01/27/2022	<p>Hi, I live at 1st and Thomas and am very excited for light rail connections in the neighborhood. I currently do not have a car and rely on biking and transit to get around. My comments would mostly be about tunnel/station depth. I think elevator only access sounds pretty unappealing, as well as long transfer times between stations or even getting above ground. In the long run I feel like shallower stations will make the system feel better incorporated into our city. As for station locations, I like the station in the Seattle Center. It's probably too late, but it would be really nice to have it even further east by the fountain. I do like the idea of the Smith Cove Station from the other alternatives SIB-2 or SIB-3 with some additional connections to Queen Anne and Elliot Way/15th ave improvements. Personally I think 15th ave elevation would be awesome to improve the whole feel of Interbay. Thanks, Parker.</p>	Parker Ammann
01/27/2022	<p>I am a homeowner in Ballard just a few blocks from the proposed site. I STRONGLY prefer the tunnel option at 14th Ave. It seems like the best and most cost effective option with least disruption to the neighborhood.</p>	Christopher Borgia
01/27/2022	<p>Please keep the Ballard link off of 14th NW. It may be fine until it reaches 14th NW and NW 57th, but thereafter it will encounter significant issues: viz. the park on 14th between NW 59th and 61st and the entire sports complex at Ballard High School between 65th and 67th. Save the park and the athletic fields--keep the link on 15th where it may move forward without disrupting the life of the community.</p>	David Madsen
01/27/2022	<p>I prefer the Other Draft EIS alternatives as it is much closer to Seattle Center and Interbay junction with Dravus and 15th. THanks.</p>	Mark Russo
01/27/2022	<p>I wish to comment on the DEIS as it relates to the Ballard portion of the extension. I strongly prefer route alternative IBB-2a. It provides the least disruption of maritime industries, housing, and traffic. Minimizing adverse impacts to key EIS components of economic, housing, and ongoing noise/vibration disruptions are important for compliance with SEPA/NEPA. None of the remaining proposed alternatives are acceptable given the relative impacts to SEPA/NEPA protected environmental issues.</p> <p>In terms of the DEIS itself, the environmental impact analysis is wholly deficient because it does not quantify the economic impact to businesses, employees, and displaced residents under each of the Ballard segment alternatives. While certain businesses are listed as being impacted under various alternatives, no dollar values are ascribed to the impacts. Overall, the DEIS unacceptably glosses over the fact some or all of these business will have to close permanently as part of the disruption. Furthermore, the DEIS fails to adequately point out a viable alternative exists (IBB-2a) which minimizes all these economic impacts.</p> <p>As a result, the DEIS is improperly skewed towards the alternatives stated as preferred. This violates not only the spirit of the EIS process, but also the letter of the law requiring the document to provide a fair assessment of the environmental impacts of the alternatives. This fair assessment is impossible unless quantifiable impacts are enumerated and tables are constructed showing those enumerated impacts across the alternatives.</p> <p>While the example used above focuses on economic impacts, the same criticism can be made about other sections of the EIS as well.</p> <p>This draft should not be allowed to move forward to the final stage without these errors and omissions being fixed. Once the economic impacts are properly enumerated and the DEIS is edited to show tables comparing the economic impacts of the alternatives, the comment period should be re-opened prior to the finalization of the EIS.</p>	David Miller
01/27/2022	<p>This plan would connect the huge gap in traveling across downtown seattle and would open the area to all of seattle and the surrounding area. Please make this happen!</p>	Cade Santha

01/27/2022	<p>There are a number of different pros and cons to the currently planned alignments, and there are a few specific aspects I want to note. For West Seattle, the Medium Tunnel 41st/Andover St Lower Height alternative feels like a very obvious choice. It is the same cost as the current preferred alternatives with fewer home displacements and a more centralized Junction Station. As your own graphic shows, it is high performing in every category. The trench station at Avalon and shallow underground station at Junction would also integrate much better into their respective communities than elevated rail lines. Ideally a trench or subway alternative would be provided for Delridge, but with the current options the shortest possible station height would be preferable.</p> <p>At the other end of the expansion project, the Ballard station should be on 15th as it is both a more centralized location and can more easily provide connections to busy bus routes, like the D RapidRide. While the tunnel alternatives are more expensive, they will better facilitate future extensions northwards when compared to the challenges of extending elevated rail through North Seattle.</p> <p>Most of the other preferred alternatives seem reasonable, with a couple of exceptions. The stations in downtown need to be as shallow as possible. If people have to spend several minutes just to get down to the platforms, they will not want to choose light rail. This is particularly important at Midtown, where it is proposed that passengers would only be able to access the station via elevator. The Seattle Center station in the preferred alternative should be moved a block west, both to better connect to "Uptown" and bus routes on Queen Anne Ave and because hiding the station away next to the arena is not necessary.</p> <p>As a final note, the article linked below details my concerns about the use of light rail technology on the WSBLE. Because the expansions are already planned to be fully grade separated and stations could be made smaller through the use of automated trains, the expansions should really be combined into a single metro line. The current DEIS alternatives could still be used as automated metro alignments, with the only changes being made to the length and height of station platforms (and the advantage of a tighter turning radius). I know Sound Transit is already quite committed to light rail, but automated metro could provide numerous operational benefits to the region in the long-term. Here is the article:</p> <p>https://www.theurbanist.org/2022/01/27/driverless-metro-a-faster-more-reliable-alternative-for-ballard-and-west-seattle/</p> <p>Thank you for taking the time to read these comments, and please continue to focus on the rider experience.</p>	Emmett Broustis
01/27/2022	<p>Why is a non-tunnel option the preferred option when the tunnel options cost approximately the same (or less with the 14th tunnel) and use less land? You will make that money back via property taxes on the land you save from bridge development.</p> <p>I would rather have no light rail than to have 2 bridges over Salmon Bay. In addition, a fixed bridge that is so tall that it ends near Market would absolutely destroy Ballard.</p> <p>A tunnel is the only option that makes sense for Ballard and with the current price estimates it is a no-brainer.</p> <p>I would go one-step further and propose investigating a multi-modal tunnel that could incorporate car traffic as well that might be able to be lidded. I don't buy this WSDOT and ST can't share infrastructure. That is insane. If car traffic could be underground, Ballard Bridge could be repurposed as pure bike/pedestrian.</p> <p>A second bridge or a massive fixed bridges that eat up developable land and end at Market are non-starters. The land saved via tunneling could be used to support affordable housing.</p> <p>Don't make a ridiculous decision. A tunnel is the ONLY choice.</p>	James Shuster
01/27/2022	<p>I'm a resident of West Seattle in Pigeon Point. I think the Preferred Alternative to West Seattle looks great since there are no other alternatives that seem less disruptive. It is necessary, however, for there to be a safe, clear and effective bicycle detour for the 22nd Avenue Southwest Street-end and the Delridge Connector Trail. Thank you!</p>	Erin Phillips

01/27/2022	The preferred alternative is the right choice. Wasting billions more dollars to appease wealthy homeowners who insist on a tunnel into Ballard and west seattle is not necessary and will inevitably lead to more delays. Whatever can be done to get the light rail extensions done faster (and spur thinking about the next phases), do that!	Calvin Boerigter
01/28/2022	In light of the article today (01/28/22) in the Seattle Times on the unsustainability of ST related to loss of fare revenue I would urge you to use the route and type of construction that is most economically feasible. Perhaps look at the Crossrail line in London and how that was built. I did read the article that highlighted those issues perhaps some hybrid dig can be achieved. Yes deep bore tunnels would be grand however without funding from state and federal sources perhaps it is not the best going forward. Sincerely, Eric Helgeson	Eric Helgeson
01/28/2022	Can you confirm that the light rail to Ballard won't harm or affect the Interbay golf course? If it does I cannot support the project. Bret Wirta	Bret Wirta
01/28/2022	I love to see that the light rail is coming to Ballard. I have 3 major areas of concern: Disruption of maritime traffic and business Keep Ballard, Ballard Increased pedestrian traffic around 15th Traffic is already affected by boats at the Ballard bridge. Building above ground is only going to add to the traffic issues (as much as one would hope it would decrease it). Reality is that boat traffic will remain and people who need to commute will continue to commute. I support building the underground route coming into Ballard to minimize impact to maritime traffic. Ballard should remain Ballard. Long-time residents have been continually bombarded with changes in the neighborhood. Adding a surface or elevated rail into Ballard is yet another impact that is going to detract from Ballard's history. Pedestrian traffic on 15th and Market is troublesome currently. Adding station at that intersection will exasperate the current traffic situation. Putting the station on 14th will give pedestrian traffic time to disperse before reading the intersection as well as not interfere Rapid Ride bus stops. Thank you for taking the time to review my comments.	Yumiko Saito
01/28/2022	Please consider a tunnel and not a surface rail. Surface rail is very disruptive, and an eye sore. Additionally please consider 14th and Market instead of 15th and Market for the station. 15th and Market is so busy with traffic that adding onto that, especially when the bridge is up, would be a nightmare.	Michelle Rakshys
01/28/2022	Yes please build these new lines. This project looks amazing. I can't wait to get on the link from Seattle Center.	Timothy McDowell
01/28/2022	Hello, I am a homeowner in Uptown/Lower Queen Anne, residing in a unit in a multifamily building on W Olympic Place. I want to voice my support for the preferred alternative for the Downtown Segment, 5th/Harrison. After reading through the residential, commercial, and environmental impacts, it appears that on a whole it will be less disruptive to the community while providing more convenient access to the local amenities. Thank you. -Max	Max Blumen

01/28/2022	<p>IBB-3 is pointless, and we shouldn't even bother with light rail to Ballard with a moveable bridge. The light rail needs to have the benefit of avoiding both road and boat traffic, and ideally not impede road traffic either.</p> <p>I'm strongly in favor of IBB-2a, or either IBB-1a/1b. A lot of midrise development has already occurred west of 15th Ave - by placing the station at 14th & Market you incentivize redevelopment of the "Frelard" area east of 15th and south of Market, ideally with an option to build taller like the U District is now allowed to do. If anyone wants a good example of subway planning, look at Arlington, VA. They have meaningful pockets of density around each metro stop, that would work well with Seattle's little downtown/main street areas in each neighborhood.</p> <p>The other argument for 14th is that, if we have to go with the elevated option, the street has a ready-made median to support it and the project would not disrupt the current bus routes on 15th.</p>	Gregory Lawson
01/28/2022	<p>1: The elevated lines up Genesee (see ES-13) will be insanely ugly. It's not that it's destroying a good view, it's that it's creating an insanely ugly view. Include shadows, graffiti, etc and the negative impacts are substantial.</p> <p>2: From up the hill, (Genesee and 21st) it is destroying a decent view.</p> <p>3: The various bridges across the Duwamish all seem "eh, ok I guess"</p> <p>4: I prefer the placement of the Del-3 and Del-4 stations on Delridge from a practical access/pull area perspective. I have no strong impact/aesthetic opinions on the various station locations.</p> <p>5: The station options near West Seattle Junction should prefer the farther west options closer to California (i.e, not WSJ-2). California already is the destination and urban village, and the transit needs to focus on serving that area.</p> <p>And a meta comment that's not that limited: I think your cost estimates are off in a systemic way that's causing you to under estimate the costs of building above ground tracks compared to tunneling.</p> <p>Yes, tunneling will be insanely expensive. But building above ground will ALSO be insanely expensive due to property cost increases over time. Over the last several years property values have steadily (~10% y/y) as demand has increased. THIS WILL CONTINUE in the future without substantial changes in housing policy which have to be assumed to be politically unviable. Predictions that it will not are indulging in irrational trust in mean-reversion, which won't apply due to the local macroeconomic conditions (Amazon and other tech companies continuing to grow in the area, pulling in more well paid people to compete for housing, and a complete unwillingness to entertain any suggestions that would actually impact the housing shortage.)</p> <p>As a result, delays increase above ground costs more than they increase tunneling costs. Delays increase above ground costs at a faster rate than the money available increases. An above-ground path will never happen due to cost increases from property-value increases outpacing funding accumulation.</p> <p>When estimating costs, please model the recent (last 10 years) of property value increases and project those out, at least as an informative element for "what if" planning.</p>	Douglas Kilpatrick
01/28/2022	<p>I think the tunnel options are worth the extra cost. On the west seattle side, in particular, its kind of mind-blowing how many new buildings will be displaced by the elevated tracks and stations. For the Ballard side, the tunnel options seem to cost the same now as the elevated options, so I don't understand why anyone would choose the bridge + elevated station options. Less noise when operating, less displacement.</p>	Jon Swanson

01/28/2022	Regarding the West Seattle Link extension. I encourage the use of SW Andover St. as a preferred alternative. That street has been abandoned for a long time and has slowly been taken over by inappropriately parked vehicles and garbage. I strongly believe that the use of that street for the link would be highly appreciated by the North Delridge community as well as have the least impact on local residents. Targeting two birds with one stone, it would clean up an unused, dirty portion of our community as well as brining the link to our area. Thank you for your time and consideration.	Mabell Gomez
01/28/2022	I think the preferred alternative is a great route and plan, I only wish it could have been done already! I know these things take time, but we have to get more cars off the road faster.	ANNELISE ALDRICH
01/28/2022	I am commenting on the West Seattle portion of the plan. As a 10+ year resident and home owner in West Seattle, I believe the the alternatives that utilize a tunnel are the only options that should be considered. Having this be above ground will be far too disruptive in what is already a highly trafficked section of the neighborhood. Again, under no circumstances should an above ground or surface street option be considered. Thank you,	Jill Akridge
01/28/2022	This is a wonderful project for someone that commutes between downtown, uptown and Ballard. The proposed route seems to focus on the core downtown area and part of SLU. However, a good portion of new offices coming up focus on the Dexter area or SLU which is currently out of most common bus routes. A good portion of commuters, who would add more cars to ongoing traffic, would commute into and out of that area and would benefit more from the route currently considered as an EIS draft.	Domenica Mata Rodriguez
01/28/2022	Literally this whole week I've been thinking: "I wish the link connected downtown to Ballard." And BOOM! I got the flier in the mail so clearly it's been on a LOT of peoples' minds! I would be STOKED to see this happen! It would also allow less vehicle congestion in the city, and downtown dwellers without cars could be employed in Ballard without relying on the bus. The bus is slower than the link for one, and also unreliable. Yesterday the bus left my stop 6 minutes EARLIER than the scheduled time (good thing I was early), but this morning it got there 7 minutes late. It's exhausting to try to keep up with the bus system when you're an organized and reliable person who wants to be on time for work, so I approve this plan and am glad it's even being talked about in the first place. The exact location of the stops, I can't say I have a strong preference. Just connecting downtown to Ballard is more than enough.	Leona Lkova
01/28/2022	Don't build it. Stop and return the money to taxpayers instead. My family is paying an extra \$1,000 a year in taxes and will most likely never use this once. Work from home means even fewer people will ever need it. It's another example of Washington government excess. The vote some years back passed by only a slim margin after heavy lobbying by the government and businesses. If you must build it then make it self funding. Price the rides so that only riders are paying for it. If it is such a good idea then the business case will still work. Thank you for having an open mind about whether it should really exist.	Brian Eccles
01/28/2022	West Seattle portion of the link would be most beneficial if it runs along SW Andover St and up SW Yancy St. It is the least used portion of the community which has caused a lot of people who live out of their cars to park there and has brought a lot of littering to the area. Putting that area to better use, such as the link, would be beneficial as well as least destructive to the homes in the area. Might also involve less private properties to be bought out for the project. Thanks for listening	Victor Ochoa
01/28/2022	I would rather have the "Other draft EIS Alternative" route.	Elizabeth Houck

01/28/2022	As a long time Ballard resident I would most definitely prefer the Tunnel 15th Avenue Station Option. It has the least impact on the Ballard surface which I believe most Ballard residents would prefer. My second choice would be the Tunnel 14th Avenue Station Option. It too has little impact on the Ballard surface. I don't want to see an elevated option in Ballard.	Craig Johnson
01/28/2022	Please consider strongly tunneling as will be done downtown, for the West Seattle extension. This is my preference both esthetically and in order to minimize the dislocation of homeowners and businesses. I am strongly in favor of light rail and mass transit.	Cynthia Thichava
01/28/2022	In reference to Chapter 2 (Alternatives Considered), Section 2.1.2.2 (Ballard Link Extension) and Pages 2-45 through 2-47 (Table 2-2.), the Alternative or Design Option for Interbay/Ballard (IBB) Station regardless whether the final decision is through Preferred Elevated 14th Avenue or Preferred Tunnel 14th Avenue, I still believe the Preferred 14th Avenue station location is the best option as opposed to the Elevated 15th Avenue or the Preferred Tunnel 15th Avenue station location. Reason is pure simple that the 15th Avenue and NW Market Street is already too busy an intersection, which any new stations built there will only add to current pedestrian and vehicle traffic, and not to mention any potential traffic accidents that may occur as safety concern. Thank you for listening!!	Francis Ting
01/28/2022	More stops between 1st ave n and nw market st will make transit trips more appealing as it will make the "last/first mile" part of someone's trip be more walkable instead of looking for buses or other modes of transportation to get to the station needed which would increase trip and influence users to switch to cars. Stops should intersect with bus stops so people would take the bus to go inward.	Omar Kahil
01/28/2022	We need more public transportation period. If any of the preferred alternatives were to open it would be a benefit to our communities. However we must also take into account the ways that gentrification tends to follow the arrival of light rail and subway stops. Communities that are living in neighborhoods that have yet to experience gentrification and displacement should be prioritized in the decision making and consultation process for these light rail options. Tax the rich to service the working communities of the city!!	Grant Gutierrez
01/28/2022	West Seattle needs something so badly. The bridge has been a huge pain. Are there ways to expedite this? What are the options for the next 10 years while this kicks off?	Jeffrey Wolford
01/28/2022	I agree that all presented preferred options are the best possible options for my community in West Seattle	Benjamin Lam
01/28/2022	With all of the condos/townhomes currently being built or just finished, try to avoid the sw avalon route as it seems to have been chosen prior to land use changes/current residential impact, why build hundreds of new residential just to knock them down at a much higher price.	Jensen Vance

01/28/2022	<p>CID resident here. I have been active in this community since 2019 and have seen many evolutions throughout my short time here. The draft EIS proposed many different ways of handling the link extension for this dense, lively neighborhood. Option CID-2b would be the best alternative given the present choices. As a daily commuter, I can let you know that the northbound lane for 4th ave is vital to many people coming in from South Seattle, particularly those who live closer to bus lines vs the rail station (I was one of those people before moving). During morning rush hours, 4th ave experiences congestion that can increase trip time by upward of 15 minutes (I have been there). The bus lane is crucial to properly dividing morning traffic.</p> <p>With that being said, CID-2b is also closer to the intended destination of CID. It would not make sense for the station to surface on 4th avenue as the CID gate, arguably the most important landmark of the neighborhood, is located on 5th ave. How would that affect non-native commuters and tourists? Business displacement would hurt the neighborhood, but none of proposed options are able to avoid that due to the dense nature of the community. The underground tunnel, once completed, will not add the already existing bustle of the neighborhood on game days or weekends.</p> <p>Also, the idea of displacing up to 230 employees with CID-2a, many of whom are restaurant workers who just survived a pandemic, is unappealing. The diagonal configuration is innovative, but not the solution CID needs. If it means displacing CID staples like Chung Chun, Musashi's, or Vital Leaf Tea for 6 months, with no guarantee that they will be able to return, then it is not worth the investment for CID-2a.</p> <p>Lastly, the parking loss is unfortunate, but not the end of the world for many CID residents. I, like many others in this part of the city, do not own a car and rely on transit. Most of the street parking is used by gig-workers or game-day visitors. The lot that CID-2b is most likely to displace (the one directly behind the CID gate on King st.), spends most nights empty.</p> <p>Please proceed with CID-2b!</p>	Nathyn Casillas
01/28/2022	Tunnel is worth it, and i guess 15th is better than 14th, but more importantly, start building it now before it becomes more costly and the next pandemic/earthquake/volcano/tsunami hits	David Gelfand
01/28/2022	For Alaska Junction Station, I prefer 42nd Ave tunnel option, WSJ-3b.	Megan Wood
01/28/2022	Cancel the entire project. Sound Transit does not have the funding to complete these lines. ST is bleeding riders. Why are we paying Billions for a line that won't be used enough to justify the cost?	Mike Smyth
01/28/2022	I live near the routes on 33/Andover. And I really prefer tunnel routes and only tunnel especially with the bridge having so many cracks and concrete issues as it is. The track would just be too high and disrupt too much of the life around West Seattle as well as the views. Please consider the TUNNEL option.	Derek Ross
01/28/2022	<p>Alternative 2 is way too far East. The station was promised to serve the Junction, which is the intersection of Alaksa and California. Anything east of 42nd is too far, which rules out everything but #1 and #4. A tunnel is preferred because it will less unsightly, quieter, and less disruptive during construction.</p> <p>If #1 would destroy both supermarkets (Safeway and QFC) that seems like a problem.</p>	Adam Wuerl
01/28/2022	I want lots of trains running frequently to popular destinations.	Mitchell Henke
01/28/2022	<p>This is a long term investment and the WSJ station should be done like other modern cities and neighborhoods, underground. WS will continue to grow and the WSJ-3b station will provide great access to housing & retail.</p> <p>DEL- 6 seems good for not displacing residents and the lowest amount of employee assuming the Transitional Resources office receives funding to relocate. DEL-4 seems like the best choice due to higher ridership, lower heights (less obnoxious/intrusive) and permanently impacting the golf course (why is a golf course needed here when housing is so difficult?).</p>	Matt O'Laughlin

01/29/2022	Overall the preferred alternatives seem decent in my opinion. In general, I'd suggest going with the lowest-cost option. For International District/Chinatown station, either shallow station would be ideal, as they would offer easier and faster access to passengers. I prefer the 4th Ave option though either shallow station would be fine.	Nathan Odell
01/29/2022	I appreciate all the effort that went into this, and it's very impressive. While there are always small issues, I have a big one. Ignoring First Hill and 3 of Seattle's largest hospitals, their 10,000 workers and thousands of patients, and all the traffic they generate is wrong. I know the station is deep. Build it anyway.	George Harvey
01/29/2022	hurry up. build it. let's not drag this out in old seattle style and try to make everyone happy all the time. make a choice and get on with it. 2. more tunnels yes. less above ground yes.	austin watson
01/29/2022	A better and more economical solution would be to have an aerial monorail from Ballard to West Seattle. This eliminates the need to have deep tunnels through downtown Seattle, and a monorail can handle the steeper grade to West Seattle. It is ridiculous that such an alternative was not considered by Sound Transit.	Michael Lampi
01/29/2022	The WSJ-5 and lower height Andover station DEL-6 appear to be the lowest cost, have the least adverse visual impact and lowest number of displaced homes and businesses. Ideally, the entire project would be tunneled but I understand budget constraints. In the event the Genesee above ground route is selected, my condominium will be eminent domain. How will you relocate a single female, senior citizen on a fixed income and mobility issues who has no mortgage, low HOA Dues and a senior citizen property tax reduction, zero stairs, enclosed-attached garage and elevator, high quality appliances, fixtures, tile, carpet, hardwood, 10" ceilings, recladed and new windows, 2 bedrooms/2 bathrooms, proximity to storage unit and 1/4 mile from bridge on-ramp to both of my businesses/jobs and properties, family, downtown Seattle, medical, dental and easy access to bus, future ST3 station, proximity to area businesses? Even with significant Housing of Last Resort payment over and above Fair Market Value of my current condominium, there is zero inventory in King County that matches what I have now. Moving me to another condo in an area that matches my West Seattle home will require higher HOA Dues and Property taxes that I just cannot afford at this stage of my life.	Debora Robinett
01/29/2022	Include turnstiles in your design! The current non paying customer issue can be mitigated by installing this simple tool that is all so common with other major cities' transit systems. There is no reason to invest funding to hire more fare enforcement officers/ambassadors (and it doesn't matter what you call them), we cannot ensure there is no bias against POC. Sound Transit is irresponsible to continue expanding and operating business as usual without re-imagining how a transit system need to operate given current environments to sustain longevity. Coming back to citizens to ask for more money every few year is not a viable option.	Janet Rogers

01/29/2022	<p>On page 34, under the "Comparison of West Seattle Junction Segment Alternatives" section, in the second paragraph, reads the following sentence:</p> <p>" Preferred Alternative WSJ-1 would displace a Trader Joe's and a Safeway, while Preferred Alternative WSJ-2 and Preferred Option WSJ-3b* would displace the Safeway. "</p> <p>I believe this statement is only partially correct, as the WSJ-2 alternative does not pass by the Safeway on 42nd. WSJ-2, does however, appear to take a path that could displace the Trader Joe's on Fauntleroy.</p> <p>Furthermore, it looks like WSJ-3b could displace the Safeway, but it doesn't appear to cross the Trader Joe's.</p> <p>I'd expect this sentence to read:</p> <p>" Preferred Alternative WSJ-1 would displace a Trader Joe's and a Safeway, while Preferred Alternative WSJ-2 would displace a Trader Joe's, and Preferred Option WSJ-3b* would displace the Safeway. "</p>	Kelly Dunn
01/29/2022	<p>Strongly support the Salmon Bay tunnel alternatives (IBB-2a, IBB-2b) over all surface and elevated options. The tunnels offer the fewest Potential Displacements, visual and shoreline impacts. For the projected additive cost, a tunnel would be tremendous value in terms of minimizing negative impacts.</p>	
01/29/2022	<p>The elevated route to Ballard is absolutely necessary. The pedestrian and bike options from Ballard to Magnolia are overcrowded and downright dangerous. We need a combined light rail and pedestrian bridge like the Tilikum crossing in Portland.</p>	Mary Conrad
01/29/2022	<p>I support this proposal. I only wish it could be expedited. 20 years to get Light Rail to Ballard seems absurd. But I fully support this proposal and would like to see it implemented.</p>	Tommy Owens
01/29/2022	<p>I think these light rails are much needed, especially to west Seattle considering the issue with the bridge. Needs these extensions very much.</p>	Kristal Walton
01/29/2022	<p>My comments relate to the relative merits of the various alternatives evaluated for a number of segments. I'm in agreement with the Board that the preferred alternatives for the South Interbay, Downtown, SODO, and Duwamish segments are the best performing and should be preferred.</p> <p>For the Chinatown/ID segment where no preferred alternative has been selected, both 'deep' alternatives should be dropped from consideration. Given the volume of transfers that will be made at this station from riders transferring between the two North-South lines and the East-West line here, a deep station requiring elevators to access should be a complete non-starter. The diagonal shallow 5th configuration appears to be the most reasonable alternative here.</p> <p>For the West Seattle Junction and Delridge segments, the 'medium tunnel 41st' and 'lower height Andover' alternative should be the preferred alternative going forward. The elevated alternatives in the Junction doom the line to terminating there forever - the line needs to be in a tunnel to make it to High Point and on to White Center and Burien eventually. The other tunnel alternatives have higher impact and cost but little additional benefit.</p> <p>For the Ballard segment, the preferred option should be the 15th NW tunnel. The 14th NW alternatives place the station entrances unacceptably far from the center of Ballard - an entrance on the west side of 15th NW is needed to adequately serve the density that exists and is coming to central Ballard. If an elevated alternative is advanced due to funding issues, the 15th NW elevated alternative should be the one chosen for the same reason.</p>	Dan La Vassar

01/29/2022	<p>I am a West Seattle resident. Upon reviewing the alternatives for the West Seattle Junction segment, I feel strongly that the Fauntleroy Way Elevated Station is by far the worst choice. The visual impacts of an elevated structure at the intersection of Alaska and Fauntleroy would be terrible. Given the large amount of new apartment construction in this location, which is exactly the type of development we need in this location, it makes no sense to blight this area with a large elevated structure. If an elevated route is chosen, the 41st/42nd Avenue route is better. But what really strikes me is the very minor cost difference between the Fauntleroy Way Elevated Station, on one hand, and the Short and Medium Tunnels, on the other. The tunnel alternatives have far fewer impacts, and cost as little as \$200 million more. This is not a significant amount in the context of a 100-year project. I note that it was recently reported that Sound Transit and WSDOT are proposing to spend almost \$300 million on a single highway interchange in Kirkland. It is ludicrous that Sound Transit would support that expenditure and not a similar or lesser expenditure to create a first-class underground light rail line in a city neighborhood.</p>	Lisa Christoffersen
01/29/2022	<p>This simply is an agreement with the published preferred version of the West Seattle/Ballard Link extensions. I'm on the Thurman Street end of Magnolia. Right now the access to the Ballard Bridge going north and our neighborhood is poor...fraught with perils. Travelling on foot under 15th Avenue NW by the concealed stairs and then crossing the three-way constantly busy intersection between Nickerson street and the bus stop at the south end of the bridge is perilous. The preferred light rail link in pink on the mailer seems the safer, more convenient way for Magnolia people to access the light rail and safely cross the bridge. I vote for that version and hope it survives the cut.</p>	Bonnie McDonald
01/29/2022	<p>I would implore the Sound Transit Board of Directors to modify the preferred alternative on the West Seattle terminus to exclude WSJ-1 (Elevated 41st/42nd Station). Based on the draft EIS (specifically, Page 6-15), the number of businesses, employees, and residential buildings impacted far out weighs the benefit of this location- especially compared to the WSJ-2 (Elevated Fauntleroy Way Station). It's not clear what the upside of WSJ-1 is compared to WSJ-2. WSJ-1 has a lower rider estimate (page 6-14). Furthermore, per page 6-34, WSJ-1 is \$400M more expensive than WSJ-2.</p> <p>It's hard to understanding how lower ridership numbers, higher construction costs, and higher impact to the community (as measured by impacted businesses, residences, and buildings) wouldn't make WSJ-2 the obvious better choice.</p> <p>Additionally, I'm confused why an Avalon station is being built so close to the Junction station. Why not get ride of this station (a mere quarter of a mile from the proposed junction locations) and tunnel into the WS junction?</p>	Peter Barrett
01/29/2022	<p>LINK stops in Ballard and West Seattle would be great for the environment and economy. This would allow Seattle to function as a city rather than multiple, disconnected, mini cities.</p>	Nadine Farouq
01/29/2022	<p>Thank you for your hard work on this important project. On Executive Summary page ES-39, Table ES-8, the cost is similar between the IBB-1a and IBB-2a but displacements are less in IBB-2a. Overall, it makes sense to go with IBB-2a since a tunnel will be faster and disturb people living in the area less (when finished) than a high bridge.</p>	Emily Matheson
01/29/2022	<p>Residents of Lower Queen Anne, prefer the Preferred Alternative (pink line) for access to Seattle Center and the further West elevated section to Ballard.</p>	Kathleen Keaney

01/30/2022	<p>Dear Sir/Madam:</p> <p>I find the UW Stadium station to be abhorrent at 95 ft and at a cost of 100s of millions of dollars. So now what is ST doing, trying to out do themselves with 100+ foot and costlier stations — sheer insanity. Please don't make Seattle the laughing stock of the transit world.</p> <p>It seems to me the only reason ST is adding some of these stations is to make a Ballard station palatable. I say give Ballard their station and proceed their line to South Lake Union but then follow it by the elimination of the next 3 stations and then pop up with a shallow station at ID (4th). This would leave a tunnel for West Seattle and future expandability.</p> <p>A streetcar is planned for SLU to ID, just reconfigure it if need be, for a fraction of the cost. This would leave us with much easier transfers then the deep Link stations and it would not bankrupt us.</p> <p>All the best,</p> <p>Larry Scheib</p>	Larry Scheib
01/30/2022	<p>6.1.5 - In West Seattle, options including elevated tracks into Alaska Junction reduce available housing and contradict city equity considerations; the tunnel option is best. Specifically, above ground stations at Avalon and the Junction would require removal of several hundred to more than 1000 multi-family housing units, many of which are newly constructions consistent with the Urban Village Plan. To remove housing is not only a contradiction of the vision for linking housing dense locations with light rail, but also displaces renters and mixed use housing developments. Further, the cost to buy newly constructed apartment buildings nearly offset the additional costs associated with tunnel options. There is no funding to connect this segment to south routes, and if future ST investments are made, a line along Delridge would more directly connect to Burien through Westwood Village, where additional density could easily be achieved in large parking lots without displacing existing residents or retail.</p>	Andres Curry
01/30/2022	<p>Specifically for the path near Delridge station (Figure 1-2), it seems that any paths that go through existing private property are going to incur large costs to acquire and build on that land. Not to mention the impact to residents in this area.</p> <p>The best option for this section would seem to be (if I'm reading this right) DEL-4, the lower height path that goes on the south side of Genesee. This puts most of the path on land that won't displace residents and won't incur demolition costs. Not only that, but the golf course and playfield are already owned by the City of Seattle, so that would minimize the cost of acquiring the land.</p> <p>Given that, I'm not sure why paths that go even slightly further south, over the north end of Genesee Playfield (where there's a skatepark and some open land) and cutting into the golf course wasn't listed as an option in this EIS. It seems like a path like that would have lowest cost, least impact to residents, and could use land the city already owns to accomplish this new rail line.</p>	Chris Downie

