developing and concluding the preferred route. People trained in the area of light rail construction and all the sub headings that go with such, came to the conclusion of the preferred route. It seems reasonable to follow these recommendations and not go off in a different direction. The loudest group should not be the decision makers on a project of this magnitude.</p> <p>2] We voted for Forward Thrust in the sixties. Unfortunately the light rail portion was the the only section that failed. This was an example of the loudest group getting their way, sadly.</p> <p>3] The alternate route proposal putting stations on Mercer Street would ad to the already existing congestion on Mercer Street. Mercer Street was opened for two way traffic a few years ago. The purpose was to serve as a connector between Highway 5 and Elliott and the commercial area. To add stations on Mercer at the Seattle Center and South Lake Union would only add to an already congested route and sabotage something that took years of planning, research and construction.</p> <p>4] The alternate route of tunneling under Mercer Street would have both noise and vibration consequences both for the construction and operation of the light rail. There is already a large storm drain that is tunneled under Mercer Street along the same route that the alternate route is being considered.</p> <p>5] The stations on Elliott on the Preferred Route give needed access to the residents of Magnolia. The alternate route doesn't serve them with as many stations.</p> <p>6] These are our major reasons for so strongly supporting the Preferred Route. We have been on Queen Anne for 50 years and have seen many changes.</p> <p>Thank you for considering our comments.</p> <p>Fred and LouAnn Freeburg</p>	LouAnn Freeburg
04/27/2022	<p>I've looked through the proposed plan, especially the proposed segments for the C-ID. I'm no expert, didn't completely understand each of the segments, but would just like to chime in to ask that whenever possible you keep the Asian & Pacific Islander community in mind, the businesses there, and the neighborhood as a whole, as you consider each on. If possible, please have the station and construction closer to Seahawk's stadium, or a part of King Street and existing transit elements, on the further south end of things. Please don't disrupt the housing and businesses closer to Uwajimaya.</p>	Jordan Uomoto

04/27/2022	<p>Re: Delridge segment of the West Seattle Link extension</p> <p>To Whom It May Concern:</p> <p>My daughter attends Alki Beach Academy in the Frye Commerce Center at 2414 SW Andover Street in West Seattle; and it has come to my attention that some of Sound Transit's proposed options for the West Seattle Link extension would require the relocation of Alki Beach Academy. I vehemently oppose any option that would require the relocation of Alki Beach Academy.</p> <p>Alki Beach Academy is the only childcare program on the peninsula that may be impacted by the project and is the largest childcare provider in the Delridge corridor. The Delridge corridor is the lowest-income and most racially diverse zip code on the peninsula and includes some of the lowest opportunity areas in the city. Removing Alki Beach Academy from this community would impose a disproportionate impact on an already low-opportunity area.</p> <p>With the childcare shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>Additionally, stations further south on Delridge would provide a more accessible transit system than DEL-5 or DEL-6. Retaining a large childcare provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>Alki Beach Academy serves a large population of this area's children, providing high quality care and education that I have not seen elsewhere, and does it at a cost that is lower than other day care providers. As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p> <p>I would be happy to answer any questions you may have. You are welcome to call me at work at 206-932-1893 or on my cell phone at 425-501-3826 at any time. I can also be reached via email at kjersti@strouplegal.com.</p> <p>Thank you!</p> <p>Sincerely, Kjersti Stroup</p>	Kjersti Stroup
------------	--	----------------

04/27/2022	<p>Access to public transportation is vital to the livability of our city during this time of unprecedented growth and expansion but, as history shows, consequences from public infrastructure projects like this have disproportionately burdened communities of color.</p> <p>As the largest transit hub in the city, this neighborhood currently serves as the primary regional gateway into Seattle's downtown core and stadium district. Simultaneously, it also sits at the doorstep of the Chinatown-International District - a vibrant historic neighborhood that is home to multi-generational families, preserved buildings, family-owned businesses, and community organizations that provide vital services to its residents and serves as a cultural destination and place of belonging for many throughout the region.</p> <p>Currently, five options have been put forward by you for expansion of Chinatown-International District Station: three options place new station entrances on 5th Avenue S, and two place entrances on 4th Avenue S. Options on 5th Avenue will displace many C-ID small businesses and result in the demolition of buildings that currently house Ping's Dumpling House, Joe's Bar, Pacific HK Cafe, and Oasis Tea Zone. No matter the location, station construction will require nearly a decade of street closures, detours, loss of parking, and subject residents to construction noise throughout the day. Cumulative impacts around the community's ability to stay and thrive remain unaddressed.</p> <p>I ask that you look into the best way to expand public transportation and not displace local businesses and community members.</p>	Citlalin Munoz
04/27/2022	<p>Please don't move forward with the 5th avenue option!! It will cause major disruptions to one of the historic neighborhoods that makes Seattle wonderful! The 4th ave option will have less negative impacts and closures!</p>	Ariana Ramirez
04/27/2022	<p>Thank for the opportunity to comment.</p> <p>To begin, my husband and I strongly support the Preferred Alternative Route for the following reasons:</p> <ol style="list-style-type: none"> 1] A great deal of time and money and expertise were put into developing and concluding the preferred route. People trained in the area of light rail construction and all the sub headings that go with such, came to the conclusion of the preferred route. It seems reasonable to follow these recommendations and not go off in a different direction. The loudest group should not be the decision makers on a project of this magnitude. 2] We voted for Forward Thrust in the sixties. Unfortunately the light rail portion was the the only section that failed. This was an example of the loudest group getting their way, sadly. 3] The alternate route proposal putting stations on Mercer Street would ad to the already existing congestion on Mercer Street. Mercer Street was opened for two way traffic a few years ago. The purpose was to serve as a connector between Highway 5 and Elliott and the commercial area. To add stations on Mercer at the Seattle Center and South Lake Union would only add to an already congested route and sabotage something that took years of planning, research and construction. 4] The alternate route of tunneling under Mercer Street would have both noise and vibration consequences both for the construction and operation of the light rail. There is already a large storm drain that is tunneled under Mercer Street along the same route that the alternate route is being considered. 5] The stations on Elliott on the Preferred Route give needed access to the residents of Magnolia. The alternate route doesn't serve them with as many stations. 6] These are our major reasons for so strongly supporting the Preferred Route. We have been on Queen Anne for 50 years and have seen many changes. <p>Thank you for considering our comments. Fred and LouAnn Freeburg</p>	LouAnn Freeburg

<p>04/27/2022</p>	<p>Thank you for all your hard work! I'll try to keep my comments brief and to the point. Overall, I want to see TOD and quick-transfer focus and believe it's important we prioritize those options. Moving south to north:</p> <p>Junction station I prefer studying and continuing forward with the WSJ-5 option, with additional study for an elevated station that could reduce costly property takings.</p> <p>Avalon station I support continuing forward with avalon as a retained cut station. I do not support removing avalon from the study as there is considerable opportunity for TOD and the rezoning of the nearby golf course. I support WSJ-5 and DEL-6</p> <p>Delridge I support DEL-6 which has a superior transfer opportunity to the many commuters using the station from buses. I also support studying any alternatives that can work with WSJ-5</p> <p>SODO Station I see SODO as one of three important transfer stations (along with Westlake and ID/C). Prioritizing a quick and easy transfer experience is paramount. I support the mixed profile station and studying how to avoid the costly post office from needing acquisition. I also like that the mixed profile keeps the SODO busway open and allows SODO Station to be a highly useful transfer station.</p> <p>ID/C ID/C will be an important station for transfers from Bellevue headed towards SeaTac, and SeaTac headed towards Bellevue. Long transfers are unacceptable. The ID/C has held the short end of the stick for many generations with regards to construction impacts from megaprojects. However, the need of a one hundred plus year investment necessitate that we make this vital transfer location quick and easy for riders. I support CID-2a, but with tracks swapped so that the two southbound platforms are closer to one another. I also support additional study for a 4th Ave option if and only if it can be made as shallow as the current trains (and have southbound trains aligned as closely as possible to one another). I love the idea of a community space in the old Union Station.</p> <p>Midtown I prefer options that are as shallow as possible, placed on 5th Ave. The depth of the station will encourage elevator use, which should be redundant and plentiful.</p> <p>Westlake The platform should prioritize easy and quick transfers between the two lines, which will also bring the station closer to the surface and make access quicker. Preferred options are simply too deep right now. Since the station will 'X' the existing station, transfers should be pretty easy in either direction. I support 5th Ave alignment.</p> <p>Denny I prefer studying DT-1 with potential streetcar mitigation. If the impact to the streetcar cannot be mitigated, I still support moving forward with a cut and cover option alobe Westlake Ave.</p> <p>SLU This station does not have great options due to highway 99. I prefer Harrison for better bus integration, but would like to see the agency study a centralized SLU station closer to Westlake Ave or 9th Ave and Republican. Shifting the station east of 99 improves ridership.</p> <p>Seattle Center The republican Street station is clearly the best for accessing Seattle Center and the stadium. I support moving forward with mitigation for the street's performing arts groups as possible.</p> <p>Smith Cove I do not support the Prospect stations as they are too far south and too close to the greenbelt. I support the northern SIB-1 Alignment which brings the station closer to potentially redevelopable land in Interbay, and could get ridership from the ship terminals.</p> <p>Ballard and Interbay I value a westerly aligned Ballard station with tunnel as the best option to move forward. 15th Ave W is a MAJOR impediment to walking, biking and rolling. A 15th and Market Station would suffer from a very undesirable streets cape, and not serve Ballard core. As the tunnel options have improved in viability, I urge the agency to study a station sited on 20th or 17th Aves. Such a station would allow for a potential East</p>	<p>Bryce Kolton</p>
-------------------	---	---------------------

Ballard station in future expansions. Interbay station is less important than getting Ballard right.

Thank you!!

<p>04/27/2022</p>	<p>To Sound Transit and the Board of Directors,</p> <p>I am a West Seattle resident and member of the Sound Transit Community Advisory Group (CAG). My family and I have lived in the Avalon neighborhood for 18 years. For the past several years, I have been working with others in my area to coalesce residents within our neighborhood and between neighborhoods in West Seattle in order to take a global--versus "NIMBY"—approach to advocate for a design of ST3 that best serves all of West Seattle, factoring in environmental impacts, aesthetics, cost, rider experience, neighborhood experience, the values promoted in the Racial Equity Toolkit, and ideal station design including TOD.</p> <p>I strongly advise the board to select a long tunnel alignment with a portal beginning east of Avalon. This is the single best option for the future of West Seattle.</p> <p>West Seattle is not alone in prioritizing and advocating for light rail to be tunneled as has seen historically from other neighborhoods in Seattle through the evolution in West Seattle so I'm sure this priority come as no surprise to Sound Transit Staff or the Board. In all conversations, the primary opposing factor seems to be cost. Given that the cost delta between the long tunnel option and any above-ground options has narrowed dramatically when compared to initial Sound, I urge the Board to not make decisions fueled by cost-savings (that can be mitigated in other ways with levers like delaying the project) resulting in an inferior design choice. This project is too big and has too long-lasting impacts to deliver a sub standard product. Please do it right versus cheap.</p> <p>As part of the DEIS process, I would like Sound Transit to respond to the following: Ensuring they are getting feedback from the community of riders from South Delridge, White Center and Burien. While Sound Transit staff does report on their outreach efforts (e.g. they attended so many farmers markets or passed out fliers, etc.) there still is a significant dearth of input from the ridership community in the southern areas who will be likely be required to utilize the Delridge station once the line to Ballard is complete. These southern communities have a greater percentage of BIPOC residents than are in the northern geographical areas of West Seattle. It is concerning they have no representative voice on the CAG nor has Sound Transit seemed to connect with these residents in a robust fashion in other ways. Their voice is critical and it's disappointing, especially with all of the focus on the Racial Equity Toolkit that at this late in the process, this has to be called out in a DEIS response letter. Differentiate between North Delridge/Youngstown input versus South Delridge participant input (if/when finally obtained) when reported by Sound Transit in their communications and presentations. For those not familiar with the area, it is critical to understand that there may be differences between the make up of the two residential populations and interests. Both are important to have voice but one should not be considered representative of the other. Score and present the proposed designs of the Delridge Station options based upon the ideals set forth for "ideal" station design, rider experience especially as related to bus transfer, quantity and quality of TOD, and within the lens of the Racial Equity Toolkit. Ensuring voice and opportunity for advocacy is balanced among groups and geographical areas (e.g. are environmental groups getting equal access, information, and elevation as the Port and Golf Course advocates are.)</p> <p>As part of the Cost Savings Process: I encourage Sound Transit and the Board to consider permanently postponing the Avalon Station to allow for overall better design for West Seattle (e.g. Long Tunnel). If West Seattle gives up a station, they should receive a "win" for the design refinement. I encourage Sound Transit to be EXTREMELY clear in all presentations what is a cost savings and what is a design refinement and not to combine those within presentations to the public or to the board. If they are suggesting a design refinement, they need to be clear what the design flaw is they are trying to correct, the correction, and the implication of that correction on displacements in other areas, etc. I do not support additional money spent on trying to correct design flaws of the Andover station (Del 5 and 6) given that I believe it has insurmountable design challenges resulting in its far north location and that it is situated so close to a steel mill. It does not meet the Racial Equity Toolkit's values, does not afford quality TOD, nor is it integrated with the rest of Youngstown, near the Community Center and the stairs leading to Pigeon Point.</p> <p>Regards, M Miller 4051 32nd Ave SW Avalon Neighborhood</p>	<p>M Miller</p>
-------------------	--	-----------------

04/27/2022	<p>The West Seattle Ballard Link Expansion (WSBLE) DEIS does not adequately encompass the historical realities of past public policies and actions in the Chinatown-International District, and the impact of those actions on the everyday experiences of the CID community and its survival. The DEIS relies on flawed data and definitions for what makes a historically significant place and does not adequately consider the threats to the CID's survival, especially given the recent events of the COVID-19 pandemic.</p> <p>The proposed 5th Avenue station and the construction to complete it will disrupt life in the neighborhoods for many residents and longtime businesses that are essential to the vitality of the CID. In the past, large-scale public works projects such as freeway construction displaced communities of color, and the harm that those projects causes continues to ripple through our society. To move forward and actually work to address institutional racism, we must consider this history and the truth that systemic racism continues to harm communities of color like the CID.</p> <p>As a concerned resident of Seattle, I urge Sound Transit to consider the perspectives and deep knowledge of longtime CID organizations like the Wing Luke Museum. I would like to echo and amplify their call for further study and community involvement to ensure that Sound Transit's plan for the WSBLE does not irreparably harm the CID community. Thank you for taking the time to consider my perspective.</p>	Reed Adam
04/27/2022	<p>My strong recommendation - and support - goes for a tunnel to connect with a new station in Ballard. Opting for the tunnel provides for a better connection between Interbay and Ballard. A bridge to replace the existing drawbridge makes traffic and development of a community problematic. Further, replacing the exiting drawbridge with a new one will only increase traggic congestion.</p> <p>A high bridge is NOT acceptable. It will destroy more residential housing unit than are listed in the Environmental Study. Further constructing a high bridge will create unsustainable noise and pollution for neighboring communities on 14th Avenue West.</p>	Gail Dykstra
04/27/2022	<p>I have read the draft EIS as well as the Wing Luke Museum's response to the EIS. I support the WLM's assertions that more research and exploration of options needs to be done before recommending a path forward. The CID and greater AAPI community have already lost so much in the name of "progress" that it behooves ST to ensure any future changes affect the community as little as possible.</p>	Jennifer Ward
04/27/2022	<p>Dear Sound Transit,</p> <p>I am writing regarding the West Seattle and Ballard Link Extensions (WSBLE). I am the daughter of a Filipino immigrant, the descendent of Japanese Americans who were incarcerated during WWII, and a member of Seattle's Japanese American Citizens League. The Chinatown International District is the treasured home of my community--I urge you to further explore how the WSBLE threatens the survival of all that we as Asians and Asian Americans hold dear.</p> <p>Accessible public transit is critical to making Seattle more livable and more equitable; however, Seattle's rapid growth often unintentionally comes at the expense of communities of color.</p> <p>I am joining my friends and community members at Wing Luke Museum in calling you to further refine the Draft Environmental Impact Statement and seek a solution that minimizes harm and does not result in the displacement of our people. I urge your team to carefully read the letter drafted by Wing Luke prior to moving forward. Wing-Luke-Museum_response-to-WSBLE-DEIS_2022-04-26.pdf.</p> <p>Thank you</p>	Gabrielle Nomura Gainor

04/27/2022	<p>Hi, Please do not tear down any buildings in the CID to build a station on 5th Ave. It is important to preserve the character of the CID. Also, it doesn't seem correct in 2022 to tear down buildings in a historically underserved and poorer neighborhood. Please build the new station on 4th under the existing buildings. Thank you. Matt</p>	Matt Kirby
04/27/2022	<p>Due to the impact of construction on the CID, I would like to give support to the 4th street option on the link/transit extension (either option), as 5th and 6th would adversely impact too many businesses for too long. I spend a lot of time in the CID and do not wish for the areas in this vicinity to be closed for construction for this long! The 4th street option displaces much fewer businesses and I'm very concerned we'll lose the heart of the area permanently if the construction goes on 5th or 6th for this long. Thank you.</p>	Melody Gonzalez
04/27/2022	<p>For the station slated for the International District, please consider going with one of the 4th Avenue options. As listed in Table ES-5, displacing 18 to 27 businesses will do irrevocable harm to a community already greatly financially impacted by the pandemic.</p> <p>Additionally, for the Seattle Center Station please consider option D-2 , which wouldn't permanently impact cultural institutions on Seattle Center's campus like KEXP and Vera Project. These non profits worked very hard to secure those spaces and may not be able to secure funding necessary to move again should a station be built in their place. Buying out the parking lot on Warren and Mercer for a station would be a much simpler alternative for the city.</p>	Brady Harvey
04/27/2022	<p>As the former First Mayor of the newly incorporated Sustainable City of Burien (1992-1998), I was an elected member of both PSRC and the King County Transportation Committee that established a Vision and Planning for the Regional Public Transport System including the future Sound Transit. Thus, I am familiar with the remarkable transit development occurring in our region. As a long-time resident of Burien (since 1967), I am looking forward to the next phase of Sound Transit extension to Burien from West Seattle within 5 years.</p> <p>The DRAFT EIS for this project appears to meet the Federal Guidelines as well as Local and Regional Environmental Impacts requirements. However, I feel strongly that ADDITIONAL focus is required to Expand the Impacts of Global Climate Change and Local/Regional priority concerns of people with Socio/Economic/Cultural Diversity Impacts vis-a-vis Poor and Disadvantaged 3. Every effort must be made by the Sound Transit to honor and value the Local/Regional Transit/Environmental/Public Transportation/Public Health/Public Safety Plans/Regulations/Laws/Ordinances with the Draft EIS</p> <p>Finally, I would be honored to be part of the next phase of Sound Transit Development impacting Burien, as a Former Mayor and current Citizen. Please contact me by Phone (206-243-2102 (home)/206-920-4851 (cell) or by E:Mail (arunjhaverihome@q.com). I look forward to hearing from you soon. Thanks. Dr. Arun Jhaveri, Burien, Washington/USA</p>	DR. ARUN JHAVERI

04/27/2022	<p>To Whom It May Concern:</p> <p>My daughter attends Alki Beach Academy in the Frye Commerce Center at 2414 SW Andover Street in West Seattle. I have learned that some of Sound Transit's proposed options for the West Seattle Link extension would require the relocation of Alki Beach Academy, which I vehemently oppose!</p> <p>Alki Beach Academy is the only child care program on the peninsula that may be impacted by the project and is the largest child care provider in the Delridge corridor. The Delridge corridor is also the lowest-income and most racially diverse zip code on the peninsula and includes some of the lowest opportunity areas in the area. Removing Alki Beach Academy from this community would impose a disproportionate impact on an already low-opportunity area.</p> <p>Child care is already in short supply and has only been worsened by the pandemic. We should not be displacing programs that provide the type of high-quality early learning opportunities our children desperately need!</p> <p>Additionally, stations further south on Delridge would provide a more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact).</p> <p>As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. This is especially true for high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>Alki Beach Academy serves a large population of this area's children and provides high quality care and education that I have not seen elsewhere. It also does it at a cost that is lower than other day care providers. As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p> <p>I would be happy to answer any questions you may have. You may contact me on my cell phone at 509-630-0925 or email at scott.stroup@gmail.com.</p> <p>Thank you!</p> <p>Sincerely, Scott Stroup</p>	Scott Stroup
------------	---	--------------

04/27/2022	<p>It has come to my attention that the upcoming transit changes may impact a critical part of the West Seattle community, Alki Beach Academy. We have two children at ABA and would be unable to function as a family without their tremendous help. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact).</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	James Newell
04/27/2022	<p>The station location on 4th ave is the better choice, it displaces less small business and is a more centralized because it's closer to the pioneer square community. The affect on the Seattle international district will be a negative for the community if placed on 5th ave.</p>	Brian Walker
04/27/2022	<p>Seattle's Chinatown-International District is a unique and special part of Seattle's history. This multiyear construction project will cause major disruption to businesses and residents, with the 5th avenue plans displacing and disrupting more. The 4th avenue plans are preferable. I think it is worth giving more attention to the impact of this project on the community and more fully explore support that businesses and residents will need in order to survive this project. This is especially true given the historical disruption to the C-ID for large scale projects and the recent anti-Asian sentiment and pandemic challenges businesses have faced.</p> <p>It will be wonderful to have this transit expansion, and it is vital that the neighborhoods hosting new transit sites and traffic are well preserved and cared for.</p>	Ashley Look
04/27/2022	<p>After reading the Draft EIS, I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St).</p> <p>Alki Beach Academy as it is one of the very few childcare options in West Seattle. If forced to relocate the facility, 300 children would be displaced and Alki Beach Academy would have to move outside of West Seattle.</p> <p>Additionally, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p> <p>Thank you for your consideration.</p> <p>-Roxanne</p>	Roxanne Murdock

04/27/2022	<p>Of the two choices for the station in the International district I would support the 4th ave station. Some of this is to that neighborhood already was majorly split when I-5 went in and had disastrous repercussions at the time. But also that neighborhood was especially hard hit during the pandemic and many of the businesses and people cannot afford to move. I am saying this as someone who usually commutes on 4th and know it will throw a huge wrench in my way coming from rainier beach. For something this disruptive i think seattle should listen to the people who live in that neighborhood and most of what I'm hearing online from people on that community is That 4th ave is the least disruptive and displacing of a under served neighborhood. We can't say as a city that we know we screwed certain areas in the past and then continue doing the things that keep doing the things we literally just acknowledged we did.</p>	Victoria Franklin
04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Alki Beach Academy is an extraordinary child care program that my child has thrived at. They are a much needed and much beloved part of the West Seattle community. Please do not force them to relocate.</p>	Juliana Winters
04/27/2022	<p>4th Ave south is the only one that should be built. Any other route will cause drastic changes for the small/local business in the area.</p>	Annie M

04/27/2022	<p>To whom it may concern,</p> <p>As an incoming student of urban planning and a lover of Seattle and its uniquely varied urban landscape, I wanted to submit my support for alternative options on 4th street for the ID/Chinatown station project. Given the recent impacts of the pandemic, racism/xenophobia, and rising gentrification/cost of living, the established community in the CID is in no place to accept the burden of the 18-27 business displacements resulting from options CID-2a, 2a Diagonal Station, and 2b. With a history marked by the destructive force of the Interstate 5 project, care must be taken to promote public trust in new, desperately needed public transit projects. An approach which creates minimal displacement within the social/business fabric of the CID will demonstrate not only Sound Transit's dedication to sustainable regional connection, but also it's respect of the communities it serves.</p>	Kyle Thiessen
04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p> <p>? The Draft EIS needs to be updated to include Alki Beach Academy as a social resource (Appendix L4.4, Table L4.4-1).</p> <p>? At the time of relocation, Alki Beach Academy will care for nearly 100 more children than the largest center currently listed in the Draft EIS (Table L4.4-1 and Table L4.4-2).</p> <p>? Based on the most recent assessments of the local child care industry, current providers can only provide care for 46% of children at or below the age of 5. This is based on pre-pandemic data (at least 1 in 5 child care programs in King County were at least temporarily closed due to COVID impacts by the most recent count).</p> <p>? Alki Beach Academy is the only child care program on the peninsula that may be impacted by the project and is the largest child care provider in the Delridge corridor. The Delridge corridor (98106) is the lowest-income zip code, the most racially diverse zip code on the peninsula, and includes some of the lowest opportunity areas in the city. Removing ABA from this</p>	Paul Winters

	community would impose a disproportionate impact on these communities.	
04/27/2022	West Seattle - I think it would be ideal to keep the loading/unloading platforms from encroaching too closely into the neighborhood residential zones. Keeping the stations on main arterials like Delridge, Fauntleroy Way, SW Alaska St, Avalon etc makes sense to me. It appears a few of the Junction options may terminate very closely or into some neighborhood residential zones.	Ryan Reese
04/27/2022	This structure implementation is unethically located. This will only negatively impact residents, communities, businesses and more. This will block access to essential streets for local residents for up to 11 years, demolish successful businesses for no reason, and provide extremely harmful environmental effects. Stop this project.	Benjamin Messing
04/27/2022	The Link Light rail station on 5th Ave in International District would displace many local small businesses in an area that has already been heavily impacted by racism and xenophobia. It would be unsustainable to disrupt the businesses in International District for the length of time which building the stations on 5th would require.	Erin Kwan
04/27/2022	The impact to the surrounding business and communities would be detrimental.	My La

04/27/2022	<p>While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood. As someone who frequents the businesses, I have seen the suffering caused by the pandemic and increase in property and hate crime. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the ID do not need the extra burden construction will cause. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.</p>	Janey Salcedo
04/27/2022	<p>While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood. As someone who grew up nearby and frequents the businesses, have seen the suffering caused by the pandemic and increase in property and hate crime. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the C-ID do not need the extra burden construction will cause. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.</p>	Caily Bjorn
04/27/2022	<p>I am not supportive of any elevated sections in Ballard. In either case of running along 15th Ave or 14th Ave, the section north of the cut should be below ground. Any elevated section will be an eyesore and decrease property values.</p>	Stephen Jensen
04/27/2022	<p>Please choose the the 4th Ave option, as it clearly has the least detrimental impact on the C-ID neighborhood. Increased access of public transportation is great, and aids in access for those who work, live and patron the C-ID. But I ask you to choose the 4th Ave option, which has the smallest impact on the neighborhood, its businesses and its residents. The pandemic has devastated the C-ID and lead to an increase in property and hate crime. The 5th Ave option will further disrupt many of the C-ID businesses struggling to survive COVID. Additionally, the people living in the C-ID would face much less impact from construction if the 4th ave option is chosen. Please hear us and choose the 4th ave option.</p>	Maggie Holland
04/27/2022	<p>Support for selecting 6th Mercer / DT-2 and the Prospect Street Station / Central Interbay SIB-3 segments.</p> <p>High concern that the 5th/Harrison DT-1 route displaces a high number of residences and disturbs the art facilities both after and during construction, these facilities are important community artifacts and have suffered enough during the rebuild of climate pledge arena. Meanwhile, according to table 6-6 and 6-7, the 6th/Mercer option displaces lower number of residences and keeps the train running underground.</p> <p>5th/Harrison DT will close Republican for 5 years which is currently a quiet residential street that is neighborly, walkable, and direct access to the waterfront walking bridge. By car it currently provides quick and quiet access to the lower queen anne area. Additionally, the closure of the street will prevent entrance to parking garages of the Luxe Condominiums and two apartment buildings, and two single family homes, that is not acknowledged in the impact listed in table 6-6, not to mention the complete lost of street parking for other residences who currently rely on that as their building do not have parking garages.</p>	Daphne Liang

04/27/2022	<p>I am a resident of the 2200 Westlake complex and will confine my comments to the two proposals for the Ballard line. The "preferred" station at Westlake & Denny strikes me as incredibly disruptive to the urban environment, while the "alternative" station on Terry should receive positive consideration instead.</p> <p>Terry needs to be a pedestrian corridor, and a light rail station at Terry & John would contribute to that goal. Construction of the Terry St. station would be far less disruptive to pedestrian, automobile, bus, and streetcar traffic than closures of Denny (the principal east-west corridor in downtown Seattle) and Westlake (the principal north-south connection from downtown to points north). A new station on Terry would encourage further development of one of the neighborhood's least used streets, whereas Denny and Westlake are both close to capacity.</p>	Ronald Holden
04/27/2022	<p>Hi there, As a resident, I'm very worried about the impact on CID businesses and tenants as a result of the expansion of the light rail. I love the light rail and use it often but it's current station pathways in the ID feel sufficient to me without the addition of increased strain, loss of revenue, and hardship for an area of the city that has already (and continues) to experience so much. Thank you.</p>	Daniel Tam-Claiborne
04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. Please do not force them to relocate.</p>	Landry Christofferson

04/27/2022	<p>In regards to section 3.1.22 and the route options for the segment crossing through International District, it clearly seems that the CID 2 pathways would be far too damaging to the traffic and economy of the International District to be considered. This is a project that will involve a heavy degree of construction and will take years to complete. Pushing the pathway along fifth avenue, as proposed by CID 2, and along an arterial vein of this community would have implications on the businesses, the residents, and the cultural identity of CID. I do not believe that our transit needs to come at such great cost to AAPI communities and business, which have already historically and presently faced harm from Seattle through xenophobia and hate crimes that effected the area both socially and economically. This cannot be overlooked in determining how local government and government agencies interact with the CID, including in shaping the physical traits of the CID through transit and roadwork. The CID 1 alternative along 4th avenue is the least harmful route to the surrounding community.</p>	Olivia Zimmerman
04/27/2022	<p>The 5th Ave corridor in ID that is being proposed is incredibly disruptive to the ID. While public transportation is incredibly important and I think that Seattle should absolutely expand our capacity, it is completely unfair to put such an undue burden on this part of the city. When gentrification is already pushing out original residents and other residents of color throughout the Southside of Seattle it seems unwise to continue the pattern. I hope that Sound Transit can find a less intrusive option and/or fund ways for these vital community spaces to continue where they are at.</p>	Melissa Blue
04/27/2022	<p>I am profoundly concerned that aspects of this planned light rail extension could have a very destructive impact on Seattle's Chinatown-International District. I believe the plan does not fully address the potential impact to the community in this neighborhood and that long-term street closures have the potential to destroy businesses and displace vulnerable elders. I strongly urge you to take action that will preserve the community and the vibrant business environment in Seattle's Chinatown.</p>	Ramon Arjona
04/27/2022	<p>I'm writing in to share my concerns on building on 5th avenue. It will disrupt many local owned businesses and potentially cause them to go out of business. Please consider a different alternative to building on 5th.</p>	Jessica dela Cruz
04/27/2022	<p>Please avoid any building in the International District. We should be preserving this historic and important community not bifurcating it for transit. Please find an alternative.</p>	Jemma Hovance

<p>04/27/2022</p>	<p>I have attached some of the documentation for my additions and clarifications to Historic Context in order to give a more complete picture of Chinatown and CID history. I am working on the revisions and hope to get it in by the deadline but wanted you to have the documentation for the name; I don't have time to learn how ST does citations for source material. It will look very familiar to Leda and Brien and may be new to the rest of you. I will cite other documentation and people who are interested can just look them up online or get them from City Archives or DAHP like I did.</p> <p>I am citing documents the City Archives provided me that were in the International Center folder they have. It's important because of community pushback led by Ruby Mar Chow on the renaming.</p> <p>Another set of documents, provided by DAHP, show Ruby Chow's role and that of Chong Wa president Ted Pang in getting the Chinatown Historic District designation changed from the nomination name of King Street Historic District. That's why I interviewed Larry Kreisman during the pandemic. His task as he related it to me, was to fill out the historic district nomination form (he was working for Seattle Historic Preservation I think) and list the historic assets, not to provide a definitive history of the area. He depended on a few folks to tell him what the history was and that's what he wrote. Therefore I will reduce the number of quotes from him in favor of primary sources from the City Archives, the recorded memoirs of Ruby Chow, and the Mar Family Remembrance by her older brother, William Mar.</p> <p>Also news articles from The Seattle Times and Seattle PI in 1951 to demonstrate the common understanding of the time that Mayor Devin's International Center proclamation was simply an attempt to get rid of Chinatown through re-naming.</p> <p>Then there's Paul de Barros book Jackson Street After Hours to provide background on why the Mayor tried to rename Chinatown and finally, the Mar Family Remembrance notebook created and written by William Mar, who was born on San Juan Dock 1918, like his younger sister Ruby 1920.</p> <p>Below documentation has to do with the history of the district name and why I deleted all references to International District.</p> <p>There is no such place as an International District! The entire district name is Chinatown International District, according to City Ordinance 119297 (1999), or the CID; or Chinatown ID, but never just ID. The boundaries of the CID are from 4th Ave. S. to Rainier Ave. S. and from Yesler Way to Charles and Dearborn Streets (Chinatown International District Urban Village Master Plan, 1998; Chinatown International District Strategic Plan, 1998). Within the CID are the three neighborhoods of Chinatown, Japantown and Little Saigon. Chinatown is roughly south of Jackson; Japantown is roughly north of Jackson and Little Saigon is largely east of I-5. Also within the CID is the Seattle Chinatown Historic District, as listed on the National Register of Historic Places (1986). For your information, a portion of Japantown opted to be included in the Chinatown Historic District. The name Chinatown International District came about as the result of a compromise, and as such, no one in Chinatown, Japantown or Little Saigon (CJLS) likes it; but that's the nature of a compromise. We want our own neighborhood names to be used for historic, cultural, heritage and marketing reasons. The problem with the "international" label is that it marks us as forever foreign and contributes to the anti-Asian hate crimes climate. As one community member asked, "When do we get to be American?" We prefer our own neighborhood names be used, as they are now time honored parts of the American fabric. The City of Seattle is moving in the right direction. City staff met with representatives of CJLS to get our input on the Jackson St. Streetcar project. As a result, our neighborhood names of Chinatown, Japantown, and Little Saigon each appears on one of the three streetcar station stops on Jackson, complete with maps and appropriate language signage for each. One of the streetcars, the most colorful one, prominently features Chinatown, Japantown, and Little Saigon. In addition, the city later installed Chinese and Japanese language translations underneath the English names of neighborhood street signs. Little Saigon at first declined, but later changed its mind when it realized the importance of neighborhood branding through signage for tourism and marketing purposes. Neighborhood businesses and community organizations are already under pressure of rising crime, displacement, homogenization, Asian hate crimes and all the challenges development entails and need all the help possible in use of our neighborhood names to get away from being labeled "international" when we are Americans. I have attached the relevant documents for you to examine. Please feel free to share the documents with your colleagues so that everyone can use the correct name of our district and the names of our three neighborhoods within the larger district. My colleague Brien Chow is on the cc. He is chairperson of the Chong Wa Benevolent Assn. Outreach Committee, of which I am a member. We are happy to meet with you and others to answer questions or discuss the history of above further.</p>	<p>Brien Chow, Betty Lau</p>
-------------------	--	------------------------------

04/27/2022	<p>Please put the new C-ID light rail extension along 4th avenue instead of on 5th. Putting it on 4th will impact far fewer businesses and workers and people in the community, and it will be seen as a show of respect and solidarity with the local community that has long been negatively impacted, ignored, and pushed aside for the sake of land development. This city doesn't need more bad press or implications of participation in systemic racism.</p>	Nathaniel Iven-Diemer
04/27/2022	<p>General:</p> <p>Prioritize shallow stations when tunneling to improve passenger experience. These stations are an investment in the future of our city, and ridership will be linked to how enjoyable, clear, safe, and easy passengers find it to ride transit. Override this strategy only if community engagement determines that the deep underground options are absolutely necessary to preserve key community functions.</p> <p>Eliminate options greater than 120' deep. Elevator only options should not be considered unless all shallower options are technically infeasible or are determined by community engagement to be infeasible for the community due to displacements.</p> <p>Community engagement should be prioritized for feedback in areas that have been historically underrepresented in infrastructure projects. Key areas for community engagement include the CID and Delridge, among others.</p> <p>Provide plazas sized to accommodate crowds in areas with major event centers.</p> <p>Integrate bus access directly adjacent to the station with awnings.</p> <p>Show depth of each underground station alternative within future comparisons to allow clear comparison between the rider experience in each option.</p> <p>Ballard:</p> <p>Prioritize underground/tunnel options (IBB-2a and IBB-2b) rather than raised guideway options in order to allow Ballard retail to thrive and new housing opportunities to remain appealing. An elevated guideway will limit the long term viability of the neighborhood as a safe, livable emerging density center.</p> <p>CID:</p> <p>Prioritize local community in TOD opportunities through priority programs.</p> <p>Prioritize community businesses in retail TOD opportunities.</p> <p>SODO:</p> <p>Coordinate with the City to make a shallow option plausible. The pedestrian experience requires escalators, and an elevator only station would be a mistake in an area that serves the high pedestrian volumes that stadiums produce.</p> <p>Realize the full potential of Union Station through easy connections to Union Station and programming of the station. Prioritize community businesses and active uses.</p> <p>West Seattle:</p> <p>Continue to pursue tunnel options and to seek ways to avoid displacements through minor alignment shifts. Prioritize options that could continue south in the future. Continue study of options WSJ-3a and WSJ-3b. to minimize displacements. Consider WSJ-3b as a potential preferred alternative due to tunneling and avoidance of Seattle Housing Authority residences. Clarify depths of WSJ-3a and WSJ-3b in documentation.</p> <p>Midtown/Westlake/SLU/Denny:</p> <p>Pursue joint development opportunities to integrate into the fabric of downtown without limiting development potential and activity near stations.</p> <p>Prioritize shallow stations anywhere possible. Seek engineering solutions that allow shallower stations. Prioritize the pedestrian experience and clear wayfinding opportunities.</p>	Molly Spetalnick

	<p>Displacements:</p> <p>Sound Transit currently provides displacement mitigation support for owners and renters with some support for displaced business owners. Make displacement mitigation more robust for businesses in a manner that acknowledges workers who do not own the businesses. Study whether past displacement mitigation has actually allowed businesses to remain in their communities/neighborhoods and if it has allowed them to maintain continuous employment for staff. If not, provide greater support to displaced businesses in partnership with the City.</p>	
<p>04/27/2022</p>	<p>The current line ends at Market St. This leaves people living from NW 60th St and north requiring a bus or auto connection to make the train. People living north of Holeman and Mary will have a choice of a bus or car to either the Northgate Station or the Market St station. Human nature being what it is, people will invariably choose to drive to Northgate where there is parking.</p> <p>If the above assumptions are correct, it would be a better use of money to find the least expensive way to construct to Market St and used the dollars saved on tunnels and rail diversions to continue construction with an overhead track up 15th to 85th.</p>	<p>Anthony Puglisi</p>

04/27/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Harjot Grewal
04/27/2022	<p>While I agree that it is important to add a connector for Ballard & West Seattle, I do not believe that having this connector in the center of CID (especially at the selected locations) is in the best interest of the city, residents, and businessowners. The current intended location of the CID Segment would displace residents and businessowners who have already been marginalized by previous incidences such as anti-Asian rhetoric amplified by the COVID-19 pandemic and redlining. While I appreciate that you have already considered this displacement through direct means (i.e. how persons would be displaced through the removal of or reduction of buildings), I believe indirect displacement as a result of the construction has not been taken into account sufficiently. Construction in designated CID areas has drastic implications for traffic to businesses and residences in CID with the likely potential of rendering undue financial harms with the power to displace persons in the years of construction outlined in the current plan. While an increase in public transportation has the ability to provide benefits, the risk associated with adding this type of transportation in the outlined locations outweighs the long-term benefits, especially when other solutions and other locations for this proposed transportation link are possible. Even if options 1a or 1b are taken, financial damages to the area due to transportation impacts have the potential to displace significantly greater businesses, employees, and residents than assumed in the document. It is frankly unacceptable to place this burden on CID's Section of the plan when alternatives could be developed.</p>	Alexandra Mielcarek

04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Haley Smith
------------	--	-------------

04/27/2022	<p>I've been following the progress of the West Seattle Link Extension with great interest and I'd like to provide some comments for your consideration.</p> <p>My interest is primarily in route into and through the North Delridge neighborhood where I reside. I live at 4847 26th Avenue SW which is located on the fourth fairway of the West Seattle Golf Course. Besides playing golf, I've also been very involved in the City of Seattle's neighborhood planning activities since the early 1990's. Additionally, I was the community project manager for the design and development of the Greg Davis Park located at 26th Avenue SW and SW Brandon Street; this park project was initiated based on Mr. Davis' creation of the Longfellow Creek Watershed Action plan. I have a keen interest in the route location from an equity, golfer, Parks advocate, and transportation perspective.</p> <p>Given my interests, the potential costs, and impacts to the immediate neighborhood (loss of real property and parks land), I suggest that either of the Andover Street Station alternatives be given priority over your preferred routes. I make this recommendation based on the following points:</p> <p>The overall budget for the Yancy/Avalon routes are as affordable as some of the other routes with less disruption/displacement to private property.</p> <p>There is no impact to any Park-owned property, in particular the West Seattle Golf Course. The Genesee routes, by permanently eliminating parks property, violates City of Seattle ordinances that park property cannot be used for purposes other than what it was intended.</p> <p>The Parks Department supports alternatives to the Genesee routes.</p> <p>From an Avalon/Yancy route perspective, there would be no risk of golf balls hitting the moving trains.</p> <p>From an environmental perspective, there is little to no impact to Longfellow Creek from the Avalon/Yancy routes in comparison to the Genesee routes since the creek is essentially diverted into a pipe at SW Andover. This can't be said for the Genesee options where construction would occur immediately on top of Longfellow Creek.</p> <p>Any mature trees either inside the golf course boundary and along the Genesee right-of-way would be spared if the Avalon/Yancy options were selected.</p> <p>Thank you for listening and I look forward to hearing more in the coming months.</p>	Michael Little
04/27/2022	<p>Please build the transit route on 4th ave instead of 5th ave. As a local, I heavily value the businesses that would be negatively affected by a route being built on 5th ave. It would be a shame to lose so many local small businesses, especially after already losing many from the pandemic. Please consider preserving small businesses while also working to improve our city's transportation needs. Thank you.</p>	Ariel Rivera
04/27/2022	<p>Please don't build the link station in the international district. It home to so much history and culture and building this will destroy that, not to mention that people's livelihoods will be disrupted. Seattle is always about being diverse and inclusive, don't destroy a diverse Asian hub.</p>	Aisha Misbah

04/27/2022	<p>I am an urban planner and Little Saigon/Chinatown-ID community member who has been working in the neighborhood for seven years. The DEIS does not thoroughly analyze the historic and cultural impacts and consequences that the WSBLE would have on the CID. The neighborhood has long been the battle ground for public infrastructure projects. As a result, the CID has suffered significant consequences including loss of homes, businesses, institutions, as well as less tangible losses like social connections and community stability. The impacts of an alignment on 5th Ave S would be no different, with the exception that Sound Transit should know better by now simply because of the lessons history has taught us. The CID cannot continue to be de-stabilized over and over with the expectation that it can miraculously bounce back. The CID cannot continue to bounce back once everything has been extracted. ST is treating the loss of culturally significant businesses, institutions, and communities simply as the cost of doing business. This is more than the cost of doing business. This is risking the decimation and end of a significant part of the CID as we know it. Places and communities cannot organically grow back like they once used to given the extreme lack of affordability we see in Seattle. These businesses will never return and the communities and families that rely on them will likely cease to return over time. ST has a moral obligation to listen to community and thoroughly analyze the consequences of their choices and seriously consider the benefits of putting cultural preservation and communities of color first. The alignment with fewer impacts to the neighborhood would be the 4th Ave S Shallow, though I strongly encourage ST to continue exploring the impacts of this option as well.</p>	Valerie Tran
04/27/2022	<p>As a close neighbor to the CID, and a white person of privilege, I write to ask you to pause planning for the second Chinatown International District light rail station. I read and support the statement of concerns provided by the Wing Luke Museum.</p> <p>This precious and fragile neighborhood has endured over a century of policies and violence designed to contain, expel or destroy people and property in the CID. I urge Sound Transit to work with cultural brokers to understand the community better in order to disrupt and displace people and businesses as little as possible. Further partnership with the City of Seattle and King County is necessary to leverage anti-displacement resources to assure that the CID is stronger and culturally preserved at the close of the construction.</p> <p>I want the expansion of light rail to continue and to strengthen my western neighbors.</p>	Janis Avery
04/27/2022	<p>The following is support for selecting the 6th/ Mercer DT-2 and the Prospect Street Station/Central Interbay SIB-3 segments.</p> <p>According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the Prospect Street Station/Central Interbay SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground. This combination of segments should be selected to help maintain our residential communities.</p> <p>According to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP. Therefore, the 6th/Mercer DT-2 should be selected.</p> <p>According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access to the parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. This should be a consideration to proceed with the 6th/Mercer DT-2 option instead.</p>	Archana Iyer
04/27/2022	<p>I believe that sound transit should move forward with the 4th Avenue option. And NOT the 5th Avenue option. As a 4th generation Chinese American, many of the businesses that would be negatively impacted by the 5th Avenue option are extremely important for my family, as well as the rest of the CID community. Thank you for receiving public comments.</p>	Jordan Hoy
04/27/2022	<p>Please choose the 4th Ave option for the proposed International District/Chinatown Link station. The proposed 5th Ave locations will disrupt residents and businesses in the International District. The 4th Ave location offers a solution that will minimize detrimental community impact.</p>	Lily Stelzer

04/27/2022	<p>I write as a historic preservation planner (MHP, Cornell University 1981); as former president of the Queen Anne Historical Society (2010-2021); as treasurer of Northwest Folklife, a Seattle Center based organization; and as a resident of Queen Anne. These views are mine alone. I reject all of the alternatives for the Interbay segment published in the DEIS and encourage adoption of the cost-saving alternative presented by Sound Transit at the Seattle Design Commission's meeting of April 21.</p> <p>Eliminating one of the Interbay stations while moving the portal and the route of the train tracks saves considerable money and mitigates impacts on the historic/existing fabric of this intensely industrial and commercial zone. (It is difficult to comment without a copy of the cost-saving design in hand).</p> <p>I encourage selection of a tunnel route under the Lake Washington Ship Canal, the aesthetic advantages and the mitigation of the impact on the maritime industries at the Fisherman's Terminal area notwithstanding, the height of the bridge now required by the Coast Guard demands this solution.</p> <p>I also favor the location of a station on Mercer Street. It eliminates the impact on Seattle Center's Northwest Court, a city of Seattle landmark and on the Station office building (location of the Queen Anne branch of the U.S. Post Office) which is listed on the National Register of Historic Places. It also protects the Inn at Queen Anne (NW corner of Republican and 1st Ave. N.) which is characteristic of the early 20th c. brick buildings which once defined the neighborhood. It also eliminates the construction disruptions on the operations of SIFF, KEXP, Seattle REP and the thriving businesses along Republican Street.</p> <p>I understood from Sound Transit at the April 21 meeting that none of the alternatives I favor would dramatically effect ridership and with the exception of the Ship Canal tunnel, might save a considerable amount of money.</p> <p>Thank you, Michael Herschensohn</p>	Michael Herschensohn
04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy (ABA) in the Frye Commerce Center (2414 SW Andover St). ABA is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city.</p> <p>My wife and I nearly needed to move out of state to be closer to family in helping raise our children when we were not able to find childcare until the owner of ABA reached out about a last minute opening they had in the program. The need for childcare in the city is extreme and limiting many other parents from participating in the workforce and any light rail option that would move ABA out of West Seattle would cause a great disruption of hundreds of young families.</p> <p>As a member of the West Seattle community I am asking that ABA not be relocated as the move of this program does not sound financially feasible with costs escalating into 7 figures and a great deal of time to coordinate.</p> <p>Thanks, Max Markham</p>	Max Markham
04/27/2022	No new link in CID!! Move it past the CID there are a lot of important historical and cultural buildings in that area!	Cody Choi

04/27/2022	<p>I've read the DEIS for the WSBLE and find it deficient in how it evaluates the impacts of the project on the CID. I whole-heartedly support the observations and conclusions of the Wing Luke Museum regarding the DEIS and urge the Sound Transit Board to address the concerns expressed in that document.</p> <p>As to other specific comments, of the several alternatives presented, it seems to me Option 1a impacts the CID the least, provides the best interconnectedness for all transportation systems serving the CID, Pioneer Square and the Stadium areas, and provides the best opportunity for revitalization of Union Station because of its use as an entrance and passageway.</p> <p>I have an additional concern and that's with respect to the proposed ventilation duct on the Union Station plaza. Isn't there some way ventilation for the new WSBLE station can be provided without having a new blocky structure built on that plaza? Can't sufficient ventilation be provided through grating on the roadway that would be built above the station or in the triangular bit of land formed at the intersection of Jackson, 2nd Ave. Extension So. and 4th Ave. So.? Can the ventilation system be incorporated into the northwest corner of Union Station, itself so that it isn't an intrusion into the plaza space? Can an artwork generated by 1% for Art funds or other money incorporate the ventilation system? There HAS to be a better way of dealing with ventilation of the station than what has been proposed!!!</p>	Gordon DAVIDSON
04/27/2022	<p>This comment is in support of the following alternatives: DT-2 SIB-3 IBB-2b</p> <p>In general, I am in support of tunneling wherever possible. We have incredible beauty surrounding us in Seattle, and while the proposed elevated lightrail lines have their own beauty, I believe they would detract from or outright block the mountain and water views all around.</p> <p>In addition to this, I particularly support SIB-3 as I live along Elliot Ave W, and will likely either have my home demolished or my property value greatly diminished by the elevated tracks proposed in SIB-1 or SIB-2.</p>	George Felton
04/27/2022	No new link in CID.	Roberto Hoyos
04/27/2022	<p>Save the CID. Do not move forward with building through the International District. This would be not only a heartbreaking loss to what remains of Seattle's already deteriorating sense of culture, but a HUGE slap in the face to our Asian American population who have already been negatively impacted by xenophobia, hate crimes, loss of business due to the pandemic, and the rampant homelessness that spills into that district.</p> <p>Please do the right thing.</p>	Naveed Naficy
04/27/2022	I'm commenting on page ES-25 section ES.3.1.2.2. Chinatown-International District Segment. I would recommend proceeding with option CID-1a. My recommendation would be to proceed with option CID-2b. The deeper station will have less impact and not require reconstruction of the 4th Avenue Viaduct.	Romeo Giron
04/27/2022	Tunnel please!	Sam Sherwood
04/27/2022	<p>Thank you for your work. I have 3 comments:</p> <p>Please consider a Ballard station West of 15th Ave NW. The core of downtown Ballard is further west, and it would make sense to take that into consideration!</p> <p>Please consider the alternative Thorndyke Retained Cut, especially if this would reduce displacement and traffic!</p> <p>Please provide for a station at Galer Street at Smith Cove to further support our Magnolia neighbors.</p>	Terri Cole

04/27/2022	<p>The light rail extension's negative impacts to local residents and businesses far outweigh its benefits. The sheer amount of time it would take to complete this, especially considering implications of decreased air quality and years of disruptive construction noise, should make the transit board reconsider. There must be another approach that is less disruptive to the local communities.</p>	Nina Luo
04/27/2022	<p>The current preferred alternative will force many small businesses in Seattle's Chinatown-International District to close. That would follow the effects of the pandemic when Chinese American and other Asian American business in were disproportionately negatively effected due to anti-Asian racism and COVID-19 related fear. Adding to these effects would demonstrate an astonishing lack of racial equity and awareness on the part of Sound Transit.</p> <p>Seattle's CID has repeatedly suffered from transit related construction. The street car and it's "barn" required extremely disruptive construction that hurt businesses and drove visitors from the neighborhood for years. Historically, the addition of the I-5 freeway overpass, which passes right through the CID is just an earlier example of Seattle's past actions that demonstrate a dispassion and lack of caring about the wellbeing of the businesses and residents of the CID.</p> <p>None of the current options show any respect for the CID, but rather make it seem like Sound Transit is actively trying to harm this historic and recovering neighborhood. Please take the time to conduct more impact studies and find alternatives that support racial equity and break the cycle of abuse on the CID community for the sake of transit.</p>	James To
04/27/2022	<p>The following is in support for selecting the 6th/ Mercer DT-2 and the Prospect Street Station/Central Interbay SIB-3 segments.</p> <p>According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the Prospect Street Station/Central Interbay SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground. This combination of segments should be selected to help maintain our residential communities.</p> <p>According to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP. Therefore, the 6th/Mercer DT-2 should be selected. According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access to the parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. This should be a consideration to proceed with the 6th/Mercer DT-2 option instead.</p>	Vaibhav Ravichandran
04/27/2022	<p>I urge you to listen to CID community because they know what they need and want for the community and neighborhood to thrive.</p> <p>Will you consider building the light station away from CID onto the parking lot next to the stadium/ 4th Ave?</p> <p>That will be the less impact and disruption onto the community and neighborhood.</p> <p>Your action will push away local residents and devalue CID's health over the years if you decide to proceed with 5th ave.</p> <p>Thank you for listening.</p>	Patty Liang
04/27/2022	<p>I'm concerned about the sound transit options for 5th Ave S as several small businesses will be displaced after having barely gotten through the pandemic.</p>	Jennie Li

04/27/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I want to express my strong opposition to the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would cripple and perhaps even effectively end the operations of Transitional Resources, a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources ("TR") is a community behavioral health agency located in West Seattle on SW Avalon Way. For nearly a half century, TR has developed successful programs and housing to serve vulnerable adults from all over King County. These vulnerable citizens are living with serious and persistent mental illness, and TR provides them with behavioral health treatment and supportive housing services to ensure these folks remain safe, healthy, and housed. I served on TR's board for 15 years and can testify to its success at building community and stability for individuals who previously did not enjoy these things. TR owns or rents several properties and serves a multitude of people who live in various parts of West Seattle, but the majority of people it serves have their homes within very close proximity to TR's offices that are located on SW Avalon Way. Many of the people that TR serves will be irrevocably negatively impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward. DEL-6 would be particularly devastating for them, but DEL-5 would also cause disruption and uprooting of people for whom such experiences are particularly difficult.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would catastrophically alter TR's ability to deliver its vital programs and services to our community. Without these services or programs, the people who live in the impacted buildings—as well as those who receive behavioral health services in those buildings--would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating not only to the people they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging. Some of the people who will be displaced have lived in their homes for two decades or more. The impact of the loss of a home for these individuals cannot be determined in simple monetary terms. They are particularly vulnerable to change. They need access to resources that are at or very near their homes. I ask you to take this into consideration. TR has been a success story in helping solve one of this area's thorniest and persistent issues. Please preserve that success.</p> <p>As someone who cares deeply about our community and my vulnerable neighbors who are served by the nonprofits that provide support that they need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals. Thank you for this opportunity to provide input and your consideration.</p>	Mary Lachapelle
04/27/2022	<p>Hello, I am commenting on my favor to move forward with choosing 4th AVE as the decision for Sound Transit to extend the Light Rail.</p> <p>Choosing 5th AVE would displace many beloved C-ID businesses, residents, and have the heart of the C-ID taken away by construction. If Sound Transit cared about their community, especially communities of color, they would know how important the C-ID is to the AAPI community. 4th AVE would help protect our businesses and our people.</p> <p>I strongly hope you consider NOT choosing 5th AVE for the light rail extension.</p>	Jaclyn Samson

04/27/2022	<p>Hello,</p> <p>I will keep this short and to the point. I support the comments and requests made by the Executive Team of the Wing Luke Museum on the expansion of the International District Light Rail Station. Additionally, I would like Sound Transit to conduct another environmental impact study for this project that places at the center of it focus the historical racism, marginalization, and ongoing structural oppression the Chinatown-International District community has suffered. It saddened me to see options in these designs that compounded on the pain and suffering this community has been subjected to for more than a century by presenting plans to expropriate family owned businesses and destroy current thriving structures.</p> <p>It is not sufficient for Sound Transit to talk about the ideals and values of Equity, Inclusion, and Diversity. Sound Transit needs to place those values at the center of what it does, and these plans demonstrate that currently Sound Transit does not do that.</p> <p>Please feel free to reach out to me if you have any questions and I eagerly await news from Sound Transit addressing these concerns.</p> <p>Sincerely, Dr. Cristóbal A. Borges</p>	Cristóbal Borges
04/27/2022	<p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE ROUTE.</p> <p>Firstly, while I do not live in Seattle, I am quite invested in advocating for small businesses. In particular, I have a vested interest in the survival of one business: the Dusty Strings Company at 3450 16th Ave W. Dusty Strings has played a major role in my personal and professional experience as a harp player and luthier. Both my harps were made by Dusty, and the guidance, customer service, and dedication to building a warm and welcoming community sets this business apart. They are a vital member of the harp community, and significantly contribute to the Seattle manufacturing community, as well.</p> <p>About the Business: Dusty Strings is a family owned company, founded and thriving in Seattle, and a team of globally respected harp builders. As a manufacturer of high-quality harps and hammered dulcimers, Dusty Strings contributes to business diversity in an increasingly tech-dominated city. They employ local skilled craftspeople, many of whom have made Dusty Strings their lifelong career, and the current route would displace as many as 60-70 workers from this building, as well as 4 other small businesses.</p> <p>It appears that the current preferred route (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration.</p>	Aidan Iams
04/27/2022	<p>Chapter 5: Cumulative Impacts: I feel that you need to do more work to evaluate the historic reality of past public policies and actions. You do not capture the everyday lived legacy of those actions up to today. There are subsequent threats to the future survival of the CID. I feel your conclusions do not adequately understand the depth and breadth of the cumulative impacts from the WSBLE project.</p> <p>As the a member of that perceived "perpetual visitor" population we will once again be ignored and buried under that red line with this project. I think further in-depth study of the community needs to be addressed.</p>	Cheryll Leo-Gwin

04/27/2022	Please do not go through with the renovations to the CID station. This area is one of the most important areas in the city and going through with this will destroy an already at risk population. You claim that you want fairness and equality, but this renovation does not stand in line with those values.	Jacob Cunningham
04/27/2022	I and other building owners around the SODO light rail station are unanimous in our support for the mixed profile option. We have made our case in testimony on four occasions before the full board when alignments were first being discussed. At-grade for both lines means jobs lost for businesses around 5th and Lander. Construction of an overpass means businesses relocated and supply chains of vital construction products (tools, safety equipment, welding supplies) in the market interrupted for years at a time. Thank you.	Bob Gillespie
04/27/2022	<p>The station should be located in downtown and not Chinatown / International district for a myriad of reasons.</p> <p>-The construction will put many small businesses in CID out of business. Not just the businesses that the project will be built over, but also the surrounding businesses due to the construction. When the Lightrail was first built, it was built over MLK with the promise to the businesses there that it will bring future business. Instead the majority of those business had to close down due to less customers during construction, and post construction there are only 3 stops between Rainier Beach and Columbia City which spans 4~ miles and there are 9 stops between Mount Baker and Westlake.</p> <p>-If Seattle is about protecting small businesses, let's see the community put their money where their mouth is.</p> <p>-Having a stop in downtown makes sense for regular commuters. They would simply hop off the light rail and immediately go be able to go to work. No need to transfer, and so much time saved. Think about when you have to transfer busses in Seattle already. It's so bad when you need to make an appointment or be on time for work, only for the bus to pass you by because it's too full.</p>	Collin W
04/27/2022	I do not support the 5th Ave alternatives presented in the EIS report. I support the route that has minimal business impacts to the CID community. Given the pandemic and many projects around the CID over the last decade, this community has experienced irreversible damage. Long-term business closures and road displacement will leave a lasting impact on a community that is already quickly being erased and suffering from the impacts of gentrification. Please choose an option that is the least impactful to the current businesses and overall community.	Tony Au
04/27/2022	I appreciate the need for the extension, and realize that the planning is very challenging. My main concern is about the CID, an area that has already seen so much upheaval during recent constructions such as the First Hill Streetcar. Disruption to businesses, community centers, and the livability of the area should be most carefully considered during this planning. I'd like to be assured that the economic, cultural, and social services communities there will survive the hardship this will impose are on their area, which is not yet recovered from the downturn of the last 2 years. The population there really deserves special consideration as plans are finalized. This area is such an important part of our history and if we lose its neighborhoods and resources Seattle will be much the worse for it. Of the several proposals for the new extensions, it is essential that the citizens, businesses, and cultural institutions in the International District confirm which configuration will benefit the area, and that accommodations and perhaps compensation should be made due to the disruptions that are inevitable during the project construction.	Phyllis Friedman

04/27/2022	<p>Sound Transit has tough choices to make. Dusty Strings is a unique business in Seattle that is one of the largest manufacturers of folk harps and hammered dulcimers that are well respected worldwide. They fill a particular niche in the music world.</p> <p>As currently proposed, the only route that would not force Dusty Strings to move is the Elevated 14th Avenue Option (from Prospect/15th), also known as IBB-1b. Other routes could possibly be adjusted in order to spare our building and five other buildings, and follow a public street instead.</p> <p>Dusty Strings was founded in Seattle in 1979 and has remained a family-owned and operated local business for the past 43 years. They make globally-recognized musical instruments have been handcrafted in Seattle since the beginning.</p> <p>As manufacturers of high-quality harps and hammered dulcimers, they are a critical member of Seattle's dwindling manufacturing community, which is important to business diversity in an increasingly tech-dominated city. They employ local skilled craftspeople, many of whom have made Dusty Strings their lifelong career.</p> <p>Approximately 60-70 workers would be displaced from this building alone, which houses Dusty Strings as well as four other small businesses.</p> <p>If they are forced to relocate, it could be very difficult to find another space within Seattle that will meet their needs as a unique manufacturer and small business. Their custom-designed building and owner-occupied model have made it possible to stay in Seattle as the costs of operating in Seattle have driven other manufacturers out of the city. Having to move outside of Seattle would certainly mean a major disruption to their instrument-building operations. It could also mean losing 20 to 30 years of instrument building expertise if their longtime employees are forced to leave their chosen careers in order to stay close to their families in Seattle.</p> <p>Dusty Strings has connections with instrument owners around the world, and many of them know of Seattle because that's where their harp was made. Dusty Strings instruments are an important part of the livelihood of local, independent music stores all across the country, as well as in the UK, Europe, Asia, Australia, Canada, and New Zealand.</p> <p>Thank you for considering how this decision will potentially impact this business that supplies highly sought after musical instruments to the world. Thank you for considering their employees and the potential loss of a unique skills that the employees possess.</p> <p>As currently proposed, the only route that would not force them to move is the Elevated 14th Avenue Option (from Prospect/15th), also known as IBB-1b. Other routes could possibly be adjusted in order to spare their building and five other buildings, and follow a public street instead.</p>	Edward Schack
04/27/2022	I am commenting in regards to the CID Lightrail extension. Please go ahead with the construction on 4th and leave the businesses on 5th where they are. As someone who lives in this neighborhood, I think the businesses here need to be left alone. Please don't destroy this community!	Alanna Cunningham
04/27/2022	I do not see the purpose of this when you are displacing many workers/ restaurants in the area that has been here for generations. What is the need for another station when one has been built. Focus our taxpayer money on the west Seattle Bridge, its been delayed for too long.	Zulkifly Chaumath
04/27/2022	Greetings. I've read over the draft EIS and, although it's too much for me to wholly understand, I'm particularly struck by the part of the proposal that deals with the ID. The ID is a vulnerable community, one that's been particularly hard hit during the pandemic, as well as by gentrification. For that reason, option CID- 1A, which calls for 4th Ave S to be closed for 6 years, seems like a crippling choice, as does CID - 2A, which would close King Street for 4 years. CID- 2A and 2B would close many ID businesses. Again, this is a vulnerable population, one that is of great cultural and economic import. Our city has a history of regarding our Asian citizens as less than; let's not continue that here by closing Asian businesses that are integrated into the community.	Melissa Aaron