01/30/2022	<p>I strongly support a rail transit connection from downtown to West Seattle, but what Sound Transit has proposed is exactly the nightmare scenario I feared it would be in the worst-case planning scenario.</p> <p>I have only focused in on the segment from Alaska Junction to the Duwamish, and it is very difficult for me to point out what exactly in the DEIS is wrong because nothing about it is right. Both horizontal and vertical alignments are wrong (it looks like a 1960s era urban renewal-by-freeway project). The removal of housing is wrong (we need more, not less). The lack of integration with existing land use (by way of destruction) and potential land use (a complete lack of foresight with obvious opportunity) is wrong.</p> <p>The process went wrong; only sketchy and fuzzy information was released until the DEIS put the details out. This is clearly a black-box planning approach where the final take-it-or-leave-it results were thrown out at the end of the process. This is not meaningful engagement on what is in every way possible a terrible design solution.</p> <p>The bus interface at stations is, in typical Sound Transit form, pretty terrible.</p> <p>The Alaska Junction station isn't even in Alaska Junction. It's 4 blocks away down a hill on Fautleroy, which means it's not accessible to a person in a wheelchair from where Alaska Junction really is.</p> <p>How is it that Sound Transit wasted so much money to do such a bad job? You've squandered both time and money to create a solution that is truly awful.</p>	Keith Hall
01/30/2022	<p>Should not go to Alaska Junction. It will be a horrible ugly mess through Youngstown.</p> <p>The most growth in West Seattle over the next 20 years will come along Delridge way. Extend the line down Delridge Way to SW Roxbury ST and 17 Ave SW. Build a station with parking garage at the autoparts store at SW Roxbury ST and 17 Ave SW.</p> <p>This will be the most used path and provide for the most parking along the route. This will give the opportunity to allow for surface installed tracks. Lower/smaller stations and will save money. No tunnels, no high-rise stations, no columns.</p> <p>Stations located along Delridge Way: Youngstown near Spokane Street. Between Hillcrest and Highland park SW Roxbury ST and 17 Ave SW Another optional one somewhere along the route.</p>	Dan Betts

01/30/2022	<p>As you know, West Seattle has a challenging topography for mass transit to points north and east. Hills and waterways limit our options. The currently proposed West Seattle extension of light rail is an expensive and problematic option, with its huge and high concrete (an emissions intensive material) foundation posts and guide rails required to get over the Duwamish and adjacent hills. There is a better option: a SkyLink gondola system and I urge you to direct Sound Transit to slow down work on the proposed West Seattle light rail extension long enough to conduct a comparative evaluation of a gondola system vs. the light rail project for the section that bridges the Duwamish peninsula to Sodo/Downtown.</p> <p>In his October 2021 West Seattle Chamber of Commerce debate with Senator Joe Nguyen, King County Executive Dow Constantine was asked if he would support a gondola system. His response was "I've asked for a SkyLink study and will bring a motion to the Sound Transit board." Executive Constantine asserted, however, a false dependency of light rail to the points south of the Duwamish peninsula on the Sodo to West Seattle light rail section. Why can't SkyLink--the system best suited to the topography of the north end of the Duwamish peninsula--be the bridge from light rail Sodo/downtown to light rail serving southwest Seattle and points south, where the topography is not as challenging and lends itself better to street level and/or slightly elevated rail tracks. A SkyLink study should look at that option. If Puget Sound taxpayers and West Seattle residents are being asked to accept the expensive and limited light rail extension over the less costly, more environmentally friendly gondola system, that request must be justified by comparative data showing why Sound Transit has determined light rail is better than the gondola system.</p> <p>Per SkyLink's evaluation, gondolas would have a smaller carbon footprint, displace fewer (lower income) residents and businesses, serve more people, be completed sooner, and cost far less than the proposed light rail extension.</p> <p>But don't take SkyLink's word for it, do your own evaluation and share the results with the public! It's not too late to take an agile approach to this important transit plan. We're going to have to live with the results of this decision for the next 30+ years. Let's get it right.</p>	Katherine Woolverton
01/30/2022	<p>After reviewing the draft EIS for Ballard light rail, the preferred tunnel under 14th is financially competitive with bridge options and will have less overall financial impact to the community.</p> <p>As a Ballard resident I now prefer the 14th tunnel option as my number one choice, and 15th tunnel option as second choice.</p>	Derek Armstrong
01/30/2022	<p>I live in upper Queen Anne and I think the alternative route marked by turquoise on the map will better serve both the Queen Anne neighborhood (which is very large and highly residential) as well as the South Lake Union neighborhood. Currently, connections between these two neighborhoods is poor and has been an ongoing source of frustration for me and likely many other Queen Anne residents. For 3.5 years I worked for organizations in the south lake union/eastlake neighborhoods and I resorted to walking because transit options so poorly supported these areas. It would be even better if the route station for SLU could extend to Fairview Ave N instead of Westlake Ave but at this point in the planning it seems that this is not being considered. Thank you for your consideration.</p>	Nicole Harper
01/30/2022	<p>I'm light rail supporter, but please limit/nullify the impact on the west Seattle golf course. It's a municipal facility with a great and long history, and it serves as an important community center for a wide variety of people from all walks of life. It's already very tight there, in terms of space, so any impact along Genesee will materially weaken the institution.</p>	Joseph Bradley

01/30/2022	<p>This comment is regarding the downtown segment of the Ballard Light Rail expansion. Other than the projected daily ridership numbers (which I question because there is no justification/data to support the projections in the analysis, and the proposed stations are 1-3 blocks apart in most cases, which shouldn't have a significant impact on people choosing to take or not take the transit), I don't see why DT-1 is preferred over DT-2. Speaking as a person who lives and works in Midtown, the proposed disruptions of DT-1 (closing off large chunks of 5th and 4th Ave for 6 years, reducing access to the public library) are enormous compared to what would happen with DT-2. Given the tendency of construction projects to last longer than projected, this impact will be extremely painful for Midtown, so I would not personally support the DT-1 plan (even though I love transit and anticipate using the line when it is completed).</p> <p>Also, speaking in purely practical terms (regarding the small segment of the line south of Pike and north of James), it seems preferable to place stations on 6th ave to make them more accessible for folks living on First Hill or visiting the hospitals there.</p>	Olga Zinoveva
01/30/2022	<p>For this project, do we really need a second downtown tunnel? It seems to be more expensive and time consuming to build another tunnel. It also doesn't seem to add much to downtown either. We are only getting one new station. We are already delaying this project and others because of excess costs and it seems like we can cut a lot of that out by not digging a second tunnel.</p> <p>Also, can we have construction going 24/7? It seems like we can speed up the process with ongoing construction throughout.</p>	Robert DeMacon
01/30/2022	<p>Both BRT and BRT+Gondola alternatives should be included in the EIS. They are likely to be much less expensive and to be able to be constructed in a much shorter time span with less disruption than the LRT alternatives.</p> <p>As for the BRT alternative its benefits include being able to use existing on-street rights of way eg on the 3rd Avenue busway and Elliot Avenue. Short tunnels could be included for South Lake Union and the Ship Canal. (Buses can negotiate relatively steep grades compared to rail and thus the tunnels can be commensurately shorter.) Either combined with a West Seattle gondola or as a stand-alone solution, BRT allows for continued use of the 3rd Avenue busway, obviating the need for the ultra-expensive, and inconvenient, 4th Avenue tunnel and related deep stations envisioned for LRT. (Major upgrades to the 3rd Avenue bus shelters is recommended.)</p> <p>I will let principle proponents of the West Seattle gondola make their case seperately.</p>	Donald Padelford
01/30/2022	<p>My comments are directed to EIS3.1.2.5. As a Ballard homeowner for over 14 years, I strongly feel that the needs of the city would be best met by having a tunnel instead of a bridge and by having the transit stop as far west as possible (15th avenue in the options presented).</p> <p>The tunnel is the best option as it will not be affected by weather or boat traffic.</p> <p>The bulk of the residents using the transit live west of 14th avenue. And many people from other parts of the city will use the new light rail to shop, eat, and drink at the many businesses in the neighborhood that are almost completely west of these options. The area around the planned transit station is not the safest. Moving it as far west as possible makes it safer for people walking as it will be closer to their likely destination. The further west the station moves, the lower the crime rate.</p> <p>I realize this is more expensive. But I strongly believe it will pay off in the future.</p>	michele obrien

01/30/2022	<p>Hello, please consider using the alternate proposed stations for both seattle center and south lake union.</p> <p>The "preferred" alternative through Uptown (on harrison) bypasses all of lower queen anne as a walk-shed. There are a lot of us that live in LQA who would rather have to only walk a few blocks than have to walk a mile to the nearest station (both the preferred seattle center and SLU stations on harrison are about a mile away).</p> <p>The Mercer alternative would instead be blocks away for many in Lower queen anne, at both Seattle Center and SLU stations.</p>	J.P. Stewart
01/30/2022	<p>I believe the West Seattle and Ballard Link extensions is a wonderful ideas that should continue to be prioritized and developed. Projects like that continue to efficiently connect our city together are worthwhile to the taxpayer and to the city as whole.</p> <p>Thank you for the hard work</p>	Ankith Bhat
01/30/2022	<p>My comments are with regard to the Chinatown-International District Segment, as outlined on ES-25 to ES-29 of the EIS. As a resident and homeowner in the C-ID, I strongly support the 4th Avenue options (CID-1a/1b) over the 5th Avenue options (CID-2a/2b) as they will be less disruptive to the C-ID community and businesses. Of the two 4th Avenue options, I am most in favor of the deep station option (CID-1b) as it will have the fewest residential and business displacements per Table ES-5. I strongly oppose the 5th Avenue options which are estimated to displace 18-27 businesses in the C-ID area. This amount of displacement would have a significant negative impact on the C-ID neighborhood and community, as these businesses are key to bringing in visitors and maintaining the vibrancy of the community. With the loss of these businesses, potential visitors would have less reason to visit the C-ID due to the reduced variety of business options. One desired goal of adding a second Link station in the C-ID should be to enable easier access to the neighborhood for more visitors. If the placement of the second Link station displaces the very businesses that people would want to visit, then it would be counter to this goal. Most of the potential displacements are small businesses, and displacement could mean the permanent end of the business - they will not simply bounce back somewhere else in the neighborhood. Please consider implementing the 4th Avenue option rather than the 5th Avenue option in order to protect our historical community. Thank you.</p> <p>C-ID options in order of preference: 4th Ave Deep Station (CID-1b) - Most preferred 4th Ave Shallow Alternative (CID-1a) 5th Avenue Deep Station (CID-2b) 5th Avenue Shallow Alternative (CID-2a) - Least preferred</p>	Like Li
01/30/2022	<p>I live at 323 Queen Anne Ave N which is on the Downtown Segment route. I am in favor of the preferred alternative DT-1.</p>	Michael Browne
01/30/2022	<p>Suggestion regarding the Seattle Center stop. Buy the underground rights under part or all of the block between Mercer St, Queen Anne Ave N, W Republican St & 1st Ave N.</p> <p>This station should have exits at each corner of this block plus a tunnel under 1st Ave N so passengers can access Climate Pledge Arena without crossing the road. King county already owns the Inn @ Queen Anne (SE corner). The other major corner for now would be the former Pagliacci's pizza location (NW corner).</p>	Ben Pearson
01/31/2022	<p>What ever needs to be done to complete the Ballard extension make it happen! Will be an incredible contribution to the neighborhood.</p>	Scott Magers
01/31/2022	<p>DEL-6 seems to be the best long-term option because it has the least visual impact, least operational noise, and the low residential displacements far outweighs the business displacements. Why was this one not chosen as the/a preferred option?</p> <p>WSJ-5 is the best option because it has the least long-term impact of all the West Seattle Junction options. It impacts the fewest people (displacements) and has no visual impact to the neighborhood. Why was this one not chosen as the/a preferred option?</p>	Jeffrey Fate

01/31/2022	<p>These proposals seem to prioritize existing car traffic over the population using the transit options. While adding transit at all will help, if these stations are not in the right place, are inconvenient or add levels of friction to the people using them for the ease of cars, they're missing the point.</p>	Katrina Lehto
01/31/2022	<p>Sound Transit should adopt a formal first principle policy of having stations accessible to riders within three stories — and ideally fewer — of the ground surface. This would ensure that riders have quicker, more reliable access to stations and greatly reduce project costs. Yes, there may be extraordinary circumstances necessitating deeper stations like Beacon Hill's and those should be properly justified if and when they arise, but that should be the exception, not the rule as it seems to be with Sound Transit's design approach.</p> <p>https://www.theurbanist.org/2022/01/31/dear-sound-transit-prioritize-rider-experience-take-a-mulligan-on-west-seattle-and-ballard-link/</p>	Paul Son
01/31/2022	<p>The Downtown and International District-Chinatown stations are too deep. We need to encourage ridership and favor the long-term success of the system over the short-term construction impact of a cut-and-cover tunnel. Elevator-only access at the highest volume stations in the system makes little sense; even at low-volume stations, long waits and unpleasant cramped elevator rides can be enough of a deterrent to make potential transit riders choose alternative means of transport. To create a system that people actually want to use and that will actually improve our urban environment, we need to focus on the rider experience above all else. Prioritize ease of use and ease of transfers over construction impacts.</p>	Brennen Birch
01/31/2022	<p>First, I appreciate all the work and complexity that goes into planning and budgeting for an endeavor like this. Thank you for your work so far.</p> <p>As a frequent transit rider, I'm disappointed in ST for even considering station depths that would require more elevator-only service at stations like Midtown or ID/Chinatown. Have the maintenance issues/lines that limit capacity at Beacon Hill taught the planners nothing? An elevator-only station is a waste of money and time, and should be taken off the table as an option. I understand the desire for a deeper tunnel to reduce construction disruptions that could occur with a more surface-level, cut-and-cover type tunnel. But the elevator service already creates enough problems in a less central location like Beacon Hill. Having an elevator-only station at a place like Midtown or Seattle Center will make that station laughably useless during peak times. Anything--even disruptive, surface-level construction--would be better than a deep, expensive station that few riders are able to use, no matter the frequency of trains. Billions of dollars would be made useless. Please, no elevator-only stations.</p> <p>I know other aspects of this alignment are getting heavy criticism, especially from West Seattle residents who prefer a tunnel (without considering the extra \$700 million dollar cost). I actually like the shape of the elevated preferred alignments in Ballard and West Seattle. (Although I'm not sure why the Alaska Junction station needs to be configured to tear down a large group of relatively new apartments. Why can't the station be fully built over Fauntleroy in a similar style to the Northgate station?) I think elevated tracks are the best way to disrupt area homes as little as possible and save taxpayers money (compared to tunnels).</p> <p>But please, again, stop considering elevator-only stations as a viable option. They are not. If anything, I'd hoped you'd be spending money to find a way to build an escalator/stairway down to the Beacon Hill station!</p> <p>I'm excited to use--and walk into--these stations when they open.</p>	Caleb Tankersley

01/31/2022	<p>The second downtown tunnel station depths are way too deep. Stations that deep are going to deter riders from using the system by adding significant travel time/inconvenience. Please reconsider pursuing a cheaper design alternative using cut and cover construction methods though the ID, Downtown, and SLU along at least some of the alignment where feasible, or run all trains through the existing tunnel.</p> <p>An alternative with the reconstruction of the Ballard Bridge connecting to 14th, demolition of the existing bridge to 15th, and subsequent construction of a light rail crossing to 15th should be considered. This presents an opportunity to rethink the Ballard Bridge interchange at Emerson Street.</p> <p>Also, please take a firmer stance on preferred alignments/alternatives earlier on in the process. Having multiple "preferred" alternatives is counterproductive - you can't please everyone.</p> <p>This is a really disappointing proposal and I hope that there is some serious thought put into this before any final decisions are made. It's really difficult to say this project is even worthwhile as is, even though I'm really pulling for it to be successful. The West Seattle segment in particular feels like it's really hard to justify with the projected ridership and costs. High-quality BRT or a gondola system should be seriously considered for this segment instead.</p>	
01/31/2022	<p>No expensive fare collectors, gates. Since Merely 5 percent of operating expenses comes from fares, save money by making transportation free. No expensive fair enforcers, collection boxes, turn styles. You'll get more riders, fewer cars on the road, less pollution.</p> <p>2. Install bathrooms.</p>	Henryu noble
01/31/2022	<p>The proposal as stands is terrible. It does not prioritize the creation quality of transit, its integration with existing systems, or cost containment. The only rationale it seems to follow is avoiding impacting car infrastructure and political fights. This is a travesty.</p> <p>The stations are ridiculously deep, the choice of alignment in West Seattle is needlessly expensive, and the station locations/elevation in Ballard/South Lake Union terrible.</p> <p>I beg that the current proposal be reviewed with a focus on creating THE BEST transit system over all other considerations. The knowledge/research exists. Confer with the Transit Costs Project, consult with TransLink in Vancouver, look to the planning processes of Copenhagen and Stockholm or Paris and Madrid. It is inexcusable that after the region approved a bold vision for transit this is the needlessly expensive and complex plan is the product. It's just appalling and a testament to the lack of vision and spinelessness of the elected officials steering this dumpster fire of a plan.</p>	Trevor Reed

01/31/2022	<p>I am a west seattle resident and believe the only acceptable options are the options that include tunnels. I think this for three reasons: 1) tunnels will preserve west seattle neighborhoods and raised tracks would harm them, 2) west seattle residents will be much more likely to accept further expansion of light rail if it is a tunnel, and 3) in the long run, a tunnel will be more cost effective.</p> <p>I've lived in other communities with raised rail lines and they destroyed the neighborhood cohesion in those places. A raised track is like a highway in that way—it creates a schism wherever it goes. For example, the raised line near the dc/Maryland border creates a palpable schism between the neighborhoods or Takoma and Takoma Park. Compare this to places where the dc metro is below ground where metro stops are centers of the community.</p> <p>Further southward expansion towards White Center and Burien will be a priority for many. It's already easy to find mock-ups of such an expansion. Personally I think this is a great idea because it will bring rail access to many more people, including many more disadvantaged people. However, As west seattlites come to realize the negative effects of raised lines on their neighborhoods, and to preserve their own homes, they will likely fight to prevent any further expansion. If the track is already underground, the expansion will be an easy sell.</p> <p>Considering future expansion, a tunnel is much more cost effective (relative to current projections) if not cheaper than a raised line. The first reason is that a raised line will require much more residential displacement and housing prices in west seattle are climbing very quickly. The other consideration is that, as argued above, west seattlites may simply not allow further expansion of a raised line. Expansion would thus require the enormous costs of transitioning the raised line to a tunnel. To save this transition cost, it would be better to plan well now and simply start with a tunnel.</p>	Dustin Beckett
01/31/2022	<p>I'm a semi-frequent light rail rider, Seattle resident, and light rail supporter. Right now the train is fantastic. I much prefer it to driving. At this point I think of the various Seattle neighborhoods as "near light rail" or "not near light rail." I think Sound Transit needs to build on this success and make user friendly, regular stations.</p> <p>I'm concerned that the station design direction that Sound Transit is currently on is putting stations in places that people won't use them - the intersections are great, but why are we looking at stations 85 feet in the air, or 180 feet underground? Those travel times are going to make those stations much less convenient to get to/from the neighborhoods they serve, and the whole reason I like the train now is that it is a convenient (and green-friendly) alternative to driving.</p> <p>A good light rail system now is going to pay dividends for decades. It's worth the investment but let's get it right rather than spend \$40+ billion for a 2nd rate system.</p>	Zach McKinney
01/31/2022	<p>Please don't dig so deep. Elevator only access stations would depress ridership significantly, furthermore the transit time from station entrance to track is unacceptably high for the deep stations.</p>	Adam de Gala
01/31/2022	<p>Hi. I am a homeowner in northwest queen anne. Regarding page 38, section "Comparison of Interbay/Ballard Segment Alternatives" - it seems to me that the tunneled alternatives (IBB-2a and IBB-2b) are vastly preferable to the elevated bridge alternatives. The tunnels will displace far fewer residents, businesses and employees, and are listed at similar overall cost in Table ES-8. Tunneled options will also help to mitigate the prolonged construction noise and traffic disruptions associated with the building portion of the project, as well as long term noise and visual impact of the project's result.</p>	Ezekiel Maloney

01/31/2022	<p>As a West Seattle resident, I have a few comments about the ST3 EIS.</p> <p>When we voted yes on ST3 we understood the proposed route to be a work-in-progress. It's frustrating to see that ST insists on building three stations so close together. Not only does this increase costs, it also slows down transit times and increases neighborhood disruption. The Avalon and Junction stations in particular could be as close together as three city blocks! No other part of the system as such closely spaced stations. Please consider removing the Avalon station. What is the point of having stations within a five minute walk of each other? Even downtown stations are further apart.</p> <p>2) The price differential for tunneling for the Junction station is a tiny fraction of overall cost. We see many other parts of the system have massively deep tunnels or other huge cost differentials, where the impact of an elevated system through the heart of our Junction would be huge. The 'visual impact' numbers in the EIS are disingenuous at best - claiming tiny numbers like 0.1 when in fact it will be an incredibly impactful visual change to have elevated transit through the core of our neighborhood. Views of mountain tops would be replaced with concrete. The entire system would then be aligned to expand south along the ridge of 42nd destroying hundreds of homes with beautiful views. Whoever came up with these visual impact ratings is playing games with us. Would we really rather tear down hundreds of just completed apartment buildings than spend a few percentage points more to maintain our new higher density developments? The cost of destroying these new buildings runs into the hundreds of millions.</p> <p>3) At least consider the Gondola proposition as a supplementary system. It could provide a quick, low-impact and tourist friendly solution, perhaps temporarily, or perhaps as a complement. Ridership capacity can be quite high on a modern system. And it requires a lot less property acquisition or capital costs.</p>	Nathan Murdock
01/31/2022	<p>The depths of the stations in the second downtown tunnel and the heights of the stations along the elevated portions of the Ballard and West Seattle extensions will render this project far less convenient for riders than it should be, forever.</p> <p>For the sake of this system's success and usefulness, please do not opt for these station alignments.</p>	Reese McMichael
01/31/2022	<p>For the Ballard/Interbay link segment, I believe the tunnel option is best.</p> <p>The tunnel project dollar outlay may be slightly more than the elevated options, but the displacements to business, housing, residents and employees is much less than the ancillary costs of the elevated plans.</p> <p>Only negative comment is on proposed number of downtown station/stops between Seattle Center and Intl District. In my time living and traveling in Europe, downtown metro stops are not spaced so close together. Close spacing of downtown stops is contrary to efficient mass transit. There should be more than 1 mile between stops, at least 2 miles, to minimize pax frustration and wasteful energy expended on the transit system. For instance, take out two of the planned stops between Seattle Center and Intl District to maximize efficiency. Two less core stops would reduce recurring carbon emissions (waste energy), the overall project cost, and taxpayer burden.</p> <p>And, are two stops really necessary, for the Stadium and SODO? Wouldn't one be sufficient? Americans are mobility spoiled. We can and need to walk. Stops spaced within one or two miles of each other are impractical and wasteful. Particularly with existing available surface transit.</p>	RJ

01/31/2022	<p>I believe that Sound Transit needs to go back to the drawing board on most of these station concepts. They don't prioritize rider experience, and are vastly overengineered. The stations are placed to placate business interests and preserve car access over maximizing ridership.</p> <p>In particular, none of the West Seattle and Downtown/CID alternatives are appropriate. In West Seattle, rather than running over surface streets like many elevated rail systems, the proposed routes run through blocks, demolishing hundreds of new apartment units. In the Downtown/CID areas, the stations are far too deep. Additionally, with Sound Transit's poor record of maintaining vertical conveyances, a deep elevator-only station in the highest ridership area of the system is unacceptable and not justified in the DEIS.</p>	Gilton Quick
01/31/2022	<p>Being more familiar with the area in Ballard. I believe the preferred alternatives (pink) works well because it's surfaced along a rail line, not needing to interfere with bus and car lines. Having the tunnel route is a must. A couple of reasons. The light rail is not any better than a bus if it has to wait for the drawbridge to go up and down. A new bridge high enough to not have to be a drawbridge destroys the horizon of our neighborhood. There will always be cars on the road and more, regardless of the availability of a light rail, why take more lanes from cars? Most importantly, if the light rail does not have a tunnel route crossing the canal, there's no option ever in the future to expand north, or even east. Unless Sound Transit wants to tear down a high school and reduce much needed lanes on the road, a tunnel route is the only option. I know it will cost more and require third party funding, but it's worth it. If our city is going to do something, do it right the first time.</p>	Emily Guist
01/31/2022	<p>Alternative WSJ-2 has two stations very close together (Alaska Junction and Avalon). Please consider removing the Avalon station from the plan since they will largely serve the same area.</p> <p>Also, the alignment of the station at Alaska Junction in WSJ-2 requires the demolition of a brand new apartment building. Please consider changing the alignment of the station to avoid demolishing the new building.</p> <p>I believe these two changes would cut hundreds of millions from the cost of the West Seattle line.</p> <p>Thanks!</p>	Steve Ross
01/31/2022	<p>Please reconsider the deep stations downtown. They are expensive and requiring riders to take elevators to some of the busiest stations is very inefficient. Cut and cover tunnels would be preferable even if they cause temporary disruption.</p> <p>Thanks!</p>	Steve Ross

01/31/2022	<p>As a Ballard resident with a young child, on the one hand, light rail cannot be built fast enough. On the other hand, we have just one opportunity to do it right. I have three primary concerns about the Draft EIS.</p> <p>Station accessibility is not properly prioritized. Sound Transit has a poor record of maintaining escalators and elevators system-wide. While separating stations and tracks from ground level is prudent, it is imperative to keep stations within a few stories (50 ft) of ground level. If it takes 5 minutes to descend to a deep station in the best case scenario, people will choose to drive instead.</p> <p>2. Station design inappropriately defers to existing car infrastructure. People need to be able to get to light rail stations safely and conveniently, and stations therefore belong at the heart of neighborhoods. Instead, nearly all the proposed stations go out of their way to avoid rerouting roads or removing car lanes. This ought to be an Environmental Impact Statement, not a "roads and parking impact minimization exercise." Most alignments of the Interbay station are particularly problematic in this way. It is not pleasant to walk, roll, or bike to an urban highway like 15th just to be able to access transit.</p> <p>3. Connecting Ballard to the rest of Seattle must be approached holistically. A tunnel is infeasible given the cost and the SPU Ship Canal Water Quality Project (an 85 ft deep stormwater pipe). However, the Draft EIS does not discuss opportunities for coordination with a new Ballard Bridge. This is a huge missed opportunity. While the Draft EIS does a fine job outlining the necessary disruptions that come with any bridge construction project, and I understand Sound Transit cannot readily share a bridge with SDOT, the Draft EIS fails to propose a single period of disruption resulting in two new bridges that are connected and coordinated in sensible ways. Presumably one bridge would be for light rail, and one would be for nearly everything else (cars, freight, pedestrians, cyclists). I do not much care if the Ballard station is located near 15th or 14th. I do care about minimizing the overall environmental impact as we build the bridges Ballard desperately needs in the next 10 years.</p>	Meredith Rawls
01/31/2022	<p>I read an article in The Urbanist, and it's spot-on. I regularly ride the Light Rail and it would be such a waste to use our one chance to deeply bury the light rail and end up with a 2nd rate system.</p> <p>If we disrupt roads for a few months it is 100% worth it for the decades (or centuries) we'll have this system. We need this to be worthwhile. It is insanity to spend so much money on a system buried so deep underground that adds significantly to commute times.</p> <p>Thank you, Harry</p>	harry maher
01/31/2022	<p>Hi,</p> <p>As a Ballard resident I am excited by the prospect of the Light Rail expansion to my neighborhood. However, looking at the expansion map options it seems like the route to Ballard could be achieved easier by expanding the Sounder Train service between Ballard and King Street Station. The proposed Link route has stops in Interbay, Smith Cove, and Seattle Center, all of which are on the already existing railroad tracks. Additional platforms would have to be constructed, with appropriate access and parking.</p> <p>I understand the railroad tracks are owned by BNSF, and an agreement would have to be met to run the Sounder train in both directions on a regular basis. However, the cost of the additional route lease and needed infrastructure seems like an order of magnitude less than the proposed Link route.</p> <p>Additionally, the route could likely be opened sooner, and with a lower environmental impact. I am happy to answer any questions on this suggestion or help with further planning.</p>	Stefan Hunkler

01/31/2022	<p>The deep stations in downtown Seattle are a disaster and should be avoided at all costs. The goal of a transit system must be to maximize the utility for future riders, a system with elevator-only stations and long walks to transfer from station-to-station or from surface-to-station suggests a failure of creativity and engineering. There must be a better way.</p> <p>Cut-and-cover, shallow tunnels, and elevated lines should be preferred, and maximizing station walkshed is critical. No station should be more than 3 stories below ground, we've already made mistakes with the deep UW station and other points along the existing line, we should not repeat those mistakes with this new line.</p> <p>Ballard: The elevated 15th station is ideal, and will be most cost effective. Interbay: The 15th station is again, ideal, but is too tall. Reducing the height and removing some of the car infrastructure that Link is replacing will substantially improve the station. Smith Cove: the preferred alternative is better Seattle Center: the preferred alternative is better SLU: the mercer street alternative, which has the potential to improve pedestrian and bike connections across Mercer, has better walkshed, and is less deep is far better than throwing the station under the 99 tunnel in the middle of a massive road intersection. Denny: the preferred westlake alternative makes sense Westlake: It is so critical that the transfer between stations work well, and unfortunately putting this station so deep is going to make transfer slow and tedious. It would be far better to find a creative engineering solution that would allow the tunnel to be higher and closer to the existing tunnel Midtown: there appears to be no choice but to put this station unbelievably deep underground. Any change that brings it closer to the surface would be a huge improvement. Chinatown/ID: The 5th avenue shallow tunnel is by far superior to the other options from a rider perspective. It would be a shame to add hundreds of thousands of hours of extra travel up and down escalators and elevators for future riders in exchange for a few years less construction impacts. Find a way to provide businesses with supplemental income so they can survive the transition... SoDo: By far the best designed station in the list, fortunately some of the past stations were designed with easy expansion in mind. Delridge/Avalon/Junction: there is no reason to destroy new apartment buildings to put the light rail in! Put the light rail in the street right of way and take advantage of this opportunity to improve the pedestrian and biking experience as the street is rebuilt. The tunnel options are all fine, but unlikely to pay off as quickly as the elevated lines.</p>	Daniel Birman
02/01/2022	Please put the route down 15th Ave NW. My employer is on 14th NW and is one of the buildings that will go away with this expansion. There are very few areas in Ballard that have the space our company needs for its operations. This would force us to leave an area we have been in since 1957.	Shana Jackson
02/01/2022	I am very concerned on how deep these stations might be. Making it long and difficult to access stations seems like a disaster in the making. We need to whatever is possible to make the ridership experience as pleasant and convenient as possible.	Robbie Cunningham Adams