04/27/2022	<p>My name is Rachel Bender and I'm a Seattle resident who frequently uses the light rail system. Regarding the draft EIS, I have major concerns about the chinatown international district section. During the last several years the area has been heavily struggling and I worry with many of the proposed plans, the situation would become even more dire to the survival of the communities residing in the area. After reviewing the impacts, I would urge you to go with the CID-1B plan as it would be a good compromise between displacement of neighborhood staple relocation and hassle to those in the area. With the expected time frame of 8-10 years and the need to reconstruct the 4th Ave South viaduct I understand how this plan creates more stressed than needed, but I urge you to think about the community first. I assure you that myself and all seattlites would like to see the continued existence and thriving of the international district over inconvenience in the short term. Thanks.</p>	Rachel Bender
04/27/2022	<p>Please move forward with project options involving 4th Avenue (1a and/or 1b) as they will diminish the impacts of construction on already economically vulnerable businesses owned by our dwindling population of minority-owned businesses in Seattle.</p>	Rachel Askew
04/27/2022	<p>Please protect Chinatown/International District businesses and community. This construction will shut down many beloved businesses and affect many employees livelihoods. CID is a historic and critical part of our city's history. 10 years of construction had potential to damage the areas economy where it may not recover. Please don't like the CID be a forgotten neighborhood</p>	Tri Le
04/27/2022	<p>The CID is such a special place and has been through so much already. Please work on finding another way to go through with this that would not further destroy our community.</p>	Maria Vipond
04/27/2022	<p>This project is destructive to the communities and culture in these areas. It does a disservice to the people who have worked hard for years to build their homes and businesses in these neighborhoods.</p>	Zaria ali
04/27/2022	<p>Hello,</p> <p>As a local member of the community, I understand the great need for additional transit options in our area. As a Seattle born, Filipino woman, I also understand how the development of this project will also cause harm to the long-term residents of the Chinatown-International District. My main concerns are that developers of the WSBLE project lack the historical understandings of how development has impacted the CID.</p> <p>In order to move towards the future, we must also look to the past and recognize wrong doings that cannot happen again. Prior to the 1900s, systemic oppression pushed folks of Chinese, Japanese, Filipino, and African descent into the areas of present day CID and Central District. "Segregation Maps" that highlighted the discriminatory practices of red-lining from the 1920s-1940s noted that the areas of the CID and Central District were "hazardous" on a grade of security scale (Honig, 2021). In the late 1960s to early 1970s, the CID was the chosen location of the new Kingdome on the west, as well as the development of the I-5/I-90 interchange freeways that cut the east side of the CID. In the late 90s and early 2000s, the Kingdome (only used for 30 years) was demolished and replaced with the two new sports stadiums. Present day projects of expanding Light Rail stations, Street Car stations, and rezoning high rises continues to further displace those who have relied on the CID for years.</p> <p>Many of these projects were developed on the foundations of racism, classism, and other forms of oppression that fail our communities. The people in the CID have always pushed for their voices to be heard, the district has a huge activism and community organizing history. The developments, while beneficial, are beneficial mainly to communities outside of the CID. What becomes forgotten is the process in between of when the projects are conceived into thought and when they are completed. The process of pushing forward with the CID station on 5th ave has the potential to increase displacement, increase noise and air pollution, further congest the roads, reduce access to businesses, increase traffic, increase rent and property prices of residential and commercial businesses, as well as impact what history is left of the CID. Although the CID is a business district, housing many commercial businesses, we must also not forget the long-term residents that literally call this place home.</p> <p>Thank you for allowing me to share my comments. I hope that those reviewing the WSBLE will take these into consideration.</p> <p>Thank you.</p>	Andrea Salgado

04/27/2022	You cannot move forward with any plan that would decimate our historic International District. To do so would be ripping away culture, delicious culinary experiences, and livelihoods of countless families. The cost is not worth this project.	Beth Hjort
04/27/2022	Hi, I think the 4th shallow option is the best option for the CID station with all the information we have at the moment. It causes less damage to the CID neighborhood, and that should be considered in ST's cost-benefit analysis. At this moment or in the foreseen future, CID is still a vulnerable community with all the precious culture and diversity uniqueness in Seattle. Keeping it one piece as much as we can is essential. Mitigation for the influenced businesses and residents should also be clarified as much as possible. Thanks,	Cecilia Liang
04/27/2022	The following is in support for selecting the 6th/ Mercer DT-2 and the Prospect Street Station/Central Interbay SIB-3 segments. According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the Prospect Street Station/Central Interbay SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground. This combination of segments should be selected to help maintain our residential communities. According to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP. Therefore, the 6th/Mercer DT-2 should be selected. According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access to the parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. This should be a consideration to proceed with the 6th/Mercer DT-2 option instead.	Sanjana S
04/27/2022	Full closure of King Street, S. Weller and 5th Avenue for several years, with increased noise & air pollution, dust, dirt, vibrations in the CID is unacceptable. Not to mention disruptions to 30 immigrant businesses permanently closed or forced to move due to 5th Avenue construction. Sound Transit, take 5th Ave. off the table. 4th Ave Tunnel Station avoids 5th Ave impacts! Move Forward on 4th!	Huy Pham
04/27/2022	I'd like to comment on the placement of the Chinatown - I.D. transit station that connects West Seattle to Ballard. It appears that you're considering three locations in the CID. Historically, this community has been negatively impacted by decisions made about infrastructure improvements (building of I-5, the kingdom demolition and subsequent building of both sports stadiums, as well as the AK Way viaduct demolition and tunnel boring). These projects seldom, if ever, considered the needs and impacts of the community that reside in this neighborhood. This is a result of Seattle's racist and xenophobic past and should not be repeated. If a station must be put in the CID, every effort to cause the least economic impact and disruption to daily life should be made. 4th Ave seems to have the least economic impact and is already home to a robust public transportation hub. It makes most sense to construct a station there, rather than displace and disrupt the lives of community members by building on 5th Ave. I know there is much to consider, but please don't make the same mistakes of projects past - build the station on 4th Ave and reduce the impact to the neighborhood.	Julia Smith
04/27/2022	Please go with 4th avenue options for the Lightrail Expansion into the International District. This option is the least harmful, and does not disrupt and impact as many of our beloved and important businesses	Mari Ramirez
04/27/2022	The historic CID neighborhood has been disproportionately been affected by poor transit decisions (the street car barn, I-5) and further impact studies are needed to find alternatives to current station options that will not displace small businesses and irrevocably change the neighborhood. The DEIS does not adequately recognize the uniqueness of the CID nor does it take into consideration emergent threats to its neighborhood cohesion.	Friederike Therese Guethner
04/27/2022	No build on 5th!! I live in the ID and this would be MUCH more than detrimental to the neighborhood itself as well as the greater Seattle community who visit daily.	Sophia Stilwell

04/27/2022	<p>The Chinatown-International District does not need to be torn up even more.</p> <p>The 4th Avenue alternatives are the obvious choice for preserving and respecting the people and businesses of the CID. Disrupting this community, already split in two by I-5, is unnecessary.</p> <p>Rebuild the 4th Avenue viaduct. It could probably use it, and it will have its life extended.</p> <p>The 4th Avenue Shallow alternative is best in my opinion. Voters approved the money, so use it to build the best possible station.</p>	JOhn Andrews
04/27/2022	<p>The following is support for selecting the 6th/Mercer DT-2 and the Prospect Street Station/Central Interbay SIB-3 segments.</p> <p>According to Tables 6-6 and 6-7, the 6th/Mercer DT-2 option connecting to the Prospect Street Station/Central Interbay SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground. This combination of segments should be selected to help maintain our residential communities.</p> <p>According to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP. Therefore, the 6th/Mercer DT-2 should be selected.</p> <p>According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access to the parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. This should be a consideration to proceed with the 6th/Mercer DT-2 option instead.</p>	Bengu Manson
04/27/2022	<p>The light rail expansion should be designed to impact the least people possible. Construction could displace residents and locally owned businesses. Please be aware of how this impacts communities of color. The Chinatown International District has been affected by many construction projects historically and please make a decision to not harm this community any more than it already has been.</p>	Henry Hazzard
04/27/2022	<p>Shallow 5th Ave option, please!</p> <p>I use Beacon Hill Station regularly: relying on elevators as the only way to get in and out of the station is a big drag.</p>	Raven Gildea
04/27/2022	<p>The 5th street option seems it will cause more issues for the community and the businesses around it. There has been a dangerous rise in xenophobic acts as well and if businesses shut down, there most likely will also be a rise of homelessness.</p> <p>With large events such as Pax, emerald city con, and game days, the ID is also buzzing with business. This would create issues for tourists and weekenders when looking for food, shops, etc.</p> <p>Although 4th Street may take more time, it would cause less issues with the district and community overall</p>	Erika Guzman
04/27/2022	<p>I'm aware that consideration has likely been given to negative impacts to the International District which has had to endure plenty of disruption over several years. I believe that the survival and health of this unique historical and cultural district should be primary since it's an area that can easily be squeezed out and not replaced. I want Seattle to do the right thing to preserve this area.</p> <p>Perhaps the 4th Ave. deep option would cause the least negative impact the International district. I'm advocating further study of the options using this historical lens.</p>	Anne Mohundro

04/27/2022	For the Chinatown/ID station, please consider a shallow tunnel along 4th Avenue that aligns with both King Street Station and the existing International District/Chinatown station on 5th Ave. This will result in faster transfer times for riders, presumably lower construction costs and shorter schedules, and perhaps most critically, reduce impacts to the surrounding neighborhood. Chinatown/International District has borne a disproportionate brunt of major transportation construction projects in the Puget Sound area for at least 60 years now. What message are we sending if we can't protect and uplift culturally rich and historically marginalized communities like the CID? It is critical that ST3 protects the CID and develops a win-win-win solution for the Chinatown/ID station, preferably along 4th Avenue.	Graham Golbuff
04/27/2022	After reviewing the draft and some other comments I have come to the conclusion that Sound Transit and the City of Seattle are once again following the historic pattern of tearing apart and irrevocably damaging the community of Chinatown/International District. The stated values of racial and economic equity frequently identified as important to Seattle are to be set aside once again to allow an infrastructure project to tear apart this vibrant neighborhood of families, businesses and historic building. I strongly support that time be taken to complete a more thorough and open investigation. One that would allow an outside consultant to work closely with all members of the CID community to complete thorough research, gather more information and design a project that does not lead to the displacement of a vibrant but challenged community. A community that has already been victimized by racial inequities in the past propagated by Seattle and King County. A plan must be developed that does not displace and damage this historic and essential Seattle community.	Michael Marshman
04/27/2022	Please don't add another transit station in the middle of Chinatown!! Support our Asian business! Don't put them out of business! Keep our culture alive, please!	Vicky Nguyen
04/27/2022	Too much impact on the community. Do not follow through with this, please.	Brandon Vu
04/27/2022	Please keep Avalon station. More apartment buildings and denser housing options are going up in that area every day. If we have to have the super deep stations can we at least have escalators and elevators. Also, the gondola idea is a disingenuous attempt to delay light rail to preserve "neighborhood character." It's really gross. Do better West Seattle.	Adrian Will-Orrego
04/27/2022	Please don't diminish communities of color by expanding the transit station(s) in Chinatown.	Kathryn Rood
04/27/2022	It's incredibly frustrating that Ballard is slated to be online so many years from now, yet is being packed more and more densely with housing, without any traffic/infrastructure improvements/relief for literally decades. Anything that could speed the process would be great. And also consideration of alternatives that provide a station west of 15th. Thank you.	Susan Ward

04/27/2022	<p>As someone that lives in the international district, the construction of the 5th ave option will be detrimental to the community that we live in. Many of the shops and restaurants that are essential to the International District will be destroyed or caused to close shop because of the construction. The restaurants and food in the international district is an amazing gathering spot for people during the weekends and weekdays. On a daily basis the area is bustling with people coming to enjoy the food in the area, which is amazing to see especially after the previous years of quarantining from the pandemic. The international District historically has also been disrupted from the many construction projects, including the stadiums, causing many stress to be placed on the Asian American community and small businesses in the area. The construction of the 5th ave station also means that air ducts will be installed in the area, pumping clean air into the station and toxic air into the International District harming the health and lives of the people that live in the area.</p> <p>Several buildings in the area that have historical value around the area will be torn down to just be dump lots. This is very sad as these buildings hold many sentimental memories for the people.</p> <p>As a big supporter of public transportation in Seattle, a new station would be wonderful in granting access to the rest of the city, however the location of the 5th ave station does not make sense. The construction of that station will actually not help Seattle.</p> <p>The best solution would be to not build in the International District, however the CID- 1a 4th ave shallow station is the better option for the community if you are still going to build it. It will still have an impact on the International District, however the effects of it will not be as horrible to the community of the International District.</p> <p>The construction of the 4th Ave Shallow station will also connect the district to pioneer square which will connect Seattle as a community even more.</p>	Alex Chen
04/27/2022	<p>The decision to expand the light rail in the IDC is unnecessary. The small business and areas that will be affected are imperative to the area and symbolize the last bit of culture that remain in Seattle. An expansion for current greed will be detrimental for decades, affecting families and people that live in the area. I encourage that you rescind ideas of expanding the light rail.</p>	Teraé Stefon
04/27/2022	<p>As a resident of Seattle, I strongly oppose the 5th Ave train station option. This will heavily impact the community in Chinatown - International District, which is unacceptable considering the historical context and maltreatment of the community.</p> <p>I ask that Sound transit move forward with the 4th Ave station.</p> <p>Please do not consider the 5th Ave station.</p>	Nancy H
04/27/2022	<p>The following is in support for selecting the 6th/ Mercer DT-2 and the Prospect Street Station/Central Interbay SIB-3 segments.</p> <p>According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the Prospect Street Station/Central Interbay SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground. This combination of segments should be selected to help maintain our residential communities.</p> <p>According to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP. Therefore, the 6th/Mercer DT-2 should be selected.</p> <p>According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access to the parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. This should be a consideration to proceed with the 6th/Mercer DT-2 option instead.</p>	Kirtana A
04/27/2022	<p>While an expansion of the CID station would be welcomed to greater serve that community, please do not let it be at the expense of that community. Most alternatives presented would negatively impact the businesses and residents of CID and wipe out whole blocks of real estate</p>	Tyler Woebkenberg

04/27/2022	<p>Having construction and the station on 5th would be destructive for the neighborhood and for local businesses. Having bad air pushed into the Chinatown area would affect everyone who calls Chinatown home. This includes the children and elders who grow up in the area, people who work in the area, and people who calls this place home. 5th Avenue is where a lot of life, businesses, and people thrives in the area. This wouldn't be just a physical change - this would be a societal change for worse in the area. This actively goes against the broken window theory and displaces people and businesses for the sake of money.</p> <p>4th would be a better place where there aren't people already living. Also, the construction period is going to cause issues for 10 years - this is a problem and period that needs to be heavily considered.</p> <p>Ideally, it's not in Chinatown at all. Sodo has a lot more space for these kinds of changes to happen.</p>	Andrew Koh
04/27/2022	<p>Please stop this project!! This is affecting the CID and family businesses that has been rooted for years!! My family and I have been long-term supporters of the CID and refuse to support this project. What's left of the tradition and BIPOC representation if there's a plan to take these businesses down?</p>	Moirá Sibal
04/27/2022	<p>Please build the transit satiation somewhere else. The international district is already suffered enough gentrification and your efforts to eliminate and eradicate asian culture that has been here for years. We don't need ANOTHER 10 years worth of constructions.</p>	Perry Liang
04/27/2022	<p>I would prefer that sound transit doesn't remove the Avalon stop in order to accommodate the Avalon residents as well as the people commuting on the 35th Ave SW bus to the Avalon stop. If you do, find a way for those people to get to link in a timely manner.</p> <p>Other than that, just build it, tunnel or no tunnel, just get it done.</p>	Peter Fleetwood
04/27/2022	<p>It is RIDICULOUS that we are quibbling about the particulars of a light rail system that won't benefit West Seattle for FIFTEEN years. I'll be retired by then and will no longer need efficient public transportation to get downtown every day. PLEASE consider the Skylink option which could be up and running in 2-3 years. This project is moving way too slowly for all of the growth in WS.</p>	Marianne Weber
04/27/2022	<p>I have lived on Beacon Hill for over 30 years and use public transportation to go to the C-ID frequently for shopping, eating out, and cultural events. As an Asian-American, I've always felt like I belonged there. It has changed over the years, but the small businesses have somehow managed to survive, surrounded by the new construction of "retail on the bottom, condos above".</p> <p>So I am familiar with the area from a pedestrian viewpoint, and that is how I read the Draft EIS for the West Seattle-Ballard expansion platforms in the ID.</p> <p>It would have been helpful to identify the buildings that would be demolished to make room for the platforms, and more specifically the businesses that would be displaced. Perhaps this was done to de-personalize the area and not acknowledge that a lifestyle and culture would be wiped out, to be replaced by modernity? I find the 4th Ave S platform slightly less disruptive than the 5th Ave S one. And all this so that residents of West Seattle and Ballard (generally, higher socioeconomic status and not communities of color) will have Light Rail? I've always supported Light Rail service, but not at the price of destroying a unique part of Seattle. The C-ID is a vibrant community that deserves better.</p>	Melanie Ito
04/27/2022	<p>The 5th avenue options (2a, 2b) will negatively impact the Chinatown International District neighborhood. The 5th avenue options are located in the center of thriving economic businesses. You will be destroying businesses and culture by the impact of Sound Transit construction by building on 5th avenue. The Chinatown International District community have always been pushed out of the neighborhood once land becomes valuable. If land continues to be taken away, there will no longer be a Chinatown International District in the future as we know it. By selecting a 4th avenue option (1a, 1b), that impact will be lessened as it will be on the fringes of the neighborhood and not in the center of economic activity.</p>	Stanley Choi

04/27/2022	Hi! I believe that causing such disruption to the CID will be fatal to the already struggling businesses that live there. Please move the station to a different location. Not even considering what has happened economically in the last two years, such construction will effectively make the CID uninhabitable for the sheer amount of folks who need to make their way through to keep businesses open. Not only that, but historically the CID has already split, rendering Little Saigon as a distinct district. I feel like I may be reaching a little here, but I do believe getting separated from the rest of the CID contributed to its atrophy as a community. I fear that another split will do nothing but weaken the CID further.	Jenny Phan
04/27/2022	The 5th Ave station will be much more detrimental to the community of Chinatown - International District. I implore Sound Transit to move forward with the 4th Ave station.	Jonathan Ngan
04/27/2022	As a Seattle resident I oppose the proposed stops in the CID as it will lead to a violent and forced removal of local POC owned businesses. This will displace communities and families that have been there for many years if not decades. These proposed stops will not help local business and in fact further the gentrification of this community. I wholeheartedly oppose this plan.	Hanako Osuga
04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Sean Anderson
04/27/2022	The proposed options for the new CID link station are all extremely disruptive and displace many long standing establishments and hundreds of employees. The city of seattle has done nothing to help AAPI communities during the pandemic as they experienced widespread xenophobia and hate crimes in CID. Now the city aims to displace and gentrify a historic area without regards to its residence. If the city cares about the AAPI community at all, the 4th Ave station option will be chosen over the 5th Ave options. Both of the 5th avenue options will negatively impacts hundreds of people and have devastating impacts on the many businesses in the area that construction will occur.	Divya Puvvadi
04/27/2022	Please do not go forward with the 5th Ave option. That will displace so many small business owners and the history of Chinatown!!!	Arifah Resmath

04/27/2022	<p>I think the Link and the success of the Link are critical for Seattle's future, and for our climate. We need to build the best system we can, for most the riders we can, at the lowest price we can.</p> <p>The Link has been very successful, and I think we should plan for further expansion. South Lake Union should allow for a line up Aurora and to the east along the Metro line 8. Ballard should allow future expansion north and east. Midtown expansion along Madison would be awesome (I live there). And we should be able to extend the West Seattle line south to White Center in Burien. This is how we reduce our VMT, meet our climate goals, and make the city more liveable by getting people out of cars.</p> <p>In Ballard, I think you should reconsider a tunnel option under the Ship Canal, especially since the Coast Guard has mandated higher bridges.</p> <p>In South Lake Union, I think the station needs to be actually in the neighborhood, something closer to the center of the neighborhood would generate much more ridership.</p> <p>For the tunnel through downtown and in the International District, please make it a shallow cut-and-cover tunnel. This will be much cheaper, and the result will be something people will be more willing to use.</p> <p>Thank you for reviewing these comments.</p>	Robin Briggs
04/27/2022	<p>The impact that this project would have to the community in the CID would be awful. It would hurt businesses and displace so many individuals. Sound transit should think historically on how the city has displaced marginalized communities in the past and rethink these options. This city claims to be so "progressive", we should see that in the planning of our cities infrastructure. If I were to choose these SLIM options, they would be CID 1a or 1b. Stay out of the neighborhood, stop displacing this important community, and find other options. Also it would look extremely fugly (fucking ugly), so like don't do it.</p>	Alexis L. Silva
04/27/2022	<p>I vote 4th deep</p> <p>Be very careful about 5th ave options they will negativly effect community's and seattle city culture also a major reason people take light rail is for culture.</p>	Francisco Leos
04/27/2022	<p>As a frequent user & person who relies on public transportation, I understand the need for the expansion of the Light Rail. I am also an Asian American who has loved the CID.</p> <p>I am writing to implore you to reconsider and more deeply think about the impact of creating a new CID station along 5th ave/diagonally around 5th ave and disrupting a section of CID that so many frequent, as well as many family small businesses are right now. The Hing Hay Park is a refuge and park for many, and the disruption in the local community could be very large.</p> <p>There are other options including 4th ave that may be less disruptive to the community.</p> <p>thank you.</p>	Brian Dang
04/27/2022	<p>I grew up in Seattle and lovingly spent my time in C-ID as well as Little Saigon growing up. I still come to C-ID every weekend and I am shocked and surprised by the proposal for CID 5th AVE which will destroy cultural institutions and restaurants who have been there for decades. The proposal for 5th Ave highlights inequalities and disregard the community of C-ID, especially when the AAPI community has faced xenophobia and racist attacks in the setting of COVID. The only clear path is for lay tracks under 4th Avenue to avoid taking land from the Chinatown Historic District.</p>	Linhchi Pham

04/27/2022	<p>As a resident in the CID, the location of this new station and it's upcoming construction will have a huge impact on my life and on the character and livelihood of this neighborhood both during construction and for the next century once construction is complete. Since moving to the CID I have been so fortunate to enjoy the community and character of this neighborhood and all it has to offer. Including the business that myself and much of this community frequent day to day. Many of these businesses would be demolished or hugely disrupted by all of the 5th Ave options. These 5th Ave options will fundamentally damage the Chinatown International District and irreparably harm a neighborhood and its businesses that have already been neglected by the City for decades. While I would prefer a new location to be considered all together, the 4th Ave Shallow (CID-1a) is the only option that lessens the damage to this beautiful neighborhood. And even reactivates Union station in the process. I sincerely hope you choose CID-1a and save this neighborhood.</p>	Seth Gottlieb
04/27/2022	<p>Please do not go forward with this project the way it is now! I'm sure an alternative can be found. The CID is a historical neighborhood where trailblazers of the Asian-American population pioneered a home away from home for Seattle's Asian immigrant population. Many of the business that will be affected are family owned staples of Seattle. Not only will businesses be negatively affected, but the people who live there will be affected by bad air quality, loud noises, and traffic problems. Many of the people who still live in Chinatown are seniors citizens and will be extremely sensitive to the problems listed above. Please, keep the CID intact and find an alternative!</p>	Alan Zhou
04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St).</p> <p>With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact).</p> <p>As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>As a parent of two children at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Bridget Igoe
04/27/2022	<p>the city needs to be considerate of the small business around the Chinatown/International district area. they should tear down these business thats been there for years and communicate with the community. Please pay attention and hear out the small business and be able to help them finanically with the rent or relocation.</p>	Ruby M Aquino
04/27/2022	<p>Preference for the 4th street options on the west Seattle and Ballard link extensions to avoid displacing local small businesses that are important to the CID community.</p>	Marissa Lordahl
04/27/2022	<p>I implore you to move forward with the 4th avenue option. The 5th avenue option would have a detrimental effect on the small businesses there, as well as the communities of people that run them. This area has already experienced the impact of the pandemic in multiple ways and many of these businesses would not survived the displacement caused by the 5th Ave option.</p>	Sydney Rhoad

04/27/2022	<p>Hi, We are a Dusty Strings dealer, which is located at 3450 16th Ave W, Seattle, WA 98119. It was brought to our attention that they may be relocated.</p> <p>I wanted to let you know that there are just a few reknown harp makers in the world and Dusty is probably in the top 5. I am afraid that a relocation will add to an already difficult situation being the already very long delays to get harps from them since COVID. At this date, as a dealer, I already have to wait almost a year to get some harps in my showroom.</p> <p>Relocating will definitely add to the problem to the point where approvisioning will come to an halt. Many schools and students are already impacted with Dusty Strings rental harps because I can't add more of their harps to my rental offer due to delays.</p> <p>I am writing hoping this will help think about the impact of not getting the other option which is the elevated 14th Avenue Option (from Prospect/15th), also known as IBB-1b.</p> <p>I hope this message gets well to you. Thank you,</p> <p>Robert Maison Glissando, Montréal, Qc 450-672-4277</p>	Robert Verreault
04/27/2022	Please do not build through historic areas of Chinatown-International district. Please listen to the community and invest in rerouting. It's not much in relation to the total expense of the project and it's important to the community. Please show respect for CID and re-route the project plans.	Nichole May
04/27/2022	<p>Do NOT route the light rail through the middle of the CID. Keep it to 4th ave only.</p> <p>Cutting through a historically POC community is a form of systemic and structural racism. POC in Seattle have been consistently displaced and pushed out of the city since its inception.</p> <p>The CID is important to the vast Asian and Asian-American populations in the area, as well as the general population. It is disappointing in this day and age that such a "progressive" city would choose to hurt marginalized communities in this manner, but it is not surprising given the city's racist past of segregation and redlining.</p>	Tessa Achevarra

04/27/2022	<p>I am writing about the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals. Thank you.</p>	megan Holmes
04/27/2022	<p>Please do not use the Genesee for the light rail route. It will be very disruptive to the surrounding neighborhood. There is a community center, a very active park, and active bus stops nearby. A light rail would take away from the community feel in this area. It would start to have a more urban feel and create noise pollution.</p> <p>People love West Seattle because it still has a neighborhood and family safe area. A light rail would drastically change the atmosphere and the safety of the families. Countless people walk up the Genesee hill to exercise, walk their dogs, and get to local stores. Why would anyone want to walk underneath a light rail station? Families don't want to raise their kids near a light station. You will see families move out of the area if you build the light rail station on Genesee. I can guarantee that. The question is what kind of culture do you want to create in West Seattle?</p>	Christina Ramos
04/27/2022	<p>I live in Fairmont Park and would be negatively affected by the above ground link extension. I highly support the underground option or the gondola/skylink. Concerns are noise, impact on houses/neighborhood, social impact, property values, and the overall eyesore it would be to a now beautiful quiet Seattle neighborhood.</p>	Lauren Schlosser
04/27/2022	<p>Please, just build this thing. Please ignore the "gondola" people.</p> <p>I live just a couple of blocks from Alaska Junction. I would prefer tunneling options to reduce area noise in the long run. The quiet here is a really important part of the quality of life. I lived next to a highway and a BART station in Oakland CA for 13 years and know how loud above-ground trains can be. I have also spent many long stretches of time in London, and New York, and of course in SF. Buried stations are fine - you just have to keep the escalators and elevators running, please don't repeat the mistakes so many others have made here.</p> <p>But if it takes some above-ground options to get us connected to downtown by rail, with infrastructure set up to get rail further south in the next expansion, by all means do it.</p> <p>If there's any way to take out that whole golf course, just do it. Waste of water, full of lawn chemicals, accessible only by the upper middle class and richer. Better to take that than housing. Put a station on top of it and call it a day.</p> <p>Please do plan for the future. Including for ever-growing populations over here.</p>	Sheila Addison

04/27/2022	<p>There's a difference between providing public transit stations and trashing a neighborhood for years.</p> <p>We need to preserve and protect the International District. This plan does the opposite of that. Do something better. Start with listening to the people your plan harms.</p>	James Bracher
04/27/2022	<p>Hi.</p> <p>The West Seattle light rail expansion for CID-2a, diagonal, and CID-2b alternative will both displace businesses and have negative health impacts on residents in the CID. The 2a and 2b alternative will require the ventilation to be built where pollution as well as the construction will have negative impacts for CID residents and especially for elder CID residents.</p> <p>The 1a and 1b alternative will not displace as many businesses and pollution will occur in an area where not many residents live, however, many elder residents have voiced not wanting the light rail expansion at all as all alternatives will negatively impact their health in some way and will also disrupt their historic neighborhood that they have been living in for decades.</p> <p>There should be another alternative to expand the light rail to increase public transit accessibility for residents in White Center, Burien, West Seattle and it shouldn't involve any negative disruption to the CID. King County should prioritize the residents of CID first so they are able to stay and their neighborhood is preserved instead of being treated as a neighborhood that is only for transient people and tourists.</p>	Sharon Tsoi
04/27/2022	<p>Hello,</p> <p>In my opinion the LightRail route to West Seattle should go up to the Alaska Junction (alaska and California) and not stop at Fauntleroy. Within a block or two such as the version at 42nd. I would also like to know if it's a possibility to then extend it south down to White Center? That's a higher poverty area where public transportation is needed and it would be great if we could take light rail from there to downtown.</p> <p>Thanks!</p>	Deidre McCormack
04/27/2022	<p>It is about time to inject some of the funding to improve the old and ugly Chinatown into a clean and vibrant neighborhood.</p>	Steve Chinn
04/27/2022	<p>As a lifetime resident, third generation in West Seattle - each and every proposal of the West Seattle light rail has been heartbreaking to see. The potential routing would be incredibly destructive to the landscape of the community. A towering light rail as you enter West Seattle will only be an eye sore in an already over-developed area. I don't believe the final product will be worthwhile or beneficial to the primary issue of commuter traffic. The pandemic has broadly changed how people work as many people are now working from home. Those who don't either drive because they have no other choice because of their route/lifestyle, or take advantage of our bus system, which has been cut due to the pandemic. Bring back the bus system, fix the West Seattle bridge, and reconsider the light rail entirely. The light rail should not enter West Seattle and stop in the junction. Perhaps it stops at Spokane Street under the bridge and ends there. Obtain land on Harbor Island and build a car park for commuters. From there commuters can take advantage of shuttles or buses to the junction/Delridge. Do no destroy West Seattle with the Light Rail.</p>	Marybeth Coghill
04/27/2022	<p>I support the 4th Ave option because it is morally and ethically wrong to demolish existing businesses in which owners' livelihoods are at stake. Chinatown is a historical aspect of the Seattle community that has already taken many impacts in the past. Therefore, the light rail should be built in a more appropriate area that is not already underdeveloped.</p>	Jose Mendez

04/27/2022	<p>Regarding ES.3.1.2.2., I support increased access/accessibility to public transportation- however, not at the expense of the historic neighborhood Chinatown International District (CID).</p> <p>Please consider the 4th Ave options only and take the 5th Ave options off of the table. 4th Shallow (CID-1a) and Deep (CID-1b) will have the least detrimental impact on the neighborhood population + businesses which has suffered immensely from the pandemic, increased living + property costs, and the rise in targeted hate crimes. "Alternative CID-2a and Option CID-2b would have the most business displacements. For Alternative CID-2a, the diagonal station configuration could require additional temporary displacement of some businesses during construction."</p> <p>Development should not come at the cost of CID. The neighborhood has experienced the construction impacts of the Kingdome, then Safeco Field, and CenturyLink Field. The First Hill Streetcar construction impacted the neighborhood for years. Please consider the residents (majority elderly), business owners, and workers who will have to tolerate disruptions for years.</p>	Danielle Dimalanta-Kim
04/27/2022	<p>I implore you to ignore the baying and crying of NIMBYs on both sides of the political spectrum whose "feedback" causes much-needed infrastructure to languish on planning boards for years, leading to projects going ridiculously and needlessly over budget.</p> <p>This expansion of the station, making it the heart of the Sound's entire transit network, will likely make it the most important transit stop in the entire state. Any temporary disruptions caused by construction to local businesses are a small price to pay for getting this right, as we will be stuck with whatever the final layout ends up being for decades, if not longer.</p> <p>The central placement of the station, its accessibility to people of all levels of ability, and its ability to provide fast, frequent, reliable service far exceed any other matters in importance.</p> <p>Link Light Rail is one of the best things ever to happen to this city. I use it almost every day and my job would literally not be possible without it.</p>	Mark Onnen
04/27/2022	<p>I implore you to choose the 4th Ave option to have the smallest impact on the C-ID neighborhood & businesses. I've seen the suffering caused by the pandemic and increase in property and hate crime. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the C-ID do not need the extra burden construction will cause. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.</p>	Miriam Cortes
04/27/2022	<p>Please don't negatively impact the international district by putting the station on 5th avenue. Construction is going to impact not only the businesses that have to close on that street but also the neighboring businesses that have less customers because of accessibility. Thank you</p>	Marielle Manila
04/27/2022	<p>The DEIS relies on limited information for evaluation due to inequitable practices in the preservation field. Pandemic has changed impact to the Chinatown community. Section 5.2.2 needs to go further acknowledging the context of race-based exclusion which has lead to abandonment of upper story hotels and apartments. Also, there are impacts from prior public infrastructure projects that have cut the neighborhood in half. Section 5.4.5.1 recounts past development and policies that have caused displacement, it fails to quantify the losses and ongoing impacts.</p>	Rebecca Chan
04/27/2022	<p>On the topic of the 'West Seattle Junction Segment Alternatives, West Seattle Link Extension' (ES-22) I would like to comment in favor of any of the tunnel-based options, but specifically 'Medium Tunnel 41st Avenue Station (WSJ-5)*.' WSJ-5 would place the Junction station close enough to the Alaska Junction without having to remove a significant amount of our residential and business neighbors around 41st and/or 42nd, who, if removed, would likely have to move out of the area entirely because of the increasing costs of housing and rent in the neighborhood.</p>	Nicholas Haskell

04/27/2022	<p>This comment is on the topic of the West Seattle Junction Segment Alternatives, for the West Seattle Link Extension. I am in favor of any of the tunnel-based options, but specifically the "Medium Tunnel 41st Avenue Station Alternative (WSJ-5)" for the proposed West Seattle Junction LightRail segment.</p> <p>A tunnel option (vs elevated train) for the West Seattle segment of the LightRail would be highly preferable because it would:</p> <p>Have less operational noise and vibration. Displace fewer residential homes and businesses. Have a smaller social impact on the integrity of the neighborhood.</p>	Lauren Fox
04/27/2022	<p>Please consider proceeding with the 4th ave focused options for expanding the current CID station. The community, traffic, health and quality of life impacts for the CID community would be optimal with this direction.</p> <p>Your fifth ave proposal would consume more space already impacted neighborhood, put unnecessary stress on traffic in the neighborhood.</p> <p>Please pursue the 4th ave options!</p> <p>Thank you!</p>	Geoff Henkel
04/27/2022	<p>Please use the 4th avenue proposal to minimize the economic impact to businesses in CID !</p>	Julio M
04/27/2022	<p>Please move forward with the 4th Avenue option for the station in the CID. This historic community deserves to be centered in this decision, not displaced.</p>	Laura Lehni
04/27/2022	<p>Please consult with the International District community!! New entrances to the ID light rail station should be located on 4th Avenue and must minimize disruption to existing businesses! The Wing Luke Museum, where I am a member, has analyzed the proposals and is willing to work with planners to benefit the International District, improving regional transit and mitigating negative effects of construction. PLEASE do the right thing and consult with impacted neighbors!</p>	Robin Rowedder
04/27/2022	<p>Hi! I really don't like 1b and 2b - I'd love to have a closer to the surface stairs-accessible station. I hope you'll be able to build this without shutting down a street for super long, but balancing depth and disruption.</p> <p>I like 1a and 2a best (and in that order) - keep it closer to the surface, stairs accessible, and all that.</p>	Ian Gallmeister
04/27/2022	<p>Proposal CID-1b is my vote. I recognize the need for the project, but the CID businesses have suffered so much already, even before the pandemic, and impacting them this way in the originally proposed numbers would destroy this cultural hub forever.</p>	Caroline Millet
04/27/2022	<p>I would like Sound Transit to consider changing their plans for the demolition of businesses in the International District in order to make room for their projects. This is not what the surrounding community, the people impacted by this decision, want, and it is not what I want.</p>	Ave Dimond
04/27/2022	<p>The Chinatown International District has historically and disproportionately been the site for construction and demolition. These projects, including the construction of the Kingdome and 1-5 have displaced the community, historic sites, and small businesses, as well as made the CID a less safe and healthy place to live. This plan will, just like all the plans before it, displace Asian families and businesses, and must not be approved. It would be blatantly racist to continue to ignore the needs of a marginalized community. Now is your chance to do the right thing. The wrong (and racist) choice has been made time and time again. You have a chance to listen to the community and to respect them. Do not allow the new Link to be built on 5th Avenue.</p>	Noelani Stewart

04/27/2022	I am concerned for the potential construction of a new Sound Transit train station in the CID would be detrimental to community. The construction of a station on 5th ave will destroy many small businesses, and the overall impact of construction conditions will disrupt and degrade the well-being of CID. The damage to the culture and community of CID that will result from the construction of a station here will be irreversible.	Evelyn Watson
04/27/2022	Please choose the 4th avenue option, as it will mainly disrupt already idle space, versus the 5th avenue options which would both be cruelly detrimental to the Chinese/International District. Public transit is important, and means a lot to me. But what makes it so special is when it is community driven. Public transit and its necessary construction should not threaten the lives of anyone in the community, let alone an extremely marginalized and abused community. I am begging you to do the right thing and work with the community, not against the community.	Jane Doe
04/27/2022	Please DO NOT build through 5th ave. If you're given the option to build a route through where transit already goes vs a neighborhood where you'll be displacing 19 small businesses and disrupting an entire community that's already been negatively impacted during this pandemic, why would you even think that was a viable option? Build on 4th and let the CID continue to work on rebuilding and strengthening its community & neighborhood.	Loufel Velasco
04/27/2022	I am very concerned about this proposal and how it will impact the CID community — their businesses will experience extreme loss of revenue due to construction. They'll also suffer air and sound pollution.	Hannah Sowle
04/27/2022	Please do not erase historical and cultural buildings/projects/monuments!	C Le
04/27/2022	Hello, As a user and supporter of public transportation I'm usually always very supportive of development to this end. However extending into international district/chinatown and impacts a specific people to the benefit of another. I'm going to speak plainly. This will impact lower and kiddle class Asians to the benefit of upper class Caucasians. Chinatown is historic, this type of development wholesales that history for the convenience of the wealthy.	Davis Tran
04/27/2022	Also, please have the air around these buildings to be safe for those living there and the environment.	C Le
04/27/2022	AVOID FIFTH AVENUE AT ALL COSTS	Collin Jurenka
04/27/2022	Please move forward with 4th avenue for the light rail expansion in the Chinatown/International District. There are small businesses on 5th Ave that are crucial to the community and would be displaced.	Audrey Kelly
04/27/2022	I feel none of the proposed solutions are preferable, but strongly oppose the 5th Ave option.	Allie Burns
04/27/2022	The Ballard downtown core is approximately 5 blocks west of the closest station alternative noted in the EIS. This seems both befuddling and quite concerning because it could have serious negative effects on the downtown core. Also it does not seem to serve the needs of the ridership who live, work, shop, dine, and seek services in the core. I ask that you reopen the study of the Ballard station placement, the Ballard/Thorndyke Portal, and remedy this significant mistake.	Retired Rep. Mary Lou Dickerson
04/27/2022	I think many people are in support of greater access to public transportation, but it should not be done so at the expense of the residents and businesses of the chinatown-international district. I ask that sound transit move forward with the project on 4th Ave to have the smallest impact on the neighborhood. The option of 4th Ave impacts parking and empty lots while the 5th Ave project would require the demolition and displacement of businesses that are of great importance to the C-ID. Coming after a rise in asian hate crimes and property destruction, moving forward on 5th Ave shows me that sound transit doesn't care about the Asian community and small businesses of a neighborhood that has already been routinely disrupted. If displaced many of these businesses and in turn people's lives will suffer and be unable to repair after years and years of construction. Choosing the 4th Ave option is the obvious answer in order to have the smallest impact on the C-ID and the people who live, work, and spend time there.	Katherine Thorne

04/27/2022	I disagree with the extension of the Link on 5th Avenue in Chinatown/International District as this will displace and cause safety/health hazards to Asian families and small businesses in an area that has been historically marginalized. Members of Seattle's Asian community have been displaced and uprooted many times before due to previous construction projects, I urge you to not let this be another instance of marginalization.	Hannah Gallagher
04/27/2022	These plans will greatly impact residents, small businesses, workers, tourists, and guest in the CID. This neighborhood has experienced significant construction impacts of the Kingdome, Safeco, Centurylink, the Seattle waterfront and demolition of the viaduct. Over and over, the government has neglected the needs and cultural identity of the CID.	Lauren Sewell
04/27/2022	4th Ave option please for the CID light rail station. As a child of Seattle as well as current resident of Central district...As a child of a civil engineer who designed numerous Greater Seattle area streets and sat through long monologues pertaining to traffic flow and street design at many dinners...after reading through all the information you have provided, the 4th Ave option is best for both The growth and accessibility of our city and county, and the preservation of the culture of the CID neighborhood.	Tripat Singh
04/27/2022	Hi and thanks for your time! As a longtime resident of Seattle, I have seen how long-term construction projects can permanently change the landscape of the community where construction is happening (Seattle waterfront, west Seattle, SLU to name a few). I fear for the health of the International District in the face of any option that isn't 4th Avenue. This community has been disproportionately affected since 2020 due to the pandemic and the blatant racism they faced in the wake of the pandemic. A long-term construction project on and around 5th Ave would negatively affect the residents and businesses. We must do everything with can as a city to protect and uplift that neighborhood, as it's such an important part of our city. I urge you to choose to use 4th Avenue for these new hubs as that street is already serving a transit purpose. Thank you for your time and consideration. This decision is not just about transit - it's a decision on how to support the people living in the area.	Denver Bingham
04/27/2022	Opt for the 4th Ave station as it displaces less business and better preserves the community. The ramifications of the 5th Ave diagonal station are too high and would cost the community a great deal of money, far less worth that station. Thank you!	Eric Underwood
04/27/2022	I recommend the No Build Solution. With 680,000 tons of carbon to build it would take 100 years to offset! All this while disturbing the aesthetics of West Seattle neighborhoods and inviting crime and homelessness under the elevated tracks.	Linda Braddock
04/27/2022	I am in support of options CID-1a & CID-1b. It is unethical to displace so many businesses.	Aiyana Inatsu
04/27/2022	This will be a huge disruption to the community that relies on the international district. I am fully against compromising a community that will be severely impacted by this decision. There needs to be another way and option.	Christine Kim
04/27/2022	I am writing to comment against the 5th avenue options for the new light rail station. Chinatown residents have a strong case that 5th Avenue would be devastating to the neighborhood, and the result would only be marginally beneficial for a neighborhood that already has excellent transit access. Additionally, all of the options displace and disrupt a community historically less equitable than virtually all other in the Seattle area. What is Sound Transit's plan to aid and support residents and businesses which will be disrupted/displaced? What kind of noise pollution are these businesses and residents facing that will last 10 years? We urge you to come up with more creative solutions, but the best of those options would be the deep station on 4th.	Debbie Vapheas

04/27/2022	<p>Hello. I wanted to speak up on behalf of Dusty Strings, which is located in the way of the upcoming light rail plans in the Interbay area. Full disclosure, I am employed by Dusty Strings as of last month. Regardless, I am very much writing for my own reasons, and everything I have to say is from my own experience.</p> <p>I would suggest paying a visit to the Dusty Strings harp factory. As a musician myself, it is an extremely impressive operation. It has taken decades of improvements to bring the factory to where it is today, and it is a saddening thought to imagine having to move this factory elsewhere. Aside from the monumental amount of work that would obviously require, the disruption it would cause in the factory workflow could honestly damage this Seattle-born company and possibly hurt their standing in the musical instrument world. I'm the new guy there, and this is already one of the best businesses I've ever worked for. The company prides itself on sourcing materials locally as often as possible, and many of these in-town relationships reach back many years.</p> <p>I've seen the proposal that our CEO, Ray, has suggested (in which the train follows the street rather than carving a path through our factory). As a Seattle resident who feels lucky in having just landed a great job with an amazing company, I humbly ask that you please reconsider the path that would force the Dusty Strings factory to be destroyed.</p> <p>Thanks for the room to speak. Take care,</p> <p>Brian Hunt</p>	Brian Hunt
04/27/2022	<p>While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the C-ID do not need the extra burden construction will cause. Choosing the 4th Ave option will have the least detrimental impact of the neighborhood.</p>	Claire Penney

04/27/2022	<p>Our house is 4115 32nd Ave. SW. 98126 We strongly support choosing the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b).</p> <p>We strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5), both of which would result in significant displacement and environmental impacts in the Yancy/Avalon/32nd Ave corridor. Particular concerns with the "Medium Tunnel" alternatives include:</p> <ul style="list-style-type: none"> (1) displacement of Transitional Resources on Avalon Way; (2) more housing displacements on and adjacent to 32nd Ave SW than preferred alternatives; (3) accessibility of remaining residences given alignment of guideway near the corner of 32nd Ave SW and SW Andover St; (4) construction impacts from excavation of retained cut; and (5) operational visual/noise impacts to remaining residences along 32nd Ave SW, SW Andover St, and SW Genesee St. (6) mitigation of construction and noise impacts for the residents of 32nd Ave. SW. and Fautleroy Way, SW. will require expensive concrete barriers for noise mitigation from the onset of the project and also to protect the residential neighborhoods from the train noise ongoing. <p>Re: Avalon Station</p> <p>Further, we suggest the removal of the Avalon station as it combines a high foot/bike/transit traffic location with the entrance to the West Seattle Bridge making it dangerous for people coming to and from such a station.</p> <p>Additionally, the Avalon station will further add traffic and parking impacts to our Avalon neighborhood, already inundated with a lack of parking, resulting in crosswalks being blocked by vehicles, making pedestrians less visible and at elevated risk with crossing the street. Adding 1200 daily boardings to the Avalon station will further put families and their children at increased risk in our Avalon neighborhood.</p> <p>I have personally almost been hit 12 times crossing at the crosswalks on Genesee/32nd between Fautleroy/32nd Ave. SW. Adding 1200 daily boardings will add an undetermined increased amount of cars driving to the area in a hurry to make sure somebody catches the train.</p> <p>Sincerely, Paul Haury and Alizah Olivas, 4115 32nd Ave. SW. 98126</p>	Paul Haury
04/27/2022	I do not support this expansion because of how it will displace Asian families in the international district and disrupt the environment.	Adam Amster
04/27/2022	The 5th Ave S option for a new train station in the Chinatown International District will displace many small businesses, require years of street closures, detours, construction and loud machinery in the CID and destroy many important cultural and community gathering spaces. Businesses that aren't displaced will lose significant revenue and CID residents will bear the brunt of poor air and sound quality. Of the options proposed in the CID, 5th Ave S would add to a long history of government infrastructure projects shaping the neighborhood with significant cost to CID residents, businesses and cultural identity.	Nicole DiMichele
04/27/2022	I believe we need more transit, but not at the cost of the international district local business. Closure up to 11 years would drive these business without business after the initial insult of the pandemic and the persistent insults of increased crime. Of note, poor air quality and loud construction would negatively impact the residents of the area. My comment is to use the alternative route on 4th Ave.	Emily Nguyen
04/27/2022	My strong preference is that alternatives CID 1a and 1b be prioritized for the Chinatown/International District station. I am a seven year resident of Pioneer Square, regular Link rider, and frequent visitor to the International District. The ID is home to many historic restaurants and businesses that contribute to the unique and diverse character of Seattle and I am concerned that alternatives CID 2a and 2b will cause irreversible damage to the neighborhood due to the outsized impact on existing businesses compared to other alternatives. In my view alternatives CID 1a and 1b do the best job of balancing the transit needs of the city overall while preserving the integrity of a neighborhood that was standing long before the light rail expansion was conceived.	Amy Ryan

04/27/2022	<p>Concerning the Chinatown-International development, as a Seattle native and one who has grown up in the CID area with ties to Little Saigon, I would like the least amount of disruption to businesses and places of residency.</p> <p>This is why I'd choose the 4th DEEP station option.</p>	Dani Tran
04/27/2022	<p>Tunneling is preferable, especially when the cost advantages of elevated and surface alternatives have evaporated. Only tunneling will allow BNMIC and its industrial users to survive and flourish.</p>	Kirk Robbins
04/27/2022	<p>Please don't bulldoze, demolish and destroy Chinatown / International District. There is significant history in that neighborhood of great importance to Seattle. There are also many thriving businesses which would be displaced. This is a real living, vital, multi-generational neighborhood which has a strong community!</p>	C M Steen
04/27/2022	<p>Dear Sound Transit Board of Directors,</p> <p>As a Seattle resident and member of the community, please consider going forward with 4th Avenue segment alternative CID-1b. After reviewing the Draft EIS for the Chinatown-International District Segments (Table ES-5) it is evident how each option varies with their pro and cons and any of the options will negatively impact communities whether that be by costs or inconvenience. Out of all the options, the CID-1b alternative seems the most ideal having the least impact on the CID neighborhood vs any of the 5th Ave alternatives which would displace far more businesses, their employees and patrons. The Chinatown-International District has faced construction projects time and time again at the cost of the community while diminishing cultural significance. Please take into consideration this feedback and proceed forward with the 4th Ave alternative.</p> <p>Thank you for your time and consideration.</p> <p>Sincerely, Megan D.</p>	Megan DeMorse
04/27/2022	<p>Please do not choose an option that requires Alki Beach Academy to move or close. It serves a crucial role in the West Seattle community and really shines as a safe and loving school for our small children.</p>	Kelsey Mangan
04/27/2022	<p>Eliminate the Avalon station please. Unnecessary expense. Use the money to build underground.</p>	Ryan Schmies
04/27/2022	<p>If you put in a light rail station at 5th Ave S, you will be displacing 19 small businesses. Instead, you should use the 4th Ave S location. Listen to the community you will be disrupting. Their voices are important and matter.</p>	Hannah Narramore
04/27/2022	<p>I support increased access to public transportation, but the 4th Ave option for the station is too disruptive to a community that has historically been marginalized anyway. 5th Ave options are better and less disruptive. The Seattle community stands with 4th Ave and petitions for an alternative and less disruptive option. Thank you.</p>	Chloe Dahleen
04/27/2022	<p>My previous comment mixed up the options. The 5th Avenue option is more destructive, and 4th Ave should be chosen. Thank you.</p>	Chloe Dahleen
04/27/2022	<p>I am commenting on the Chinatown-International District portion of the Ballard link extension. I strongly prefer the 4th Avenue alternatives and prefer the 4th Avenue Shallow Alternative (CID-1a) alignment. Please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than 4.5 minutes.</p> <p>Please prioritize reducing displacement of businesses in the CID historic core -- less than 5 -- and provide any displaced businesses with generous relocation assistance. Please prioritize mitigation of construction impacts on residents and neighborhood landmarks. 5th Avenue alternatives have unacceptable impacts on the historic core of the CID and would result in inequitable displacement of a neighborhood and communities that continue to fight for their very survival in our city.</p> <p>Regarding the rest of Ballard link and West Seattle link, I support the priorities and alternatives preferred by The Urbanist.</p>	Rebecca Lavigne

04/27/2022	Please reconsider the new station plans for the C-ID. The businesses on 5th Ave and the surrounding areas would suffer immensely from these plans if construction/closures last 10+ years as proposed. I am a born and raised Seattle native and the International District is a neighborhood with such significance to the city, tourists, and most importantly the asian community. I urge you to consider alternate routes/options. Thank you.	Katelyn Saechao
04/27/2022	I am in favor of moving forward with the light rail expansion on 4th. This does not disrupt the neighborhood core as intensively. The 5th ave proposals will permanently change the National Register Seattle Chinatown Historic District in a way that the 4th ave solutions will not. This neighborhood has already seen and endured so much in the name of transportation development. Please listen to CID residents and small business owners and do right by this treasured and diverse community.	Hannah Rosentreter
04/27/2022	I do not understand why you guys would want to build a new transit station in the CID when there is already one? As a small business owner in CID, it would not only hurt the businesses, with the decisions that you are implementing will cause some to even lose their business. Before making this decision, why don't instead you guys provide a grant support for all of us since you have too much money?	Joanne Lam
04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate. This is a much needed resource for the local community.</p> <p>Thank you for your time and attention to this issue.</p>	Jane Luterek
04/27/2022	I writing to comment against the 5th avenue options for the new light rail station. This will clearly disrupt and displace a community far more than the 4th avenue options. Will Seattle Transit do anything to aid residents and business that will be displaced during and after construction? Also, It would be very irresponsible of Seattle to cut into a community that is already less equitable than others.	David Burns
04/27/2022	Please consider laying tracks under 4th Avenue to avoid taking land from the Chinatown Historic District.	Leanne Greer

04/27/2022	<p>Please, please, please go with Option 4.</p> <p>Underground stations that don't have actual stairs as a backup for when escalators/elevators (inevitably) fail or there's an actual emergency are both infuriating and dangerous. This happened at the Husky Stadium station a few years ago and the anger/disbelief was palpable; there was practically a riot. How had nobody planned for a simple mechanical failure that could block everybody from using the station? If the escalator was broken, why couldn't we just use it as stairs, at our own risk, as they do in other cities? Wasn't this supposed to be a fancy, brand-new transit system? People were berating the poor employees who were posted there just to turn them away, it was awful. I was lucky enough to be able to cross the street and take a bus that got me to my destination on Cap Hill in 35 min; others didn't have that option and spent hours standing in an epic line, getting nowhere, even though the rail was running right underneath their feet. I'll admit I even currently avoid the Beacon Hill station for this reason, as well--it just doesn't feel safe to not even have an escalator.</p> <p>Additionally, Option 4's shorter underground walkways would also be/feel much safer, requiring fewer patrols of safety officers, etc. Keeping both rail stations as close together as possible just makes more sense.</p> <p>I say this even as an occasional customer of Joe's Bar and Grill, which is truly an iconic neighborhood institution in a rapidly gentrifying city that's shuttering too many of its historic dive bars. Please give the displaced businesses the money they need to find new space nearby. Maybe enough so Joe's could move into the J&M Cafe's old space...or anything other than just closing up shop for good.</p> <p>Thanks very much for your careful consideration.</p>	K P
04/27/2022	<p>Directors:</p> <p>I worked in the ID-CT area for 12 years from 2007-2020. I have a history of how decisions have been made concerning transportation issues in this neighborhood. Transportation issues have never been made with the community in mind or brought to the community with transparency. Decisions have been made first and the community told later and then mitigation 1. shutting down the parking (over 200 spaces) under the freeway to house equipment for the I-90 repair project 2. impacts from the light rail tunnel project 3. decision on the location of the street car maintenance barn 4. moving the maintenance barn from Pier 70 area to the Charles St. facility 5. and now the light rail hub 4th Ave vs 5th Ave. The full project for the light rail hub has not been fully detailed or what the full impacts will be on the businesses and those living in the area, just generalities and promises everything will be taken into account. I am already suspicious a decision has been made. I think the city and board have decided the 5th Ave proposal is the best decision to lessen the impact of traffic going into the downtown city core and this is more important than the survival of the ID-CT neighborhood which has been part of Seattle since the 1880's. Like past decisions, why protect a neighborhood that has a low income, less voters, less lobbying power, a haven of crime and homelessness, etc. I hope this is not the case but if the 5th Ave site is adopted, it means that the ID-CT neighborhood will not survive and become just a memory in the history books. Any prolonged closure of the streets and avenues in this area will destroy this fragile community. Just look at Portland's CT as an example or what happened to SF's chinatown when they shut down the only ramp leading into the neighborhood after the 1989 earthquake.</p>	John Hom

04/27/2022	<p>As a resident of Phinney Ridge, I visit Ballard several times weekly. I know the streets well and the best route for the light rail should be WEST of 15th Ave NW. The majority of Ballard businesses are west of 15th and Swedish Hospital is also west of 15th. There should be a station as close to Market Street as possible, probably near 16th or 17th NW.</p> <p>The route should be via tunnel, under the Ship Canal. I imagine it will be more expensive to build, but will disrupt streets in Ballard less during construction and it won't impede ship traffic in the canal or be impeded by draw bridge openings for ships to pass.</p> <p>Sincerely, Thomas Booze RN</p>	Thomas Booze
04/27/2022	<p>The CID has already been divided by major transit construction. Why does the new train tunnel also have to come through? I prefer 4th Ave options, CID-1a and CID-1b, because they will be the least disruptive options to the businesses and culture of the neighborhood.</p>	Nancy Mariano
04/27/2022	<p>I'm here to write against the options for the light rail station on 5th Avenue. Any option for a station on 5th Avenue would be devastating to CID—something that is all too common to a community that has been displaced numerous times and stripped of their livelihoods. Any option of the light rail taking place on 5th Avenue would just continue this cycle of violence against the International District community. Is there any plan by Sound Transit to support the many residents in this area that would be displaced, businesses disrupted or residents disturbed by construction nuisance for the next 10+ years? In conclusion, the deep station on 4th is the best of the available options, but I urge you to come up with more creative solutions that don't uproot peoples' livelihoods.</p>	Michael Hoffman
04/27/2022	<p>4th Avenue!!! Do not disturb the Chinatown-International District on 5th!! Home to hundreds of families and local histories of Seattle's Asian and migrant populations.</p>	Emily Uechi
04/27/2022	<p>It will be not smart to build the new station along 5th Ave in the China international district. It will affect lots of jobs and business. As someone who visits the CID frequently it's been a juggle to learn the new traffic patterns to get through the neighborhood. Thanks for reading.</p>	Irene I

04/27/2022	<p>To whom it may concern,</p> <p>My name is Seumas Gagne and I am a professional harp performer and teacher born and raised in Seattle. I have been playing the harp since 1981, when Dusty Strings had only been in business for three years. As my own education, then career progressed I had the opportunity to play harps made by nearly every manufacturer and none surpass Dusty Strings instruments.</p> <p>Everywhere I go in the US, Canada, and the UK to teach and perform harp players all know where Seattle is, even if they aren't sure about the difference between Washington State and Washington DC and that is because of the unique contribution that Dusty Strings makes to the stature of our city.</p> <p>Sound Transit has tough choices to make. As currently proposed, the only route that would not force Dusty Strings to move is the Elevated 14th Avenue Option (from Prospect/15th), also known as IBB-1b. Other routes could possibly be adjusted in order to spare our building and five other buildings, and follow a public street instead.</p> <p>If they are forced to relocate, it could be very difficult to find another space within Seattle that will meet their needs as a unique manufacturer and small business. Their custom-designed building and owner-occupied model have made it possible to stay in Seattle as the costs of operating in Seattle have driven other manufacturers out of the city. Having to move outside of Seattle would certainly mean a major disruption to their instrument-building operations. It could also mean losing 20 to 30 years of instrument building expertise if their longtime employees are forced to leave their chosen careers in order to stay close to their families in Seattle.</p> <p>Thank you for considering how this decision will potentially impact this business that supplies highly sought after musical instruments to the world. Thank you for considering their employees and the potential loss of a unique skills that the employees possess.</p> <p>Sincerely, Seumas Gagne www.seumasgagne.com</p>	Seumas Gagne
04/27/2022	<p>While I am extremely supportive of building the Ballard and West Seattle links, I would like to express my support for the SIB-3 South Interbay Segment Alternative. The tunnel exit at the dead end of West Republican Street will disrupt a quiet, residential street. As one of the many residents of the dense condo buildings that occupy the dead end of W Republican Street, I appreciate that one of the assets of Seattle are the proximity of residential to urban environments. This dead end is a perfect little refuge from and yet only blocks away from the center of Uptown. It's buildings like mine keep this neighborhood vibrant! I ask you to protect the green and residential spaces that abut Elliott south of Mercer St. Tunnel under W Mercer Street and exit to the elevated rail on the other side of Kinnear Park. This will create less long term impacts on quiet residential buildings, the trees, water views and lack of passing trains we now enjoy.</p>	Natasha Rodgers

04/27/2022	<p>The building of ST3 is a once in a generation opportunity. We have to get it right and getting it right means building a transit system which is optimized for transit. Transfer times between lines, station entrances, and other modes of transit should be minimized. Trains should not be routinely stopped by anything other than a station. Stations should be built where people are, or there needs to be concrete plans for up-zoning the land around them. Lines should be set up for expansion.</p> <p>All of this specifically means: Building a truly shallow station in the CID Not building a moving bridge to Ballard Building the Ballard station on the west side of 15th, or entrances on both sides of 15th Building many reliable, fast, and frequent elevators/escalators, especially at any stations which have to be built deep Leave room for expansion East<->West in North Seattle</p> <p>Construction only lasts a few years, while the lines laid last down can last for 100s of years, but only if they are placed in the right spot. Otherwise we will have wasted all of our time and money for naught.</p>	Matthew Rayermann
04/27/2022	<p>4th SHALLOW or 4th DEEP but no 5th! Do not relocate businesses so vital to the the CID area. What purpose would this serve if the businesses here are displaced for a station that would lose meaning in its name.</p> <p>I do not like the deep option other than the fact that fewer businesses and no homes are displaced.</p> <p>The 4th shallow will take a lot of time but it seems to be the better option in the long run. Please go with 4th shallow with 4th deep second.</p>	Dani Tran
04/27/2022	<p>In general, I implore the decision makers to pick SIB-3 as I live along Elliot Ave W, and will likely either have my home demolished or my property value greatly diminished by the elevated tracks proposed in SIB-1 or SIB-2. My husband and I just spent our life savings to buy into this condo community as our first home.</p> <p>We have incredible beauty in this area and this will really impact many of our lives. It would be incredibly sad to lose the mountain and water views all around. This would be the direct impact of elevated tracks proposed in SIB-1 or SIB-2.</p> <p>Should this be unavoidable, please consider including the purchase of the building. Thank you for taking this comment into consideration and for adding much needed infrastructure into our city.</p>	Faith Nyakundi
04/27/2022	<p>I'd like to recommend that the Sound Transit Board adopt WSJ-5 as its preferred route. That seems to be the winner across the board since it is less expensive and impacts fewer residences.</p> <p>Thank you for your consideration. Rachel Mishra 4426 38th Ave SW</p>	Rachel Mishra
04/27/2022	<p>The C-ID is a unique neighborhood, and uniquely vulnerable. Sound Transit needs to provide greater clarity around how the negative impacts of construction and street closures will be mitigated. Currently the DEIS seems to offer an overly simplistic view of the impact on the residents and businesses of the C-ID, as well as the many visitors and tourists to the area. It is not taking into account the longer term effect of transportation disruptions and business closures on the cohesion of the neighborhood. Public transit is an important service, but too often the costs of providing this public good are shouldered disproportionately by communities of color. In considering the impacts of this expansion, Sound Transit must provide stronger assurances that needs and concerns of the C-ID are being adequately addressed, so that this incredible neighborhood will continue to exist and thrive after the expansion is complete.</p>	Jennifer Sunami

04/27/2022	I believe that for the proposed International District station, the 4th Ave. Shallow Station is the better alternative than the 5th Ave one. The International District is an area known to have a vibrant community and the 5th Ave plan would displace too many local businesses and residences that have a history of being subjected to systemic inequality. The 4th Ave alternative offers less displacement and would be the better option.	Thomas Sugimoto
04/27/2022	<p>Regarding WS Link Extension:</p> <p>Stations:</p> <p>The Avalon station is unneeded. As planned, it is less than 1 mile (.8 mi. from the Junction station and .7 mile from the Delridge station). The area between stations is very walkable with sidewalks and pedestrian amenities.</p> <p>WS Stadium and WS Golf Course are located close to the proposed Avalon station, but the stadium is used minimally by private schools. The golf course and stadium have a large parking lot that serves both facilities.</p> <p>The Delridge station is most functional sited near SW Genessee St. (DEL-1a to 4). DEL-2a and DEL4 are preferred. Locating the station near Youngstown Cultural Center, SW Youth & Family Services, and the Delridge Community Center, Skate Park & Playfield ensures that light rail will serve the community well. These facilities are hubs for the less affluent "east side" of West Seattle, particularly for underserved youth and families. None of these facilities has a large parking lot, so users rely on public transportation. Siting the Delridge station farther north (DEL-5 or -6) would be a blatant disregard of the practical needs of our community.</p> <p>Alignment</p> <p>Based on the need for siting the Delridge station close to community hubs, I firmly support the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b). I strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5).</p>	Marcia Kato
04/27/2022	<p>I voted for Sound Transit 3 and am a passionate believer that bringing light rail to West Seattle, among other neighborhoods, is an important thing to do. I'm also a big believer that creating—and preserving—as much housing as possible is critical for keeping Seattle affordable for all people.</p> <p>For that reason, the tunnel options currently being considered for West Seattle are the only logical choice for light rail, in my view. The destruction of homes necessitated by the elevated options, along with those that would be destroyed by a later extension of elevated light rail southward towards Burien, would be a setback to the lives of West Seattleites and to housing affordability in this city. World class city's like New York and Paris have figured this problem out already: Put the trains underground.</p> <p>Respectfully, Nick Wingfield</p>	Nick Wingfield
04/27/2022	Please don't have the light rail station expansion into Chinatown. This is an historic neighborhood serving primarily Seattle residents of color. The burden of this construction and destruction of our city's history would disproportionately affect Asian Americans. That is not right! Seattle is better than that. Put it on 4th Avenue where it won't affect already disadvantaged communities	Monica Dewald

04/27/2022	<p>The following is in support for selecting the 6th/ Mercer DT-2 and the Prospect Street Station/Central Interbay SIB-3 segments.</p> <p>According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the Prospect Street Station/Central Interbay SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground. This combination of segments should be selected to help maintain our residential communities.</p> <p>According to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP. Therefore, the 6th/Mercer DT-2 should be selected.</p> <p>According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access to the parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. This should be a consideration to proceed with the 6th/Mercer DT-2 option instead.</p>	Rahul Thirumala Kumara

<p>04/27/2022</p>	<p>Dear Reviewer: Attached are my comments on the West Seattle-Ballard Link Extension DEIS. I have provided my comments as a resident of the Mt. Baker neighborhood in Southeast Seattle.</p> <p>Overall Organization Given how this alternative presents two segments opening at least 10 years apart, I believe that the DEIS should be republished into two DEIS documents. The content of many sections already has been divided this way. The choice to combine the details into one large document makes it unwieldy to review and respond. There is nothing inherent in the project that requires that it be one large DEIS.</p> <p>The certification of this DEIS will be particularly cumbersome as a large document. With two DEIS documents, the West Seattle segment could achieve certification with less addenda to address inadequacies in this DEIS version and legal challenges that may result in the overall DEIS. In this way, the West Seattle Link Extension may be able to begin construction sooner.</p> <p>Chapter 1: Purpose and Need Section 1.2.2.2. Downtown Seattle Transit Tunnel Capacity Constraints This section does not present the capacity constraints of the Downtown Seattle Transit Tunnel. Instead, it attributes the addition of a second tunnel to a study not presented in the DEIS. Because the second tunnel is a substantial part of the expense of this project, this assumption needs to be clearly verified. As this is also listed at Need #2 throughout the document, explanation of this need is expected! In this way, I find the current document flawed and incomplete.</p> <p>By using the data found in the supporting documents, it appears that the Downtown Seattle Transit Tunnel is not constrained as stated in the Purpose and Need. One source of the capacity constraints data is found in the Transportation Technical Report Appendix N1. In this report, it presents an overcrowding of rail lines in the current Downtown Seattle Transit Tunnel. However, this overcrowding is presented at an assumption of three minute headways or 20 trains an hour in the peak direction. Sound Transit has indicated on Page 292 that an average of 892 and 865 riders would be on overcrowded trains at these three minute headways. If the headway was reduced to two minutes, those trains would appear to have 595 or 575 average riders per train, leaving 295 to 275 standing riders. If more frequent trains were assumed (2 minutes rather than 3 minutes), the available capacity per train appears to offer 4 square feet per person at the peak hour in the peak direction, meaning that an adequate Level of Service D would be attained if all the trains were in the current Downtown Seattle Transit Tunnel. In other words, there is quantitative evidence in the DEIS that contradicts the stated Purpose and Need #2.</p> <p>Further, the allocation of trains in the peak direction should be balanced. Currently trains are forecast to run to West Seattle every 6 minutes during peak periods, however, the aggregate ridership on the West Seattle segment is not high enough to warrant this frequency. Thus, some trains in the current Downtown Seattle Transit Tunnel should continue to run into Southeast Seattle, as this segment is the most susceptible to overcrowding.</p> <p>Chapter 2: Alternatives Considered The alternatives presented in this DEIS are inadequate and do not cover the range of alternatives anticipated in a DEIS for new rail corridors. In particular, DEIS for new rail transit corridors typically include an examination of different rail technologies. One technology in particular, automated trains such as those planned for the Ontario Line in Toronto, affords a higher level of service frequency than is proposed here as well as would allow for smaller stations to be built along the corridor (resulting in substantial cost saving). To provide this, the corridor operational plan would have to be revised so that the West Seattle-Ballard segments would be served by this line rather than by mixing it with the current 1 Line. Changing to a more frequent, automated rail line would save costs for the system and provide more frequent service for the riders.</p> <p>Another alternative not considered was a different service configuration of the current 1 Line from Southeast Seattle into its current alignment through Downtown to UW and North Seattle. Because of this omission, all alternatives result in significantly longer travel times from Southeast Seattle into Downtown and points along the 1 Line today. This is not only due to the excessive amount of time to complete a transfer required given the vertical distance and horizontal distance between the current station and the proposed new station, but the proposed new stations are substantially deeper so that even most Downtown destinations will take longer to reach in the Build alternatives than in the No Build alternative. As Southeast Seattle contains a large low-income population as well as many residents and businesses of various ethnic groups include East Asians, every current Build alternative would make places in the Chinatown-International District area more difficult and longer to reach than the current line offers today.</p> <p>Another alternative not considered was to operate the Ballard to Downtown segment as a stand-alone automated rail line, with West Seattle and Southeast Seattle lines both using the existing tracks in SODO and through the current Downtown Seattle Transit Tunnel. A line that ends at Westlake would allow for station elevations at Westlake to be shallower, and possibly at the same level as the southbound platform. Finally, there are not alternatives presented at SODO to allow for same-direction cross-platform transfers. Instead, every alternative requires making vertical level changes at this station. Since the vertical elevations are more pronounced at Westlake and Chinatown-International District Stations, the SODO station is the most logical place to provide same direction cross platform transfers between 1 Line and 3 Line. With a</p>	<p>Joseph Story</p>
-------------------	--	---------------------

cross platform transfer, riders must simply go between 20 to 25 feet on the same level (less than 10 seconds), and riders would not have to walk to then queue at escalators, stairs or elevators located at the ends of the platforms. This would reduce the transfer time at SODO from as long as 3 minutes to a less than 10 seconds. This is an appropriate mitigation for the added time required for existing 1 Line riders to have to use new deeper stations in the proposed system presented in every alternative.