02/01/2022	<p>West Seattle Junction Segment - Preferred Elevated 41st/42nd Avenue Station Alternative (WSJ-1) is the wrong choice for our community. The density of our community, and the geography, combined with the fact that West Seattle is overwhelmingly residential, means running elevated light rail would negatively impact our community by:</p> <ul style="list-style-type: none"> · removing many existing households in the Junction area alone in the middle of a housing crisis, · taking blocks of future develop-able, transit-oriented affordable housing off the table, reducing/depressing home values anywhere near the elevated light rail, · reducing property taxes along the immediate route of light rail (due to reduced home values), · increasing noise near residences, · creating a permanent scar and barrier across a classic Seattle community, one that is vibrant and an evolving tapestry of both multi- and single-family residential. · Any future extension to the light rail system in our region will lead to further costly devastation. Hundreds or thousands of houses along 41th, 42nd Ave SW will have to be demolished in any elevated future extensions. 	amir sadrpour
02/01/2022	<p>DON'T DO IT. PERIOD. Further, this light rail is a seismic, pandemic, and terrorists dream. Sound Transit and KING County are NUTS for pushing this 19th century illogical travesty.</p> <p>It is an irresponsible financial and TAX burden, that NEVER will be self supporting, and always require subsidy it will further induce demand that will ultimately DESTROY the environment, Sound, forests, and fertile farmland in the entire region, and It will NOT SOLVE THE REGION'S TRANSPORTATION ISSUES one iota. It just wastes right-of-way needed for future vehicles, roads, and potential high capacity routes for vastly better and more efficient transportation solutions.</p>	Thomas Imrich
02/01/2022	<p>Please consider the transit user experience with your deep station proposals. Waiting in line for a required elevator ride to the platform does not sound scalable. Also, I hope that the future transit experience for decades will be weighed more heavily than short-term disruptions. For example, why not a cut and cover tunnel under 5th Ave downtown. Cars should be lowest priority after transit, pedestrians, bikes, and freight on multimodal corridors.</p> <p>Also, please consider easy connections between the Midtown station and First Hill where there is a very high density of residents and business including the hospitals. Without obvious wayfinding signs, frequent bus/trolley service, weather shelter, etc. the Midtown station will be much less useful to this dense neighborhood.</p> <p>I support elevated options in West Seattle and Ballard. These will make more accessible stations closer to the street level and cost savings that can be used in other parts of the project or expand the scope of Sound Transit 4.</p>	Trygve Bakken
02/01/2022	<p>Noise: Please make tracks and cars as quiet as possible. Not just quiet as budget allows, please make quiet as engineering can. The short run through the Delridge/Youngstown neighborhood is only a mile or less so the extra cost should be reasonable. This neighborhood is a good place to live and once you get off the main street is very quiet. Please be a good neighbor. I have rental property at 2616 SW Dakota St. No matter how you build it the tracks will only be a block away or closer.</p> <p>Thank you Robert Cozens</p>	Robert Cozens

02/01/2022	Please file my email with the many other unheeded complaints against the expanding western WA light rail system. I'm astounded that sound transit light rail revenue is down by half for the year even though ridership is up as reported on the TV news. It is almost beyond belief that our government entrusted design experts can spend billions of \$ on new systems & expansion but can't even figure out how to keep about half of all riders from NOT paying their fares!!! Personally, I'm not surprised when our reps are feeding freely at the taxpayer's trough but they're as incompetent as hell. Before you waste more tax \$, just design/install fare collecting machines on every train/bus to keep the deadbeat freeloaders off of 'em. Or just shut it down & make 'em walk instead --- too simple for simpletons?!	
02/01/2022	This plan, and what has already been built and building, is the best thing to happen to Seattle since the trolley system was done away with. It can't come fast enough!	James Touza
02/01/2022	Thank you for the opportunity to comment. I urge you to prioritize stations that are accessible to riders within three stories — and ideally fewer — of the ground surface. This would ensure that riders have quicker, more reliable access to stations and greatly reduce project costs. By placing stations hundreds of feet underground, you're forcing riders to rely on overcrowded elevators that will delay trips and make transit use less appealing. I urge you to avoid "elevator-only access configurations" and place stations closer to the surface.	Collin Jergens
02/01/2022	I am submitting a general comment in favor of any of the tunnel options. Elevated lines and stations will decimate the character and sightlines of West Seattle and serve to divide the community. Thank you for your consideration.	Travis Vermeer
02/01/2022	I am once again writing for what feels like the 1,000th time to plead for you not to take our home and the homes of our neighbors. The "Preferred Dakota St Station" would wipe out our little community, displacing us and likely forcing us out of the city and neighborhood that we love. Our block here is diverse, vibrant and some of the last "affordable" housing in the city. We were lucky enough to achieve the goal of home ownership in Seattle for our little family (we have 3-year-old twins) and we love where we live. If you are truly looking to serve this community, you will look elsewhere for a station location, preferably north of us on Andover when you would not be displacing residents. Our community is constantly neglected, we have dealt with the outage of the West Seattle Bridge for too long and have had this hanging over our head for years. Please do the right thing and find a solution that does not displace us.	Taylor Huerta
02/01/2022	After suffering two years of detours due to the closure of the West Seattle Bridge, we are hopeful that things will move quickly to add us to the rail network. This part of town is growing upward, increasing density, and before the bridge shutdown it was often becoming congested during rush hours.	Cindy Hoyt
02/01/2022	Commenting on the Ballard portion: Based on the metrics the virtual town hall presents, the tunnel option to 14th costs the least and has the fewest impacts among all the options (displacements in all categories, water, etc.). So why is this not the preferred option? If there is a reason, please articulate this better in the materials since this choice would seem obvious at the high level that has been presented.	David Canfield-Budde

02/01/2022	<p>Hi,</p> <p>I prefer the route options with more underground rail (elevated rail lines hurt the neighborhood, block light, and make noise).</p> <p>I would also prefer building the lines sooner/faster. Why wait until 2037? We need more transit in Seattle now!</p> <p>Also, if still possible, I would also prefer a route that went farther south and closer to Belltown, as proposed by this article: https://www.theurbanist.org/2015/12/14/light-rail-for-belltown-a-possible-solution/.</p> <p>If not, is there a plan for a Belltown station on a future route, such as the one shown in this plan: https://www.theurbanist.org/2021/06/03/seattle-subway-2021-map/</p> <p>Sound Transit should focus on effectively covering in-town urban areas that are already densely populated and suited to transit, like Belltown, Queen Anne, Fremont, First Hill, Squire Park, and Madison Valley, with rapid (non-streetcar), frequent (<5-minute headways) heavy, underground rail before building these lengthy commuter-rail-type expansions to far away places that are unlikely to generate many riders (Everett, Kenmore, Renton, etc.). Because virtual work will continue, suburban/commuting-focused stations will be very expensive and slow and have low ridership.</p> <p>Thanks.</p> <p>Best,</p> <p>Jared Cowan</p>	Jared Cowan
02/01/2022	<p>I have issues with the Ballard proposal. You already have a connection to Seattle on the main route from Northgate to downtown. If the light rail connected Ballard to the University Station, there would be no need for an additional water crossing. It would feed students to the university, also expanding their housing opportunities. The route would be shorter, and therefore, potentially less expensive. Riders in the Ballard area would not need to travel all the way to downtown in order to go north again. As we open up travel to Shoreline, Lynnwood and Everett, this route would save a great deal of commuting time and allow northern workers equal access to ridership. A shorter commute for them is less cars on the highway.</p>	Robert Schumer
02/01/2022	<p>I would like to voice my support for either of the tunnel options under Salmon Bay for the Ballard Extension. I feel strongly that we not have waterway traffic compete with light rail traffic. I also think we should replace the Ballard Bridge with a tunnel, but I know this is not part of this discussion!</p>	David Saulnier
02/01/2022	<p>I support the WSBLE Full Build, SODO-1a, DUW-1a, DEL-1a OR DEL-2a if funding can be sourced, WSJ-3a if funding can be sourced, DT-1, SIB-1, IBB-2a.</p> <p>Overall, I think this project should be should be allowed as the environmental impacts of construction will be less in the long-term than if the areas it serves continued to develop with mainly car and bus commuting.</p>	Grant Shogren
02/01/2022	<p>Comment Topic: West Seattle Link Extension</p> <p>The Duwamish Segment of the West Seattle Link Extension does not include any stations. This means workers on Harbor Island will not be able to use the light rail line to commute to their job site. Harbor Island is also not serviced by busses or other transit. Busses are routed on the upper West Seattle Bridge with no rider access near Harbor Island. Harbor Island workers/commuters will have, effectively, zero transit options and will be forced to continue driving cars to work. Hundreds of workers commute to and from Harbor Island daily. Geography and water access dictate that jobs on Harbor Island cannot be moved and will likely be a part of the economy for decades to come. Light rail is supposed to be a long-term investment in sustainable mobility. A West Seattle Link Extension corridor without access to Harbor Island is a long-term deficiency. Thank you.</p>	Joseph Laubach

02/01/2022	Both Ballard and West Seattle should be put on hold until the lines from Everett, Tacoma, and Remind to Downtown Seattle are completed. Those lines are the backbone of mass transit here. The Ballard and West Seattle lines are subsidiary and should be dealt with later to the extent funds are available.	A Quigley
02/01/2022	<p>Noise. Should the decibel levels be above the acceptable levels, what noise barriers will you be using for every section of the route? I only ask in that there have been unacceptable noise levels along the I-90 for which neither Sound Transit nor WSDOT will do anything about. And what happens if you say you will mitigate the noise, but then not mitigate? Are people to sue Sound Transit/Federal Highway?</p> <p>With regard to how many businesses will be displaced, in this environment, any business closing down is a loss.</p> <p>Where can one find the comparisons in time it would take if someone went via Rapid Bus/regular bus/regular bus and transfer to light rail/light rail only, SOV, and HOV? I suppose a forecasted Capacity Report for that route and how much time would be saved. And the carbon emissions each mode would produce (eg, a comparison between someone driving their electric vehicle versus the light rail.</p> <p>And where can one find the operational costs for light rail versus regular bus versus light rail once this proposed light rail is constructed? I only ask in that when it came to Northgate, they did not realize how much it would cost to run light rail and as a result, had not budgeted for it. And the same with East Link, Sound Transit did not realize it would cost so much to run light rail and they had not budgeted for light rail and that is why they have to have buses terminating at Mercer Island rather than continue on to Seattle. And how many new passengers will they be adding who would not ordinarily take the bus or drive in their own car?</p> <p>And out of the businesses and people who will be displaced, how many of the businesses and people are "of color" and "low income"? I only ask in that it would not look good if those businesses and people being displaced are "of color" and/or "low income." What happens if the people and businesses are "of color" and/or "low income? Will you then cancel the project?</p> <p>I hope this will go to the voters to vote on. I am not in favor of it at all.</p>	Sarah Fletcher
02/01/2022	The end of the West Seattle line is better closer to 41st or 42 rather than Fauntleroy. As much tunneling as can be done is preferred in the West Seattle residential areas.	Dan Sluss
02/02/2022	<p>Given the inconvenience and cost of the stations can we go back in time to a prior strategy? It would be interesting to perform and compare cost analysis with what we've learned from ST3.</p> <p>"The monorail project initially attracted two bids led by Hitachi and Bombardier, but both pulled out in April 2004 over cost concerns and the availability of local contractors.[219] The project was stymied by tax revenue that was lower than expected and design changes to keep construction costs within the proposed budget and open by 2009—a two-year delay from the original plan"</p> <p>https://en.wikipedia.org/wiki/Seattle_Center_Monorail#ETC_and_Seattle_Monorail_Pro</p>	Larry Scheib
02/02/2022	<p>Please start building it now! This is taking way too long and costing too much just for planning.</p> <p>Also, is a second tunnel needed for downtown? It seems to be very expensive and doesn't seem to add much to the existing system already.</p>	Robert DeMacon
02/02/2022	For the Ballard extension, I prefer the Tunnel options IBB-2a or IBB-2b. Surface rail impacts traffic and pedestrian flow. Elevated solutions are unsightly in dense urban environments. Ballard will continue to grow (on the surface and up). Let's not get in the way of that.	Joseph Osowski

02/02/2022	<p>The Interbay to Ballard "Preferred alternative" puts two key stations in inconvenient and low-utilization locations and is the worst of the 4 alternatives.</p> <p>17th Ave W location is in a difficult to access location and will be the lowest used site on the entire system given the current land usage with BNSF Rail yard blocking free access to the site.</p> <p>Tunnel alternatives under Salmon Bay are greatly advantaged compared with an elevated alternative. BUILD THE TUNNEL.</p> <p>What is most frustrating is that you present no alternative which will be of greatest success to both the system and to Interbay/Magnolia.</p>	Brian Rulifson
02/02/2022	<p>The downtown preferred alternative seems to be wisest for passenger usage, due to easy access to Climate Pledge Arena. The preferred alternative for Ballard/Interbay seems like a good choice as well.</p> <p>It is imperative that all underground stations have a usable stairway. Elevator only access is NOT okay, especially in a quake prone area.</p>	Chris Cady
02/02/2022	<p>I am a resident of Magnolia near the interbay border with an association to the maritime industry. The tunnel options are the only acceptable options for this. I believe a LID should be proposed to fund the difference between the over water options and the tunnel. The depth of the uptown and Interbay stations is too low. No one wants to ride for 6 minutes on an escalator. The escalators never work either. These need to be higher so that stairs are an option. When you can only compare your stations to the most extreme in the world, it's not reasonable. Please fix this.</p>	Kenneth Burgess
02/02/2022	<p>YES! I am in full support of this line, it is much needed and will hopefully cut down on pollution.</p>	Nicole Barquist
02/02/2022	<p>please make this. please never stop making these. thank u</p>	Andrew Swanner
02/02/2022	<p>politics is not a solution for safe operations.</p>	ikroop nayyar
02/02/2022	<p>The environmental impacts of people using light rail far outweigh any other impact - I suppose I'll look forward to using this in 50 years with all the time wasted to plan and get feedback</p>	Virginia Weir
02/02/2022	<p>With rising costs and the much larger impacts to the maritime industry the only logical alternatives are the tunnel options. I prefer the 15th alignment better as it would allow easier expansion in the future.</p>	Derek Herman
02/02/2022	<p>Hello,</p> <p>I am a resident in Ballard who commutes downtown, and am keenly interested in the Ballard Link Extension.</p> <p>Between the presented alternatives, it is clear that both tunnel options (either on 14th Ave NW or 15th Ave NW) are immensely superior to all of the bridge alternatives. They are among the lowest cost, have by far the smallest environmental and construction impacts, and the light rail wouldn't be affected by movable bridge delays. In my opinion, the 14th Ave NW tunnel is the best overall option as it has the lowest cost and fewer construction impacts vs. the 15th Ave NW tunnel option.</p> <p>Please choose one of the tunnel alternatives for the Ballard Link Extension. Thank you for your consideration, -Alex Wipf</p>	Alex Wipf

02/02/2022	<p>yes, it is pretty hard to find the comment section. But here I am. please consider moving the "station" to the sand and gravel business off of 15th on the wet side of 15th- before market street.</p> <p>YOU CAN move the bus terminals there as well, will connections to the market street bus stop. This will allow you to use an open area that does not need to have businesses torn down.! We don't need more garbage in the land fills.</p> <p>So you can take the land as a government, and the business can move out of the city where there is more space.</p> <p>thank you for considering this option. There is not room to have a huge station at 15th and market.</p> <p>anne brink</p>	Anne Brink
02/02/2022	<p>I don't understand how this is a debate AT ALL. The OBVIOUS choice is the second "Alternative" route - or the WS short tunnel 41 Ave Adover st station lower height and the scores PROVE it.</p> <p>WS short tunnel 41 Ave Adover st station has the LOWEST Residential impact and is on par with business displacement. It doesn't impact any of the parks, and it is the second least expensive.</p> <p>As a North Delridge resident for 5 years I have been VERY closely following this project because routes were released a few months after buying the house. I KNOW this neighborhood and here are some points that you should consider:</p> <p>The business in Delridge like ounces and Skylark want the station close to them. It will bring a TON of business.</p> <p>The businesses in the business park are few and far between. They will find other spaces, or may stay/come back because having the station there will GREATLY IMPROVE their businesses.</p> <p>The station is closer to the social service affordable housing units which the residents really want because it will make it easier for them to commute because they don't have cars.</p> <p>There is NO park impact. The Parks are the heart of Delridge and SO important to the community. We want to keep them safe.</p> <p>This is closer to more Bus Routes from every direction both rapid rides from the junction and south delridge and white center so you will actually better impact both communities .</p> <p>This wont impact traffic on Genesee street which already has HISTORICALLY BAD TRAFFIC and is one of ONLY 2 artery streets into the junction it is also the preferred one for most cars.</p> <p>Not impacting the traffic on Genesee st is important because when it is closed you are effectively cutting north Delridge off from all of our resources (grocery, restaurants, other essential business) and Delridge vs junction tensions already run high.</p> <p>This is fair to the Delridge community which is already underserved by the THIS IS THE ROUTE EVERYONE IN DELRIDGE WANTED AND THAT UPPER WEST SEATTLE WANTED. We have been suggesting this route for 4+ years. You would be improving BOTH neighborhoods for the better.</p> <p>Please make a smart choice. It is so easy at this point. The correct choice is WS short tunnel 41 Ave Andover st station lower height.</p>	Giuliana Plut
02/02/2022	<p>Hello, I am commenting on the Interbay/Ballard Segment Section of the Draft. Specifically, I am opposed to including a moveable bridge in any part of our link light rail systems. Planning for unnecessary traffic mixing is planning for delays for your ridership, and therefore not prioritizing said ridership. Public transit users currently experience delays and traffic backup at the drawbridges in Fremont and Ballard, the same will happen if another drawbridge is made here. The two Preferred Tunnel Alternatives (IBB-2a and IBB-2b) are the better options for that reason.</p>	Kylie Stelly

02/02/2022	<p>We support the preferred alternative (shown in red in the pamphlet) and strongly oppose the alternatives shown in blue. Our support is based on the assumption that noise levels will not increase. The pamphlet should clearly indicate the streets. It is borderline disingenuous not to do that.</p> <p>Thank you.</p>	Gerardo Castaneda
02/02/2022	<p>Hello,</p> <p>The preferred route puts the Denny station too close to the next station north. Putting a little more distance between them will result in more area being with walking distance of a stop. The alternate route does a better job in this section.</p> <p>Thank you. David Moore</p>	David Moore
02/02/2022	<p>On Page ES-30, I believe the proposed Downtown segment (DT-1) would be the most useful for Seattle residents and tourists. The station placements make the new line valuable because they offer different locations than the existing light rail line, and the station near Seattle Center serves both Seattle Center and the Climate Pledge Arena. The alternative, DT-2, is too far north of the Seattle Center to be useful for people. DT-1 would bring more people into Seattle by being closer to Seattle Center and the arena, as well as key businesses in South Lake Union and Pike/Pine.</p>	Madeleine Haworth
02/03/2022	<p>I have comments on the West Seattle and downtown portions of the line. For West Seattle, the Del-6 to WSJ-5 connection is a very well thought out option and to me is easily the best one. The Delridge station may be a bit far north, but most users will just take the Rapid Ride H for another minute or so and be there. The option destroys the fewest homes of all of them, and a small TOD area could still be done by the station. I love how it avoids the gigantic concrete bridge over Genessee, dodges the hundreds of residents along Avalon Way, and utilizes some of what appears to be WS Bridge ROW. The retained cut station at Avalon should be equally or more accessible than the elevated options there and much more quiet and aesthetically pleasing. Sacrificing what looks to be a Pep Boys tire shop for the portal of a tunnel that would put a station right between California and Fauntleroy on Alaska is a strong tradeoff, and orienting the line so that it could run south as a (hopefully cut and cover) tunnel in the future is forward thinking. Maybe the most surprising thing of all though is that this is a medium cost option and is closer to the low end than the priciest version. This option is an incredible value play that makes the oft-spoken desire of West Seattleites for a tunnel possible without finding \$700mm under the couch and without hurting many people to get it. Build this set of options.</p> <p>On downtown, both routes look super useful as far as what they get you close to and how many people they serve, but any option for a station that is only accessed by elevators must be thrown out immediately. That is a horrible idea, and I'm honestly confused how it made it into this document. You would be effectively crippling the capacity of one of the system's busiest stations. This setup leads to long wait times at the much lower density Beacon Hill Station, and one or several of the elevators will end up out of service most or all the time as the years go by. It also looks like a finely wrapped invitation to experiencing enormous cost overruns. If Sound Transit ever gets hit with austerity and has to defer maintenance through lean times, then it's possible the entire station could get knocked out of service in future decades. If the line is too deep to get escalators down there, then build the line somewhere else. Ok end of rant. Thanks for ST's efforts on this, and I hope we end up with a great rail line.</p>	Tyler Coyle
01/28/2022	<p>public transit: I am still waiting for the monorail you were going to build back in 1999, from Ballard to somewhere else..I spend my retirement years trying to navigate around thos articulated mostly empty buses..</p>	William Penland

01/30/2022	<p>Should not go to Alaska Junction. It will be a horrible ugly mess through Youngstown. The most growth in West Seattle over the next 20 years will come along Delridge way. Extend the line down Delridge Way to SW Roxbury ST and 17 Ave SW. Build a station with parking garage at the autoparts store at SW Roxbury ST and 17 Ave SW. This will be the most used path and provide for the most parking along the route. This will give the opportunity to allow for surface installed tracks. Lower/smaller stations and will save money. No tunnels, no high-rise stations, no columns. Stations located: Youngstown near Spokane Street. Between Hillcrest and Highland park SW Roxbury ST and 17 Ave SW Another optional one somewhere along the route.</p>	Dan Betts
01/29/2022	<p>Dear Sir/Madam:</p> <p>I find the UW Stadium to be abhorrent at 95 ft and costing 100s of millions of dollars. So now what is ST doing, trying to out do themselves with 100+ foot and costlier stations — sheer insanity. Please don't make Seattle the laughing stock of the transit world.</p> <p>It seems to me the only reason ST is adding some of these stations is to make a Ballard station palatable. I say give Ballard their damn station and proceed their line to South Lake Union but then follow it by the elimination of the next 3 stations and then pop up with a shallow station at ID.</p> <p>Streetcar is planned for SLU to ID, just reconfigure it, if need be, for a fraction of the cost. This would leave us with much easier transfers.</p> <p>Larry Scheib larryscheib@yahoo.com</p>	Larry Scheib
02/01/2022	<p>Hello: After reading this article,I felt compelled to communicate support for the course that is being taken in West Seattle. The author of this article clearly has ulterior motives given he doesn't provide any factual evidence of his assumption surrounding ridership based on the current plan. Additionally, he doesn't even live in Seattle, let alone West Seattle. We clearly need better mass transit to WSea and "going back to the drawing board" would delay our growing community to the point where we're penalizing people for remaining in the area. Thanks.</p> <p>Myke Smith High Point resident</p>	Myke Smith
02/01/2022	<p>Upon reviewing the Light Rail extension plans to West Seattle, I feel it is imperative to consider other options, such as the Skylink Urban Gondola proposal which would be cheaper, faster, cleaner and much less disruptive to our community. I would like to see a feasibility study done on the Skylink proposal.</p> <p>Regards, Shelby Skiena West Seattle resident (98116)</p>	Shelby Skiena

01/28/2022	<p>Hello, my name is Karl. I live in the 5600 block,26th Avenue South West in the Delridge Valley. I'm really really disappointed in this plan that the rail system will not come down Dell Ridge, you know, we're a low income, racially diverse neighborhood. We're not all white. We're not all affluence. And as I like to say, we are the view and I just find it mildly racist and mildly classes that there is no discussion of a main thoroughfare such as Delridge, having any light rail system on it. There is space to have an elevated system, so I don't want to hear the excuse there's no space.And I don't want to hear the excuse that it cost too much. There's already billions, and billions, and billions of dollars being spent. And leaving out a low income, racially diverse, ethnically diverse neighborhood in my mind is unconscionable. So, there you go. That's my opinion. Good luck. Of course, you're never going to make everyone happy, but that's not the goal. But when you start to leave out neighborhoods, that could really benefit from this. Instead of the whiter, more affluent view properties up on the top of Seattle. Well, I take Umbrage. Thank you very much.</p>	Karl Derrick
01/29/2022	<p>Good morning,</p> <p>I wanted to provide a little feedback regarding the Light Rail extension mailer I received. I don't feel ending the light rail in the Alaska junction makes much sense at all. The junction is already incredibly developed with little parking. Why not reroute the light rail toward Westwood Village? There is ample parking so West Seattle and Burien commuters could utilize it as a park and ride. There is also tons for room for business development in that area and the light rail could attract a number of ventures. I for one can say o likely wouldn't use the light rail if it meant driving to the junction then struggling to find parking.</p> <p>Thank you for your time!</p> <p>Sincerely, Carlyn Zylstra West Seattle resident and business owner</p>	Carlyn Zylstra
02/01/2022	<p>Please file my email with the many other unheeded complaints against the expanding western WA light rail system. I'm astounded that sound transit light rail revenue is down by half for the year even though ridership is up as reported on the TV news. It is almost beyond belief that our government entrusted design experts can spend billions of \$ on new systems & expansion but can't even figure out how to keep about half of all riders from NOT paying their fares!!! Personally, I'm not surprised when our reps are feeding freely at the taxpayer's trough but they're as incompetent as hell. Before you waste more tax \$, just design/install fare collecting machines on every train/bus to keep the deadbeat freeloaders off of 'em. Or just shut it down & make 'em walk instead --- too simple for simpletons?!</p>	Michael Lazenby
01/29/2022	<p>A 2039 arrival date for the West Seattle and Ballard Link Extensions is unacceptable. The traffic in Seattle is a critical problem now--there must be options under construction in 2022 not 17 years from now. I've seen the 2039 date published before and disputes changes in reality, a bigger need, worsening climate change, and the passing of a large federal infrastructure bill, this timeline remains the same.</p>	David White-Espin

02/03/2022	<p>Greetings</p> <p>We read the plans for approximately 8 TOD to be developed in Skyway.</p> <p>In your plan we do not see any equity justice for the already displaced Communities of color, to and below 60% AMI. I am sure they will not be able to afford the condos and townhome.</p> <p>As a black diable veteran 501c3 owner and with experience in homelessness for 3 years, I believe your plan will cause more harm to the local community.</p> <p>Shepherd's Transformation Mansions scattered Communiy and Greater Gospel Temple would like to partnership to manage 3 of your location under our Trauma-Informed Housing First onsite optional wraparound self-sustainability support services.</p> <p>Thank you for the opportunity to speak to you and Transforming Lives TOGETHER.</p> <p>https://flow.page/tracybjonesross</p> <p>Tracy Jones Ross Founder STMC TracyJones@stmhomeless program.org</p>	Tracey Jones
01/30/2022	<p>Did ST consider the possibility of designing for cross-platform transfers for through trips, given the need to rebuild SODO station (which appears to be intended as a primary transfer location) and the extra space afforded by the elimination of the SODO busway?</p> <p>If the northbound WSLE entered the area in the space currently used by the SODO trail east of the existing line, perhaps underpassing the existing line in a cutting at S Forest St, there could be western southbound and eastern northbound platform pairs. Transferring between the lines would then involve a 20-foot walk to the train doors directly opposite, instead of either a circuitous detour up a limited number of stairs to a concourse and then back down, or out to the street and back in.</p> <p>Such a design would save minutes off every trip between Beacon Hill (and points south) and Capitol Hill (and points north). It would also reduce the frustration of missed connections caused by the detour required to transfer.</p> <p>The SODO trail could be moved to the western side of the corridor to accommodate the northbound WSLE track. With the new tracks added to the “outside” of the existing station, the existing station could remain in place where it is. And with most transfers taking place across each platform, it could be less necessary to add a transfer concourse atop the station.</p>	Jonathan Boles
01/30/2022	<p>One thing I missed - this would also be compatible with the interim operation of the WSLE before the BLE and 2nd tunnel are built. Trains from West Seattle terminating at the northbound platform east of existing SODO station could enter the existing line north of SODO station and then use the existing turnback siding at Stadium station to return to the new southbound platform on the western side of existing SODO station.</p>	Jonathan Boles

01/31/2022	<p>Hello,</p> <p>I would like to add my comments for the WSBLE DEIS.</p> <p>I am a frequent Link Light Rail rider and a huge proponent of light rail and all mass transit. I think it would be a huge mistake to choose the super deep options for stations. It should be prioritized that stations are not more than 100-120ft deep or so. Elevator-only stations should not be considered at all. This only barely works at low-traffic Beacon Hill Station, and even then it is a frustration for riders. To think that some of the busiest downtown transit stations would be elevator-only and potentially hundreds of feet deep is absurd. It should not take more than a minute or two to reach the platform from the street. If it takes 6+ minutes to travel between the street/platform, this totally sacrifices the original convenience of the light rail. We are investing billions of dollars in new rail only to potentially spend an extra 25%+ extra travel time to actually exit the train station? That is absurd!</p> <p>Even if we could trust Sound Transit to maintain elevators properly, which we cannot given the track record, any urban elevator-only station is completely set up for failure, is 0% future-proof, and it will only serve to frustrate and dissuade people from using Link. We need to make whatever sacrifice necessary so that all of these stations require minimal time to travel between street/train platform with options other than elevators. If this means cut-and-cover tunnels, that's fine. If this means we need to disrupt some streets and some businesses, that is FINE. We can figure out how to provide them support while we complete 100-year investments into those neighborhoods. What we SHOULD NOT do is make 100-year investments in transit that are insufficient and doomed from the beginning because we couldn't stomach ripping up a few streets for a year or two.</p> <p>Can you imagine getting out of a large event at our great new Conference Center and then needing to fight through a crowd for an elevator to access the Midtown light rail station? How long would that take? Long enough to turn the light rail from something convenient into something not worth using. Absolutely absurd that it is even being considered as an option.</p> <p>Build a transit system that actually works for people. Avoid the deep-bore and elevator-only stations for our light rail expansion. We are all paying big money for this, we want a transit system that is actually convenient... let's do it right.</p> <p>Thanks, Nils Hostage</p>	Nils Hostage
02/01/2022	<p>The link from the Sound Transit page to the draft plan doesn't work. Also please seriously consider the gondola as an integral part of the plan. If their numbers are right it's a third of the cost and can get deployed in a couple of years vs 10, 12, or maybe 15 for light rail. West Seattle has gotten the short end of the transportation stick for years, going back to when Sound Transit regrettably aligned with the downtown interests to kill the monorail, viewing it as a competitor to light rail instead of an efficient way to feed into it. Right now if I want to get to the Sodo light rail station it's a minimum of 30 minutes bus ride, plus getting to wherever I want to go on light rail, and longer at off peak times. The gondola would make this far easier and much sooner so I don't have to wait till I'm 80 or 90 years old..</p> <p>Paul Loeb Author, Soul of a Citizen and The Impossible Will Take a Little While 3232 41st Ave SW Seattle, WA 98116 [paul@paulloeb.org] [www.paulloeb.org] (206) 935-9132 or cell (206) 206-240-5903</p>	Paul Loeb

<p>01/27/2022</p>	<p>Hello,</p> <p>I would like to provide feedback on the alternatives provided for the Delridge section of the West Seattle Light Rail Extension.</p> <p>Of the 6 alternatives, I don't understand how the one that has the most visual impact is the preferred alternative. We live on 25th Ave SW and all options except DEL-5 and DEL-6 would result in a light rail running right next to our home.</p> <p>Hello,</p> <p>Here is the visual of our home in relation to the light rail. Who would possibly want to live here?</p> <p>Of all the options available, DEL-5 and DEL-6 have the lowest amount of displacements, and costs less. The negative impacts listed on these two options have to deal with commercial interests. While every other options deals with residents themselves:</p> <p>Alternatives DEL-5 and DEL-6 would also have the most business displacements. All alternatives would displace a small business center that houses the neighborhood coffee shop, sandwich shop, and deli mart in an area with limited neighborhood commercial uses.</p> <p>That small business center is home to a Subway, a convenience store, and a coffee shop. I don't think Seattle will be hurting too much if we lose one coffee shop, a convenience store and the most franchised store in the entire country.</p> <p>Finally, the DEL-5 & DEL-6 options are the only ones that do not affect the West Seattle Golf Course. This is one of the best parts of living in West Seattle, and people come from all over the city to play this beautiful, public course. The views of downtown are some of the most appealing parts of playing this course, and putting a light rail station in front of that view will take away the appeal.</p> <p>The alternatives come down to the following:</p> <ol style="list-style-type: none"> 1. Displace more residents, and for the ones that remain, they are unfortunate enough to have a light rail run right in front of their home. 2. Displace a Subway, coffee shop and convenience store for less money. <p>The decision is straightforward, please make DEL-5 and DEL-6 a priority.</p>	<p>Tommy Swartz</p>
<p>02/03/2022</p>	<p>I generally agree with the people at The Urbanist and Seattle Subway and others who have urged a reconsideration of priorities here. The alternatives presented seem to have placed a high priority on avoiding a few years of disruption during the construction phase at the expense of rider convenience for the life of the system.</p> <p>The downtown tunnel should not be built so deep that the stations require an elevator or long escalator ride to access. These things make it so that riders will need to take multiple minutes to get in and out of these stations, and that's assuming the elevators are working that day. These things go out of service sometimes and the station should still be accessible by a reasonable-sized staircase if so. Ease of station access and ease of transferring between lines should be the overriding priorities here. Construction disruptions are painful in the short run but absolutely the right trade-off to make when building a rail line we'll be using for a century to come.</p> <p>The Ballard station should be located on 15th Avenue. 15th is a major arterial, and the majority of Ballard's population lives to the west of it. Forcing most riders to cross this arterial and walk a further block to the east just to save a bit on construction costs seems extremely misguided. I don't really have a preference between a tunneled or elevated station on 15th. I like the idea I've seen elsewhere to build a new road bridge on 14th, and then the existing Ballard Bridge can be replaced by a rail bridge.</p>	<p>Eric Aderhold</p>