A simple refinement of the SODO station layouts and nearby track configurations would enable same direction cross platform transfers. A substantial amount of grade crossings already must be built between the proposed West Seattle branch and the central Operations and Maintenance Facility (OMF). The current track configuration is for tracks to be operated in a northbound-southbound-northbound-southbound pattern. This makes it difficult to provide switching between tracks. If the tracks were configured with the northbound trains on the east and the southbound trains on the west (the tracks headed to Southeast Seattle as the westmost of the four tracks, with a new connection to the existing tracks at the OMF), or the northbound trains at ground level and the southbound trains on an elevated level, track switching will be much easier to accomplish. Switches are particularly important if a train must stop due to a service disruption, meaning that hundreds of riders would need to transfer from one train to another.

At several times in the alternatives development process, I have made both written and verbal comments at public meetings to explain why same-direction cross-platforms are needed at SODO and how it can be accomplished. However, no changes were ever made in the subsequent versions. Now, with the recent revealing of how much longer and more difficult transfers will be at Westlake and International District – Chinatown Stations, I again request that this design refinement be made.

A technical note is that I have not found any explanation of forecasted rail line transfer volumes by direction. Instead, broad references suggest that transfers occur at one of three stations but there is no indication of how many will be transferring from and to which line in which direction. Without these details, it is not known how much importance needs to be placed on making transfers more seamless and on the same level. The aggregate time delay added for Southeast Seattle riders should be documented as a negative impact.

Chapter 6: Alternatives Evaluation

The presented alternatives in the DEIS focus on the construction of the project, but not the operation of the project. By omitting the impacts to the operation of the revised system, it fails to complete a disclosure of all the impacts that will arise from the proposed alternatives.

In particular, the residents of Southeast Seattle are negatively affected by the proposed rerouting of the 1 Line from the current tunnel to the new, much deeper one because of the resulting additional travel time and transfer time. Southeast Seattle is a community of many lower-income individuals and transit-dependent people as well as a number of ethnic groups that will have long transit travel times as a result of this operational change. The report is silent on this negative impact, and this should be mitigated in some way, by either providing cross-platform transfers at SODO and/or interlining some or all of the current trains to and from Southeast Seattle into the existing Downtown Seattle Transit Tunnel. Without analyzing the operational impacts to Southeast Seattle, this DEIS is incomplete in the disclosure of impacts and consideration of these mitigation actions as required by NEPA and FTA.

Need #4 states that the WSBLE project is supposed to improve multi-modal connectivity for transit-dependent residents, low-income people and communities of color. However, accessibility and connectivity in all project alternatives are SIGNIFICANTLY WORSE THAN THE NO-BUILD ALTERNATIVE for these demographic groups that reside or rely on destinations in Southeast Seattle because of the added travel time and effort to use the proposed new stations in the proposed operational configurations. The access times between the street and platform are longer Downtown by at least 2 to 4 more minutes, while the total travel time to reach UW (not only the academic campus but the medical center), Capitol Hill (Seattle Central College) and other points in North Seattle will increase by 5 to 8 minutes using the current transfer-averse station designs. As a trip from Columbia City to Capitol Hill using Line today is 21 minutes and will increase to 26 to 29 minutes, this is a 24 to 38 percent increase in travel time as an example! If the SODO station is redesigned for same-direction cross-platform transfers, this delay could be reduced to only 22 minutes if trains are scheduled to arrive at SODO Station at about the same time, and become a much less significant impact. Similarly, accessing destination from the new Chinatown-International District platforms will add 2 to 4 minutes to every trip once leaving the train.

You may contact me to ask me for clarification on my comments.

Thanks in advance for responding to my comments,

Joseph Story

04/27/2022	While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood. As someone who grew up nearby and frequents the businesses, I have seen the suffering caused by the pandemic and increase in property and hate crime. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the C-ID do not need the extra burden construction will cause. Then the traffic from the detours that could cover for 6+ years? Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.	C Le
04/27/2022	There needs to be a less racist, less gentrifying, less devastating way to build a new station near the CID. this plan is lazy and poorly thought out and clearly shows that ST doesn't care about the community that resides there.	Gina Barnhill
04/27/2022	We much prefer the longer tunnel alternative into the junction to preserve the look and feel of our thriving business community. I also believe we need to keep all three stations to allow access to more citizens.	Sharon Hoover
04/27/2022	Your construction plans are going to ruin a ton of small business owners. Ask if covid xenophobic vandalism wasn't enough... give these people a chance. Route your station elsewhere	Loc Nguyen
04/27/2022	I am asking the city to consider the 4th Avenue construction option over the option on 5th Avenue. While both option will affect local small businesses, choosing 4th Avenue will affect far fewer. It is unfortunate that the city is choosing one of the few neighborhoods in Seattle that has historically been home to people of color to upend and further gut.	Imaan Ramezanzadeh
04/27/2022	This will disrupt and displace the people who call CID home. Do not do this.	Abigail King
04/27/2022	While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood. As someone who lives nearby and frequents the businesses, I have seen the suffering caused by the pandemic and increase in property and hate crime. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the C-ID do not need the extra burden construction will cause. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.	Mari Onoye

04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate. There are very few locations in the area where families can get access for infant care. Through the pandemic mothers have left the workforce in large numbers, in part because of lack of childcare. Please don't make it harder for families by impacting a caring, critical part of our community.</p>	Chloe Wear

Please do not force them to relocate.</p>	Brandon Wear
04/27/2022	<p>Your current plan laid out to put the expansion in the CID is going to have negative impacts before, during and after construction phases. Some buildings would have to be torn down, including many small businesses. Ping's Dumpling house is an institution that my family frequents, they have recently finished a remodel to expand their business. I was born and raised in Seattle, with my elders all working in the International District. We have seen many changes over there decades. I am not opposed to change, however I don't want this change to occur at the expense of small family owned businesses that have worked so hard to maintain their livelihoods and enriched our community. Please look at other options and work with community led organizations such as the Wing Luke Museum and SCIPDA. Thank you for your consideration.</p>	Joselynn Engstrom
04/27/2022	<p>Building this link station is irresponsible and racist. By destroying a poc community for "transportation" is thinly veiled capitalistic racism that purposefully tears apart communities. At least a decade of construction will decimate most of the local businesses in the area and force residents to move away from their support networks and into other housing that they can't afford. Do not build this.</p>	Olivia Anderson
04/27/2022	<p>It is crucial we go with one of the 4th Ave options (CID 1a or 1b) and NOT one of the 5th Ave options (2a and 2b). The 4th ave shallow option is least harmful to the businesses and community members who live and work in the ID. The 4th ave options do not involve demolishing existing businesses and keep construction farther from the core of the neighborhood. I have been coming to the Chinatown International District since I was a child. As an adult, I still visit the ID almost every weekend. This neighborhood is an important cultural center and home to many elders in our community. Demolishing buildings, eliminating family run establishments, and having construction in the heart of the neighborhood (which are part of the 5th ave options) will have horrible impacts. The 5th ave options will negatively affect business, health, and daily life for our community. For these reasons I believe we must go with one of the 4th ave options and NOT the 5th ave ones.</p>	Mara Chang

04/27/2022	The local community of China Town does not want a station. Do not bulldoze a neighborhood of color, displacing many. This station will destroy the livelihoods of mom & pops who will face disruption during construction and being priced out due to gentrification. I urge you to speak to the people who live in the places where stations are being planned. Do not destroy a vibrant community.	Sarah Smith
04/27/2022	Don't build a light rail through CID. It hurts way more folks than it helps.	Emily Cai
04/27/2022	Please do not impede on the businesses around 5th ave in Chinatown! We have been displaced far too many times, with recent development in the little saigon area affecting our communities. 4th Shallow is the only acceptable option.	Tam Tran
04/27/2022	I am writing to comment against the 5th avenue options for the new light rail station. Chinatown residents have a strong case that 5th Avenue would be devastating to the neighborhood, and the result would only be marginally beneficial for a neighborhood that already has excellent transit access. Additionally, all of the options displace and disrupt a community historically less equitable than virtually all other in the seattle area. What is Sound Transit's plan to aid and support residents and businesses which will be disrupted/displaced? What kind of noise pollution are these businesses and residents facing that will last 10 years? We urge you to come up with more creative solutions, but the best of those options would be the deep station on 4th.	Matt Draus
04/27/2022	I strongly urge the Sound Transit Board to choose the 4th avenue alternative for the CID light rail station. While all options would clearly have an economic impact on the area, it seems clear that the 5th avenue alternatives would have lasting and profoundly detrimental impacts on the already vulnerable Seattle CID and AAPI communities. The businesses displaced/impacted are vital and much loved pieces of the neighborhood. The the people of the CID already face enough discrimination, systematic displacement, and economic hardship. Please, do not disrupt and destroy what had been built there by going ahead with either of the 5th avenue alternatives. Thank you.	Hayden Johnson
04/27/2022	We hope that you will reconsider the route of Seattle's proposed light rail project. Dusty Strings Harp and Dulcimer Factory is right in the proposed path and would have to be relocated. This business is an important and innovative party of the international harp community. Dusty Strings Harps are known worldwide for their quality and beauty of sound. They have been in business many years and they help support our harp teaching initiative in Guatemala, called Arpas En Armonia. It would be a disruption to the world harp community to lose this important part of the harp community. I hope you can find another route, which does not impact Dusty Strings Harp Company.	Patrice Fisher
04/27/2022	Page ES 22. I am in favor of either of the the tunnel options for the West Seattle Junction Station, preferably the 41st Avenue option. The Junction is a dense and vibrant area with multiple new apartment buildings as well as multiple former single family lots now with increasing numbers of ADUS and subdivided properties. Yet the area has retained a low rise, welcoming, human scaled environment. A large concrete elevated structure would be a scar running through the neighborhood, destroying the sense of safety and community that walkable streets now provide. In addition, the number of homes, including apartments and less dense housing options would be lost with the teardowns needed for the elevated option. Thank you.	Emily Wingfield
04/27/2022	I will echo the concerns of impacted community members: " "We can't afford to lose any of the remaining buildings and land surrounding the few blocks there," said Jesse Tam, a director at the Greater Seattle Chinese Chamber of Commerce. "We have a vibrant economic community that is servicing hundreds of thousands of consumers and residents in the neighborhood; our space is tight with very limited space to grow or to expand."" Build the station on 4th to limit the impacts to small businesses in the Chinatown International District. Best, Rachel	Rachel Ravitch

04/27/2022	Downright a disgusting abuse of power to build over top of local businesses in Chinatown-International District and further gentrify the area. Just because it's big business does not mean you need to demolish smaller ones to fit your blaring obvious attempt at staying relevant as a tech city. No one needs another "easy access transport" option, especially when the other ones are lacking and/or not finished themselves. Consider the people you're impacting and their livelihoods. Going through with something like this will let us know that Seattle values money and greed, not people.	Delaney Messitt
04/27/2022	Please only expand the ID station to 4th Avenue and NOT 5th, demolishing existing businesses.	Camilla Guevara
04/27/2022	Please proceed with 4th street. The 5th street option will disrupt the beloved CID Seattle knows and loves	Olivia Johnson
04/27/2022	<p>I highly oppose the Link Extension project as it now stands, including all of the alternatives proposed, mainly for its impact on the Chinatown-International District neighborhood. I personally love using public transit and love that our city is proactive about it, however I cannot in good faith support this project when its implementation would mean profoundly negatively impacting the Chinatown-International District community--many of whom are low-income, immigrant elders who are particularly vulnerable.</p> <p>Apart from creating serious permanent disruption by demolishing buildings where people in the CID live and work, the longterm construction will almost certainly cause the closure of many small, family-owned businesses in the vicinity over time. Not to mentioned the polluting effects and decreased air quality that will result from this that will likely affect the children and elders of the community. The idea of essentially bulldozing the CID, a historically-significant, majority Asian-American neighborhood, furthering gentrification and historical and cultural erasure is absolutely unacceptable to me, and I hope Sound Transit will consider other options that will not do this amount of profound harm.</p>	Anna Downing
04/27/2022	Please do not build the light rail with the 5th Avenue option as it will detrimentally impact many businesses and community members in the ID. Please actively consult local neighborhood businesses and members for where the line should be to minimally harm this historical and important community.	Erica Ng
04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Chloe Erwin

04/27/2022	<p>The board needs to reevaluate and recognize the amount cultural and heritage damage that will be done if any of these drafts get put into place. The C-ID area has a rich history of the city not respecting the cultural and heritage meaning that the physical location and all of the store fronts/buildings and PEOPLE that would be harmed in this process.</p> <p>Do not make the mistakes of the past and recognize how this community can lend help and support for new and better ideas, instead of following the colonial path of destruction in order to build something that feeds into the capitalistic cycle of this city.</p>	Kassie Procopio
04/27/2022	<p>Please consider the less invasive ideas proposed by SkyLink. This is a viable option. Possibly in addition to the proposed light rail options. Thank you. Sincerely Danny</p>	Danny Meulbroek
04/27/2022	<p>Please consider moving forward with the CID new station on 4th avenue or elsewhere. Having the new station on 5th would severely impact the neighborhood and continue to negatively affect the minorities and working class individuals in the community. Creating the station on 5th would displace businesses, workers, and meeting places for the Asian American community in Seattle. Please consider moving forward on 4th Ave or elsewhere.</p>	Michelle Taam
04/27/2022	<p>Please do not destroy so much of what makes the ID a wonderful place to bring the light rail into it.</p>	Duncan Starboszko
04/27/2022	<p>Please consider the displacement and impact on the ID with choosing from these different scenario plans. The ID is a home to the AAPI community. It is our sanctuary (as well as anyone who loves boba or dim sum). Jokes aside, the pandemic has made it hard for our AAPI community. It's hard to feel safe in a place that historically AAPI ancestors made for their own protection. Many of us have worked hard to create the ID and nourish it so that it has that energy to fuel our community and extend to other communities. With the proposed new link and the ensuing construction, this disrupts 1) access to spaces and restaurants, 2) AAPI owned businesses, and 3) ability for community to gather. Choosing the 4th Ave Alternative seems like the least impact on the main arterial street to the ID. Please choose and plan for the least impact. Thank you.</p>	Vic Ly
04/27/2022	<p>The following is support for selecting the 6th/ Mercer DT-2 and the Prospect Street Station/Central Interbay SIB-3 segments.</p> <p>According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the Prospect Street Station/Central Interbay SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground. This combination of segments should be selected to help maintain our residential communities.</p> <p>According to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP. Therefore, the 6th/Mercer DT-2 should be selected.</p> <p>According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access to the parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. This should be a consideration to proceed with the 6th/Mercer DT-2 option instead.</p>	Ethan Piraino
04/27/2022	<p>Hello, I would just like to comment on the current plans for expanding to the CID station and how it will impact the community, the residents, small businesses and the overall well-being of the CID. The options on the 5th Ave S will displace a lot of folks from the community and cause strain to the quality of living in the area which is already struggling. I urge you to please consider a different route that doesn't put communities, especially minority communities, at risk for the sake of better public transportation.</p>	Mia A
04/27/2022	<p>I've never been to a neighborhood so disrupted by gentrification and yet so bonded in their spirit of community. The attempt to shut down part of it, force people out of a building they're using regularly, and thrust mom and pop business into a tough financial time is a racist attempt, based on the idea that these inter generational culture and history are not worth keeping when the new advancement is on the horizon. For immigrants, a home is not just a home. It is their identity. It's their success story. What make you think that the city has a right to disrupt that for convenience?</p>	Purim Junkham
04/27/2022	<p>While adding to the link light rail is important, I ask you consider how a many year project will impact the communities in the CD and international districts. Our senior citizen who are an important part of the community and who's lives revolv around being able to travel by light rail will be negatively impacted by this decision. Please reconsider.</p>	yamileth diaz

04/27/2022	I believe that Tunnel 41st would be the best option for the West Seattle Lightrail. It has a lower impact on homes and businesses, tunneled trains are far less of an eyesore on the neighborhood and they create less noise pollution. If we take a long-term perspective on this line, we can likely expect it to be extended beyond the Alaska Junction and I personally do not want elevated trains all over West Seattle.	Dan Engel
04/27/2022	While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave option as it will have the smallest impact on the neighborhood. As a Seattle resident and frequent patron of the area, I've seen firsthand the suffering caused by the pandemic and the increase in property and hate crimes. Some of these businesses would not survive the disruptions to benefit from the project if the 5th Ave option is chosen. The C-ID community does not need the extra burden on top of everything it has already faced. Choosing the 4th Ave option is clearly the better choice for the neighborhood and for the city of Seattle.	Alyson Doyle
04/27/2022	The proposed stop in CID on 5th is not acceptable. It will impact the community greatly that has been impacted so much recently with institutional racism. Shutting down these businesses will be a big hit and creating disruptions to this area.	Jimmy Craig
04/27/2022	I have lived near and around the international district my 15 years living in Seattle. It is an area that is part of what makes Seattle, Seattle by embracing culture and valuing a diversity of people. This historical and essential area for many is not for the taking or destroying. I urge you to listen to the community that lives, works, shops in that area and do NOT proceed with any of the options listed. Any of them will be too great an impact to an area that has suffered much during the pandemic and yet continues to evolve. There will be nowhere to visit on the light rail if this goes forward in its current condition. Thank you for your consideration and efforts to go back and try again for the sake of community.	Kelly Brunson
04/27/2022	Im not for building the train through CID	Hannah Nguyen
04/27/2022	The 5th Ave option will detrimentally impact the surrounding area. The city has forgotten about the ID and Asian population by under resourcing and under-reacting to Asian violence and the demands of local Asian businesses. What are we afraid of by going with the 4th Ave. option? Impacting the Salvation Army? You offer no alternatives nor relocation options with the 5th Ave. option. People only come to the ID for the local businesses and by eliminating the local businesses over local politics, corporate profit, and municipality, we see where the city's loyalties lies.	Chisup Kim
04/27/2022	As a commuter and worker in the CID and Pioneer Square area, I support a new station that will allow more access to the region. However, as someone who regularly takes transportation along both 5th and 6th and Jackson and frequents businesses in both neighborhoods, I strongly feel that the proposed 4th avenue options for the transportation corridor would be better suited for the area. It is central to both the Sounder and the Link, and more accessible to stadium traffic. It also less disruptive to local businesses and residents. I hope you will take the words of a lifelong local and a 15 year+ Seattle commuter into consideration. Thank you	Christina Sakura
04/27/2022	Please don't construct another link station in CID!! The benefits of more transit do NOT outweigh the negative effects it will have on the neighborhood. The residents and community deserve better.	Ella Rubenstein
04/27/2022	The link expansion construction is harmful to the CID community and should not happen with its current plans!	Emma Canto

<p>04/27/2022</p>	<p>To whom it may concern,</p> <p>I understand that accessible transportation is a necessity for communities. However, the benefits of the plans laid out in front of the community do not out-way the cons.</p> <p>The loss of parking in that area will cause even more stress for residents for around a decade and a half. This is not something worth losing when we are already so short on available parking. It is short enough that our city had to pass a law in October 2021 stating that no car can be parked in a spot for longer than 3 days without getting ticketed and/or impounded. And with this area being such a tourist attraction, there will continue to be less parking as the season warms up and covid restrictions reduce.</p> <p>Residents will have to suffer from the effects of the negative environmental impact this construction brings for years to come. It's not worth risking the health of our community to build a new station in the location you are proposing. We are still suffering from covid, not only from the physical effects but the trauma as well. Please don't bring another long term issue into the community.</p> <p>Businesses will have to close because of the construction demolishing certain buildings. Along with the reasons listed above, this will bring even more stress to residents who rely on these businesses.</p> <p>My point is, for 16 years of construction, there is not nearly enough good being brought to the community to make up for that long period of time. Please think the impacts of this project through - impacts on physical health, mental health, emotional health - because we need to keep caring for our community. That being said, I have not seen enough reasons to convince me that this is a caring project. If this station absolutely needs to be built, it should be built somewhere else, not in the middle of where people conduct their lives.</p> <p>Thank you, Chloe Brown</p>	<p>Chloe Brown</p>
<p>04/27/2022</p>	<p>I am concerned about the CID-2A and CID-2B alternatives for the CID segment of the West Seattle and Ballard Link Extension project. I believe that they will have permanent adverse effects on CID businesses that have been integral to the community for decades, and perpetuate a pattern of inequitable city planning that the CID community has been victim to for years. I implore you to find alternatives that can produce the desired outcomes of further connecting Seattle neighborhoods, while minimizing disruption and displacement of businesses and livelihoods of the CID community.</p>	<p>Johnson Nguyen</p>
<p>04/27/2022</p>	<p>Hello --</p> <p>As a West Seattle full time working mom, I rely on quality daycare services that come at an adorable price, are dependable, and are open a wide range of hours that meets my needs. And, that's just the basics. My child also needs a welcoming environment where he can learn, grow, and be guided by a diverse team of caring and knowledgeable professionals serving our community in ways that are second to none. Do you know how hard it is to find child care services, let alone one that provides all of the above? In particular in the West Seattle area? I do not approve of DEL-5 and DEL-6 options as they would displace (or worse, permanently close) a daycare that serves a portion of West Seattle that NEEDS a community service that is as special and important to our next generation as Alki Beach Academy.</p> <p>Thank you.</p>	<p>Katherine Finnegan</p>

04/27/2022	<p>I urge the committee to select an alternative site/path for the West Seattle and Ballard Link Extension (WSBLE) light rail station that does not directly impact the Frye Commerce Center, more specifically Alki Beach Academy Daycare.</p> <p>Alki Beach Academy Daycare has provided outstanding childcare for families in the West Seattle neighborhood for over 7 years. In addition to providing childcare, they give back to the community and to the families they help serve. And they are truly one of the most affordable childcare options in West Seattle. If they were to be moved, temporarily closed, or permanently closed it would have a huge negative impact to the community.</p> <p>Again, I urge the committee to not develop a light rail station near the Frye Commerce Center (Alki Beach Academy).</p> <p>Peter Caballero</p>	Peter Caballero
04/27/2022	<p>As a resident of the Seattle area since 1952, and now a member of the Seattle International District Rotary Club, I have a deep love for the Chinatown-International District, and I am stunned at Sound Transit's plans for ruining the heart of the district by closing the area for construction for as long as ten years. This will completely destroy the businesses and organizations that are the heart of the district. What you are proposing is akin to the plan to raze the Pike Place Market, another Seattle icon that was saved from destruction and has remained one of Seattle's favorite places. Don't destroy Chinatown! Use the Fourth Avenue route.</p>	Julie Hungar
04/27/2022	<p>We wish to make comments in two areas; an additional alternative to consider and specific values that we feel have not been sufficiently taken into account when assessing the existing alternatives.</p> <p>We note that there are two main approaches in the DEL segment; a line going up Genesee and a line going up Andover/Yancy. We are concerned that significant investigation has been done into the possibility of a tunnel integrating with the Genesee alternative but there is no current consideration of a tunnel starting at the hillside where Yancy approaches Avalon. It is true that a tunnel was briefly considered as a Level 1 alternative (Appendix M, page 2-9), however that is not what we are suggesting. The Level 1 alternative was correctly rejected because it suggested a station near Avalon Way, which would have limited ridership. The ST board has never considered an alternative similar to the current DEL-6; a station at Delridge with the line turning up Andover and Yancy (as in the current DEL-6), then going underground in the hillside East of Avalon. This approach seems to be the best of both worlds, as it would reduce impact in both the Delridge and Avalon neighbourhoods, with almost all the displacement coming from businesses rather than residential buildings. Further, we note that the WSJ-5 option would involve a tunnel connecting to the DEL-6 route. If a tunnel is under consideration for WSJ-5, it behooves the board to consider whether the cost of just 2000 feet more of tunnel may actually be less than the cost of displacing the residential properties on Andover and 32nd, West of Avalon.</p> <p>Further, regarding DEL-6, we wish to speak strongly in favour of the board meeting with, and learning more about the work done by, Transitional Resources at 2970 SW Avalon Way. They would be displaced if DEL-6 was implemented as currently designed. They are a non-profit organisation that helps people transitioning out of mental health facilities, drug dependence, and homelessness. These are all issues in a critical state in Seattle right now, and removing such a resource would be a tragedy for the city. I know that ST has said that they will find equivalent properties for anyone displaced, but consider the effect to the already vulnerable residents at Transitional Resources for them to be uprooted. Also, I think it is likely to be impossible for ST to find an equivalent property for all the residents and the support center to be moved to; there are four buildings (including two apartment buildings with a large number of residents) on Avalon and Andover that would be displaced, plus there are several residential buildings on Yancy that would not be displaced by DEL-6, but would lose their utility if they were no longer in such close proximity to the support center on Avalon. Please take this into account when considering DEL-6; it is also a reason to favour investigating the Yancy tunnel option described above.</p> <p>We wish also to address the DEL-5 alternative, which runs up a significant length of Avalon. The board must take into account the number of people affected by the line going up the middle of the road in terms of noise and other quality of life factors, even if they will not be displaced. This corridor has become a very high density area because of its proximity to the West Seattle Bridge and the C-Line bus, and more properties will very likely be built up in the near future. This is appropriate and we support the city of Seattle in zoning this area for high density. Areas like this are an important resource to dealing with the residential crisis that Seattle is facing. It is vital that the ST board take this into account when considering the alternatives; we must be encouraging development of high density buildings, and encouraging people to want to live in them. Selecting DEL-5 will discourage further development and reduce the desirability of</p>	Nathan Rose

	<p>living in one of the parts of the city where high density should most be encouraged. Further, it will reduce the quality of life for the large number of people living along that corridor. This will be a disproportionate effect compared to routing the line along a road with primarily single family homes. Avalon is a relatively narrow road with large buildings on both sides (and space to build more in the future). There would be no way to build the line without it being a major eyesore and source of noise pollution.</p> <p>Thanks for the consideration,</p> <p>Nathan Rose and Patrick Kennelly</p>	
04/27/2022	The current proposed options for the light rail stations in the Chinatown-International District do not fully take into consideration the impact on small businesses and the cultural fabric of this historic Seattle neighborhood. The harm the proposals will bring to the neighborhood cohesiveness and cultural resources is too significant. The 5th Ave alternative is not acceptable. Please explore alternatives that have less impact on this important neighborhood.	Kent Koth
04/27/2022	DO NOT TAKE 5TH AVE	Jordan Tu
04/27/2022	I reviewed the plans regarding CID alternatives considering the community of CID. It would be best to have a 4th ave station with the hopes of preserving the original CID structure and community. The 5th ave plans SHOULD not be moved forward.	Binhan Pham

04/27/2022	<p>Please do not build a train station through a historic part of Seattle. Chinatowns in all majors cities are so important to maintain and upkeep for all those who grew up in Seattle with an Asian background. Gentrification has wiped out much of seattles "old self" and though transit is important, it's so much more important to preserve communities that have served the Asian communities in this area.</p> <p>Money raises your power to control the flow of traffic but it also protects you from being torn down to create light rails. Chinatown does not have this luxury. Chinatown is where my mom who came from Japan drove every other weekend to her only Japanese market to purchase Japanese brand groceries for my family that we couldn't get even in 2005. Chinatown served so many of our Asian siblings and after the fire that caused one of my dad's favorite bakeries that he's gone to since high school burnt down, it was an absolute tragedy and building this train station will only cause more pain among those that work so hard to preserve the buildings and communities. I'm not saying it's pretty but if we should be holding chinatowns communities and buildings as high as we hold pioneer square. Pioneer square has history, but at this point creating more noise pollution and construction through areas where people barely held it together to keep restaurants through covid and meet Seattle city fees for cleaning graffiti, it would be a huge loss for Seattle and it would make it harder to live in this area that has no respect for history. This light rail would be beneficial for those only who don't understand the background to Seattle's Asian communities and Seattle barely advertises our kind. They hold Kobe Japan and hyogo as their sister locations but they only want to show their appreciation through a garden. Sisterhood of Asian appreciation starts with Chinatown. It's where my family felt like home even when they were far away from home. I'd rather newer buildings get torn down than to keep destroying old buildings and not helping to maintain them. Seattle has already gone to shit by not caring for their patrons (those with or without homes) please don't take this one thing away that has kept our Asian communities thriving with life and a home away from home. Please don't build the light rail. I'd rather funds allocated to low income housing for those living in the area than to keep satisfying the high volume traffic that helps fund Seattle. Money drives decisions but preservation of history should be held at a higher standard. Thank you for your time and I hope this shows how much we love our city.</p>	Kirsten Macfarlane
04/27/2022	<p>Please do not create more disruption or at least minimize disruption near the Seattle Center. The construction of Climate Pledge Arena was horrific for many businesses and non profits in the area and we need those businesses and non profits to not just survive but to flourish.</p>	Amy Bates
04/27/2022	<p>These should not be connected through the Chinatown/International Distict light rail stations. This will heavily displace asian families, who are mainly lower income and have already suffered through the COVID-19 pandemic. This should be a clear reason not to go through with the connection at this stop. We cannot displace these families who have made what the International District what it is today.</p>	Mina Mehus Helbert

04/27/2022	<p>Our house is 3220 SW Genesee Street, 98126</p> <p>We strongly support choosing the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b).</p> <p>We strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5), both of which would result in significant displacement and environmental impacts in the Yancy/Avalon/32nd Ave corridor. Particular concerns with the "Medium Tunnel" alternatives include:</p> <ol style="list-style-type: none"> (1) displacement of Transitional Resources on Avalon Way; (2) more housing displacements on and adjacent to 32nd Ave SW than preferred alternatives; (3) accessibility of remaining residences given the alignment of guideway near the corner of 32nd Ave SW and SW Andover St; (4) construction impacts from excavation of retained cut; and (5) operational visual/noise impacts to remaining residences along 32nd Ave SW, SW Andover St, and SW Genesee St. (6) mitigation of construction and noise impacts for the residents of 32nd Ave. SW. and Fautleroy Way, SW. will require expensive concrete barriers for noise mitigation from the onset of the project and also to protect the residential neighborhoods from the train noise ongoing. <p>Re: Avalon Station</p> <p>Further, we suggest the removal of the Avalon station as it combines a high foot/bike/transit traffic location with the entrance to the West Seattle Bridge making it dangerous for people coming to and from such a station.</p> <p>Additionally, the Avalon station will further add traffic and parking impacts to our Avalon neighborhood, already inundated with a lack of parking, resulting in crosswalks being blocked by vehicles, making pedestrians less visible and at elevated risk with crossing the street. Adding 1200 daily boardings to the Avalon station will further put families and their children at increased risk in our Avalon neighborhood.</p> <p>Sincerely, Radhika Makhija and Vikram Baskaran 3220 SW Genesee Street 98126</p>	Radhika Makhija
04/27/2022	<p>Our asian elders and our communities are already fighting the rising gentrification and modernization of our once beautiful city. I understand the benefits of the extention, but wrecking small businesses and communities during the process of progress is not a solution. It is greed. Do better.</p>	Laurence Hoehnle
04/27/2022	<p>The current plans for the Chinatown International District 5th Ave S route will disrupt and displace almost 20 small businesses in a Historic area known for risks of erasure since the time of its founding. Please consider the path south of 4th Ave S to preserve the area and make the culture and charm of Chinatown International District accessible to everyone not just for today but for the future and future generations too.</p>	Michelle Pollard

04/27/2022	<p>While I believe the WSBLE project provides benefit to the city of Seattle and its residents, the numerous issues raised by the Wing Luke Museum, one of which specifically regarding Section 5.2.2, is of significant concern as major contextual events, public policies, and actions in American and Washington state history, including the Chinese Exclusion Act, the 1864/1921 Alien Land Laws, and 1942 EO9066 forced removal of Japanese Americans are not sufficiently included or taken into consideration in the DEIS in its current form. Further information must be gathered and considered to make a better determination of impacts. Seattle CID is a unique and historically significant area, and threats to neighborhood cohesion needs to be taken seriously especially prior to, during, and through to present day in the context of the COVID-19 pandemic and anti-Asian hate crimes and incidents. The conclusion of Section 4.3.4.3.3 is not correct in stating no direct impact to neighborhood cohesion, and this must be addressed and corrected. Further, section 4.3.17.3.2 incorrectly concludes that none of the CID Segment alternatives would have long-term impacts to parks and recreational resources; by making changes to Hing Hay Park and the Donnie Chin International Children's Park, this will have a significant and negative impact to the sense of safety and belonging that elders and youth currently experience in aforementioned areas. I implore the Sound Transit Board of Directors to review and adjust the DEIS and WSBLE project planning accordingly to preserve and protect these areas due to their significant cultural importance to the AANHPI community. Finally, please ensure adequate review and consideration of factors impacting CID and its residents, including but not limited to: re-routing of traffic and buses through the CID in Transportation analysis, vibration impacts in Noise and Vibrations analysis, stadium events in Transportation analysis, parking losses, and Visual and Noise Impact analysis. All such factors have a major impact to residents and visitors to this unique and culturally significant area of Seattle, which must be preserved, protected, and developed.</p>	Stephen Woo
04/27/2022	<p>After lots of studying -I'm strongly in favor of the NO BUILD ALTERNATIVE for the whole West Seattle Ballard Extension. I strongly believe that we need better mass transit, BUT... this LIGHT RAIL extension WILL BE MORE NEGATIVE than positive- for the short term and long term for our environment. I strongly oppose all of the lines and station placements - especially for the West Seattle portion of the line- especially opposed to Del-5 and Del 6 and the "medium" retained cut/tunnel.</p> <p>It could take at 600,000 tons of carbon to construct and we couldn't make up for that for over 100 years and we all know that concrete "bridges" (essentially) do not last that long anyway. Light rail's carbon footprint should be considered, and a proper (outside expert) study done to compare gondola and light rail carbon footprints in construction and operation.</p> <p>ST3 includes funds to plan high-capacity transit to reach lower income and BIPOC neighborhoods like White Center, Westwood, and South Park in the future. But the DEIS fails to even mention those needs and evaluate how proposed alignments may accomplish this.</p> <p>We have yet to see the latest ridership numbers and projections considering the change of commute patterns since the pandemic. Many of the riders in the North West Seattle / Junction area are able to work remotely for at least half the month. Bus riders from South Delridge would not want to get off the bus, walk up/down multiple flights of stairs to wait for a train to take them to SoDo to get off the train again and wait for another to take downtown.</p> <p>Chapter 2.8.2.1.1 lists the many alternatives contemplated in the DEIS and the associated total costs between \$3 billion and \$4.7 billion which is about double or triple the amount approved by voters in ST3(\$1.7 billion). Before the pandemic, three West Seattle buses (RapidRide-C, #121, #21) already provided 25,500 trips daily. The DEIS projects 27,000 trips on light rail by 2042, only 1500 more than buses were providing in early 2020.</p> <p>The Alki and Delridge Connector trail is a major walk/roll corridor to connect West Seattle with the rest of Seattle via the lower bridge. Chapter 3.7.3 lists the Alki and Delridge Connector trail, but the mitigation (on 23rd Ave SW) is not clear and fails the assurances in 3.7.4</p> <p>Chapter 3.9.3 mentions some impacts to fishing rights, but still contemplates new in-water columns. The tribes have traditionally been disenfranchised, and the failure to address the impact of water columns is a major oversight. The chapter also does not mention that the West Seattle bridge will need to be replaced at some point. ST should coordinate space requirements for that with SDOT and the DEIS should be updated to cover these requirements.</p> <p>Chapter 4.2.3.3 includes several pages of huge impacts. It talks about the fact that light rail will destroy businesses, reduce the city's tax base and may affect tribal fishing rights. It fails to address the social impact</p>	Kim Schwarzkopf

for the employees and owners affected by this destruction, many of them small businesses whose livelihood is affected. It does not address the strain on the social services. Even more importantly it does not address the impact to the community which has grown around these services and the businesses and families which will be impacted indirectly. Alki Beach Academy for example provides daycare services to 300 children; affected parents may need to quit their jobs or move elsewhere if they lose affordable daycare.

Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, it claims it is "consistent with existing views." While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The norther bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway will be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther. Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRide-H. Now all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) will be impacted by multi-year construction and related detours. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours.- Figure 4.2.5-4 does not show any coverings over the station therefore making it appear lower than it is. It only shows the destruction of homes directly adjacent to the station, but not along the guideway which again provides a distorted impression of what will happen. - Chapter 4.2.5.3.3 fails to mention that Olmsted already suggested to preserve the view from Pigeon Point which any of the southern alignments would destroy, for details: Pigeon Point - West Duwamish Greenbelt – Friends of Seattle's Olmsted Parks (seattleolmsted.org) Ecosystems Chapter 4.2.9 provides a long list of impacts on the ecosystems, habitats, and many threatened and endangered species, some with potential impact and others with very specific impacts, in both Longfellow Creek and the northern portion of the West Duwamish Waterway. The alignments related to the two suggested southern bridge crossings would be detrimental to the Osprey nest and Great Blue Heron colony. While the Osprey nest could potentially be relocated, there is no guarantee that the birds would accept the new location. For the Great Blue Heron, the proximity of major construction work would most likely be detrimental. The northern slope is unstable and may collapse (see 4.2.11) during an earthquake, causing many large trees which are currently providing an important buffer and stabilizing the slope to be removed.

Because the construction of the light rail guideway towers would induce shaking similar to an earthquake, the construction of either southern bridge alternative should be removed from consideration because it poses a serious danger to the northern slope of Pigeon Point.

While the Genesee alignments may try to minimize the Longfellow Creek impact (also see 4.2.17), the removal of trees and bushes along Genesee would make it even more difficult for wildlife to migrate between the golf course and creek area than the current roadway allows. This will cause major disturbance to this critical wetland, bird and salmon habitat. The Andover alignments would be a bit better, but still disturb the creek area.

Again, the DEIS should have considered transit technologies (such as gondola) which are more compatible with the environment and unique challenges in West Seattle.

Geology and Soil

Chapter 4.2.11 explains that the soil conditions along the whole alignment are challenging. A huge guiderail construction has major risk for shifting and other issues and the soil conditions put the finished product and the people riding trains on it at high risk should an earthquake occur – especially since the Seattle fault crosses the Duwamish peninsula. The DEIS should consider lighter weight transit and less vulnerable modes such as an urban gondola.

I would support an additional 90 day DEIS comment period to continue the momentum of outreach and engagement to folks in SouthWest Seattle- including White Center, Burien, Des Moines, Tukwila.

Again, I am in favor of the NO BUILD ALTERNATIVE for all of the WSBLE light rail and stations - especially in West Seattle and Ballard.

Thank you for considering.

04/27/2022	Please do not put the light rail down Genesee street. Not only is this an important thorough fare street that would be a huge issue to remove for normal traffic, but you would also be displacing 100s of peoples homes that would no longer be able to afford to live in west seattle. Please do not use Genesee street for the light rail.	Erin Mcghie

04/27/2022	<p>I would like to comment on the DEIS for West Seattle and Ballard Link Extensions Project.</p> <p>Upon reviewing the DEIS and further research and observation of the local businesses in the Chinatown: International District segment (CID) I have reached the conclusions common to all alternatives CID Segment: The DEIS does not adequately encompass the historic reality of past public policies and actions including the everyday well being and the subsequent real threats to future survival.</p> <p>The DEIS relies on limited information to evaluate historic and archeological resources as a result of inequitable practices within the preservation field.</p> <p>The DEIS does not adequately recognize the unique and historical importance of the CID not take into consideration emergent threats to its neighborhood cohesion, all the more evident during the pandemic and other past city expansion including the highway splitting the CID, the Light rail, and the sports arenas development over the last decade.</p> <p>I fear that there is insufficient information and inadequate consideration of re-routing traffic and buses through the CID in transportation analysis Insufficient consideration of vibration impacts in Noise and Vibrations analysis Inadequate consideration of impacts of stadium events in Transportation analysis Underestimation of the impacts of parking losses Insufficient Visual and Noise impact analysis.</p> <p>Due to the overwhelming cumulative impacts and threats to neighborhood cohesion, built up over 150 years, there is a public call for exploration of options for refinements to the proposed alternatives beyond what typically occurs from a DEIS to final EIS that will not result in displacement within the CID</p> <p>Thank you for the opportunity to comment on the DEIS.</p>	Jonnie Pedersen
04/27/2022	<p>I believe the new plans for Sound Transit should move forward on 4th Ave as to not disrupt the current businesses on 5th ave in Chinatown that have been so impacted by the pandemic and other crimes in the ID area lately. Let's not add one more burden and force the small businesses that are staples in the ID to shut down. Many of these restaurants and tea shops are well known and frequented often by Seattlelites, it would be unfair to allow construction to shut down the street access or detours that reduce the foot traffic in the area. I believe there are other more viable options to reduce the impact on small businesses that the community wants to support and see thrive.</p>	Diane Phan
04/27/2022	<p>Hello! Please choose 4th Avenue for the new light rail. This will disrupt less business / daily lives and displace less people than the 5th Avenue options. I strongly strongly feel this and implore you to choose the 4th Avenue option. Thank you for the opportunity to share my voice!</p>	Sarah Zhang
04/27/2022	<p>Hello. For the light rail expansion in the CID, I believe the best option out of the four is one that displaces the least amount of businesses and people. While options 2a and 2b are shorter in construction and are less inconvenient than 1a and 1b, it is not worth the loss of businesses in the CID. Unless those businesses were supported financially and through other means to help relocate them to a different building in the CID. If not, I believe alternatives 1a and 1b to be the best options for the light rail expansion.</p>	Sara Wang
04/27/2022	<p>We cannot sacrifice small businesses, homes, cultural heritage, and a vital center of safety for the sake of this transit. In a time when violence against Asian communities is still a risk, disruption of a core neighborhood is violently careless.</p> <p>Please preserve family homes and small businesses in CID. Please find another solution. We cannot lose more of our original communities for the sake of growth.</p>	Wren Thompson
04/27/2022	<p>The option to put a train station on 5th ave in the c-id will completely disrupt business and homes throughout the neighborhood. The amount of times this has happened before with other constructions in the area is outrageous. Think about what you are doing, and listen to this community. Look at all your options, like how 4th ave would be less disruptive. PLEASE consider all the factors. Thank you.</p>	e m

04/27/2022	The CID community is priceless as the last remaining ethnic diverse community here in Seattle not displaced by years of re-development and gentrification. Because of this, regardless of the cost, the 4th AVE plan is the only way. It can be configured and people can connect to the other station via walking or other means (the difference is negligible) as long as we are able to save and preserve the businesses and structure of CID.	Bang Pham
04/27/2022	Genesee is the main thoroughfare connecting Delridge and Avalon, and disrupting that would be devastating for west Seattle. On top of losing the bridge for this long, then having to lose this street would continue to West Seattle a difficult place to live. The other alternate routes displace significantly fewer houses and have less impact on traffic. Please do not choose any of the Genesee St options.	Andy Mcghie
04/27/2022	Chinatown has already been destroyed so many times by Seattle's transit system. Little Saigon has already been devastated from the freeway (through geographical separation from the rest of Chinatown) and at this rate, does not seem like it will recover. So many small and local businesses have shut down. Placing the light rail extensions in Chinatown will displace businesses, residents, and the cultural identity of the neighborhood. I work at a community health center in the neighborhood and serve many elderly immigrants who reside in the neighborhood that have helped the area grow and now rely on services that exist only in Chinatown. Chinatown is where non English speaking residents can go to the bank and have someone advise them in their own language. Chinatown is where elderly can visit pharmacies with medications unique to their health care. Chinatown is where young people can connect with with heritage. Don't demolish Chinatown for another lightrail station. Structural violence is still violence. Hasn't our community had enough?	Ly Huynh
04/27/2022	Please do whatever possible not to disrupt, damage, or displace the International District and its people! Seattle, and the US as a whole, have too long a history of harming people of color, their homes, and their cultural heritage in the name of "progress". Please choose the 4th Ave option for the light rail!	Wesley Dors
04/27/2022	While I support the increased access of public transportation, especially for the ease of access for those that work there and the potential business that it will bring to the CID, I implore you to choose the 4th Avenue option to have the smallest impact on the neighborhood. As someone who frequents the businesses and grew up nearby, I have seen the suffering caused by the pandemic and increase in property and hate crimes. Many of these businesses will not survive the disruptions long enough to benefit from the project if the 5th Avenue option is chosen. Please choose the 4th Avenue option.	Helen Cheung
04/27/2022	Please re-open study of the 20th Ave station. A station in Ballard's pedestrian core will be much more usable than a station on 14th or 15th.	Nate Eklund
04/27/2022	It is imperative that the city listen to the community that will be most impacted by the destruction of 19 small businesses. We need those businesses and people and livelihoods in Seattle. The cultural and social web of this area makes Seattle more beautiful, diverse and unique. Please build the light rail elsewhere. The 4th Ave S alternative is preferred. Thank you.	Jen Iadevaia
04/27/2022	Hello, I believe that having the work on 4th is better than the 5th, given the hard times the CID has fallen under. Best regards, Emily	Emily Cebula
04/27/2022	on a more serious note, there are many historical locations in the ID and demolishing buildings that date back years isn't right. i've read the book " hotel on the corner of bitter and sweet" by jamie ford and was able to imagine where everything was located as i also grew up exploring the area. there are years of memories for some people and it's just not right to take that away. i would reconsider picking an area where there would be less impact to a community of people. empathy is a great thing to take into consideration during projects like these. our community has been through so much during the pandemic with vandalism and hate already just give us a break.	sabrina y

04/27/2022	As a resident of Ballard, I believe that Sound Transit needs to reevaluate Ballard Link light rail station options west of 15th Avenue NW instead of only station options at 15th Ave NW and 14th Ave NW. The Ballard Link light rail station needs to be located in a location that is more central to the Ballard Urban Village. In earlier public outreach that I participated in, potential stations were located near NW Market Street and 20th Ave NW. A station location closer to that should be evaluated. A station at this location would be more likely to generate higher ridership, provide better pedestrian and bicycle access to the station.	Gil Cerise
04/27/2022	I am very concerned how long-term construction will negatively affect local businesses in Chinatown/ID, especially if the 5th Ave route goes forward. Please use the proposed 4th Ave route which is much less disruptive. Our Asian communities have been through enough hardship in the past two years; please consider how you can reduce negative impact and maintain economic health for small and long-running shops and restaurants in the area. These are people's livelihoods.	Claire Kelly
04/27/2022	<p>I am writing to voice my concern on the West Seattle and Ballard Extensions of the Link Rail. My concern is that it will cause harm to the Chinatown International District (CID for short) such as displacement of our elders, the local business, bad air quality for everyone, traffic distribution, loss of foot traffic for the local business due to no parking. These are just a few of concerns that come to mind.</p> <p>Building the extension for the West Seattle and Ballard at the current location is going to cause major disruption in the CID community. I don't believe it will bring more business to the area if it were to be completed there. Take the MLK Link Rail for example, it was suppose to bring high traffic volume to the area, but instead it stopped foot traffic costing the local business in the area to go out of business. As there is no Link Rail Stop for that area, so many business got hurt by this, the gap from Columbia City to Othello is too long and there should have been stop in between them. Not only that it also hurt the neighborhood as well, not having enough transit to get to places. The Link Rail was suppose to bring in business to the area, but instead it took business away from it. The most affected are minorities, and the proposal to build in CID is once again affecting minorities the most.</p> <p>Take what happened with the MLK Link Rail extension, is about to happen again to the CID. It will cause displacement among the community, it will cause disruption to the surroundings area, plus it will also cause BAD AIR quality for the community which is harmful for the elders that lives in the CID. The bad air will shorten lifespan and cause major health problems. The CID isn't just a short stop for food but it house our elders and the multigenerational families and kids that lives here in the CID.</p> <p>Not only will it cause bad air quality, it will also have a huge impact on traffic, it will cause the local business to go out of business due to having detours of the closed sidewalks, having no parking, not to mention all of the loud noises it will cause making it more difficult for the business to serve its community.</p> <p>The CID is very close to my heart, it already has a history of displacement I do not wish to see any more of it, I want generations to come to have a CID to come to and to love. The neighborhood is not one quick stop, it has a history to told and one people needs to see and hear about. Especially with COVID-19, the neighborhood has taken a huge loss, with all of the Asian Hate that has been going on. Having this extension is going to make it worst.</p> <p>Again as mention, it will cause harm to the neighborhood, I advise that you take these concerns serious and to listen to the community of how its going to impact the CID and its people. That you folks should place the extension in an area that can be benefit both, you can do this by asking the community of where we would like to place it, instead of deciding that on your own.</p> <p>Thank you for taking your time to read this.</p>	Ann W.
04/27/2022	The 4th Ave options (slight preference for 4th Ave 1b) to have the smallest impact on the neighborhood. I have worked in community building and public safety for many years and have seen the CID repeatedly get neglected by the city. To further disrupt and displace with the proposed 5th Ave options will have detrimental effects on what community still manages to exist. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. Please consider the 4th Ave options.	Gina Lee

04/27/2022	<p>Dear Members of Sound Transit Project Committee:</p> <p>I work for Dusty Strings Company, 3450 16th Ave W, Seattle WA 98119, whose building is on several proposed routes of Sound Transit light rail system.</p> <p>Dusty Strings is a 43 year old, family-owned harp and hammered dulcimer manufacturing company. If you come to tour the facility, you will be totally impressed and inspired by the specialized plant design, well-thought manufacturing flow, R&D facilities, enthusiastic and skilled craftspeople, instruments technicians and office people. Every harp and hammered dulcimer is hand crafted with intense care, precision, diligence, and immense love of workers. Years of trials, errors, and improvements shaped up the Dusty Strings harps and hammered dulcimers to the globally recognized and beloved brand that it is today. For Dusty fans as well as Dusty crew, Seattle is the home of Dusty Strings.</p> <p>Please preserve this unique small business within the city of Seattle and choose the route IBB-1b "Elevated 14th Ave (from Prospect/15th).</p> <p>Thank you very much! Naoko Nakamura</p>	Naoko Nakamura
04/27/2022	<p>Please reconsider choose the 5th ave options as they have more affect on Asian American businesses. Choose 4th as it will impact the area the least.</p>	Pauli Dang
04/27/2022	<p>Why are we asking those who have suffered the most to endure even more hardship? No matter the final decision, the people and businesses of Chinatown-International District will be greatly impacted by Sound Transit's expansion of the station in that neighborhood. However, the 5th Avenue options will be the most detrimental.</p> <p>The Chinatown-International District is a lifeline for many, notably low-income and disabled Asian elders. Do not hold this neighborhood hostage with years of disruptive and construction on 5th Avenue. This is further violence against the Asian community in Seattle.</p>	Madeline Moy
04/27/2022	<p>Place the ballard link extension on 4th! Adding it directly into Chinatown is a horrible choice. Chinatown is already a hub for food and culture so it doesn't need a station in the middle of it. Also it would negatively impact the current businesses there during construction and operation.</p>	Ary Mac
04/27/2022	<p>For the Chinatown-International District station, please use the 4th Ave options to lessen the impact on the business especially those on 5th Ave.</p> <p>The 5th Ave option will displace a lot of the history, businesses, and livelihoods of hundreds of community members. By doing that, this area which has already been shrinking and has been subjected to many challenges in the last year will see a devastating impact in every aspect.</p> <p>Please take these lives into consideration. Thank you.</p>	Aisha Dayal
04/27/2022	<p>4th Ave makes infinitely more sense than 5th Ave! There's no reason to disrupt an already underserved neighborhood by demolishing historical buildings and businesses. Please consider 4th Ave as the superior choice.</p>	Seth Halleran

04/27/2022	<p>My comment is regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate!! This is deeply concerning to the West Seattle community.</p>	Cecilia Rogers
04/27/2022	<p>I'm excited by the prospects of connecting West Seattle with Downtown, Sodo, and Ballard. This is long-needed project.</p> <p>I do not believe that speed to completion or cost of the project should hinder making the project happen. Yes, it'd be nice to have light rail in West Seattle now, but a thought-out, deliberate plan that can leverage the best usage and experience to maintain high ridership is important to me.</p> <p>I'd like to see minimal impact on homes and businesses to sight the track. The fewer homes and businesses we can remove for the project, the better, but I'm fully on board with knowing we'll lose some structures - homes and businesses. We need light rail for the greater good of our community.</p> <p>From my perspective, the Northernmost Route (not a preferred alignment) across the Duwamish and then tunneling to get to the Junction is the way to go. Here's why: By going via the Northern Route, the light rail alignment will avoid steep slopes and part of the Greenbelt that surrounds the North End of Pigeon Point.</p> <p>2. By going to the North of the West Seattle Bridge, this rail alignment will not disturb habitat for Blue Heron and other species of birds and mammals that reside in Pigeon Point as well as critters that connect with the greater West Duwamish Greenbelt complex.</p> <p>3. The area on the North End of the Duwamish Greenbelt including the area suggested for the Southernly alignment of the light rail is considered by the Duwamish Tribe sacred. It has been suggested that some of this land is former burial ground for the tribe.</p> <p>4. Anything but the Northern route of the light rail will impact residents along the North end of Pigeon Point in an adverse way. Not worth it.</p> <p>For the other parts of the alignment, I think tunneling is the way to go to reduce impact to businesses and residents. Less destruction of needed housing and commercial business will happen this way. And with Sound Transit's track record with tunnelling, it should be smooth and a positive process. Tunneling also alleviates any aesthetic qualities that an elevated rail line will bring, for better, but maybe worse.</p> <p>Thank you for listening. We look forward to having light rail in our neighborhood in Pigeon Ridge.</p> <p>Matthew Clark</p>	Matthew Clark

04/27/2022	<p>After reviewing the Draft EIS, my recommendation as someone who lives near the ID and has frequented it often my whole life, please do not proceed with any 5th ave builds—I am begging you. I understand and recognize that the 4th ave options are more expensive, would take longer, and would displace 120 housing units, but there is absolutely no housing shortage in Seattle and the loss of 19 businesses in the International District would be such an incalculable loss for the community. Not only that, but it would disrupt the overall neighborhood with years of construction and the effects of that would create an even further strain, on top of all the pandemic hardships. It isn't right that the residents and businesses of the International District have to fight in order to be considered a critical part of Seattle and that they deserve to be protected—it should be a given. Please do not proceed with any 5th ave builds.</p>	Katherine Wong
04/27/2022	<p>As a daughter that comes from a first-generation family who immigrated to Seattle, WA over 20 years ago, the International District holds a very special place in my heart. The ID is home for a lot of memories with my family members and friends. The more and more it changes, the more my heart just sinks a bit deeper. The ID is also home to many mom & pop restaurants that I grew up going to. Unfortunately, the ID has been hit extremely hard as they continue to navigate through COVID, a high amount of vandalism that happens to their storefronts, and violent attacks within the community targeting POC. The ID deserves to be recognized as a community worth not only protecting, but to preserve what is left of the history of Seattle's ID. Please give the community of the ID a break from so much heartache these past few years. Those that own a family business in the ID that are at risk for being demolished - they deserve so much more support. Please go down 4th Ave!</p>	Dorothy Alcafaras
04/27/2022	<p>As a community member and someone who has witnessed the CID undergo multitude of changes, I share concerns about the impacts all of the 5th Ave alternatives have on our neighborhood. I support moving forward on the CID-1A 4th Ave shallow option as the least destructive option of the 5.</p> <p>The livelihood of businesses displaced and buildings permanently destroyed will be detrimental to the CID. Time and time again, this neighborhood shoulders the burden of inequitable infrastructure changes and development. I support public transit whole heartedly and I believe light rail expansion is a critical need, but there has to be more mitigation and support for businesses, communities, and cultures that will be severely impacted with the WSBLE project.</p> <p>Issues such as construction pollution/debris, 6+ years of road closures, extended periods of construction noise, etc. are all harmful to the neighborhood and its many residents and community members who call this place home. These impacts are further compounded by a global pandemic that will take this neighborhood even longer to heal from, and if we permanently displace 18+ businesses from this process, we may never recover.</p> <p>I hope that these project decisions are not hastily made by leaving out the voices of a district that has been silenced for years. We cannot afford to erase our neighborhood identity.</p>	Connie Au-Yeung
04/27/2022	<p>All 5 proposed options for expansion of the Chinatown-International District Station displace and demolish important small businesses and community builders in the area. The Wing Luke Museum has already submitted a statement about the proposed station urging Sound Transit to consider the local impact that it would have. I urge you to deeply consider that statement. I live in West Seattle and would love to have greater access to the rest of the city through this line. But I do not want other communities to suffer economically and socially at the expense of the convenience of a new line.</p>	Anna Feit

04/27/2022	<p>As a former board member for Transitional Resources I am writing to ask for Sound Transits reconsideration of the plan for West Seattle due to the significant negative impact it will have on vulnerable members of our community who rely on public transportation.</p> <p>-----</p> <p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that give to those in need, I strongly urge the committee to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Sarah Kaiser
04/27/2022	<p>Please find a different much-less disruptive plan for the station serving the International District.</p> <p>Too much disruption has already happened and continues to be happening to this community.</p>	Annabel Wrightsman
04/27/2022	<p>Please do not do the construction at Chinatown for CID people. They do not want disruption to their business.</p>	Thananun Prasertsup
04/27/2022	<p>I prefer the 4th Ave proposal so that the small businesses in the Chinatown-International District can be preserved and thrive. The community deserves public transit options that prioritize them.</p>	Dana Tran
04/27/2022	<p>Hi, I'm writing to support building the Link expansions on 4th Ave S because it will cause the least displacement of small businesses and least damage to historic buildings in the International District. I work with people from here and value the rich history of the neighborhood. Be considerate of the opinions and values of the residents.</p>	Mercedes Delgado

04/27/2022	<p>My name is Greg Lawler, and I would strongly urge the Board of Directors to select one of the 4th Ave alternatives (1a or 1b) for the Ballard Link extension. In particular, I believe the Draft EIS understates the negative impact to the C-ID for the 2a and 2b options. The C-ID is a beacon of cultural energy for Seattle, and the 2a and 2b alternatives will have longer term impact than the report captures. First, the businesses displaced will likely not have the means to pack up and start over, particularly given the damage COVID did to the restaurant and service industries. This will mean the elimination of those businesses, and a reduction in the cultural appeal that the C-ID brings for all of Seattle. Second, the reduction in parking and traffic complications will have a broad impact on all C-ID businesses. Depending on the impact, this may lead to further business closures. Third, many of the people that operate these businesses live in the C-ID, and they will be considerably more impacted, as compared to the folks at the ICON apartments or those that work at the bus base. Consider, these are the folks keeping the C-ID the thriving cultural basin that's drawing the demand for a new line in the first place.</p> <p>The increased cost of the 1a and 1b alternatives will undoubtedly be raised as a counterpoint. However, these points are mute. Consider that option 2a would require relocation of the fiber optics utilities line for the Link. If this option is chosen, and there are complications here, the Link shuts down - an incredibly costly risk. Furthermore, depending on the age of the viaduct, it may be time for a re-build anyways.</p> <p>To summarize, the Board should select one of the 4th Ave alternatives. It makes sense logically. But more than that, it protects the people that have made the C-ID their home, and it protects the people that keep the C-ID one of Seattle's greatest cultural landmarks.</p>	Gregory Lawler
04/27/2022	Move forward with 4th Avenue options to reduce the economic impact to CID	Christina Liu
04/27/2022	<p>I am a business owner and community member in the CID and fully oppose the 5th Avenue options. I have seen firsthand the damage construction can do to a business as I have survived both the streetcar construction and the reconstruction of our sidewalk. This project will destroy many businesses in the CID and have lasting impacts on the fabric of our community. These plans show no regard for the CID and do not consider the community, economic, and health impact of this project. Sound Transit is clearly showing us that decimating our community is a viable option to provide services to predominantly white neighborhoods.</p> <p>I would also like to echo the letter from the Wing Luke Museum and stand in solidarity with them.</p> <p>The DEIS does not adequately encompass the historic reality of past public policies and actions, the everyday lived legacy of those actions to the present-day, and the subsequent real threats to future survival. As such, any conclusions made fall short of depth and breadth of the cumulative impacts from the WSBLE Project.</p> <p>The DEIS relies on limited information to evaluate historic and archaeological resources as a result of inequitable practices within the preservation field. Further information needs to be gathered and considered to make a better determination of impacts.</p> <p>The DEIS does not adequately recognize the uniqueness of the CID nor takes into consideration emergent threats to its neighborhood cohesion, all the more made evident during the pandemic.</p> <p>The Final EIS requires greater clarification on multiple fronts to better assess construction impacts.</p>	Richard Saguin
04/27/2022	I am opposed to expanding this light rail project to expand further in the International District. Five to eleven years of construction — next to housing and landmarks like the Chinatown Gate and Hing Hay Park — would be hugely disruptive. It would also reroute public transit and detour up to 30,000 vehicles per day through the CID's residential and pedestrian-oriented streets.	Krista DeFils

04/27/2022	<p>This comment is in reference to Chapter 2 alternatives provided for the CID station location. Please pursue 4th avenue options (CID-1a or CID-1b) and halt potential alternatives on 5th avenue. This request is being made to maintain several vital cultural businesses and restaurants that foster essential community in Seattle. Please consider the small business impact and Asian mainstays located on 5th when making this decision. The International District community members are our neighbors and we should be protecting the almost 20 small businesses that currently reside there. There are better alternatives with less small business disruption. Please move forward on 4th. Thank you for your consideration!</p>	Ashlee Gee
04/27/2022	<p>West Seattle and Ballard Link Extensions DEIS Comment April 28, 2022</p> <p>Preferred Options and Comments</p> <p>SODO SODO-1b: Move stations to be accessible from Lander Overpass and optimize for directional transfers, like MacArthur BART Add tail tracks and a switch so that the new Ballard line can be extended down to Georgetown and Sea-Tac eventually</p> <p>Duwamish DUW-1a</p> <p>Delridge DEL-2a: Lower station (60') is key, the others are absurd, at 10 stories above the ground</p> <p>West Seattle WSJ-2: if station can be moved farther north on Fautleroy to not demolish the new apartments on Fautleroy and Alaska WSJ-5: Short tunnel that minimizes impacts near the Junction, but doesn't over build the Avalon Station Consider eliminating the Avalon Station or consolidating with Alaska Junction</p> <p>CID CID-2a: Shallow under 5th Ave is the best, to preserve the space under 4th Ave for eventual high speed rail use, also transfers from the existing station, the new station, and King Street station need to be harmonized - should be designed to accommodate a unifying mezzanine between all three stations and a future high speed rail platform</p> <p>Downtown DT-1/DT-2: Modify alternatives to use 5th Ave Downtown and Mercer St alignment in Uptown; the SLU station should straddle Dexter Ave to better serve multi family housing on Dexter and alleviate the unreasonable wait times for pedestrians at the Dexter/Mercer intersection; and the Uptown station should be along Mercer to minimize impacts on the cultural institutions at Seattle Center; and must include a tail track oriented toward Westlake Ave for a future Aurora line</p> <p>Downtown stations need to either be shallower than planned or have super high capacity elevator banks with pass-through elevators with two doors - one for entry and one for exit; another idea is some kind of continuous load system similar to a gondola, with a large cabin every 15 seconds, without ever having to press a button - the interval of an escalator, but the vertical conveyance direction of an elevator</p> <p>Interbay SIB-1: A station that serves the Armory site and Expedia would be ideal - also look into an at-grade station between Magnolia Bridge and Galer Overpass, might be cheaper to purchase some ROW from the freight rail company than to make that whole stretch elevated</p> <p>Ballard Ship Canal crossing needs to be fixed - either a tunnel or fixed bridge; remove the movable bridge from consideration Interbay station should be located to optimize connections between Nickerson, Emerson, and Thorndyke bus lines; Interbay and Smith Cove stations could be potentially consolidated, if bus integration is well considered IBB-2b: A 15th tunnel makes the most sense of the options presented, but a tunnel station at 17th Ave NW or 20th Ave NW makes more sense than the options presented, as they will be several minutes closer to the core of Ballard and better serve Swedish Hospital</p>	Nathan Machida

	<p>General</p> <p>Keep station depths and heights as close to ground level as possible</p> <p>Getting from street to platform shall not take more than 5 minutes during peak times or else that will cause a deterrent to use - total trip duration determines ridership</p> <p>Design more capacity and redundancy into station elevator systems - current vertical conveyance level of service is unacceptable; vertical conveyance and platforms need to be able to handle game day style crush loads</p> <p>All elevators must go from street to platform from now on - no mezzanine transfers for elevators</p> <p>Use at-grade alignments with street crossing overpasses in industrial areas</p> <p>Incorporate new tail tracks in South Lake Union and SODO to accommodate northward and southward expansion on the highway 99 corridors (Aurora Ave toward Shoreline and Marginal Way toward Georgetown); or else the new lines and tunnel will be underutilized</p> <p>Only consider consolidating these stations: Avalon with Alaska Junction and Interbay with Smith Cove</p> <p>Definitely keep South Lake Union station</p>	
--	---	--

<p>04/27/2022</p>	<p>Greetings Sound Transit Board of Directors, I am commenting regarding the Delridge segment of the West Seattle Link extension. I want to express opposition against any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St).</p> <p>My family is a part of Alki Beach Academy and we are immensely pleased with our experience. Our, now toddler, Mila, was born during the pandemic and her socialization was of great concern for us. Not surprisingly, the adjustment was difficult, but now our little girl is kind, loving, sociable, and a cognitively well developing child. This is what I understand to be the experience of every family at Alki Beach Academy. I have a doctorate in School Psychology, work closely with special education and am intimately aware of the importance of early learning and healthy attachments. Alki Beach Academy has served those essential needs exceptionally for hundreds and hundreds of families. In addition to the volume of families that would be impacted, logistically, the social emotional and cognitive development of children within those families would be negatively impacted as well. Generally speaking, matters were worsened by the pandemic, and the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need. As someone who works in public education, I can attest to the criticality of the preparedness and growth Alki beach Academy provides.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. This is especially true for ensuring access to high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent who resides in West Seattle and who is a part of Alki Beach Academy, and as an educator who is knowledgeable about and works in public education I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p> <p>In some customs, greetings center on the children because they are our future and the metric by which the wellness of a community can be measured: "How are the children?", "The children are well." Alki Beach Academy ensures our children are well, you all have the opportunity to continue that.</p> <p>Thank you for your time and openness. Keep well and take care, Dr. Polo DeCano</p>	<p>Polo DeCano</p>
<p>04/27/2022</p>	<p>Hello,</p> <p>I am a Chinese American resident of Seattle, and I have strong concerns about the proposed ongoing construction for new light rail lines in Chinatown-International District. Not only will longtime, minority-owned businesses be disrupted by the structures on 5th Avenue, but air quality in this multigenerational neighborhood with lack of access to affordable healthcare will be affected as well.</p> <p>I ride King County Metro and Sound Transit every day, as someone who works in downtown Seattle. I understand the importance of public transit options, especially in a city where cost of living is skyrocketing. However, this should not come at the cost of a historically marginalized neighborhood already at risk of economic precarity and health impacts. The placement of the construction project should be reevaluated with local businesses and health of C-ID residents in mind.</p> <p>Thank you, Mengyao Liu</p>	<p>Mengyao Liu</p>

04/15/2022	<p>I am writing on behalf of my Mom Patricia Yerg who has lived in her house at 3711-19th Ave SW, 98106 on Pigeon Point for all of her 101 years. There was another house on that lot before that burned down before she was born so the property has been in the family a long time. Mom has seen the street end erode considerably in her lifetime. It is almost to her property line now. She received a letter that her property might be affected and is worried about losing her house either from your acquiring it or it sliding down the hill. Her nextdoor neighbor on the edge of the hill lost half their patio to a slide years ago.</p> <p>When looking at a map of slide areas in Seattle, the whole of Pigeon Point is a slide area. Don't think you are going to reimburse people for their property value being lower because of slides. There used to be several streams flowing down 19th and 20th avenues, but they disappeared. One still comes to the surface yearly on Andover Street at 23rd Ave SW.</p> <p>How will you keep the hill from sliding? The natural erosion is bad enough.</p> <p>The alternate of building on the other side of the bridge to keep away from the hill or a gondola would be preferable.</p> <p>It will kill my mom if she loses her house. There are also a lot of million dollar houses on the end of the hill so it would be very expensive if they start sliding.</p> <p>Thank you for listening.</p>	Patricia Yerg
04/27/2022	<p>Please do not move forward with option 5 as it is extremely detrimental to the China/International District. I think the extension is a good idea but ideally Sound Transit would move forward with the least invasive option. Please do not use option 5.</p>	Eirene Smith
04/27/2022	<p>No action should be taken that demolishes any part of the international district</p>	Melissa Taft
04/27/2022	<p>Federal, state, and city governments have shaped the neighborhood through projects such as the Interstate 5 construction, literally splitting the neighborhood in half. The neighborhood has experienced the construction impacts of the Kingdome, then Safeco Field, and then CenturyLink Field. Chinatown-ID has felt the pressure of construction impacts from the SR-99 deep bore tunnel, Seawall, Seattle Waterfront, and demolition of the Alaskan Way Viaduct in adjacent Pioneer Square. In recent years, the construction of the First Hill Streetcar impacted the neighborhood for years. Time and time again, government's role in implementing projects have come with a cost to Chinatown-ID, its residents, businesses, and its cultural identity.</p> <p>Sound Transit, this is your opportunity to live your equity values. Please acknowledge the historical and current disproportionate impacts on the Chinatown-ID community. And, listen to the Chinatown-ID community and move forward with the 4th Avenue Option.</p>	Heidi Sohn

<p>04/27/2022</p>	<p>Tunnel is the most important.</p> <p>Also: zoning considerations after the light rail has been built. Homes that are adjacent should be up zoned to allow other multi-dwelling units be built near the transit station.</p> <p>We strongly support choosing the long tunnel preferred alternative (DEL-2a or DEL-2b + WSJ-3a or WSJ-3b). We strongly oppose the "Short" and "Medium" tunnel alternatives (WSJ-4 and WSJ-5), both of which would result in significant displacement and environmental impacts in the Yancy/Avalon/32nd Ave corridor. Particular concerns with the "Medium Tunnel" alternatives include:</p> <ol style="list-style-type: none"> (1) displacement of Transitional Resources on Avalon Way; (2) more housing displacements on and adjacent to 32nd Ave SW than preferred alternatives; (3) accessibility of remaining residences given alignment of guideway near the corner of 32nd Ave SW and SW Andover St; (4) construction impacts from excavation of retained cut; and (5) operational visual/noise impacts to remaining residences along 32nd Ave SW, SW Andover St, and SW Genesee St. <p>Delridge Station:</p> <p>We strongly support a Delridge Station located to the south of Andover St, either the Preferred Dakota St Lower Height (DEL-2a) or Delridge Way Lower Height (DEL-4). We do not support locating the Delridge Station north of Andover St (DEL-5 or DEL-6). Particular concerns with the Andover St. station include:</p> <ol style="list-style-type: none"> (1) undesirable location of transit-oriented development adjacent to a steel mill and elevated highway ramp; (2) poor walkshed of station; (3) poor compatibility with racial equity toolkit; (4) bus transfer requiring buses to turn off of Delridge Way SW; (5) lack of community input from bus riders in south Delridge and Burien. <p>Avalon Station:</p> <p>We support the underground Avalon Station (WSJ-3a or WSJ-3b). However, given the low ridership estimate (1,200 daily boardings) and uncertainty of 3rd party funding, we consider the Avalon station to be a lower priority than the longer tunnel and support dropping the Avalon Station in exchange for a longer tunnel.</p>	<p>Alicia Gaynor</p>
-------------------	---	----------------------

04/27/2022	<p>I wish to comment on the Interbay portion of the West Seattle and Ballard Link. I highly support the building of dedicated mass transit and feel it will be essential to the continued health and viability of our city for all levels of society.</p> <p>It is with great sadness that I see all alternatives except IBB-1b (the Elevated 14th Avenue from Prospect/15th) go directly through Dusty Strings manufacturing facility (3450 16th Ave W, Seattle, WA 98119), probably the most unique and viable businesses in the Interbay neighborhood. I say this not only as a former employee of Dusty Strings, but as a precision craftsman who has made a career in museum object mount fabrication, largely with the creative skills I learned during my years at Dusty Strings. It is hard to put too fine a point on the fact that the loss of creative fabrication skills is an immense loss to our region and our nation.</p> <p>The building that Dusty Strings built (after being notified by the Seattle Fire Marshall that continuing operations in their Fremont location was no longer viable), is the largest tool in the production of the world class Harps and hammered dulcimers they produce. Replacing and reproducing the role that this building plays in the building of these instruments will be very time-consuming and expensive. I acknowledge that Sound Transit has relocation assistance for businesses effected by the construction, but this is not a supplier that can move to a warehouse in Kent and continue along. The skilled crew is part of the DNA of the company and many will likely leave or retire if long distance commutes become a reality. Frankly, I feel that forcing a move for this manufacturing facility may spell its demise and it would be a loss to all who enjoy playing music as a part of their lives. Dusty Strings has been a major player in the cultivation of fine music and fine craftsmanship in Seattle for over 40 years and its loss would be truly tragic.</p> <p>Thus, I am asking your consideration for the IBB-1b (the Elevated 14th Avenue from Prospect/15th) route, or possibly small adjustments to other route alternatives. I feel a tunnel route under the Ship Canal is truly the best long-term solution and bringing it adjacent to 15th NW instead of trashing 14th Ave NW and the new Ballard Food Bank makes the most sense for access to surface transit and existing arterial routes.</p> <p>Thank you for your consideration, James Hascall Phinney Ridge, Seattle</p>	James Hascall
------------	---	---------------

04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p> <p>Additional Talking Points:</p> <ul style="list-style-type: none"> ? The Draft EIS needs to be updated to include Alki Beach Academy as a social resource (Appendix L4.4, Table L4.4-1). ? At the time of relocation, Alki Beach Academy will care for nearly 100 more children than the largest center currently listed in the Draft EIS (Table L4.4-1 and Table L4.4-2). ? Based on the most recent assessments of the local child care industry, current providers can only provide care for 46% of children at or below the age of 5. This is based on pre-pandemic data (at least 1 in 5 child care programs in King County were at least temporarily closed due to COVID impacts by the most recent count). ? Alki Beach Academy is the only child care program on the peninsula that may be impacted by the project and is the largest child care provider in the Delridge corridor. The Delridge corridor (98106) is the lowest-income zip code, the most racially diverse zip code on the peninsula, and includes some of the lowest opportunity areas in the city. Removing ABA from this community would impose a disproportionate impact on these communities. ? The alternatives that would require the program's relocation need to include this impact in their descriptions where appropriate. ? The Draft EIS needs to include a detailed description of the barriers to relocating a program of this size (20,000 square feet). ? The Draft EIS needs to include a detailed description of the impact to child care supply in 98106 if the program is relocated. ? The Draft EIS needs to include language acknowledging that the program's relocation would conflict with the environmental justice and racial equity goals of Seattle, King County, the Puget Sound Regional Council, and Sound Transit. ? Sound Transit is only required to pay \$50,000 in reestablishment expenses, which is about 3% of the estimated construction costs to reestablish Alki Beach Academy -- excluding moving expenses (Real Property Acquisitions and Relocation Policy, Sec. 9.4) 	Amy Drzayich
------------	--	--------------

04/27/2022	<p>Transitional Resources (TR) is a nonprofit community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults who are living with serious mental illness and provide them with behavioral treatment and supportive housing services, ensuring these residents remain safe, and housed.</p> <p>I'm writing to support TR in their fight to not be displaced. In regards to the proposed Delridge segment of the West Seattle Link Extension plan, I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan.</p> <p>Transitional Resources has provided the community-oriented model of care for over 45 years. They have worked very hard to acquire the buildings and property in close proximity because the interconnection of their services is what is unique about their service of care. Relocating and finding new property is not easy and it will disrupt the lives of individuals who struggle with the challenges of mental illness.</p> <p>There is a crisis right now in mental health care and a large demand for the services that they provide. Please don't take the keys away from the residents at TR. They have called this place their "home."</p>	Linda Nguyen
04/27/2022	<p>Please consider alternatives to the current WS-BLE light rail station proposal, the current proposal that runs along 5th avenue and through the heart of the CID would be detrimental to the community I've called my home for the last several years. The construction itself would deter foot traffic and tourism to the area, the radial impact on the surrounding neighborhoods would suffocate the already struggling small businesses. These businesses make the CID a place to come together, to uplift one another, to help people who can't help themselves. Please do not displace communities who have already been displaced so many times. Please do not build a station that negatively affects the help of my community. Please do not tear down the place I've made so many memories. I do not oppose the light rail expansion, this is something I know will benefit Seattle as a whole, but please do not do it at the expense of my community.</p> <p>Please build this along 4th ave which currently doesn't have any businesses or residential buildings. There are other options to consider.</p>	Kevin Yen
04/27/2022	<p>No to 5th Ave cid Transit expansion. That neighborhood has already been impacted too much and this Will make it worse. And this community is important to the greater community of seattle!</p>	ileah Arturet

04/27/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. 04/27/2022	<p>As a Belltown resident living next to the Olympic Sculpture Park, I prefer the DT1 alternative because it offers a closer connection to the light rail which I depend on for school at UW and work on Capitol Hill.</p> <p>I feel deep ties to the CID neighborhood, the only part of Seattle where I feel a sense of pride and belonging. Please consider moving forward with the 4th Ave alternatives (CID-1a, 1b) and for once, prioritizing the needs of the CID community. CID businesses have already been hurting due to the pandemic and an uptick in Asian hate violence. Permanently demolishing and removing local businesses and cultural institutions along 5th Ave will destroy the neighborhood and our cultural identity in an already-shrinking part of the city. Losing 5 businesses is already painful to the community, but losing 19-27 (4-5x more) is an absurd amount to an already marginalized community. We cannot afford to lose any more businesses. I regularly frequent these spots, like Chung Chun Rice Dog, Seattle's Best Tea, and Oasis. Construction along 5th will disrupt the livelihood of and hurt the CID for over 10 years. I-5 has already cut into the heart of the CID, shrinking and destroying the neighborhood permanently. The 4th Ave tunnel and the streetcar have already displaced businesses in the community that have never returned.</p> <p>For the sake of the survival of this 300+ year-old community, please move forward with the 4th Ave alternatives.</p>	Kevin Shum
04/23/2022	<p>Sound Transit Board Members and Seattle City Council Members,</p> <p>I am writing to express my concern about the CID station options 2a and 2b. The options 2a and 2b mean:</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years. Re-routing cars, buses, to 6th, Maynard, 7th, 8th, 10th & 12th. Gas, water, electrical shut offs to businesses, nonprofits and residents.</p> <p>And will have very negative impact on the international district community for years. I am writing to urge you to take 2a and 2b off the table, and choose option 1a or 1b.</p> <p>Mengdong Yang</p>	
04/27/2022	<p>The construction of another station here does not bring any new economic benefits for Chinatown. The district already has heavy traffic and is in need of refurbishing in the nearby areas, such as clean up on the streets and new stores. Tearing down what there is currently ruins the flow that the city area has.</p>	Lana Pham

<p>04/27/2022</p>	<p>A transit system without riders is not a transit system. The design of the West Seattle to Ballard extension must be designed to maximize ridership and rider utility over the long term. This means:</p> <p>Stations must be convenient to access by biking. This means the DEIS should have a target for bike share access to stations and study ways to encourage additional riders arriving by bike. In the stations themselves, this includes bike racks, bike lockers, elevators that can accommodate a variety of bikes including e-bikes, and availability of shared bikes and scooters. In the station area, the DEIS should study the impact of area improvements including pedestrian and bike bridges and all ages and abilities connections to the existing Seattle bike network (such as it is).</p> <p>2. Stations must be convenient to access by walking. This means that the DEIS should study station area improvements to sidewalks, and the addition of useful public amenities like plazas to attract people by foot. Inside the stations there must be reliable and redundant vertical conveyances which have been a disaster thus far.</p> <p>3. Stations must be accessible to all people - regardless of age, ability, or disability. The DEIS should study how station design impacts not only people with mobility challenges or mobility aids, but also families with small children or strollers.</p> <p>4. Stations must be designed for fast and convenient transfers. Stations that are too deep or require very long transfers between lines will discourage ridership. This is also an accessibility issue (see point #3). The DEIS needs to study the impact of station depth and transfer time on both ridership and accessibility.</p> <p>Comments on specific alignment choices:</p> <p>SODO: Prefer moving station to the north to avoid an expensive and disruptive taking of the USPS. Delridge: Prefer alternative compatible with the 41st Ave tunnel (DEL-6) Junction: Prefer WSJ-5 alternative (medium 41st tunnel) with a Fautleroy station design that avoids expensive property takings. Ballard: Prefer a station on the west side of 15th Ave NW to maximize pedestrian and bike accessibility from the rest of Ballard, and to encourage transit oriented redevelopment north and south along 15th Ave NW/14th Ave NW. CID: Prefer shallow station options (CID-2a, CID-1a) to maximize ridership and avoid long transfers. Transfers between two urban lines cannot be 4.5 minutes in a modern transit system! South Lake Union: Study a Westlake Avenue or similar alignment that places the station closer to the heart of South Lake Union.</p> <p>Thank you for taking the time to consider my comments. I remain,</p> <p>Yours, Mark A. Foltz</p> <p>spuddybuddy@ubertuber.org 3635 Burke Ave N. Seattle, WA, 98103 Founder, Welcoming Wallingford</p>	<p>Mark Foltz</p>
-------------------	---	-------------------

04/27/2022	<p>The comments herein are specific to the Sound Transit "Preferred Alternative" for the Delridge section of the proposed light rail expansion into West Seattle.</p> <p>Guideways taller than the high level West Seattle bridge are unacceptably out of scale with the areas designated to receive them in the "Preferred Alternative", as are they with the whole of West Seattle.</p> <p>Placing a light rail station in the center of a neighborhood as diverse in terms of ethnicity and range of income as the neighborhood that will be obliterated by the "Preferred Alternative" is unacceptable.</p> <p>The continued gentrification of West Seattle as a byproduct of any Sound Transit "Preferred Alternatives" is unacceptable.</p> <p>A budget hundreds of millions of dollars more than any other alternative presented is unacceptable.</p> <p>The feedback that you've received from the community of North Delridge is unmistakable in terms of the need to limit the impact on this area when introducing light rail service to it. Should the "Preferred Alternative" move forward you will not only have failed to meet your obligations but will have also introduced a permanent scar on the face of West Seattle. The community of North Delridge put it's faith in Sound Transit as an "authority". If the "Preferred Alternative" is the best that we can expect perhaps Sound Transit should do nothing at all.</p>	Ivan Stroh
04/27/2022	<p>Public transportation is a service entitled to all citizens of Seattle. Through public transportation, upward mobility for low-income communities, especially communities of color, increases. Nonetheless, public officials need to be careful of how their projects and ambition can be detrimental to communities of color.</p> <p>The CID is a bustling neighborhood of Seattle that thousands of people flock to for work, tourism, recreation, errands, etc. It is a place of rich history that tells a story of resilience. Nonetheless, the CID is not invincible. Past transportation projects like the construction of i5 literally ripped the neighborhood in two. Businesses were displaced and people lost their livelihoods forever. I fear the same outcome with this new project. The CID can not handle another project which shatters it's borders and displaces it's people.</p> <p>I believe that the propositions regarding the expansion of Link Light rail through the Chinatown-International District of Seattle will be detrimental to the businesses and people who reside in that area. If passed, the constriction and implementation of this project in the CID will forever affect the neighborhood, staining the reputation of Sound Transit as a body that rejected thousands of objections all while tearing a community apart. I fear the loss of employment for the hundreds of people who work in the CID who will be affected by the construction and demolition of iconic Seattle businesses.</p> <p>Please reevaluate your plans to expand into the CID. Otherwise, the neighborhood will die along with its rich history.</p>	Dylan Valdez

<p>04/23/2022</p>	<p>Dear Sound Transit,</p> <p>Please accept this public comment concerning the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions (WSBLE). As someone who works as the Executive Director of a nonprofit organization in Chinatown / International District, I am deeply concerned about the impacts of this project on our neighborhood.</p> <p>I would like to urge Sound Transit to prioritize the 4th Avenue shallow option as the preferred alternative through Chinatown / International District, and that it discontinue consideration of all 5th Avenue alternatives.</p> <p>There are many reasons why I believe the 4th Avenue shallow option is the best alternative: The 4th Avenue option will minimize impact to businesses, including many small businesses, in the CID. The CID is a neighborhood that is already at high risk for gentrification and displacement, and it is also a neighborhood that has historically bore the brunt of large-scale infrastructure projects (e.g. I-5, sports stadiums). Sound Transit now has an opportunity to address these racially-motivated historical harms and choose an option that will protect small businesses and cultural heritage.</p> <p>Through conversations with community partners who have much deeper roots in the neighborhood than our organization does, I have heard repeatedly that there is significant fear that the neighborhood will be irreparably harmed if one of the 5th Avenue options is chosen. I believe that the people most rooted in a community should have the most power in choosing the future of that community, and so I want to amplify the voice of other CID organizations and individuals advocating for the 4th Avenue option.</p> <p>I am already worried about my organization's ability to recruit students for our programs in the CID after 2 years of pandemic shutdowns and the possible demolition of our next-door neighbor, Bush Garden. The 4th Avenue option will help keep traffic impacts farther away from Maynard Avenue, which in turn will make it easier for our students to get to and from our programs – and to ensure their safety while doing so.</p> <p>When comparing the 4th Avenue deep and shallow alternatives, it seems clear that the deep alternative will create significant access challenges to the new station (not to mention challenges for people transferring between lines), which risks turning people off from visiting the CID and limiting the economic benefits that the new station could bring.</p> <p>We all know that the decisions made in the next few months will affect the CID for the next 100 years. I strongly urge Sound Transit to prioritize the current and future needs of residents of the CID by choosing the 4th Avenue shallow alternative.</p> <p>Sincerely, Jordan Goldwarg</p>	<p>Jordan Goldwarg</p>
<p>04/27/2022</p>	<p>Hello, my name is Alejandro and I live in Seattle and use the Sound Transit Link Light Rail everyday on my commute to work in downtown Seattle. I am very pro public transit and believe that it is the solution to our society's and our city's addiction to fossil fuels as well as our struggles with climate change. However, I do not believe that we should solve these problems by placing undue burdens on our most vulnerable communities. I am strongly against Sound Transit's plan to displace and disrupt the Chinatown-International District community by building an extensive and invasive station over the next ten (10) years. The COVID-19 pandemic has done enough already to weaken the local economy of the CID and the last thing it needs is further disruption and removal of local businesses. I am quite ashamed to say it, but the CID is the only neighborhood that I know of in the city that is predominately a racial minority neighborhood. To me it seems incredibly racist to even consider undertaking such a disruptive and damaging project while the neighborhood suffers from incredible gentrification and displacement. While the station could eventually bring about a strong economic future for the area, I see it as only a continuation of the gentrification processes that are occurring there already. I urge you to please consider building the station somewhere else where the economic and cultural impact will be less intensive and demanding on the people that currently live there. I am very proud of our city and our region and they're commitment to our progressive ideals. The last thing I want is to contribute to the devastation and harm that this station will bring to the CID neighborhood and the stain that such an action will have on our image and character as a progressive and accepting region in our country.</p>	<p>Alejandro Gonzales</p>

04/27/2022	A station on 5th will lead to a loss of more businesses that countless BIPOC communities support and count on. Taking away these businesses will be another statement on racism. While the all options are meant to connect neighborhoods together, a station on 5th will only disconnect already marginalized and vulnerable communities from each other.	Christine Lazaro
04/27/2022	<p>The city should choose options CID 1a or 1b as it is the least disruptive option.</p> <p>Throughout the years, this community has endured previous construction disruption, hate crimes, xenophobia, and was one of the most impacted communities in the Seattle because of the pandemic.</p> <p>In addition, for me personally, as a student at freehold theater it would be potentially detrimental to the organization as it has already had to relocate numerous times due to being priced out and flooding. This would be another instance of the business being vacated with little options to turn to. This would likely out classes on hold, limiting student growth and income for educators there. Thus, 5th Ave option would not only be vacating many food establishments (which are pillars of the community) but it would be knocking out a arts educational facility (one of the few left in the Seattle area). As an educator myself, this theatre, their teachers, and the community have been a saving grace these past months and it would deeply sadden me to think it could be gone.</p> <p>Please pick the 4th Ave option.</p>	Sophie Chang
04/25/2022	<p>To Sound Transit Board Members and Seattle City Council Members,</p> <p>I noticed that West Seattle and Ballard Link Extensions proposal CID 2a and 2b will have negative impact on resident of international district:</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years. Increased noise & air pollution, dust, dirt, vibrations. Disruptions to 300 businesses already battered by the pandemic, higher than ever anti-Asian hate crimes, criminal violence. Disruptions to programs, classes, recreation for 1,200 elderly non-English speakers.</p> <p>Take all above concerns into account, Sound Transit should take 5th Ave. (option 2a and 2b) off the table and "Move Forward on 4th!" (Option 1a or 1b).</p> <p>Thanks. Feng</p>	

04/27/2022	<p>Dear Sound Transit Board of Directors:</p> <p>I am a homeowner living right in between Pigeon Point and Delridge Way. I am a public transit enthusiast and am thrilled for the upcoming expansions by Sound Transit in a region that needs more accessible, effective, and affordable transportation options. I have joined in on a handful of Sound Transit's community calls and have appreciated Sound Transit's willingness to engage with communities in making life-changing decisions for the residents of my neighborhood. Coincidentally, prior to purchasing my home, I lived right across the street from the Capitol Hill Station and witnessed the process and the successful, celebrated outcome of a vibrant transit hub. When designed thoughtfully, public transit has the power to catalyze an area.</p> <p>After learning about the alternatives and weighing the consequences of the impacts, I've come to strongly recommend the DUW-2, DEL-6, and WSJ-5 alternatives in the West Seattle Expansion based on the EIS's assessments of long-term impacts. While DUW-2 does cost more than its competing Duwamish Segment alternatives, its long-term impacts are significantly lower and less to current (and future) residents and employees, the ecosystem and parks, permanent in-water impacts, and noise/visibility levels in a residential area (6.2.2.1.2 Duwamish Segment; Table 6-9). Similarly, in the Delridge Segment's DEL-6 has the least number of long-term impacts to residential displacements, historic properties, and park and recreational resources, while also having the least operational visual and noise/vibration impacts due to its proximity to Nucor (6.2.2.1.3 Delridge Segment). The DEL-6 alternative falls on the lowest end of the estimated cost range in comparison to the preferred DEL-1a alternative, while additionally having the least long-term impact when compared to the other preferred DEL-2a alternative (Table 6-9). Finally, the connecting WSJ-5 alternative the West Seattle Junction Segment is on the lower cost range and would displace less residents and businesses (6.2.2.1.4 West Seattle Junction Segment; Table 6-9). This alternative would have some of the lowest amount of operational impacts and nearly no impact on historic properties and parks.</p> <p>Transit expansion comes at a cost, and the cost is more than a dollar amount. Once the construction is done and the trains start running, the residents will have to live with the consequences — the good and the bad — of the expansion. My hope is that the Board carefully considers the long-term consequences of these expansion decisions, impacts that will affect its riders' lives, homes, and communities.</p> <p>Sincerely, Hanna Hwang</p>	Hanna Hwang
04/27/2022	<p>While I support the increased access to public transit, especially for the ease of access for those who live & work in the C-ID and the potential business it will bring to the C-ID community, I implore you to select the 4th Ave option to which will have the smallest impact on the existing neighborhood and community. As someone who frequents businesses in the C-ID, I have seen the suffering caused by the pandemic and the increase in property damage and hate crime in the C-ID and our local AAPI community. Some of these businesses will not survive the disruptions from construction and would not gain the benefits from the transit expansion if a 5th Ave option is selected. The people and community of the C-ID do not need the extra burden the construction would cause. Choosing a 4th Ave option will have the least detrimental impact on the community and neighborhood.</p>	Theresa Blaine

04/27/2022	<p>Chinatown's International District consists of numerous residents and businesses who have all shaped the cultral identity of the area. To have construction along 5th Avenue would essentially split the neighborhood in half, negatively impacting the economy, where businesses suffer and the lives of people would be in jeopardy.</p> <p>To elaborate on how construction would cause hardship on 5th Avenue:</p> <p>Firstly, load zones would be eliminated and business access would be disrupted/eliminated along neighborhoods across 5th Avenue S., 6th Avenue S., King St., and Weller St.</p> <p>Secondly, in CID-2A, there would be 19-27 Business Displacements, as there would be 170-230 Employee Displacements, too. Additionally, 155-190 on-street parking spaces would be elimated. The loading docks for Uwajimaya would become temporarily closed for 1-3 months.</p> <p>Thirdly, along CID-2A Diagonal, 19-27 Business Displacements would occur. And there would be 170-230 Employee Displacements. American Hotel operations and retail would be displaced for more than a year. And Bity Building operations and retail would be displaced for more than year, as well. Lastly, 20-30 on-street parking would be eliminated.</p> <p>Lastly, in CID-2B, 18 Business Displacements and 170 Employee Displacements would occur. Where 40-50 in-street parking spaces would be eliminated.</p> <p>To contrast with construction on 4th Avenue:</p> <p>The north parking lot of the Pacific Office Supply would be displaced. There could be potentially disrupted access to Union Station garage, as well as disrupted businesses along 4th Avenue S. Lots will be vacant along former the Salvation Army property.</p> <p>In CID-1a, there would be 5-8 Business Displacements and 120 Employee Displacements.</p> <p>Whereas in CID-1b, there would be 5 Business Displacements and 200 Employee Displacements.</p> <p>From the numbers alone, construction of the new train station would be most beneficial along 4th Avenue, with significantly less economic impact. Through these numbers, the people of 5th Avenue S, in China's International District could peacefully get-on with sustaining their livelihoods, whilst respecting Sound Transit's plans for building a new train station, preferably on 4th Avenue.</p>	Caitlin J
04/27/2022	While I support investment in public transportation, there are existing issues (like the West Seattle Bridge) that are still unfinished. Please don't move forward with disrupting small businesses and people of C-ID especially attempting to come out of the pandemic where there was plenty of disruption to livelihoods.	Mercedes Bickerstaff
04/27/2022	I oppose this planned expansion because this new route will once again displace Asian elders in Chinatown and further contribute to systemic racism in Seattle. The link needs expansion, but not at the expense of vulnerable communities.	Graham Isom
04/27/2022	Hello, my name is Hannah Morris and I am a proud member of the Seattle community. Having lived in several other major cities across the country, I can say with absolute certainty that our international district is unique to us and integral to the culture of the city. With the amount of gentrification happening all over the city, it is incredibly important to preserve historical areas that have made the city into the growing landmark it is today. I would be heartbroken to see us lose Seattle institutions such as oasis tea that have been home to so many memories for Seattleites of all ages, ethnicities, and cultural backgrounds. As difficult as I'm sure it will be, I urge you to find somewhere else to put this stop, or at the very least, do everything in your power to reduce the amount of demotion of buildings and businesses that will be sorely missed by the community at large. Thank you for your consideration.	Hannah Morris

04/27/2022	<p>I am a business owner and community member in the CID and fully oppose the 5th Avenue options. I have seen firsthand the damage construction can do to a business as I have survived both the streetcar construction and the reconstruction of our sidewalk. This project will destroy many businesses in the CID and have lasting impacts on the fabric of our community. These plans show no regard for the CID and do not consider the community, economic, and health impact of this project. Sound Transit is clearly showing us that decimating our community is a viable option to provide services to predominantly white neighborhoods.</p> <p>I would also like to echo the letter from the Wing Luke Museum and stand in solidarity with them.</p> <p>The DEIS does not adequately encompass the historic reality of past public policies and actions, the everyday lived legacy of those actions to the present-day, and the subsequent real threats to future survival. As such, any conclusions made fall short of depth and breadth of the cumulative impacts from the WSBLE Project.</p> <p>The DEIS relies on limited information to evaluate historic and archaeological resources as a result of inequitable practices within the preservation field. Further information needs to be gathered and considered to make a better determination of impacts.</p> <p>The DEIS does not adequately recognize the uniqueness of the CID nor takes into consideration emergent threats to its neighborhood cohesion, all the more made evident during the pandemic.</p> <p>The Final EIS requires greater clarification on multiple fronts to better assess construction impacts.</p>	Lonnie Wells
04/27/2022	<p>RE: West Seattle alternatives.</p> <p>I think it is pretty close to unacceptable to have an above ground option that displaces so many people's homes and creates so much visual issues (over the Junction and above Avalon). I know the problem is incredibly complicated and expensive but I don't think there is any real option than underground.</p> <p>Thank you for the hard work. I know it's not easy.</p>	Keith Ramsdell
04/27/2022	<p>The building of the CID light rail stop will disrupt Asian American small businesses and encourage gentrification. Please do not build it in this neighborhood.</p>	Amanda Ong
04/27/2022	<p>While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave options (shallow or deep) to have the smallest impact on the neighborhood. As a Seattleite who works and frequents C-ID businesses, I have seen the suffering caused by the pandemic and increase in property and hate crime. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the C-ID do not need the extra burden construction will cause. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.</p>	Angela Lim

04/27/2022	<p>I am West Seattle resident, father, architect; spent six years with an urban planning & urban design firm.</p> <p>My comments are limited to the Alaska Junction station and station area. Bottom line: I am strongly, strongly against any and all elevated Alaska Junction station options. I believe the further investment in an underground alternative is the only appropriate decision when viewed through a century-long time lens.</p> <p>ES.3.1.1.4. ES-19 The Elevated WSJ-1 Alternative and the similar WSJ-2 Alternative would be disastrous outcomes for the Junction and are short-sighted from the perspective of future generations. I will not try to comprehend all the factors, obviously budget among them, that lead these two options to be "preferred".</p> <p>Even in the Junction of 30-40 years from now, based on the elevated ST stations built to-date, these elevated stations will be of a grossly overbuilt and unfriendly scale that despite my urbanist inclinations and professional background, believe will be detrimental to the experience, character, atmosphere and quality of their surrounding contexts. These impacts are measurable. But to keep it simple: people in such close urban conditions - such as the Alaska Junction already is - feel these multiple negative effects innately. That diminished quality of experience is a drag on the overall desirability of that area and therefore is a drag on its development and continual improvement over generations. This negative impact is not redeemed by the function that those stations serve. I believe that function - to move people in bulk through a densifying city - belongs underground! The many great cities of the world with systems consisting of primarily underground stations and alignments are all the evidence we need. It is possible to design an elevated station well, as an architectural object. But it is not possible to eliminate its impact on light, view, presence of its touchpoints (columns, etc), noise, and operation of the trains.</p> <p>Also: the fact that the two elevated Fauntleroy station options would obliterate mixed-use housing developments anywhere from only ten years old ("LA Fitness" via WSJ-1) up to a BRAND-NEW 2022 apartment building (vai WSJ-2) where the paint has barely dried is the height of insanity! This, from any measure of wastefulness and particularly from an embodied carbon perspective. How many saved car trips will need to be taken on ST over a likely a human lifetime to offset the construction, then subsequent DE-struction, of hundreds of units of housing that were built for a 50-75 year lifecycle? When you remove new, market-rate housing from the housing pool, it puts even more pressure than we already have on the existing, older housing stock, none of which is affordable anyway.</p> <p>ES.3.1.1.4. ES-20 The WSJ-3b Alternative, with a station that redevelops the aging, anti-pedestrian and urbanistically offensive Jefferson Square (Safeway et al) complex is my preferred alternative. The location one block from the heart of West Seattle, entrances on either side of Alaska, and integration with existing mid-block connections is a triple, quadruple win, particularly for an aging, less mobile population who can exit this station just steps from the shops and services they need.</p> <p>The potential from WSJ-3b for an outcome similar to the Capitol Hill station and subsequent developments would be a tremendous win for generations to come. They will take it for granted because it will "just work". This would be in contrast to the elevated options and the cursing of their forebears who, perhaps feeling that they had no choice, had to cut corners and built a sub-standard (elevated) imposition on the neighborhood.</p> <p>WSJ-4 is a lower-impact use of the currently useless BoA surface parking lot and perhaps offers a more balanced access for all the housing being built to the east of Fauntleroy. If the Avalon station was eliminated, this may be a more equitable access option.</p> <p>Finally, please coordinate with the Alki Lumber property development projects! And any other planned, large developments. WSJ-1 & WSJ-2 are bad enough in wiping out new housing. Please do not allow the market to permit and build even more massive housing projects, only for them to be halted or worse, demolished the day after they're finished!</p> <p>Thank you.</p>	Brian Kenny
04/27/2022	Lightrail extension is best for the city, decrease traffice in the future. Any options if fine with me.	Hai Tran
04/27/2022	Low traffice during construction is the must	Thanh Tran
04/27/2022	Any options is great, wondeful to have light rail system in the city, I will try when it done.	Tu Vu

04/27/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail paths. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery? BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. I'm looking forward to their classes aimed at established knifemakers and beginners. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at: BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Let me now add a bit of personal information. In 1960 I began my University education at Seattle Pacific College and after 5 quarters transferred to the University of Washington where I earned a BA in Bus. Admin Mktg Major. During the time at the UW I lived much of those years in the U District. Upon graduation I married a US citizen (since divorced), became employed by North American Life before being transferred to Toronto On. While at the UW, I did volunteer work with the Radio and TV station as broadcaster and stage manager. I also took a course in Theatre Organization and Management from Dr. Greg Falls and then became the first House Manager of ACT -- A Contemporary Theatre in 1965 which was a Professional Summer Stock company created by Dr. Falls. While there I found a continued interest in photography from the Theatre Manager which four years later having moved to the GTA I began a 33 year career as a Wedding/Portrait photographer. I earned a Master of Photographic Arts PPOC and was Chairman of the Central Portrait division plus other positions. While working in this career, I learned of Custom Knives and joined the Canadian Knife Collectors Association and joined the Board 3 months after joining in August of 1980. Six months later I was President and remained on the board until 1997. We had many knife shows and a few years ago the Canadian Knifemakers Guild was formed, I was given Honorary Membership. I have known Blade Gallery & Dan O'Malley for over 20 years and hope that you can see that his business will continue to thrive in Seattle. Another business that I find myself having an attachment to is Dale Chihouly and wished that his new gallery had been open at our last Seattle visit in 2011.</p> <p>I will attach an image taken by me of a knife I purchased from Dan in 2000 on a trip to Seattle. Let me close by simply saying -- Go Huskies!!! However, I hope the Blue Jays can defeat the Mariners.</p> <p>Yours, BladeGallery Inc Customer: Murray White Home address: 1200 Shamir Cr. Mississauga, ON Canada Email: phymur@rogers.com Phone: 1-905-275-8320</p>	Murray White
04/27/2022	I cannot wait to see the new extension open to serve many people in our community. Safety, quick transfer from City to City, low cost, easy to get to and from, on and off.	Suu Bui
04/27/2022	Less pollution, less noise, low traffic	Phu An

04/27/2022	<p>Sound Transit Board Members and Seattle City Council Members,</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years, with increased noise & air pollution, dust, dirt, vibrations in the CID is unacceptable. Not to mention disruptions to 30 immigrant businesses permanently closed or forced to move due to 5th Avenue construction.</p> <p>My family business was directly displaced during the light rail construction on MLK in 2009 so I understand firsthand community and financial impacts of such development. Considering the pitfalls of the lightrail on MLK that competes with street traffic with countless collisions and fatalities, Sound Transit has a deep responsibility to move with equity at the forefront this time.</p> <p>The Chinatown community has historically faced so much adversities with development in the area as is, not to mention the economic impacts of COVID-19, and the rise of anti-Asian hate. 5th avenue closure will absolutely decimate this community and its history and it will be at the hands of Sound Transit.</p> <p>Sound Transit, take 5th Ave. off the table. 4th Ave Tunnel Station avoids 5th Ave impacts! Move Forward on 4th!</p> <p>Sincerely, Nurhaliza Mohamath Food Justice Coordinator at the Rainier Beach Action Coalition Community Leadership Institute Fellow with Puget Sound Sage Business Owner of Salima Specialties</p>	Nurhaliza Mohamath
04/27/2022	I like to see it happen on 5th instead of 4th. Safety, low cost, many routes and frequently is the best	Kim Nguyen
04/27/2022	Move forward on the 4th Ave option, the 5th Ave one is far to invasive to C-ID businesses!	Chloe Chow

04/27/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. 04/27/2022	I will be on when it open. Safety, low cost, fast speed, and easy to get on and off for disability person is the best.	Nhu Pham
04/27/2022	This expansion will be detrimental to the CID community and business owners. Minorities have been through enough the last several years with racism and small business closing due to the pandemic. Street closures for up to 11 yrs??? Ridiculous. Loud machinery for 16 hours a day along with poor air quality. Please do not put the CID through this nonsense. Think of the POC community.	Jessica Augustine
04/27/2022	I live in West Seattle, so happy to know that lightrail will open here, Any options is ok with me.	Chi Tran
04/27/2022	The transit route should be on 4th ave. The business that it would affect if any other alternate route is taken could destroy many lives. Also this town has memories and history. To make this work listen to the voices of those who will be affected in this decision. The 4th ave location is the least invasive.	Patricia Kuizon

04/27/2022	<p>I what to comment in favor of tunneling the Ballard extension rather than bridging. I support re-opening the 20th Ave tunnel study for a stop on 20th, because the high housing density and access to shops would improve ridership.</p> <p>If not 20th Ave I highly support a tunnel stop on the west side of 15th Ave, option IBB-2b. That stop would provide close access to a Target, housing, hospitals, grocery stores, and would be highly trafficked. I currently live off of 15th, and want to stress the importance of increasing pedestrian safety and comfort along that street, which is essentially treated like a highway. Any traffic calming measures, including providing safe transit alternatives to private vehicles, would save lives and property.</p> <p>On that note, I would encourage tunnel stations to be shallower, especially shallower than the UDistrict stations. The multiple layers of escalators break frequently, which makes accessibility unreliable.</p> <p>I also want to comment on the importance of designing an easily expandable system, especially designing for increased ridership. Namely, I think it is essential that Ballard not be planned as the most northern terminus for the line.</p> <p>Finally, I want to implore Sound Transit to consider two important quality of life elements when designing future stations: one is to include flexibility for small retail in stations. Being able to grab a coffee, breakfast sandwich, or quick lunch while on your commute would increase ridership, and rider satisfaction. Two, is to plan for expansive bike ridership to stations. The multiple bike storage options in the new station in UDistrict are a great start, but to plan for even more bike storage and bike access would save money in the future and induce demand for another alternative to driving to a station.</p> <p>Thank you!</p>	Ragon Dickard
04/27/2022	<p>Regarding the Ballard station alignments - I would reconsider reopening the study on 20th Ave tunnel station. I work in this area of Ballard and with future Link expansion (especially a connection from Ballard to UW) this would be a great help to commuting and quick access to other parts of the city. Additionally, this area of Ballard is adding several hundred new units of housing and will continue to densify, adding to ridership and a need to service this location.</p> <p>If this is not possible then a station alignment along 15th Ave NW would be preferable either via a high fixed bridge or a tunnel like the one outlined in option IBB-2b. While I live closer to this alignment it makes the area difficult to access for those further west closer to the downtown core of Ballard located around 20th Ave. Without traffic calming measures or other easy pedestrian access along 15th this location reduces accessibility of riders for the Ballard station.</p> <p>Additionally the stations planned for tunnel locations like in the Chinatown/International District should be shallower. Already commuting on the station at U District is difficult due to the many levels. It is a hazard to have passengers rushing down multiple escalators to catch a train. The deep stations are an issue for accessibility and overall rider safety and reliable trip times.</p> <p>Thank you!</p>	Zachary Turcich
04/27/2022	<p>Information share is greatly appreciated. I can't wait to see it completed.</p> <p>Safety, low cost, keep historical zone</p>	Chi Duong
04/27/2022	<p>The CID has tried so hard to make the area welcoming for all patrons and many of the old businesses no longer exist here. Please do not build the 5th Ave and please go with the 4th ave. Businesses and livelihoods will be affected as well as the community in the CID</p>	Mandy Truong
04/27/2022	<p>I like the idea of extension. Please keep it with low cost, reduce fare, no additional tax in the future.</p>	Mai Truong
04/28/2022	<p>Less polution, noise, cost, done sooner, so we can travel to West Seattle from Seattle. Chinatown, and Bellevue.</p>	Linh Vu
04/28/2022	<p>Safety, low cost, easy to get on and off.</p>	Lam Doan
04/28/2022	<p>I drove to work and take public transportation for fun activities with friends on weekend. Low cost, safety, easy access is must consider in new extenstion please</p>	Kim Phan

04/28/2022	<p>Wonderful news for the City, Please get them done sooner than 2032 or 2037 so I can try before too old.</p> <p>Many thanks!</p>	Hai Le
04/28/2022	Which option that low cost and safe for users is greatly appreciated.	Dung Huynh
04/28/2022	<p>In reference to EIS 5.4.4.2 Impacts during Construction: In addition to increased noise and decreased pedestrian and vehicle traffic due to construction, this project will decrease access to and inhibit the function of local businesses and community resources if this project were to take place on 5th street. This project threatens the well-being of key establishments in the local Asian community in the CID that are still trying to recover from the heightened effects of racism and xenophobia directed towards Asian businesses throughout the pandemic specifically. Please help preserve the CID community by choosing to NOT place the new station on 5th street.</p> <p>Thank you.</p>	Serina Dawa
04/28/2022	<p>I like and vote for lightrails extension. It's helpful for me now and the next generation.</p> <p>I wish to see shallow station and low noise in the neighborhood.</p>	Ly Tran
04/28/2022	<p>Hello,</p> <p>Please chose the 4th Ave alternative instead of the 5th Ave alternative! Having a station on 5th ave would disrupt so many businesses and would take away some of the reasons for people coming to that area in the first place.</p>	Ariane Evans
04/28/2022	<p>My children enjoyed the lightral rides. I wish the cost is low with construction, less polution, safety get to the platform with working elevator so they dont have to wait too long or unable to walk due to disability.</p>	Trung Tran
04/28/2022	<p>I drove and take bus sometimes, hope th process and construction would not damage to current historical areas as well as not heavy traffic. low noise and polution.</p>	Suong Nguyen
04/28/2022	<p>The ID is home to many wonderful and community oriented small businesses. It is one of the most culturally rich places in Seattle and I believe also one of the last. It would be immensely devastating to watch the city lose more of these businesses to poorly planned expansion that continues to go on in this city. The lack of planning and empathy to communities is tearing this city apart. While I believe that accessible transportation is very much needed, what good does it serve if we watch the businesses that make this city worth exploring in the first place disappear throughout the process. The ID is an extremely special place. I am an asian american first generation immigrant who grew up in the suburbs north of Seattle. And when I had moved to the city and explored the ID, I really wished that it was something I was able to spend more time in as a child. It is a place that should remain to be seen by generations to come. It is home to many lovely hard working people that make Seattle so great. Having community and seeing representation is everything.</p> <p>Please leave this community be.</p>	Claudine Magbag

04/28/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Roman Schindlauer
04/28/2022	Creating this light rail station will put many business and people risk of displacement.	Michael Pugal
04/28/2022	I don't think this project is particularly helpful to making the CID more accessible. Chinatown is disappearing and making main transport lines through the entrance is not the way. Many people rely on this area for their livelihood. Please reconsider and move the project somewhere else. A few miles radius won't make a difference in the long term, but will mean a great deal in the short term!	Minh Phuong

<p>04/28/2022</p>	<p>Considering the human displacement risks between 4th Ave and 5th Ave, having the station at 5th Ave seems to potentially displace more businesses and residents. To this end, please choose the option that reduces human displacement risks, which appears to be a 4th Ave location.</p> <p>When considering displacement risks, please also consider the historic, social, and political context of the very specific community the station will impact, i.e. the heart of the API community in Seattle that is barely hanging on in the face of gentrification, high rent, high cost of living, and drastically reduced access to social services and community resources. Consider the history of displacement on those who have built CID for themselves and their safety and culture. These are API immigrants who back then and today come to the U.S. with next to nothing, often escaping poverty, war, and violence in their home countries, and survive in Seattle only with the support of other API immigrants and sympathetic neighbors of color. Consider the displacement API residents in the early CID days faced at the hands of Seattle locals who formed violent mobs and forced CID residents of Chinese descent onto boats back to China. Consider the federal and local policies and laws that perpetuated long-term displacement upon Seattle's API community, including the Washington Alien Land Law that prohibited immigrants from owning land in this state and essentially forced Takuji Yamashita, a Japanese American law student whose bar admission was rejected by the Washington Supreme Court solely due to his Japanese heritage, to move back to Japan; the WW2 Japanese American Incarceration that drastically and permanently reduced both the Japanese American population of Seattle and the physical size of Nihonmachi, which once reached where the current Central District is, to just a few blocks in the CID today; and the construction of the Kingdom and I-5 that not only destroyed residential homes/apartments and local businesses but impacted the air quality and health as a result of increased pollution from nearby vehicle activity. Despite this history, the CID survives as a safe space, means of making a living, and a rich cultural community for API immigrants and their descendants, thanks to the activism of the community and its allies. Consider the recent decade of displacement of the CID's most vulnerable residents, including immigrant families and aging residents who live on a fixed income and often do not speak English, whose livelihood depends on the resources only available in the CID including ICHS, CISC, ACRS's food bank, culturally specific grocery stores, doctors, CPAs, teachers, religious leaders, caregivers, bankers, newspapers provide in their specific language. Throughout history, the CID and by extension, Seattle's API community has survived because its people supported and protected each other in the face of continuing adversity through the years. Consider the work and legacies of Uncle Bob Santos and Donnie Chin who worked their entire lives to protect the very people this project will potentially displace and make homeless.</p> <p>Consider the richness and individuality that the CID has contributed to Seattle's strength as a city. People in Seattle and beyond love the CID for its delicious food, its rich history, the fun shops, the anime, the lion dances and drill teams, the pop-up shops, the bubble tea, the Night Market, movie nights, etc. Don't forget the residents and the community who worked to create, preserve, and maintain this unique place. Don't reward all the work the CID has done to protect and sustain itself with displacement. Again. Please don't make the saying within the API community ring true: People love to eat Asian food but hate the people who make it.</p> <p>Having a station at 5th Ave will displace more businesses and more residents than the numbers provided for a 4th Ave station. The priority here should be reducing as much residential and business displacement as possible, even if it means the project will cost more or will take longer to complete. Vulnerable people, including low-income blue collar service workers who do not speak English and lack white collar skills or the network or resources to get those kind of jobs, make their living with the businesses that could potentially be displaced. They will lose their jobs and it will be incredibly difficult for them to find similar jobs in a safe and familiar community that is often geographically close to their homes and families and of course, with workers who speak the same language. Due to the complexities associated with most immigrant workers, they do not experience the same barriers in earning an income that most U.S. citizen workers in Seattle face, which are already high barriers already. Workers will lose their income and their ability to provide for their families and keep housed, especially when housing prices and rent is unreasonably unaffordable. Any government program that will help this large number of displaced workers will either need to be extremely thorough to meet the complex needs of these workers or need an extremely large investment to do so. The potentially displaced businesses are largely immigrant and BIPOC owned. Not only are you impacting vulnerable business owners but the services they provide are often culturally specific, to which the loss of these business will impact the residents and local API community that often go out of their way to travel to CID to get these services. In a city where immigrant and BIPOC business owners are already at a financial disadvantage compared to white business owners outside of the CID, building the station on 5th Ave will further perpetuate the wealth disparities in Seattle between races and citizenship status. Finally, having a 5th Ave station will also displace vulnerable residents living along this area, which includes many senior citizens on a fixed income and who often do not speak English. Again, in a city where affordable housing is becoming a rarity and homelessness is a major issue nowhere near to being addressed properly, displacing such vulnerable residents dependent already on public benefits and community services will only add and perpetuate the housing, rent, and homelessness crisis. It makes the City look even worse when you're</p>	<p>Jenny Wu</p>
-------------------	--	-----------------

	<p>making elderly non-English speaking immigrants homeless.</p> <p>This is personal to me as I have close family and friends who live and work in the CID and make their living off their jobs in the CID to pay the rent, buy a home, or send their children and grandchildren to school. My grandmother lived in a subsidized apartment building near 6th Ave and Weller, where she took care of me growing up. My grandmother and her friends living in this apartment would be detrimentally impacted by a 5th Ave station.</p> <p>Please choose the option that would create the least amount of displacement for CID's businesses and residents. Please do this to protect not just CID's current residents and workers but to respectfully protect the history and legacy of the CID, its builders, its community activists, and its protectors. Do this to not exacerbate the racial inequities this City has failed to prevent for the past decade (and even longer). Do this to save some of the progress and gains made by the API and CID community. Finally, do this to protect the future of the CID and Seattle's API community.</p>	
04/28/2022	I don't like the overhead stations and tracks running through busy residential and business areas. The visual impact and the impact on pedestrian and vehicular traffic appears immense. I strongly prefer tunnel alternative WSJ-3a.	Michael Phelps
04/28/2022	Find a better solution please	Ghada Haffar
04/28/2022	I took public bus to the station and transfer to the lightrail. I wish to see the elevator is working properly, clean, and safe	Xuan Nguyen
04/28/2022	<p>I only take public transportation on a weekly commute. I will try the lightrail when my grandson is available to take me out.</p> <p>Safety is my biggest concern for get on and off, to the station as well</p>	Danh Le
04/28/2022	<p>The deep option is better to me because it's decrease level of noise and it does not effect many things around.</p> <p>I voted for the extension with low cost.</p>	Son Nguyen
04/28/2022	<p>-Safety and low cost with light rail transportation</p> <p>-less pollution during construction</p> <p>-noise reduce in residential zone</p>	An Le
04/28/2022	<p>I have not have a chance to get on the lightrail and excited to get on some day soon. My family would love to take a trip in future.</p> <p>Hope tax does not increase on resident due to the light rail extension cost.</p>	Kim Nguyen