01/28/2022	<p>Good afternoon, my name is Roger Nelson. My address is 333 Northwest 47th Street, Seattle, Washington 98107. And I'd like to leave a comment about this new transit line. I was just concerned that it seems like these lines are never on time, especially the one going to West Seattle and the one to Ballard. You are re-doing the timeline on those lines in especially the Ballard one in 2039 and I suppose that it will go even longer than that. The cost overruns never seem to be working out. The people in charge of these are never on time it seems like and the cost is always really raised up. It's just ridiculous. And you're going to be back asking for more money for these lines to be completed. I would say start charging the time or the money that it costs for the people to actually ride these lines and that what they have to pay instead of being subsidized by everyone. And the last comment I'll put down is that they are working on these cost overruns to help these transit lines, but what about the poor people in Ballard or the homeless and the encampment people? Can't they do something about getting them some kind of housing? The millions and billions we are spending could house them. Put them up in a house. Give them some kind of income from the city. Tax us so that we pay for them. That would be fine as long as they are off the street, off the side walks. Put them in some housing anywhere. Make a big highrise.</p>	Roger Nelson
02/03/2022	<p>Hello,</p> <p>The 14th Ave Ballard location is a poor choice. The zoning in that area is not conducive to high utilization of the station, nor does it serve the existing Ballard core effectively.</p> <p>If 15th is not an option, the station should be moved further West. Also, the cost estimates should be revisited in the wake of extremely high land prices in Seattle.</p>	Logan Bowers
02/03/2022	<p>The West Seattle portion of this project should prioritize the following (in order of importance): 1) Easy transfers to the other lines in SODO (minimize walking distances and wait times), 2) Stations accessible from the heart of the areas they serve (i.e. at or under the Alaska Junction as opposed to multiple blocks away), 3) Underground stations and lines wherever possible.</p>	Matt G
02/03/2022	<p>What in the he'll was that junk you sent to households. I Wasted photos, little comprehension as to what was planned. Oh, excellent on repeated language translations. And what was the projected annual cost on these options. Defend and replace this tax funded waste refered to as / sound transit..</p>	Steve Wedlund
02/03/2022	<p>It's hard for me to get excited about a transit system that a not insignificant percentage of people alive today will never ride by the time it actually opens. The fact that the existing light rail is so desperately slow already, doesn't really seem to inspire much enthusiasm for the future of transit in Seattle 12-17 years from now.</p> <p>All the environmental impacts aside, and those are considerable no matter which option is chosen, how useful will light rail in Seattle really be 17 years from now? Why are we investing so much time and money into a system that is almost certainly going to be obsolete by opening day?</p> <p>That said, from an environmental perspective, the major damage, from my point of view, is how completely fractured the detours are likely to be. With the daily experience of the WS Bridge detours, which are either slow, winding through residential streets and neighborhoods, or both - how are you going to make these detours manageable over the next 12 years? The detours themselves cause significant environmental damage from the sheer volume these routes are taking today where there was never intended to be this much volume.</p> <p>I don't know. I guess something is better than nothing - maybe. But I think it would be smarter to abandon light rail and look for something that is going to be able to accommodate the projected population with something that isn't 60 year old technology by the time it first opens.</p>	George Grunwald

02/04/2022	<p>My focus is on getting all of this transit in as soon as possible, much sooner than 2030s. The environmental impact of all of these options seems extremely negligible when compared to the alternative that is cars.</p> <p>It seems running via tunnel is less disruptive noise wise and fairly low on environmental impact while cost effective enough.</p>	Steven Roberts
02/04/2022	<p>The tables comparing construction tradeoffs for route options are very helpful.</p> <p>As I compare alternatives for the Ballard station, I struggle to understand why "Elevated 14th Avenue" is the preferred alternative when "Tunnel 14th Avenue" has superior characteristics on every axis in your own comparison.</p> <p>Beyond these pros/cons for construction which clearly favor "Tunnel 14th Avenue", the end state of having a subterranean station vs a ground level station seems far superior. The underground station would free up more ground level retail and living space above and around the station. The underground track would provide far less disruption to a busy traffic nexus in Ballard. An underground station would accommodate far more waiting passengers and provide protection from the elements.</p> <p>Beyond this, I don't see the topic of bridge vs tunnel over the ship canal addressed. I would expect a bridge to cause disruption to ship traffic as well as trains if it were low enough that certain ships could not pass through without it being raised.</p> <p>From an urban planning point of view, tunnels and underground stations are superior and scale better over the decades. While cost must factor in, tunnels and underground stations should be the default choice as we plan for the future where our local population surges by 50+% over the next few decades and becomes a major urban hub. In this situation the "Elevated 14th Avenue" station also wins across all cost and tradeoff comparisons. Let's build the tunnel.</p>	Patrick Finnigan
02/04/2022	<p>I support an elevated route from Interbay to Ballard. We should use this new crossing to add support for bikes and pedestrians, like Portland's Tilikum Crossing does. https://www.portlandoregon.gov/transportation/68548</p>	Aubrey Pullman
02/04/2022	<p>The area under the elevated section from Interbay to Ballard should be used to provide a high quality pedestrian and bicycle path that connects to the Elliot Bay trail from the Magnolia Bridge through Interbay to the Burke Gilman.</p>	Aubrey Pullman
02/04/2022	<p>Delridge section station DEL-2a makes the most sense. Displacing part of a golf course versus displacing homes should be an obvious choice. The lower design seems less offensive, blending into the neighborhood and actually displaces fewer homes than the giant concrete pillars needed for 1a. 2a also does not impact the park, play area, and playfield. These are important parts of this neighborhood which is already being greatly impacted by this construction.</p>	gretchen van dyke
02/04/2022	<p>I have a concern about the location of any Light Rail station in West Seattle. I understand the Alaska Junction is the ideal location for the Light Rail but there is currently no bus route in my neighborhood that will take me to the Alaska Junction. I'm assuming there won't be any parking at the station. How will commuters get to the Light Rail station?</p> <p>Also, the time (5-7pm) listed for the West Seattle meeting does not match the time (5:30-7:30pm) of the meeting when I add this to my calendar. Which is the correct time?</p>	Ivy Lim
02/04/2022	<p>I believe it's best to create a tunnel to West Seattle than to create elevated rail. The elevated route to go over the Duwamish Waterway, the Delridge/Marginal Way junction, and along the West Seattle golf course would be unpleasant to look at and experience, creating the area feels much more industrial than it is now. Why not route a tunnel under the Nucor Steel plant, making a softer turn to Avalon Way, and then to Fauntleroy. If you're already doing a tunnel, why not just do it once and for all? Like how it's been done under Capitol Hill, Beacon Hill, and UW? There's no need for more elevated routes over the Delridge/Marginal Way junction - it's just too much, especially when the West Seattle Bridge has been closed for the past 2 years.</p>	Derek Wendt

01/31/2022	<p>Hello,</p> <p>Please reevaluate the depth for the stations, particularly in Downtown and International District, Elevator only access with transit time of 5+ minutes from station entrance to boarding (not counting for elevator wait times), should be viewed as an unacceptable design.</p> <p>Furthermore, faster methods such as cut and cover should be viewed as preferable to tunneling deep when practical. Disruptions will be necessary to provide this city with mass transit.</p> <p>Thank you for your work in bringing public transit to Seattle. Adam de Gala.</p>	Adam de Gala
02/01/2022	<p>Dear ST,</p> <p>We will be the embarrassment of the world along with having created a system that fairly begs riders not to approach if we continue down the path you are currently leading. I'm sure you have seen this: https://www.theurbanist.org/2022/01/31/dear-sound-transit-prioritize-rider-experience-take-a-mulligan-on-west-seattle-and-ballard-link/.</p> <p>Whatever discounts in ridership your models make account for with respect to long travel – vertical or otherwise - from either station entrance or platform 1 to platform 2, I promise your adjustments will prove to be far too small. These horrible deep station designs will be the ruination of ST rail.</p> <p>Try explaining why Seattle needs two downtown train tunnels to anyone who doesn't live here and is not inured to the "Seattle way" of planning? Only if you are in need of a good laugh.</p> <p>Best, Paul</p> <p>Paul Feldman 206.317.7687 Seattle CD WA-7, LD 43, King County 8, Seattle 3, Schools V</p>	Paul Feldman
02/02/2022	<p>https://www.theurbanist.org/2022/01/31/dear-sound-transit-prioritize-rider-experience-take-a-mulligan-on-west-seattle-and-ballard-link/ I fully agree with the points made in this article. These designs sound poorly considered and difficult to use. Please reconsider station design so that light rail can be fast and user friendly. Jessica Winter-Stoltzman Seattle resident</p>	Jessica Winter-Stoltzman
02/04/2022	<p>In regards to the Ballard link, putting the station anywhere but 15th is a mistake UNLESS you're going to build an elevated pedestrian bridge over 15th. Surface routes are fine. The number one goal should be to finish this in a reasonable amount of time. 2039 is basically the same as never. How can we speed this up and haul Seattle's public transit into the 21st century (or rather, back to the early 20th century, since there was a way better system of transit then). Come on, let's GO!!!</p>	Kay McKelly
02/04/2022	<p>I left a comment earlier and I think I misread one of the plans. I just wanted to emphasis I really like the preferred alternative station locations for the Seattle Center, especially the East portal and how it is located in the center. It is nice to see a very pedestrian entrance.</p>	Parker Ammann
02/04/2022	<p>Please no operable/draw bridge over Salmon bay.</p>	Parker Ammann
02/04/2022	<p>I am a Ballard resident and prefer the Interbay/Ballard Segment - Preferred Elevated 14th Avenue Alternative (IBB-1a) proposal.</p>	Logan Bryant

02/04/2022	If it stops at 35th and Fauntleroy, that would be a dream. Also if it went just beyond to California Ave, it's a great spot in West Seattle with plenty of traffic.	Travis Elliott
02/04/2022	<p>PLEASE do not make the stations so deep! Having deep stations significantly increases the cost and complexity of construction, and severely negatively impacts the rider experience by making it take much longer to go in and out of stations.</p> <p>As stated in ES.3.1.2.2 of the draft, the alternative CID-1b of the International District station would be 190 feet deep. There is no good reason for the station to be that deep. That's deeper than Beacon Hill, and there isn't even a giant hill in the way like there is there! Making it so deep would be very expensive and unnecessary. And the extra cost wouldn't even be worth it, since deep stations negatively impact ridership with the way they increase travel times.</p> <p>If you want to avoid cut-and-cover construction, there are better ways to do it. Just look at the London Underground: their TBM-mined stations are seldom deeper than 70 feet below ground.</p>	Timo W
02/05/2022	<p>My comment is related to the West Seattle (WS) portion of the WS and Ballard Link extensions. I note the preferred alternatives are all using elevated routes past the Avalon station, going into WS. I encourage you to highly reconsider this, and to move with the preferred alternatives with third-party funding. For once, work hard and find this funding. Elevated routes will have a dramatic impact on people living around the rails, while the overall goal of light rail is to improve the quality of life by providing a reliable commuting option. Elevated routes will cut outdoor light for many apartments and businesses which have windows on only one side. This will also increase the noise level since the noise from the trains will radiate up and down from the elevated routes. Elevated routes will also be a scar to the urban landscape which has never been designed to anticipate this. Also, pillars and the complete infrastructure will be a magnet for graffiti, tags, etc., which will be poorly taken care of (as can be seen in existing light rail routes) by public entities in charge of maintenance. Finally, elevated routes are more impacted by earthquakes than other types of infrastructures. Tunnels will remove all these nuisances. They've been used throughout the world for 100+ years with success, and many cities are still building new ones, like Paris for the various RER extensions (heavier than light rail). It's 2022: Be modern, turn on the brain, and make the right decision for once. Also, WS had street-level rails decades ago. That's not even considered here: What about closing streets or reshaping them for that purpose. A good example of what can be done is the city of Lyons, in France. Take a look.</p> <p>One last thing: If you want to reduce costs, forget about working with unions, etc., which are working solely for themselves and rising the costs for their own benefit (as an example, the union for the port is a poster child of discrimination and privileges as it creates four categories of workers, with the D one being of extreme negative impact on workers' life). WA state laws already guarantee minimum income. Open the door to competition. Get rid of the red tape which drives the making of decisions which go against the overall objective.</p>	Romain Seguy
02/05/2022	<p>A tunnel seems to be the most appropriate route for West Seattle.</p> <p>Otherwise, the above grade alternative is very disruptive. Unlike other areas it goes right through a dense residential area.</p> <p>A tunnel is much less obtrusive and eliminates enormous stations above grade.</p> <p>Allows for a much more aesthetic entry into West Seattle.</p> <p>Not in favor of an above grade rail. West Seattle is not a quasi industrial area.</p>	Richard Kettlewell
02/05/2022	<p>I live in West Seattle and drive between Delridge and the Junction daily. I think 3 stations between Delridge, 35th, and Jefferson Square is too many. The stations aren't that far apart, but the vertical rise will make it kind of hard to walk.</p> <p>I think 2 stations, at Delridge and either at Jefferson Square or possibly on Fauntleroy and Alaska, make more sense. It's hard to see why buses or transfers needed on Avalon couldn't just go to either station. It also seems like it would save a lot of money and slightly shorten the trip times into downtown.</p>	Paul Fleurdelys

02/05/2022	<p>Hello.</p> <p>I live in the West Seattle In my opinion the better way to route Light Rail to this part of the city will be through a separate stand alone bridge with a bottom route on the EIS draft. Since the West Seattle bridge is in repairs right now and there is no guarantees that it won't have to be repaired sometime shortly the future, Light rail will need its own dedicated high bridge. From the point where it touches the land on the west side, the rail should be in the tunnel, following the pin preferred alternative up to the 42nd Ave sw with a stop at Fauntleroy Way sw. Also, the route should include stops near Delridge and Avalon Way SW.</p> <p>Thank you</p>	Yuriy Mazurenko
02/05/2022	<p>Hello,</p> <p>First off, I want to thank the SoundTransit staff for all their hard work pushing forward our transit system into modernity. The investments we are making now will pay dividends for us into the future.</p> <p>That said, we have to make the best decisions we can to ensure the success of our transit network and provide a good rider experience. After reading the Draft EIS, I have major concerns over the vertical circulation in many of these proposed stations, particularly for the stations in Chinatown/ID and the downtown core of Seattle. Aside from the new Westlake station that needs to accommodate the existing tunnel and the station at Mercer/Harrison that needs to go beneath the SR-99 tunnel, we must do whatever we can to avoid having deep tunnel stations. In particular, the deep-bore station alternatives for Chinatown/ID station need to be thrown out entirely. This station is going to be the most important station in the system, functioning as the primary transfer point between the 1, 2, and 3 Lines, as well as both Sounder lines. Making the transfer as easy as possible - and therefore making the platforms as close together as possible - is paramount to ensure the success of our system. Potentially requiring riders to take an ELEVATOR to transfer between lines at a station as busy as this should be out of the question.</p> <p>Additionally, the elevated station alternatives are too tall in general. All of the alternatives need to be evaluated and replanned to have a target height above ground of 50 feet or less. Northgate Station is 45 feet above the ground, and that's about as tall as we ought to build a station if we want to provide a good rider experience. Going too much taller requires passengers to travel unnecessarily long escalators/stairs/elevators, lengthening trip time by several minutes at each boarding and departure, making the rider experience worse.</p> <p>Thank you for reading, Ryan Lorey</p>	Ryan Lorey
02/05/2022	<p>None of these alternatives provide direct access to light rail for the residents of High Point, the largest mixed-income community in the area. Instead of reconnecting this thriving community of nearly 1,600 families with the rest of Seattle, the focus is again on the wealthier areas in West Seattle. There are no plans to expand this Link Extension to White Center and further connect additional low and mixed-income communities to downtown Seattle. Many of these residents rely on the public transportation system and they should be provided direct access to a modern mean of transportation. Let the residents of Alaska Junction walk/take a bus to the Avalon station and replace the Alaska Junction station with a 35th & SW Morgan station. Make it a tunnel route, with a deep station, if the current light rail trains cannot go up the hill. Reevaluate your plans through Equity lenses.</p>	Codrin Nedita
02/05/2022	<p>I prefer the pink alternative route with Ballard stop on market St.</p>	Jonathan Newkirk
02/05/2022	<p>I prefer the pink alternative from the map in the pamphlet. I also prefer anything that brings the light rail to Ballard sooner.</p>	Dayna Polstein
02/05/2022	<p>I am a west Seattle resident and This proposal has my full support. The only thing I wish is that it were being built far more quickly. Let's do this!</p>	Benjamin Hamm

02/05/2022	Magnolia is so underserved in regards to fast public transportation. Please put it as close to Magnolia as possible.	Emilia Misner
02/05/2022	Hi, it's important to ensure we're getting better access to the International District and engaging with our communities of color. It is extremely difficult to get around most areas in the Greater Seattle without a car so further expansion to the light rail to more unrepresented communities is important. I live outside of Seating the suburbs and have always wished that there was better modes of public transportation. This proposal if brought to fruition will bring better access to a community that is under represented and creating further inclusion, plus alleviate congestion and parking issues in the ID.	Jennifer Le
02/05/2022	The Andover alternative is far and away the best, cheapest, and really the only feasible option! It does not displace numerous families, is the best option for transfers, has the least detrimental effect on the community, and (even per draft EIS) fits in best with the layout of the surrounding Delridge north/south oriented neighborhood blocks. What eyesore the other options are. And the other options go diagonally through North Delridge, ripping out the heart of the neighborhood and wreaking havoc on traffic and the overall look of the area.	Jeff Harding
02/05/2022	Andover alternative is on/under budget, great station location, and perfect alignment with the layout of the North Delridge neighborhood. Andover is a great route. It leaves intact the occupants that the rail is intended to serve. The Andover route is a perfect match with the historical neighborhood. Great access for local riders, plenty of room for parking, ample room for bus transfers, and ideal for commuters. Andover alternative does not displace the entire neighborhood. Its routing aligns perfectly with the North Delridge neighborhood.	Jeff Harding
02/06/2022	I prefer the medium tunnel options, particularly medium tunnel at 41st as it displaces the fewest number of residential units and only 35 businesses. Also, it is a lower budget and does not effect parks.	Paola Medina
02/06/2022	I would like to provide two comments on the draft EIS. Cut and cover construction doesn't have to be as intrusive as are being described. In relation to the International district station, I would recommend that ST look to the Broadway skytrain extension project in Vancouver, which is utilizing cut and cover construction in a less intrusive (but more cost effective) manner: https://dailyhive.com/vancouver/broadway-subway-construction-skytrain-millennium-line 2. for the deep stations proposed, I would recommend that ST staff look to design examples from Barcelona's "Line 9" project. There is precedent for constructing deep train stations for significantly lower cost than shown in this EIS. Thanks for your time, Chetan	Chaitanya Sharma
02/06/2022	Personally prefer 'Other Draft EIS alternatives' as it travels through SLU and Seattle, which are most densely populated areas in the city.	Vincent Chen
02/06/2022	I would like to have the Medium Tunnel 41st Avenue Station Andover Street Station Lower Height option. It is one of the lowest cost and least impact to the West Seattle neighborhood and best fits our needs for West Seattle.	Adrian Pope
02/07/2022	For the Ballard to downtown link, I would prefer the "blue" Draft EIS alternative, giving greater access to the Link for residents of Upper Queen Anne, who are otherwise quite remote from the potential stations. The blue alternative seems more central to population centers.	Jon Skillman

02/07/2022	<p>The link stop in Uptown should be located in the center of the Uptown neighborhood at Mercer St., not at Republican which is a block south of the major existing transit stop in the neighborhood.</p> <p>I strongly oppose construction of light rail on surface streets. The surface route in the Rainier Valley significantly slows transit and is unsafe for pedestrians and drivers. It also seems discriminatory; why are surface routes only proposed in south Seattle?!</p> <p>The use of elevators rather than escalators to transfer from the West Seattle/Ballard to the existing light rail line is a terrible idea and will add additional hassle and travel time to an already unnecessarily time consuming trip from - for example - my home on lower Queen Anne to SeaTac airport.</p> <p>Because the link travels so slowly through the Rainier Valley, it already takes more than twice as long for me to get to SeaTac using the link as opposed to using Uber or Lyft. Every deterrent such as time consuming elevator rides and slow train speeds on surface streets discourages the use of mass transit!</p> <p>Finally, PLEASE FIX ALL THE BROKEN ESCALATORS on the existing line. The number of broken escalators is disgraceful.</p>	Robb Miller
02/07/2022	<p>I would prefer that the Link Light Rail extension to West Seattle be all underground once the Link Light Rail tracks get to Delridge. It is much quieter for the Link Light Rail to be underground and it will prevent Sound Transit from having to tear down lots of buildings, homes, and trees. The Preferred alternatives with third-party funding" (the brown line indicating that is is a tunnel route) is my preferred option. The third party funding would help with addition costs to put the Link Light Rail underground. We should make this the best form of transit possible and above ground train routes are not as good for quality of life as trains that are underground.</p>	Zachary Burton
02/07/2022	<p>Hi!</p> <p>I own and live in a home in the Delridge/Youngstown area. I've seen public support for a gondola system instead of the proposed light rail, and I would like to see an analysis of that alternative as well. According to the organization West Seattle Skylink, a gondola would cost far less and be completed far sooner than a light rail line. I would like Sound Transit to do their own analysis and publish their results to determine if that is true.</p> <p>Thanks! Don Zheng</p>	ZHAODONG ZHENG
02/07/2022	<p>Strongly support extension to W Seattle. We live in South Seattle but rely heavily on access to W Seattle as many common resources/services in the South End (Rainier/MLK corridor) are very under-developed and/or inferior. The connection between W Seattle and everywhere else besides downtown is a MESS. Adding a link light rail would help stabilize access to that area so it is not at the mercy of one driving route. Please also include the White Center area in your planning. Thank you.</p>	Jennifer Harris

02/08/2022	<p>The quantitative criteria used in the DEIS fail to incorporate impacts on qualitative issues such as quiet residential neighborhoods being impacted vs. busy, noisy arterials, and the significance of larger businesses to local residents as opposed to just the number of businesses. Re the neighborhood issues, Fauntleroy seems to me to be the preferred alternative as opposed to any of the 41st/42nd alternatives because the condos along Fauntleroy were built with noise issues in mind, and people who bought those units did so with full recognition of existing noise issues on an arterial. In contrast, condo owners along 41st and 42nd bought units on fairly quiet residential streets, and these Seattle residents will experience a significant deterioration in their quality of life if any of the alternatives on those streets are selected. In regards to businesses, at least 2 grocery stores are impacted by the 41st/42nd alternatives. My wife and I walk to these stores; if ST puts transit stations on those streets and thereby destroys these 2 stores, we will be forced back into our car to find comparable shopping alternatives. Mass transit is supposed to lure people away from their cars, not force them back into them.</p> <p>A final point - given the timing of this process and when analytic work was done, I very much doubt that the economic projections used to forecast light rail and bus ridership are anywhere close to accurate given the continuing impacts of COVID-19 on ridership. Remote work is a long term reality that businesses all over the world are adjusting to. Therefore, I think that ST light rail ridership will be lower than forecasted in the DEIS for many years. Any cost-benefit calculations based on the existing economic projections need to be redone based on new more accurate ridership projections, which in turn would stem from revised long term economic projections. I am a professional economist and I know how the economic projections are prepared, and when they were prepared. Your present projections are invalid in our new "post-COVID" reality.</p>	Paul Sommers
02/08/2022	<p>West Seattle Line Comments - Please act with utmost speed in completing this project. Speed, not perfection (extension will never be perfect as certain groups of people will always be disappointed), is my number one priority. A raised line is acceptable (and will be quicker to build), and it is a better riding experience to be able to look out windows instead of being trapped in a dark tunnel. Planning now should also consider extending the line south in the future, especially to diverse communities that rely much more on transit like High Point and White Center. Please try to save Trader Joe's in the Junction.</p>	Brian Janura
02/08/2022	<p>I attended a meeting on the Interbay segment evaluated in the EIS. As someone who lived for 10 years in sight of the Ballard Bridge, I am concerned about the numerous effects to residents, traffic, historic Fisherman's Terminal and the canal if the 136 foot "preferred" bridge over the canal remains the option. Based upon the projected costs, it sounds like the tunnel under the canal and the bridge option are comparable in price. If this is the case, I strongly urge the need for a tunnel to minimize impacts to the businesses, residences, parks (notably the boat ramp on the North side), shoreline loss and marine disruption in the area of the Ballard Bridge. Additionally, 15th Ave is a very important traffic corridor, the only one serving the northwest corner of the city, so impacts caused by above ground infrastructure should not be taken lightly.</p> <p>As for the Smith Cove proposed stations, it was unclear to me how easily pedestrian could access the proposed Galer Station, and whether historic views from the Betty Bowen viewpoint would be impacted.</p> <p>Thanks for your consideration! I am excited that light rail in this area is finally looking like a real possibility.</p>	Marina Alvarez
02/08/2022	<p>As a West Seattle resident and homeowner. I do NOT want the Light Rail connecting into the Alaska Junction. It should stop at Delridge or Fauntleroy and go directly down to White Center. There are too many schools and traffic congestion in the Alaska Junction to make this a safe or beneficial location for a light rail stop.</p>	Sarah Tito

02/08/2022	<p>Most Important: The rail needs to service California Avenue business district (as it is the heart of West Seattle) with stops on either 41st or 42nd - NOT FAUNTLEROY!</p> <p>There is one clear choice: "Other Alternative - Medium Tunnel 41st Andover St Lower Height". It is unquestionable the best choice for these reasons.</p> <p>Is causes the fewest residential displacements in a housing market where there is a shortage. This option will be least impacted by budget overruns as the cost to acquire residential properties continues to increase dramatically in a housing market where there are extreme shortages.</p> <p>It is one of the options that impacts the fewest businesses.</p> <p>It is THEE HIGHEST PERFORMING SOLUTION!</p> <p>It is one of the LOWEST COST solutions.</p> <p>It is one of the lowest cost solutions.</p> <p>Unlike almost all the other options, there are no permanent park effects.</p> <p>Given these reasons, it is almost incomprehensible to me that the other options would even be up for serious consideration.</p>	Michal Dodge
02/08/2022	<p>As someone who both lives in the area of the West Seattle extension and uses public transit as my primary means of transportation, the expanding light rail system is something I'm eagerly looking forward to.</p> <p>I strongly prefer any of the options that involve the Alaska Junction station being underground. Overhead train stations harm the walkability of an area; they're ugly and noisy. Compare, for example, the impact of the overhead monorail stations downtown to those of the downtown tunnel. The area around tunnel stations is walkable and pleasant, busy at all times of year, while areas with overhead monorail are practically deserted.</p>	Blue Frauenglass
02/08/2022	<p>As a Ballard resident and homeowner, I believe that for the Interbay/Ballard Segment, the best solution is the Preferred Tunnel 15th Avenue Station Option (IBB-2b). I recognize that it's more expensive, but as the best option long-term, I think it's important to avoid ending up with an inferior infrastructure in the future by trying to cut costs now.</p>	Lonnie Mann
02/07/2022	<p>Hello,</p> <p>I am writing in full support of light rail coming to West Seattle and Ballard. My main concerns are as follows:</p> <ul style="list-style-type: none"> -This should happen sooner. 2032 is a long time away, and this city has needed improved train service since we first voted it down in 1968. Service sooner than 2032 to at least the Delridge station would be a great start. Condos and houses would be less affected, and a station near Delridge would at least be a place that West Seattleites can go to have train access. Let West Seattle argue over routes/etc., but please get a train across the Duwamish waterway to us, preferably much sooner than 2032. -We'll need direct bus lines to the stations. The proposed routes aren't that extensive, so there will need to be more buses that go directly to the train station. I live near 35th and Morgan and I can't currently get a direct bus to a train line, including Sodo. -Bike Lockers: Please, please, please have plenty of bike lockers at stations. Again, with not a lot of direct bus routes to train stations from West Seattle some of us will just prefer to bike over there rather than take multiple buses. Fully safe bike lockers are important for e-bikes as well, with the current crime in Seattle. <p>Finally, and most importantly, please just finally make this happen. We could have had light rail and then decent monorail routes for over a decade now, but instead we've put it off and land has become more expensive. Cars, even electric ones, are not a sustainable option. We need to focus on expanding our train system as the number one priority in public transportation.</p> <p>Thank you, Steve Raparelli</p>	Steve Raparelli

02/09/2022	PLEASE, PLEASE, PLEASE make the Delridge to Alaska junction section underground. There is already enough noise and traffic in our neighborhood. I struggle enough with sleeping due to the trains horns in the distance. I will hate wehearing the bells of the passing train.	Lindsey Imbier
02/09/2022	I really don't like how deep the stations are through downtown. It is crazy to have them be so deep you can only access them via elevator. This might work fine at a station like Beacon Hill that's outside the urban area and has less riders getting on and off there, but having elevators at a busy station downtown means people are going to be waiting awhile to get on an elevator rather than an escalator or stairs. Please go back to the drawing board and make the stations be closer to the surface.	Evin Fairchild
02/04/2022	This is Joan Bateman Phone Number(412) 952-5829. I lives in Seattle, e-mail, Joan Bateman, joanbateman@earthlink.net. I have one comment, and it seems almost silly,excuse the expression, to have the West Seattle line stop, either at SODO or Holgate, without going all the way to the stadium. We have many people that go to the games, football, soccer,baseball. Many nights a week. And you can count on most in the summer time, almost every day. And it would be helpful, if we could get ourselves all the way to the stadium, so that we don't have to walk, many of us are elderly or disabled. And, or, figure out how to get there. Thank you. I hope my comment makes sense to you, and thank you for including me in your comment period. Please call back at (412) 952-5829, if you have questions or need any more information. Thanks. Bye.	Joan Bateman
02/09/2022	There does not seem to be any provisions for access for those living in West Queen Anne to access either Smith Cove or Interbay stations. The greenbelt essentially blocks this access and it appears that a station closer to the Seattle Armory would be more beneficial rather than Smith Cove.	Denis Ogun
02/09/2022	Keep the preferred alternatives through Seattle Center into Interbay and Ballard. Costs, congestion during construction if we use Mercer will choke the area. A couple blocks from Mercer with a stop by Climate Pledge is smart How high is the track have to be to cover water into Ballard? Make that distance as short as possible to contain costs	Scott Douglas
02/09/2022	The WS line that ends on Fauntleroy and does not make it up the hill to 41st or 42nd leaves the least negative impact to the WS community and is, therefore, the best option. Fauntleroy is a busy street and can handle having a station and above ground platforms provided some businesses are purchased on the east side of the street to leave room for the station. This is the best option from a service perspective and to minimally impact the Alaska Junction "village" aesthetic. It also provides value to the most commuters; servicing those that live near the Alaska Junction, those on 35th, Fauntleroy area residents and the incoming ferry commuters.	Brook Peters

02/10/2022	<p>Hello! Thank you for taking the time to consider my comments. I am a Seattleite from the Maple Leaf neighborhood and I first want to say that the Northgate Extension to Link has been an amazing addition to the area. It was only after living abroad that I realized how absolutely essential a reliable, effective, and well-designed rail network is to a functional city, and because of that I think Sound Transit needs to address a problem that has been creeping up more and more in the past few years as ST3 goes through design: unnecessary concessions at the massive detriment to the project.</p> <p>The current plans for the second downtown tunnel are, frankly, unacceptable for a functional transit network. I could go into the dozens of reasons why stations so deep would be a massive handicap on the system, but I am going to assume that your team is already aware of why this is a bad thing (transfer times, accessibility, etc). Instead, I want to make a plea: please stop worrying about the impact and disruption of construction! A temporary inconvenience is ALWAYS worth it if it means a century of exceptional transit infrastructure. As a resident of Maple Leaf, the construction around the Northgate Transit Center was an inconvenience for years, but the results speak for themselves! In my opinion, another shallow depth (possibly even cut-and-cover) tunnel through downtown would save money and create an incomparably better ridership experience than a 10-story deep TBM route. Yes, it would cause disruption, but we put up with massive disruption for years of road and highway construction all the time, and for something that is a massive waste of money and space in return (car-centric infrastructure).</p> <p>Yes, some people will complain, including businesses. But businesses come and go, and the results of this project will outlive all of them. We cannot allow a loud minority to control the future of transit infrastructure in Seattle and the surrounding area. We must be willing to do the hard or inconvenient thing in the short term if it means exceptional results that will benefit hundreds of thousands of people every single day. Please, do the right thing and make the right choice for this project. I want my family to be able to ride the Link as I grow old and not regret horrible decisions and impotent results.</p>	Keenan Sieg
02/10/2022	As an eastsider, my priority for the Westlake station is to have easy access to the Paramount theater and 5th Avenue theater, as that is a primary scenario for when I would take the train into the city, connecting from the eastside train.	Austina De Bonte
02/10/2022	<p>There are a lot of good public opinions out there on the Seattle line expansion like the video linked below. I know this isn't really the place for this comment, but I'd like to hope these considerations are being seen and noted. I hope the Seattle line can be built to be it's best and most usable self despite any pushback.</p> <p>Thanks</p> <p>https://youtu.be/mqnTqNSxS0</p>	Jackson Teal

02/09/2022	<p>Hello,</p> <p>I would like to provide the following comments for the West Seattle Light Rail Extension: SODO-1b would be preferred due to the footprint and maintenance of one facility versus two facilities. A much "cleaner" concept and impacts fewer businesses during construction. No preferred option on the Duwamish segment. It appears to be a trade off of impacts vs cost. The preferred DUW-1a seems sufficient. DEL-2a seems to make sense. However, why would you need third party funding for DEL-2a that is \$400m but not third-party funding for DEL-1a at \$600-700m. Seems like a good choice to save \$200-300m for something that serves the same purpose. Getting a station as close to California Ave as possible would be a good idea. The Alaska Junction is the hub of West Seattle. The goal should be to service that hub. WSJ-3b would be the most useful for everyone. This includes people on the other side of California Ave (Genesee etc.) Those people will not get much use out of it if you put the station far away. However, a \$800m difference is a tough one to swallow for a few blocks of additional access.</p> <p>Best regards,</p> <p>Cody Cousins</p>	Cody Cousins
02/08/2022	<p>My comment to the proposed West Seattle Station is to please chose the alternative that does not condemn or take houses along the pigeon point neighborhood. Please pick the option that goes on the other side of the freeway.</p> <p>Thank you,</p> <p>Kathryn Perkins Resident of Pigeon Point in West Seattle</p>	Kathryn Evans
02/08/2022	<p>To all who are working for Sound Transit - thank you. Public transportation is a critical public service, and this Seattle resident appreciates the hard work. I'm excited for all the new developments coming in the years ahead!</p>	Joe Dubbs

02/08/2022	<p>Hi:</p> <p>Thanks for the opportunity to comment on the Ballard to West Seattle Draft Environmental Impact Statement.</p> <p>My thoughts on West Seattle:</p> <p>MUSTS</p> <p>No sky-high concrete columns. If 150-foot columns is the best Sound Transit can do, it should postpone until it can do better. No one will be happy with that result which, in a world with gondolas now and self-driving taxis on the way, seems dated even today. The community will look to tear it down within a generation or two. Delridge/Genesee area residents, in particular, may be better off losing their homes than living in the shadow of a graffiti-riddled, Viaduct-like structure running through their neighborhood.</p> <p><u>Avoid West Seattle Golf Course as much as possible.</u> With so many options available, there is simply no reason to trample on one of West Seattle's best and most historic assets.</p> <p>Some form of tunnel.</p> <p>I understand tunneling is costly, but the cost has lessened since ST penciled this project years ago (see Elon Musk's The Boring Company). Indeed, ST should re-examine the financial feasibility of a Pigeon Point tunnel: with real estate getting more expensive and tunneling getting cheaper, the delta between tunnel and elevated can't be what it was when Pigeon Point was nixed in 2017. (Speaking of Pigeon Point: It is only 1.8 miles from Pigeon Point to the Junction. Conversely the University/Capitol Hill Tunnel is 3.1 miles -- and it was built! Surely tunneling in West Seattle is not THAT much more expensive than it is in Capitol Hill.) For light rail to expand south, a tunnel is the only viable option.</p> <p>**Limit the above-ground "transportational" vibe.** No one wants West Seattle to look like it's next to an airport.</p> <p>BECAUSE THEY DON'T MEET THE "MUSTS," SOUND TRANSIT SHOULD ELIMINATE ANY CONFIGURATION WITH THE FOLLOWING: DEL-1A; DEL-1B; DEL-2A; DEL-3; AND DEL-4 AS CURRENTLY ENVISIONED.</p> <p>**IF ST SETTLES ON A DELRIDGE WAY STATION INSTEAD OF DAKOTA OR ANDOVER FOR THE DELRIDGE SEGMENT, IT SHOULD CONSIDER A DEL-4/DEL-2B HYBRID ROUTING. **</p> <p>The elevated, lower routing would start heading west on the south side of Genesee, then cross to the north side of Genesee as soon and as far east as possible before entering a tunnel just east of Avalon on the north side of the street.</p> <p>Advantages:</p> <p>The golf course would be spared save perhaps a few hundred feet at the far east.</p> <p>The green area that would be left over below the tracks on the north side of Genesee could be repositioned as public space (dog park, etc.), which would be much welcomed in an extremely dense neighborhood.</p> <p>DEL-2B IS PROBABLY THE BEST OPTION ON THE TABLE NOTWITHSTANDING THE HEIGHTENED COST OF A LONGER TUNNEL. SURELY ST CAN PROCURE FEDERAL INFRASTRUCTURE FUNDING TO MAKE UP THE DIFFERENCE.</p> <p>THE ANDOVER STATION OPTIONS -- DEL-5 AND DEL-6 -- ARE REASONABLE OPTIONS SO LONG AS THEY TUNNEL AS SOON AS POSSIBLE. (WSJ-4 OR WSJ-5.)</p> <p>The Andover Station options (see the 6th and 7th columns below) actually stack up quite nicely on all counts (see chart below) except for the location of the North Delridge station, which many people will say is too far north. That might be a plus. That station's ridership is going to come mostly from buses anyway, And if ST can build, say, a skybridge connecting lower Avalon to the station to the south of Nucor, then it would basically connect Alki and North Admiral riders: they'd only be a bus ride away.</p> <p>[See documents below for the Rainbow Slide referenced.]</p> <p>Sincerely, Nick Jenkins</p>	Nick Jenkins
02/08/2022	<p>As a new home owner in Ballard I'd really like to see the preferred tunnel option to 14th or 15th (IBB-2a or IBB-2b) as the selection. Mainly because these options disturb the community in the lowest way. A lower number of residents and business along with greater reduction in impact to the shipping canal.</p> <p>Is there anyway for residents to donate to the funding?</p> <p>Thanks</p>	

02/09/2022	<p>Why are we extending our light rail system?</p> <p>By one calculation, light rail's total cost per passenger mile is about \$2.03, while private vehicles average about \$1.02. Even taking these numbers with a grain of salt, light rail is a tough sell based on cost-efficiency.</p> <p>Light rail's environmental benefits are real, but they're probably not durable. A Toyota Prius consumes half the energy and emits a third less CO2 per passenger mile than light rail. LTR is greener today, but maybe not tomorrow, if we end up where we want to be with alternative fuel vehicles.</p> <p>No study has found any light rail to reduce traffic more than marginally, even in the most successful systems. This seems to be borne out in the draft EIS, which estimates Seattle light rail extensions will reduce traffic 20 years from now by 0.1 percent, or 1/1000th.</p> <p>So why light rail, then? Serious proponents seem to focus on light rail's ability to guide and influence economic development. This can make sense. A highly subsidized transportation solution like light rail shifts the cost of mobility from the individual to society. We all benefit from enabling the mobility of individuals participating in the economy.</p> <p>But is this arguably singular benefit worth the blight of elevated light rail? The short answer is no. Elevated guideways can be a great solution along existing freeways or through unpopulated stretches, but it's not defensible in urban and semi-urban areas. If we can't afford sub-grade over elevated, we can't afford light rail. This is not subjective opinion: new urban light rail in successful cities around the world are universally below grade. US cities seem to be uniquely willing to permanently sacrifice urban character in exchange for surprisingly small one-time savings.</p> <p>If we're going to spend billions under the banner of a vision for the future, let's make sure that vision isn't myopic. Let's suffer only once, spend the relatively small amount of additional money upfront, keep guideways below grade in West Seattle, and not accept irreversible mediocrity in the name of economy and easier execution. Expediency erodes our future.</p> <p>Thank you, Gene Brumblay</p>	Gene Brumblay
02/10/2022	<p>Hi,</p> <p>Have been loving the access available and the new stations for the Link in the past few years. Have been looking forward to the ballard station for quite some time as well for when it's eventually finished. It would definitely make a lot of things more accessible.</p> <p>Thank you, Erin Roach</p>	Erin Roach
02/09/2022	<p>I would prefer to see the underground station on 14th with a connecting pedestrian tunnel that comes up on the west side of 15th. This would have the least impact and would still allow for pedestrians to reach the terminal without the need to cross 15th. This also provides for an easier expansion to connect the Ballard line at Northgate eventually. The street median on 14th will get to 65th before there would be disruption.</p> <p>James Bushell</p>	James Bushell
02/10/2022	<p>Thank you for the opportunity to "share."</p> <p>Light rail to West Seattle is a ridiculously expensive pipe dream. As a long-time West Seattleite, I will actively work against this costly project, that will not have the ridership to support the expense.</p> <p>Sherry Richardson 8026 Fauntleroy Way SW Seattle, WA 98136</p> <p>Sent from my iPad</p>	Sherry Richardson

02/08/2022	<p>1. Super deep stations are worse than not building at all - if they aren't convenient to use, no one will use them. Find a way to keep them shallow.</p> <p>2. Coordinate with City of Seattle on the bridge over Salmon Bay for joint cost savings. Together, build a new bridge early & use it to divert car traffic while Ballard Bridge is torn down and a new bridge easily built in the old right-of-way. Once both bridges are complete, convert one of them to light rail / pedestrian use.</p>	Doug Kirschner
02/06/2022	<p>Dear ST Staff,</p> <p>My name is Chetan Sharma. I'm a civil engineer based outside Seattle. I wanted to provide the following two comments/suggestions regarding the draft EIS.</p> <p>Cut and cover construction doesn't have to be as intrusive as has been previously. For the international district station, I'd recommend learning from the Broadway Skytrain Extension project in Vancouver. Here is a link for reference (if you're allowed to copy links): This is how the Broadway Subway will be built over the next five years Urbanized (dailyhive.com)</p> <p>In areas where extremely deep stations are actually necessary, there are ways to mitigate associated concerns that are not yet outlined in this EIS. I'd recommend looking for the Barcelona line 9 project for examples regarding how to reduce the cost of deep level station construction. Again, here's a link if you're allowed to open them: The Most Interesting Metro Line in the World: Barcelona Line 9 - YouTube</p> <p>Thanks,</p> <p>Chetan</p>	Chaitanya Sharma
02/11/2022	<p>Hello, I am commenting on the Ballard/Interbay Segment Alternatives (i.e. as mentioned on ES-39 of the EIS). I believe the preferred alternative, which is on 14th St., does not adequately take into consideration the impact of usability and accessibility to the population core of Ballard. Whether people actually use the Link rail will have tremendous ramifications for Link's long-term fiscal success, as well as Link's potential for displacing higher-emission forms of transportation. In becoming part of people's day-to-day routine, every minute counts; being 5 minutes closer to the heart of Ballard (as well as to the Westward edges of Ballard) could hugely increase the number of people who actually rely on Link for regular transportation, and choose Link for travel into downtown Seattle.</p> <p>Given current zoning and housing trends, the gap in density between the areas East and West of 15th Ave is only likely to grow, increasing the need for access from the West.</p> <p>Please consider one of the 15th Avenue alternatives for the Ballard Link station; I believe they could serve Ballard much more successfully, and it looks like some of these alternatives are comparable or better in terms of cost and impacts.</p> <p>Thank you for your consideration.</p>	Corey Mahoney
02/11/2022	<p>I live in north Delridge. Your "preferred" routes through our neighborhood are the least acceptable to me. They have the greatest impact on our now peaceful neighborhood (mainly the elevated track on Genesee), and the greatest impact on displaced households and businesses. If we do indeed have rapid transit coming to West Seattle, I prefer tunneled routes that run on Andover. This would have the least impact on our neighborhood, both aesthetically and with decreased noise pollution, not to mention less residential displacement. I am much more in favor of the Skylink option for many reasons, and hope the powers that be will give it the attention and evaluation it deserves.</p>	Nancy Fry

02/11/2022	<p>I strongly favor IBB-2a or IBB-2b because the tunnel options are far more aesthetically pleasing, and because bridge options put permanent obstacles on the Ship Canal that might be regretted in future years.</p> <p>Between the two, IBB-2b is slightly better because 15th Ave NW is truly a focus point of Ballard, whereas 14th is not. Transfer to the Rapid D should not involve a block-long walk, which a 14th Ave NW station would require.</p>	Jeffrey Davis
02/11/2022	<p>The West Seattle Junction station should be as far west as possible from the Avalon Station. This will put it close to the true West Seattle Junction (where most people will want to visit), close to California Ave. (THE main avenue in West Seattle), and allow more people who live west of California Ave. to be within walking distance of a light rail station . It's silly to spend so much money and have the two stations close together.</p> <p>I don't think it makes much difference whether the train is elevated or in a tunnel -- as long as it is not at ground level (where it has to move slow).</p>	Daniel Koehler
02/11/2022	<p>Before you build new tracks and stations, how about improving the current stations. Almost all stations have 2-5 escalators and elevators broken.</p> <p>And how can you have (to/from one track) a DOWN escalator working but a UP escalator broken? Westlake station used to be beautiful. It always has 5-7 broken escalators and elevators and the station is dirty and smelly now. Elevators that do work, have human feces and urine on the floor.</p>	Joyce Chris
02/12/2022	<p>I'm so glad to see the extensions to urban villages. Light rail here in West Seattle is critical. I am commenting on four locations. In West Seattle where I live I like WSJ-2 and WSJ 3 2. I hate the displacements and disruptions but the bridge closure shows us how critical it is to have another effective way off the peninsula. I like the alternatives because WSJ-2 is central to buslines and both fauntleroy and business districts at California and Alaska. It's walkable for people in new multi level multi residential constructions. I like WSJ 3.2 because it serves Morgan Junction and all the new development along California and increasingly along Fauntleroy south of Alaska. If we're going to extend into Morgan Junction 3.2 is the most sensible in my view as it goes well into the Junction. If we're going to disrupt lets make it worthwhile is my philosophy.</p> <p>I'm also commenting on Ballard proposals. I like SIB-1 because of it's logical placement. I drive a lot around the area and this seems to be the best location for transit with logical and workable disruptions to drivers. I also like BB3 though I'm wary of the shoreline impacts.</p> <p>Finally what is planned to compensate or relocate displaced residents and businesses?</p>	sarel rowe
02/12/2022	<p>Those deep stations are going to be a real pain for riders, adding minutes to their commute. Not to mention the expense of building them/ Why can't the West-Seattle-Ballard line share the existing tunnels with lines 1 and 2?</p> <p>Of course, this would entail shorter headways to accommodate the increased capacity. Using a control technology like CBTC would support that.</p> <p>I have read that CBTC can't be used on light rail that mixes with auto traffic, which requires block control. But the vast majority of the track miles are grade-separated. Wouldn't it be possible to have a hybrid control system, block in auto traffic, and CBTC grade-separated?</p>	William Reed
02/12/2022	<p>No to West Seattle light rail. It will demolish houses and businesses that are a huge part of our history. I prefer going underground and above ground like the gondola idea. The Rapid C line is fast and efficient. Work on improving the water taxi and a major park and ride. The one below the bridge only stops for the 21. West Seattle is not only the Junction. There are numerous parts of West Seattle. Seattle is making improvements. Including the rapid h line that will connect to the hospitals in first hill. The light rail is expensive and will take 10 plus years to build. Ruin our history.</p>	Lisa Jackson

02/12/2022	<p>For the downtown segment, as a rider I really dont want to have to ride in an elevator to get to any of the stations. Also I would prefer the option to get to the platform as fast as possible, so I think this means I would prefer the option with the shallowest tunnel (probably the bottom two sub-alternatives on page 30. I do not see too much issue with there being more construction visual and mobility impacts on the surface for some years if that means the transit will be more convenient for who knows how long this tunnel will be used.</p>	Mark Nash
02/13/2022	<p>Summary of comments for West Seattle: I prefer the routes that prioritize: 1) minimal impact to property and businesses; 2) maintain the character and views throughout the neighborhoods of West Seattle (e.g. do not favor towering concrete columns with raised track); 3) prefer routes that favor existing commercial zones vs residential for raised track portions of the light rail.</p> <p>Question: Do we actually need two stations at Avalon and Delridge? Could a signal option be introduced?</p> <p>Preferred routes from Draft EIS: 1) North Crossing Alternative over Duwamish; and 2) Mid-Tunnel 41st Ave & Andover Street Station Lower Height.</p> <p>Thanks, Andrew</p>	Andrew Trujillo
02/13/2022	<p>Trains are always going to be several orders of magnitude more environmentally friendly than highways, so please build more rail lines!</p>	Sean Bennett
02/13/2022	<p>Hello, thanks for taking the time to read this.</p> <p>My family and I live at the intersection of 34th and Andover, and we are happy to be able to provide input on the light rail plans.</p> <p>After reviewing the different options, the Tunnel 41st and Tunnel 42nd options seem like the best ones, although clearly they are clearly the most expensive. The appeal for these options include the significant reduction in ongoing noise, a decreased visual impact, and reduced residential/business impact for the Avalon/Alaskan Way areas.</p> <p>Behind those, I would say the Elevated Fauntleroy Way option would be best, with it being \$400M cheaper to build and having a much smaller impact on businesses and residences in the area. I can't really justify those costs in order to get the station a few blocks closer to California Ave.</p>	Jesse Tucker
02/14/2022	<p>The depth of these stations (and the fact that you can only reach some of the platforms by elevator!) feels like a huge misreading of the room. The passenger experience is going to be so tedious and claustrophobic. We should build an accessible and inviting transit system the first time around and not make something that just checks the boxes. These should be crown jewels not fools gold!</p>	Xio Alvarez
02/15/2022	<p>My comments will focus on the Delridge station. I personally prefer the "elevated Delridge" option. The two preferred alternatives seem like they take out so much more good, dense, walkable housing. That area along 26th is one of the more dense areas of Delridge and it seems a shame to take out that housing. I'd rather see development along Delridge and take out some parking lots. The elevated Andover station also seems good from a development standpoint, but the potential walk/bike catchment area is reduced somewhat.</p> <p>Whichever station location is chosen, I hope to see mixed use development including restaurants, grocery stores, etc. The Delridge corridor is a food desert; the closest grocery to us is 1.7 miles. That store is hard to access by bike (too steep), by foot (too far) or by transit (transfer to a bus that runs at 20 minute frequencies).</p>	LISA ENNS
02/15/2022	<p>I like the Preferred Tunnel 15th Avenue Station Option (IBB-2b). Seems to make the most sense for ridership access. The best overall option!</p>	Joel Jacobsen

02/15/2022	<p>Thank you for the wonderful presentation of materials, opportunities to learn more and commitment to constructive, equitable community engagement. I realize that you are going above-and-beyond to minimize barriers to participation and I hope it results in broad, representative feedback/input.</p> <p>Overall, I encourage Sound Transit to change their preferred alternative for the Interbay/Ballard segment to the tunnel option to 14th. The overall impacts of the preferred alternative (elevated structure to 14th) are assumed to be greater than the 14th/tunnel option, including significant disruption to the maritime community (businesses, recreational users, etc) and removal of housing in an area already seeing explosive housing prices. Furthermore, the current preferred alternative is potentially more expensive than the 14th/tunnel alternative.</p> <p>The investment the community is making through Sound Transit to build these two lines is incredibly important. If we can accomplish this in a less impactful and cheaper way, then it makes sense to select the 14th/tunnel alternative as the new preferred alternative.</p> <p>Thanks again for all your hard work!</p>	Dennis Sandstrom
02/15/2022	<p>Building light rail in Ballard on 14th instead of 15th would be a huge mistake dealt with for generations. Transit should go where density exists, but Sound Transit appears to prefer building where there are fewer riders, not more, as seen by the spine eventually being built along I-5, where the closest walking destination is a freeway instead of a walkable neighborhood. ST should coordinate with the city on building light rail on 15th and the imminent replacement or refurbishment of the Ballard bridge. Moving car traffic to a new bridge on 14th so light rail can cross 15th without disrupting traffic, has been suggested. Sound Transit should not build a massive piece of infrastructure so far from the urban core of Ballard. The single family homeowners won't want a massive elevated train station anyway. Consider lower cost options like a surface rail station on 15th and Market instead of elevated (moving the arterial south of Market from 15th to 14th would free 15th for use as predominantly a transit mall). Just please don't build something over-engineered in the wrong location.</p>	Karl Noss
02/16/2022	<p>Voting for Preferred alternative to be built, also voting to be built sooner than 2037.</p>	Wei Zhi Liu
02/11/2022	<p>As a long-time Ballard resident, the IBB-2a "Tunnel to 14th Ave NW" or the IBB-2b "Tunnel to 15th Ave NW" options are the best to options for Ballard. Mostly, it's the tunnel concept that is definitely preferred to the bridge concept to minimize the impact to our maritime industries, and to decrease the pushback and probable legal challenges you no doubt will get from those industries concerning a bridge. Also, the price of real estate along that corridor is ever escalating due to all the high rises and office buildings being built. Those costs will continue to rise and may not be forecastable. However, you are already determining tunnel construction costs for the Denny Way tunnel section. At some point, continuing the tunnel maybe even be less than the bridge version. I would recommend having the Ballard station emerge on 14th Ave NW to lessen the pedestrian traffic at the NW Market Street and 15th Ave NW intersection. Further, move the station one block north to NW 56th Street and 14th Ave NW and have it emerge on the southeast side of the intersection. That lot contains a low commercial structure and a parking lot, which their removal would cause the least impact to the neighborhood.</p> <p>As a side note, the Ballard Bridge is very old and has been on the City's list for replacement for years. This maybe a budget nightmare, but while you are digging the tunnel for the light rail, how about use the same equipment and construction techniques to replace the Ballard bridge with a tunnel. We are apparently getting funds from the US Government for infrastructure improvement, so here's your opportunity.</p> <p>Edward Rhine 206-631-0158</p>	Ed Rhine
02/16/2022	<p>In the future, please do not build any rail or stations down Fauntleroy. This is where I live, and would be extremely disruptive and expensive for me to relocate.</p>	Linda Takamine

02/16/2022	<p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>First: Thank you for building this section of light rail! I am a Seattle native and 30 year Ballard homeowner, and I worked in Interbay for much of my working life. As such, I very much appreciate the need for this project.</p> <p>Regarding the route: I STRONGLY SUPPORT THE BLUE LINE ALTERNATIVE ON 15th. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to staying in Seattle over the decades and hiring local people, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the BLUE LINE alternative as a good compromise.</p> <p>Thank you for your consideration.</p>	Marc Borges
02/16/2022	<p>I would like to comment on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>As a longtime homeowner in Ballard, and a past employee of an Interbay company, I support this project. Regarding the route: I STRONGLY SUPPORT THE BLUE LINE ALTERNATIVE ON 15th. I've worked in Interbay for Dusty Strings Company located at 3450 16th Ave W. They are a harp building company that was started in Seattle decades ago, and is now one of the top builders in the world. They have been committed to staying in Seattle throughout their history, and are a unique and valuable part of Seattle and the Interbay area, employing a crew of skilled craftspeople. As I understand from reading the EIS, the preferred "pink" line would require the removal of their manufacturing facility. This is a modern custom manufacturing facility built specifically for their operations, and as such they wouldn't just be able to buy a replacement building – they would have to design and build another custom facility. This would upset their business for many years. While I support mass transit in Seattle, I also support businesses that are committed to their employees and to staying in the city. As such I support the building of the BLUE LINE alternative to accommodate both needs.</p> <p>Thank you.</p>	Nancy Borges
02/16/2022	<p>Can the link extend further down south to high point community? High point is a high density residential area with a lot of people working along the current link stations (from downtown to airport). There are a good amount of people living in low income housing and would benefit from a close by public link station as well.</p>	Kate Jiao
02/16/2022	<p>My two concerns are as follows, first being: timing, 2032 is 10 years away and I think this is needed sooner – especially with the bridge being down or closed.</p> <p>My second concern is "Displacement of water-dependent businesses on Salmon Bay and ripple effects on other maritime-related businesses (Preferred Alternative IBB-1a, Option IBB-1b, and Alternative IBB-3). Water- dependent uses have unique characteristics or uses that could be difficult to relocate and may require construction of new facilities. Some water-dependent facilities may not be able to be relocated." What does that mean? I wouldn't want to affect the current west seattle businesses or water in the area and those water/related businesses. Would this affect traffic, especially on Marginal way? There is really only one street currently, being Marginal Way which goes in and out of west seattle - without the bridge. We have to plan that the bridge could need repairs in another 10-20 years.</p>	Olivia Bacon

02/17/2022	<p>Hello,</p> <p>I have a comment after looking at the various alternatives in Ballard. I think the tunnel option along 14th Ave NW is the best option, it disrupts far fewer properties and won't mess up sight lines in the area. Considering real estate prices are going up and up I think elevated lines above the street that requires purchasing properties will be very very expensive by the time construction starts, which is less of an issue for the tunnel. Please do the tunnel.</p> <p>Thank you,</p> <p>Andrew Wiseman 202-270-4464</p>	Andrew Wiseman
02/14/2022	<p>Hi all,</p> <p>I'm a resident of Seattle and transit enthusiast. I am very excited about the expansion of the light rail system in Seattle - that being said, PLEASE reevaluate the Ballard / West Seattle station plans. A station 15 stories deep is just unfeasible. Light rail should be designed to that it's easy to use - the easiest way to do things - and having to take an elevator to a transit stop a quarter mile underground just doesn't sound very accessible. And elevators are especially troublesome given COVID. A 6 to 10 min trip to even get to the station is longer than the time many people will spend on the train - it's wild!</p> <p>Please reconsider cut-and-cover or surface stations. We NEED transit to be accessible and easy in order to combat climate change. Public transit needs to work - and it's not going to if we make it hard for people to use.</p> <p>cheers,</p> <p>Ryan Wilson (530)386-6932</p>	Ryan Wilson
02/17/2022	<p>Several station alternatives are unthinkable deep. This is particularly evident in the comparison between CID-1a and CID-1b. 1a has a higher "price" in the short term (closure/rebuild of existing stations) but results in a vastly superior long-term experience: it's easy to get to and from the station platform from the surface.</p> <p>Considering the high price-tag for these transit projects, decisions should be made emphasizing the long-term utility of these projects-there won't be an easy do-over for the BSLE project.</p> <p>In general, I would prefer stations that are easier to access (close to the surface) and do not become clogged when crowded (like Beacon Hill can), and I prefer grade separation where possible. The regularity with which people are hit in Rainier Valley is unconscionable (as well as restricting train frequency).</p> <p>I admit to being influenced by this article, and I agree with the arguments: https://www.theurbanist.org/2022/01/31/dear-sound-transit-prioritize-rider-experience-take-a-mulligan-on-west-seattle-and-ballard-link/</p>	Jonathan Janzen

02/18/2022	<p>I'm excited for the future of Link, which is why I have this constructive criticism:</p> <p>Do not make the stations super deep.</p> <p>It makes the experience for the rider much worse to have to go up and down 120 feet or more to get to the train. Elevators have a limited capacity and waiting for them can make you miss your train. Escalators are almost always broken at Link stations. The best thing we can do is to make the stations as shallow as possible.</p> <p>Chinatown is one of the greatest places in Seattle. I'm glad it's getting a second station and I have no doubt that it will be very good for the people, business, and culture of the international district, as long as the station is pleasant to use. Please select one of the shallow alternatives. 80 feet or 90 feet is exponentially better than anything over 100 feet.</p> <p>I also strongly suggest you evaluate making any of the other deep stations shallower because it will pay off in the long run, but at the very least, you must select one of the shallow stations for Chinatown.</p> <p>Thank you</p>	Andrew Hu
02/18/2022	YES on west seattle link!!!	Mikiah Fender
02/18/2022	<p>Thank you for putting together the DEIS!</p> <p>I have several comments, which I will list below:</p> <p>The deep stations in ID, Midtown, and LQA are terrible for transfers, which would be required for many people coming from Ballard to jobs/recreation via East Link. These should be made as shallow as possible or go back to the drawing board.</p> <p>I empathize with disruption to local businesses, especially in the ID or Freshman's Terminal, but this is literally why we have local governments and eminent domain. Compensate them for the disruption and then use the public right of way (which belongs to us ALL) for the common good. Shallow 5th is the only viable option of those listed here.</p> <p>All Ballard/Interbay alignments and stations are a joke and are dancing around the elephant in the room -> We don't want to disrupt 15th Ave or Maritime Industry/Port of Seattle at all. But it seems to me that an elevated track down 15th would be the most affordable and reasonable alignment through itnerbay. You could even consider rebuilding the 15th ave bridge as a transit bridge (https://www.theurbanist.org/2022/01/07/moving-the-ballard-bridge-will-remake-northwest-seattle-for-the-better/)</p> <p>On that note, however, I have to say the BALLARD alignments are absolutely a failure of serving the needs of the community. I've lived in Ballard for about 10 years, almost exclusively along the Leary/Market/24th Ave corridor. 24th continues to densify at a strong rate, and has long been a strong transit-use community. The WSBLE does not serve this corridor well, especially considering non-commute uses like recreation to Golden Gardens/Shilshole or eating/drinking/shopping on Ballard Ave.</p> <p>Some options I see:</p> <p>Seriously evaluate an alignment that brings the Link to "Old Ballard" -- tunnel, elevated, at-grade, anything, and include it in the final study</p> <p>Take the least-bad 15th alignment (15 tunnel or 15 elevated) and add another stop somehow, closer to old Ballard (24th?)</p> <p>Take the least bad 14th alignment (15 tunnel/15elevated) but add a new East/West line, similar to the 44 Bus route, and have that Serve 32/24/20/17 and connect to the 15th line. This requires a transfer to get downtown for work, but opens up a very common recreational corridor, and commute for students or employees at UW. You also get maybe closer to Golden Gardens or Shilshole as well</p>	Tyler Doyle

02/18/2022	<p>I am so upset that people do not want a station at Avalon and hope the decision makers take the word of those living in the near by houses and new construction without any parking that rely on transportation like this.</p> <p>Avalon not having a station is going to have a MASSIVE impact when the triangle completely changes in 5-10 years. Did everyone forget about the number of new no parking apartments, micro units apartments and no parking townhouses that are currently being constructed?</p> <p>The junction station is just going to be packed with people.</p> <p>I am pro Avalon station. This NEEDS to be built</p>	Francisco Augustine
02/18/2022	<p>Please keep the Avalon station!!! 100% support this station. I live in this area (right where the concrete pillars will be and still a fan) and it feels short sighted to cut this station due a few vocal folks. For everyone who lives near 35th street and needs to travel for work (etc) to the rest of Seattle, this station will be needed. To ask folks to travel on the transit up 35th and then walk to the Junction station will be short sighted and lower ridership. Avalon and triangle have a lot of new apartment complexes (the lumber yard) and soon new development happening that having a station in that area will encourage more ridership that isn't accounted for in this report. Please consider the comments from those who actually would use this station and lives near this station. It isn't as easy as walking to the Junction station. The triangle is a perfect location to build a station. Thank you!</p>	Pamela Cortez
02/18/2022	<p>Dear Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>As an alternative, compensating Blade Gallery for their relocation, in addition to compensating the building owner's for their property would be acceptable to me. I value Blade Gallery's presence a great deal and simply want to ensure their continued existence. Another move within such a short period of time is a business ending expense.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, Ken Charm</p>	Ken Charm

02/18/2022	<p>I am not a Seattle resident. I live in the UK and collect high quality antique arms and armour from the middle ages to the 18th century but also world-class custom knives by artisan smiths as investment items. Since I was a teenager many years ago Blade Gallery have been the premier venue for these custom pieces. In fact, without disrespect to Seattle, that is what I immediately associate Seattle with. Would be a shame to see it go.</p>	Daniel Parry