04/28/2022	<p>Dear Sound Transit,</p> <p>I am writing in regard to the West Seattle and Ballard link extensions draft EIS, specifically the Ballard/Interbay segment (executive summary pages ES-36 to ES-39). As a 13-year employee of Dusty Strings in Interbay, and also daughter of the owners and founders, I strongly urge you to choose the IBB-1b alternative, or to modify one of the other preferred routes in order to bypass our harp and hammered dulcimer manufacturing building at 3450 16th Ave W.</p> <p>Not only is Dusty Strings beloved in the Seattle music community, and not only are we the reason harp players in places like Italy and Japan have heard of Seattle and dreamed of visiting here to tour the factory where their harp was born, we also represent a dying breed of independent, family-owned, manufacturing businesses in Seattle. Our city is losing its unique character as businesses like ours are driven out by rising costs and the influx of giant tech corporations. In the face of this changing landscape, Dusty Strings has remained committed to staying in Seattle, employing local skilled craftspeople, and continuing to do business with integrity and heart. We talk to people every day who are so relieved that we still exist in this Amazon-dominated world - that there is a place to work where you are treated like family, that there is a place to shop where you are important as an individual and not a dollar sign, and that we are putting our hearts into creating heirloom-quality works of art that enhance people's lives.</p> <p>I support the light rail, and I know you have some really tough decisions to make. I realize that any route you choose will have an impact on someone's business or home, and I don't mean to say that Dusty Strings has more right to stay than anyone else does. However, I do think that being forced to move would be an exceptional hardship for our company. It's not something we could be reasonably compensated for, and it could take years to recover from.</p> <p>Having gone through a forced relocation 20 years ago when we were told we could no longer spray lacquer in our basement shop in Fremont, we know well the difficulty of finding affordable manufacturing space in Seattle that can support a one-of-a-kind business like ours. We have specific infrastructure needs as well as high materials costs and a low profit margin. The building we are in now was built 20 years ago to our custom specifications, houses four other small businesses besides Dusty Strings, and is the only reason we were able to stay in Seattle. It took five years and hundreds of thousands of dollars more than simply the purchase and building costs for us to move in, and we expected that we would be here for at least a couple of generations. Knowing how difficult it was then, and how much Seattle has changed in the subsequent two decades, I find it very hard to believe that Dusty Strings would be able to remain in Seattle if our current building were taken.</p> <p>While moving outside of the city might be an option, I believe it would be difficult for the company to survive. My coworkers and I (affectionately known as Dusties) have been looking forward to commuting to work using the light rail system we've voted for and are paying taxes towards, and it stings to know that we might instead be asked to sacrifice our workplace to the light rail and face a longer car commute instead. With homes in Seattle, families in Seattle, and kids in Seattle schools, I don't know how many Dusties would follow the company out of the city.</p> <p>A third of our crew have been here more than 10 years, and a few have reached the 30-year mark. Because the nature of our work is so specialized, it takes six months to train a new person to the point where they are actually contributing, and we depend on our longtime employees for continuity. To lose that collective skill and knowledge base and be forced to rebuild from scratch would be a massive blow that would take years to recover from. Coming on the heels of the pandemic, which has already put almost unbearable stress on us, it's honestly hard to imagine where we would find the energy to start over. Knowing how personally important our work is to so many people, I have to believe we'd find a way to carry on, but I still can't shake my fear that losing our building could be the final puff of wind that causes Dusty Strings to crumble the way so many other small businesses have in recent years.</p> <p>Please, if it's at all possible, choose the IBB-1b route or modify one of the other routes to bypass our building. We want to stay in Seattle in our custom and still-new building, we want to support our employees, and we want to continue doing what we love best, which is building musical instruments that bring people joy.</p> <p>Thank you for your consideration, Christy Mooers 12722 Roosevelt Way NE Seattle, WA 98125</p>	Christy Mooers
04/28/2022	<p>Lightrail is convenient, hopefully living in Renton can come to Seattle</p> <p>safety and low cost is best for seniors</p>	Thu Ta

04/28/2022	The the elevated stations (Preferred Alternatives WSJ-1 and WSJ-2) and the Medium Tunnel 41st Avenue Station (WSJ-5 other alternative) are the cheapest alternatives and impact the least number of homes in the area. This, of course, makes several assumptions: first, SoundTransit is serious about keeping costs down and impacting fewer people and their homes. As of August 2021, SoundTransit is over budget by 6.5Billion and many lines are delayed by at least 2 years later than planned. The second assumption is that SoundTransit does not exploit this opportunity to appropriate large to medium parcels, razing people's homes on them, rezoning and subdividing the lots, and selling them to builders for a net profit after they have built their line.	Prag Mishra
04/28/2022	Building the station at 5th Ave would disproportionately affect CID businesses, and harm/displace BIPOC communities. The 4th avenue choice would reduce impact on this historically significant area.	Andrea McCarthy
04/28/2022	Lightrail services is bring benefits to seniors in the community with low cost, easy to get on and off	Thanh Pham
04/28/2022	I like lightrail, convenient and cheap I wish the new extension is easy for everyone	Loan Tran
04/28/2022	Please slower the speed when in resident zone	Thanh Dinh
04/28/2022	-The lightrail is wonderful for our city, I hope less traffice during construction. Safety is my most concened for seniors and children in wheelchair or stroler	Lien Tran
04/28/2022	Lightrail is good to have in our City, Please dont tax residents we cannot affort higher cartab cost Less polution is better during construction	Phung Nguyen
04/28/2022	I hope during construction times no traffice issues in the neighborhood or impact so many residents	Thao Thao
04/28/2022	I have try lightrail in the past, it need a safer space on the ride for disability individual to avoid their wheelchair moving.	Le Tran
04/28/2022	I will share lightrail information to my friends and family members and will encourage them to give their feedback to the organization. Safety, easy to access, low cost, less noise, elevator is working and safety	Hanh Hanh
04/28/2022	I would like to say that having this route come through 5th Ave would cause nothing but a great loss to the CID. This historically significant and culturally rich neighborhood has been through the wringer, especially in these last few years. Closing down 19 locally owned and operated businesses and causing a decade of construction/road closures would be an extremely deep blow to a neighborhood which is already struggling to maintain. These last few years filled with hate crimes, constant theft, shootings, vandalism, and continued gentrification have already been so incredibly disruptive to many longterm business and residents. Whether this has come in the form of concentrated areas like 12th and Jackson or as the individuals who decide to come down here regularly to vandalize and/or steal from Asian owned businesses. This is also on top of the continued rise of rent and other disruptive new construction projects. The work people here have had to do just to get back up is fraught with extra hurdles. This decade of additional strain would cause more than 19 businesses to disappear it would demolish a big part of this neighborhood's identity.	Hart Boyd
04/28/2022	Lightrail is easy and fast, it help me a lot with transportatin issues.	Nga Huynh
04/28/2022	Many ways to improve our transportation system. Please consider the lowest impact to enviroment and residents with noise, polution, and relocation	Quang Quy

04/28/2022	<p>I am a strong supporter of public transit and I believe that the light rail is extremely important to our region. However, I have concerns around the way public transit infrastructure so often takes place in marginalized communities who don't have the resources or opportunities to advocate for themselves.</p> <p>Listening to the community and working with the people you intend to serve is crucially important when undertaking civil projects. Please take the concerns around the environmental impact, the traffic, the quality of life into serious consideration, especially in regards to the construction on 5th Ave (CID-2a and CID-2b). I recognize that public projects will never have unanimous support, and that change is an inevitable side effect of progress. However, I implore you to listen to what the community is saying - not just which proposal would be the least painful for them, but really listen to what they are saying.</p> <p>In the future, taking in these community concerns early on in the design process and treating them as major stakeholders (rather than making assumptions about what they want) would help get buy in and support sooner. Everyone impacted by the construction of the infrastructure should get a seat at the table. They deserve a representative or some way to give feedback ahead of time. They're owed that much, at least.</p>	Brian Park
04/28/2022	<p>I am happy to see the new development in the City and transportation improvement. Please consider on safety, times, and cost. If everything line up well and benefits residents then you are doing great job to keep our City growing.</p>	Manh Dinh
04/28/2022	<p>I wish to still avlive to get on with lightrail and experience the long trip from airport to West Seattle I will ask my grandchilren take me when it done -deep or shallow is fine with me, safety is the most consideration</p>	Chanh Chanh

<p>04/28/2022</p>	<p>I do not believe that the CID station (the stadium station) needs to be expanded. I believe that an alternative could be evaluated and ultimately chosen to place a hub in SODO or just North of SODO (between Holgate and Spokane Streets), an area that is mostly industrial and does not have a vibrant, unique community. A hub between Holgate and Spokane Streets would also allow extension to West Seattle and Duwamish waterway areas.</p> <p>However, it seems again that Chinatown-International District will be divided and reduced to a neighborhood that people pass through. Like the construction of I-5 which divided the neighborhood, this construction will ignore the residents, businesses, community centers and parks that make up this vibrant neighborhood. As a citizen of this area, frequent visitor to CID for my place of worship, and having voted for almost 40 years, I believe that Sound Transit should reconsider the impacts of CID2a and CID2b on the Chinatown-International District in relation to the following paragraphs: 5.4.1 Transportation; 5.4.2 Acquisitions, Displacements, Relocations; 5.4.3 Land Use; 5.4.4 Economics; 5.4.5 Social Resources, Community Facilities and Neighborhoods; 5.4.17 Historic and Archaeological; Parks and Recreational Resources.</p> <p>5.4.1 Transportation, p. 5-7 - "The project would either remove or convert some street parking to bus (or other transit) loading zones; however, the project would also be removing some of the residential or commercial land uses that created demand for parking in these areas." This admits that the project alternative CID2a and CID2b will take away parking, and remove vital businesses and residences in an already-densely populated area, in a neighborhood populated by people of color and the elderly. Those who do not live in the Chinatown-ID who travel from through King and Snohomish County to support CID businesses will have less parking. Light Link rail and Metro buses are not a safe or efficient alternative to personal vehicles for attending evening events at Hing Hay Park, the Wing Luke Museum, or the many restaurants. During construction, street parking is inevitably lost and street closure will decrease lanes available for vehicles, as we witnessed throughout the construction of the Light Link rail such as in the Roosevelt area.</p> <p>p. 5-14 -"Social and community resources within the Chinatown-International District Segment have historically faced multiple construction-related interruptions, delays, and accessibility issues associated with recent redevelopment and infrastructure projects, such as the First Hill Streetcar. Sound Transit would work with resource and community providers in the Downtown and the Chinatown-International District segments to minimize impacts from the WSBLE Project and maintain access to resources." A plan created with community input, needs to address these issues before choosing alternatives. Will buses be re-routed through the CID during construction? Jackson street is already compromised by the "First Hill Street car", whose ridership may view Chinatown-ID as a neighborhood they pass through on their way to the Stadium or Downtown.</p> <p>5.4.2 Acquisitions, Displacements, Relocations, p. 5-8: "Not all of the identified foreseeable future actions have finalized environmental documents, including displacement data, and all projects are subject to change from a variety of factors, such as funding and design modifications ...However, Seattle's recent history of large-scale redevelopment has caused involuntary displacement of individuals through the sale of rental properties to private developers.... Sound Transit's study of available and vacant properties within the WSBLE study area indicates that most, if not all, displaced entities could be relocated within the city, although not necessarily within the same neighborhood." More research is needed to determine which residences will be lost by CID2a or CID2b. Residents who lose housing in Chinatown-ID cannot be temporarily or permanently housed in another neighborhood. International Community Health Services (ICHS) is located in the CID, opened in 1975 as the first clinic to serve a diverse Asian population. Residents shop in stores where store owners speak their language, and provide herbs and food specific to their diets. Businesses will be closed due to CID2a or CID2b, located at: 418 5th Avenue South; 519 6th Avenue South; 515 South King Street (L4.1, p33).</p> <p>5.4.3 Land Use, p 5-10: "The WSBLE Project would support the goals of several regional and local plans, such as Puget Sound Regional Council's VISION 2050 (Puget Sound Regional Council 2020); King County's Comprehensive Plan (King County 2018); and Seattle's Comprehensive Plan (City of Seattle 2018b), Urban Village Strategy (City of Seattle 2015a), and Transit Master Plan (City of Seattle 5 Cumulative Impacts Page 5-10 West Seattle and Ballard Link Extensions Draft EIS January 2022 2016b), by encouraging mixed-use transit-oriented development and affordable housing through Sound Transit's Equitable Transit Oriented Development program in areas planned for high-density development. This development would occur predominantly in areas surrounding transit stations and would improve neighborhoods' appeal by improving transit, recreational, employment, and retail opportunities and accessibility." Chinatown-ID has already been the brunt of increased high-density development, which creates residences that do not meet the needs of the Asian elderly or the working class who currently live in the area. Recent high rise, increased-density residences do not maintain the architecture of the CID or reflect the different ethnicities that make up this neighborhood.</p>	<p>Andrea Mano</p>
-------------------	---	--------------------

	<p>5.4.4 Economics (p 5-10): “However, redevelopment has been occurring throughout the study area and would likely continue without the WSBLE Project and in relation to other foreseeable future actions. Planned private development projects would also increase the availability of residential, retail, industrial, and office space, as well as employment opportunities, within the project vicinity. As redevelopment occurs, it is also possible that it may become more expensive for business owners to operate within the study area, and it is possible that the WSBLE Project could contribute to a cumulative impact on businesses in the study area.” It appears that for CID2a and CID2b, Bank of America, a full-service bank that for decades has served CID and local Asian churches will be removed (Bank of America, 525 South Jackson Street, L4.1, p33). Businesses such as Oasis Tea Zone will close as the land it sits on will be acquired (519 - 6th Avenue South, L4.1, p 33), a business frequented by young, elderly and the Seattle Police Dept. Additional research should be done into alternatives to having CID2a or CID2b or having any additional station in CID.</p> <p>5.4.5 Social Resources, Community Facilities and Neighborhoods (p5-13) “... the Chinatown-International District was identified by the City as having a high displacement risk to residents and businesses. Increased property values and redevelopment encouraged by the addition of transit service could result in changes to neighborhood composition and character. These changes are already occurring to some extent with recent growth trends. Sound Transit is partnering with the community and other agencies on a community-based planning effort for the area to evaluate strategies to maintain and enhance community cohesion as well as strengthen connections between the Chinatown International District, Pioneer Square, and the transit hub. These efforts are in early phases and will continue during the Final Environmental Impact Statement and final design phases, guided by the community and informed by the actions of the Sound Transit Board to identify the light rail project to be built.”</p> <p>CID2a and CID2b should not be put forward as alternative until these “efforts” to partner with the community have been explored with community input and external consultants. CID already has a cohesive community, with health services, grocery stores, restaurants, community centers, housing, outdoor places to gather, without the addition of another Light Link rail station. Maintaining and enhancing community cohesion would therefore not require the addition of another station at 5th Avenue South. Each day, from sun-rise to sun-set, Hing Hay Park serves the elderly Asian community, who gather to talk, to walk and to exercise. Evening events on the weekend include outdoor markets, performances by the community or outdoor movies. The noise and reduced air quality from construction will reduce the quality of those who rely on Hing Hay Park as one of the centers for their community. Increased traffic during use can lead to increased problems, such as the recent attack at the Stadium station where a woman was thrown down the stairs and kicked.</p> <p>5.4.15 (p. 5-21 and 5-22) “Existing services, such as police and emergency service providers, would continue to be available in the areas they currently serve, as well as any expanded services which may be added to accommodate planned growth within the area. Station design and security services along the light rail system would minimize crime incidents and would not contribute to a cumulative impact.” Chinatown-ID is already underserved by emergency service providers and police. Tents continue to house people under I-5 along Jackson or King Streets. Another Light Link rail station will be another area for people to sleep and urinate in public. Additional research and commitment from emergency service providers is needed to ensure that adequate services or expanded services are provided, with an influx of additional people travelling through the CID.</p> <p>Thank you for your attention to these concerns.</p>	
04/28/2022	<p>I like this idea of lightrail extension, I cannot wait to get on.</p> <p>Please make sure it's easy to get to the platform for seniors with wheelchairs</p>	My Dung
04/28/2022	<p>I will try to get on lightrail when it done. Now I am driving for short distance</p>	Hien Pham
04/28/2022	<p>Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than four and a half minutes.</p> <p>Also the 5th Avenue options are all too disruptive to existing businesses and the CID community to be considered. The light rail should revitalize the area, not destroy it. Construction on this station is already projected to take at least ten years, what will the traffic look like in CID during that time? Stadium traffic and event parking already regularly disrupts businesses without additional construction.</p>	Larry Liang
04/28/2022	<p>Lightrail is safe and cheap</p>	Tham Nguyen

04/28/2022	As a resident of Seattle, I enjoy going to Chinatown and International District to visit the local and irreplaceable vendors and shops. Some of my favorite places are in proposed stations locations. Not to mention, more than just personal enjoyment of visiting these memorable businesses, many of these locations are family owned and local. Displacing these businesses, disrupting their operations, and reducing their customer accessibility is unacceptable and not worth the proposal. The long construction can destroy the Chinatown marketplace and economy so severely that may not be much to even visit by the end of construction thus reason to use the proposed transportation. Additionally, it is unnecessary when there are alternative transportation options and better potential areas available.	Anjali Sinha
04/28/2022	Deep is better, make sure elevator is working most of the time	Thu Le
04/28/2022	the idea to ruin CID for a stupid train for Ballard to west Seattle an area full of mainly rich people who can afford alternatives is disgusting and will ruin the lives of hundreds of employees and so many businesses owned and operated by primarily asain people who do not have the same business opportunities in other parts of Seattle Ballard and West Seattle are mostly made up of white rich people destroying asain owned businesses for the convince of rich white people is unethical and inhumane	Caden LaMar
04/28/2022	Dear Sound Transit, I am a resident and owner of a condo unit at 909 5th Madison, the so-called "5th&Madison" building. I have reviewed your responses to the questions of my community, and I am deeply troubled by the preferred option for the Midtown Station. The life of 125 families in my building would be upended for several years during construction: the potential closure of Madison St, closure of our garage gate, gridlock around the block, access to deliveries and even more importantly, access to emergency vehicles, will all be major disruptions in our everyday lives for years. Our building is the largest condominium building in the Financial District, has already suffered from the degradation of downtown Seattle in the last few years, and the proposed Midtown Station could deliver the final blow. I urge you to move the station to 6th St. Thank you for giving us the option to comment. Respectfully, Anna Goussiou	Anna Goussiou
04/28/2022	In regards to the new station in the international district, it would seem as though moving forward with the 4th ave alternative would be a more equitable solution, as it will be less disruptive to the residents and overall community of the international district than the 5th ave options.	Alexandre Beard
04/28/2022	I urge further study before finalizing the DEIS, which does not adequately take into account efforts to stabilize and strengthen a neighborhood already under tremendous stress. The CID is at the core of Seattle history, and yet has been repeatedly and destructively impacted by major infrastructure projects that ignored the cultural integrity of the community, namely I-5, the Kingdome, and subsequent stadiums. It is increasingly a fragile community, as witnessed during the Covid pandemic, when small business experienced violent racist attacks, and many remain boarded or closed. To think that such an already pressured, community of color can withstand years of construction closure and traffic is folly. Sound Transit can do better. It can show true leadership in more deeply studying the impact of construction and subsequent traffic and elevating the value of a historic and living community.	Barbara Johns
04/28/2022	Don't build on 5th. How about you build on 4th. Thank you.	Alicia Lawing
04/28/2022	Honestly, I'd prefer the no build option for the CID because all the alternatives seem highly disruptive. I worry about patients and elders accessing the health and social services at ICHS, shelter residents, etc. If you're going forward with light rail construction in the CID, the 4th Ave options would be preferable for the Asian-owned businesses in the area. It would be ideal to have no more disruptions in a historically marginalized community to begin with, but for the least long-term impact on local business and residences, please go with the deep station option (CID-1b).	Carol-Ann Smith
04/28/2022	Never understand the way some engineers design project without given any respect to the human factors, in this case, the proposed CID station location that will wipe out blocks of carefully preserved Asian cultural gem of this great Emerald City. Board members of Sound Transit should have more sense, I hope, to avoid destroying part of the city historic culture.	Dennis T Su

04/28/2022	<p>I'm upset and saddened to see the city and Link Light Rail taking advantage of the non-vocal minority of the underserved communities of CID. There will be a lot of businesses and communities that have been there for many years that will be affected. They have already been through a lot of trials what with COVID closures and discrimination and building the light rail through their community would be detrimental to their well-being and livelihood. It would be better for our taxpayer money to be spent on projects that help the businesses and communities in these areas as well as addressing the homeless population that also live in this area. I hope this takes precedence over building a light rail station that serves communities who are already well off and it is apparent that their communities take priority over those that are more in need.</p>	Norlaila Toulas
04/28/2022	<p>The environment impacts of a station on fifth ave in the CID are MUCH greater than those of fourth ave. I am more likely to use sound transit if I know it's protecting as many local businesses as possible.</p>	Laura S
04/28/2022	<p>West Seattle resident (westwood, formerly delridge), so only commenting on the areas I travel regularly:</p> <p>Preference for either of the DEL-2 designs over the DEL-1s. DEL-4 is also appealing.</p> <p>DEL5 and DEL6 feel like they're likely to complicate an already tense driving area, as well as suffocating Nucor.</p> <p>WSJ-3a and 3b's suggestion of a 3 year full closure of 35th is absolutely insane. 35th was recently impacted by a comparatively less disruptive closure for new bus stations, and it was brutal. Closing 35th for 3 years should be out of the question. 35th is a west seattle backbone, significantly wider than all surrounding streets, which are steep and narrow residentials that are already effectively one-way when cars are parked. There's no way to catch the overflow from a full 35th closure. If you take one thing from this comment, it needs to be this: Do not fully close 35th.</p>	Rick Steele

<p>04/28/2022</p>	<p>Hi. Please, please consider the impact on the West Seattle Golf Course. This is such vital place for community, sharing, learning, fun and being outdoors!</p> <p>This is about the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <p>The business disruption is closely similar for both of these options</p> <p>The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487</p> <p>The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for.</p> <p>The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year</p> <p>There would be no risk of golf balls hitting the trains</p> <p>The Parks Department supports the Yancy alternatives</p> <p>This is the only golf course that serves the West Seattle community</p> <p>Longfellow Creek would have no risk of damage to the fish or the creek</p> <p>The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes.</p> <p>Thank you for helping us keep our beloved golf course and making the light rail project efficient and useful as well!</p> <p>Regards, Janet Sweet</p>	<p>Janet Sweet</p>

04/28/2022	<p>Please acknowledge the potential consequences and ramifications of business displacements in the international district. The 5th AVE option causes more business displacements than the 4th AVE option. The 4th AVE option does cause business displacements but not as much as the 5th AVE option. It is the lesser of two evils. In any regard, please acknowledge any potential displacements and accommodate them during construction of the West Link to Ballard.</p>	Michael Sea
04/28/2022	<p>The negative impacts of this plan on the C-ID neighborhood are too great to continue unchecked. Please take this proposal back to the drawing board and consider alternatives that protect housing, small businesses and cultural institutions in the C-ID.</p>	Rebecca Chase-Chen
04/28/2022	<p>Rider experience should be the primary motivation for all decisions. Best station placement, ease of transfers, speed/ease of station/platform access and reliability is a must. Getting the most ridership is a must. Planning for expansion would also be preferred. We're building a system that will out live us so petty arguments about shortsighted goals need to be put aside. For example a 14th Ave in Ballard or SLU right next to 99 would be a wasted opportunity. Making downtown light rail and other major transit transfer difficult or timely is a non starter. Using movable bridges is a joke. We need to build an excellent urban system for riders and not let anything stop us. Don't take this opportunity away from us and waste it. Thank you for your time</p>	Joshua Karell
04/28/2022	<p>The Central / International District is a very important part of Seattle. Moving the entrances of the Light Rail Station to 5th Ave S doesn't feel like the best move. Many businesses would close. Construction would close streets for a decade, and the noise from the project would be a nuisance. Please consider the effects of the pandemic on the neighborhood. The anti-Asian sentiment that so many people endured during the pandemic is enough stress to deal with. Changing this important neighborhood is too risky.</p>	Brandi Carnes

04/28/2022	<p>Hello,</p> <p>As a lifetime resident of the South End and a sixth generation Seattleite, I strongly urge you to build the new station on 4th instead of 5th. Development in Seattle and the destruction of historic buildings, neighborhoods, and communities of color and the working class has been almost unmatched anywhere else in the country in the last ten years, in addition to the fact that the city has already gone through many other periods of massive development, destroying parts of our short and small and precious history and communities that was then regretted deeply later, including destroying part of the CID with the building of I-5. The neighborhood is already threatened by gentrification, as is the entire city, which is rapidly becoming unaffordable for anyone who does not have an extremely high paying job. The idea of destroying part of this small and one of a kind neighborhood and community for a second light rail station in the same area as the first instead of building on 4th would be absolutely shameful and ridiculous.</p> <p>Sincerely,</p> <p>Nick</p>	Nick Thompson
04/28/2022	<p>As a supporter and user of public transportation, I am grateful for the ongoing expansion of the light rail system. The expansion from West Seattle to Ballard will undoubtedly have a huge impact on the CID business and community. There are the hardships that come with this level of construction-changes in access to business, traffic and uncertainty and a permanent occupancy that will allow access but may also further increase property costs. The CID and community have spoken. They have pleaded to have construction plans moved forward to 4th and not 5th avenue. This move will still disrupt business and lives but it will be less detrimental. Please protect the CID community. What will be lost by moving forward with construction on 5th is too high of a cost.</p>	Stephanie Gomez
04/28/2022	<p>Only consider putting the link on 4th Ave S for the international district (CID). Don't choose 5th, it will displace many businesses.</p>	Zhane Spates
04/28/2022	<p>I think the light rail expansion near CID should take place on 4th avenue not 5th avenue. By extending the light rail system through the purposed route on 5th, it will significantly impact the Asian- American community, including numerous families who have worked so hard to carve a path for their current and future generations. Seattle has had enough gentrification throughout the communities of color, let's not destroy another meaningful part of Seattle that many Seattleites grew up with. Please consider saving this piece of cultural diversity that Seattle is known for and find alternative routes, such as 4th Ave S, to give the public access to this beautiful Chinatown International District</p>	Anthony Ngu
04/28/2022	<p>I would like to provide a comment in support of the proposed alternative for the 4th Avenue rail station in the C-ID over the 5th avenue alternatives.</p> <p>Both proposed alternatives would submit the communities of our AAPI neighbors to prolonged negative impacts to their businesses and way of life. Decades of construction projects that have routed through the C-ID have drastically impacted the communities and social and economic way of life of AAPI folks. While i believe wholeheartedly in the light rail extension, we must choose options that not only limit the environmental impact, but also the social and cultural impact of proposed development. This is environmental justice: historically marginalized communities should not shoulder a disproportionate burden to provide an environmental amenity to the larger Seattle area</p> <p>After reviewing the two alternatives, I believe the one that pursues the practice of harm reduction - or, will have the least potential negative impact - is the 4th Avenue alternative.</p> <p>Additionally, if businesses and employees from BIPOC communities are displaced, STB should take all measures necessary to provide financial assistance to those impacted business owners and employees.</p>	Grant Gutierrez
04/28/2022	<p>Please consider the 4th Ave option for light rail construction. Using the 5th Ave option will greatly impact the CID, which is already economically disenfranchised by Covid and xenophobia. Do not displace a whole neighborhood!</p>	Gabriella Vogt

04/28/2022	Please choose an alternative route for the light rail! I applaud the ingenuity of this form of public transit, but cannot support tearing through historical sites and allowing marginalized populations to bear the brunt of what ultimately benefits mainly wealthier white populations. Yes, WA. Is about progress and also needs to be about what is fair and equitable for all involved, especially those living amidst the destruction of sacred spaces and seeing their community and livelihood be turn apart once again.	Wendy Barth
04/28/2022	I'd prefer frequent bus connectors and coordination with current bridge development to a separate West Seattle bridge project. I would like to see better cooperation between agencies. If collaboration is happening, it doesn't seem that way and perhaps more communication about that would be appropriate.	Lisa Reager
04/28/2022	The US has a history of displacing ethnic neighborhoods for transportation projects. Sound Transit needs to make sure that is not repeated in this project.	Teresa Jewell
04/28/2022	<p>Thank you for your efforts on this light rail project! As a Seattle resident who relies on public transit, I sincerely appreciate additions that will positively impact so many through the years. I do have some comments on route alternatives for the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>2 of the "preferred" routes would remove the specifically purpose built manufacturing home of Dusty Strings currently at 3450 16th Ave W. This company is a Seattle native, family-owned and operated here for 43 years. Employing over 60 local people, and having grown into a globally recognized and respected harp builder.</p> <p>More than that - I'm 37 years old, with multiple degrees, and have worked across a variety of industries in multiple states. I've just completed my first year employed at Dusty Strings, and I can sincerely state that it is the most ethical, compassionate, and responsible company I have ever worked with by far. They go above and beyond for both customers and employees, as well as working intentionally to support their community and operate with care for the environment. Any city should be proud to have a company like this represent them, and Seattle is lucky that Dusty Strings has tried so hard to stay here, even when it has become increasingly financially difficult as the city transitions to nearly exclusively tech.</p> <p>I STRONGLY SUPPORT ROUTE ALTERNATIVES, such as the proposed IBB-1b alternative, or other alterations that would preserve the purpose built manufacturing home of Dusty Strings. Replacing this building - with its mill shop, craftsman woodworking space, finishing room, lacquer facility, sound-protected assembly space, and all the massive amounts of supporting infrastructure for such an artisan business would require a level of time and financial cost that might not be possible. Especially in the wake of a pandemic that continues to seriously impact manufacturing businesses.</p> <p>Please, please consider the benefits to keeping Seattle a home to more than tech. To small businesses that demonstrate how to compete on a global scale while being entirely locally operated. To companies that live out the ethics of equity and inclusion, and whole person support for their employees.</p> <p>Please consider route alternatives that preserve the manufacturing home of Dusty Strings.</p> <p>Thank you.</p>	Lillian Johnson

<p>04/28/2022</p>	<p>I have been an urban dweller my entire life; living in Chicago, Paris and NYC. All great living/pedestrian cities with some of the densest transportation systems available. I have been trying to support/live that same urban style in downtown seattle for the past 15 years or so. I have 3 key frustrations/disappointments with the current plan (and others).</p> <p>Integration and Leveraging While Seattle is very fortunate to have many passionate and committed individuals and groups to help develop our great city, most all of the efforts are independent, non-integrated and therefore often wasteful. Repeating/solving many one off, similar tasks over and over in the same area rather than sharing , leveraging and building in addition. Why we are building yet another tunnel through downtown first ...and then expanding outside of? The fact that we can't find ways to share current tunnels is shocking. We have seen the reports that show we are one of the only large urban areas that use many more trips to transport far fewer passengers. Why cant we, like the dense urban areas i mentioned above, find ways to share the tunnels. NYC, Chicago and Paris all figured it out. Wasteful, under-leveraged spending.</p> <p>2. Pedestrian Friendly/True mixed use Downtown NEIGHBORHOOD. Seattle is a city of great neighborhoods...except downtown. We still treat it like a commuter/shopper corridor. 1st Avenue and 5th Avenue are our only two more intimate downtown streets for a great pedestrian experience, in comparison to our very broad 2nd, 3rd, 4th and 6th. Why would we destroy and convert yet one more street for transit, rather than allow 1st and 5th to be a great pedestrian paradise? If we want Downtown to be a true neighborhood we need to attract and think about people who are/want to live there there 7x 24...not just passing through 9 to 5 Again, consolidate/share the transit corridors sandwiched between two intimate streets 1st and 5th</p> <p>3. Relating to above; the residents of the downtown are the very last on the list of considerations. I have been trying to make downtown my neighborhood for almost 15 years patiently waiting for acknowledgement that people live here. Construction, noise, services, always cater to the 9 to 5 business community first, then tourists. With the unprecedented shift in housing costs being close to equivalent to commercial office space....and the fact that we want to 'rebuild' our downtown into a neighborhood we can be proud of as an international example, the residents may want to become more of a priority. The current 5th avenue plan will have very negative impact on quality of life for many residents. Many residents who have been patient and trying to be faithful to the evolution of our downtown.</p>	<p>andrea vanecko</p>
-------------------	--	-----------------------

04/28/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of Park property on the golf course.</p> <p>Following are my reasons:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B.</p> <p>2) The business disruption is closely similar for both of these options.</p> <p>3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487.</p> <p>4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than how it was intended to be used.</p> <p>5) With the Yancy/Avalon routes, the loss of revenue and recreation opportunity would not be impacted for over 60,000 golfers each year.</p> <p>6) There would be no risk of golf balls hitting the trains.</p> <p>7) The Parks Department supports the Yancy alternatives.</p> <p>8) This is the only golf course that serves the West Seattle community, and is one of only four in the city.</p> <p>9) Longfellow Creek would have no risk of damage to the fish or the creek.</p> <p>10) The mature trees all along the North edge of the golf course would not be cut down.</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Jennifer Broadstone
04/28/2022	<p>Hi, I am a concerned community member particularly for this projects decision to add a station/link to the Chinatown International District. As an Asian-American, who has grown up in the area, it is painful to see how much gentrification and damage new development and Seattle's unhoused population has decreased the Asian diaspora there for both residents and businesses. I please ask that Sound Transit considers how the construction will impact the communities in the area. This construction will cause closures and disruptions to traffic that the CID businesses are desperately needing as they are still recovering from COVID-19 and at an amplified rate due to the stigma and anti-asian hate that was brought up the community. Please think about people and community, not capitalism and construction when you decide to develop in underrepresented places. The residents of the CID are mostly non-native English speakers and even those who do not reside there but are from the AAPI community that come to support, please consider the best option to cause less harm and disruptions. I don't want to see my community disappear even faster than it already has - if the project must proceed please continue to move forward on 4th and stay away from the main hub of businesses and homes.</p>	Bryanna Bui
04/28/2022	<p>The CID deserves to have a more responsible and community friendly station that serves the residents and members of that neighborhood. It's already been cut in half by a freeway and been hit economically by the pandemic. The 4th Ave option is by far the best for the whole city. Do better.</p>	Taylor Aikens

04/28/2022	<p>As a frequent patron to the C-ID, please move the 5th Ave options to 4th Ave. This district that brings culture and diversity cannot endure more displacement. People from far and near rely on this neighborhood for their necessities. To eliminate these small businesses who are owned and operated by marginalized families further disenfranchises people of color. To even temporarily eliminate the already scarce parking and access to parking would discourage frequent visitors from other cities and tourists because of the lack of access. I commute from up north and parking a consideration of whether I will come. Though it may be temporary, but it will cause less harm on 4th than on 5th. Even just a few months of disruption for small businesses will cause them some to shutter completely.</p> <p>Carving up this neighborhood sends a message and will make national news. Please consider protecting our AAPI community and being a model of what it looks like to actually protect marginalized people.</p> <p>Thank you, Rev. Angeline Lau</p>	Angeline Lau
04/28/2022	For west seattle - delete Avalon station and put \$ towards medium tunnel option for Alaska junction station. Place station at Bank of America site.	Michael Brunner
04/28/2022	Please build the light rail station through 4th instead of 5th in the International district. This will be much less disruptive to the local businesses.	Liza Dinh
04/28/2022	<p>A tunnel option for West Seattle is the only way forward. An elevated route would destroy hundreds of housing units in the middle of a housing crisis. And with land values skyrocketing, by the time construction would begin, a tunnel likely be the cheaper option for taxpayers.</p> <p>In addition, keep the Avalon Station. Those advocating for dropping Avalon fail to consider (i) the amount of high-density housing on Avalon and surrounding streets; and (ii) the hill climb that would be necessary to reach a station on 41st/42nd. For folks with mobility challenges, Avalon Station is a necessity.</p>	Jeffrey Maxwell
04/28/2022	Prefer the 4th Ave option for the CID station to better protect existing businesses.	Marshall Blaine
04/28/2022	While I support the expansion of public transit, especially for the access it could bring to those who live & work in the C-ID and the business it will bring to the C-ID community, I ask that you select the 4th Ave option, which will have the smallest impact on the existing neighborhood and community. As someone who frequents businesses in the C-ID, I have seen the suffering caused by the pandemic and the increase in property damage and hate crime in the C-ID and our local AAPI community. Some of these businesses will not survive the disruptions from construction and would not gain the benefits from the transit expansion if a 5th Ave option is selected. The people and community of the C-ID do not need the extra burden the construction would cause. Choosing a 4th Ave option will have the least detrimental impact on the community and neighborhood.	Sandra Faucett
04/28/2022	I worry about the impact this will have to the CID community and businesses. With xenophobia and anti-Asian hate crimes running rampant, this will likely cause an even larger increase.	Kelsey Szuba
04/28/2022	<p>After reading the Draft EIS, I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). (Oppose DEL-5 and DEL-6, Page ES-16)</p> <p>Alki Beach Academy is one of the very few childcare options in West Seattle. If forced to relocate the facility, 300 children would be displaced and Alki Beach Academy would have to move outside of West Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community. Please do not force them to relocate. Thank you.</p>	Kyle Murdock

04/28/2022	As an Asian American and loyal customer to many businesses in Chinatown-International District, I beg you to protect those businesses' livelihood and choose the 4th Ave option for the new light rail station. So many of those small, family-owned and -operated businesses are what make the city of Seattle so special and rich with culture. Many people who visit Seattle make it a point to visit this neighborhood, countless residents depend on these businesses for food and grocery, and to gather as a community. I hope you hear our voices loud and clear and understand the devastation that NOT building on 4th would cause to many thousands of people.	Kaitlyn Yamamoto
04/28/2022	For the Delridge Segment, we encourage you to choose the Preferred Dakota Street Station Lower Height (DEL-2a). Our priority is that any route traveling along SW Genesee Street should travel along the south side of Genesee, to avoid the north side of Genesee where Longfellow Creek remains one of two salmon-bearing creeks in the City of Seattle. The loss of parkland in this instance is from the West Seattle Golf Course, which should not be prioritized, as it is neither an environmental nor local community benefit. DEL-2a also provides high opportunity for equitable transit-oriented development around the Delridge station. As outlined in the Racial Equity Toolkit analysis, bus/rail integration should be prioritized, specifically in proximity to Delridge Way SW. Many transit riders will be accessing Sound Transit from South Delridge, White Center, Burien, and beyond, and the ST3 Delridge Station should be close to Delridge to provide an accessible transfer experience, inclusive of transit riders of all abilities. For this reason, the Andover Street Station options should not be considered.	Scott Schubert
04/28/2022	<p>Please consider my comments for the West Seattle and Ballard Link DEIS as follows:</p> <p>A. General Comments</p> <p>First and foremost, design the system for transit riders and the optimal rider experience. Traveling between the station platform and the surface should be quick, straightforward, and reliable. Transferring between transit lines should also be quick and easy, especially at the major transfer points at Westlake Station and International District/Chinatown Station.</p> <p>2. Build the system to maximize ridership. Design a good rider experience and ridership should follow. Still, even the most elegant station will struggle for riders if it's in the middle of nowhere, with few homes, jobs, activity centers, or transit connections nearby. Preliminary ridership projections aren't the be-all end-all, but all things being equal, the station alignment projected to get higher ridership does have a leg up.</p> <p>3. Design the system to be easy to expand. Ideally, West Seattle Junction will not be the southern terminus long as the line extends south to White Center and Burien. Likewise, Ballard should not be the northern terminus long as the line extends north to Greenwood and perhaps east to Wallingford and the University District. Meanwhile, a future Aurora rail line may link up with the new Downtown light rail tunnel near South Lake Union Station. Planning with expandability in mind could save billions of dollars and numerous headaches down the road.</p> <p>4. Station locations should unlock transit-oriented development (TOD) opportunities to the highest extent possible. A station isn't just a transit stop, it can be a catalyst for neighborhood development and housing growth, both market-rate and affordable. Sound Transit has an Equitable Transit-Oriented Development program that has aided in the construction of hundreds of affordable homes on the agency's surplus properties. Alternatives more favorable to TOD have an edge and they will help the system attract more riders down the road by allowing more people to live in close proximity to light rail.</p> <p>5. Construction impacts are important but shouldn't solely determine a 100-year investment. Construction-related road closures weigh heavy on the mind of policymakers, but it is crucial we pick the right station for the future of Seattle and grapple with the construction impacts that entails. Closing a busy road for a few years is a small price to pay to add a light rail line that will last centuries. The priority in mitigating construction impacts should start with prioritizing pedestrian access, transit operations, and bike routes.</p> <p>6. Cost is an important factor, but we shouldn't shy away from big investments where there is a high return. Mostly we are worried about building this right, but we can't dismiss costs, especially since some high-ticket items will require third-party funding, which could be difficult to secure. Controlling costs is also key to avoiding delays to these much-needed transit lines.</p> <p>B. Detailed Comments</p>	Anne Drew Hu

	<p>West Seattle Link</p> <p>a. Junction - Medium Tunnel 41st Avenue Station: Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings.</p> <p>b. Avalon - Retained Cut: Prefer WSJ-5 with a request to study a refined DEL-6 pairing.</p> <p>c. Delridge - DEL-6: Study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].</p> <p>d. SoDo - Mixed Profile Station: Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking.</p> <p>2. Ballard Link</p> <p>a. Chinatown-International District - 4th Avenue: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than 4.5 minutes.</p> <p>b. Midtown - 5th Avenue: Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>c. Westlake - 5th Avenue: 5th Avenue Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access.</p> <p>d. Denny - DT-1 on Westlake Avenue: Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower.</p> <p>e. South Lake Union - Harrison or Central SLU: Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible.</p> <p>f. Uptown / Seattle Center - Republican Street: Prefer Republican Street Station and work to mitigate impacts to arts organizations to the extent possible.</p> <p>g. Smith Cove - Galer Street: Preferred Galer Street Station [SIB-1].</p> <p>h. Interbay - Retained Cut or Slimmed Down 15th Avenue Elevated: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3].</p> <p>i. Ballard: Study pairing a high bridge with an elevated 15th Avenue Station and to continue to refine all tunnel options to put a station entrance west of 15th Avenue. Open additional study of the 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p>	
04/28/2022	<p>Hello,</p> <p>While the growth of the light rail brings changing landscapes and the promise of increased ease of transportation, the application of this change without regards to historical and cultural significance can bring harm to the very people this transportant should serve.</p> <p>Seattle is for all of us who live here, especially the people who have built it and maintained community through the years. I am opposed to the 5th street building location as it will hold the largest detrimental impact on this community. Honoring the communities request to build elsewhere or prioritize the 4th street location is the top priority.</p> <p>Don't choose the 5th street building locations.</p> <p>Thank you.</p>	Avalon Roe
04/28/2022	Please continue with the 4th ave option other than 5th. It does much less damage and is more practical	Xander Rico

04/28/2022	The CID already has the I-5 running through it, why does the new train tunnel have to come through as well? The construction will disrupt businesses and make parking even more difficult than it currently is. New options should be explored. Of the current options proposed, it seems like the ones of 4th street (CID-1a/1b) may be the least harmful, but still not ideal.	Lan Nguyen
04/28/2022	As someone that uses public transit on the regular, nothing makes me more frustrated when huge disruptions to businesses I want to visit occur because of public transit construction. The 4th Ave option feels the least disruptive and have my support. The alternatives to 4th do NOT have my support.	Amanda Wilber
04/28/2022	Connection to the station from the neighboring communities is important in determining how much the Interbay station is used. As Dravus is steep and inaccessible, frequent bus connection along Dravus is necessary. Additionally, a pedestrian and bike connection to Ship Canal trail would be a vital connection for SPU students and as a connection to Fremont. Regarding the Ballard stop, the station would have to be as close as possible to downtown Ballard to be useful. A station on 15th with an entrance on the west side of 15th would be much more useful than the proposed location on 14th. For connectivity to North West Seattle and North East Seattle, it's important to consider future expansion North and East when designing the Ballard station.	Eva Thomas
04/28/2022	Adding an additional station on 5th ave in Chinatown/ID perpetuates poor health, poor air quality, and increased noise pollution for potentially over a decade in a population that has been continually abused by the city through various construction projects such as the King Dome, CenturyLink (Lumen) Field, and the streetcar. I implore the city to expand their ideas and explore options that don't require further construction in a historical neighborhood of an already marginalized population. This isn't very equitable of you. Do better.	Theo Small
04/28/2022	Please do not go through with these plans. Born and raised in Seattle, and there are so many other things the money could be invested in. For starters, this money could willingly help the homeless issue that continues to enlarge itself year after year. Consider those who have been in the community even before time and are still there til this day. Evacuating the area To build more rather than fixing more TRUE problems at hand. I VOTE NO.	Aries Franklin
04/28/2022	The Avalon station is not needed. It is a 10 -12 minute walk from the 7-11 on 35/Avalon to the Junction. Eliminating this station would save homes, jobs, time and money. Please reconsider ripping up the Genesse neighborhood and skip the Avalon station.	Stephen Duda
04/28/2022	I strongly believe that putting a train station in the middle of International District will hurt a lot more than it will help. It will put many elderly people out of their homes and out of business. There is already a light rail and busses, there doesn't need any more construction and the destruction of peoples homes and businesses. Not everyone is rich and can afford to just up and move to a new home or find a new place for their shops. This would be detrimental to our community and would destroy the way that people experience this historical part of Seattle.	Daniele Schwenk

04/28/2022	<p>The building of a new train station in Seattle's Chinatown-ID has the potential to displace hundreds of employees and businesses crucial to this neighborhoods economy and the culture and wellbeing of the city of seattle. For years the establishments in this neighborhood have fed and entertained us, satiating our physical and cultural appetites. People find home in this community and it is personally one of my favorite places in Seattle. It is one of the rare areas in the city that has any prominent asian community, let alone a community where Asians are the majority rather than a steep minority. In high school when I went to a predominately white institution, this neighborhood felt like a way to escape and feel comfortable without the pressures of whiteness all around me. To this day as a college student, I return time and time again to the businesses in this neighborhood that I have been frequenting since before I could drive a car. To move forward with the 5th Ave expansion plan would severely impact and harm--if not demolish--some of my favorite bakeries, restaurants, grocery stores and more. I always look forward to coming to the CID and any time a friend visits from out of town, or I make plans to catch up with someone, I come here. You are putting people's livelihoods at stake. These people have continuously contributed to our city and each day make it a better place to be. This destruction is inhumane and must be stopped. These communities have endured too much, from the foundation of the CID to the continuous construction of large city projects separating and destructing the neighborhood. I urge you to not move forward with the 5th Ave expansion options and choose alternate plans such as the 4th Ave site to minimize the damage of this expansion.</p>	Flora Medina
04/28/2022	<p>I am concerned about the health impacts on the residents and elders. I am concerned about the fact that as a long time, community member, resident, and business owner, (with family owning businesses in the neighborhood for 20+ years), what the impact will be on displaced businesses, and the ability to get to CID as it is already difficult enough. I am concerned that this construction that will displace historical businesses and spaces without ever acknowledging or remembering their presence and importance to the neighborhood.</p> <p>Plan CID 1a, CID 1b, CID 2a, CID 2b, will all be terrible for the neighborhood. This needs to be any where else outside of the CID. This is the only cultural community as a link light rail stop, and you are deciding to kill the neighborhood, its' business, and its' residents.</p> <p>What do you plan to do for the business that are impacted? Why did Sound Transit only provide us two options that will both be deadly to us? How will you make sure that CID and its' residents are protected from the environmental impacts? How can you ensure that the years of construction will not impact the wellbeing of the many elders and seniors living here? Haven't you done enough of cutting through our neighborhood?</p>	Monyee Chau
04/28/2022	I favor the option with the tunnel and station at 42nd and Alaska.	Zachary Ramels
04/28/2022	<p>Upon review of the draft EIS, I have serious concern regarding the impact of the project on the Chinatown-International District (CID) community and in particular the impact of proposed project construction along 5th Avenue. As a fourth generation Japanese American and descendant of a WWII concentration camp survivor, the CID means a lot to me. It is a place of comfort, cultural connectedness and belonging. It has provided a rich, resilient, and vital community space in the midst of rising anti-Asian violence and the enduring legacy of racist policies and injustice. More thorough and community-centered analysis is needed regarding the true impact on the CID community, in order to prevent further displacement and destruction of this neighborhood. I urge you to not go forward with any of the proposed projects along 5th Avenue, and to engage with CID community leaders in identifying alternatives, next steps and solutions for moving forward in a good way—not continuing the violent historical pattern of burdening communities of color with disproportionate harm in the construction of new infrastructure.</p>	Hana Ferronato

<p>04/28/2022</p>	<p>Dear Sir or Madam</p> <p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS.</p> <p>I support either of the Andover/Yancy Avalon routes. I oppose any route that disturbs the integrity of the West Seattle .golf Course.. And I strongly oppose tunnel alternatives that are unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>I do support mass transit and believe we must strive to find solutions that balance cost, loss of business and residential property and preserve green space.</p> <p>My husband and I are avid golfers and live in the North Beach neighborhood north of Ballard. I have belonged to the Womens' ' club at West Seattle for over 15 years and choose to make the long commute made even longer by the closure of the West Seattle bridge so that I can enjoy this spectacular Seattle landmark. We realize that our golfing days may be over before this plan is implemented completely but believe it is our civic and human responsibility to SPEAK UP!</p> <p>Some of the reasons for supporting Andover/Yancy/Avalon routes include the following:</p> <p>Estimated budget is the same or cheaper than current "preferred" option for Andover/Yancy/Avalon routes at \$1.6 B or 1.5 B. Any reasonable option at \$100 million less cost should be preferred) The business disruption is closely similar for both of these routes. The property disruption is less for both Yancy alternatives. The Genesee routes likely violate Seattle City Ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for. The Parks Department also supports the Andover/Yancy/Avalon alternatives The West Seattle Golf Course has served the citizens of Seattle with excellent recreation, community fabric and vibrancy as a business for over 80 years.</p> <p>While respecting the need for rapid transit via expansion of light rail, routes that do not impact this unique parkland are the only options that should be implemented!</p> <p>Sincerely,</p> <p>Maureen Kennelly Don DeWeese 1919 NW 96th Street Seattle, Wa 98117</p>	<p>Maureen Kennelly</p>
<p>04/28/2022</p>	<p>I have heard from elders that attended meetings that there gas/air/exhaust/fumes will be vented out of the tunnel(s) and into the community over 5th Ave if the proposed 5th shallow or 5th deep are accepted. I am concerned about the long term health impacts of having this exhaust directly over the community. We know that there are higher incidences of poorly controlled asthma in communities living around airports (among many other examples of health impacted by community environment). If the proposed 5th Shallow and 5th Deep are accepted:</p> <ul style="list-style-type: none"> —How will placing the exhaust air/fume/gases over 5th Ave affect the next generation of Seattle's children? —What are the healthcare costs associated with treating children with moderate-severe persistent asthma? —What are the healthcare costs associated with treating children with asthma exacerbations? —How will the community keep future generations safe from the environmental impacts of the proposed plan? —Are these costs less than what it would take to build over 4th St? 	<p>Philip Fallah</p>
<p>04/28/2022</p>	<p>Please reconsider the new station plans and move forward with 4th. While both options will impact the ID greatly, the 5th Ave options will have more detrimental impacts to our neighborhood - after a history of construction impacts, xenophobia, hate crimes, and the pandemic should not bear.</p> <p>The 5th ave options will displacement 19-27 businesses and 170-230 employees and eliminate 155-195 parking spaces. The 4th ave will impact similarly, but not to this extent.</p> <p>Thank you for taking the time to resconder this plan.</p>	<p>k w</p>

04/28/2022	Please don't break up the international district! The 2 stations on 5th are so much more detrimental than just one on 4th. The community is going to feel this for a long time and it is worth it for transit, but don't make it harder for the people already living there (who will get pushed out by high rents once the station is complete.)	Kay Nugent
04/28/2022	Why in the CID, where a Sound rail station and traditional rail station both already exist, do we have 5 options that impact the lives and businesses of so many people? Can nothing be done to augment those existing stations to be Ballard rail ready? Can we not propose another alternative where people aren't removed from their livelihoods? I don't see any sort of health impact report published here either. Where is the info on short and long term health effects of the people living in the community?	John Eckstein
04/28/2022	I strongly encourage the board to consider future rider experience and choose stations which are as shallow as possible and have excellent transfers to other lines and services (e.g. buses). Current stations suffer from unreliable vertical conveyance so planning very deep stations which rely on a lot of escalators and elevators seems like a recipe for a poor rider experience as well as high maintenance costs. Finally, stations should be placed near existing dense neighborhoods which have taken on much population growth in anticipation of improved transit service.	Brett Youngstrom
04/28/2022	This comment is for the West Seattle Junction segment of the light rail route. Please use the information from the DEIS to select an alignment that minimizes displacement and maximizes use of TOD once construction is completed. In the DEIS Chapter 4, section 4.2.2.5.2, mentions that tunnel alternatives provide more potential for affordable housing to be built. In the FEIS, it would be helpful to provide estimates of the amount of affordable housing to be built with a tunnel station in the Junction vs an elevated station. In order to minimize displacement, maximize land use and increase equity by more affordable housing with TOD, I hope the Sound Transit Board will seriously consider tunnel alternatives. Especially since there are tunnel alternatives that are comparable with price, timeline and ridership estimates. Thank you and I look forward to the next steps.	Nick Chiosie
04/28/2022	I think the push and demand to make the light rail possible no matter what is really fogging up the possibilities available to public transportation. There is no reason to displace business and residents, just because its a "small sacrifice". There are other alternatives like gondolas or ferries that can be suitable. I also believe stations do not need to be in the middle of west seattle by way of sacrifice of those business or residential areas. Putting stations on the outskirts or along shore of the sound could be much suitable without impacting already established business and residents.	Corey Dennis
04/28/2022	The proposed Sound Transit link being built on 5th Ave S will negatively impact the area, closing down 19 small businesses including Ping's dumpling house, Musashi's and Seattle's Best Tea. 11 years of construction right at the CID gate will impact the rest of the area. With many of the current restaurant owners just barely making it now, this will inevitably harm and harm many more CID places. Please strongly consider 4th Ave instead.	Claire Weber
04/28/2022	Why are we asking those who have suffered the most to endure even more hardship? No matter the final decision, the people and businesses of Chinatown-International District will be greatly impacted by Sound Transit's expansion of the station in that neighborhood. However, the 5th Avenue options will be the most detrimental The Chinatown-International District is a lifeline for many, notably low-income and disabled Asian elders. Do not hold this neighborhood hostage with years of disruptive construction on 5th Avenue. This is further violence against the Asian community in Seattle.	Richard Murray
04/28/2022	As a resident of Seattle, Pioneer square specifically, my partner and I frequent the ID neighborhood via car and walking. For commuting, my partner uses the streetcar to which is very helpful and sufficient to what has already been done in ID. We visit/are a customer of ID businesses at least 3-4 times/week. Adding the Ballard rail will not only affect the businesses that you're demolishing but the patrons and residents who use them out of necessity. Please reconsider your plans.	Iris Miyasaki

04/28/2022	<p>The proposed 5th avenue route for the link through Chinatown will have detrimental effects to the International District neighborhood.</p> <p>It limits access in the cid neighborhood along 5th ave S, King St. and Weller st. It displaces businesses and demolishes buildings where many Seattle people have relied on for service. It displaces employees. It eliminates accessible street parking for all residents and business owners. Station construction will require years of street closures, detours and loud machinery in the C-ID for 16 hours per day along with poor air and sound quality.</p>	Lena Nguyen
04/28/2022	<p>I am writing to express my concerns with the DEIS for the West Seattle and Ballard Link Extensions (WSBLE) Project. The new Link entrance should NOT be built in the Chinatown/International District neighborhood. Doing so will displace many historic buildings and businesses, including Ping's Dumpling House, Joe's Bar, Pacific HK Cafe, and Oasis Tea Zone. Please reconsider a new location for this Link entrance. Thank you for your consideration.</p>	Michelle Chan
04/28/2022	<p>I'm a parent of two young children who routinely takes light rail or a bus down to the International District with them. We love eating at the small restaurants and bakeries, stopping into a few of our favorite shops (Sairen and Uwajimaya), admiring the murals and visiting Danny Woo Community Garden.</p> <p>If the light rail extension disrupts the businesses that we have grown to know and love, we will have fewer reasons to use the light rail.</p> <p>I'm also concerned about the impact of the 5th ave options to an already marginalized community of Asian heritage who has had I-5 come through their space and experienced both overt and covert racism in Seattle.</p> <p>For these reasons, I prefer the 4th avenue options</p>	Natasha Dillinger
04/28/2022	<p>Referencing the proposed locations for CID/SODO location the fourth avenue location is far better solution than either 5th Ave solutions. 4th avenue is already a major transit hub that is recognizable both as a local and visitors, and has infrastructure space that can be further utilized to improve transit. The 5th Ave options are not within eye sight of existing transit, would displace long standing ID businesses, destroy historic structures and displace significant cultural institutions.</p>	Simon Wright
04/28/2022	<p>I am one of the homeowners who will be affected on three of the four considered routes for sound transit in West Seattle. I've been a resident here for 12 years, and a homeowner to a house that is almost 100 years old. Similar houses this age that surround me will also be gone. I understand sacrifices will have to be made for the line to exist. I hope that sound transit will consider taking out the stop on Avalon way sw in order to preserve a small piece of history. If the underground tunnel prevents the loss of residential homes and will save sound transit \$60 million, it only seems like a logical decision to make. Besides, these residents would only have to walk approximately 5 blocks to access the next transit line. It seems to me that the line is accommodating the new build at Alki lumber and other new builds in the Avalon area. Sound transit will therefore be taking away some historical and unique properties in order to accommodate the pockets of big business real estate. This will take away from the uniqueness of what so many people love about West Seattle. I can imagine in 10-15 years when sound transit is completed. People who travel here won't be in the unique West Seattle that I now know, but will be surrounded by a gentrified, homogenized suburb. Our character will be gone, and the reason why people love West Seattle will be lost.</p> <p>Sincerely, Stephanie Haynes</p>	Stephanie Haynes
04/28/2022	<p>PLEASE do not demolish these wonderful buildings that add so much culture to the area. I have so many fond memories of going to oasis, hoodfamous, and more that I will be devastated if we lose:(</p>	Molly Mclauchlan

04/28/2022	<p>Hello,</p> <p>I am reaching out to you specifically about the plan to expand light rail into West Seattle. As a West Seattle resident and home owner, I am excited about much more efficient public transportation coming to my neighborhood, but have significant concerns about the current plans to build above ground in such a high density area. I want to urge you all to think long term and not short term. A tunnel (below ground option) has significant advantages over the above ground options such as:</p> <p>Impact on housing: housing shortage is a big issue in seattle. This area, especially on 41st and 42nd Ave SW is a high density housing area and so many people will be displaced (especially marginalized communities). It will defeat the main purpose of brining connectivity to a high density residential area, and goes directly against recent legislative efforts to zone and permit for higher density housing. Please consider a tunnel similar to Capitol Hill station. There is also significant concern about property values and property confiscation with the elevated option.</p> <p>2. Environment concern: above ground stations have been proven to be hazardous environmentally. Noise and vibration from above the ground line cause significant issues for the neighbors and continue to impact the residential housing in the area.</p> <p>3. Instead of focusing on cutting cost by choosing a cheaper construction option, I urge the city to build fewer stations (2 instead of 3) and build them below the ground, benefiting the city and its people more in the long-term.</p> <p>Sincerely,</p> <p>Sandhya Iyer (resident of West Seattle-Junction Neighborhood)</p>	Sandhya Iyer
04/28/2022	<p>Please move forward on the 4th Avenue Option. As an architectural designer trained and practicing in Pioneer Square/CID area, the small business and established, existing street-level retail have kept this area human during the pandemic and other Downtown development.</p> <p>The 5th Avenue option is far too disruptive to local economy as it significantly displaces employees and business. The number of stations/extensions/etc. in the 5th Ave Option also seem unnecessarily complicated and involved, to the point where I wonder if disruption of the existing fabric is the intention of Sound Transit planners.</p> <p>If the intention is to connect West Seattle/Ballard to the CID, then the CID must be maintained so there is something to connect to.</p> <p>Thanks.</p>	Emilia Cabeza de Baca
04/28/2022	<p>Please do not further destroy the CID neighborhood by building a new station off of 5th Ave. I am an artist working in the neighborhood and my livelihood depends on a quiet, accessible, and pollution-free environment. I would hate to be displaced because of a huge construction site that can be built on 4th Ave instead. The CID has suffered enough major demolition over the years. You will destroy a piece of culture, many small businesses, and further contribute to gentrification. Please do not do this.</p>	Grace Flott

04/28/2022	<p>I'm glad we are expanding the light rail. However, I do not want to destroy the communities in order to expand this public transportation system. Especially thinking of the CID station and the proposed destruction to the center of the neighborhood, we must adjust our plans.</p> <p>The current plans would destroy an extremely important part of the neighborhood and the city of Seattle that we would not get back. The center of this CID neighborhood is the heart of CID and holds such valuable cultural and historical significance. Seattle would lose a huge piece of its soul by destroying the CID.</p> <p>Not to mention toys would be the continuation of racist displacement that Seattle has actively championed thought our history. It's time for us to make better choices. We must value the lives of the people that live and work in the CID, especially as we have repeated failed to value them in both our distant and very recent pasts.</p> <p>Please do not destroy the CID for the light rail. It is not worth the cost; it is not worth the soul of Seattle.</p>	Olivia Heath
04/28/2022	<p>Please reconsider construction for ST3. On 5th. The proposed construction with severely negatively impact the C-ID community including small business owners and beloved Seattle cultural monuments. The Covid-19 pandemic has already hurt this community so badly and this planned route will exacerbate the situation. Please work with community leaders to find a better alternative. Thank you!</p>	Sarah Neurath
04/28/2022	<p>Do not displace the people of the CID again. This neighborhood has already undergone incredible change due to the I-5 construction. Please take time to consider the community before moving forward with these plans.</p>	Yahir Gonzalez
04/28/2022	<p>Sound Transit Board of Directors,</p> <p>I'm excited for Light Rail to come to West Seattle. It's going to connect our little peninsula to The Greater Seattle Area, and really rejuvenate our local economy. Moreover, it's going to lead to much less air pollution via people riding rail V driving. I can't drive, as I'm disabled. It'll be so nice to have the freedom again, to get around and visit Bellevue, Redmond, Tacoma, and all of Seattle via rail, instead of having to take many buses, or prohibitively-expensive Uber. I believe Light Rail will make transportation easier and more affordable. I'm sad that it will take so long for it to arrive: With so much infrastructure money available, and with so many Washingtonians (with any variety of educational background) in need of work, surely there's a way to safely fast-track Light Rail?</p> <p>Anyhow, I'm grateful this is being built. Thanks for allowing community comments.</p>	Todd Jackson
04/28/2022	<p>I support the construction of a new station at the 4th Avenue location, to mitigate the negative impacts on CID businesses and community. This location will allow for less disruption and destruction for a community that has already been facing numerous hardships in the past years.</p>	Madeline Corbin
04/28/2022	<p>I read the Executive Summary related to the West Seattle Link Extension. I'm opposed to routes that temporarily or permanently affect the WS Golf Course. That would include tunnels that would capture park property.</p> <p>Given the options, I would choose the North Crossing (DUW-2) in conjunction with the Yancy Avalon routes.</p> <p>Thank you.</p>	David Broadstone
04/28/2022	<p>While I support the increased access of public transportation, especially for the ease of access for those that work there and the potential business that it will bring to the CID, I implore you to choose the 4th Avenue option to have the smallest impact on the neighborhood. As someone who frequents the businesses and grew up nearby, I have seen the suffering caused by the pandemic and increase in property and hate crimes. Many of these businesses will not survive the disruptions long enough to benefit from the project if the 5th Avenue option is chosen. Please choose the 4th Avenue option.</p>	Christine Jin
04/28/2022	<p>I support building the 4th Ave option CID-1a,1b.</p>	Daniel Lazo

04/28/2022	<p>As a commuter and occasional shopper in the International District, I am concerned that the 5th avenue plans in the C-ID will disrupt and permanently close the small businesses and shops I enjoy in this area.</p> <p>I take transit for work and for fun (Mariners and Sounders games), and love the idea of being able to walk through Union Station on the way to/from games or shopping trips to the C-ID. It seems like C-ID 1a and 1b will preserve the small businesses on 5th avenue and make Union Station a more engaging part of the community.</p>	Karen Secret
04/28/2022	<p>Please do not proceed with any of the 5th Street alternatives for a station in the International District. I visit 5th and King almost every weekend, and it has become my favorite block in the city. It is thriving with small businesses, amazing food, and is a cultural hub that must remain open to continue thriving.</p>	Russell Salazar
04/28/2022	<p>I dont live in CID, but I travel there everyday. The proposed transit would make it impossible to get to the restaurants and stores I like to visit . I wont be walk around and enjoy the CID that I have grown to love</p>	Justin Smith
04/28/2022	<p>I would like to encourage the Seattle Transit Board to move forward with the option to build a new transit station on 4th avenue in the Chinatown International district. Building on 4th avenue will be the least disruptive option for the CID community which has already dealt with so much unrest due to the COVID-19 pandemic. The options on 5th Ave should not be considered because they will have far more negative community impacts on residents and business in the area. The CID is an essential historical and cultural part of Seattle, choosing to disrupt this district massively with station construction would be a violent disservice to this community. Please consider very carefully how people who live in this community, operate businesses in this community and care about this community are saying in unison that building on 4th Ave is essential! Choosing to ignore the wishes of the CID community would cause irreparable harm and further displace residents and businesses in the Chinatown community. More transit is generally helpful, but not if it destroys communities, displaces people of color and gentrifies historical districts. Please let the new Seattle transit system uplift Seattle communities instead of destroying them. Thank you for building on 4th instead of 5th!</p>	Gabrielle Boettner
04/28/2022	<p>I want to comment strongly against all the 5th Ave routes being considered in the Chinatown International District (pages 6-16 to 6-20) because of the impacts to this unique neighborhood.</p> <p>The Chinatown International District is a cultural gem and one of the coolest places in our city. The extended construction disturbance and demolition of buildings along 5th Avenue will cause much greater damage to the heart and soul of our city than what it looks like on paper, at least in the way you've presented it. All the proposed 5th Ave routes would cause an extreme amount of negative impact to a neighborhood that has already experienced so much harm from construction projects, hate crimes, and the pandemic. These routes would disproportionately impact small businesses and people of color.</p> <p>Even though I understand the impacts of the 4th Ave routes to utilities and transit, I think it's worth it to choose one of those alternatives to preserve a precious community, beloved small businesses, and an important cultural anchor. Neighborhoods like the Chinatown International District are the lifeblood of our city and they deserve to be treated with care.</p>	Amelia White
04/28/2022	<p>It's great to see more public transport options connecting neighborhoods and communities to one another. That being said, please consider the location and the impact on the community with where the location of the link station is placed. The 4th Ave station will connect west Seattle and Ballard but with a lower negative impact on the community that lives in the ID.</p>	Xiao Duan
04/28/2022	<p>I drive through CID on my way to Settle Boulderling Project . I also get food in CID when I am done working out and this purposed will make it very hard to get around and eat . It'll make it hard to drive to Seattle boulderling project</p>	Edmund Constantine

04/28/2022	<p>The C-ID is a unique cultural community, and my family enjoys shopping, visiting, and spending time here. I am concerned the 5th avenue plans will have detrimental impacts on many unique small businesses during multiple years of construction. Where will customers park? How will they access shops? I prefer CID-1a and 1b because they seem to have the smallest negative impact on businesses. As an added bonus, will these options open up Union Station as a vibrant hub for transit and commerce?</p> <p>I understand the 4th avenue plans may cause disruptions to traffic and commute patterns, but as a West Seattle resident... I'm used to MANY disruptions in my commute. :)</p>	Karen Secret
04/28/2022	<p>Do not proceed with the destruction and displacement of CID establishments. The locals living in the area will see tremendous loss in their communities and those store fronts that will not be effected directly will be effected by the loss of business due to construction and in turn will ultimately have to close their doors. COVID has hurt the CID enough, this is not what the city wants or needs under these circumstances. Please reevaluate the plan and save the city and the people living day to day in this beautiful, historic and important part of Seattle in peace.</p>	Eleni Georgakopoulos
04/28/2022	<p>I am a huge proponent of mass transit and Link light rail in particular and I'm excited for the new line between Ballard and West Seattle. That said the CID station is the most concerning aspect of the project. All 5th Avenue alignments would have long lasting detrimental impacts to the CID neighborhood. There are dozens of businesses that would be impacted either because the buildings would be demolished or because construction impacts would reduce customers so as to require closing the business. Seattle is lucky to still have a vibrant Chinatown/ID. Many other cities like Washington D.C. only have a Chinatown in name. There are no vibrant Chinese or Asian businesses in the area. It is a faint whisper of what once was. We must prevent the same thing from happening in Seattle. All of Seattle's citizens benefit greatly from having a vibrant Chinatown/ID that people from all walks of life enjoy. Those who live in the area to those grabbing lunch before a Mariners or Seahawks game. The 5th Ave alignments would destroy a large part of the CID and destroy an integral part of Seattle's past, present, and future. There remains a huge scar cleaving CID in two, I-5. It was an unfair choice to put a huge freeway in the middle of minorities neighborhoods just because they would put up the least fight. It would be disgraceful to repeat the same mistake by overlooking the demands of the CID neighborhood again. The CID has paid more than it's fair share of disruptions and destruction. I believe the CID 1a and 1b alignments are in the best interests of Seattleites. You would reactivate the 4th Avenue area including Union Station with foot traffic.</p>	Andrew Lee
04/28/2022	<p>I love the convenience of the light rail and I also love the Chinatown International District. I've seen the options and it looks like they will interfere with the CID neighborhood and the ability for people to enjoy it. I hope that isn't the case.</p>	Katrina Ramos
04/28/2022	<p>Please help us preserve chinatown/international district and pick the 4th ave option. I have grown up in the area and it is near and dear to my heart. the 4th ave option would displace less businesses and not closure streets for as long. Thank you</p>	Stacey Lee

04/28/2022	<p>Dear Sound Transit:</p> <p>Regarding the Draft EIS for the West Seattle & Ballard Link Extension project:</p> <p>I sincerely hope you will reject proposed alternative routes DEL-5 and DEL-6. These two routes would have severe negative effects on a non-profit which for 45 years has provided housing and ongoing services to indigent mentally ill King County residents.</p> <p>While I strongly support expansion of light rail services to West Seattle, I equally strongly oppose disrupting services so important to our region, especially in these times of dramatically increased homelessness. You might as well propose running the routes through Lincoln Park!</p> <p>Please instead choose routings that leave these important services intact and easily accessible. We need BOTH expanded light rail and continuing easy access to vital community services. Surely your planners can accommodate both.</p> <p>Hopefully, Mamie H Rockafellar</p>	Mamie Rockafellar
04/28/2022	<p>I am a huge advocate for public transit expansion. However, why are the only plans for this expansion ones that seriously harm and disrupt the CID, one of the longest standing immigrant communities of color in Seattle? The CID has already faced major built environment changing by the building of highways through its core. I don't want to see another situation where CID residents, community members, business owners, and customers are negatively affected by construction for decades. On top of this, there are major health concerns related to noise, pollution, and the downstream effects of loss of income and revenue. Please reconsider displacing the CID.</p>	Carolyn Fan
04/28/2022	<p>Table 2-2, Page 2-9</p> <p>There is a cursory mention of the gondola alternative, "Mode not identified or analyzed in Sound Transit 3 Plan." This suggests to me that the alternative has not been seriously considered by objective experts, but has been dismissed without adequate consideration. The purported advantages of a gondola are cost savings, less disruption of homes and businesses, and a much earlier date of functionality combined with an ability to move the same number of riders as the proposed light rail systems. If this is true, the case for a gondola is strong and it deserves a serious look, not a cursory dismissal.</p>	Dean Shuey
04/28/2022	<p>The proposed plan for the Central/International District would negatively impact hundreds of AAPI families whose workplaces and lives would be massively disrupted by this development. Additionally, this area has seen major development throughout the years and while the benefit of expansion may be an opportunity for some, the detriment of the lack of air quality, noise, and parking disruption can be business breaking for small businesses like most of those found in this area.</p> <p>Please do not disturb the CID any further with development— we already have a transit hub there and do not need to further burden our Asian neighbors.</p>	Callie Little
04/28/2022	<p>Sound Transit's plans to build on 4th and 5th avenue in the Chinatown International District (CID) will impact the community and businesses negatively. The CID has already been disrupted and fractured by other construction projects, and the community has already suffered from anti-Asian sentiment. The construction of new light rail stations will further harm this neighborhood. They should find a different place to put these new stations.</p>	Olivia Louko

<p>04/28/2022</p>	<p>First off, I would like to state I am a supporter of effective public transit systems so I understand the need to extend the light rail extension through Ballard. However, being on the other side of an eminent domain situation has already proven to be extremely disruptive to both my overall wellbeing and financial health. It breaks my heart that I, along with hundreds (if not thousands) of other residents and small businesses, have to bear the extreme burden of these infrastructural changes.</p> <p>I'll begin with a little of my history so you can appreciate why this is especially disruptive for me. I've completely supported myself financially since I was 18 years old, working my way to a college degree over an eight year period with 2-3 jobs at a time. I've worked my tail off over the years to save enough money to buy a place of my own. Finally at 41, I was able to do this as a single woman. I've moved 18 times in my adult life, one of the last times due to a greedy landlord pushing me out of my rent controlled apartment to get market rate. I was so excited to FINALLY be able to afford a place of my own where I could enjoy the fruits of my labor and fully settle in, I finally had a HOME.</p> <p>Nope.</p> <p>From a financial perspective, this will affect me tremendously in many different ways. In speaking with an eminent domain attorney, I was advised this will likely cost me \$60,000 out of pocket for representation. The \$7500 reimbursement I will receive from Sound Transit doesn't even begin to cover this expense, in fact it's comical. I'm also currently locked into a very low interest rate, and with interest rates rising, there is a high likelihood I will pay hundreds of thousands of dollars in additional interest to the banks for a new mortgage. This means that I will not be able to afford a comparable residence sheerly due to the amount of monthly interest I will have to pay for a new loan. Not to mention the price of housing is skyrocketing from inflation, so a comparable property will already be much more expensive, which means I'll also be paying more interest on higher principal. Then there's the housing crisis, I very likely won't even be able to continue to live within the city of Seattle, let alone find a place I love as much as the current place I live in. There's a strong chance I'll have to settle for something subpar and will have to endure the pain of renovations all over again.</p> <p>To quantify the financial loss I will endure because of this, let's do a little quick math. The total amount of interest I'm currently paying for my 30 year loan is \$251,000. Let's just assume that a similar property 3 years out will conservatively be \$150k more than what I paid for my existing residence, and at a current 6% interest rate for another 30 year loan, I will pay \$665,000 in total interest. The difference of \$414,000 plus the \$60k in attorney's fees means I will lose \$474,000! I will lose nearly HALF A MILLION DOLLARS of my hard earned money for this project!</p> <p>What if I want to make a career change in the next few years and it requires me to move out of state? I surely won't be able to sell my place without losing money since I will have to disclose the eminent domain status! Who wants to buy a property when they know it'll likely be knocked down in a couple years? Probably someone that's buying it at a big discount. So I'm pretty much stuck in all aspects of my life, at the mercy of this whole situation and unable to plan for my future. I was on the initial Sound Transit conference call in November and one of the attendees posed this question as they were in process of selling their place. The presenters had the audacity to make the bold statement that "We've actually found in these situations property values go up" so no need to worry. What kind of asinine lie is that? I'm sure I'm not the only one that was outraged at a statement like this, completely undermining what we're all going through with no accountability for the impact it's making on all of our livelihoods.</p> <p>So let's look at what leaving Seattle looks like. First, I have no idea where else I would want to go as my Washington family and friends are all here. Not only will I have to spend both my personal time and money to commute to see them, but there will also be incurred costs of commuting for the traveling part of my job. Do you know how long it takes to build a personal ecosystem after a move? It can take years to find an adequate dentist, physicians, exercise facilities, handyman, pet care, veterinarian, dry cleaner, auto mechanic, massage therapist, acupuncturist, hair stylist and many other necessary services. It takes years to build a community, all of this will be lost and I'll have to start completely over. Believe me I know, I've had to do it many, many times before. I'll likely have to move to the suburbs as I'll be priced out of cities like Seattle and suitable alternatives like Bellevue, it completely and utterly changes my lifestyle and the access I'll have for many social activities.</p> <p>We're only a handful of months into this and I've already been experiencing persistent sleepless nights, worrying about what I will do and where I will go. Lack of sleep is also exacerbating the anxiety and stress I'm experiencing, I can only imagine the other medical problems this will cause down the road. I'm exhausted, stressed and on edge. I cry often, my mental health feels like it is hanging by a thread many days of the month. I'm working with a Ph.D. clinical psychologist to assist with managing this transition and the related adverse side effects. The worst part is this will go on for YEARS and is extremely unsettling. I live and work from home, my whole world is here and you're tearing it away from me.</p>	<p>Carly Kogler</p>
-------------------	--	---------------------

	<p>I've spoken with others that have been impacted by eminent domain in the city of Seattle, and all I hear is the city low balls property values. As far as the value of my home goes I'll have to fight for what's just and fair (and pay an exorbitant amount of money in doing so), but what about being compensated for all the other disruptions and the damage to the quality of my life? We're expected to bear the burden off all of this while the rest of the residents benefit! I'm a lawful citizen that pays property taxes and this is the reciprocity I get? It's completely and unequivocally preposterous! The city of Seattle has effectively tainted the next 5 or so years of my life, what's the value of that? These are years I'll never get back, I'm absolutely heartbroken and devastated. If Seattle really is as progressive as it claims to be, it would offer top dollar for properties affected and also compensate for personal loss and damages, thereby minimizing the collective BILLIONS of dollars that will be paid to all the attorneys in the process.</p> <p>I think all of you at Sound Transit need to really consider how YOU individually would feel if you were in this situation. Stop denying how awful it is and making boldfaced lies to "appease" the people affected. It's offensive, inhumane, lacks compassion and it makes it all that much worse. Remember, WE are the ones that have to suffer the consequences of this change.</p>	
04/28/2022	I would prefer the WSB3-A proposal that is the tunnel. Please do not put the West Seattle Light Rail in overhead tracks and stations	Steve Lorentzen
04/28/2022	As a homeowner in West Seattle, I want to make sure that any decisions we make now are sustainable and future looking. Our decisions don't just affect us now, but also our neighbors 50 years from now. Stations either too high or deep are going to be viewed as huge mistakes and inconvenience future users for years from now. I would urge the board to consider the options that are going to be most usable and drive the most possible users of the system. It is supposed to be public transit so I hope your decision takes into consideration what will do the most good for most of the public.	Christopher Welter

04/28/2022	<p>Re: West Seattle station options.</p> <p>Too many stations have been proposed for the WSEA area. There are two locations that fall within the same walk-shed area—Alaska Junction and Avalon stations. These two should be combined into one station within the Triangle area and the savings from doing so should be applied to make the resulting station better fit into the neighborhood environment on a more human scale to the extent possible keeping the engineering requirements as most important as there are needed slopes for the system to run properly. I think this best corresponds to the Fauntleroy alignment option.</p> <p>There is precedent for this in the Columbia City, Beacon Hill, and Montlake stations where one station serves a large area and allows folks to converge at a single location for boarding with good access to other transit. We already have two designated C stops serving the Triangle neighborhood that could serve as the main connecting transit hub.—centralize it and make folks go there. The bulk of apartments is already on that side of the Junction anyway.</p> <p>Re: station should fit into the scope of the built environment. My meaning here is that it should not tower over the rest of the built environment and create a visual nuisance or create unnecessary noise for surrounding neighbors. The other areas that feature light rail have done a good job in incorporating the stations into the landscape and kept them human scaled. The budget amount saved from combining two stations into one, should more than cover making the improvements needed to lessen station impact to the affected neighborhood. West Seattle should be treated the same as prior light rail areas and should receive high quality stations and not utilize “cut and cover” methods to save on installation to the detriment of the neighborhood.</p> <p>Thank you for taking the time to review my thoughts and comments.</p>	Julie Garbutt
04/28/2022	<p>This city has been on a path of progressing forward with construction to make transit easier for all and I have been personally impacted. I commute on the light rail to work daily from the New U District station and I am so grateful to be able to use public transit! I also think this city has a responsibility to protect the history of the city and the community within the city. The international district is an important place in our city’s history and has a vibrant community that have been marginalized and we have the responsibility to protect. The 4th street option seems to be the best option. I would not support the option of 5th street directly impacting the International District by taking away small business and distrusting the flow of other business that need open channels of traffic to keep them in business. Let’s do the right thing and protect our AAPI community.</p>	Rodgers Joanna
04/28/2022	<p>This is so insane you plan to do this not to mention in a neighborhood that is already going through a lot. Seattle needs to finish one project before you take on another one. Fix the bridge.</p>	Jessica Bair
04/28/2022	<p>I am reviewing the Sound Transit Project Update and looking at table ES-3. DEL-5 & DEL-6 have the least residential and environmental impact, with DEL-6 being better. (Businesses and neighborhoods still take a hit.) Building a light rail line through these areas dramatically impacts the environment and residents. ST light rail projects follow established multi-lane traffic routes and industrial corridors. The West Seattle project is a departure from this model. I believe there is a less impactful solution, and we can find a feasible way to bring less impactful to West Seattle, and it does not need to be light rail. I support a feasibility study on gondolas and electric buses.</p>	Jan Roberts
04/28/2022	<p>I support building the light rail station on 4th avenue so it will disrupt fewer small businesses in the Chinatown-ID.</p>	Miriam Works
04/28/2022	<p>The CID has already been broken up with I 5 cutting through. If there is an option that will displace and disrupt the least amount of community members and businesses, I think that should be the priority. I would prefer the 4th ave location options, CID-1A and CID-1B since it would be the fairest and be less disruptive. There are many small businesses that I have been a patron of for years, and having these close down would be like ripping out the heart of what makes CID so special.</p>	Crystal Tam

04/28/2022	<p>I do not believe that moving forward with construction on 5th Ave is an acceptable option for expanding the Lightrail system. Chinatown has already experienced disproportionate economic and cultural impacts through infrastructure projects in the past and to further that would be harmful to the residents, businesses, and cultural sanctuary that is Chinatown. To move forward with construction on 5th Ave would not be an equitable or inclusive decision. In moving forward with project decisions I expect that the city will consider an intersectional perspective on how this will impact the city and contribute to the gentrification that Seattle has already experienced so widely. We do not want to push minority populations out. We do not want to lose this cultural sanctuary and the history it has established in Seattle. We do not want our marginalized community members to be the people taking the hit. It is not fair, it is not equitable, it is not just to move forward with a project that primarily effects the lives of minorities. Please think about this and move forward with construction on 4th Ave instead.</p>	Mary Kibala
04/28/2022	<p>I don't want it. I voted for it in 2016 but given all of this context and impact I don't want it. We just went through 2 years of no West Seattle Bridge, and a year+ of Delridge being torn up. I live at Andover and Delridge and this 3 year construction period will destroy my ability to move around - particularly getting to/from my home.</p>	Nicholas Hodapp
04/28/2022	<p>Full closure of King St, S Weller, and 5th avenue for several years, with increased noise & air pollution, dust, dirt, vibrations in the CID is unacceptable. Not to mention disruptions to 30 immigrant businesses permanently closed or forced to move due to 5th Ave construction.</p> <p>Sound Transit, take 5th Ave off the table. 4th Ave tunnel station avoids 5th ave impacts! Move forward on 4th!</p>	Megan Stein
04/28/2022	<p>Hello,</p> <p>I urge the city to move forward with plans for 4th. The massive development in the city over the last decade has certainly driven economic growth, but Seattle has also lost so much of the city culture that used to define us. We cannot afford a 5th avenue project that disrupts the very makeup of the ID, and irreplaceable neighborhood and collection of businesses that make Seattle, Seattle. Please choose 4th for this project.</p>	Jade Graddy
04/28/2022	<p>I am a life long Seattle resident and owner of a tattoo shop on 5th avenue in the CID. If sound transit chooses to proceed on 5th avenue this will severely impact our ability to run our business and our livelihoods, along with many of our long standing neighbors. We have already been through a pandemic. Please consider developing the new station on 4th avenue. Thank you.</p>	Albie Brant

<p>04/28/2022</p>	<p>Summary: The following comments are all related to WSJ segment alternatives. WSJ-3a,b (without Avalon Station) should be the preferred alternative. WSJ-5 (with Avalon Station) should be runner up alternative. WSJ-1,2 and 4 options should not move forward due to the points outlined below:</p> <p>Point1: DEIS Chapter 3 Transportation section 3.5.3.1.4 West Seattle Junction Segment: States that for WSJ-4, 37th Ave SW north of Fauntleroy Way SW would be permanently closed with turnaround areas added to the street ends. Two big beautiful mature trees would likely need to be removed to accommodate the additional space required for the turnaround. These trees provide shade, natural habitat, visual interest and help separate the single-family housing zone from the mixed-use commercial zone that runs along Fauntleroy Way SW.</p> <p>Point 2: An elevated guideway in WSJ-1,2 would radiate track noise to surrounding peaceful residential areas. The curved tracks along Fauntleroy Way SW would make the track noise worse than straighter track segments due to “wheel squeal noise”. Sound barrier mitigation devices are visual eye sores that detract from the beauty of the neighborhood and attract unwanted areas for graffiti and maintenance neglect. The elevated guideway options would also ruin the planned Fauntleroy Way SW Boulevard improvement project (mentioned in Appendix K Present and Future Development, Transportation, and Public Works Projects in the Study Area Table K-2 page K-53 Map ID 1) as the space that would’ve been improved would now be claimed by guideway columns and the natural sun light blocked by the overhead track. The boulevard improvement project is currently in a holding pattern waiting to see how the ST3 project will interfere with the boulevard improvement plans. The elevated guideway options along Fauntleroy Way SW would be dramatic reduction to the visual quality of the neighborhood, especially from 37th Ave SW, where majestic views of the Cascade mountains are enjoyed on clear days.</p> <p>Point 3: In Appendix N2 Visual Technical Report page 4-23 it states “there would not be a visual impact” to the residences northwest of Fauntleroy Way SW for elevated guideway options WSJ-1,2. I very much disagree with this conclusion and I can’t imagine how replacing a view of the Cascade mountains with a view of an elevated light rail guideway would be considered anything other than a large negative visual impact.</p> <p>Point 4: In DEIS Chapter 3 Transportation section 3.4.3.3.5 Table 3.-5 on page 3-17, the projected Avalon station 2042 ridership (daily boardings) numbers are extremely low (1200) relative to the nearby Alaska Junction station (6400). The recent idea of removing the Avalon station and using the savings to support one of the WSJ segment tunnel options should be strongly prioritized. The system would be better of routing the Avalon riders to Alaska Junction or Delridge stations to improve economies of scale at those stations instead of diluting the ST system with an under-utilized station that is future growth constrained by residential zoning, topography and existing West Seattle Stadium and golf course land.</p> <p>Point 5: A complaint on the DEIS itself: Why are there no 3D views for Avalon station in Appendix N2 Visual Technical Report Attachment N.2B Station 3D Views and Cross Sections pages 1-6 and 1-7? This makes evaluating the different alternatives an unfair exercise since only certain alternatives are visualized. With humans being very visual creatures, the cross-section only drawings leave a lot to the imagination.</p> <p>Point 6: Another complaint on the methodology of the DEIS: For the residential displacement figures (such as those shown in DEIS Chapter 6 Alternatives Evaluation section 6.2.2.1.4 West Seattle Junction Segment Table 6-4 Projected Ridership and Key Impact Differences - West Seattle Junction Segment, Row Potential Displacements on Page 6-15), only addressable units were used as a simple count of displaced units. The problem with this is that it reduces the weighting of multi-bedroom private residences when compared to single-bedroom efficiency apartments. Anecdotally, If I look at my immediate neighbors on my street, there are 9 houses and would be counted as 9 units displaced. But a total of 24 people live in these houses full-time. I don’t believe the same headcount density exists per unit in the efficiency apartment units. As a result of this flawed calculation, I believe the displacement impact to single family residential units are being under counted by at least a factor of 2 relative to the large apartment buildings. Displaced heads should be used instead of units to get a better picture of the impact of displacement between the various alternatives.</p> <p>Thank you.</p>	<p>Stuart Ford</p>
-------------------	---	--------------------

04/28/2022	<p>I use public transit often, and I welcome expansion, but I wish a less populated area was chosen to disrupt and intrude upon, the CID has already suffered so much from endless construction and poor civic planning. The continued disregard for our Asian community is extremely hurtful and offensive, and this is yet more blatant redlining and inconsiderate planning for our homes and businesses.</p> <p>Please go with the least harmful option of 4thb avenue but also take note that we are very displeased with the attitude that the CID & other lower income areas have to be torn apart and made to suffer for the peace and convenience of white neighborhoods.</p>	Brenda Ho
04/28/2022	<p>Go forward with 4th! Consideration of 5th street light rail routes would displace local businesses in a thriving Asian American community. As an Asian American, even though I do not reside in the International District, I enjoy cultural events, rich history, and delicious food there and I bring family and friends there when visiting from out-of-town.</p> <p>The community is important to my sense of culture and a unique asset to many in the Seattle area. Do not disrupt or displace it!</p>	Danielle Trierweiler
04/28/2022	<p>I am writing to show my support of the local businesses and community of the C-ID and request that the city use the 4th Ave proposal. All of the options will have an impact on an community that has already been disrupted by public works projects (I-5), however, the 4th Ave proposal would appear to have the least impact.</p>	Cameron Froehlich-Simmons
04/28/2022	<p>Please move the station up to the 4th. The shops around the 5th has become the cultural landscape of the place, it's going to break people's hearts if the shops there got demolished.</p>	WenYen Pai
04/28/2022	<p>Hi, my name is Michael and I live in Seattle. A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options.</p>	Michael Mellini
04/28/2022	<p>My townhouse is located at 3062A SW Avalon Way, 98126.</p> <p>Upon reviewing the draft EIS, I strongly suggest the removal of the Avalon station proposals (DEL-5 or DEL-6) as it appears the cost & displacement analysis are out of date. The renderings associated with DEL-5 supports my thought as it shows the lightrail being constructed on a large green space at the Northwest corner of the intersection of SW Avalon Way and Genesee. There are at least 2 housing complexes that are not accounted for in this rendering that opened in the last 1-2 years, 1 housing complex for affordable housing that is currently under construction, and an additional two apartment buildings that were built prior to the last 2 years that this rendering suggests would be removed. For this area alone I would estimate the potential displacement (of existing, new and future housing underway) at much higher than 48-82.</p> <p>Additionally, the road design proposed does not address how the flow of traffic along SW Avalon Way (a critical way of accessing of the high and low West Seattle bridges) would be addressed. This is already a highly congested road today and the proposal seems to suggest removing lanes of traffic as well as much of the parking options in this high-density area. Lastly, the road has already been ripped up and redesigned two times since I moved here in April 2020 - it does not appear that the cost estimates for DEL-5/6 take into account the cost of redesigning the road yet again.</p> <p>The Andover station proposals are not viable options as someone who lives and commutes in this area and thus I strongly suggest it be removed from the options.</p>	Rosa Zhang
04/28/2022	<p>Don't build a station on 5th, there are many small businesses located there that this would be detrimental for. Along with that being xenophobic behavior. Go ahead and do it on 5th instead. What's so hard about that??</p>	Jailene Sanchez

04/28/2022	<p>I do not support Sound Transit building on 5th avenue disrupting community, businesses, and the IDs cultural identity. There is a perfectly good option to build on 4th instead aligning with the cities idea to have better alternative transportation other than cars. We've put vehicles over community for way too long. If we see a better future for our city, families and, children we have to start making decisions that reflect that. The culture of Seattle is at risk and that's a huge part of our identity as a city and a tourist destination. This impact could be huge on the community and we're firmly standing on the option to build on 4th and displace a parking lot over community. Please consider the people's strong voice on this matter.</p>	Samantha Barberio
04/28/2022	<p>I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood of the International District. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen and would cause immense economical harm to the area. This would make Seattle a less attractive option in general and cause people to simply move outside the city limits even further. The people of the C-ID do not need the extra burden construction will cause. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.</p>	Colin Sievers
04/28/2022	<p>I hope that Sound Transit will maintain its core value of being Progressive in its project to expand the rail into the CID area. It is clear that the option of building through 4th, though inconvenient for commuters who drive, would be the best way to conserve and value our Asian American community members. AAPIs in the U.S. have gone through multiple iterations of displacement, especially in Seattle. To commit to building through 5th out of convenience is against the company's diversity, equity, and inclusion values. "Our commitment to diversity, equity & inclusion is at the heart of everything we do." If you build through 5th, I hope you understand that your DEI work is far from where it needs to be and that you are failing the community. This quote from your race equity meeting,</p> <p>Sound Transit does not have an established agencywide policy, process or mechanisms to equitably engage with community to create long term relationships across our region that allows community to shape the way they interact with the agency in order to remove barriers to communication, and play a more active and meaningful role in decision making. (Equitable Engagement Tools Presentation, 2020)</p> <p>makes it painfully clear that you don't have the tools to think clearly about the impacts of this project on the AAPI community. You are all devoted and invested in fixing your DEI problems in writing. But I beg you to follow your DEI policy goals and not just be a performative institution. You have the opportunity to care and be committed to the AAPI community in Seattle. This project will lead to displacement and loss of jobs, businesses, and community ties. All of these are key to having a healthy community.</p>	Joyce Diaz Sandi
04/28/2022	<p>As a resident of the Chinatown-International District, I am writing to urge Sound Transit to look for transit expansion options that will minimize harm to the CID area, including small businesses and the residents, many of whom are elderly Asian immigrants, many of whom are not able to access these kinds of feedback forms to express their concerns about how the Sound Transit expansion could affect their daily lives.</p> <p>During the expansion of I-5, countless homes and businesses in this area were razed, and the neighborhood was bifurcated into what we now think of today as Chinatown/Japantown and Little Saigon roughly. The CID would lose numerous small businesses in the historic core, and see a dramatic increase potentially in traffic if Sound Transit does not take steps to minimize harmful impact.</p> <p>Please consider a 4th avenue option or other below ground options that will minimize harm to a neighborhood which has had to persevere through systemic injustices throughout its existence.</p>	Joseph Lachman

04/28/2022	I strongly recommend adoption of the shallow or deep 4th Ave options to lessen long-term harm to and within the C-ID because: 1) Historic injuries (expelled, forced relocation, etc.) against our Asian neighbors and their accommodation and adaptation to previous mega-projects (I-5, I-90, stadiums) should be enough to support their request for the 4th Ave options. 2) The C-ID neighborhood is a MAJOR tourist attraction and generates income to many tourist-related businesses outside the C-ID. 3) 4th Ave is a major northbound traffic corridor to enter and pass thru downtown (I use it often) but the few years of disruption to traffic flow is worth the trade-off for long-term stability in the C-ID. 4) The geology beneath the various options can't be so different or they wouldn't have been proposed. 5) With the 4th Ave options, most of the lost housing and businesses will be outside the C-ID core. 6) The 4th Ave options would provide easier access to the existing stadiums. 7) My 1st choice is the Deep 4th Ave option but elevator only access is a concern as is the high projected cost. 8) My 2nd choice is the Shallow 4th Ave option with its more flexible access and somewhat lower costs. 9) I have loved the unique character of our C-ID with its food, museums, theater, parks, Asian elders, and more since 1968 when I came to Seattle! Thanks for your consideration. Anna Rudd, now on First Hill	Anna Rudd
04/28/2022	Building a station on 5th is racist and much more detrimental than the 4th idea. I'm all honesty Seattle will be okay without this station altogether. Don't support racist gentrification and do better.	Jailene Sanchez
04/28/2022	The new Ballard-west Seattle route will have extremely detrimental impacts to many businesses in the international district. Specially, by installing the station on 5th Avenue, where many businesses reside and rely, will have detrimental impacts on the livelihoods of many individuals who support and run the businesses that have served our community for so long. Implementing the station on 4th Ave, while still posing negative impacts, will have much less of a risk on the livelihoods and well beings of the individuals who serve the ID community and the people who support the businesses.	Riley Wilmart
04/28/2022	this new light rail transfer station needs to prioritize the shortest travel time possible to transfer between trains, or people will be significantly discouraged from using the light rail with transfers. You also need to be providing substantial assistance to the businesses being displaced... enough to overlap leases so they don't have to stop their business, and enough for each business to invest in their new space to make it operable as soon as they are removed from their current location. I think it's also important to protect 4th Ave S as it is a major entry point into downtown from SODO. Sound Transit should also think about providing vendor spaces within the light rail station. This could liven up the feel of these barren spaces and also increase visibility to help reduce crime. I prefer option 3 (CID-2a).	Tyler Wilcox
04/28/2022	I'd like to encourage planners to select the 4th Ave option for the International District link extension. I love that neighborhood. I visit all the time to shop, eat, and socialize. The 4th Ave option would be best for residents and businesses.	Megan Castillo
04/28/2022	Please choose the 4th Avenue option, as this will impact less locally owned business in the heart of the CID.	Joe Wong
04/28/2022	I do not support building a new station in the CID to link West Seattle to Ballard. The CID has endured many hardships during the pandemic and also before. The construction will impact the CID greatly and the businesses in that area will suffer the consequences. Building the new station on 4th Ave will be less intrusive to the area.	Alina Luong

<p>04/28/2022</p>	<p>Dear Councilmembers and Sound Transit,</p> <p>I am a customer and blade smith who is regularly represented at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm excited about their new larger storefront and look forward to being involved in teaching their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail path alternatives. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else.</p> <p>Please consider the following comments on the appropriateness of Alternative DUW-2, which does not eliminate this unique business:</p> <p>As stated in Paragraph 4.2.2.3.3, Alternative DUW-2 would not convert any single- or multi-family residential land or City-owned open space to a transportation use.</p> <p>As shown in Table 4.2.3-2 and stated in Paragraph 4.2.3.3.3, Alternative DUW-2 would displace the fewest employees – about 40% fewer than other alternatives.</p> <p>As stated in Paragraph 4.2.5.3.3, Alternative DUW-2 would have the least change to the visual character in areas with concentrations of sensitive viewers and the least impact on visual quality of all the Duwamish Segment Build Alternatives</p> <p>As stated in Paragraph 4.2.7.3.2, Alternative DUW-2 would have the fewest noise impacts of all the Duwamish Segment Build Alternatives – about 90% fewer than other alternatives.</p> <p>As shown in Table 4.2.8-1, Alternative DUW-2 would introduce the least square footage of total new impervious surface by a significant margin – less than 10% that of other alternatives.</p> <p>As stated in Paragraph 4.2.8.3.3, Alternative DUW-2 would not require relocation of any outfalls.</p> <p>As shown in Table 4.2.9-2, Alternative DUW-2 would have no effect at all on Alternative Wetlands, Wetland Buffers, and Biodiversity areas.</p> <p>As stated in Paragraph 4.2.11.3.3, Alternative DUW-2 would avoid the steep slopes on Pigeon Point, offering the greatest slope stability and least landslide risk, thereby avoiding the need to construct retaining structures.</p> <p>As stated in Paragraph 4.2.14.3.3, Alternative DUW-2 would not be expected to require relocation of Fire Station 14, and no long-term effects are expected.</p> <p>Table 4.2.16-4 seems to indicate Alternative DUW-2 would impact 9 historic properties, the most of any alternative. However, the table inexplicably divides the Department of Highways District No. 1 Headquarters/Maintenance Facility into 5 subproperties, thereby skewing the statistics. If Table 4.2.16-4 instead tabulated only whole historic properties, Alternative DUW-2 actually impacts the fewest historic properties of any alternative.</p> <p>As shown in Table 4.2.17-1, Alternative DUW-2 is the only alternative that would have no permanent impact at all to parks and recreational resources.</p> <p>Table 4.2.18-2 repeats the inexplicable division of the Department of Highways District No. 1 Headquarters/Maintenance Facility into five subproperties. As a result, Alternative DUW-2 would appear to be similar to other alternatives in its impact on properties with Preliminary Section 4(f) Determinations. However, when evaluating the DOH District 1 HQ/Maintenance Facility as a single property, Alternative DUW-2 in fact impacts the fewest number of properties with Preliminary Section 4(f) Determinations. Please support the DUW-2 Alternative that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. I've been involved with Epicurean Edge since the 90's, and it's always been a very important foundation stone in the world of cutlery. Without their expertise, the international community of makers, and buyers alike would be missing a crucial component in the sharing of the type of quality products that they offer. I've been particularly looking forward to the range of classes that will be offered, as I will be involved in many of the workshops as an instructor. Currently I'm offering classes at my forge in Ballard, and I've been looking forward to expanding over to Blade Gallery's new, and much larger facility. My hope is that the alternative DUW-2 option will be seriously considered, and that the international knife making community will not lose this very unique business.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select</p>	<p>David Tuthill</p>
-------------------	---	----------------------

	<p>Alternative DUW-2 for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at 3628 E Marginal Way S., Seattle, WA 98134, phone (425) 889-5980.</p> <p>Thank you for your consideration, David</p> <p>David Tuthill Fire Horse Forge 1415 NW 49th St Seattle, WA 98107 206-229-6008</p>	
04/28/2022	<p>To Whom it May Concern: I have read and support the findings and recommendations published by the Wing Luke Museum and wish to have these issues of preservation of an historic ethnic enclave addressed. Thank you.</p>	<p>Mayumi Tsutakawa</p>
04/28/2022	<p>Would like to show my support for constructing the new light rail station somewhere on 4th instead of any of the 5th street options. The businesses located on 5th are vital to maintaining the authentic nature of Chinatown for those who enjoy connecting to their heritage like myself. The disturbance of construction so soon after the pandemic will bring more trouble for businesses just recovering. I am originally from Portland, and the chinatown neighborhood there is now non existent and empty due to poor planning policy and lack of consideration of the community that built it. The Asian community in portland has since moved farther out of town where land is cheaper, and transit is sparse. This is likely similar to what the CID can expect if they move forward with 5th street options. Portland no longer even really advertises their chinatown as a tourist spot because it is empty and abandoned with the exception of a few asian inspired street design elements. Seattle has a rich history of asian culture that is very much in the city's interest in preserving, as I'm sure everyone is aware, but it doesnt hurt to reiterate and hear the support from the community. Thank you for your consideration.</p>	<p>Trevor Wright</p>
04/28/2022	<p>I want to ask why you need to destroy a community that has already been hurt from COVID and is being destroyed by gentrification? There's a train station there, figure out how to make the existing one work for your new routes, build on top of the existing train station and don't touch existing businesses OR build somewhere else. Please do not hurt International District with it's wonderful businesses and community.</p>	<p>Madison Haws</p>

<p>04/28/2022</p>	<p>Dear Councilmembers and Sound Transit,</p> <p>I am a employee at BladeGallery’s Epicurean Edge in SODO (Seattle). This last fall, we moved from Kirkland, WA to Seattle. I’ve recently heard that we are in danger of our new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail path alternatives. This is a unique business, serving as a hub for the international Bladesmithing community, that can’t be found anywhere else.</p> <p>Please consider the following comments on the appropriateness of Alternative DUW-2, which does not eliminate this unique business:</p> <p>As stated in Paragraph 4.2.2.3.3, Alternative DUW-2 would not convert any single- or multi-family residential land or City-owned open space to a transportation use.</p> <p>As shown in Table 4.2.3-2 and stated in Paragraph 4.2.3.3.3, Alternative DUW-2 would displace the fewest employees – about 40% fewer than other alternatives.</p> <p>As stated in Paragraph 4.2.5.3.3, Alternative DUW-2 would have the least change to the visual character in areas with concentrations of sensitive viewers and the least impact on visual quality of all the Duwamish Segment Build Alternatives</p> <p>As stated in Paragraph 4.2.7.3.2, Alternative DUW-2 would have the fewest noise impacts of all the Duwamish Segment Build Alternatives – about 90% fewer than other alternatives.</p> <p>As shown in Table 4.2.8-1, Alternative DUW-2 would introduce the least square footage of total new impervious surface by a significant margin – less than 10% that of other alternatives.</p> <p>As stated in Paragraph 4.2.8.3.3, Alternative DUW-2 would not require relocation of any outfalls.</p> <p>As shown in Table 4.2.9-2, Alternative DUW-2 would have no effect at all on Alternative Wetlands, Wetland Buffers, and Biodiversity areas.</p> <p>As stated in Paragraph 4.2.11.3.3, Alternative DUW-2 would avoid the steep slopes on Pigeon Point, offering the greatest slope stability and least landslide risk, thereby avoiding the need to construct retaining structures.</p> <p>As stated in Paragraph 4.2.14.3.3, Alternative DUW-2 would not be expected to require relocation of Fire Station 14, and no long-term effects are expected.</p> <p>Table 4.2.16-4 seems to indicate Alternative DUW-2 would impact 9 historic properties, the most of any alternative. However, the table inexplicably divides the Department of Highways District No. 1 Headquarters/Maintenance Facility into 5 subproperties, thereby skewing the statistics. If Table 4.2.16-4 instead tabulated only whole historic properties, Alternative DUW-2 actually impacts the fewest historic properties of any alternative.</p> <p>As shown in Table 4.2.17-1, Alternative DUW-2 is the only alternative that would have no permanent impact at all to parks and recreational resources.</p> <p>Table 4.2.18-2 repeats the inexplicable division of the Department of Highways District No. 1 Headquarters/Maintenance Facility into five subproperties. As a result, Alternative DUW-2 would appear to be similar to other alternatives in its impact on properties with Preliminary Section 4(f) Determinations. However, when evaluating the DOH District 1 HQ/Maintenance Facility as a single property, Alternative DUW-2 in fact impacts the fewest number of properties with Preliminary Section 4(f) Determinations.</p> <p>Please support the DUW-2 Alternative that does not force BladeGallery’s Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef’s knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that we will remain open for many years to come. I greatly appreciate any efforts that you can make to select Alternative DUW-2 for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for our employees and the hundreds of artisans we represent. 04/28/2022	Please listen to the community's needs and build the 4th Ave option.	Jessica Green

04/28/2022	<p>Good morning,</p> <p>I am writing about the West Seattle Junction and Delridge alternatives. I am in favor of public transit and light rail and would love to see this happen as soon as possible. However, this does not have to mean destroying neighborhoods, people's homes and businesses.</p> <p>I oppose the preferred alternatives of an elevated track. This would cause a lot of nuisances, first visually, this would be towering over a neighborhood of single family homes, townhouses and 4-level apartment buildings between Delridge and Fauntleroy. It would also be a direct noise and visual nuisance for the apartment dwellers between Fauntleroy and Alaska, not just from the train themselves but from the continuous announcements at the stations. I lived next to one L track and station in Chicago - Armitage (link https://goo.gl/maps/jzKXuSwoUjZfMYkM6) and moved out because of it). It would completely alter the character of the Junction that has been painstakingly preserved over the years.</p> <p>I am in favor of tunnels that would go under Genessee and 41st or 42nd Ave SW. That would reduce the number of residents being relocated and savings from the expropriations with current real estate prices would offset a big chunk of the cost of a tunnel. Also another source of savings is limiting the number of stations from 3 to 2. The distance between the stations at the Junction and Avalon is just 1/2 mile and 12 minutes walk according to Google maps so an Avalon station might not be the most bang for the buck.</p> <p>Thank you for your consideration, Regards David Saint Michel West Seattle</p>	David Saint Michel
04/28/2022	<p>Combine the two stations in WSEA into one station and place it on/adjacent to Fauntleroy Way SW alignment. Walkshed covered will be acceptable. Much better than walkshed in other neighborhoods served by light rail. With two obvious examples being: Bellevue, where the light rail station is a mile from Bell Square and half a mile from the new improved transit center. This solution would be a much smaller and more manageable walkshed and would be concentrated near the vast density of housing in the two areas. Folks can walk or bus to the commercial center which would still be an easy walk from the station or an even easier C bus ride.</p>	Julie Garbutt
04/28/2022	<p>Choose Fourth Avenue and create an intermodal direct transfer! Don't hurt the CID and its elders by going through with Fifth Avenue.</p>	Sorana Nance
04/28/2022	<p>The impact to housing and business is too great to allow the light rail above ground here in the West Seattle junction area. ST is great at digging tunnels and has done so when a line is called for in a hilly, dense neighborhood. The investment in West Seattle for alternate transportation is long overdue but is also something that will be with us for decades and needs to be done right to fit best within our community and that means underground.</p> <p>Likewise, a combined Avalon/Junction station near the Fauntleroy/Alaska intersection (with entrances on both sides of these busy streets) will serve the community well and helps eliminate the problematic Avalon station -- both due to existing housing but also because the walkshed is severely limited due to area topography and the West Seattle freeway cutting off easy access.</p> <p>Aside from this, the large, mildewing concrete that comes with elevated rail does not fit within our densely populated neighborhood and will bisect are area that, instead, is slated for City of Seattle investment to bring both sides of Fauntleroy and Alaska together for people walking and rolling.</p>	Kevin Freitas

04/28/2022	<p>Hi all,</p> <p>I am incredibly excited for the Link extensions that are coming in the future! I am an avid user of public transit (mostly using bike and KC Metro services to get around) and I can't wait to see how the upcoming Link extensions improve mobility within and around Seattle.</p> <p>However, I implore the team at Sound Transit to choose the 4th Ave route for the West Seattle and Ballard Link Extensions. The 5th Ave option will disrupt the CID immensely more than the 4th Ave option, putting a neighborhood that has already been through so much disruption in the past years caused by construction (through the construction of I-5, Kingdome, CenturyLink Field, etc), as well as disruption caused by increased crimes and hate-motivated attacks on the Asian population.</p> <p>Community is so, so important to us as humans. We thrive when we are given safe and stable places to express our shared cultures and to grow close to one another. The 5th Ave choice for the Link Expansion would put a huge strain on businesses, homes, and ways of life.</p> <p>Please, choose the route that would impact the people of the CID the least. Please choose to expand the Link using the 4th Ave option!</p>	Gillian Fulford
04/28/2022	<p>Regarding the Interbay/Ballard alternatives - any of the 14th Ave NW segment alternatives would be devastating for the Ballard Food Bank in it's brand new facility on 14th Ave NW and NW Leary. Full closure of 14th for 3 years would mean it would make it very difficult if not impossible for deliveries to the food bank and for vulnerable clients to get to the food bank for crucial food supplies. This would not meet Sound Transit's own stated environmental justice goals.</p> <p>On the other hand, the Ballard Food Bank is in favor of the 15th Ave alternative (as opposed to further west as some are advocating) in order to better meet the transportation needs of their clients.</p> <p>My own preference would be for a tunnel under the ship canal for fewer impacts on views, shipping, and businesses in Ballard and the Interbay area.</p> <p>Thank you for the opportunity to comment.</p>	Lynda Emel
04/28/2022	<p>While I support the increased access to public transit, especially for the ease of access for those who live & work in the C-ID and the potential business it will bring to the C-ID community, I implore you to select the 4th Ave option which will have the smallest impact on the existing neighborhood and community. As someone who frequents businesses in the C-ID, I have seen the suffering caused by the pandemic and the increase in property damage and hate crime in the C-ID and our local AAPI community. Some of these businesses will not survive the disruptions from construction and would not gain the benefits from the transit expansion if a 5th Ave option is selected. The people and community of the C-ID do not need the extra burden the construction would cause. Choosing a 4th Ave option will have the least detrimental impact on the community and neighborhood.</p>	Grace Wong
04/28/2022	<p>I really hope there is reconsideration for the 5th ave project near CID. The 10 year plane will cripple the businesses in the area that have already faced enough adversity the last two years. Please reconsider different location or plan that doesn't affect more business. Your organization has already wasted public funds. This is not needed at this time</p>	Kevin Lee
04/28/2022	<p>Please, please, please route the light rail through 4th Avenue in Chinatown International District!</p>	Brian Luong
04/28/2022	<p>I voted for this extension in 2016, but having now seen the West Seattle expansion options, I believe the environmental and economic costs outweigh the benefits. Please reconsider how electric buses and other transit options could meet the growing needs of West Seattle's population without displacing dozens of businesses, hundreds of homes, and hundreds of animals that all make their homes in West Seattle.</p>	Shannon Saam

04/28/2022	<p>While expanding and improving public transit is essential for our city, it's critical that we take full accountability for and address and mitigate the repercussions of that expansion.</p> <p>In particular, the displacement of businesses and vulnerable community members at the heart of the Chinatown-International District has not been sufficiently addressed. This is an already marginalized community facing a decade of destruction and displacement. Much more needs to be done to protect this community, support impacted businesses, and avoid displacement.</p> <p>Sound Transit already has a history of asking minority neighborhoods like Rainier Beach to bear the brunt of construction impacts while failing to mitigate displacement or helping these neighborhoods reap the full benefits of transit. Sound Transit has a responsibility to do better for marginalized communities like the C-ID and has an opportunity to improve the legacy of public transit here by revisiting and fully addressing impacts to this community.</p>	Shelley Wilson
04/28/2022	<p>The CID was originally created because of racist redlining policies and has been disrupted and forcibly moved on 3 major occasions already because the city has decided that our communities and neighborhoods aren't wealthy or important enough to not be demolished every single time. We are strongly opposed to all of the 3 options listed for 5th Ave S. Our neighborhood loves and uses as much public transit as possible, but not at the cost of community, livelihoods, and forcing the residents of the neighborhood to live in a construction zone for the next decade.</p>	Erika Lovas
04/28/2022	<p>Thank you for issuing the Draft EIS for public comment. I think most West Seattle residents (myself included) are all excited and anxiously awaiting light rail to West Seattle. The needs for public transit alternatives to and from the peninsula are glaring in the past 2 years with the bridge closure.</p> <p>I am an Architect and resident of West Seattle (Alaska Junction). In reviewing the EIS, it is apparent that the site constraints and elevation changes after crossing the Duwamish necessitate a tunneling option at least from Delridge to the junction</p> <p>Additionally, the amount of property which would need to be required either through standard real estate transactions or eminent domain is astronomical with an elevated track, not to mention the fact that all the residents of said properties would have to be displaced. For instance, the elevated proposals for the Alaska junction station would require the acquisition, and demolition of effectively 2 entire blocks. The proposals for a Fauntleroy elevated station would require the acquisition, DISPLACEMENT, and demolition of a brand new apartment building that just opened at the end of 2021.</p> <p>Given the pace of real estate prices, has the budget for acquisition provided enough funds for procuring all of these properties? Has this process started? Certainly not every one of these residents will sell willingly, forcing an eminent domain challenge, which will most certainly be challenged in some capacity leading to a potentially years long legal battle, just to acquire the properties. Has this been accounted for in the schedule?</p> <p>It seems just from a land use and acquisition question, that the elevated options do not seem feasible. Delridge 2B is a great configuration for a tunnel, which leverages existing city property, thereby eliminating some property acquisition requirements and achieving a tunnel from there to the junction. I strongly urge Sound Transit to consider modifying the preferred alternative to a tunneling strategy, which utilizes as much city owned/public property as possible without the forcible acquisition and eviction of residents.</p> <p>Furthermore, while the West Seattle Bridge repairs are due to be completed this year – this bridge will still need replacing. It would be wise, before the bridge reaches the end of its lifespan, to plan for a hybrid road/rail replacement design which can be constructed as part of the light rail extension and would allow the existing West Seattle Bridge to be decommissioned at a later date once the light rail is opened. I understand this requires interface with SDOT, but would be a wise endeavor for efficiency's sake.</p>	Steven Townsend
04/28/2022	<p>Please move forward with the 4th Ave alternative. The 5th Ave alternatives have too many negative impacts on the community.</p>	Kate Quamma

04/28/2022	Expansion of the light rail in the CID will be very detrimental to important community. If it must be expanded please only expand onto 4th Ave and NOT on 5th Ave. Building on 5th Ave expansion will demolish some existing businesses (oasis, Seattle best tea, pings dumplings) and bring construction into the heart of the neighborhood. 4th Ave options will not do these things.	Natalie Sridhar
04/28/2022	The building of these transportation systems will desalinate the Chinatown-international district for years to come. These communities are already suffering from overall covid-19, on top of the extreme racism they deal with in general and directed from hate crimes due to the virus. Please seek other options that will not ruin lives by demolishing small business of People of Color.	Ali Lorenz
04/28/2022	<p>Access to public transportation is vital to the livability of our city during this time of unprecedented growth and expansion but, as history shows, consequences from public infrastructure projects like this have disproportionately burdened communities of color.</p> <p>As the largest transit hub in the city, it currently serves as the primary regional gateway into Seattle's downtown core and stadium district. Simultaneously, it also sits at the doorstep of the Chinatown-International District - a vibrant historic neighborhood that is home to multi-generational families, preserved buildings, family-owned businesses, and community organizations that provide vital services to its residents and serves as a cultural destination and place of belonging for many throughout the region.</p> <p>The economic impact of the pandemic and anti-Asian American sentiment has hit the C-ID neighborhood harder and longer than most. Many of the small businesses that struggle to survive today will be hit even harder, our Museum included. We have determined that evaluations by Sound Transit have ultimately failed to fully address and account for the ways in which the expansion will irreversibly change the neighborhood.??We've lived through the construction of I-5, which cut the neighborhood in half and paved over churches, homes, and businesses. We've lived through the construction of the Kingdome, which threatened to turn the C-ID into a parking lot. We experience the legacy of their impact year-round. For a neighborhood that exists due to historically racist policies such as redlining and lack of city services, our neighborhood once again faces an uncertain destiny.</p> <p>Current plans to expand the Link Light Rail in Chinatown-International District Station threatens to further divide and marginalize the C-ID neighborhood. I support the 4th Ave, not the 5th Ave plan.</p> <p>This is certainly not the first major construction project in Seattle to impact the community, as seen during the construction of the Kingdome in 1972 (the site of Century Link field today), the expansion of I-5 which literally divided the neighborhood in half, and many others since the Chinese Exclusion Act was enforced from 1882 to 1943. Articles regarding the history mentioned above:</p> <ul style="list-style-type: none"> • https://archive.seattletimes.com/archive/?date=19990708&slug=2970605 (Tsutakawa 1999) • https://brambleproject.com/uploads/Brian-Thesis.pdf (Kalthoff 2012) 	Alvin Ongoco
04/28/2022	Do not build anything that will harm Chinatown.	Vincent So
04/28/2022	The CID is a neighborhood near and dear to my heart. while I understand that access to public transportation is important, it shouldn't have to come at the cost of the health, safety, and comfortability of residents in the CID community. I strongly suggest the 4th Ave option as that create the least impact on a neighborhood that has already been through enough disruptive construction projects. Thank you!	Josephine Law
04/28/2022	No, this will carve into Chinatown-ID. A culturally rich neighborhood does not need to be carved into. We value the elderly, small businesses, and Asian culture.	Fiasta Bautista

04/28/2022	<p>Firstly even considering displacing so many CID businesses and residents in unacceptable in terms of racial and community equity. These citizens have made the district livable, economically viable, and vibrantly contributory both civically and regionally. There must be sufficient budget to provide guaranteed funds for businesses reestablish to their original or virtually equivalent business locations, if any displacement is required.</p> <p>I dislike any deep station alternative at this site, as the stations only accessible by elevator experience frequent elevator service disruptions. At at station of this nexus import, any elevator service disruptions are completely UNacceptable.</p> <p>I strongly encourage Sound Transit to further study concepts along 4th Ave to minimally impact CID businesses and residents, as well as to also take into account the longevity of the 4th Ave Viaduct and incorporate that replacement information in the light rail expansion project timeline, so that traffic impacts are also minimized to the shortest timeline possible.</p> <p>Respectfully, Tracie Giles</p>	Tracie Giles
04/28/2022	<p>I strongly agree with the statement put forth by the Wing-Luke. The CID is greatly important to Seattle and must be protected.</p> <p>The open letter outlines oversights and historical context for opposition to the current station options, and calls for a more thorough study on impact to the local neighborhood and community.</p> <p>Thanks kindly, David Gibbs</p>	David Gibbs
04/28/2022	<p>This current plan unnecessarily displaced businesses and people in a deeply populated area. This plan can and should be moved to other locations with less devastating effects to our elders and local AAPI community</p>	Caroline Daniel
04/28/2022	<p>I support the the "4th St Shallow" or "4th St Deep" option for the Chinatown section of Sound Transit. The 5th Ave option would displaces many more businesses.</p>	Frances Blauvelt

<p>04/28/2022</p>	<p>Dear Councilmembers and Sound Transit,</p> <p>I am an employee at BladeGallery’s Epicurean Edge in SODO (Seattle). This last fall, we moved from Kirkland, WA to Seattle and are in danger of our new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail path alternatives. This is a unique business, serving as a hub for the international bladesmithing community, that can’t be found anywhere else.</p> <p>Our staff has worked tirelessly throughout the pandemic to try to keep our business open and our employees employed. Forcing our business to close our doors after just completing this extremely time consuming and expensive move without a chance to recoup funds would cause our business to go under. We don't just employ our own employees, but also provide a avenue for over 500 additional small businesses, from bladesmiths, to machinists, to folks still creating art using old world and often lost techniques to sell their art and feed their families. The loss of our business would have a ripple effect throughout our industry resulting in income lost for hundreds of families.</p> <p>Additionally, the loss of our business would simply be a disservice to the public of Seattle. A business like ours draws customers from all over Washington simply because a business like ours does not exist anywhere else in the world. This generates revenue for the City of Seattle from people that normally avoid coming into Seattle. With the addition of our building, Lawless Forge, and Decorative Metal Arts, a true community of artists and metalworkers have began coming together in an area of the city that desperately needs a community to support it. It only takes 5 minutes of someone driving throughout the Sodo District to see that Sodo does not get the same support from taxpayer dollars as other parts of the city receives. Currently the City of Seattle is unable to even keep up with cleanliness of the streets, removing hazardous broken glass from the sidewalks, and trash and debris from the streets, sidewalks, and alleyways. The addition of a light rail throughout this area will only exacerbate the problem.</p> <p>Please consider the following comments and respond on the appropriateness of Alternative DUW-2, which does not eliminate this unique business:</p> <p>As stated in Paragraph 4.2.2.3.3, Alternative DUW-2 would not convert any single- or multi-family residential land or City-owned open space to a transportation use.</p> <p>As shown in Table 4.2.3-2 and stated in Paragraph 4.2.3.3.3, Alternative DUW-2 would displace the fewest employees – about 40% fewer than other alternatives.</p> <p>As stated in Paragraph 4.2.5.3.3, Alternative DUW-2 would have the least change to the visual character in areas with concentrations of sensitive viewers and the least impact on visual quality of all the Duwamish Segment Build Alternatives</p> <p>As stated in Paragraph 4.2.7.3.2, Alternative DUW-2 would have the fewest noise impacts of all the Duwamish Segment Build Alternatives – about 90% fewer than other alternatives.</p> <p>As shown in Table 4.2.8-1, Alternative DUW-2 would introduce the least square footage of total new impervious surface by a significant margin – less than 10% that of other alternatives.</p> <p>As stated in Paragraph 4.2.8.3.3, Alternative DUW-2 would not require relocation of any outfalls.</p> <p>As shown in Table 4.2.9-2, Alternative DUW-2 would have no effect at all on Alternative Wetlands, Wetland Buffers, and Biodiversity areas.</p> <p>As stated in Paragraph 4.2.11.3.3, Alternative DUW-2 would avoid the steep slopes on Pigeon Point, offering the greatest slope stability and least landslide risk, thereby avoiding the need to construct retaining structures.</p> <p>As stated in Paragraph 4.2.14.3.3, Alternative DUW-2 would not be expected to require relocation of Fire Station 14, and no long-term effects are expected.</p> <p>Table 4.2.16-4 seems to indicate Alternative DUW-2 would impact 9 historic properties, the most of any alternative. However, the table inexplicably divides the Department of Highways District No. 1 Headquarters/Maintenance Facility into 5 subproperties, thereby skewing the statistics. If Table 4.2.16-4 instead tabulated only whole historic properties, Alternative DUW-2 actually impacts the fewest historic properties of any alternative.</p> <p>As shown in Table 4.2.17-1, Alternative DUW-2 is the only alternative that would have no permanent impact at all to parks and recreational resources.</p> <p>Table 4.2.18-2 repeats the inexplicable division of the Department of Highways District No. 1 Headquarters/Maintenance Facility into five subproperties. As a result, Alternative DUW-2 would appear to be similar to other alternatives in its impact on properties with Preliminary Section 4(f) Determinations. However, when evaluating the DOH District 1 HQ/Maintenance Facility as a single property, Alternative DUW-2 in fact impacts the fewest number of properties with Preliminary Section 4(f) Determinations.</p> <p>Please support the DUW-2 Alternative that does not force BladeGallery’s Epicurean Edge to move again or close shop</p> <p>Thank you for your time and consideration.</p> <p>Jeff Swanson</p>	<p>Jeffery Swanson</p>
-------------------	--	------------------------

04/28/2022	Sound Transit needs to be expanded, and the missing link of the Burke-Gilman needs to be completed!! Mass transit is vital to our city, and is more environmentally friendly.	Rachel Wood
04/28/2022	Please reconsider this development because it's another way Seattle is practicing gentrification and harming the people who live in this area. Making them loose their businesses and not be able to afford rent. This is not an act of love for the people in Seattle who will be deeply impacted by this.	Ray Tarrach
04/28/2022	I am a resident of Beacon Hill and frequent stores and restaurants in the ID. It is a wonderful gift to Seattle and should be preserved as much as possible during this expansion. Please listen to those who reside or have businesses in the ID, and of course the community leaders. Their advice is essential for retaining the culture and history of the International District. As a member of Wing Luke Museum, I understand the important of retaining as much of this area as possible. Seattle needs increased lightrail, but it should not be at the cost of this historic area which represents so many Asian communities.	Alice Doyel
04/28/2022	Section ES.3.1.2.2. Chinatown-International District Segment: 4th Avenue options are preferable to those on 5th Avenue. Please choose option CID 1a or CID 1a. Businesses that would be displaced by 5th Avenue options are an important part of our community in the CID. 4th Avenue options would minimize disruptions and noise during the construction period.	Sarah Wozniak
04/28/2022	In order to serve the Ballard community, already one of the densest areas in the Seattle area, the light rail station needs to be as far West as possible. A 15th Ave. station just barely fits this need, but is still on the borderline of usability. Riders would still need to cross a busy, car-centric intersection in order to get there, although at the very least they could see the station from Ballard. Moving the station to 14th Ave. would put the station firmly in the much-lower-density West Woodland neighborhood. Putting the station in central Ballard, even if more difficult, meets the needs of the community so much better. Yes, there are engineering challenges that need to be addressed, acknowledging the impact to historic structures, but the benefit is high enough to merit that effort. I have heard that a central Ballard station is completely off the table, for the aforementioned reasons, but I strongly urge you to reconsider this decision. The potential upside is just far too high. If the board of directors have made up their mind that a Ballard location is off the table, then 15th Ave. is the most acceptable option. I've seen concerns that 15th would impact more businesses, but the only businesses I've seen in the proposed location are a Mud Bay and a Subway. These are not important Ballard institutions. Ballard already has a locally-owned pet supply store, and several locally-owned sandwich shops. Let's not sacrifice the long-term accessibility of the neighborhood for the sake of a few low-value chain stores. To summarize, please re-evaluate the 20th Ave. option, and do not consider any options East of 15th Ave.	Mark Verrey