02/18/2022	Please only consider options for the West Seattle extension that can be extended further South in the future.	Gina Gage
02/18/2022	For the five years the west seattle train is meant to stop at SODO and transfer, would it be possible instead to have trains with alternate destinations? A rider at Westlake might have a choice of "south bound train toward West seattle and "south bound train toward Tacoma", for example. This system works well in other cities, why not here?	Gina Gage

------------	--	------------------

02/19/2022	<p>I'm a resident of 5th & Madison Condos and I'm concerned about how the tunnel construction options impacting the streets surrounding my building would impact our quality of life, including access to our building and garage, over a period potentially extending to an estimated 6 years.</p> <p>Especially the 5th/Harrison option including "Deep" tunneling on 4th and 5th Ave. would severely restrict access to our parking garage, to an extent that it's unclear from the provided plans how we would access parking through either of our existing garage entrances.</p> <p>Even absent this consideration, 6 years of construction imposing even partial road closures on our block will have a negative impact on quality of life for our entire building community for more than half a decade, which seems a very significant burden.</p> <p>I am also concerned about the impact of long-term closures of major roads on the recovery of our downtown region following the COVID-19 pandemic. It's difficult to imagine how re-routing traffic from 4th and 5th, major roads running through the core of downtown, would not negatively impact the recovery of our local businesses.</p> <p>In Midtown, the 6th/Mercer option seems enormously preferable - with partial closures limited to only 1 year for a section of 6th Ave, and long-term impact extending only to a single highway off-ramp.</p> <p>I strongly support expansion of public transit in the city, but as a midtown resident I worry about the impact of shutting down our existing local transportation infrastructure for such an extended period of time. I hope that you will take this into consideration and opt for a plan that will be less invasive to residents of our city throughout the long construction process.</p>	Matthew Chartier
02/19/2022	<p>I do not want to see this built at all, and especially not as an overhead structure up Avalon and into the West Seattle Junction. There is just no room for it, unless you impact a large number of properties, and views in the area. It will block a lot of light and attract crime and litter. If Beacon Hill can afford to tunnel it, West Seattle can too. We who live here have already been negatively impacted by the 10,000 new people and massive development that has gone on in the last 5 years and it just needs to STOP. The quality of life here has really gone down. The whole thing just seems to be a boondoggle for cement and construction companies. Things of this magnitude need to be built to farther-out places like Burien and White Center, instead of crammed into small city spaces. What are we? Spoiled brats who need the transit to come right to our doors, with no thought for the rest of the community. The whole thing is an eye sore and not in keeping with the needs of the community. How about using the money to enlarge the sewer lines out of West Seattle, since we've already overbuilt for them. Stop building stuff, we don't need. People can just Go Away. You don't need to accommodate them.</p>	Andrea Saunders
02/19/2022	<p>It's my understanding that the company known as Blade Gallery is in danger of losing their business to a group of Socialists land grabbers for the sake of personal greed. Is the person responsible for this another Vlademere Putin ?</p> <p>It's tactics like this that can cause only trouble. It's obvious you don't care about the lives of working men and women who will suffer from your liberal tactics.</p> <p>As a customer of Blade Gallery I'm asking you to reconsider your Hitler type activity and find another way for your venture.</p> <p>Thank you P.J. Evangelista</p>	Pasquale Evangelista
02/19/2022	<p>I want the light rail into the Alaska Junction to be underground. I don't want to see those hideous overhead platforms in our Junction.</p> <p>Jeff Johnson</p>	Jeffrey Johnson

02/19/2022	<p>I live at 5th and Madison Condominiums. We own Unit 703. I have reviewed the West Seattle and Link Extensions plans and have many concerns. Your data isn't accurate regarding residential units impacted for 5th/Harrison. It shows 26 units. Our building alone has approx. 125 units. Midtown Diagonal configuration shows partial and full closures of 5th and Madison in front of our building and side of building. Closures for years depending on depth with little detail regarding what that means. We must have access to our parking garage from Madison between 4th and 5th. That same side must be accessible for access to building utilities and maintenance. Our building requires emergency response access, utility access, trash removal, move-in/out access, building maintenance, noise limit considerations at a minimum. Please advise immediately how all of these items will be mitigated. Our BOD at 5th and Madison will also be communicating numerous concerns to include, but not limited to the above.</p>	Kelly Nispel
02/19/2022	<p>Based on ridership projection and proximity of neighboring stations, I think we need to re evaluate the Avalon station. Please force the board to evaluate a solution that combines Alaska junction and Avalon station.. also from an equity standpoint I'm shocked that a third station in white center wasn't considered.</p>	Steve Gregory
02/20/2022	<p>I am excited that the region is finally expanding public transportation.</p> <p>There have been critical mistakes made in the past.... Such as surpassing a stop at the Southcenter Mall, not creating a stop at Bellevue College, not creating a stop at the top of the hill in the University District.</p> <p>Hopefully, expansions consider significant points of interest to the public before the line is designed to pass them by.</p>	Justin Giossi
02/20/2022	<p>The appropriate light rail station would be built in White Center, South Delridge. The north end of West Seattle is more affluent, future ridership stops should not just be catered to this one portion of West Seattle. If you are building more than one station, they should not all be concentrated in one area. Absolutely need to move the Avalon and/or north Delridge station to the South end of West Seattle, by Roxbury. Our neighbors in 98146 deserve to be connected by light rail with a station. Its irresponsible to put 3 stations all in one concentrated area. Please consider the South End of West Seattle!</p>	Leah Pham

02/20/2022	<p>Dear Council Members and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is an extremely unique business, serving as a hub of the PNW bladesmithing community and that of the international community as well. It simply cannot be found anywhere else in the region and Seattle would be less without it and the community it fosters. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community - especially that of the local PNW region.</p> <p>The BladeGallery Showroom is at: BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, David Fowler 13409 SE 42nd St. Bellevue, WA 98006 fowlerds@gmail.com 206-795-1530</p>	David Fowler
02/20/2022	<p>Regarding the West Seattle Avalon Station and comments to reconsider station development - I would like to voice my support, as a resident, that considering Station development is critical. With slated developments (townhouses, apartments, etc.), the area will continue to become more mixed used and residential.. bringing in more residents and business in the future.</p>	Andrew Soucy

02/21/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a knife maker from Sweden Michael Andersson is my name. I stamp my blades with Micke.</p> <p>BladeGallery's Epicurean Edge in SODO (Seattle) has sold my work for 20+ years I first met Daniel O`Malley at Blade Show in Atlanta, we have also been good friends since that. A really honest and nice person to do businnes with. This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and I know they will have classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, Michael Andersson Home address: Forsnasvagen 40, 91892 Bullmark, SWEDEN Email: mickandersson@hotmail.com Phone:+46703169350</p>	Michael Andersson
02/21/2022	<p>I live at 3212 Genesee ST, which is right across from the proposed Avalon station. I want to say, like so many other people, the Avalon station is not needed. Personally, you might think I don't want it because it will impact me-I don't care about that. I am selling in 5 years and ST purchasing it via eminent domain would most certainly be better financially for me than outright selling, so I actually, from a personal economic stand point want it, but it absolutely makes no sense for the cost vs usefulness standpoint, not to mention the huge disruption to entering and exiting WS via the bridge that constructing it would cause. It is economically better to take that station out of consideration due to low ridership projections (which are probably skewed higher than they will be in reality) and the close proximity of 2 other stations. Please, take it out of consideration and use the money for a tunnel, which all around would be better for WS.</p>	Michael Commons

02/22/2022	<p>My name is Ryan Knudsen, and I am the facility manager for SSA Marine (1131 SW Klickitat Way) and for Tideworks Technology (1129 SW Klickitat Way) both of which will be adversely impacted by the proposed preferred light rail line route across Harbor Island. It is hard to determine from the graphic of the proposed routes, but it appears that the preferred route will run directly through the north side of Harbor Marina Corporate Center buildings and our Tideworks Technology building? Furthermore, if this is the case, I don't think my management would want their corporate SSA Marine headquarters' office at (1131 SW Klickitat Way) in direct proximity to a light rail line - that doesn't have a stop on Harbor Island. I understand that if the preferred WS light rail line is approved, and it does require the tearing down our Tideworks Technology building that we receive fair market value for the property. How will the compensation for our property be determined? How would we be compensated for the real estate value of our SSA Marine office going down due to the immediate proximity to a light rail line? If we are required to relocate due to either eminent domain or because the location is no longer suitable due to construction impacts, will we be provided relocation assistance? Will we be allowed to hire our own appraiser to assess the properties?</p>	Ryan Knudsen
02/22/2022	<p>Please consider putting the Ballard station under 15th Ave NW at Market Street with a pedestrian under pass. This would allow pedestrians to avoid the dangerous crossing at 15th and would improve their travel time. You could also then remove the street level pedestrian crossings, which would improve the intersection for cars as well. Also, make sure to leave some place for coffee stands and takeaway food in the underpass!</p>	Alexander Anderson

02/22/2022	<p>I am a resident of Ballard. First and foremost, I highly support any plans to build the West Seattle and Ballard Link extensions - do whatever it takes to get this project done. Transport by car is no longer a tenable option for the area, and anything is better than the no-build alternative. I realize that this will necessarily involve the adverse impacts listed in section ES.5, as well as the alternative-specific impacts, but these are a small price to pay compared to the no-build scenario.</p> <p>With that said, I would specifically like to voice my support for the Interbay/Ballard IBB-2a and IBB-2b alternatives which propose using tunnels for this area. This will minimize visual, noise, vibration, shoreline and water transport impacts. I personally think these are valuable in their own right, and additionally I believe they will be useful for maintaining political support for the extension by minimizing publicly-visible disruptions. On top of that, literally, they will reduce land-use requirements which will be good as land is an absurdly valuable and scarce resource within the city.</p>	Benjamin Guyer

02/24/2022	It would be very desirable if the WSTP property on 42nd would be chosen. This would stimulate the general commerce and promote pedestrian traffic for the Junction business.	Leon Capelouto

02/11/2022	<p>With its price tag being comparable to the other options, not requiring the light rail to be impacted by the use of Ballard Bridge when finished, and the least amount of displacement to residents and businesses, I vote for IBB-2a, the 14th ave tunnel option. Let's do the least damage to our skyline and our neighborhoods when we are working to improve our city.</p> <p>Lauren Wyckoff EarthGen - Learning Sparks Action Empowering our youth to combat climate change.</p>	Lauren Wyckoff
02/16/2022	<p>Hi All, I strongly support the option of tunneling under the Ship Canal. While there are additional costs up front, this is a project that will be here for generations, and the tunnel is not only better aesthetically, but it will also ensure consistent travel. Very truly yours, Curtis Chambers</p>	Curtis Chambers
02/17/2022	<p>Hi, my name is Scott Delhommer. I live in Lower Queen Anne, and I have some serious concerns about the design of the proposed light rail stations. Specifically, I'm extremely worried about how deep the tunnels will be downtown especially for the transfer between the lines at Westlake and the International District section. Tunneling so far down increases the costs and timeline for the project while also making the transit experience for riders significantly worse. It will necessarily increase transfer times as riders will have to use long escalators and elevators to reach their transfer and make all of these trips longer than they need to be, making light rail less competitive with car travel. Furthermore, I'm really concerned that there will be serious challenges with upkeep of the new elevators and escalators that will be needed for these really deep stations. Sound Transit seems to have serious problems with upkeep of the escalators in Westlake station and they are not long escalators. If we have trouble maintaining short escalators for our current stations, I'm worried that we will continue to have issues with even longer escalators for these new stations. I can easily take the stairs for the Westlake station when the escalators are out, but that won't be feasible for these deep stations. Even if we greatly improve the maintenance of escalators and elevators, it will be nearly impossible to maintain these 100% of the time. I'm worried that riders will have an extremely negative experience with these deep stations and it will push them more to taking cars for travel instead of the light rail. I would like it if ST focused more on designs using cut and cover along the streets for the light rail lines. I know that this will be unpopular with certain business owners. While cut and cover would be more disruptive in the short-term, it will allow for the light rail lines to be completed more quickly and on a smaller budget while creating stations that are less deep, which will also lower maintenance costs and transfer times. If there are serious concerns from business owners, it may be possible to compensate them with the money that ST would be saving by not having to bore so deep underground. I implore you to reconsider these deep tunnels and stations. These deep tunnels and stations will have long-term and negative implications for our transportation network for the next 50 years and these decisions won't be able to be reversed once the tunnels and stations are set up. The current plan is setting up ST for costly tunnels, maintenance, and a poor rider experience for transfers and getting to and from the stations. Please reconsider. Thank you Scott Scott D.</p>	Chris Delhommer

02/19/2022	<p>Dear Council Members and Sound Transit</p> <p>I have been a customer of BladeGallery for the better part of a decade. Last fall, they moved their business operations from Kirkland, WA to Seattle. I was happy to hear about their new larger storefront and look forward to receiving periodic updates regarding the classes they will be conducting on knifemaking, forging, culinary knife skills, and sharpening. I have recently been informed that BladeGallery is in danger of their new location being taken through eminent domain in connection with a Light Rail project. Please keep in mind during the Light Rail discussion and planning process that BladeGallery is a unique business that serves as a hub for the international bladesmithing community. These artisans would be hard-pressed to find such an institution anywhere else. I would also very much appreciate your consideration and support in finding a path for the Light Rail project that does not force BladeGallery to contemplate moving its business operations again or shuttering.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I look forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. 02/19/2022	<p>Dear Councilmembers and Sound Transit:</p> <p>Roughly 12 years ago, I wandered into BladeGallery Epicurean Edge's store in Kirkland, WA looking to replace my chef's knife. That began my journey of learning about and becoming a collector of custom-made knives. As a customer over the years, I've come to realize that BladeGallery's Epicurean Edge may be one of the best knife shops in the world.</p> <p>Daniel O'Malley and the staff at BladeGallery worked hard through the difficulties of COVID-19, to renovate and then move from Kirkland into their new store in the SODO area of Seattle. I look forward to visiting the store this Spring, on my next trip to the Pacific NW. I just learned that BladeGallery's Epicurean Edge is in danger of losing their new location at 3628 E Marginal Way S, Seattle, WA 98134, due to eminent domain for Light Rail.</p> <p>BladeGallery's owner, Daniel O'Malley, his passionate and dedicated staff, the hundreds of bladesmiths they represent, and thousands of customers, collectors and chefs they serve are a cultural and economic treasure for the Seattle area and beyond, because:</p> <ul style="list-style-type: none"> o Their 2200 square foot showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors and manicure gear, and draws guest from all over the world to Seattle. o BladeGallery currently supports 7 employee households o They represent 600 artisans from around the world who create custom knives. In many cases, BladeGallery is the primary source of income for these artists o They provide a high-performance sharpening service for home and professional chefs o They offer classes for both beginners and established knifemakers. <p>Simply put, they are the best at what they do. It would be loss to the local, national and international knife making, knife collecting and chef's communities if the store did not exist.</p> <p>I ask that you help find a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Thank you for your consideration.</p> <p>Sincerely, Regina Weichert BladeGallery Inc Customer: Regina Weichert Home address: 467 Central Park West, Apt 12E, New York, NY 10025 Email: reginaorders@icloud.com Phone: 917-863-4727</p>	Regina Weichert

02/21/2022	<p>Dear Councilmembers and Sound Transit,</p> <p>I am a customer, as well as a Seattle based small business, who's work is represented at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I will also be involved as one of their instructors, and am very excited about the state of the art facility that they have been working so hard to create there. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop. BladeGallery's Epicurean Edge, and their high standing in the world of artisan made cutlery has made it possible for me, as well as many others in our trade, to get our work to an international clientele, that we might otherwise not have access to. The world of handmade cutlery is very specialized, and to be represented by their knowledgeable staff is invaluable not just to the craftspeople they represent, but to the consumer as well.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. ------------	--	-------------------

<p>02/18/2022</p>	<p>Council members and Sound Transit,</p> <p>I am a long time customer of The Epicurean Edge. I've made several purchases from them over the years in addition to bringing my knives in for regular sharpening services. Just last weekend, I was in their new space in SODO buying a couple new kitchen knives. I've always appreciated The Epicurean Edge for their quality products, expertise, advice, and service. Their new space is a fantastic improvement over their old, small, location in Kirkland. I was also excited to hear about some of the classes and partnerships they're working on, and am looking forward to attending some of them.</p> <p>I've also recently learned about potential plans to eminent domain their building for the light rail path. As much as I believe in good quality knives, I also believe in public transit. This puts me in a difficult position. On one hand, The Epicurean Edge is the only retail establishment of its kind in our area, and it would be a monumental shame if they were forced to shutter operations. On the other, public transit is important to our ever growing area.</p> <p>I would implore the Council and Sound Transit to choose a path for Light Rail that does not force them from their new home. They provide a unique and important service to their customers that simply isn't available anywhere else in our area.</p> <p>Thank you for your consideration.</p> <p>Jon Wong 13221 SE 151 ST, Renton, WA smashplastic@gmail.com</p>	<p>Jon Wong</p>

02/19/2022	<p>Dear Councilmembers and Sound Transit:</p> <p>I have been a customer of Epicurean Edge for many years. Last fall the Gallery moved from Kirkland to Seattle. The move took almost two years but resulted in an expanded showroom and teaching center complete with forges for classes. I'm excited about their larger storefront and look forward to their culinary knife skills and sharpening classes. I've heard that they are in danger of their new location being taken through eminent domain for Light Rail. If so, Epicurean Edge likely won't survive. This is a unique business, serving as a hub for the international bladesmithing community that can't be found elsewhere. Please help support a revised plan for Light Rail that does not force Epicurean Edge to move again or close shop. Sound Transit announced that their current plans are "financially unsustainable", yet the threat of eminent domain now hangs over this thriving, unique business. That is unfair.</p> <p>Who is BladeGallery?</p> <ul style="list-style-type: none"> • BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. • The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. • They also offer a high performance sharpening service for home and professional chefs. • I'm looking forward to their classes aimed at established knifemakers and beginners. • BladeGallery Inc is a small business that currently supports 7 employee households. • BladeGallery Inc supports over 600 artisans from around the world, custom building knives. <p>02/20/2022</p>	<p>Dear Councilmembers and Sound Transit,</p> <p>I have been a customer at BladeGallery's Epicurean Edge for many years, and have followed them as they made the move from Kirkland to SODO. They've asked for my help in bringing to your attention how difficult it would be for them to pick up and move yet again. Everyone loves light rail...I get it! But I want to make sure you realize how unusual and how special this small business is.</p> <p>If you walk into their store and point at a knife, it will have a story. It could have been made by a person named Brian in Oregon, or a master in Japan who has been making knives since before you were born. The people that work there will tell you all about it. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>Then there's the community aspect. When I bring in my knives to get sharpened, I invariably bump into someone working in a local restaurant picking up their work knives. A sharp cooking knife is a safe knife. They're also planning classes, which sound great.</p> <p>The finances of a small business like this are always tight. There are multiple families whose livelihood depend on this shop staying open. And there are many many artists who need a responsible and skilled shop to help bring their pieces to the public. I'm writing to ask that you please help them stay in their current building during the light rail expansion project.</p> <p>Thanks! And now you totally know where to take your knives to get them sharpened!</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Sincerely, Sarah Brown 9207 NE 20th St Clyde Hill WA 98004 sarah.lally.brown@gmail.com 206.909.8154</p>	<p>Sarah Brown</p>
<p>02/20/2022</p>	<p>I read your DEIS, and all the alternatives seem terribly disruptive and unpleasant to live with. Also very expensive - much more than we thought when we voted in 2016 - with a lengthy construction period. I've heard there's a cheaper alternative that wouldn't destroy so much property and wouldn't take up so much room, could be completed quicker and then wouldn't be so imposing on the landscape - an aerial gondola. Why not spend a relatively small amount now and contract with an independent engineering firm to do a study on that idea to connect West Seattle with SODO and the ID?</p> <p>Thank you for considering this.</p> <p>Annie Phillips</p>	<p>Annie Phillips</p>

02/21/2022	<p>I am a long-time customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and think that the classes such as knifemaking, forging, culinary knife skills, and sharpening will be of great benefit to the city. In the past, I've actually visited the Seattle area from the East Coast where I live in order to visit this internationally known business. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international blade smithing community that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery? 02/22/2022	<p>Dear Council members and Sound Transit,</p> <p>I am a longtime customer of BladeGallery's Epicurean Edge which moved from Kirkland WA to SODO in Seattle just last fall. They have spent the past two years customizing this new space, building out the forgery, and ensuring it is meeting every spec to be environmentally sound. I am excited to visit for classes and to see hands on their amazing offering of knives.</p> <p>However, recently I have learned they are now in danger of this newly customized space being taken from them through eminent domain for Light Rail. After building a successful specialty business and fostering an international community of blade smiths and artisans over these past twenty plus years, then surviving through two years of pandemic upheaval, now they are going to lose everything to eminent domain?!? How can that be right?</p> <p>Epicurean Edge is a unique business offering hand crafted knives from makers around the world. Seattle's professional chefs and home cooks alike rely on their high quality blades and sharpening services — the best in the country. Please help ensure this local treasure stays open for years to come; please help support a path for Light Rail that does not force them to close shop.</p> <p>I very much appreciate any effort you can make in this regard. Forcing this business to move again after this tremendous investment could so readily lead to their closure, which would be a tremendous hardship for their employees and hundreds of artists / bladesmiths they represent as well as a great loss to the broader artisan knife making community, the SODO district, and caring chefs and cooks everywhere.</p> <p>Epicurean Edge is located at: BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Sincerely, Beth Berger 3505 Old Post Road Fairfax, VA 22030 Bberger@newgrowthconsulting.com 425.941.6504</p>	Beth Berger

They've spent years building an international reputation that should be celebrated in our Seattle community. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, Katharine McCoy BladeGallery Inc Customer: Home address: 417 E Pine St Seattle, WA 98122 Email: katmccoy79@gmail.com Phone: 480-612-7412</p>	Katharine McCoy
02/23/2022	<p>Hello,</p> <p>I am a customer of BladeGallery's Epicurean Edge, an excellent small business that provides an outstanding service.</p> <p>They employ helpful and friendly members of our community, allowing them to work closely with a great passion of theirs.</p> <p>It is a unique business that would have no replacement, and they cannot survive an acquisition of their building towards which they have invested so much.</p> <p>In a time that has put inordinate stress on the already struggling small businesses left, it would be a genuine tragedy to lose them to this.</p> <p>Please, I ask you to fully consider the implications of your potential actions.</p>	Patrick G

02/22/2022	<p>Dear Council Members and Sound Transit,</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and look forward to their classes such as knife-making, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. The pandemic has placed incredible strains on the small businesses of this country, with many disappearing, this is not the time to add to that strain with eminent domain seizures of property. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knife-making community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, Nathan Wager 426 Cornell Ave Des Plaines, IL 60016 nate@petrii.net 414-687-0408</p>	Nathan Wager

02/21/2022	<p>Distinguished members of the Council and Sound Transit</p> <p>I am a customer of BladeGallery's Epicurean Edge at SODO (Seattle). They moved from Kirkland, WA to Seattle last fall. I am very excited about their new larger shop window and look forward to their watches like knife making, forging, culinary knife skills and sharpening. I recently heard that they are in danger of having their new location taken over through the eminent light rail domain. This is a unique business, serving as a hub for the international blacksmith community, which cannot be found anywhere else. Please help support a light rail road that doesn't force BladeGallery's Epicurean Edge to relocate or close the store.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc. attracts guests from all over the world to their workshop in Seattle (SODO). The 2,200-square-foot exhibition space displays a wide selection of handmade and production knives, including cooking knives, tactical and practical knives, flat razors and manicure equipment. They also offer a high performance sharpening service for home and professional chefs. I look forward to their courses for established knife makers and beginners.</p> <p>BladeGallery Inc. is a small company that currently supports 7 household employees. BladeGallery Inc. supports more than 600 artisans from around the world, custom-made knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, help support this unique business and ensure it stays open for many years to come. I greatly appreciate all the effort you can make to choose a light rail route that does not force BladeGallery Inc to relocate or close - resulting in enormous difficulties for their employees and the hundreds of craftsmen they represent. Furthermore, closing BladeGallery Inc would be a significant loss for the wider community of craft knife makers.</p> <p>Being a customer from Bosnia and Herzegovina, I am pleasantly surprised by their professionalism and kindness. In just 5 days I received the package at my address in Bosnia.</p> <p>The BladeGallery exhibition space is located at:</p> <p>BladeGallery's Epicurean Edge 3628 E Rubni put S Seattle, WA 98134 (425) 889-5980 your, Robert Toljusic Client BladeGallery Inc: Home adress: Kruscica bb, 72250 Vitez, Bosnia and Herzegovina e-mail: robert.toljusic@gmail.com Phone: +38761795529</p>	Robert Toljusic

02/20/2022	<p>Hello,</p> <p>I think the priority regarding WS should be at least getting from the Sodo stop across the Duwamish to a first stop near Delridge/under the West Seattle Bridge. That way West Seattleites at least have one stop and can get themselves to the connected system. I'm afraid that bickering over where the route will go/whose condo will be torn down will put the entire WS Link into jeopardy. The area under the WS Bridge that the train will go is not residential and there will be less debate. Please at least make this first portion happens, and sooner than 2032 would be amazing.</p> <p>Thanks, Gwen and Steve</p>	Steve Raparelli

------------	---	----------------

02/20/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer of Blade Gallery's Epicurean Edge in SODO (Seattle). I have been a loyal customer for more than 15 years and they offer goods and services that cannot be found anywhere else. I continued to shop with them even while I lived outside of the PNW. Over that 10-year period, I continued buying good and services from Blade Gallery due to their unique offerings and exceptional customer service and knowledge. The impact they have on the custom knife world cannot undervalued. They are truly one of the few brick and mortar retailers left in the country that support the small mom and pop makers of the world and offer truly exceptional sharpening services. Where else can you go to find the deep knowledge, they possess and touch functional works of art like you can at Blade Gallery? With the popularity of the History Channels Forged in Fire, the classes they plan to offer in the future will drive tourism and revenue for the city of Seattle for years to come. Seattle has seen the closing of other stores like City Kitchens that had a unique set of goods to offer. Small businesses like these need the protection of those in government to keep Seattle as unique as possible.</p> <p>In the fall of 2021, Blade Gallery moved from Kirkland, WA to Seattle after decades of supporting that community so that they could expand their goods and services. I'm very excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. These art forms are part of the dying fabric of our country where commodity driven disposable 'kitchen ware' have taken over from heirloom quality pieces handed down from generation to generation. Who does not have or remember their grandparents cast iron skillet or knife that was just plain sharper longer than any other? While those items are hard to find, one place you can still find that special and sharp knife is at Epicurean Edge.</p> <p>I've recently heard that they are in danger of losing their new location to eminent domain for Light Rail. While I support all activities that improve transportation in the Seattle area, this is a unique business. One that has invested significantly in the community and in the arts of this area. They want to become a hub for the international blade smithing community. One that can't be found anywhere else. They picked Seattle due to its rich food culture, and diverse international community who want and need this type of place to exist downtown. Please help support a path for Light Rail that does not force Blade Gallery's Epicurean Edge to move again or close shop permanently due to the economic hardships they will face if forced to move. If they are forced to shut down, it will rob Seattle and the Pacific Northwest of this valuable cultural and educational business. I move that will potentially force this store out of the area, state or worse case scenario shut down entirely.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery and store front that draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives. These include chef's knives, practical knives, straight razors, and manicure gear at all price points.</p> <p>They are bests known for custom sole authorship kitchen knives from around the world. Supporting small US and International makers from all over the world.</p> <p>They offer a high-performance sharpening service for home and professional chefs and can sharpen almost anything you can bring them. This dying skill set if delivered at a level that has to be experienced to be understood.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners. These include sessions from American Blade Society Master smiths and other local artisans.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world. In many cases, BladeGallery is the primary sales mechanism for these artists helping the global and local economies of those workers</p> <p>During this uncertain and stressful time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close. Allowing Blade Gallery to be shut down will result in tremendous hardship for their employees and the hundreds of artisans they represent.</p> <p>Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community and impact the City of Seattle both now and in the future. Help Blade Gallery continue to educate and serve the local and international customers who shop with them and support/market small makers and restaurants that keep Seattle fed.</p> <p>The BladeGallery Showroom is at: Blade Gallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980 Respectfully, Michael S. Hatt 330 NE Denny Way, Issaquah WA Email: mhatt757@gmail.com</p>	Michael Hatt

02/19/2022	<p>Dear Sound Transit,</p> <p>We were just notified that the building that Blade Gallery's Epicurean Edge has spent the past two years renovating after moving from Kirkland may be acquired through eminent domain by Sound Transit for a Light Rail Path. This business has spent much time and money preparing their new and larger storefront in a difficult time. Not only do they have a selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear, but they will be offering classes to the public, such as knifemaking, forging, culinary knife skills, and sharpening. This is a business that has an international reputation as a hub for the international bladesmithing community. It seems inconceivable that the city would force this company to move again or close shop when the city is looking to bring back more small businesses. The store is a unique business, and we would be disappointed to see it move or close since it supports local employees and artisans from around the globe. Please do all you can to find another path for the Light Rail that allows this business to remain in their current location. Also, it would behoove you to visit this company and see for yourselves what an asset it is to our city.</p> <p>Thank you so much for your consideration.</p> <p>Sincerely, Jim and Linda Spoor 6508 2nd Ave NE Seattle, WA 98115</p>	Linda Spoor

02/18/2022	<p>I have been a customer of the Bladegallery Epicurean Edge for over 22 years and am dismayed to hear they may be forced out due to a light rail expansion. That would be a disservice to Seattle. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close. Work out a different route to help preserve this unique small business.</p> <p>Thank you. David Plude 2837 NE 178th St, Lake Forest Park, WA 98155 206.948.6631 davidplude@gmail.com</p>	David Plude

02/18/2022	<p>I get how Seattle has been transforming and I'm not one to push back change. Change is a representation of the people. However, I write this because I am part of the community by which this building is important. As a Seattle native, I've seen the city personify originality. I imagine as councilmembers that you too can understand how deep original thinking is to Seattle. What Light Rail seeks to take over is a community hub born from that same original spirit.</p> <p>The Epicurean Edge is a community that brings knife smiths from all over the world. Furthermore, the diversity of knife smiths as well as chefs that walk through these doors is already a testament to why an establishment like this needs to stay open. I'll let Daniel (business owner) attest to his travels and patrons...</p> <p>In another spirit, we live in the information age and Seattle is a locus of this era. However, I plead you to consider another spirit by which information is also garnered not on the internet but by the pure diligence and experiential practice passed down, in person, in what this store represents. Please don't think of this as just-another-knife-store. You are threatening a diverse community that only bolsters Seattle as an independent thinking leader.</p> <p>I plead you to keep this establishment free from Light Rail's eminent domain proclamation.</p>	Victor Quan

In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Best Regards,</p> <p>Wilson Wong 9 Thornton Street Quincy, MA 02170 wilson.wong.05@gmail.com 781-888-7929</p>	Wilson Wong
02/25/2022	<p>Is equity important for this project? The Avalon stop is suppose to provide access to residents from High Point, the largest mixed income community in Seattle, to light rail. Currently, some West Seattle residents are suggesting a "cost-saving" solution: the elimination of the Avalon stop. This will make it more difficult for low income, mostly black residents, to access the light rail and it will favor the high income residents from Alaska Junction. If you are truly considering cost-cutting alternatives, eliminate the Alaska Junction stop. That is the most expensive stop. Alaska Junction residents can walk to Avalon. Other residents can take the bus to Avalon, the same way we take the 21 bus to Avalon. In time, expand the light rail from Avalon, along 35th Ave SW, all the way to White Center! Improve access to modern public transportation for low income residents!</p>	Codrin Nedita

02/26/2022	<p>As a West Seattle resident, I strongly support the tunnel alternatives WSJ-3a or WSJ-3b (ES-20). In fact, if these cannot be built on the planned schedule due to funding constraints, I would favor terminating the line at Delridge Station based on the Minimum Operable Segment specification until tunnel funding can be secured. Elevated lines:</p> <p>Disrupt neighborhoods. Are visually obtrusive. Consume high value real estate and in consequence can harm urban development. Consume space that would better be used for other purposes, including pedestrian, bicycle, and auto traffic.</p> <p>At-grade lines have the above disadvantages and can also result in slower service, higher labor costs, and higher accident risks.</p> <p>Tunnels, in contrast, preserve neighborhoods, real estate, and urban space, do not create unsightly visual barriers, and do not entail the cost and potential delays of acquiring surface properties and having to temporarily or permanently alter surface traffic patterns.</p> <p>It is also critically important to have a strategic vision. West Seattle's growth is likely to continue for the next thirty years or more. The tunnel alternatives will set the area up for better future light rail options and will enhance the development of the urban village at West Seattle Junction as well as future urban clusters. It is notable that many communities are now seeking to dismantle elevated roadways, as detailed in the following:</p> <p>https://www.archpaper.com/2021/06/explore-removing-elevated-highways-with-federal-infrastructure-funds/ https://www.theb1m.com/video/america-interstate-highway-system-teardowns</p> <p>Let's learn from these and make the right choice.</p>	Joseph Boland

02/28/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, Paramita Mookherjee</p>	Paramita Mookherjee
02/28/2022	It will be good to expand the light rail to cover different parts of the city to help with the current bus transit system, which at times may be unreliable due to traffic conditions on the streets. I guess better late than never?	ALEX KALAW
02/28/2022	I like the 5th/Harrison alignment for all the reasons listed in the table comparing that with the 6th/Mercer alignment.	Eric Wong
02/28/2022	I've been voting for the Monorail and everything that might get us some semblance of BART for over 20 years. I have stopped paying attention because I feel like anything the people vote for won't get built anyway. Just keep expanding!	rebecca allard
03/01/2022	<p>Please go for tunnel options, don't demolish new apartments!</p> <p>According to recent statements by Sound Transit, we may not need third party funding for the tunnel options in West Seattle and Ballard. I'm especially focused on West Seattle because I don't want to see new apartment buildings demolished. Transit oriented development (i.e. apartments by Link stations) make Link and Seattle better!</p> <p>https://www.theurbanist.org/2022/02/28/ballard-west-seattle-link-third-party-funding/</p>	Andrew Hu
03/01/2022	Regarding chapter 2, please use a cut and then a tunnel from Interbay to 14th Ave NW. From there, just continue tunneling. No surface rails or elevated lines, they're intrusive, awkward, and ugly. We've big hills, just tunnel through, please.	Emilie Zuffrey
03/02/2022	<p>I'm a west seattle resident who's attended approximately six of your meetings.</p> <p>In each meeting the subject of combining the Avalon and Alaska Junction stations was brought up by numerous attendees. I agree that your proposed locations are too close. Seems like a waste of money to have both so close. A perfect location would be the block where Trader Joe's, Eastside Church and Collision Repair Center are.</p> <p>Why aren't we saving money by combining the two mentioned stations?</p>	John McAlpine

03/02/2022	<p>I live a few blocks away from the proposed Ballard light rail station. I don't have strong opinions on which of the several Ballard options to pursue, except to say that best option is the one that brings light rail to Ballard soonest. Many new townhomes and apartment buildings are under construction in the neighborhood with little or no car parking provided. The residents of these new homes, as well as current residents, need reliable car-free transportation as soon as possible. Thank you for listening.</p>	Gregory Wallace
03/02/2022	<p>I am a resident of Ballard and I'm writing to express my preference for either of the two tunnel (Interbay/Ballard Segment - Preferred Tunnel 14th Avenue Alternative (IBB-2a), and Interbay/Ballard Segment - Preferred Tunnel 15th Avenue Station Option (IBB-2b)) options for the Ballard Extension to cross the Ship Canal. The impact will be the least on the actual ship canal and more visual pleasing than an additional bridge. The tunnel will also have less impact on the businesses, employees, and residents along 15th AVE or 14th AVE.</p> <p>I understand a project of this size will have a massive impact on a neighborhood, but the cost difference is minimal for the tunnel vs elevated crossing of the Ship Canal and the reduced impact of the tunnel far outweighs the minimal cost increase.</p> <p>Thanks Chris</p>	Christopher Sanborn
03/02/2022	<p>It would save money and time in building (including trying to cross the ship canal) if you went from Ballard to UW. But if you are going to keep going over or under the ship canal, the stop has to be further west than 14th, like 20th, where most people want to go if they are visiting Ballard (or the hospital)</p>	Alex Choi
03/03/2022	<p>I fully support placing the Ballard Station somewhere to the west of 15th Ave. A station at 20th would be ideal.</p> <p>If the studies are now showing that tunneling is roughly equivalent in cost to elevated, and a tunnel at 14th is the cheapest, then please study a tunnel at 14th that curves, or angles to the west and terminates at a station west of 15th. (NOT at 15th, WEST of 15th is ideal to put it in the heart of Ballard.)</p> <p>Thank you</p>	John Scott

02/13/2022	<p>Dear Lauren,</p> <p>I am writing this letter to ask two questions regarding the Link extension project.</p> <p>According to the brochure, the preferred alternatives is to build elevated bridges to carry the rail across Duwamish Waterway (parallel to West Seattle Bridge) and Salmon Bay. Can you confirm this? Given that fact that elevated bridges, like West Seattle Bridge, Aurora Bridge (carrying SR-99) and Ship Canal Bridge (carrying I-5), serve as part of the city landscaping, I assume these two bridges will play an important role and transform the existing ones of West Seattle Bridge area and the Salmon Bay area. Do we currently have any designs, proposed or adopted, about the visual appearance of the two bridges? If so, when will it be disclosed to the public? If not, what is the procedure next?</p> <p>I am looking forward to your reply. Thank you.</p> <p>Best, Fan</p>	Fan Jin

<p>02/23/2022</p>	<p>Dear Sound Transit,</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO. This past fall they relocated from Kirkland to Seattle. I was excited to see their new and larger space, but recently discovered that Sound Transit may be acquiring the building through eminent domain for a LightRail path. BladeGallery recently acquired their building and remodeled it at tremendous cost of time and resources during the Covid-19 pandemic.</p> <p>BladeGallery is a unique business that serves an international customer base from Seattle. It would be a huge loss if they were forced to close as a result of this forced acquisition. They are a small business that currently supports 7 employees locally and over 600 artisans from around the world.</p> <p>Please help support this unique business and ensure that they will remain open for years to come. I greatly appreciate any efforts that you can make to select a path for LightRail that does not force BladeGallery to move to close down.</p> <p>The BladeGallery Showroom is at :</p> <p>3628 E. Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Sincerely, Rick Kellogg</p> <p>Rick Kellogg 206.683.8269 (c)</p>	<p>Rick Kellog</p>
<p>03/03/2022</p>	<p>My name is Paula Libes Chester. I have been both employee and customer of the world-class cutlery store and procurer/seller of artisan-made knives: Epicurean Edge/Blade Gallery, formerly of Kirkland.</p> <p>I am writing today to implore you to support a path for light rail that does not force this unique business to move or close. In the new, larger location they have been able to offer classes in knife-making, forging, cutlery skills and sharpening, a boon to the community, well as their huge selection of the finest knives available anywhere!</p> <p>Moreover, the artistic renovation of an original building in this burgeoning Seattle district is swift becoming a landmark! I hope you will consider my feedback and that of others to bring out a workable solution that would allow this remarkable business to go on supporting 7 employee households and 600 artisans around the world.</p> <p>The BladeGallery Showroom is at: 3628 E Marginal Way S Seattle, WA 98134 phone: 425-889-5980</p> <p>Light Rail is a great asset to our area, as is Epicurean Edge!</p> <p>Thank you for your time and consideration.</p> <p>Sincerely, Paula Libes Chester 7930 SE 34th St. #105 Mercer Island, WA 98040 paula.libes@gmail.com</p>	<p>Paula Libes Chester</p>

02/28/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). I have patronized their former store location in Kirkland and was excited to learn that they were moving to Seattle. I'm very pleased with their new, larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening.</p> <p>I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop. There must be something that can be done to help this small business survive.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high-performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at: BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Thank you for your consideration.</p> <p>Very Truly Yours, Jerry H Moos BladeGallery Inc Customer: 933 N. Northlake Way Slip 2 Seattle, WA 98103 m) 425-241-8351 jerry.moos@outlook.com</p>	Jerry Moos

02/27/2022	<p>Dear Councilmembers and Sound Transit representatives,</p> <p>I've been a customer of BladeGallery's Epicurean Edge for almost ten years. When they moved their business from Kirkland to SoDo last year, it meant a longer drive for me, but also a beautiful new gallery, with areas for classes and a full showroom. I fell in love with the new space. It is a true destination, somewhere between storefront and museum, showcasing hundreds of artisans and helping new enthusiasts (like me, once) to dive into this very special crafting community.</p> <p>I hope all this helps to explain why, when I heard that their location might be expropriated for the new Light Rail lines, I was hit pretty hard.</p> <p>Please don't do this. Find any other place to put the new Light Rail line. The pandemic and associated hardships have already forced a number of unique Seattle businesses to close or move to less expensive storefronts outside the city. Epicurean Edge is the only thing that brings me into the city on a regular basis since these closures, and it's the first place I always look forward to taking my friends when they visit Seattle. (Okay, after Pike's Place Chowder.)</p> <p>I would love to see this city landmark stay where it is for many years to come. If they're forced to move (again) in the middle of a pandemic I worry they might never reopen at all.</p> <p>Their showroom is at: BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>If you've never had the chance, please consider visiting it; I think you'll enjoy it (really), and once you've seen it in person it will be easy to see what makes it special.</p> <p>--Angela Smiley 11311 NE 128th St. Kirkland, WA 98034 765-210-0244</p>	Angela Smiley

02/20/2022	<p>Hello,</p> <p>I think the priority regarding WS should be at least getting from the Sodo stop across the Duwamish to a first stop near Delridge/under the West Seattle Bridge. That way West Seattleites at least have one stop and can get themselves to the connected system. I'm afraid that bickering over where the route will go/whose condo will be torn down will put the entire WS Link into jeopardy. The area under the WS Bridge that the train will go is not residential and there will be less debate. Please at least make this first portion happen, and sooner than 2032 would be amazing.</p> <p>Thanks, Gwen and Steve</p>	Gwen Raparelli

02/24/2022	<p>An efficient mass transit system is clearly essential to a livable city. This includes the proposed West Seattle extension. Equally important to the city's vitality is the amazing variety of unique, small, independent enterprises that give Seattle its soul. These businesses embody the dreams of their owners, represent substantial investment of their time, sweat and resources, and employ countless citizens. As Seattle has matured we've lost a disturbing number of these to "progress" (Byrnie Utz Hats and the Two Bells Tavern, are but two examples).</p> <p>Another may be endangered by the West Seattle extension: Blade Gallery/Epicurean Edge. I've been a customer for years, at times would go to their shop simply to listen as Daniel and his staff freely gave of their knowledge. Their recent relocation provides larger space, with incredible opportunities for teaching and training, and - most importantly - demonstrates a concrete commitment to the city's future.</p> <p>The Draft EIS identifies the numbers of businesses and other establishments that would likely be impacted by each of the route alternatives. But the EIS fails to provide any qualitative assessment of what might be lost ... it should do so. A small business with worldwide renown such as Blade Gallery should be recognized for the value it brings to the city. Route planning and detailed design should address preservation of these irreplaceable assets.</p> <p>Very truly yours, Larry Leland 2351 42nd Ave. E. Seattle. WA 98112 425-785-2835 dodgerleland@gmail.com</p> <p>CC: Councilmember Terese Mosqueda Councilmember Tammy Morales Councilmember Sara Nelson</p>	Larry Leland

03/03/2022	<p>Hello,</p> <p>I'm a homeowner with a home located in the Alaska Junction. After reviewing the EIS information and proposed sites I'm very concerned about the proposed use of above-ground lines and stations in the junction. In my opinion, these options would significantly take away from the community, charm, and everything that makes West Seattle and the junction such a special place.</p> <p>From the numbers, the number of businesses and employees displaced is the highest for all above-ground options. Meanwhile, our short to medium tunneling options are comparable in price and would greatly limit the impact on businesses and the surrounding community.</p> <p>Underground options would improve the community and they would be celebrated architecturally for their fit into the community. The same can not be said about above-ground lines and stations that will run right through the junction. Please preserve the spaces, homes, businesses, culture, and community that we have in West Seattle and the junction.</p> <p>Thank you,</p> <p>Raymond Cook</p>	Raymond Cook

01/30/2022	<p>Dear King County Council Vice Chair McDermott, members of the Sound Transit System Expansion Committee, and Sound Transit Board members:</p> <p>I am a resident of Highland Park in West Seattle and a volunteer for 350 Washington and 350 Seattle. I'm active in my community and passionate about multi-modal transportation and its role in responding to our climate crisis and keeping our neighborhoods liveable. I also live in the neighborhood that most of the traffic previously using the WS Bridge now flows through.</p> <p>As you know, West Seattle has a challenging topography for mass transit to points north and east. Hills and waterways limit our options. The currently proposed West Seattle extension of light rail is an expensive and problematic option, with its huge and high concrete (an emissions intensive material) foundation posts and guide rails required to move trains over the Duwamish and adjacent hills. There is a better option, a SkyLink gondola system, and I urge you to direct Sound Transit to slow down work on the proposed West Seattle light rail extension long enough to conduct a comparative evaluation of a gondola system vs. the light rail project for the section that bridges the Duwamish peninsula to Sodo/Downtown.</p> <p>In his October 2021 West Seattle Chamber of Commerce debate (1) with Senator Joe Nguyen, King County Executive Dow Constantine was asked if he would support a gondola system (~38 minute mark in the video). His response was "I've asked for a SkyLink study and will bring a motion to the Sound Transit board." Executive Constantine asserted, however, a false dependency of light rail to points south of the Duwamish peninsula on the Sodo to West Seattle section. Why can't SkyLink--the system best suited to the topography of the north end of the Duwamish peninsula--be the bridge from light rail Sodo/downtown to light rail serving southwest Seattle and points south, where the topography is not as challenging and lends itself better to street level and/or slightly elevated rail tracks? A SkyLink study should look at that option. If Puget Sound taxpayers and West Seattle residents are being asked to accept the expensive and limited light rail extension over the less costly, more environmentally friendly gondola system, that request must be justified by comparative data showing why Sound Transit has determined light rail is better than the gondola system.</p> <p>Per SkyLink's evaluation (2), gondolas would have a smaller carbon footprint, displace fewer (lower income) residents and businesses, serve more people, be completed sooner, and cost far less than the proposed light rail extension.</p> <p>But don't take SkyLink's word for it, do your own evaluation and share the results with the public! It's not too late to take an agile approach to this important transit plan. We're going to have to live with the results of this decision for the next 30+ years. Let's get it right.</p> <p>Sincerely, Katherine Woolverton 7755 16th Ave SW Seattle, WA 98106 Embedded links: (1) King County Executive debate: https://www.youtube.com/watch?v=o2T795JQcka&t=985s (2) SkyLink Comparison of gondola's vs. West Seattle LR Extension: https://www.westseattleskylink.org/comparison</p>	Katherine Woolverton
03/03/2022	<p>I am a customer of BladeGallery's Epicurean Edge in SODO (Seattle). Last fall, BladeGallery made a significant financial investment in relocating their business from Kirkland, WA to Seattle. I understand that BladeGallery is now in danger of losing their new location to eminent domain for Light Rail.</p> <p>BladeGallery is a unique business which serves as a worldwide hub for knife makers, knife service providers, knife users, and knife buyers. The synergy so created can't be found anywhere else.</p> <p>I have benefitted personally and professionally from the service BladeGallery provides. Among these benefits are the connections I've made with custom knife makers from around the world. BladeGallery supports over 600 makers, many of whom rely on BladeGallery as their only sales channel.</p> <p>I urge you to support this unique and cherished resource by finding a path for Light Rail which avoids forcing BladeGallery to move again or go out of business.</p> <p>Sincerely, Tony Spielberg 449 Fieldstone Drive, Burlington, NC 27215 tony.spielberg@gmail.com mobile 512-762-4389</p>	Tony Spielberg

02/18/2022	<p>Dear Councilmembers and Sound Transit,</p> <p>I'm stalwart customer of Blade Gallery/Epicurean Edge and have recently learned that their building is in danger of being demolished for Light Rail. While I understand and respect the benefits of Light Rail, it would be a tremendous loss if Blade Gallery as a business was lost due to this situation. They recently moves into this building and expended significant resources to bring the facility up to their standards and it is entirely possible they could endure that again so soon.</p> <p>Beyond the financial benefits this small business brings, it is also a world-renowned source of knives, especially in the quality culinary cutlery community. I can tell you how rare and unique it is to have such a store front in our state. These types of businesses are are not common in the USA and are often widely spread out. This business was on my list for this summer specifically for a vacation destination from Spokane to Seattle. While I would visit other business and locales while there, there is currently nothing else there that sufficiently motivates me to make the trip other than this store and awesome opportunity to view such a rare business.</p> <p>I can also attest that everyone from the owner to each employee whom I've dealt with has been outstanding and are the kind of people who keep you coming back.</p> <p>In making your decision, please consider these words and how unfortunate it would be to lose such an excellent small business.</p> <p>Sincerely,</p> <p>Erik L. Turner</p>	Erik Turner

03/03/2022	<p>I feel it is essential for the agency to pursue a preferred alternative for the downtown alignment that does not include such deep stations. The alignment is inconsequential relative to the 3-5 minute trip (or longer) into and out of the downtown stations. This will add 6-10 minutes to trips and will dissuade riders from taking transit. Deep stations also prove to be technically challenging to build and maintain. With mobility technology and consumer preferences changing quickly, ensuring quick access in and out of stations will be a competitive advantage for sound transit as they seek to divert people using less efficient means of moving from place to place.</p> <p>I understand there are tradeoffs associated with pursuing a cut and cover tunnel alignment through downtown. Closing 5th avenue for several blocks at a time for 5-7 years would be disruptive to residents and businesses owners. However, the short-term construction impacts would be far outweighed by the improved ingress and egress for passengers of the new system, which will exist for well over 100 years once it's fully operational in the mid-2030s. Furthermore, the construction-period impacts can be mitigated through proper outreach and funding for resilience efforts.</p> <p>Sound Transit has a strong track record of delivering complex projects. I have faith they will be able to complete the deep stations as contemplated in the EIS. However, I believe that there are better designs for end users than the options being contemplated in the EIS.</p>	Chris Bendix

03/03/2022	<p>I live in Maple Leaf but have to take the bus everyday to my office in Marysville.</p> <p>Im a behavioral health care manager at a pediatrician office which is a very rewarding but difficult job.</p> <p>I have to be at work by 9 am. In order to do so I have to leave my home by 7:00am from the bus stop from my home to Northgate Station, that then goes to the Lynwood station, I have to get off there and take a bus to Everett Station..then I get off about 10 min from my work and have to walk to work the remaining almost 3/4 mile.</p> <p>I leave work at 5 pm, and dont get home till 730.</p> <p>This is super frustrating as I just want a work life balance as I myself am supporting this community as a first responder.</p> <p>PLEASE HURRY UP AND BUILD THE LIGHT RAIL UP THROUGH ARLINGTON. NOT ONLY FOR MYSELF AS A PROFESSIONAL BUT CHILDREN AND FAMILIES WHO NEED THIS ACCESS.</p> <p>I WASTE 4 1/2 OF MY DAY ON THE BUS.</p> <p>thanks you</p>	Mursal Ahmady
03/03/2022	<p>I want to reiterate that I don't think the alignments of the stations are cause for concern. Given the alternatives and constraints. I support all the preferred alternative alignments. I object to the depth of the stations in downtown, SLU, and Uptown. I understand that the EIS is primarily concerned with alignment and immediate station-area impacts. I also understand that deviating from a concept after receiving approval from the FTA is difficult. Please reconsider the extreme depth of the stations throughout downtown, possibly even pursue a shallow cut and cover option throughout the central portion of the alignment. The user experience will benefit from this approach tremendously.</p>	Chris Bendix
03/05/2022	<p>ES.3.1.2.4. South Interbay Segment</p> <p>I currently live at Harbor House (521 5th Ave W). I'm concerned about the construction impacts to my area and after the construction completes, the final noise pollution of the light rail exiting the hill and passing in front of my building for the SIB-1 and SIB-2 alternatives.</p> <p>The SIB-3 alternative would be the most preferable option because it keeps the light rail construction and final impacts to my area minimal. The SIB-3 option does make me nervous because it looks like the light rail could run directly under my building and not very far from the surface. I'd be worried there could be impacts to the building's foundation during the tunnel construction. Despite that concern I still think SIB-3 is preferable to the other options for me.</p>	David Zietz

03/05/2022	<p>I'll preface my commentary with having lived in Seattle for many years now and have voted time and time again for spending bills to expand the light rail further; the amount of pure frustration I have with having received probably the fifth new proposal of light rail expansion within downtown Seattle with literally not a SINGLE thing physically done is indescribable.</p> <p>First of all, I don't know who the person/party was that thought it was a great idea to have a public transit station not stop at the Seattle Center; not realizing that anytime there's an event there, all of Denny Way and Mercer St get so clogged up with traffic and traffic flow gets so horribly mismanaged, is a complete moron. Disregarding the fact that putting an arena is basically a more residential area of Seattle with ZERO public transit is just classic idiotic city planning on behalf of Seattle; to suggest not having that arena be serviced by public transit when it's been rebranded to virtue signal by a polluting corporation that they pledge to do something about climate change speaks volumes in ways that it shouldn't.</p> <p>I recall the first time I reviewed one of these mailed out light rail station proposals and expansions optimistic that finally, Seattle proper can finally have actual trains that can quickly get you around, I was shocked to see how it was expected to take until around the 2040s to get from Westlake to Ballard. Meanwhile, service to the East side has been built up along with Northgate no problem. But clearly the institution of the Seattle Process is the reason why over five years later not a SINGLE new light rail station anywhere in the core of Seattle has opened up.</p> <p>My commentary on this is simple: shut up and do something. If I get another proposal of alternate light rail stations or more asks for public commentary, I will 100% be voting against any increase in funding for Sound Transit. It took nearly 20 years to replace the viaduct because for some inexcusable reason, the city's leadership and agencies can't do anything correctly, can't design roadways correctly, and can't do public transit correctly. We don't have another 20 years to waste away discussing proposals in the face climate change.</p> <p>Get it together.</p>	Andy McMaylor
03/06/2022	<p>I have gone over the EIS plans and I have a background in construction. I understand the light rail crossing the Duwamish needs to be elevated 140' to match the West Seattle Bridge and it seems to meld with the Bridge so as not to be as noticeable. The elevated light rail is not a pretty sight but then it doesn't seem as bad in a commercial zone area. When the elevated light rail comes around Pidgeon Point, we have two possible stations, as far as I'm concerned whichever one displaces less people and buildings is the best option. I am also in agreement for the tunnel at Genesee and Avalon. The less displacement of people and buildings will always be the best option and to be bluntly honest, the elevated light rail is ugly and noisy. Developers have been building non-stop in the last 15 years in this area and it seems you will be taking out a lot of these new apartment buildings if you put in an elevated light rail system. You will have to take out apartments all the way up Avalon and then up Fauntleroy. It seems that will be rather expensive, I think that money should go towards the tunnel. If you continue with the elevated light rail, it will disrupt the integrity of our neighborhood. I honestly don't know any place in the country that likes the elevated light rail. They have some in New York but if you see any movies whereas people's homes are shaking everytime they go by, that should be a lesson in itself why we should go underground. I think the best station should either be on Fauntleroy or on either side of Alaska and 41st. Please don't be short sighted when it comes to our neighborhoods. This is what makes our communities special in Seattle.</p>	Judy Aloisi

03/06/2022	We are not happy about an elevated light rail. My home on 40th Ave SW between Alaska & Oregon would be right in the path. I would not be able to afford moving to an area that does not have easy access to all we have near the junction. We would like to see a tunnel instead. An elevated would be so disruptive and noisy to our community for a long period of time. We would live to keep the integrity of community, which is so important. Please consider a tunnel instead. Thank you!	Karen Keating
03/07/2022	Some of the potential plans for the Chinatown and Midtown stations on the Ballard extension seem to place the new stations extremely deep. This seems like it would make these stations much harder to access - would this mean multiple long escalators down to the platform? Given that these stations have high ridership projections (and given that the Chinatown station looks like it will be an important transfer point) placing them deep underground where they're only accessible by mechanical equipment like elevators and escalators (which tend to break down often on Sound Transit) seems like it would lengthen a lot of commutes and make the light rail system less reliable.	Jacob Cosman
03/07/2022	Seattle foolishly cancelled funded bike safety infrastructure on Fauntleroy Boulevard between 35th Ave SW and SW Alaska St. due to potential planned siting of light rail stations. Sound Transit must insure that right of way is preserved for safe access by bicycle and by walking to businesses along this corridor in both directions. That means there should be no big pylons on the sidewalks or curbside shoulder areas of Fauntleroy Way. Also, Bikelink secure enclosed bicycle lockers should be installed at the stations since frequently there is no room on the trains for bicycles.	Kathleen Dunn
03/07/2022	Build it as fast as possible	JEROME MILLER
03/08/2022	4.3.4 Strangely, Little Saigon is never mentioned except as the CID community east. Need to use neighborhood names of Chinatown, Japantown, Little Saigon. CID community east could be referring to the CD or Jackson Place neighborhood. 4.3.14.3.3 Listing of Public Services shows public and private schools but omits daycares, Chinese schools, Vietnamese school, martial arts schools, ESL programs, senior service providers, Nikkei Manor Assisted Living, Legacy House specializing in Alzheimer's and Dementia elderly, after school programs, youth programs & activities, pre-schools, ICHS, and more. These should be added since they also serve the public. Or maybe above should go under 4.3.4.1 Social Equity 4.3.4.1.2 Demographics should include number of elderly non English speakers, about 1200; needs to be a place to include thousands of pre-K to 16 youths participating in the many activities (2,000 per year visiting the WL museum alone) CID mentioned as an Asian hub but the three neighborhoods should be named as well as why many Asians go there for services, visit elderly relatives, food, entertainment; very strange CID is shown to be only Chinatown Historic District and that is not true. Please clarify by stating CID is Chinatown, Japantown, Little Saigon since the station is the gateway for all three neighborhoods. 4.3.17.1.2 Hing Hay Park use not just for festivals main use is for elderly residents to do traditional exercises such as Tai Chi, play ping pong, and to use the traditional exercise equipment (requested by seniors, funded by Parks) 4.3.17.4.3 Should list adverse impacts of dust, dirt, noise on health of elderly residents who live in 15 buildings--many are in close proximity to proposed construction as well as toddlers in day care, children in schools and youth programs	Betty Lau
03/08/2022	Please don't knock down the brand new apartment buildings on Fauntleroy in West Seattle. I think this is such a terrible waist and unnecessary. The alignment that puts the station at the current location of the Safeway in Jefferson Square makes far more sense because that complex is outdated and old, and you could build the station in such a way that business and housing could go up next to it like the Capitol Hill complex around that station. I personally don't care whether it's raised or tunnel as long as it's grade separated, but please don't knock down brand new buildings. That's the stupidest thing I've ever heard. Also, for downtown, don't have elevator only stations there. I lived in Pioneer Square for 6 years, and the elevators in that station were exclusively used as rest rooms for the homeless population over there. The elevators will just be used that way in the new stations you are building. If you feel like you have to go with an elevator only design then please please put public restroom facilities in it. Thanks so much for everything you do! I'm excited to see the system expand!	John DeGennaro

03/08/2022	<p>I would hope that either tunnel option are chosen given the small changes in cost versus and elevated rail that will displace already needed housing and be more noise and visually disruptive to the area. I have no preference on the 14th vs 15th location, I imagine that locating it on 14th will help prevent further delays given the current state so would prefer either one that moves the projects faster.</p>	Patrick Dion
03/08/2022	<p>Hello,</p> <p>We're residents of Pigeon Point and thought we'd add our opinions and thoughts on the matter of the preferred route of the lightrail tracks that are proposed to run and cut into the hill. We've lived in the neighborhood for 13 years and adore its charm, proximity, neighbors, and sense of community.</p> <p>The disruption not just of construction, but of the new addition to the neighborhood (lightrail in West Seattle!) will greatly affect the attitude and spirit of our unique little hood. Displacing residents and thrusting the trains into our homes that live closer will be a constant stress.</p> <p>The noise of industry in Pigeon Point is part of its already unique soundtrack. Among our beautiful birdsong is the clang of steel, noise of trains (OMG the trains), low flying aircraft, trucks, ships, cars, and more. We can live with these but adding lightrail tracks directly on top of us is cruel. The lightrail should NOT pass through Pigeon Point.</p> <p>The NORTHERN ROUTE won't displace people from their homes, will move noise away from permanent residents, and place it to where it belongs, with industry that already exist. We should use the route that utilizes industrial spaces such as harbor island in a way that uses its potential and enhances it.</p> <p>Bonus, the NORTHERN ROUTE might be able to incorporate some businesses, expand commodities in the area, create jobs, and save houses for people to live in. It will still offer an amazing view of the sound, life around the sound, and provide a quick easy way into and out of West Seattle.</p> <p>We are truly excited for lightrail in West Seattle, but please choose the NORTHERN ROUTE!</p> <p>Sincerely, Joshua and Heather Gosovich</p>	Joshua Gosovich, Joshua and Heather Gosovich
03/09/2022	<p>I am a Pigeon Hill (Point) resident one block off of Delridge on 23rd SW and 2 lots south of SW Dakota. It seems to me having the Delridge Station be closer to Andover St and the Steel Mill would have the less impact on the residents of our community. HERE IS WHAT I THINK SHOULD HAPPEN.</p> <p>DEL 5 OR DEL 6 OR A TUNNEL THRU PIGEON HILL./PT.</p> <p>DUW -2 NORTH SIDE OF THE BRIDGE. OR TUNNEL THRU PIGEON HILL/PT.</p> <p>TUNNEL TO WEST SEATTLE JUNCTION.</p> <p>WE DON'T WANT TO LOOK AT AN ELEVATED STRUCTURE. WE ALREADY HAVE TO LOOK AT THE WEST SEATTLE BRIDGE.</p>	Gina Kaukola

03/09/2022	<p>The underground option seems to be the most preferred by local residents and businesses. It will support the long term aesthetic of the Ballard neighborhood, and reduce its visual and practical impact. I also understand that due to recent property price increases, the cost differential is no longer significant - which was the major driver for it not to be the preferred choice.</p> <p>Furthermore, the current preferred option on 14th is wholly unsatisfactory. Our brewery - the first in the recent wave of the Ballard Brewery district - would be wiped out and converted to a drain field in the preferred solution. There has been no explanation of why our site was selected for this - when other sites opposite ours are literally currently for sale.</p> <p>I would advocate for the long term solution of the tunnel, and if above ground is required keeping the impact to the busy 15th Ave would be a better choice. Please think of the long term impact to the aesthetic of the neighborhood rather than be driven by cost measures - which are no longer as significant as when this was first written.</p> <p>Thanks</p>	Adam Robbins
03/09/2022	<p>I'm recommending the light rail tunnel through Elliott Ave W, as first option and Prospect Street station / central Interbay as the 2nd option. I believe closing off Elliott Ave during construction would hurt many commuters that live in the area. Light rail on the east of Elliott Avenue along the greenbelt will keep Elliott Ave open for commuters. No elevated guideway on the west side of Elliott.</p> <p>Ralph</p>	Ralph Castellino
03/09/2022	<p>Hello, I am very concerned about the Light Rail Ballard extension down West Republican. It appears to be the preferred alternative for the route for the Seattle Transit Authority; it is not for this commentator. I note that two buildings on the south side of the street, in the five hundred block of West Republican, near the western most end of that street, will be razed, trees at the western most edge will be removed (with questionable hill stability as a result) and, the Luxe Condominium building, in particular, will be subject to substantial multi year disruption. If I read the EIS details correctly, the West Republican route could lead to the closure of two of the three parking garages for the entire Luxe Condominium building (which are accessed off of West Republican) for years; there is no alternative parking in the area. In addition, the multi year construction in front of the many south and southwest facing units for that building will effectively diminish, if not drastically undermine, the value of those properties. Following construction of the station, which it appears will be effectively across from the Luxe Condominium, traffic in what is a confined area due to the hillside drop off to Elliot in that area will generate significant noise, environmental and visual pollution in that confined area. This appears to be a condemnation lawsuit/injunction waiting to happen. It does not appear that there is any thought given for compensation for the diminution of property values or loss of access to the Luxe Condominium property over the many years of construction.</p>	Malcolm Goodrich
03/10/2022	<p>The Ballard station on the WSBLE should not be located at 14th or 15th street and Market. Instead, it should be located at 20th and Market to better serve the existing urban village of Ballard. Placing the station at 20th would provide a far greater ridership experience for riders trying to visit historic downtown Ballard.</p>	Maxwell Pearson
03/10/2022	<p>Sound Transit should reopen study of a station at 20th Avenue. The EIS analysis shows that a 15th Avenue option with a drawbridge now costs as much as a 14th Avenue tunnel option. We need to revisit the cost of a 20th Avenue option. 20th Avenue would serve Ballard better, as was shown during pre-DEIS work. A station at 14th or 15th does not serve the already-dense historic core of Ballard and instead serves hypothetical development east of 15th that may never come. Build for the neighborhood that is already there.</p>	Brennen Birch
03/10/2022	<p>Restudy a tunnel option to 20th street in Ballard. With the RTA funding bill passing Seattle will definitely vote for extra funding for that option. We cant vote for something we dont have the information for though. Also do not make every station deep. Your history with elevator and escalators means this will be a disaster for riders. Every station needs to be as shallow as possible.</p>	Charles Fowles