04/28/2022	<p>Dear Councilmembers and Sound Transit,</p> <p>I am an employee at BladeGallery’s Epicurean Edge in SODO. I started my employment here in November of 2021 and within several weeks of my employment, I, along with the rest of the staff, learned that we are in danger of our new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail path alternatives. This is a unique business, serving as a hub for the international bladesmithing community that can’t be found anywhere else. Furthermore, working here is my sole source of income upon which I depend to pay my bills.</p> <p>Please consider the following comments on the appropriateness of Alternative DUW-2, which does not eliminate this unique business:</p> <p>As stated in Paragraph 4.2.2.3.3, Alternative DUW-2 would not convert any single- or multi-family residential land or City-owned open space to a transportation use.</p> <p>As shown in Table 4.2.3-2 and stated in Paragraph 4.2.3.3.3, Alternative DUW-2 would displace the fewest employees – about 40% fewer than other alternatives.</p> <p>As stated in Paragraph 4.2.5.3.3, Alternative DUW-2 would have the least change to the visual character in areas with concentrations of sensitive viewers and the least impact on visual quality of all the Duwamish Segment Build Alternatives</p> <p>As stated in Paragraph 4.2.7.3.2, Alternative DUW-2 would have the fewest noise impacts of all the Duwamish Segment Build Alternatives – about 90% fewer than other alternatives.</p> <p>As shown in Table 4.2.8-1, Alternative DUW-2 would introduce the least square footage of total new impervious surface by a significant margin – less than 10% that of other alternatives.</p> <p>As stated in Paragraph 4.2.8.3.3, Alternative DUW-2 would not require relocation of any outfalls.</p> <p>As shown in Table 4.2.9-2, Alternative DUW-2 would have no effect at all on Alternative Wetlands, Wetland Buffers, and Biodiversity areas.</p> <p>As stated in Paragraph 4.2.11.3.3, Alternative DUW-2 would avoid the steep slopes on Pigeon Point, offering the greatest slope stability and least landslide risk, thereby avoiding the need to construct retaining structures.</p> <p>As stated in Paragraph 4.2.14.3.3, Alternative DUW-2 would not be expected to require relocation of Fire Station 14, and no long-term effects are expected.</p> <p>Table 4.2.16-4 seems to indicate Alternative DUW-2 would impact 9 historic properties, the most of any alternative. However, the table inexplicably divides the Department of Highways District No. 1 Headquarters/Maintenance Facility into 5 subproperties, thereby skewing the statistics. If Table 4.2.16-4 instead tabulated only whole historic properties, Alternative DUW-2 actually impacts the fewest historic properties of any alternative.</p> <p>As shown in Table 4.2.17-1, Alternative DUW-2 is the only alternative that would have no permanent impact at all to parks and recreational resources.</p> <p>Table 4.2.18-2 repeats the inexplicable division of the Department of Highways District No. 1 Headquarters/Maintenance Facility into five subproperties. As a result, Alternative DUW-2 would appear to be similar to other alternatives in its impact on properties with Preliminary Section 4(f) Determinations. However, when evaluating the DOH District 1 HQ/Maintenance Facility as a single property, Alternative DUW-2 in fact impacts the fewest number of properties with Preliminary Section 4(f) Determinations.</p> <p>Please support the DUW-2 Alternative that does not force BladeGallery’s Epicurean Edge to move again or close shop. I hope you consider this information in earnest, as this situation has cast doubt on the future of our business and the livelihood of myself and my colleagues.</p>	Nathan Bayer
04/28/2022	<p>As a way to mitigate or eliminate the environmental damage to the area, please study interlining the trains between SoDo and Westlake, while retaining the same frequency. This would require an infrastructure investment (to allow for better headways in the existing tunnel) but would likely cost less than a new tunnel. This would also be much better for riders, thus increasing ridership and reducing driving (thus reducing the overall environmental impact).</p> <p>Also study a new station at 20th NW in Ballard. The station could be oriented east-west, which means that the crossing would not necessarily occur at 20th (it could occur east or west of there). Doing so would increase ridership, and thus reduce driving (and damage to the environment). For the crossing, please study both underground and above ground options to the east and the west.</p>	Ross Bleakney

04/28/2022	<p>as a resident and community member living in international district/chinatown, i am urging you all to remove 5th Ave as an option for the new Sound Transit light rail station. instead, build it on 4th Ave! if this station is built on 5th Ave, it significantly impacts the lives of workers and residents living in the area in a negative way - this construction will displace hundreds of local brown, Black & Asian owned businesses, endanger the lives of Asian elders living in the area and cause environmental effects that will directly impact the hundreds of brown, Black and Asian residents in CID. i live here. i work here. my friends, my community, the folks i love live here. our lives will all be disrupted for the next 20 years and we will directly face the consequences and negative impacts of construction. CID has faced so much injustice and blatant discrimination from the city of Seattle - i am urging you all to acknowledge this and strongly consider prioritizing the lives and needs of Black, brown & Asian folks living in CID. please listen to what the CID community is telling you. NO to 5th Ave, YES to 4th Ave!!!</p>	Iris Monica Ann Silan
04/28/2022	<p>I support the 5th Ave alignment, but Sound Transit must take CID community concerns seriously and seek to minimize disruption to local businesses by prioritizing a 4th Ave S station just below street level like the existing station. Regardless of the rest of the downtown alignment it's absolutely essential to have multiple banks of large surface-to-platform elevators to serve the second downtown transit tunnel. The need for a mezzanine level is minimal; ticket machines and ORCA card readers can be stationed at immediate at all surface level-station entrances as with all stations in the newer segment between Capitol Hill and Roosevelt.</p> <p>The Ballard station is too far from the core of the neighborhood and fails to properly serve it - given the growth of the neighborhood and its existing core, it'd be like building the U District station by the freeway bus station instead. An alignment more to the west would also allow better pedestrian and bicycle access to and across the Locks and Discovery Park.</p> <p>Similarly, the SLU station should be built to serve the neighborhood core (between 9th and Boren), and redundancy to the streetcar by building it under Westlake instead would not be unwelcome.</p> <p>I don't have particularly strong opinions on the other alignments, though WSJ-5 is clearly the best option to actually serve riders in West Seattle, and consolidating Smith Cove/Interbay should be studied further as the drawbacks of cutting Smith Cove are not huge compared to time savings and better possibilities of TOD to drive ridership in addition to being close to existing useful retail, though if not the 17th Ave/Thorndyke retained cut option is the most ideal (again, considering the potential for future TOD, not as it's currently developed).</p>	Derek Shan

04/28/2022	<p>Hello,</p> <p>My name is Kristen Johnson and I am writing to comment about the proposed DEL-5 and DEL-6 alternatives for the West Seattle Link Extension. I am strongly opposed to these alternative routes, as they would completely disrupt the behavioral health agency, Transitional Resources, that I currently work for.</p> <p>I have been an employee at Transitional Resources for just over 3 years, and I also live in West Seattle. Transitional Resources provides behavioral health treatment and supportive housing for those who are living with serious mental illness in our community. A majority of those we serve are people who once struggled with homelessness and hospitalization and are now living stable, healthy lives in the community thanks to our services. The proposed DEL-5 and DEL-6 routes would devastate Transitional Resources (TR) and our model of care if they were to move forward.</p> <p>The proposed routes affect 3 of our properties; one is a house that serves as a permanent residence to several clients, and two other buildings are apartments that house clients and contain offices for our programs--and these two buildings are absolutely essential to the work we do. These two buildings are not only permanent housing for 30+ clients we serve, but are also where the entirety of our supportive housing program and outpatient services offices are located and operated from. These buildings and their close proximity are located in the community and are a cornerstone of TR's successful model of care. Clients and staff rely on the easy accessibility and consistency of services that the co-location of the buildings provide. TR has a multitude of clients who live in the surrounding community--including those at our recently constructed Rise at Yancy Street building located a block away—who would lose access to these services that are right on their doorstep. Those who do live in these properties would be displaced and would likely struggle to find a new home and services that could meet their unique needs. Many of these people were homeless for many years and were finally able to find permanent housing through TR, and they have maintained this housing thanks to our services.</p> <p>Finally, the biggest issue concerning these proposed alternative routes is that TR cannot easily relocate since the proximity of services and housing are essential to our model of care. Costs are going up in the area, and finding a new property that would meet our needs without needing to build new would be nearly impossible. The costs of building new would be far out of our means as an agency, and I emphasize once again, the close proximity of our buildings and the interconnected nature of all our programs is essential to the services we provide, and to the successful outcomes we see from our clients.</p> <p>As you can see, the disruption of these services would be catastrophic to not only our clients, but our community as a whole. I urge Sound Transit to reject the DEL-5 and DEL-6 alternatives and go with other alternatives that will not devastate a vital community service that this nonprofit provides.</p> <p>Thank you, Kristen</p>	Kristen Johnson
04/28/2022	Don't mess with 5th Ave. C-ID needs to be built around community and displacing local stores for a decade long project will not benefit the area in the immediate or in the future. Leave C-ID alone!	Benjamin Ko
04/28/2022	The 5th Ave alternative option should be taken off the table. The impact to the community and businesses would be too detrimental to recover from and ultimately do more harm to an already marginalized community than any good. The 4th Ave option is much less harmless and less invasive to the community.	Grace Sinclair
04/28/2022	Options on the 4th Ave (1A and 1B) are better from a transportation cohesion standpoint. These options additionally enable people like me to continue supporting local business that celebrate my heritage. An additional benefit is that it would break with Seattle's history of putting all the infrastructure burdens on minorities, which would be a laudable thing to stop doing.	Ederlyn Lacson
04/28/2022	Please go with the route on 4th, NOT on 5th. Going through the China Town International district would be detrimental to the Asian American and Pacific Islander community, especially after a devastating last couple of years of violence and abuse due to the pandemic and racism.	Laksmi Van

04/28/2022	<p>Hello,</p> <p>I know discussion is happening around where the CID lightrail will be going. 5th Ave St houses and employs so many Asian Americans that gives richness to what makes the Chinese International District special. It would be much preferred if the lightrail station was instead moved to 4th Ave where it will cause much less displacement and disruption.</p> <p>Thank you for your time, Chanelle Geveshausen</p>	Chanelle Geveshausen
04/28/2022	<p>Housing/land costs will continue to WELL outpace inflation. As such, delays will raise costs (of land acquisition) faster than money to buy them, and will doom the project. Unless the project changes to not need to purchase land.</p> <p>Plan to build a tunnel (in West Seattle) instead where it saves you from having to acquire large chunks of property. It'll be the only way to actually succeed, and as a bonus it will be less obnoxious visually too.</p> <p>(Alternately, if we could kill R1 and parking requirements, maybe we could catch housing inflation? But that's for the council to change, and you can't really get them to change that. So ... tunnels.)</p>	Douglas Kilpatrick
04/28/2022	<p>Why are these the only options? Why should the regional transit hub go through the Chinatown International District? The Lightrail, the Streetcar, and I-5 projects have disrupted our neighborhood enough. Put the hub at the stadiums or at downtown!</p>	Rachtha Danh
04/28/2022	<p>This project will harm the low income, predominantly POC community in the C-ID exponentially more than other privileged communities in Seattle. SoundTransit should reflect on their commitment to diversity, equity, and inclusion as they are proposing to actively harm this community for decades to come.</p>	Megan Grosse
04/28/2022	<p>To whom it may concern,</p> <p>I prefer selecting DEL-5 and DEL-6 for the West Seattle Sound Transit route.</p> <p>After reviewing the Draft EIS Executive Summary Delridge Segment (ES.3.1.1.3, page ES-13 – ES-18), it appears that the proposed options DEL-1a, DEL-1b, DEL-2a, DEL-2b, DEL-3, DEL-4 all impact the corner of Delridge and Andover. They will force our office building at 4000 Delridge Way SW to close and demolish the surrounding neighborhood, which I believe would be devastating for our business and employee morale to have to leave West Seattle, as well as the nearby neighbors.</p> <p>It seems DEL-5 or DEL-6 are better options due to less neighborhood impact. They would allow us to remain on our corner and prevent any disruption to our thriving business. Also, Options DEL-5 and DEL-6 would disrupt the fewest amount of residential and a similar number of commercial properties – both of which are limited in West Seattle. The noise and visual impact would appear to be significantly less if DEL-6 was chosen above all other options. The DEL-6 option is cheaper than the others, making it a great choice since construction costs are rising dramatically.</p> <p>In closing, please consider selecting DEL-5 and DEL-6 for the West Seattle Sound Transit route. Thank you.</p>	quyen vu

04/28/2022	I am concerned by the residential and business displacements which will be caused by the preferred 14th Avenue elevated option as outlined in graphic ES-8 of the EIS's Interbay/Ballard Extension section. I am also concerned by the years-long negative impact to the newly-opened Ballard Food Bank, a vital service to many people in the community. Additionally, I am troubled by the visual impact of the elevated section, particularly over the Ship Canal near the Ballard Bridge - it is out of scale with most of Ballard and Interbay, and unattractive. For these reasons, I support the Tunnel Option on 15th, as 15th is already the main transportation corridor through this area.	Dana Staikides
04/28/2022	Four stations are not necessary in West Seattle. Long term accessibility and route expansion should go south from the Fauntleroy station. I believe the Alaska Junction station, regardless of whether it is above or below ground is not necessary and is a dead end ride. It is easily walked up Edmunds, Alaska or Oregon and would thrive with a shuttle from the Morgan Junction as well as the Admiral Junction. This would allow the possibility of pedestrian only from the Triangle to the Alaska Junction. No cars, walk or trolley to a safe, noise free and sunlight destination for shopping and entertainment. Build for expansion to the airport and beyond.	Sharonn Meeks
04/28/2022	Please build this underground! The West Seattle we know has already been ruined and over built. This monstrosity is loud and ugly, the least we can do is put it underground and save what little bit of our once lovely town that we can. Underground please!	Heather Scott
04/28/2022	Please consider only 4th Ave options despite higher costs. We need to absolutely avoid further disruption of life in Chinatown/ID. Our embarrassing actions in Seattle toward Asians since deporting Chinese in 1886 need our continuing apologies, not unending disruption of this historic and successfully expanding district.	Charles Meding
04/28/2022	Don't build this transit system! Multiple small businesses are placed there that have been around for many years. Building this would end these businesses and harm many families.	Gabriella Middleton
04/28/2022	Please do not expand the station in a way that is going to be harmful to the CID. Seattle has already taken a great hit from covid & gentrification. Many small businesses that are the heart of Seattle have already been forced to close. Ping's dumpling house is a staple of Seattle, and the CID. Expanding the station in a way that demolishes these buildings, will not only be a tragedy for Seattle, it will also negatively impact the residents with loss of business, dealing with road closures, harmful air quality from construction, and obnoxious noise from construction. I personally do my grocery shopping at Uwajimaya, and frequently spend my time after strolling through the street, getting boba from oasis tea, dumplings from pings and tea from Vital Tea tasting house. I am devastated thinking of a future where the link expansion is considered more important than then value of life of the residents. Find a different option that does not demolish the heart of CID. I couldn't imagine the city would choose to demolish the heart of Fremont or Ballard, so I hope that is not the case for the CID. How many more times will POC have to sacrifice their quality of life for the sake of "progress" when a compromise can easily be made ?	Neisha Bhagwandin

<p>04/28/2022</p>	<p>NO on 5th Ave options (CID-2a, 2b) NO on 4th Ave deep (CID-1b) Tentative YES on 4th Ave shallow (CID-1a)</p> <p>I've read through the draft EIS and I am not confident that the assessment fully understands and captures the scope of the long-term negative impact that this project will have on the C-ID neighborhood. Many of the proposed repercussions are unacceptable to me, as someone whose life, community, and work centers in this neighborhood. I ask for Sound Transit to thoughtfully and intentionally conduct additional studies of the environmental, cultural, health, and equity impacts of this project. As such, in a host of bad options, 4th Avenue shallow is the least damaging of them. Here are my reasons why:</p> <p>Firstly, I note that all options (CID-2a, CID-2b in particular) will cause irreparable displacement of key businesses. If options result in displacement, why are they viable options? CID-1a and CID-1b cause fewer disruptions to the neighborhood, but still result in potential displacements of neighbors. The West Seattle station was able to be moved to prevent avoidable displacement. Why is that not being entertained in this scenario?</p> <p>Secondly, it fails to account for the long-term harms caused by construction and closures in several ways: Economic disruption of business operations - The neighborhood has not recovered from the early days of the pandemic and Anti-Asian American sentiment/violence. So many businesses have struggled to survive even without massive construction disruptions, and the reduction of parking options, increased congestion, and street closures means that many businesses will lose even more revenue than they already have. This will not just affect the displaced businesses that will no longer exist, but we will feel the effects neighborhood-wide. Many more businesses will not survive. The project proposals fail to protect the economic vitality of these family-owned businesses. Noise pollution - The prospect of having continuous construction noise throughout the day for long stretches of time, in addition to the heavy machinery that will be coming in and out of construction sites is a huge detriment to the quality of life in the C-ID. As a dense residential area filled with a large population of elderly people, this has a massively negative emotional and psychological effects on quality of life. Our elders and neighbors are peaceful and deserve compassionate consideration. Health effects - CID-2a is too close to the neighborhood's central park space where families, elders and community members congregate. I was also appalled to see that the location where Oasis Tea Zone currently exists is going to be the site of the tunnel exhaust system. The C-ID already suffers from poor air quality due to a lack of canopy cover and greenspace, not to mention that it is adjacent to I-5. We're talking about pumping low-quality/polluted air into the heart of our neighborhood where children play and elderly people sit outside to enjoy fresh air. This is absolutely unacceptable and has negative implications on development of new generations and the lifespans/health outlooks of current residents. This would never fly in a residential neighborhood like Laurelhurst or Magnolia. Why is it an option here in the C-ID, also a residential neighborhood? Asian Americans are not expendable.</p> <p>Thirdly, historical context is absent in consideration of these sites. Previous infrastructure projects such as I-5 effectively cut the C-ID in two, severing and isolating Little Saigon from the rest of the neighborhood. The lack of foot traffic and degradation of community cohesion has had lasting and irreparable effects on the neighborhood's vitality. When the Kingdome was constructed, it was proposed that the C-ID was going to be where the parking lot was. Why is this an option? The Japanese Incarceration removed people from their homes and effectively wiped Japantown from the map save for a few meager blocks. This neighborhood has already suffered massive and continued loss due to massive infrastructure projects.</p> <p>The C-ID exists today specifically because of historically racist policies such as redlining. Once upon a time, this neighborhood was one of the ONLY places that immigrant populations, Black, Brown, Asian people were ALLOWED to live. As a result, we built a vibrant self-sustaining community in the only place we were able to. Now, this neighborhood and community which we have fought for generations to preserve is just going to be paved over as it has been time and time again. It is not as simple as destroying a few buildings. Unlike many other neighborhoods in the city, this one in particular is a tight-knit community of interlocking relationships and support systems - damage to one part of the community has a rippling systemic impact. The proposal perpetuates and makes worse historical racial inequities.</p> <p>In summary, my reaction to the Draft EIS is overwhelmingly negative on the basis of unacceptable damage to neighborhood cohesion and cumulative impact on the C-ID's physical and emotional health and economy. If I were to support any option, it would be CID-1a, but I would like Sound Transit to conduct a more thorough study of the long-term cumulative effects that this will have and explore other alternatives that do not result in massive displacement threat, economic damage, and poor quality of life for the neighborhood.</p>	<p>Max Chan</p>
-------------------	--	-----------------

04/28/2022	<p>I am a first-generation born Filipino-American and have been living in Seattle for 5 years. Within that timeframe, I've had the opportunity to live in downtown Seattle, Columbia City, and now reside in West Seattle. The light rail and other public transits have been my main methods of travel and I've enjoyed them very much. I am proud to say that Chinatown-International District has been one of my most favored stops along the light rail due to the local businesses and their hospitality. It's a spot that's reminded me of home because of the people, small businesses, local shops, food and beverage services that make up the neighborhood there. It's a place that I've grown to cherish. While the thought of connecting West Seattle to Ballard via new Sound Transit station can be beneficial, the affects of the neighborhood in the C-ID must be considered. We must listen to those that have been there, that live there, that have generational roots and businesses that serve and have served the community over the years there. Please consider this as we #MoveForwardOn4th.</p>	Adam Gatdula
04/28/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy (ABA) in the Frye Commerce Center (2414 SW Andover St). I currently have a daughter that attends ABA and my older son (now 8) attended ABA for five years. ABA has been an extremely important part of my children's lives, providing high quality pre-k education and more importantly, safe and loving childcare while my spouse and I work. Additionally, because of the location of ABA, as opposed to being somewhere such as the Alaska Junction, the cost is lower than other facilities in West Seattle. Had our only option been to send our children to another provider, such as Bright Horizons, we would not have been able to afford it and likely I would have had to quit the workforce to be a stay-at-home mom.</p> <p>I realize that by the time this relocation would be implemented, I will no longer have a child at ABA. However, I sympathize with all future parents trying to obtain affordable, quality childcare for their children. I have spoken to many parents who have been on waiting lists since they were newly pregnant, and still have not been able to find anything well after their child is born. Forcing ABA to relocate off the peninsula and/or to a smaller space would have negative repercussions for thousands of families in the future.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Inga Shigetani
04/28/2022	<p>Evaluations by Sound Transit have ultimately failed to fully address and account for the ways in which the expansion will irreversibly change the neighborhood. We've lived through the construction of I-5, which cut the neighborhood in half and paved over churches, homes, and businesses. We've lived through the construction of the Kingdome, which threatened to turn the C-ID into a parking lot. We experience the legacy of their impact year-round. For a neighborhood that exists due to historically racist policies such as redlining and lack of city services, our neighborhood once again faces an uncertain destiny. Ultimately, the final EIS requires greater clarification on multiple fronts to better assess construction impacts.</p>	Gauri Sharma
04/28/2022	<p>Hello, as a large property owner along 14th Ave NW, (Vaupell Property between NW 54th and NW 53rd) I am interested in the project. I am concerned about how I plan on our redevelopment without knowing where the line will go and how much of our property you are interested in. We plan to redevelop the property starting this summer. We are concerned with access issues if 14th Ave NW is under construction for a long period of time. We are supportive of a light rail link to Ballard.</p> <p>Thank you,</p>	Don Fosseen

04/28/2022	<p>I am a citizen, resident of WA, and proud Asian American healthcare worker.</p>	Sarah Wang
	<p>This light rail construction will economically harm the Asian American densely populated communities of Seattle. How many more homes and businesses does King County need to ruin before considering the uprooting of white homes for expansion and betterment of communities? Construction will create toxic waste and unhealthy environmentally toxic living conditions for the multigenerational Asian Americans residing in the sanctuary of the ID. I formally work in public health clinical research on environmental toxicology and know the effects of chemicals and toxins on childhood development, pregnant women, and elders within communities. This effects of this project haven't even been formally considered by city planning-disgusting behavior.</p> <p>This is not the first major construction project in Seattle to impact the community, as seen during the construction of the Kingdome in 1972 (the site of Century Link field today), the expansion of I-5 which literally divided the neighborhood in half, and many others since the Chinese Exclusion Act was enforced from 1882 to 1943.</p> <p>Access to public transportation is vital to the livability of our city during this time of unprecedented growth and expansion but, as history shows, consequences from public infrastructure projects like this have disproportionately burdened communities of color.</p> <p>This project will deface and economically harm a vibrant historic neighborhood that is home to multi-generational families, preserved buildings, family-owned businesses, and community organizations that provide vital services to its residents and serves as a cultural destination and place of belonging for many throughout the region.</p> <p>Proposed options on 5th Avenue will displace many C-ID small businesses and result in the demolition of buildings that currently house Ping's Dumpling House, Joe's Bar, Pacific HK Cafe, and Oasis Tea Zone. No matter the location, station construction will require nearly a decade of street closures, detours, loss of parking, and subject residents to construction noise throughout the day. Cumulative impacts around the community's ability to stay and thrive remain unaddressed and historically, from previous historical construction narratives in the community, will detrimentally affect the well-being of community members.</p> <p>The economic impact of the pandemic and anti-Asian American sentiment has hit the C-ID neighborhood harder and longer than most. Many of the small businesses that struggle to survive today will be hit even harder. Evaluations by Sound Transit have ultimately failed to fully address and account for the ways in which the expansion will irreversibly change the neighborhood. The ID has lived through the construction of I-5, which cut the neighborhood in half and paved over churches, homes, and businesses. They have lived through the construction of the Kingdome, which threatened to turn the C-ID into a parking lot. The ID experiences the legacy of their impact year-round. For a neighborhood that exists due to historically racist policies such as redlining and lack of city services, the neighborhood once again faces an uncertain destiny.</p>	
04/28/2022	<p>Thank you for the opportunity to comment. I am very supportive of building light rail. I support a system that prioritizes riders and good station access. As a regular user of the current line 1 system, I am often very frustrated by the lack of functioning elevators and escalators. I am against any of the deep stations for that reason.</p> <p>In the Chinatown International District, please build a station on 4th that is shallow. This neighborhood also needs construction mitigation efforts to support the unique local businesses in this neighborhood. The CID has faced so many negative impacts from transportation projects over the past decades, and it is important to figure out how to support the existing local businesses and prevent further displacement.</p>	Kelli Refer
04/28/2022	<p>I do not believe the EIS sufficiently considers the impact to the Chinatown- Japan town that this construction and new station entrance would cause. This area is a Seattle treasure with many small businesses and would be severely impacted by construction or a new station. All expansion must be based at a different location not in this community.</p>	carol overbeck

04/28/2022	<p>Support any option that puts more trains in tunnels through West Seattle and Ballard Options where stations are only accessible via elevators are not preferred CID-1a is preferred as it minimizes displacement of businesses in the CID. DT-1 is preferred as it locates the Downtown and South Lake Union stations in more desirable locations o Supportive of tentative plans presented to Seattle City Council showing an approach to the Mid-Town station is located and designed such that acquiring the Bartell's parcel isn't necessary. Support IBB-2b and IBB-3 design for Interbay and Ballard Stations. Locating station along 15th Ave W/ NW will provide easiest access for neighborhoods. For Interbay Station, locating the station away from 15th Ave W limits the systems ability to be easily accessed from bus routes (unless buses are re-routed), but support IBB-2b as it puts station below-grade at 15th Ave NW and NW Market St. Locating Ballard Station on 14th Ave NW limits access and potential future use. Sound Transit should work with the City of Seattle to establish higher height limits for future TOD developments around stations – especially in West Seattle, Smith Cove, Interbay, and Ballard Stations. Stations need to be connected to and accessible via safe routes for everyone walking, rolling, and biking. Sound Transit needs to work with the City of Seattle to create safe intersections, safe bike routes, and secure lock-up facilities for short and long-term bike storage at new stations in West Seattle, Interbay, and Ballard.</p>	Connor Davidge
04/28/2022	<p>I believe expanding transportation is important but please do not destroy Chinatown in the process. My family has had business in Chinatown for most of my life and I have practically grown up there. Many of my family's loved ones also run small businesses in Chinatown and on the block the construction will be. This construction will heavily change everyone's lives for the worse. For many people, their business in Chinatown is their only livelihood. Many elders including my grandma reside in Chinatown as well as many other communities. The construction will add so much pollution and debris into the air, it will impact their health. It will also change the peace of living with all the construction. Adding on to all this, it will destroy what little history we have of Chinatown. Japan town is already non existent due to Pearl Harbor, I would hate to see more representation being destroyed ! This is my culture, and many other peoples culture, that is once again taken away from us. Please reconsider the amount of lives that will be impacted due to this expansions.</p>	Nicky Dang
04/28/2022	<p>I would love to write a petition to support the 4th Ave expansion plan, not the 5th Ave plan. Thank you.</p>	Vy Pham
04/28/2022	<p>The CID district mean the world to so many families that worked hard to build their business. And keep their culture with them tearing parts of it down will effect so much of that! And hurt a lot of them economically please consider a different route.</p>	Christy Florez
04/28/2022	<p>In the interest of promoting equity and minimizing impacts to the area's air and water quality, these are the best options for the West Seattle line of ST3: No Avalon Station, with cost savings going toward a long tunnel. Because the other stations will be very close, this station would cause unnecessary displacement, air pollution, noise pollution, expense, and traffic delays. It is also poorly positioned for connections with bus transit. Long-tunnel option extending to 41st Ave SW. This option causes the least displacement, is best for the environment, leads to the fewest traffic disruptions, and preserves the small and large businesses that have made West Seattle what it is. Its design is also in line with other Link light rail lines (Capitol Hill, Roosevelt, etc.). Underground Jefferson Square Station (WSJ-3b). This option leads to the least displacement, pollution, noise, and traffic disruption, while also preserving the character of the Alaska Junction's business district. Elevated Delridge Way Station (DEL-3). This option causes the least displacement and offers good connection to transit services along Delridge Way.</p>	E. Benbow

04/28/2022	Displacing and disturbing many businesses and residents in the international district, like restaurants and tea shops like Oasis, is unacceptable. These businesses are beloved and depend on customers, and the residents nearby deserve to enjoy their neighborhood and should not be pushed out in any way. The proposals to make a station on 5th are not tenable due to these impacts. Larger businesses and industrial land use are more appropriate to displace, because these corporations will be able to recover and handle the disturbance. Do not jeopardize the international district and it's businesses and residents.	Evelyn Matson
04/28/2022	For the expansion of Link Light Rail in Chinatown-International District Station, I support the 4th Ave plan, not the 5th Ave plan.	Sarah Nguyen
04/28/2022	SoundTransit should consider the potentially devastating economic and cultural impacts of the proposed 5th Ave Link to West Seattle station in the CID. The CID has been consistently negatively impacted by the pandemic, a rise in anti-AAPI hate crimes, and years of city projects (from the stadium construction to transit projects). The 4th Ave station option would better preserve existing businesses and the endangered cultural bastion, haven, and resource that is the CID.	Colin Walker
04/28/2022	<p>Chinatown-International District Segment (ES.3.1.2.2.): I am strongly in favor of either of the 4th Avenue alternatives (CID-1b or 1a) with a slight preference for the Deep Station options. It is critical that impact both residents and business owners within the CID be minimal, and the 5th Avenue options will be devastating for the area - traffic/access/parking in the area is already challenging and this will be very detrimental to this historic area.</p> <p>One additional comment is that escalator quality needs to be a priority - the current escalator situation at even our newest stations (I ride light rail weekly) is terrible.</p>	Leslie Piacitelli
04/28/2022	<p>Salutations fine city planners,</p> <p>I work at a company called Dusty Strings at 3450 16th Ave W in Seattle. You may have gotten some other comments from people regarding this business, both coworkers of mine and customers of ours, but I felt the urge to toss my hat into the ring as well to say my piece.</p> <p>I used to live in Tacoma before I moved up to Seattle several years back. You might recall the light rail expansion being passed in the 2016 election; regardless of how you may feel about any other part of that election, positive or negative, I think we can all agree that getting the expansion passed was honestly one of the best things that happened that day. I know that I celebrated. I love the Pacific Northwest. I eat breath shop live local. I'm one of those fools you see strutting around with a knitting project in my bag made from yarn spun and dyed two blocks from my house and a book written from a local author purchased from Third Place Books Ravenna or something like that. I bought a home in this city because I love it so much. I would honestly do a lot to be able to take the light rail to work - which I could if there was a stop right next to it! But, unfortunately, I couldn't if the stop were to obliterate it.</p> <p>You've heard that our building is custom built and designed with our production in mind - that's true. You've heard that we send our instruments around the world - that's true. You've heard that we were hit hard by COVID and that trying to continue production in a safe manner for our community smacked us so bad that we're still trying to recover and having to relocate would be just another kick while we're down - that's true. All of that is true. I can attest to that. But what I can also attest to on a more personal level is that our employees love this city, young and old. I don't want to have to choose between a job that I love and a place that I love, were we to have to relocate out of the city. That's an impossible choice to have to make. For me, as for everyone else who has written in support of Dusty Strings being able to stay a local Seattle business, I urge you to go with proposed route IBB-1b.</p> <p>Thank you for your time!</p>	Julia Shaver

04/28/2022	Please do not go forward with the 4th and 5th Ave light rail stations. These will have detrimental effects on the community which has already faced a disproportionate amount of hate and struggles for protecting its cultural identity, businesses, and daily life. The construction of light rail stations here will exacerbate these and continue to show the communities in the International District they are not cared for or appreciated.	Gracie Sullivan
04/28/2022	Please reconsider your location for Chinatown. My family has business and I grew up there all my life. I hold such a special place in my heart for Chinatown and have so many happy memories. Not just me, but my siblings, my parents, my grandparents, my aunts and uncles, and all my friends. Destroying Chinatown is destroying a part of my identity and my culture. We have so little left of my culture, yet you want to destroy even more? On the block where construction takes place is where the Taishan association lives. This is the home of many Asian elderly. The Chinese elderly go there for a piece of their home land and culture. They chat, laugh eat, and play majang. Destroying it would mean destroy a part of the only feeling of home they have here. I am seriously worried the major damage this construction plan will do on our Chinese and Asian community. My family's business will suffer, the elderly will suffer, and everything important to us in the Asian community will fade into memories, one day being forgotten. Please reconsider.	Lesly Dang
04/28/2022	<p>Dear Councilmembers and Sound Transit,</p> <p>I have been an employee at BladeGallery's Epicurean Edge for 7 years. This last fall, we moved from Kirkland, WA to Seattle. A move that was by no means easy, but one that we were very excited and hopeful for the future being in such a historic building. Our new larger storefront we hope to host things such as classes in knifemaking, forging, culinary knife skills, and sharpening, and potentially trade shows were we host knife makers. The new that we are in danger of our new location being taken through eminent domain for the DUW-1a and DUW-1b Light Rail path alternatives in devastating. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else.</p> <p>Because we have only just moved locations, having to attempt move a second time if the building was claimed would be a devastating, potentially fatal blow to our company. So much has already been invested in this location, the possibility of starting again is impossible. In addition to putting employees out of work, we are one of the last remaining businesses of our kind in the state, and without us much of our customer base will be forced to instead of buying local, they will have to buy online with international competitors.</p> <p>Please consider the following comments on the appropriateness of Alternative DUW-2, which does not eliminate this unique business:</p> <p>As stated in Paragraph 4.2.2.3.3, Alternative DUW-2 would not convert any single- or multi-family residential land or City-owned open space to a transportation use.</p> <p>As shown in Table 4.2.3-2 and stated in Paragraph 4.2.3.3.3, Alternative DUW-2 would displace the fewest employees – about 40% fewer than other alternatives.</p> <p>As stated in Paragraph 4.2.5.3.3, Alternative DUW-2 would have the least change to the visual character in areas with concentrations of sensitive viewers and the least impact on visual quality of all the Duwamish Segment Build Alternatives</p> <p>As stated in Paragraph 4.2.7.3.2, Alternative DUW-2 would have the fewest noise impacts of all the Duwamish Segment Build Alternatives – about 90% fewer than other alternatives.</p> <p>As shown in Table 4.2.8-1, Alternative DUW-2 would introduce the least square footage of total new impervious surface by a significant margin – less than 10% that of other alternatives.</p> <p>As stated in Paragraph 4.2.8.3.3, Alternative DUW-2 would not require relocation of any outfalls.</p> <p>As shown in Table 4.2.9-2, Alternative DUW-2 would have no effect at all on Alternative Wetlands, Wetland Buffers, and Biodiversity areas.</p> <p>As stated in Paragraph 4.2.11.3.3, Alternative DUW-2 would avoid the steep slopes on Pigeon Point, offering the greatest slope stability and least landslide risk, thereby avoiding the need to construct retaining structures.</p> <p>As stated in Paragraph 4.2.14.3.3, Alternative DUW-2 would not be expected to require relocation of Fire Station 14, and no long-term effects are expected.</p> <p>Table 4.2.16-4 seems to indicate Alternative DUW-2 would impact 9 historic properties, the most of any alternative. However, the table inexplicably divides the Department of Highways District No. 1 Headquarters/Maintenance Facility into 5 subproperties, thereby skewing the statistics. If Table 4.2.16-4 instead tabulated only whole historic properties, Alternative DUW-2 actually impacts the fewest historic properties of any alternative.</p> <p>As shown in Table 4.2.17-1, Alternative DUW-2 is the only alternative that would have no permanent impact at all to parks and recreational resources.</p> <p>Table 4.2.18-2 repeats the inexplicable division of the Department of Highways District No. 1 Headquarters/Maintenance Facility into five subproperties. As a result, Alternative DUW-2 would appear to</p>	Caitlin Peterson

	<p>be similar to other alternatives in its impact on properties with Preliminary Section 4(f) Determinations. However, when evaluating the DOH District 1 HQ/Maintenance Facility as a single property, Alternative DUW-2 in fact impacts the fewest number of properties with Preliminary Section 4(f) Determinations. Please support the DUW-2 Alternative that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. BladeGallery Inc is a small business that currently supports 8 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select Alternative DUW-2 for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at 3628 E Marginal Way S., Seattle, WA 98134, phone (425) 889-5980.</p> <p>Thank you for your consideration, Caitlin Peterson</p>	
04/28/2022	<p>The C-ID community has a long history of existing under the threat of displacement, and the recent pandemic has made this all the more apparent the need to prioritize the preservation of this neighborhood. All ST3 options would negatively impact the neighborhood, businesses, and livelihoods of those that call the Chinatown-International District home. While the 4th Ave options would impact the C-ID in less directly harmful ways, the neighborhood will no doubt suffer from the reverberations of closures, detours, and disruptions (ES.3.1.2.2).</p>	Madison Ramey
04/28/2022	<p>Regarding the sound transit options and decisions to build a new station I'm concerned for the detrimental impacts it will have on the community and business's with the 5th Ave option. Out of the two options then, I would push for the 4th Ave option to alleviate the impacts to the community that construction would create with the 5th Ave choice. No matter the option chosen, the communities hurt the most will be pushed out and further gentrify an area that's already been affected again and again. Low income asian elders and families are being impacted endlessly with the circumstances of the pandemic, hate crimes, vandalization, increased rent, lack of protection from gentrification. I urge and call for actions that will protect the current communities there.</p>	Charlie Lavidés
04/28/2022	<p>As a public transportation user, I understand the desire to build more light rail station options for our community. However, the current plan to do so involves decimating existing historic blocks, including family-owned businesses and shops who have survived many adversities throughout history. Chinatown International District is meant to be for our minority community members, whom should not be subject to over a decade of disruptive construction that may put their businesses at risk for survival as well. I oppose the 3 options listed for 5th Ave S street. Please consider the risks and consequences this construction would have on our CID community and discuss alternative options for improving public transportation. Thank you.</p>	Katherine Nguyen

04/28/2022	<p>After reading the Draft EIS, I am extremely concerned with the proposed expansion of Link Light Rail's Chinatown-International District Station. I agree with the Wing Luke Museum's open letter to Sound Transit stating that there is a need for exploration of additional refinements before the Final EIS (beyond what typically occurs between Draft and Final EIS) so as to prevent displacement of people, businesses, and community in the CID.</p> <p>The 5th Avenue South alternative is also entirely unacceptable, and I ask that this option be removed entirely, to protect the culture and community of the CID core.</p> <p>Please continue to explore other options that center racial equity and do not destroy communities.</p>	Mark Petterson
04/28/2022	<p>I own and live in a townhouse in the heart of the Alaska Junction. I also own rental property in the Pigeon Point neighborhood near the proposed Delridge stop. I would be an avid user of light rail if well-implemented.</p> <p>I favor the "Medium Tunnel 41st / Andover St Lower Height" option for West Seattle because of cost, station locations, and routing.</p> <p>Cost The only option with lower monetary cost than doing the "Medium Tunnel 41st / Andover St Lower Height" option (\$1.6B projected cost) is the "Elevated Fauntleroy" option (\$1.5B projected cost). Yet for this 6% difference in dollar cost, we would end up with a station further from the heart of the Junction (just blocks away from the Avalon station) and with 286 more housing units needing to be eliminated to complete the project. The "Medium Tunnel 41st / Andover St Lower Height" option seems to provide the most value.</p> <p>2. STATION LOCATIONS</p> <p>DELRIDGE STOP: I believe Andover Street Station provides the best location and routing. An Andover station would replacing an aging strip shopping center (whereas Dakota location take out entire blocks of housing). An Andover station location would provide opportunities for an improved commercial center through redevelopment that could potentially enhance the neighborhood. It could be a more compelling spot for shopping, coffee, dining, etc than the sad shopping center that is currently on that corner. It could create a neighborhood hub for Youngstown and Pigeon Point residents while preserving existing housing and history for some of those very same residents.</p> <p>ALASKA JUNCTION STOP: I believe that any tunnel option for the Alaska Junction Station is optimal. It will reduce any visual blight created by an elevated railway and elevated station. It will significantly reduce residential displacements so that more of our community can remain intact It will bring riders closer to the heart of the junction than would be the case with an "Elevated Fauntleroy location" (and reduce the redundancy of the Avalon and Alaska Junction stops by not having them be so close together) It is much cheaper than the Elevated 41st/42nd Avenue option – saving a projected \$400M while sparing hundreds of unnecessary residential displacements and tens of business displacements.</p> <p>3. ROUTING Running the elevated line along the industrial section of Youngstown rather than along the Greenspace on Genesee seems to make so much more sense as a way to mitigate the effect of the elevated line on the visual environment and preserve the character of West Seattle.</p>	David Papanikolas
04/28/2022	<p>I am in agreement with International District community leaders that a link rail section should be built along 4th Avenue rather than 5th. At the rate the link rail is being approved for more funding and more stations, Sound Transit can absolutely fund a location according to what ID leaders propose. Please reach an agreement that helps the community rather than further displaces citizens.</p> <p>Reference: https://southseattleemerald.com/2022/03/17/new-light-rail-threatens-chinatown-historic-district-community-pushes-back/?fbclid=IwAR27ZOzQiFqTCoLJ_5spdDnptQ7Ykly1enVcolojRulrYZoQsICcfjZYoWk</p>	Mary Adner

04/28/2022	I am writing to urge you to approve the 4th Ave options when expanding the CID station. The 5th Ave options would have harmful and disruptive impacts on Seattle's Chinatown-International District's businesses and residents. Please move forward on 4th!	Caroline Epstein
04/28/2022	To whom it may concern, Please consider moving the Light Rail Chinatown International District station to 4th rather than 5th. We should always try our best to lessen the impact of small and local businesses, especially within marginalized groups. Having the light rail placed on 5th will further divide the C-ID culture, and we must do our best to consider the thoughts and input on those that live and do business here. Kind regards, Tierra Garcia	Tierra Garcia
04/28/2022	I am writing in solidarity with the Wing Luke Museum and other businesses that will be affected by the expansion of the Link Light Rail in the CID. A more thorough study should be done on the effects this will have on the longstanding CID community. The legacy of historically racist policies and past urban planning projects (Kingdome, the I-5 construction), as well as the ongoing pandemic and uptick in hate crimes and anti-Asian American sentiments are felt in CID and expanding the Light Rail will cause more businesses, families and communities in CID to suffer. Please follow the community's asks and needs. Thank you.	Kendall Dunlop-Korsness
04/28/2022	ES 3.1.2.2 and the summary on Table ES 5: I appreciate that there is no preferred route identified for the Chinatown-ID station/route. There are challenges with all the routes. Given the fragile nature of this district, historically attacked and under-represented, I strongly urge you to take a deeper dive to protect this community- both during construction and when operational. The impact as summarized underestimates the historic toll on this segment of our city, including other public works projects such as I-5, the stadiums and the current stations; and other stressors on this community such as the unequal impact of the pandemic. I recognize that you've taken usual steps to pull in community comments, but I suggest you consider this community as a frail treasure that has already been historically attacked and displaced. Given our city and region's stated commitment to equity, you have a responsibility to take a deeper dive with stakeholders from the CID including experts from the Wing Luke Museum.	Diane Schairer
04/28/2022	I am mostly focused on West Seattle as a resident there. I think it makes the most sense to get rid of the Avalon station to reduce disruption and gain funds that could be used to make better Delridge and "Junction" stations. For the Junction station, I don't mind the ones that are further east (closer to where the Avalon station would have been) to help give those residents closer access to the light rail line (either elevated option). Of the tunnel options, I like the WSJ-3a alternative best. If funding is possible, I do prefer a tunnel.	Steve Mohundro
04/28/2022	Please give maximum consideration to the tunnel solutions for the West Seattle Junction. This project will be a permanent imprint on the neighborhood. No one will care in 100 yrs if the project saved some money and time by going with the cheapest solution. The tunnel solution will clearly have the lowest negative impact to noise, congestion, character of the neighborhood, historical businesses, and least immediate removal of badly needed residential housing (the cost of which to purchase for imminent domain goes up by the day).	Jon Struck
04/28/2022	Please give maximum consideration to the tunnel solutions for the West Seattle Junction. This project will be a permanent imprint on the neighborhood. No one will care in 100 yrs if the project saved some money and time by going with the cheapest solution. The tunnel solution will clearly have the lowest negative impact to noise, congestion, character of the neighborhood, historical businesses, and least immediate removal of badly needed residential housing (the cost of which to purchase for imminent domain goes up by the day).	Melanie Struck

04/28/2022	The CID is a critical part of Seattle culture and heritage. Please respect that by mitigating damage to the area and rather preserving it.	Sandra Seaman
04/28/2022	Making the sound transit on 5th Ave will cause a greater impact on the CID community; displacing 18 businesses and leaving hundreds without a job. Please opt for the 4th Ave route.	Vicky Mai
04/28/2022	Please reconsider your location for Chinatown. My family has business and I grew up there all my life. I hold such a special place in my heart for Chinatown and have so many happy memories. Not just me, but my siblings, my parents, my grandparents, my aunts and uncles, and all my friends. Destroying Chinatown is destroying a part of my identity and my culture. We have so little left of my culture, yet you want to destroy even more? On the block where construction takes place is where the Taishan and Kaiping association lives. This is the home of many Asian elderly. The elderly go there for a piece of their home land and culture. They chat, laugh, eat, and play majang. Destroying it would mean destroy a part of the only feeling of home they have here. I am seriously worried the major damage this construction plan will do on our Chinese and Asian community. My family's business will suffer, the elderly will suffer, and everything important to us in the Asian community will fade into memories, one day being forgotten. Please reconsider.	Lesly Dang
04/28/2022	I would like to advocate for the Del-5 or Del-6 route for the West Seattle light rail route. The others would demolish some beloved businesses and I would hate to see that happen.	Olivia Heath
04/28/2022	Please do not run the light rail on 5th Ave S in the China-International District. This will displace businesses who have already been gutted by the dual crises of racism and the pandemic. Putting the light rail on 4th Ave S will not impact these businesses - please listen to the community and choose this option to preserve history and a community that has done so much for us.	Emily Meltzer
04/28/2022	Sad to see that Seattle, like Portland & Vancouver BC, is going to whitewash the CID & displace the historically socio-economically underprivileged residents of this area. We must find another location for some of these routes. Part of the terrible homelessness we see in Seattle stems from the total disregard for this type of displacement in the Belltown area in the heyday of 90's gentrification. Where will the people go? We deserve to know before they have their businesses & homes destroyed along with the history of Asian immigration & contributions in the PNW.	Regina Bock
04/28/2022	<p>The only viable alternative for the west Seattle community is one where a bored tunnel is used from WS golf course to the Junction. Cut and cover tunnels and elevated trackway construction would impose an unbearable impact on a fragile community that has greatly suffered from the effects of the bridge closure and covid. Recent visits to the heart of the junction show many businesses that hung on for over a year have given up. I worry there are more to follow. The current economic and ridership baseline is not likely current. The community is not as robust and resilient as when the alternatives analysis was begun. The impacts are very likely underestimates and some preferred alternatives could be untenable if reevaluated with the current socio-economic, inflation, and ridership baselines.</p> <p>With the permanent shift to hybrid and remote work the need for hub and spoke transit has been reduced, potentially to a point where delaying light rail for 10-20 years + expanding C and D lines + elevated gondola would be more cost effective, timely, and positively impactful.</p> <p>The line to Ballard can be accelerated and new high bridge project can then be expanded to accommodate build out and growth when these mass transit systems reach capacity and the light rail demand as originally envisaged materializes, the community rebounds from several years of stability, and economics are better.</p> <p>While I voted for ST3 that was based on data presented at the time - costs, timelines, alternatives and ridership estimates are far off from that now. Traffic should be less going forward, thus the status quo is becoming more attractive if implementation of the preferred alternative would tear up the junction for 5 or 10 years.</p>	Zachary Corum

04/28/2022	<p>Re: ES.3.1.2.2. Chinatown-International District Segment, pages ES-25 through ES-29:</p> <p>I am writing to advocate for choosing one of the 4th Avenue alternatives for the C-ID lightrail station linking West Seattle to Ballard (4th Avenue Alternatives CID-1a and 1b).</p> <p>All of the options will impact the C-ID district. However, while the 4th avenue alternatives will impact traffic and transportation in Seattle during the construction timeframe, I am much more worried about the long term impact to businesses that would occur with the 5th Avenue alternatives.</p> <p>Chinatown-ID is a neighborhood that is near and dear to me. It is one of the areas I spend the most time in - I do my grocery shopping here, and I frequent the restaurants and shops, hang out in the parks and gardens.</p> <p>In addition to the permanent impact on displaced businesses and employees, the 5th avenue alternatives would result in partial and full street closures directly within the C-ID neighborhood during construction, eliminate a lot of street parking, and generate even more noise and construction disruption directly within the neighborhood that would impact residents, businesses, and visitors. This would be a huge negative economic impact that spans years. I also worry about permanent noise and vibration impacts due to the passing of the lightrail directly through the neighborhood, which includes parks and open spaces like Hing Hay Park, an area where I often sit to eat lunch on the weekends.</p>	Jeanette Liao
04/28/2022	<p>Hello,</p> <p>The 4th Ave alternatives certainly seem like the lesser of the two evils since it displaces fewer people/businesses for a shorter period of time and less permanently than the 5th Ave alternatives, but why are these the only options? Why are we suggesting such major and harmful changes to a community already struggling with increased anti-Asian hate, the pandemic, being divided by I-5, and the higher levels of air and noise pollution in this district? Will this project help alleviate any of those problems long term? I understand NIMBY politics are difficult, but are there not other areas where this station could be placed?</p>	Kayla Luft
04/28/2022	<p>If the skatepark at Delridge is impacted by the rail line or if other recreational amenities are impacted and mitigation is necessary, consider adding a solar (PV) shade structure over the skatepark to expand the usability of the park throughout the year. Leaf fall at that park is hazardous, rainy days are frequent.</p>	Zachary Corum
04/28/2022	<p>I am writing because I am someone who is connected to the fiber of your community by the music that I play, which is part of my community way over in Florida. The family business of Dusty Strings has evolved in Seattle as part of their community. That two way trust of ownership and community is why Dusty Strings builds and sends out wood community to the far side of the United States. Please don't build through the manufacturing building at 3450 16th Ave W, Seattle, WA 98119. Be aware if you do, the disruption from that will ripple all the way over here. An option to spare Dusty would be the elevated 14th Avenue from Prospect/ 15th a way to have a rail and Dusty! Please choose the IBB-1b. I love your city and your magical state.</p>	Val Hyde
04/28/2022	<p>Building the new train station in Chinatown on 5th Ave would be extremely detrimental to the neighborhood. Many beloved, small businesses would be displaced, therefore, leaving many people without income. Residents in the neighborhood will experience poor living conditions due to construction, along with the endless construction that has already been endured for years on end. The International District has already suffered majorly as a result of this. Please do not strip the CID of what little is left of its cultural identity, made up by residents and businesses.</p>	Cayden Harmon

04/28/2022	The Link extension for the CID should be constructed on 4th Avenue rather than 5th. While it appears that the construction period may be somewhat more disruptive to traffic, placing the extension on 5th Ave would displace valuable CID businesses and services which are vital to the community, particularly after the challenges and losses that the neighborhood has suffered through Covid. The 4th Ave station would provide better and more efficient long term infrastructure for Seattle public transit and is the most beneficial option.	Mia Stephenson
04/28/2022	I believe that Chinatown/ID light rail stop needs to prioritize rider access and transfers. If the best/only way to accomplish that is a shallow cut & cover tunnel, then the most impactful/creative mitigation measures for the neighborhood need to be employed. This station is a multi-generational investment opportunity that shouldn't be marginalized by short-term impacts.	Dan Cantrell
04/28/2022	I am in support of either of the 4th Ave S alternatives (CID-1a or CID-1b) for the Chinatown International District segment. CID-2a and CID-2b would displace the most businesses. Many of those business owners were already greatly impacted by the COVID-19 pandemic, and displacement would inevitably harm many more CID places.	Sam Hollister
04/28/2022	One business (Dusty Strings Musical Instrument Fabrication Shop) 3450 16th Ave W, Suite 200, Seattle, WA 98119 (206) 634-1656 handcrafted@dustystrings.com Has been a unique mainstay of the arts community locally, nationally, and internationally. Present plance call for demolition of this unique resource? Any alternatives?	Catherine Britell
04/28/2022	I support the 4th st options, 5th st would displace too many existing businesses	Becky Cowan
04/28/2022	With how negatively the international district was hit by Covid, the community at large should be protected instead of further damaged. My family loves going to the international district to enjoy the lovely businesses in the area, but Covid has already taken down many of those businesses. We would hate to see even more businesses shutting down because of the disruptive construction. Please consider the well being of our community!	Junhee Lee
04/28/2022	BALLARD FOOD BANK....doing good in the area with a lot of support from the community...OUT OF BUSINESS FOR 3 YEARS WITH THIS PLAN????	Catherine Britell

04/28/2022	<p>My name is Elizabeth Wong and I have lived in Seattle my whole life.</p> <p>I am writing in today to strongly oppose the construction of all the light rail additions on 5th avenue and advocate for the least damaging alternative on 4th avenue instead. Why must Sound Transit decide to build out the station in China town International District instead of considering other locations that are not residential? What financial assistance are they planning to offer displaced families and businesses? Why do they insist on displacing an Asian community that has suffered from racist red-lining policies and has been already forced to move multiple times in Seattles History in gentrifying land grabs?</p> <p>CID is mostly residential with mom and pop stores, and has a large population of elderly individuals, many who do not speak english. At greatest 11 years of disruption to their neighborhood and destruction of multiple family run businesses would be extremely difficult for all of us but especially the most vulnerable members of the community. It would destroy an irreplaceable part of Seattle's history and culture as well as many people's fond and emotional memories.</p> <p>In addition it would be extremely harmful for the livelihoods of the families that live and work there. The increased rerouting of traffic and construction presence would damage businesses profits and everyone's quality of life, making it even harder for the Asian community who has already suffered many losses due to Covid based anti-asian racism and discrimination.</p> <p>Construction in the middle of the CID would also increase noise pollution and lower air quality with an overall negative environmental impact. There is already very poor air quality in the area due to its closeness to I-5. Putting the station through 5th ave would put it right next to many historic Chinatown structures like the Gate and Hing Hay Park and ruin the scenery and the wonderful atmosphere of the park space which is used for community gathering and spending time with friends.</p> <p>Our neighborhood loves and uses as much public transit as possible, but not at the cost of community, livelihoods, and forcing the residents of the neighborhood to live in a construction zone for the next decade.</p> <p>Please reconsider this construction project and the extremely harmful impact it will inflict on our community-- no train station on any of the 5th avenue S options. Protect as many of our homes and businesses as possible.</p>	Elizabeth Wong
04/28/2022	<p>I'm a Magnolia resident and look forward to finally having light rail service to my area. I hope you will maintain all possible stations for Smith Cove and Interbay. Connection to bus routes on 15th is essential, as is easy access to the neighborhoods.</p> <p>-It is my understanding that the route into Ballard was selected before the higher bridge option was mandadted by the Coast Guard. Please re-open your study of a 20th Ave. NW route as an alternative cross-canal options that would more easily serve urban centers. Furthermore, if the route is on 14th Ave. NW, I don't want to have to cross 15th Ave. NW, which would be too dangerous. If the route is on 14th Ave. NW, please provide a tunnel to 15th.</p> <p>-In general, keep all stations shallow. I would like to see specifically why deeper tunnels are being recommended at some stations, specifically 4th Ave. Keep these stations user-friendly!</p> <p>-Provide options for future expansion in this plan. What we do now will impact greatly what we do in the future. Plan ahead!</p> <p>-Please do further study on South Lake Union Station (Central), possibly going under Westlake. I don't want to see stations on the edges of urban centers, they must be in the heart of urban centers.</p> <p>-I hope to see level cross-platform transfers.</p> <p>-Please avoid demolition of the USPS in SODO. This is too expensive and can be avoided.</p> <p>Thank You</p>	Camille Parker
04/28/2022	<p>Please don't build a station through International District. The businesses impacted are critical to our community and culture. Their livelihoods are important and should not be impacted by this project that is supposed to help the community.</p>	Hannah Mei

04/28/2022	<p>Dear Seattle City council,</p> <p>I hope you would consider moving the new light rail from 5th street to 4th street. This would help alleviate business activities stress on the already struggling post pandemic International District. As a responsible Asian-American citizen, please help preserve the historic districts of the small part of the only thing left within the Asian Community (Chinatown, Japantown, Little Saigon, etc..) As we know, historically Chinatown has been relocated 3 times due to racism and segregation, we hope that a light Rail would not permanently displace the people living in the already crowded Seattle area. Please reconsider some of these displeasure cry for help that only so many of the Seattleites could vocalize as many of them do not have the energy, knowledge, and privilege to to take action. I plead for past, present, and future generations for you to make this sound decisions.</p>	Natalie Chan
04/28/2022	In the International District, please opt for the 4th avenue option, rather than cutting through an important and delicious set of restaurants and businesses on 5th.	Sarah Rappaport
04/28/2022	AVOID disrupting the international district's historic businesses by pursuing the 4th ave alternative. The traffic it would cause is much more bearable than the unrecoverable displacement of well loved businesses in the community, in a neighborhood that is already victim to gentrification.	Beatrice Denton
04/28/2022	<p>While I support the increased access of public transportation, especially for the ease of access for those that work and the potential business it will bring to the C-ID, I implore you to choose the 4th Ave option to have the smallest impact on the neighborhood. As someone who grew up nearby and frequents the businesses, I have seen the suffering caused by the pandemic and increase in property and hate crime. Some of these businesses would not survive the disruptions to benefit from the project if a 5th Ave option is chosen. The people of the C-ID do not need the extra burden construction will cause. Choosing a 4th Ave option will clearly have the least detrimental impact on the neighborhood.</p>	Tiffeny Zeng

04/28/2022	<p>We need to take extra care with this project, because doing it wrong will hurt vulnerable communities. Thank you for taking the time to hear what I have to say.</p> <p>I love this part of Seattle; Itsumono, Hood Famous, HK Bistro, all the amazing Dim Sum restaurants, bubble tea places, and beautiful architecture. Despite it's tiny greenspace, the neighborhood is alive. It's rooted in heritage. It's growing. I am worried about the wrong kind of development hurting the beloved CID Community. It needs our protection and careful planning as the rest of Seattle city keeps expanding and investing in important infrastructure. We can't let this neighborhood be squashed under a larger vision of 'progress' for Seattle; the CID is a source of strength and pride for Seattle. We should treat it as such.</p> <p>I live in Central District but commute to CID often. When friends come to visit, I take them to CID. It has the best food, the best nightlife, and a joyous spirit of resilience that comes through in its street murals, museum, and summertime parties at Hing Hay park.</p> <p>Here's my suggestion: To preserve and improve the CID, I believe CID-1a and 1b are the best options. They could make the existing Union Station even better--the station itself is gorgeous and the entrances are intuitive and easy to use. With this option we would be able to build on this existing infrastructure, rather than rip up a whole new space. The 4th Avenue station alternative has the cool bonus of being another station (one of only two!) where passengers can transfer between all three light rail lines that serve downtown. That would be super convenient for commuters like me, people traveling to and from SeaTac, and people just trying to get around the area without a car.</p> <p>Also: did I read that the CID-1a and CID-1b would include a partial return of Union Station to its retail/food/beverage/community-oriented design? That would be amazing. Imagine some Seattle-born independent coffee shop (like Hood Famous) or a to-go dumpling spot (like Xiao Chi Jie), or Seattle-made artisan products (like Tuesday Store hand-painted kimonos) all displaying CID's culture and pride in the Union Station space. Think of how cool it would be for locals and tourists alike to boast Union Station as a vital cultural hub, an extension of the neighborhood and an invitation to explore more above ground, rather than a big empty space we drive past but rarely visit.</p> <p>Thank you so much for your time and please feel free to reach out if you have additional questions about how make this expansion uplift our beloved CID community.</p>	Katrina England
04/28/2022	<p>Please extend the comment period to 90 days for the West Seattle and Ballard Link Extensions (WSBLE) Draft Environmental Impact Statement (DEIS). I am deeply concerned about Sound Transit's proposed alternatives for Chinatown-International District, as each proposed alternative will have dramatic impacts on traffic and safety in the neighborhood and will result in the displacement of small businesses and, in at least one scenario, residents. Many residents, small business owners, and non-profits in the neighborhood have heard nothing about how this project and each of the proposed alternatives may impact their lives and livelihoods and what, if any, mitigation will be provided.</p> <p>All voices and perspectives be heard on a project that proposes to cut through the heart of the CID neighborhood, and I ask that Sound Transit grant this 90-day extension request to ensure a more informed and equitable process.</p> <p>In addition, more analysis is needed around cumulative impacts, historical and archeological resources, neighborhood cohesion and social resources, and construction impacts. Current DEIS analysis is insufficient and more study is needed - by external consultants that work in partnership with CID community groups and stakeholders.</p> <p>Thank you for your consideration,</p> <p>Cynthia</p>	Cynthia Brothers
04/28/2022	I think we should do what community leaders are asking for and implement the fourth avenue plan for the Chinatown-ID expansion.	Jeremy Tarpey

04/28/2022	Please build the train station and 4th instead of 5th - so many small businesses would be detrimentally impacted if you choose 5th. I approve what you do and we definitely need more public transit, but fourth is far and away the better option. CID suffered so much with the pandemic, they don't deserve to be pushed down even more.	Kaylan Godfrey
04/28/2022	I'm a Seattle resident extremely concerned about development that leads to displacement of Asian Americans and destruction of culture in the C-ID. Extremely concerned. The current draft EIS does not adequately consider how changes to the C-ID light rail station will threaten neighborhood cohesion and exacerbate the impacts of the pandemic and anti-Asian violence. Reading it makes me wonder whether any meaningful two-way dialogue with the Asian American community happened during development of the EIS. Our city needs to do better. I've read Wing Luke Museum's statement submitted to this public comment process and second all their concerns and recommendations.	Adrienne Sutton
04/28/2022	Regarding the Chinatown-International District Plan, I do not support going forth with the current proposed plan. The life expectancy for Chinatown residents is already lower than the average Seattle resident due to poor air quality from Interstate 5 traffic congestion(pscleanair.gov, epa.gov). There are multiple reports of this publicly available online. Additionally, the residents of the Chinatown district are primarily elders and working class. Going forth with the current plan will both leave the Chinatown district inhospitable for many years for residents, as well as endanger their health and well-being. Also, the possibility of closing 19 businesses in the district is unacceptable without any sort of alternative offering to help support these businesses in return. I hope you reconsider your plans to keep a historically significant neighborhood and its residents safe and healthy.	Serena Narisawa
04/28/2022	I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need. In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success. As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.	Jessica McCaffrey

<p>04/28/2022</p>	<p>To Whom It May Concern</p> <p>I am writing to advocate for choosing one of the 4th Avenue alternatives for the C-ID light rail station linking West Seattle to Ballard (4th Avenue Alternatives CID-1a and 1b).</p> <p>All of the options will impact the C-ID district deeply. However, while the 4th Avenue alternatives will impact traffic and transportation in Seattle during the construction timeframe, I am much more worried about the long-term impact to businesses that would occur with the 5th Avenue alternatives.</p> <p>Chinatown-ID is a neighborhood that is close to my heart since moving to Seattle. C-ID is the community I spend the most time outside of my home community. I visit grocery shops every weekend and frequently visit the restaurants and shops. Since moving I have seen the amount of people dwindling from a variety of factors like COVID, safety, homelessness, violence, etc. I fear that the 5th Avenue options will only make this worse. There is no doubt that the 5th Avenue options will displace businesses, employees and customers as it would require multiple street closures and eliminate the already few parking options. The sound from the construction would be torture to the residents and further prevent people from wanting to visit. This would be a huge negative economic impact that spans years. I also worry about permanent noise and vibration impacts due to the passing of the light rail directly through the neighborhood.</p> <p>Thank you for your time and consideration.</p> <p>Best, Dustin</p>	<p>Dustin Lee</p>
<p>04/28/2022</p>	<p>Moving forward with the 5th Avenue options of the new station would be detrimental to the small businesses in those areas. The area has already been affected by not only COVID but also hate crimes, it would be awful for their stores to have to be impacted by years and years of construction after having to suffer through and come out of those issues.</p> <p>The 4th Avenue options seem more reasonable and affect fewer businesses. Specifically, the 4th Avenue shallow option seems best.</p>	<p>Sana Suse</p>

04/28/2022	<p>We are local residents of West Seattle, living near California Avenue SW in Seaview.</p> <p>Two items are very important to us: The light rail alignment should end on 42nd near California. If the station isn't built there, it will be largely inaccessible / too far of a walk for most of us living on California Ave SW, and especially for those living west of it. California is the most dense part of West Seattle, so it makes sense to align light rail with it. It's also the bus arterial for many folks living near and south of Morgan Junction (+ the ferry). If the light rail is built next to California, buses can drive from Arbor Heights & the ferry directly to the station, staying only on California--making it easier & more convenient for many more residents to access the line.</p> <p>The Junction is also the most important economic engine of West Seattle, and offers the most business / dining / etc. options. It makes the most sense by far to have the light rail exit there, it's better for business</p> <p>Finally, by aligning on 42nd, we open the path to building a station in the center of Morgan Junction, which is WS Junction's little brother and is a solid place for expansion given recent upzoning.</p> <p>The light rail should live underground. An above ground light rail alignment would cost the same amount, be extremely disruptive, and would cut through our community, destroying many homes and businesses in the process. It would be loud and lower the quality of life of residents as it cuts directly through residential neighborhoods (no other light rail like cuts through residential areas like this would--it would be elevated and cause noise for a large area. Other light rail is at-grade with sound walls or is underground.). It makes no sense for the light rail to be elevated, there are so many cons, and the only "pro" (it's cheaper) isn't even a factor anymore given elevated land acquisition costs.</p> <p>These opinions are reflected by neighbors and other house members.</p> <p>Thank you!</p>	Kory Watson
04/28/2022	<p>Building this station in the middle of the CID, specifically on 4th or 5th Ave, will displace residents, destroy businesses, upend day to day life, and force people to lose their jobs. This is incredibly harmful to the community. Community members in the CID have had to endure years of construction and changes to their community infrastructure due to gentrification and capitalism as Seattle continues to push out people who have lived here for generations, specifically Black people and People of Color, and more specifically in the CID, Native Hawaiians, Pacific Islanders, and Asian folks. CID residents, business owners, and workers must be spoken to directly regarding this construction. The plan as it currently stands will upend CID resident's lives for 16 years or more and physically destroy so many beautiful community hubs and businesses. I strongly encourage you to reconsider and reevaluate this plan for the station and reflect on how this will impact community members of the CID and how these construction projects directly harm Asian communities and other communities of Color.</p>	Lilli Donahoe
04/28/2022	<p>please do a more in depth EIS report/ analysis.</p>	mary chiu
04/28/2022	<p>I support the building of the International District station at 4th Avenue. As a progressive city investing in a public transit system, our considerations need to encompass how its placement impacts the communities who live and contribute to the neighborhoods vital to Seattle's culture and economy. Building on 5th Ave would severely undercut the economy and prosperity of the International District/Chinatown neighborhood. A future of better transit will allow us to be a greener and more accessible city and will provide so much good - to create that legacy, we must ensure that we do our best to keep neighborhoods intact and thriving so we benefit the current residents. To do otherwise would taint the legacy of a promising new transit system.</p>	Sydney White

04/28/2022	<p>I work with a youth-serving nonprofit located in the CID and I am very worried about how disruptive the 5th Ave plan will be to the high school students ability to safely get to and from programs (as well as the staff). All rely on public transportation to get to/from the CID.</p> <p>Additionally, the CID has already felt the economic and social impacts of the pandemic with businesses closing and increased hate crimes. This community has lost so much. The city needs to pick a route that minimizes lost jobs, closed businesses, and forever changes the fabric of the CID.</p> <p>The smart option for the community is 4th Ave. Fifth Ave routes shouldn't even be on the table for consideration give the long term disrupting nature that will have irreversible economic and social harms.</p>	Kirsten Rogers
04/28/2022	<p>I recommend an alternative WSJ-1 should not advance due to noise vibration, shadowing and cost. Please go with the tunnel alternatives with a further study to mitigate long term road closure and the impact on traffic.</p> <p>Thank you, Stephanie</p>	stephanie boender
04/28/2022	<p>Hello,</p> <p>I do not agree with the plans for CID-2b. I feel that though the plan mentions using cut and cover methods as to reduce the surface disturbance this plan will still negatively impact the CID a great deal. I feel as though the businesses in this area will be impacted in such a way that they will not recover. In doing so this would change the CID as we know it. The CID is such an integral part of the Seattle area and to distort it in this way would have a rippling negative effect in our communities. Thank you for your time.</p> <p>Sincerely, Cierra Ogata</p>	Cierra Ogata
04/28/2022	<p>As someone who lives in Yesler Terrace and is a member of the AAPI community, I really urge Sound Transit to NOT BUILD A STATION on 5th Ave in Chinatown/International District. Many beloved businesses would be impacted such as Best Tea, Oasis, Ping's Dumpling House, Musashi's and more. That area is such a vital part of the Asian American community here in Seattle. The 4th Avenue option, while still disruptive, is a much better option.</p>	Angel Brodin
04/28/2022	<p>It seems most of these options are not great. They greatly would impact locally run business. But of all, the 4th avenue option would be preferable.</p>	Ariel Alexander
04/28/2022	<p>Hello Sound Transit,</p> <p>I'm writing in regards to the CID expansion options in the DEIS as someone who lives and works in the CID neighborhood. I ask that you reconsider all of your Chinatown-International District Alternatives as the neighborhood is still experiencing the negative impacts of the construction of I-5. I don't think that enough consultation of current residents occurred in proposing the CID alternatives, and I believe that the neighborhood is better off without any construction in the CID. Because this neighborhood exists due to racial covenants, forcing communities of color into certain areas, there should be a precedent to preserve and improve the livability and residential aspects of the area. The expansion of the light rail station will have negative impacts on the residents during and after construction. Please do not prioritize making this neighborhood a transit hub more so than a place for community to thrive. If one of the current alternatives is necessary, any option on 4th avenue is better than 5th, but I still insist that other options outside of the CID are considered.</p> <p>Thank you, Blake Nakatsu</p>	Blake Nakatsu
04/28/2022	<p>Building on 4th rather than 5th creates less disruptions to the community</p>	Lillian Nguyen

04/28/2022	<p>I'm mostly concerned about the alternatives for the Chinatown station. I used to work at 5th avenue and S. King street in what is now a hotel. I used to walk form my home on Beacon Hill to work. I walked through the Chinatown neighborhood and consider 5th Avenue to be an integral part of the historic Chinatown district. Disrupting this part of the neighborhood would not be good for the community and the city. Please keep the tunnel at 4th avenue where it is better suited. There is so much more space there that would not hinder the businesses and pedestrian walkways. You specify 4th avenue would displace residents in some way but I do not see where on your map. Perhaps there can be clarification on this.</p>	Jessica Griffith
04/28/2022	<p>Hello,</p> <p>I lived at the Alaska Junction from 2015-2020 and currently live in Highland Park. We have many friends and neighbors who still live in the Junction and we visit there weekly. The general concern is that WSJ-1 and WSJ-2 place an extra burden on the residents and businesses of that area so that the general community can pay a lower price for the benefit of a light rail. At a time when housing is strained and business are trying to recover post pandemic, these alternatives will contribute to housing shortages and business disruption for almost a decade. The light rail is an effective option at combating traffic, mobility and emissions. But we can accomplish those goals while minimizing the impact on the individuals sacrificing for the benefit of the community. If the community wants this, we should be willing to share the burden of additional costs in order to minimize the impact of displacement and business disruption.</p>	Braden Hardisty
04/28/2022	<p>I am lifelong Seattle resident and current West Seattle resident, mother, architect.</p> <p>My comments are limited to the Alaska Junction station and station area. I am mainly commenting that there should be NO ELEVATED Alaska Junction station options. I'm 110% behind mass transit and the light rail cannot get here fast enough BUT we cannot have a hulking concrete platform in the Junction.</p> <p>ES.3.1.1.4. ES-19 The Elevated WSJ-1 Alternative and the similar WSJ-2 Alternative would HORRIBLE for the neighborhood, especially as it grows. The city is encouraging density here and these alternatives would not enhance anything in the neighborhood. The current ST elevated stations are grossly overbuilt and unfriendly scale that will be detrimental to their surrounding contexts. Walk through the neighborhood at the Roosevelt station and imagine an elevated line and stations there. It's not a pretty thought experiment, the neighborhood would suffer as opposed to being enhanced by the current underground station.</p> <p>Also, there are mixed-use housing developments that would be destroyed in order to make these stations work. These buildings are brand new to roughly a decade old. This just seems crazy and the opposite of what Seattle and our neighborhood needs.</p> <p>ES.3.1.1.4. ES-20 The WSJ-3b Alternative, makes so much more sense with a station that redevelops the aging Jefferson Square complex. It is my preferred alternative. The location one block from the heart of West Seattle, entrances on either side of Alaska, and integration with existing mid-block connections is a slam dunk. This station would IMPROVE the neighborhood and not detract from it, same as in Roosevelt.</p> <p>WSJ-4 is a lower-impact use of the BoA surface parking lot and perhaps offers a more balanced access for all the housing being built to the east of Fauntleroy. I truly do wonder about ridership numbers and usefulness of the Avalon station. If it were eliminated, costs would go down and the tunnel version in the Junction would be less costly. Perhaps this station would be a better midpoint for the riders between Fauntleroy and Avalon.</p> <p>Finally, please COORDINATE with the Alki Lumber property development projects! And any other planned, large developments in West Seattle. Please don't let more developments be removed for lack of coordination.</p> <p>Thank you.</p>	Lori Kirsis

04/28/2022	<p>It would be great to have minimal business impact/relocation as a result of the Chinatown ID station. Therefore the 4th Ave options would be the way to go. I would say shallow would be more cost effective, elevator only stations are not ideal.</p> <p>My other station thought is concerning the west seattle extension which I think should be prioritized to move along as fast as possible, I am assuming that would mean cost effective? Is elevated faster than digging a tunnel?</p> <p>Another note is that I am not concerned with the losing portions of the golf course and I think provided access to a social service provider is important. I hope this construction will begin to consider extensions that continue to go further south in west Seattle..</p> <p>thank you.</p>	Trevor Goosen
04/28/2022	<p>Dusty Strings manufacturing is part of a heritage local business that is respected worldwide. I own three harps made by this amazing local unique business. They employ local work people who have specialized skills. And the workshop also makes repairs in addition to creating harps that are shipped and loved by people worldwide. This business is a treasure.</p>	Lesly Kaplan
04/28/2022	<p>I support the 4th Ave Shallow option, but I believe that more should be done to engage with the historic CID community to take this option from being the "least harmful" for the CID to "most helpful" for the CID.</p> <p>I believe that providing more public transportation to and from the CID will be overall beneficial, but the impact to the community and businesses from the construction of this new station could be detrimental. As you well know, there is a long history of transportation expansion being used to bisect and harm BIPOC communities and benefit white communities. As a resident of Seattle and a frequent patron of CID businesses, I hope Sound Transit can adjust the plans for construction to have a low impact on businesses in the short and long term. It's your job to make sure the CID remains alive and thriving through expanded access to public transportation, don't let this community down.</p>	Pari Gabriel
04/28/2022	<p>4th deep or 4th shallow are the options that I would choose to minimize the business in Chinatown.</p>	Sharlene Wong
04/28/2022	<p>Please move forward on selecting the 4th Ave S option for the West Seattle Ballard Link Extension into Chinatown International District. As a member of the Asian Pacific Islander community in Seattle, the CID is a treasured place for me to gather with people like me, honor my heritage, and engage in cultural education. It is imperative that we preserve the integrity of this neighborhood—which is a true gem in Seattle that adds to the vibrancy of this city—and do everything we can to cause the least disruption to a community who would be especially impacted.</p> <p>The 5th Ave S options will close or displace up to 19 local businesses. The construction in this area will seriously impact the entire neighborhood.</p> <p>The 4th Ave S option will cause road closures and displace only 5-8 businesses. I believe the 4th Ave shallow station will cause the least amount of harm to our historic buildings and community.</p> <p>I hope that the voices of the CID community and small businesses will be prioritized in decision making. Move forward on 4th.</p>	Kara Eagens
04/28/2022	<p>Please build on 4th Avenue. The 5th ave option is far more detrimental to the people living in this district. As a citizen of king county I urge you to please choose 4th ave</p>	Tessa Klotz

04/28/2022	<p>As a concerned citizen, a member of the local Asian-American community, and a student studying the cultural impacts what marginalized communities experience, I write out of concern for the proposal to expand the LINK station in the Chinatown-International District. While the expansion of public transit is vital for many including myself, this neighborhood has felt the historic and continuing impacts of poor infrastructure decisions, like the construction of the I-5 freeway straight through its heart. While it remains a vibrant and joyous community, it has evidently and irreparably felt the negative effects of this decision, evidenced by the increase of homelessness and overall visible neglect from the city. This is the result of displacement, whether it be of businesses or individuals, and instability, including social, financial, and personal instability.</p> <p>The Chinatown-International District has also bared the brunt of racist policies in Seattle, one of these being the construction of the I-5 freeway. This infrastructural decision would simply never be enacted in neighborhoods like Fremont or Ballard– predominantly white, upper middle class neighborhoods that host much of Seattle's hipster aesthetic. Thus, the CID, still predominantly people of color who have been particularly affected by the pandemic (in terms of public health and racism), is left picking up the pieces of external destabilization from the city made worse by a lack of social services afforded to them. For these reasons, I strongly, deeply oppose the expansion of the LINK station in the Chinatown-International District.</p>	Samantha Hiura
04/28/2022	I am commenting in favor of the 4th Ave station in the CID.	Abby Wolfe
04/28/2022	Our community highly values our small businesses. The plan to build on 5th Avenue will displace a huge number of minority-owned small businesses that we hold close to our heart. If Sound Transit truly values diversity, please consider building on 4th Avenue so we can continue to preserve this historical part of the city	Belle Ampoan
04/28/2022	I would urge the Sound Transit Board of Directors to more carefully study and consider the potential impacts to the Chinatown-International District before moving forward with plans for expansion of the C-ID Link Light Rail station. This culturally rich community is vital to the history and diversity of the city and has been greatly impacted by previous infrastructure projects. Impacts from construction and demolition will make it exceedingly difficult for residents and businesses in the area to survive. Please consider these impacts carefully before moving forward.	Peter Reiquam
04/28/2022	The Ballard and West Seattle light rail extensions should not come at the cost of the Chinatown/International District. This neighborhood was already adversely impacted by Seattle's decision to cut it in half with the I-5 freeway, it doesn't need to be further torn apart.	Colleen Frakes

04/28/2022	<p>I am deeply disheartened by the mere thought of any area within the Chinatown International District being proposed as an option for the site of a new transit transfer station.</p> <p>The CID has remained a resilient and extremely vital component for the entire city spanning over a century. Community is the people who make it up, shown by the fact that even though our CID has been physically relocated over the course of Seattle's development, we have stayed intact. Continuing to be present as a neighborhood with pride and significance.</p> <p>Whether or not the historical importance of the CID matters to the committee, I implore you take our cries seriously. And whether or not the implications of another mass transit project systemically tearing down our home resonates with you personally... It might behoove you to listen; for the voices screaming to be heard out of desperation are generally the most motivated.</p> <p>Maybe it is unclear to those who have spent little time here. Or maybe for those who have, you have forgotten who raised you. Either way, if nothing of the social, allegorical, or testimonial evidence gets through to you.</p> <p>Simply review your numbers. But rather than just viewing these as statistical sacrifices for the future of Link Light Rail. Might I be so bold as to suggest placing names to each numerical stat line granted onto a person, business, or building.</p> <p>And if you cannot do such a thing, then you really should listen more closely to the pleas pouring into your forum that are generally disregarded. For those numbers that hold higher value in your decision making process are nothing more than those same outraged voices ignored. Numbers that should really be used to remind you of the screams you devalue.</p> <p>On the low estimate of 120 employed individuals losing work, to the "high" of 230. I am curious what the longterm ramifications are for those numbers. For it is publicly accessible knowledge that 29.7% of the CID's population lives below the poverty line. In comparison to the city's 14%. Is it not safe to draw conclusions regarding the issue that five different proposal sites were created in a space where the construction would disproportionately negatively impact communities of color? Because the CID is home to over 71% BIPOC residents compared the city's average of 33%.</p> <p>The median HOUSEHOLD income for the CID is just above \$33k, while the rest of Seattle has a household income over over \$65k. And yet we are asking for a disgustingly conservative estimate of 120 residents to somehow relocate into far more expensive parts of Seattle?</p> <p>Knowing the racial, socio economic, and cultural context regarding this proposal, I question how something like this is even up for discussion? But in addition to understanding the literal destruction and demise this would grant so many already underrepresented and protected residents.</p> <p>This is a deplorable and depressing indication of what is prioritized and protected in Seattle. And a rude reminder of who is valued over others.</p> <p>Statistics provided in my comment may be found here, http://www.seattle.gov/documents/Departments/Neighborhoods/Districts/Neighborhood%20Snapshots/Chinatown-ID-Little-Saigon-Snapshot.pdf</p> <p>And here, https://www.soundtransit.org/sites/default/files/documents/6-wsble-drafteis-chapter6-alternativeevaluation-202201.pdf</p> <p>-Child of the CID.</p>	Tamar Manuel
04/28/2022	<p>The construction on 5th ave will be detrimental to the history of our Chinatown and it will have an impact on current business owners in the area that will be difficult to bounce back from.</p> <p>Please prioritize the preservation of this culturally rich area by choosing another less intrusive option. 4th Avenue instead</p>	Rebecca Delima
04/28/2022	<p>Hello, I'm writing to ask that you move forward on 4th avenue through the CID. It is critically important to preserve the businesses and thoroughfare on 5th, a community that has already survived much disruption and deserves as much support as possible. Running the new rail lines down 5th would cause far too great an impact and must be avoided.</p> <p>Thank you for your time.</p>	Rachel Edelman

04/28/2022	<p>I moved to Seattle not long ago and used to go to the Chinatown-International District (CID) every weekend. I fell in love with the culture and the offerings available there. Because of that I have made the CID my home for the past 6 months. I see many families and elders in the neighborhood, hanging out, walking in the green spaces etc. The construction, pollution, traffic diversions that will be caused by this will greatly affect the community. Businesses are slowly recovering from the Anti-Asian hate sentiments and covid related loss of business and closures, this project will be another major blow to the community and it might not recover. Sound Transit should reconsider other options for the link expansion that doesn't include destroying culture, businesses and increasing health issues to an already vulnerable population. I oppose this project in the CID.</p>	Yinnie Ng
04/28/2022	<p>Although the WSBLE project is intended to "expand mobility for... the region's residents, which include transit-dependent people, low-income populations, and communities of color" (ES.2.1. p15), it is also noted that the Sound Transit Board of Directors "did not identify a preferred alternative in the Chinatown/International District Segment" (ES.3 p.17, ES.3.1.2.2. p.37) for proposed construction sites for the Sound Transit expansion despite being able to identify "preferred alternatives for the majority" of the rest of the project. All of WSBLE's current proposed construction plans in the CID would invite "construction disruption such as noise, visual changes, and traffic diversion... into the [CID]," as well as "have an adverse effect on historic properties" in the neighborhood (ES.3.1.2.2. p.28). I thus fail to understand how the proposals by the Board to implement 5-11 year long, disruptive, displacing construction projects into a neighborhood that has been nationally recognized as a historic district, is one of the eight historic neighborhoods recognized by the City of Seattle, and has been home to much of Seattle's Asian American population since the first Chinese immigrants arrived in Seattle in the 1850s to work on the docks, aligns with the overall goals of the WSBLE's project to better serve the regions' low-income populations and communities of color. In a neighborhood already fraught with gentrification (https://www.seattletimes.com/seattle-news/homeless/chinatown-displacement/) and rising living costs despite the fact that 29.7%-34% of its population live below the poverty level (based on a 2018 report published by Seattle's Department of Neighborhoods (https://www.seattle.gov/Documents/Departments/Neighborhoods/Districts/Neighborhood%20Snapshots/Chinatown-ID-Little-Saigon-Snapshot.pdf and a 2020 report published by multiple CID organizations and International Community Health Services https://living-future.org/wp-content/uploads/2017/08/2020-CID-Healthy-Community-Action-Plan.pdf), even the temporary displacement of up to 120 residents and 5-27 businesses (ES.3.1.2.2. p.29) can have devastating ramifications on residents' livelihoods and the cultural richness of the neighborhood. These construction projects would also worsen the health of CID residents -- the CID is already bisected by I-5, which has lead to poor air quality in the neighborhood and has been associated with more asthma, respiratory, and cardiac-related hospital visits per capita than 99% of other Puget Sound neighborhoods (Seattle CID 2020 Health Community Action Plan and Puget Sound Clean Air Agency). Inviting these year long construction projects to the neighborhood would worsen the already subpar environmental quality of the neighborhood and thus exacerbate the environmental racism experienced by CID residents.</p> <p>This is not the first time that the City of Seattle has decided that the homes of people of color - in this case, specifically Asian Americans - were secondary to the aims of larger construction projects. Asian American activists protested against the construction of I-5 in the 1960s and the Kingdome stadium in the 1970s (https://www.ichs.com/history, https://depts.washington.edu/civilr/aa_kingdome.htm). It is also meaningless to designate the CID as a historic district without giving it the respect it deserves, which means refusing to continue to ravage the neighborhood with intrusive, displacing construction projects that will have long-standing ramifications on the neighborhood's health, small businesses, and demographic makeup. I strongly urge the Board to consider finding an actual alternative to bringing more construction projects to the CID.</p>	Eileen Li
04/28/2022	<p>I am in support of community voices who are advocating to take 5th Ave off the table and move forward on 4th Ave. They have highlighted that 30 immigrant businesses will be permanently closed or forced to move, as well as disrupting schools, daycares, and programs serving thousands of children/youth and programs, classes, recreation for 1,200 elderly non-English speakers will be disrupted.</p> <p>Please center community voice in this decision and take 5th Ave off the table.</p>	Kymber Senes

04/28/2022	<p>While I believe accessible public transit is critical to making Seattle a more livable and equitable city, I have concerns regarding the current DEIS and the impact on the vibrant Chinatown International District.</p> <p>The potential train station on 5th ave will displace many CID small businesses. Station construction will require years of street closures, detours, and loud machines. The current Environmental Impact Statement (EIS) is insufficient in its consideration of re-routing traffic and buses through the CID in Transportation analysis. As an avid cyclist, I am concerned for the safety of other cyclists and pedestrians during the years-long construction.</p> <p>The current EIS also fails to fully consider noise and vibration impacts, meaning that businesses that do not get displaced or demolished will bear the brunt of poor air and sound quality. This perpetuates a legacy of harm to communities of color and a neighborhood that has already endured a long-history of institutional racism ,including race-based Exclusion like the Chinese Exclusion Act, Alien Land Laws, the forced removal of Japanese Americans, and other ordinances.</p> <p>The DEIS must further understand past harm and cumulative impacts and how the current plans fail to consider neighborhood cohesion and cultural heritage, both tangible and intangible.</p> <p>Please consult with community partners and CID stakeholders to explore additional plans that will mitigate impacts and not result in displacement within the CID.</p> <p>Thank you.</p>	Tara Peters
04/28/2022	<p>The 5th Avenue project plan will displace so many businesses and effect life in the CID for many years to come. Don't disrupt already marginalized communities that already deal with crime, homelessness, and targeted racism/vandalism.</p> <p>We can do better</p>	Shaun Wahle
04/28/2022	<p>For multiple reasons I continue to object to the alternative(s), including the preferred alternative, that would establish a station on the west side of the railroad tracks at Dravus and 21st Avenue West.</p> <p>That is a major gateway, to and from access point for Magnolia and it already suffers from congestion with nothing in the middle of the intersection. A station there would compound the problem.</p> <p>Given also that there is no foreseeable plan for replacing the Magnolia Bridge at Galer, would anything happen to the bridge or were administrative or emergency action by the City taken to shut down that bridge - this would lead to a far worse negative impact to this access point to and from Magnolia if a light rail station were built there.</p> <p>I continue to support a station north of Dravus and in the 17th Avenue West area - that would be farm more disruptive - and would have the added benefit of being far closer to the north bound and south bound bus stops at 15th Avenue West and Dravus.</p>	Elizabeth Campbell
04/28/2022	<p>The distance between Delridge Station and Avalon Station is approximately 1 mile, distance between Avalon and Junction stations approximately 1/2 mile. We don't need three stations within a mile and a half. Given the constraint of the port on the north and golf course on the south, the Avalon/Delridge has an upper bound on population to be served. Drop the Avalon Station and speed up trips to/from the Junction Station.</p>	Barbara Mockett
04/28/2022	<p>I think it'd be better to route through 4th ave alternatives over 5th ave alternatives to avoid displacing existing small businesses in International District / Chinatown. ID is an important cultural part of Seattle and should hopefully be kept as is.</p>	Angelica Tran

04/28/2022	<p>Seattle is becoming unrecognizable with high rises, freeways, light rail--booming zooming! Cement is suffocating our history.</p> <p>The International District is one of the "hearts" of Seattle's diverse communities. Tourists like to visit a different world, not a world just like the one they came from with high rises, freeways, and light rail.</p> <p>As a Japanese American, I love coming to the International District with its exotic stores, cafes, museum, events. It's a treasure like San Francisco's Chinatown and Los Angeles's and San Jose's Japantowns.</p>	Mary Abo
04/28/2022	<p>Please DO NOT choose the options on 5th Ave S, they will displace a number of local businesses that have already struggled in the past with COVID and anti-Asian hate. This is a historical community that does not deserve this sort of treatment nor disruption from the construction options on 5th Ave S</p>	Madelyn Lim
04/28/2022	<p>I urge you not to destroy historic buildings in the International district/Chinatown area for the link/light rail. There is so little history left in Seattle that an alternative must be implemented. Is there even ridership in that area that warrants it at a cost of decimating entire neighborhoods, or must a vibrant diverse area suffer so other areas with more political clout can get to a ball game? Put your thinking caps on and save the ID from an irreversible destruction.</p>	Susan Sires
04/28/2022	<p>This seems horribly ill-guided due to the volume of displacement, both to people and businesses of the International District. I, and many others, beg of you to reconsider.</p>	Gunnar Schmitz
04/28/2022	<p>ST needs to go back to the drawing board in order to come up with station alternatives that aren't so deep. Asking people to travel that deep down will depress ridership and will discourage people from using transit as a primary means of travel. This is especially egregious considering that these deep stations are at critical transfer points such as Midtown station, the ID, etc. Sound Transit has an incredibly poor record of vertical conveyance, requiring that riders take elevators to access the stations should be a nonstarter.</p> <p>For the ID, please only consider the 4th Avenue option. The 5th Ave alignment impacts the ID business community far too much. The 4th Ave viaduct needs to be replaced anyways. I do not think avoiding inconvenience for drivers on 4th should take precedence over avoiding impacts to ID businesses along 5th. ST should also study shallower options in the ID and find a reuse of Union Station as a transit hub for the region, similar to how Union Station in LA and Denver operate.</p> <p>In addition, the placement of the proposed Ballard, Seattle Center, and SLU stations are poor and fail to serve the core of these neighborhoods, reducing the usefulness of these stations and depressing future ridership. It's critical that ST gets these stations right, as they will be serving already vibrant and dense neighborhoods that are perfect for being served by light rail.</p> <p>Sound Transit must reopen study of the Ballard 20th/Thorndyke Tunnel Portal option. The other DEIS options fail to serve Central Ballard and are hemmed in by industrial zoning that is unlikely to change. Ballard doesn't need to rely on Transit Oriented Development to make a station work; it already boasts a desirable, populous urban destination. Ballard's biggest and most productive small business strongholds along 24th and Ballard Avenues aren't moving. This station is the only Ballard station in ST3 and is likely to be the furthest west Ballard station in the system forever – Sound Transit needs to get it right.</p> <p>Neither SLU station option serves the neighborhood well and the Mercer Street option isn't even in SLU at all. Failure to locate a SLU station as advertised to voters in 2016 within the neighborhood boundaries could even be considered grounds for transgression against voter promises. Luckily there is a better option that serves SLU and will likely be cheaper and faster to build: Westlake Avenue. Keeping the station on Westlake Avenue in the heart of SLU will enable a shallower crossing of SR-99/Aurora Avenue without the negative implications of a station there. A north/south station would make building for expandability easier as well. We'll leave it to Sound Transit to find a specific solution, but a different station location that intends to serve South Lake Union is worth additional study.</p>	Vladmir Swiss

04/28/2022	<p>I have been a West Seattle / N. Delridge resident, for over 30 years. I have been the community block watch leader for over 30 years north of South Seattle College. I wanted to provide input and highlight several concerns about SoundTransit's proposed options for the light rail extension.</p> <p>I and several members in the Puget Ridge neighborhood strongly favor the SkyLink option vs. train. Please consider this efficient, cost effective, lower environmental impact alternative.</p> <p>As has been proven in several of the leading global metropolitan areas, the gondola technology is especially effective in mixed terrain areas such as West Seattle and SODO. Key reasons why SoundTransit should support the SkyLink option include significant taxpayer cost savings, significantly less adverse impact on the environment, time savings and significantly less resources for implementation, and most importantly the least amount of detrimental impact on the large percentage of people of color and lower income in the area.</p>	Stephen Locke
04/28/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Anne Samenfink
04/28/2022	<p>The DEIS does not reflect the impact of the historic constructions over and through the International District. IS paved over homes, churches and businesses. The DEIS proposal of stations on 4th Ave continue the racial prejudice against Asian Americans in relocating the community. The DEIS does not respect the uniqueness of CID and the cohesion of its people.</p> <p>Please DO NOT consider construction on 4th Ave.</p>	Henry Lee

04/28/2022	<p>Hello,</p> <p>As a member of the community I am formally requesting that Sound Transit I am calling for a refinement and additional explorations to be considered in the ST3 process. This is a neighborhood that has long experienced the impacts of construction as a means of cultural and historical erasure. Our community has continually been expensed as disposable for the "advancement of the city" and neglected to have our perspective considered during major projects like the I5 construction, stadiums, and previous Sound Transit projects.</p>	Mercedes Luna
04/28/2022	<p>The expansion of the train stations into the heart of the International District as the Light Rail expands will greatly negatively impact the citizens who live and own business in this area. I urge you all to reconsider the placement of these train stations</p>	Camille Woll
04/28/2022	<p>The expansion across the international district will be harmful to communities of color and invite gentrification and higher rent prices. I do not agree with this nor the demolition of such historic buildings.</p>	Grace Medina
04/28/2022	<p>I believe that having the new light rail station be placed near 4th ave in the C- ID neighborhood would be best because having the new station on 5th would affect and possibly displace a lot of small businesses who currently reside there.</p>	Tiara Watson
04/28/2022	<p>If we do not plan on fairly compensating the affected business owners on 5th avenue, please do not pursue the 5th avenue option. Both options are going to be hard, but the 5th avenue version will have a larger impact on the ID community.</p>	Jonathan Sim
04/28/2022	<p>Greetings,</p> <p>I am submitting a personal comment in addition to the comment I submitted on behalf of the Delridge Neighborhoods Development Association (DNDA). My comments mirror that of the organization, but wanted to reiterate these personally as well. Thank you.</p> <ul style="list-style-type: none"> • For the Duwamish crossing, I urge you to choose the North Crossing (DUW-2), which is necessary to avoid cutting into the West Duwamish Greenbelt and the north end of Pigeon Point, where a critical hillside and a Great Blue Heron habitat are at risk. The North Crossing avoids loss of vital park resources (the West Duwamish Greenbelt, Seattle's largest greenbelt) and avoids loss of a biodiversity area (Heron colony, et al). I believe these should be held paramount, and projected higher costs are worth the protection of these vital natural assets. Further, the North Crossing avoids residential displacements, and has the least number of displaced employees. • For the Delridge Segment, I encourage you to choose the Preferred Dakota Street Station Lower Height (DEL-2a). My priority is that any route traveling along SW Genesee Street should travel along the south side of Genesee, to avoid the north side of Genesee where Longfellow Creek remains one of two salmon-bearing creeks in the City of Seattle. The loss of parkland in this instance is from the West Seattle Golf Course, which should not be prioritized, as it is neither an environmental nor local community benefit. DEL-2a also provides high opportunity for equitable transit-oriented development around the Delridge station. • As outlined in the Racial Equity Toolkit analysis, bus/rail integration should be prioritized, specifically in proximity to Delridge Way SW. Many transit riders will be accessing Sound Transit from South Delridge, White Center, Burien, and beyond, and the ST3 Delridge Station should be close to Delridge to provide an accessible transfer experience, inclusive of transit riders of all abilities. For this reason, the Andover Street Station options should not be considered. • The lower height guideway through Delridge should be prioritized for easier transfers and to retain the character of Youngstown and North Delridge, a vibrant and historic neighborhood. • I urge you to focus on investments to improve safety throughout the Delridge station area. Improvements to lighting and hillside staircases will be necessary to prioritize community safety and effectively serve Sound Transit's ridership. • There is an opportunity with ST3 to remove the culvert under SW Genesee to further restore Longfellow Creek, which could help Sound Transit mitigate other project impacts. I and DNDA would welcome partnership with Sound Transit here. <p>Many thanks, David Bestock</p>	David Bestock
04/28/2022	<p>Please move forward on the 4th. Thanks!</p>	Aluna Ademasu

04/28/2022	<p>I am concerned about the health impacts on the residents and elders. I am concerned about the fact that as a community member, business owner, and future resident, what the impact will be on displaced businesses, and the ability to get to CID as it is already difficult enough. I am concerned that this construction will displace historical businesses and spaces without ever acknowledging or remembering their presence and importance to the neighborhood.</p> <p>Plan CID 1a, CID 1b, CID 2a, CID 2b, will all be absolutely terrible for the neighborhood. This needs to be anywhere else outside of the CID. This is the only cultural community as a link light rail stop, and you are deciding to kill the neighborhood, its' business, its' residents, its' rich culture, and history.</p> <p>What do you plan to do for the businesses that are impacted? Why did Sound Transit only provide us two options that will both be deadly to us? How will you make sure that CID and its residents are protected from the environmental impacts? How can you ensure that the years of construction will not impact the wellbeing of the many elders and seniors living here? Haven't you done enough of cutting through our neighborhood?</p>	So'le Celestial
04/28/2022	Do not build through the Chinatown International district, by doing so you will be destroying part of a historical neighborhood that has already felt enough hardships through Covid-19 and the rise of anti-Asian sentiments.	Emily Efird
04/28/2022	<p>Hello,</p> <p>I'm commenting as a concerned community member of the C-ID/Southend Seattle area. Upon reviewing the Draft EIS, I have found that the current plans to construct along 5th Ave will bring problems in shutting down/displacing businesses, as well as disrupting daily activities in the C-ID community. The 5th Ave plans will, in total, displace up to 18-27 businesses and will also affect the flow of business/recreational operations along the street.</p> <p>Based on the Draft EIS, however, there are alternatives to building along 4th Ave. This alternative would not have a huge impact as this would only affect up to 5-8 businesses in that area. Looking at the situation, I would highly recommend and demand that Sound Transit would take and move construction over to the 4th Ave alternative location. Doing so will not impact the larger C-ID community.</p> <p>Thank you, Josh</p>	Josh Valdez
04/28/2022	<p>Please consider CID 1-a as the most viable option for the the new light rail expansion. We cannot displace small local businesses in the ID.</p> <p>I hope that we move away from elevator only access at transit hubs. Anyone who has used the elevators at Beacon Hill station knows how much they suck. Elevators+stairs+escalators are the preferred method. Also please instal proper escalators this time.</p> <p>The use of Union station as an actual station hub is also very wise as the building already exists.</p> <p>Thank you</p>	M. Seamus Loftus
04/28/2022	Of the CID options, the 4th Ave one is more preferable.	Georgia Zhang
04/28/2022	<p>Why are we asking those who have suffered the most to endure even more hardship? No matter the final decision, the people and businesses of Chinatown-International District will be greatly impacted by Sound Transit's expansion of the station in that neighborhood. However, the 5th Avenue options will be the most detrimental. The Chinatown-International District is a lifeline for many, notably low-income and disabled East Asian elders. Do not hold this neighborhood hostage with years of disruptive construction on 5th Avenue. This is further violence against the East Asian community in Seattle.</p>	Carly M

04/28/2022	Please move forward on 4th Avenue and do NOT build on 5th Avenue in the Chinatown international district . This would be devastating to the historical international community. The 4th Avenue route is a viable alternative that would help keep the CID businesses and residents like myself able to function and live in their special community	Michelle McDowell
04/28/2022	We prefer the 4th Ave S alternative for the CID station.	Anjali Manoj
04/28/2022	While efforts to expand the link station are valid, I believe this this expansion causes more harm than good. That said, the 4th avenue option is more preferable as it causes less disruption to Chinatown-ID, in terms of its residents, businesses and cultural identity.	Lin Wenes
04/28/2022	While I support the increased access to public transit, especially for the ease of access for those who live & work in the C-ID and the potential business it will bring to the C-ID community, I implore you to select the 4th Ave option which will have the smallest impact on the existing neighborhood and community. As someone who frequents businesses in the C-ID, I have seen the suffering caused by the pandemic and the increase in property damage and hate crime in the C-ID and our local AAPI community. Some of these businesses will not survive the disruptions from construction and would not gain the benefits from the transit expansion if a 5th Ave option is selected. The people and community of the C-ID do not need the extra burden the construction would cause. Choosing a 4th Ave option will have the least detrimental impact on the community and neighborhood.	Tiffany Tan
04/28/2022	I call for more exploration of options to prevent damage to a historical Asian American neighborhood.	Leslie Lum
04/28/2022	Option 4 is better than option 5, way less disruptive	Lucas Crowley
04/28/2022	<p>I would like to comment on the proposed Light Rail to Ballard, that will run through Interbay, pages ES 36 to ES 44. I know we need this project. I lived in Ballard for 37 years and worked in Fremont and Interbay during that time. The city will be improved by this transit program. I just hope it can go in without wiping out the type of businesses that we in Seattle value the most.</p> <p>Dusty Strings, 3450 16th Ave W , is a unique home grown and wholesome handcrafted musical instrument business. They have employed local crafts people for over forty years and make beautiful hammered dulcimers and harps. Music from said instruments is enjoyed by just plain folks picking a tune, to celebrating marriages, to hospice harp playing - calming music to ease the last hours of life for the terminally ill. They're good folks, and they and their employees and their instruments make a positive difference in this world.</p> <p>I suppose that Sound Transit will be obliged to pay some sort of market value for properties they take. With the way that costs are going crazily upward across the board, it seems unlikely that Dusty Strings could afford to rebuild without going much further out - while if they can stay, many of their tenants and employees will be able to take the new light rail to work. Isn't that how it's supposed to work ?</p> <p>Please use the IBB-1b Alternative and don't run this business out of town. Thank You, Douglas French</p>	Douglas French
04/28/2022	<p>I looked over this plan. The 5th Ave option is really disruptive to the Chinatown International District.</p> <p>I ask that it move to the 4th Ave option instead. It will be less disruptive to all the business in the CID that have already been impacted due to Asian Hate, pandemic, and always getting pushed out. There needs to be another alternative than to use 5th ave since that affects all the low income, people of color, small business and residents in the CID.</p>	Angela Lee

04/28/2022	<p>Commenting on the Ballard and West Seattle Lightrail extension. Please, as much as possible, avoid disruption to the businesses and communities in the Chinatown/International District neighborhood. I've heard that this neighborhood would prefer having the tunnel built on 4th ave rather than 5th, and I support this proposal even if it's more expensive. I think it's worth it the long run to preserve the neighborhood, as well as the equitable thing to do. Thanks!</p>	Mara Page
04/28/2022	<p>Hello,</p> <p>I am a proud parent of two children attending Alki Beach Academy and I can not stress enough how important it is to allow this educational center for children in the West Seattle neighborhood to remain open and operating at their current location. ABA provides quality care for children in an area with limited options - especially given the current situation with the West Seattle bridge cutting off access to amenities and services downtown. It has reinforced that the need for quality childcare that is convenient and local to families is a critical component for a happy healthy kid and a supported parent. Not only are there other options for the transit location but there are better location - locations that give access to parts of the neighborhood who need access to the transit center, and ALSO childcare close by. Think this one through, and know that Alki Beach Academy is truly a critical component of our community, and we would be very desperate for options if they were forced to move.</p>	Kelsey Newell
04/28/2022	<p>Hello, I have thoroughly reviewed the Draft EIS and am extremely excited about light rail finally arriving in West Seattle. My most major concern is that we keep all three stations here on the peninsula. The Avalon station is critical to achieving population density goals here in West Seattle, and eliminating that station from the final design would doom the historic Junction area as the density flowed (pressure to build high rises, to the areas closest to the two remaining peninsula stations. It is a short-sighted idea and one that must be rejected for the benefit to us all. It has been approved, funded, and must be built for the design to achieve maximum effectiveness.</p> <p>My second though is that line placement north of the West Seattle bridge would alleviate many of the issues around Pigeon Point. The Delridge Way station should be centrally located, versus North of Andover Street, and the Junction station should be located (above or below ground) where Jefferson Square currently sits along 42nd SW with a North/South orientation for future southward extension of the line. Thank you for considering my opinion. I implore you not to eliminate the Avalon station!</p> <p>Regards, David Caldwell</p>	David Caldwell
04/28/2022	<p>The 4th ave station option will be more beneficial. I feel the impact will be less devastating on the community in that location. If either of the 5th Ave options were to be pursued, that will be detrimental to the cultural identity of Seattle, or what little identity remains. This will impact Asian-American owned and operated small businesses primarily, as well as the residents of that area. Seattle is one of the few cities that has an active Chinatown/ International District, and it has a number of historical landmarks that would be hurt by a decision to build here. It would not be the first time the Asian-American citizens of Seattle were driven out of their homes and stripped of their businesses, and I can ensure that if that were to happen again, history would not smile upon you.</p>	William Bock
04/28/2022	<p>The 5th ave. option must be avoided + the 4th ave. option is preferred out of the two choices. The 5th ave. Option will negatively affect more businesses & residents in the CID area. We understand the need for a light rail collecting the West Seattle to Ballard area but believe other transportation projects should be prioritized over this CID light rail, mainly the reconstruction of the West Seattle Bridge.</p>	Audrey Ngadiran

04/28/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Garrett McCaffrey
04/28/2022	I support increased access of public transportation, but please choose the 4th Ave option to have the least amount of negative impact on the C-ID, its community members, and its businesses.	Madisynn McCombs Encinas
04/28/2022	I would love to be able to catch a train through Union Station again. And even grab a coffee or a bite to eat. CID-1a and 1b would reactivate the station. Plus 1-5 already cuts through the CID, we don't need a new train tunnel, too.	Kate Rotter
04/28/2022	PLEASE find another location for this light rail extension. There are so few historic and cultural neighborhoods left in Seattle that haven't been vastly changed by city expansion in recent years. It's a shame to disrupt the International District with construction, and for such a long period of time. Surely there's another solution that wouldn't gentrify and disrupt this beloved neighborhood so much? Thank you	Kate Johnson
04/28/2022	The proposal to build a route via the 5th avenue options through the Chinatown-International District will have irreparable negative impacts as they relate to displacement and gentrification, two major issues that Seattle is already facing the the Central District. While some economic impacts would take place on both the 4th and 5th ave alternatives, the impact of the 5th avenue alternatives would have far more severe consequences on those who depend on the CID most, and may not even have the capability or knowledge to provide these comments. Please do not consider the 5th ave option as a feasible option, as it would have irreparable negative consequences on the cultural fabric of this city.	Chrissie Seilie

04/28/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <p>Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand</p> <p>Minimize transfer time from transit to platform</p> <p>Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures.</p> <p>Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Interbay Station (IBB-2b):</p> <p>Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures</p> <p>Station must lead to Ship Canal Tunnel</p> <p>No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Thank you for your consideration.</p>	Sound Transit Board, Andrew Lewis, Sara Maxana, Amy Plantenberg
04/28/2022	<p>This comment is in support of the following alternatives:</p> <p>DT-2</p> <p>SIB-3</p> <p>IBB-2b</p> <p>Regarding the proposed routes for the Ballard extension, tunneling should be used as much as possible. The proposed elevated tracks will detract from or outright block the mountain and water views which surround us in Seattle.</p> <p>The SIB-3 proposed alternate route has the least impact on residences & businesses in the area. This route should be the top consideration for the ST board.</p>	Vickie Hauck
04/28/2022	<p>I am commenting specifically on the track that will run through Chinatown/International District. Currently there are two options and it is clear that moving forward on 4th Ave as opposed to 5th Ave would be a much better decision for the local community. Moving forward on 5th would cause significant disruption to businesses and employees that have already been struggling during the pandemic.</p> <p>CID 2A, CID 2a diagonal, and CID 2B all displace employees and businesses. This also reduces parking in the area significantly, which can have a large impact on people's ability to access the area and lower both engagement and profits in the area. The 4th Ave option clearly causes less disruption to people and businesses in the area. To pursue the 5th Ave option, Sound Transit is further marginalizing a community that has been facing continual harm. Please listen to the people in the community who have been advocating firmly against 5th Ave.</p>	Ali Cho

<p>04/28/2022</p>	<p>Thank you for the opportunity to comment. I'm piecing together a variety of comment topics for the DEIS team to address. Firstly, I want to touch on sustainable accessibility, then pivot to station designs in detail, then reiterate my general support for The Urbanist's light rail principles, and then outline my specific alignment/station comments.</p> <p>In terms of sustainable accessibility, Sound Transit needs to seriously develop plans for walking, rolling, and biking to stations. These modes have a very high opportunity to generate immense ridership shares. Traditionally, Sound Transit has treated these modes something worse than tertiary. Sound Transit needs to prioritise these by building quality bike lanes and spot pedestrian improvements around station areas at least within a half-mile. The agency also must work with and demand from local authorities to plan for quality implementation of these facilities within a 10-minute walkshed and 10-minute bikeshed of every planned station. A station area doesn't just stop at the end of the station site.</p> <p>Sound Transit also must do its part to better accommodate these users by actually purchasing super high quality and European standard elevators and escalators. The technology that Sound Transit has recently acquired for new stations is severely substandard and inappropriate to the current system. Relying on junk APTA reports to justify garbage systems is not acceptable. Redundant systems should also be evaluated, such as three escalators instead just a pair of two as is best practice by most airport and proper transit operators. As part of this, European consultants need to be used instead of the poor quality American ones that Sound Transit has been using.</p> <p>Additionally, Sound Transit needs to explore Continental European best practices for bike storage and movement in stations. The bike storage implemented at new stations has been substandard and complicated to use. And the storage designs show that Sound Transit doesn't treat the mode as a serious long-term mode share, but it should with hundreds and hundreds of bike storage spaces for different kinds of users. Bike storage should also be universally free. Further, stations should have runnels to platforms that can comfortably be used by different bike types up and down stairs. The agency needs to research proper requirements for runnels and test them abroad so that they can properly applied here. The current runnels are completely unusable.</p> <p>Earlier this year, I flagged Sound Transit's achilles heel, which is station design. The agency is planning stations that are far too deep. I'm going to include my story for The Urbanist here to illustrate the immense work that Sound Transit must do before it even bothers to come back with an FEIS, although we really are owed an entirely new DEIS.</p> <p>(Link to story: https://www.theurbanist.org/2022/01/31/dear-sound-transit-prioritize-rider-experience-take-a-mulligan-on-west-seattle-and-ballard-link/)</p> <p>"Sound Transit recently released updated alternatives for the Ballard and West Seattle light rail expansions. As Doug Trumm detailed here at The Urbanist, the agency has drafted up concepts for some of the most cavernous stations in not just North America but the entire world. Other concepts show urban stations many more stories above the ground than Northgate's and accommodating status quo car infrastructure. What these concepts really show is that if you don't have any first principles in station design, you can easily go awry in designing stations that will inconvenience riders for generations to come and dissuade some from either bothering."</p> <p>"Let's look at some of these offenders and then discuss what can be done to course correct."</p> <p>"In Chinatown-International District, one station option seriously under consideration could be as deep as 190 feet below ground — that's more than the height of the landmark Josephinum Building on 2nd Avenue. In the downtown office core, the preferred Midtown Station could be 170 feet deep — deeper than Beacon Hill's station at 160 feet — and a competing alternative could be 200 feet deep."</p> <p>"In West Seattle, the preferred station in Delridge would needlessly take out a block of homes and situate the platforms 85 feet above because of an unwillingness to use the street and undulate guideway. In Interbay, an alternative station design would involve construction of an elevated station right above 15th Avenue W. You'd think they'd get this right, but incredibly it would retain the car sewer nature of the street, elevate platforms 50 feet above the ground, and put a pedestrian bridge above the platforms to reach the east side of 15th Avenue W."</p> <p>"And in South Lake Union, a preferred station alternative would place platforms 120 feet below ground — essentially underneath SR-99 — and dump riders right onto the precipice of a state highway and its giant highway tunnel exhaust tubes. Here we continue to pay for the folly of digging that massive SR-99 car tunnel in the first place. If not for the need to go under that monstrosity, this station could be much shallower, the air around it less foul and noisy, and the walkshed less interrupted."</p>	<p>Stephen Fesler</p>
-------------------	--	-----------------------

"These stations aren't friendly to riders. These aren't urban stations. These are monoliths of over-engineering and misplaced priorities. But that may not be the worst part of it."

"Sound Transit has partially calculated platform-to-surface travel times at stations. These are decidedly slow for downtown stations, especially where elevators are the sole option, but you can extrapolate the problem to include a very large share of the Seattle stations conceived. As Trumm reported earlier this month:"

""Sound Transit has modeled travel times from the surface to the station platform at five to six minutes via escalator at Midtown Station and four to six minutes via escalator at the new Westlake Station, agency spokesperson Rachelle Cunningham said. Elevator times are two to three minutes at Midtown and three to five minutes at Westlake, but that quote does not appear to factor in waiting time in lines to get into the elevators, which can be very long at peak times, as users of the elevator-only Beacon Hill Station can attest. Sound Transit is considering elevator-only options for its deepest Midtown and Chinatown stations.""

"The caveat that Sound Transit doesn't appear to have factored in wait times for cramped elevator-only stations should raise eyebrows on its own. But crucially, five- to six-minute platform-to-surface travel times are serious time penalties for riders. That's the kind of time that could lead a rider in a rush to miss an intended train trip and maybe miss the one after that. These stations also aren't the kind of stations that even the most able-bodied rider would willingly ascend by stairs — were there any. And let's just be honest here that Sound Transit has been a very poor steward of vertical conveyances that it has installed, whether they be escalators or elevators. Adding an armada of them at these stations could be a recipe for systemic failure, leaving riders out to dry. Conversely, shallower stations only three stories or less give riders more choice for platform-to-surface access whether by stair, escalator, or elevator and shorter one- to two-minute platform-to-surface travel times."

"Sound Transit should have a first principle in designing its transit systems around stations. That means before developing formal alignments — whether they be at-grade, aboveground, or underground — the agency should be deeply considering the location of stations and how people will ultimately use them. If the agency had a standard of designing stations such that a person accessing them would not need to go up or down three stories and would not be faced with overbuilt roads and freeways, the designs and alignments would be much different. Instead, the agency has started with alignments and complaint-aversion first and left station design dead last."

"The City of Seattle and the Washington State Department of Transportation must be better partners, too. The agencies have talked up collaboration, but there is no sign that this brain trust has considered slimming down the highways and arterials near the stations in order to make way for transit space and improved accessibility for riders. Interbay's overbuilt 15th Avenue station is a testament to this — heaven forbid we redesign highway off-ramps next to our billion-dollar transit investment. Same story for the elevated Junction station that plows through more than 400 apartments rather than use the Fauntleroy Way right-of-way and sacrifice a car lane or two."

"Fundamentally, Sound Transit's project falls short of global transit standards. There is no technical justification for the poor station designs at hand. They are what they are because stations and the rider experience were an afterthought in the planning process."

"Going forward, Sound Transit should adopt a formal first principle policy of having stations accessible to riders within three stories — and ideally fewer — of the ground surface. This would ensure that riders have quicker, more reliable access to stations and greatly reduce project costs. Yes, there may be extraordinary circumstances necessitating deeper stations like Beacon Hill's and those should be properly justified if and when they arise, but that should be the exception, not the rule as it seems to be with Sound Transit's design approach."

"As painful as it is to say, Sound Transit must go back to the drawing board on the Ballard and West Seattle extensions. If the agency does not, the overall projects will be subject to high risks in both cost and delivery, riders will forever pay the price in extreme time penalties, and depressed ridership will be reflected across the system."

"Ultimately, these projects cannot move forward as currently conceived, Sound Transit needs to take a mulligan."

Sound Transit needs to get its stations design right. They can't be deep, they can't be tall. Riders shouldn't be penalised with long surface-to-platform travel times just because the agency has developed seriously lazy alignments and doesn't want to make anyone unhappy.

Relatedly, alignments need to be refined. Sound Transit has failed to show why low, elevated alignments in streets are infeasible. Instead, the agency has concocted false excuses and deflected on why elevated alignments and stations in streets are infeasible. If the agency is incapable of doing its job of truly vetting options, it needs to hire European and Asian consultants who actually know how to do this stuff and this must be done prior to proceeding to an FEIS. Sound Transit's work is not done here.

Now I'm going to pivot to The Urbanist's general comments.

Light rail planning principles

First and foremost, design the system for transit riders and the optimal rider experience. Traveling between the station platform and the surface should be quick, straightforward, and reliable. Transferring between transit lines should also be quick and easy, especially at the major transfer points at Westlake Station and International District/Chinatown Station.

2. Build the system to maximize ridership. Design a good rider experience and ridership should follow. Still, even the most elegant station will struggle for riders if it's in the middle of nowhere, with few homes, jobs, activity centers, or transit connections nearby. Preliminary ridership projections aren't the be-all end-all, but all things being equal, the station alignment projected to get higher ridership does have a leg up.

3. Design the system to be easy to expand. Ideally, West Seattle Junction will not be the southern terminus long as the line extends south to White Center and Burien. Likewise, Ballard should not be the northern terminus long as the line extends north to Greenwood and perhaps east to Wallingford and the University District. Meanwhile, a future Aurora rail line may link up with the new Downtown light rail tunnel near South Lake Union Station. Planning with expandability in mind could save billions of dollars and numerous headaches down the road.

4. Station locations should unlock transit-oriented development (TOD) opportunities to the highest extent possible. A station isn't just a transit stop, it can be a catalyst for neighborhood development and housing growth, both market-rate and affordable. Alternatives more favorable to TOD deserve an edge, and they will help the system attract more riders down the road by allowing more people to live in close proximity to light rail.

5. Construction impacts are important but shouldn't solely determine a 100-year investment. Construction-related road closures weigh heavy on the mind of policymakers, but it is crucial we pick the right station for the future. Closing a busy road for a few years is a small price to pay to add a light rail line that will last centuries. The priority in mitigating construction impacts should start with prioritizing pedestrian access, transit operations, and bike routes.

6. Cost is an important factor, but we shouldn't shy away from big investments where there is a high return. Mostly we are worried about building this right, but we can't dismiss costs, especially since some high-ticket items will require third-party funding, which could be difficult to secure. Controlling costs is also key to avoiding delays to these much-needed transit lines.

My general station and alignment comments are here:

West Seattle Link

a. Junction: Prefer and study refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings, but also study Medium Tunnel 41st Avenue Station [WSJ-5].

b. Avalon: Prefer and study a refined DEL-6 pairing, but also further study WSJ-5.

c. Delridge - DEL-6: Study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].

d. SoDo - Mixed Profile Station: Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking.

2. Ballard Link

a. Chinatown-International District - 4th Avenue: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker

	<p>than 4.5 minutes. The Alliance for Pioneer Square has a good idea to tie this station together with the other Link station, King Street Station, and Union Station. Also develop plan that aligns with the King Street Station concourse proposed.</p> <p>b. Midtown - 5th Avenue: Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>c. Westlake - 5th Avenue: 5th Avenue Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access.</p> <p>d. Denny - DT-1 on Westlake Avenue: Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower.</p> <p>e. South Lake Union - Harrison or Central SLU: Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible.</p> <p>f. Uptown / Seattle Center - Republican Street: Prefer Republican Street Station and work to mitigate impacts to arts organizations to the extent possible.</p> <p>g. Smith Cove - Galer Street: Preferred Galer Street Station [SIB-1].</p> <p>h. Interbay - Retained Cut or Slimmed Down 15th Avenue Elevated: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3].</p> <p>i. Ballard: Study pairing a high bridge with an elevated 15th Avenue Station.</p> <p>I would also like to note that I have seen new "cost-savings" concepts that Sound Transit has generated, such as consolidated station locations at Westlake, in-street/sidewalk station subway entrances, and partial closure of a street in the Denny Triangle. I generally think these are very interesting. For example at Westlake, reusing and connecting access with the existing station could avoid redundant/complex entrances. Having one or two simple direct in-street/sidewalk entrances could be better than demolishing whole buildings at immense cost and then locating related station facilities in surface streets/plaza area (bike storage areas and vending machines) as well as in mezzanine areas. Stations don't need massive footprints. Where there are opportunities to use streets, please use them including having bold plans to pedestrianise areas like along Westlake Avenue and side streets. Transit is an opportunity for wholesale changes and Sound Transit shouldn't be afraid to fight for a change in paradigm. It shouldn't be running scare from local governments preemptively.</p> <p>Go Sound Transit!</p>	
04/28/2022	<p>Hi! Can I just start off with, big fan, love your work. I ride the light rails everyday. Now that my general stance is out of the way, I just wanted to say that I'm kinda disappointed by your proposals for the cid station extension. The only proposals you have made deeply impact and disrupt the neighborhood. Firstly, I love the neighborhood. I've always spent a good chunk of my free time here. It's a very important place to me. I feel a deep sense of community and the care of others.</p> <p>Secondly, I feel like this proposal goes against the needs of the community. Isn't the point of Sound Transit to help the communities you serve and not hurt? It would disrupt and destroy many businesses. This sort of this has happened over and over. It's frankly a repeat of the building of i-5. I think it's time we learn from our mistakes of disrupting the lives and communities of marginalized peoples. If y'all truly cared about this sort of thing, this is a way to actually show it instead of just making a meaningless statement of support. I know you have very creative and thoughtful people working for you and I know that we can definitely come up with a better design. We're in this together!</p> <p>Have a nice day. All the best Eliza</p>	Eliza Eslinger

04/28/2022	<p>I am submitting a comment on the Draft Environmental Impact Statement (DEIS) for the West Seattle and Ballard Link Extensions. As a community member having worked in the CID for years and currently having a Food Bank located there, I am disappointed to see the plans laid out by DEIS. Currently, five options have been put out by Sound Transit for potential CID Station expansion. All five station plans, especially those with options on 5th Ave, displace historic CID businesses (perhaps more than 20), detour thousands of vehicles through the neighborhood's pedestrian oriented streets , and create disruptive construction, including noise and air pollution, for the next 5-11 years. The CID station is the only Link station to be surrounded by a densely populated community of color. It is unacceptable to not consider and adequately research other alternatives that would not once again put residents of the CID at risk of their livelihoods and safe and healthy living environment. I urge Sound Transit to reconsider options on 4th or 5th ave and instead look to other options that will not displace our beloved residents and businesses in the CID.</p>	david tetsuo beer
04/28/2022	<p>To whom this concerns,</p> <p>It is my belief that construction for the new station be done by way of a 4th Street option. It is clear that options CID-2a, CID-2a diagonal, and CID-2b will impose greater costs to the Chinatown-ID community than CID-1a or CID-1b.</p> <p>Thank you, Erin Shelden</p>	Erin Shelden
04/28/2022	<p>Without any contingency plan for the businesses that are threatened with the construction in the ID, your decision-making may create a disaster culturally within the city. These aren't just businesses, but people. And together they are the cultural fabric of the city.</p> <p>All of that said, it might be worth also rereading Jane Jacobs and seeing how these types of infrastructural changes can completely destroy a community.</p>	Greg Bem
04/28/2022	<p>I am commenting in regards to the Delridge segment of the West Seattle Link extension. I noticed that the EIS does not include reference to a large child care facility that would be severely impacted by two of the proposed options for the Delridge segment. As a parent of two children, finding adequate childcare facilities was extremely difficult. West Seattle has a growing number of young families and needs more child care facilities. And not have them be impacted or eliminated due to DEL-5 or DEL-6. The EIS must reflect the the impact to this essential community resource.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p> <p>Additionally, DEL-5 and DEL-06 do not make sense from a location perspective. Having stations that far north would limit their accessibility to larger populations in the Delridge community and result in fewer riders. Any of the other alternatives would leverage land that impacts fewer West Seattle families. The options that use the land near the golf course make the most sense to limit the impact on West Seattle residents and families.</p>	Brad Finnegan

<p>04/28/2022</p>	<p>Hello,</p> <p>Thank you for offering an opportunity to contribute input on how this project could impact many, many families such as ours. The decision may not be easy, but as a resident of West Seattle, home owner, parent and active citizen, we feel voicing our support for one of the businesses that supports our community in ways that words are not able to describe.</p> <p>Both of our children attended Alki Beach Academy since they were 3 months old. Our youngest is wrapping up his last few months in this amazing micro-community and both have flourished by being cared for in a SAFE, inviting, stable and engaging environment. We would not have been able to work without the child care they provide. Our children would not be thriving if not for the care of the staff. Our lives and the lives of many friends, neighbors and families would be drastically different if not for the existence of Alki Beach Academy.</p> <p>Additionally, businesses owned and operated by minority women are few and far between in West Seattle. Our family shares similar cultural background where we do not look like most of West Seattle, so we support this thriving business and advocate for it's continued existence for OUR West Seattle Community as a whole. Both my wife and I are professionals who intentionally selected to live in West Seattle and without Alki Beach Academy's existence, we would not have been able to function as a household with 2 working parents, paying the taxes required to live here and would have challenging barriers to provide quality child care for our children. Please hear US as a community and understand the NEED for Alki Beach Academy to continue supporting the families of West Seattle.</p> <p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p> <p>Additional Talking Points:</p> <ul style="list-style-type: none"> ? The Draft EIS needs to be updated to include Alki Beach Academy as a social resource (Appendix L4.4, Table L4.4-1). ? At the time of relocation, Alki Beach Academy will care for nearly 100 more children than the largest 	<p>Tim Tilbury</p>