03/10/2022	The EIS makes it clear a bridge is not cheaper than a tunnel. We should return to older, far better location proposals that actually serve the Ballard neighborhood like 20th and Market.	Bryson Albrecht
03/10/2022	Please reconsider a station at 20th and Market	Monica Lewis
03/10/2022	<p>The only appropriate placement for the Ballard station is west of 15th. Costs have changed, and according to this post by Seattle Transit Blog:</p> <p>https://seattletransitblog.com/2022/03/10/st3s-ballard-station-has-to-serve-ballard/</p> <p>it could be within the price range of the other stations proposed.</p> <p>Let's be real. This is what we'll be using for the next hundred years. The decisions made now need to take a longer timeframe into account than just the next few. If we settle for mediocre, then the city will have to suffer through mediocre for a century or more. If we push just a little bit harder, we can make life easier for millions of people for hundreds of years, rather than satisfying a few tens of stakeholders for a short amount of time.</p> <p>Go back to the drawing board and study a station west of 15th. History will remember you as brave.</p>	Joshua Sera
03/10/2022	<p>I support Seattle Subway and Seattle Transit Blog. Please add the 20th st Tunnel option back and review it. The station should be central to the Urban Village and the core of Ballard.</p> <p>https://seattletransitblog.com/2022/03/10/st3s-ballard-station-has-to-serve-ballard/#more-113923</p>	Derek Herman
03/10/2022	The Ballard station needs to be at or close to 20TH Ave. NW, not 14th or 15th. Not only is that the heart of the neighborhood where the attractions and dense housing are, but also for those with mobility concerns, a station at 20th is much closer to Swedish Hospital. If the station could be built with an exit on the south side of Market St., these folks would not even need to cross a major road to get to the medical care they need. Please consider the needs of those with mobility issues who need to take public transportation to the hospital to access medical care. Employees and staff would benefit as well, some of whom also have mobility issues and do not drive. The Ballard campus is in an area with limited parking and inefficient to commute to by car. We regularly make concessions to prioritize those with limited mobility when it comes to cars, and we should do the same with our transit system. This is an environmental impact when it comes to those with limited mobility.	Brandon Kerns
03/10/2022	Please put a station at the location that is best for passengers, as that will actually result in fewer cars on the road. Putting a station so far away from where passengers will be going after they disembark means people will simply not take the train. You wouldn't build a road intentionally far away from shops because it's cheaper to build there, so don't do it for transit.	Diane Panagiotopoulos
03/10/2022	Please consider a Ballard station location that will serve the existing residential density that is in Ballard, rather than a potential residential area that will need to be rezoned: revisit a Ballard station on 20th or 22nd Ave instead of 14th or 15th, which are too far from the Ballard business and residential hub!	Day Frostenson
03/10/2022	We must build it right the first time. Study a central Ballard 20th Ave NW tunnel station further. It is the only realistic alignment that is open to further expansion north and east.	Ryan Dooley
03/10/2022	The 5th Avenue options will entail construction in the Chinatown International District which comprise of Chinatown, Japantown and Little Saigon for 5 to 9 years. Construction obstruction would severely impact business operations, local businesses, and residents. Our business base rely heavily on patrons coming in to enjoy the flavors of Chinatown. Obstruction for 5 to 9 years would be devastating to Chinatown.	Tuck Eng
03/10/2022	<p>I'd like to see further study of a station on 20th or 22nd to ensure that we develop transit that directly serves dense areas, making public transit more accessible and more convenient for more people.</p> <p>Seattle Transit Blog makes this case here: https://seattletransitblog.com/2022/03/10/st3s-ballard-station-has-to-serve-ballard/</p>	Taylor Cramer

03/10/2022	<p>Please consider a 20th Ave location for the Ballard station. This location serves the Ballard core more directly, and equally serves residential units from 15th to 24th Ave. There's several high density apartment buildings around 24th Ave and NW Market beyond 24th Ave. Furthermore, a 20th Ave station enables people to easily access the Ballard Sunday farmers market, which bolsters our local farms and business as we drive more traffic to the market.</p> <p>Alternatively/additionally, consider two Ballard stations. One at 14th Ave, and one at 24th Ave.</p>	Finn Thompson
03/10/2022	<p>Please reconsider the 20th and Market station alternative. 14th and Market does not serve the vast majority of Ballard, and 15th is also problematic. 20th would increase ridership and connect better with existing bus infrastructure.</p>	Conrad Meyer
03/10/2022	<p>2.1.2.2, page 2-45: It is a mistake to site the Ballard station on 14th or 15th. The station should be central to where people actually go: 20th is the heart of Ballard.</p>	Daniel Kwan
03/10/2022	<p>VERY glad to see the elevated tracks: The views are too precious to hide. Financially, too, there would be savings from NOT boring tunnels; plus increased ridership/income from tourists, visitors, residents - ANYONE who wants to enjoy the sights of our unique city.</p> <p>(Obviously, this route is long overdue - but everyone knows that.)</p>	Bob Hollowell
03/10/2022	<p>As a longtime resident of Ballard, I implore you to take into deeper consideration a station on 20th or 22nd. Please see this post for more details https://seattletransitblog.com/2022/03/10/st3s-ballard-station-has-to-serve-ballard/#more-113923</p>	Federico Rozenberg
03/10/2022	<p>https://seattletransitblog.com/2022/03/10/st3s-ballard-station-has-to-serve-ballard/</p> <p>We need to revisit the location of the Ballard station. The walkshed simply does not cover the core of Ballard as a destination, nor even a large chunk of the density on 24th.</p> <p>It's important to get the station location right not just for commuters, but also as people want to travel to Ballard.</p> <p>Another option being discussed by some advocates is having 2 stations in Ballard, one East and one West -- with options being a tunnel to 14 that then turns West. That's also an option to study</p>	Tyler Doyle
03/10/2022	<p>Hi please reconsider locating the Ballard station at 20th or 22nd. Cost is not the only factor. Ridership would benefit immensely by locating the station in the commercial hub.</p>	Alex Frederick
03/10/2022	<p>Please consider a 20th Avenue tunnel option for Ballard. With the EIS out it seems that the cost would not be significantly higher than the other two options, but would provide so much more use to our community.</p>	Christopher Peterson
03/10/2022	<p>There is only one Ballard station in ST3 and we have only one chance to get this right. We need a Ballard station where it will serve the most people who live in, work in, and visit Ballard: 20th and Market, directly in the center of the urban village.</p> <p>Please review the 20th avenue station in central Ballard and study it further.</p>	Christopher Dawe
03/10/2022	<p>There are two things that are very important to me regarding the Ballard Station:</p> <p>That the station is located closer to the urban hub of Ballard. Otherwise I couldn't see myself using the line nearly as often.</p> <p>That the station is designed in a way that accommodates future extension of the line. I know there will be a lot of support for the line to continue on to Green Lake or UW once the line is in use. Anything that can be done today to make that easier is something worth building in now. I believe that an underground station would be best for this reason.</p> <p>I'd also like to make a similar point about the West Seattle stations. It's likely that these lines will be extended in the future and that this area will continue to grow, so an underground station should really be pursued, even if it costs more.</p>	Jacob Tukul
03/10/2022	<p>Please reopen for consideration placement of Ballard station to 20th or 22nd Street. It should now be recognized that the EIS incorrectly restricted the scope of the analysis based on faulty cost assumptions.</p>	Michael Gillenwater

03/10/2022	<p>Reopen the study of the 20th Ave NW tunnel! We need a Ballard station where it will serve the most people who live in, work in, and visit Ballard: 20th and Market, directly in the center of the urban village. Though a station at 15th and Market is marginally better than a station at 14th and Market, neither serve the entertainment district on Ballard Avenue well or maximize usability for most people who already live in Ballard. The forthcoming Ballard station doesn't need to rely on new transit oriented development; there is already an urban neighborhood there in need of transit service around 20th.</p> <p>That said, 20th isn't the only station location option in central Ballard that could work. A station on 22nd could offset the continually rising land prices by using a significant amount of City of Seattle-owned land along 22nd Ave (including the Ballard Commons or Bergen Place) as potential locations for Sound Transit station entrances. There could be another central Ballard option that works better than 20th. The point is that Ballard station has to be in central Ballard and the options that made it through the EIS would require an additional future station to serve it properly.</p>	Erica Clawson
03/10/2022	<p>I'm writing to encourage the Sound Transit Board to reopen consideration to place the Ballard station at Market and 20th or 22nd streets, where it will best serve the needs of Ballard residents. As a resident myself, it's difficult enough having our extension pushed off further and further in favor of lower traffic, but more politically connected areas. At least enact a plan that will provide the best service when Ballard station is completed.</p>	Victor Allen
03/10/2022	<p>Though I'm excited that ST3 is including a link station in Ballard, I believe the current plan of a 14th/15th Ave station is not the best location and that the 20th Ave station option should be studied further (a station that provides access to central Ballard). Thanks!</p>	Evan Van Otten
03/10/2022	<p>I agree with this article that it makes sense to re-evaluate a station at 20th or 22nd in Ballard. 14th & 15th options don't serve present or future Ballard well.</p> <p>https://seattletransitblog.com/2022/03/10/st3s-ballard-station-has-to-serve-ballard/#more-113923</p>	Micah Loffer

03/07/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, BladeGallery Inc Customer:Philippe BABUT Home address: 15350 Veyrières FRANCE Email:lacroixdeschamps@gmail.com Phone: +33 6 30 20 53 84</p>	Philippe Babut
03/10/2022	<p>Ballard Station should be in the core of the Ballard commercial district.</p> <p>i.e.</p> <p>WEST of 15th</p> <p>Ideally at 20th, but certainly NOT EAST of 15th as indicated a 'preferred alt', which would effectively cut off riders from the primary destination.</p>	Kevin Steffa
03/10/2022	<p>?Please reopen the Ballard 20th Avenue Station Study with a Thorndyke Portal in Interbay!</p>	Derek Dexheimer
03/10/2022	<p>Thank you for all your hard work so far. A station at 20th or 22nd seriously needs to be reconsidered. 14th and 15th are too far from central Ballard. Let's do this right the first time please. Let's get more cars off the road and make Seattle accessible.</p> <p>https://seattletransitblog.com/2022/03/10/st3s-ballard-station-has-to-serve-ballard/?fbclid=IwAR3zPSbt6nV7oOSQ2vBxK25z7Fu4yQ5Azf6CBfRdadavLiZLgO_UIFMNqw4</p>	Lauren McCambridge
03/10/2022	<p>I would like to see the board reconsider the 20th Avenue tunnel in Ballard. 20th and Market is the commercial hub of Ballard and a station there would link that vibrant neighborhood with downtown and Queen Anne. It is a once in a lifetime chance to bring this neighborhood closer to all Seattleites.</p>	Justin Terada
03/10/2022	<p>Please place the station on 20th st. It's a FAR better location.</p>	Drew McMurry
03/10/2022	<p>We need you to reopen a central Ballard station option. Transit first means picking the best place for ridership. That's obviously a station at 20th or somewhere closer to central Ballard than 15th or god forbid 14th.</p>	Michael Stein-Ross

03/10/2022	I am a lifelong Ballard resident and strongly encourage that the Ballard line includes a station at 20th - in the Ballard core. A station at 14th or 15th is better than nothing, but doesn't serve the Ballard core very well and is a short sighted solution.	Heike Burr
03/10/2022	The Ballard station should be near or on 20th street rather than 14th. It would much better serve the neighborhood. The deep stations downtown are also not a good investment. Making the travel time to the station take 5+ minutes is unacceptable, especially given Sound Transit's track record with vertical conveyance. I understand that cut and cover is more expensive and disruptive, but if we want a great transit system like NYC or European cities, we cannot have such deep stations.	Luke Small
03/10/2022	Writing to request you reconsider 20th and market as the location for Ballards light rail station. 14th Ave is too far removed from Central Ballard.	Chris Mahannah
03/10/2022	Study a station at 20th Ave NW. That location will allow for the most useful system. Build the right system. The cost differences are minor in comparison with the differences in how useful the system is.	Christopher Hoffman
03/10/2022	The ballard station should be on 20th or further west to better serve the retail core and the hospital blocks.	R C
03/10/2022	We need to study a 20th avenue station in Ballard. We cannot spend so many millions of dollars to have a mediocre stop that does not serve the people of Seattle. There is so much to do and see in Ballard, but a station on 15th or even 14th is farther than most people will walk to visit ballard. We need the station actually in Ballard.	Harry Maher
03/10/2022	My comment is about the Ballard station alternatives. None of the proposed Ballard station alternatives in the draft EIS align with the neighborhood's current development or amenities, which are mostly located west of NW 15th Ave (between Shilshole and NW 17th Ave). As a resident who has lived in both west and east Ballard, I believe the neighborhood west of NW 15th Ave is better suited for the high-quality transit that Link represents. The area features significantly greater density that is less car-dependent, with the opportunity for additional development without zoning changes. Walking, biking, and rolling is more pleasant with a higher density of destinations. There are greater opportunities for multi-modal station connections like neighborhood greenways, cafe streets, and bike paths. I believe a more western alignment, such as the NW 20th Ave station proposed in the initial alternatives would better serve the neighborhood, its residents, and visitors. I urge the Board to revisit a centrally located station in Ballard.	Michael Burgess
03/11/2022	Please consider putting the Ballard station on 20th versus the current proposals of 14th and 15th. This gets people to the core of where they want to be. A tunnel is the best option for future expansion of rail sand the city and I can't see an above ground option being successful	Graham Roberts
03/11/2022	Regardless of location, please consider Taking measures to rescue any noise level that might be an issue for residents nearby. Also, would recommend adding a police station nearby since there will be more traffic and a police station nearby will help with a faster response if needed.	Jessica Huang
03/11/2022	Please prioritize a Ballard station at or near 20th & Market. This is the ideal location to maximize usage of residents of west and central Ballard, commuters and visitors to downtown & the brewery district. For tourists, this would increase access to the Locks & Nordic Heritage museum. With ~15 years to go, density will increase in the Ballard core and transit must serve it accordingly.	Peter Rice
03/11/2022	ST's lack of focus on where the Ballard riders are (downtown Ballard) is to the Ballard Link Extensions detriment. I live in north Ballard on 13th, so putting the station at 20th Av. means it's further from me personally, but it is absolutely the right thing to do. Central Ballard around 20th has far more businesses, events, and housing than the area around 15th. Please reconsider the 20th Av. Station alignment.	John Parejko
03/11/2022	Preferred Alternative SODO-1a makes great sense! And, while I can see why building a link to Magnolia would be a lot, it should be taken into account that we are cut out of all your plans... so having this go through Interbay would allow us to have closer access from here. This would be especially important when you take into account that the Fort Lawton Homeless housing will be hopefully happening soon, and giving those residents more access to transportation is incredibly important! Thank you.	Alexandra Pavlish

03/11/2022	<p>I live at 5713 14th Ave NW right near the end of the preferred alternative in Ballard. I saw that in 4.3.7.3.5 of 4c-wsble-drafteis-chapter4-4.3-aff-env-env-consequences-ballard-202201 it says there will be significant noise impacts at the end of the line, but the map at https://www.soundtransit.org/sites/default/files/documents/16b-wsble-drafteis-noisetechreport-attn.3a-e-202201.pdf#page=169 Figure N.3D-21g shows two surrounding properties that have noise impacts, but not my house which is between them. That seems like an oversight, wouldn't all the buildings have the noise impacts? Especially since my house is closest to it. I am the property just south of BD6481 which is indicated in yellow. It seems like only the multi family places were highlighted, but my bedroom for example faces the street.</p>	Andrew Wiseman
03/08/2022	<p>DEIS 4.3.1-2 Needs better description or specificity about displaced, relocated businesses on King Street other than those 2 or 3 in American Hotel.</p>	Betty Lau
02/13/2022	<p>WSB Link Extension Team,</p> <p>Given its importance as the best transfer node in the future network, I was wondering: would it would be possible to construct the Chinatown-International District 5th Avenue Shallow (CID-2a) (non-diagonal) alternative's station¹ in such a way that it could eventually be combined with the existing (1 line) International District/Chinatown station in a stacked cross-platform interchange configuration?</p> <p>I hope the illustrations on page 5 of this document will help explain my question: st3-cid-proposal-2.5.pdf</p> <p>¹ CID-2a (non-diagonal) station alternative as illustrated on p32-34 of the WSBLE Draft EIS Appendix J (Ballard Link Extension) (drawings B01-ASP100, B01-ASX100, B01-ASX101).</p> <p>Please let me know if the above question requires clarification or if you are unable to access the linked document. And many thanks to your and your colleagues for your efforts to make this important project a reality!</p> <p>Thank you very much,</p> <p>Will (South Lake Union resident working in Redmond)</p> <p>William McGough wm@williammcgough.com https://williammcgough.com</p>	William McGough

03/08/2022	<p>From 4.3.4 Social Resources:</p> <p>"The district is home to Hing Hay and Donnie Chin parks, the International District/Chinatown Community Center, and community festivals. As described in Section 4.3.4.1.2, Demographics, a high percentage of the population in the Chinatown-International District Segment is low-income. Many social services that support communities of color and/or low-income populations and cater to the Asian- American community are in this district. Other social resources in this segment include senior and low-income housing, a child support office, a community center, and the Goodwill Seattle Outlet."</p> <p>Note: Also in the district, comprised of Chinatown, Japantown, Little Saigon are Kobe Terrace Park, Little Saigon Park, Danny Woo Community Garden; senior programs, ACRS food bank, Denise Louie Education Center, Chinese Information and Service Center....Chinese language and Vietnamese language schools, etc. You specifically mention Goodwill so please name the community service providers, the public library, ICHS, Kinon Services, Nikkei Manor Assisted Living, Legacy House for the most frail (Alzheimer's, Dementia elderly) and so on ESL programs, martial arts schools, 15 low income senior buildings, etc., community newspaper offices</p> <p>Betty Lau</p> <p>On Mar 8, 2022, at 2:23 AM, Betty Lau <Betty.lau47@gmail.com> wrote:</p> <p>Plz add Bailey Gatzert Elementary to the list of schools for CID under Public Services section.</p> <p>Betty</p>	Betty Lau

I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop</p>	Frankie Heming

02/25/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a Washington State-based professional knifemaker, involved with BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and look forward to possibly teaching some classes there such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to participating with classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, Salem Straub Promethean Knives www.prometheanknives.com</p>	Salem Straub

03/11/2022	<p>The Ballard station does not work on 14th or 15th. The station needs to serve the existing neighborhood. The cost assumptions that eliminated the obviously correct option earlier in the process are no longer valid. Put a 20th street option back on the table.</p>	Tim Sparkles

02/21/2022	<p>Dear Councilmembers and Sound Transit:</p> <p>I am a longtime customer of Epicurean Edge in SODO (Seattle). Last fall, they moved from Kirkland, WA to 3628 E Marginal Way S. in Seattle. I was alarmed to hear that their new location is now in danger of an Eminent Domain seizure for Light Rail and wanted to share my concerns:</p> <p>If Epicurean Edge were to move or close down, there would be immediate impact to Seattle’s renowned restaurant community, whose workers have struggled through the COVID-19 pandemic. Epicurean Edge is an essential resource for professional grade knives and sharpening services, with offerings at every price point. Having access to high-quality gear for prep cooks and line cooks makes their work faster and safer, keeping up with heavy demand, and showcases their talents to earn promotion and higher wages. There would also be impact to Seattle’s retail kitchen stores (great knives lead quickly to other upgrades), as well as to thousands of home cooks. There is simply no equivalent retail space for knives anywhere in the Pacific Northwest.</p> <p>The deep intent and effort involved in Epicurean Edge’s relocation to the SODO District was enormous, and took considerable time, money and energy to manifest. The space was purchased, renovated and brought into compliance with Seattle environmental regulations at great expense, with the intent of creating a destination for home cooks, professional chefs, craftspeople, tradespeople, local bladesmiths, and the international bladesmithing community.</p> <p>The loss of this new space to Eminent Domain would be massive. Epicurean Edge / BladeGallery Inc. supports over 600 highly skilled artisans from around the world, who produce customized wares to Epicurean Edge’s high standards. For many of these artisans, Blade Gallery / Epicurean Edge is their primary sales channel and source of income. Epicurean Edge’s staff would be similarly impacted in our fragile economy.</p> <p>Over the last ten years, my wife and I have gotten to know Daniel O’Malley, the proprietor, and we have witnessed the immense care and cultivation he practices with Blade Gallery / Epicurean Edge. Even though we buy less frequently of late, Daniel always remembers us, the knives we own, the metals and bladesmiths we prefer, as well as what we have bought for close friends and family members. We continue to learn about these fine knives and their care every time we visit.</p> <p>I urge you to please consider the hard work and deep investment made by this unique business, by ensuring Epicurean Edge’s new space can remain open for many years to come. Please find a path for Light Rail that does not force BladeGallery Inc. to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Let’s keep Seattle’s restaurant community thriving, as well as our home kitchens.</p> <p>With gratitude and appreciation, Scott Orange 1100 NE 8th Street #A-920 Bellevue, WA 98004 sorange@newgrowthconsulting.com Cell: 425-941-6506</p>	Scott Orange

02/20/2022	<p>Dear Sir or Madame,</p> <p>I am contacting you because of the Light Rail project that you are undertaking. This project, while I'm sure is worthwhile and important, has the potential of disrupting businesses along its route that may not recover from its implementation. The Blade Gallery on 3628 E Marginal Way S is one such business. And, I am very concerned about this.</p> <p>I am a knife collector and have been a customer of Blade Gallery for years. Blade Gallery is one of the finest custom knife dealers in America. And, I do not consider this an exaggeration. They not only sell fine custom knives, but the gallery actively promotes exceptional knife makers and the knife making trade in general. Blade Gallery's owner, Daniel O'Malley, is an exceptional individual who is considered a knife expert in the custom knife trade.</p> <p>It would be very unfortunate if the building Blade Gallery now occupies were to be condemned and destroyed as a result of this project. Blade Gallery, like many small businesses, would find it very difficult to recover from such a setback, and we would stand to lose a very significant, unique player in the custom knife world.</p> <p>Given this, I am asking that you and all involved in this worthy project carefully consider alternatives and ways to achieve your goals without harming the businesses along the Light Rail route. Our businesses, small and large alike, have taken significant hits over the last several years due to COVID, supply chain issues, employment, and inflation. We are at the point where any further disruption to operations of these businesses will be the very thing to cause permanent closures and the loss of some very unique enterprises. Blade Gallery is one of these.</p> <p>I started my public career many years ago in the City and Regional Planning Profession before going to work for the Federal Government (NASA). I fully appreciate the complexity and problems associated with transportation projects and the importance of implementing them for the larger public good. But I also know that the larger public good is also served by the many small and medium sized businesses actively operating in our local communities. They are equally important. Please try to find a way to accommodate the goals of your Light Rail project vis-a-vis the survival of these small businesses. Thank you.</p> <p>Sincerely, David Birmingham 2319 Bisontine St. Friendswood, TX 77546 Email: dbirm@sbcglobal.net Tel. No.: (281) 482-4103</p>	David Birmingham

I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours,</p> <p>Dale D. Miller</p> <p>dalemiller2@msn.com</p> <p>5422 NE 180th St. / Lake Forest Park / WA 98155</p> <p>206.992.5549</p>	Dale Miller
------------	---	-------------

02/18/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Please don't be surprised that I'm from Germany. I visit BladeGallery on every business trip I take to Redmond to work with Microsoft.</p> <p>Yours,</p> <p>Andreas Baumgarten BladeGallery Inc Customer: Andreas Baumgarten Home address: 38518 Gifhorn, Germany Email: andreas@wolfpaw.de Phone: +49 151 651 42 333</p>	Andreas Baumgarten
03/11/2022	Keep light rail on 14th or 15th. It will serve new developments east on market, and north -south commuters on 15th. Consider future extension possibilities north on 15th to Holman and beyond.	Leila El-Wakil
03/11/2022	The exclusion of SkyLink from the DEIS is unacceptable. We need to get real about transit in West Seattle.	Brenda SUE Luke
03/11/2022	Please consider moving the Ballard light rail station from the current options of 14th or 15th avenue NW to 20th or 22nd Ave NW. The recent analysis demonstrated that a tunneled or bridged canal crossings were similar in price. If so, let's send the tunnel to 20th avenue, in the heart of Ballard and service more riders, and better service the existing commercial districts.	John Wesner

03/11/2022	My family strongly opposes construction of elevated light rail within the west seattle junction corridor. This area is rich with residential and businesses units and any future development will result in further destruction. The elevated option will invite homelessness to our neighborhood. We cannot envision large concrete structure so close to this beautiful neighborhood. West seattle junction is comparable to Roosevelt and capital hill stations. Tunnels were chosen for those areas and i hope SDOT and city choose the tunnel option west Seattle. Some of the tunnel alternatives are now comparable or cheaper than elevated option. Light rail will impact west seattle for many decades and so the final selection should consider its long term impact. Please choose the tunnels. Do not turn junction into a giant elevated light rail terminal.	Sholeh Hakimelahi
03/12/2022	I believe that the 15th ave tunnel is the best option for the st3 portion of the plan in Interbay/Ballard. In the long term it will reduce noise and light pollution for residents and provides closer access to Ballard downtown. Moving the Interbay station off of 15th will keep this busy and noisy corridor from becoming a worse eyesore for the community.	corey lindgren
03/12/2022	I vote for the elevated 14th Ave route.. Keep it away from the auto arterial.. More room to development on 14th.	Gene Eberlein
03/12/2022	The preferred route should be going across the West Seattle bridge down Fautleroy. Add a station at Fautleroy ferry, downtown White Center, and end at SeaTac. We don't need 3 stations for the junction. This is wasteful and impractical. This option could encourage more foot traffic on the Fautleroy ferry terminal and improve traffic for pedestrians.	David Oldham
03/12/2022	I strongly encourage you to reopen the Ballard station location options at 20th and 22nd ave, as the assumptions upon which they we prematurely eliminated appear to no longer be sufficiently valid. Sincerely Michael Gillenwater	Michael Gillenwater
03/12/2022	Please spend \$200,000 for a technical engineering study of a West Seattle gondola, as an alternative to West Seattle light rail. Potentially save \$2 billion. https://www.westseattleskylink.org/comparison .	James Little
03/12/2022	In Ballard, please reconsider the station location options to include "downtown Ballard", somewhere near the intersections of NW Market Street and 20th or 22nd Avenues NW. Anyplace east of 17th Ave NW makes no sense in terms of long-term ridership.	Matt Evans
03/12/2022	If the projected numbers and other factors (displacement and worker effects) are correct, the 14th Ave tunnel is most cost effective. Skirting the BNSF railyard makes a lot of sense. Going down 15th would include taking the bridge at Dravus and Emerson into consideration - which would have their own costs. Remember there are (today -as who knows how long the Magnolia Bridge will hold) only 3 roads in/out of Magnolia where there are 12,729 households.	martha tofferi

03/12/2022	<p>I live along the Ballard Link alignment, so I will provide comments on the Ballard to Downtown section. In Ballard, I was disappointed to see no tunnel option to the heart of Ballard (20th Ave NW). Please consider revising the DEIS to include an option to the core Ballard Urban Village. In Interbay, it seems like 15th Ave W is a good candidate for a surface alignment considering the roadway width and the lack of E-W streets. Please consider adding a surface Interbay option, particularly if it would be cheaper. I am very concerned about the second tunnel through Downtown. The depth of the proposed stations may severely limit their utility. Please consider adding an option to run the Ballard line through the existing transit tunnel. The existing stations are much shallower and very well located. This would make the Ballard line significantly more useful and make it much easier to transfer to the other lines. Did the ridership projections in Chapter 6 include station depths? Looking at the ID station options, it is hard to believe that a station that is 100' deeper would not have lower ridership. Descending into such a deep station will add several minutes of travel time, which decreases the appeal of that option. I think the DEIS in general (and chapter 6 in particular) needs to expand on how these alternatives impact the actual users of the system. The summary tables and text focus extensively on impacts to everyone else expect the users of the system. The user perspective could be better incorporated by devoting more analysis to total rider travel times (including transfer and station access times) and transfer times. This could be accomplished by comparing travel times for significant trip types. For example, when evaluating DT-1 vs DT-2, you could evaluate travel times from the entrance of the SLU station to the exit of U District Station. When comparing the ID station options, you could evaluate travel times between the entrance to Downtown Bellevue Station and the exit at SeaTac station. These examples would help us better understand the consequences of such deep stations.</p>	Robert Frankel
03/12/2022	I think the proposed light rail is a great idea	Jeremy Rolewicz
03/12/2022	<p>Look into a more central location underground like 20th and nw Market in Ballard. It's a more central location and is closer to the population density and shops and tourist spots.</p> <p>I ask think that the SLU would be better on Mercer, like close to the underpass of 99 the station would be closer to the surface, less engineering challenges and more empty land for entrances.</p>	David John
03/13/2022	Prefer the retained cut Prospect St Station tunnel traveling to the 14th Ave Tunnel Station in Ballard. I have been tuning into the Zoom sessions and based on freight impacts and also aesthetics of our community I think the tunnel is the way to go. I think the 14th Ave tunnel is better than the 15th ave tunnel for similar reasons and I think it offers better and safer access for pedestrians.	Steffanie Beauchamp
03/13/2022	Tunneling under 14th seems like the clearly preferable option as the least disruptive to the environment, existing homes, and existing businesses. I hope ST prioritizes these things as well as focusing on easy pedestrian connections to the station. Planning should be with longevity in mind even if means deviating from the original plan. The elevated bridge seems fraught with unnecessary complications.	Megan Gibbons
03/13/2022	Ballard train should go up 15th above ground. Lower cost & personal safety. Very scary for vulnerable populations to go underground where they're not visible.	Anne Ellis
03/13/2022	The Ballard station needs to be at 20th and Market. Let's put the station in the middle of the urban village. We have one shot to do this so let's do it right.	Andrew Mullenix
03/13/2022	I strongly support the tunnel alternatives (IBB-2a and IBB-2b) for the Salmon Bay crossing. As a transit rider and Ballard resident, my greatest concerns are reliability of the light rail service and minimizing noise and other proximity-related impacts of the line on the adjacent neighborhoods. Reliability is achieved by all of the alternatives except for the movable bridge (IBB-3), which would interrupt train trips and could hurt ridership. The tunnel mitigates the other impacts (noise, potential for train strikes, etc.). In a densely populated city that is becoming denser, the tunnel option seems to make the most sense if we want to maximize the line's effectiveness and minimize its impacts on surrounding land uses.	Joel Creswell

03/14/2022	<p>The locations being considered for the Ballard station are terrible. Please consider an underground station at 20th and Market instead.</p> <p>Rather than putting a station on the other side of a horribly busy intersection, far away from the actual center of Ballard, please put it in the center of Ballard.</p>	James Pasko
03/14/2022	<p>The Chinatown/International District is one of the most historic places in Seattle. It has survived being moved from closer to downtown, and also the destruction that occurred for the building of I-5. Many businesses have been eliminated through the years because of these construction decisions that the city has made. What is left still survived everyday through this pandemic and brings many visitors internationally to Seattle. Sound Transit must now heed the recommendations of CID and Seattle residents on construction of the train line in the CID area. To not do so would be utter disrespect, and commit more violence to people who have already endured so much despite having brought the city so much of its culture.</p>	Danthanh Trinh
03/14/2022	<p>The West Seattle stations should be underground/use tunnel stations when in residential and community areas. A elevated light rail would significantly decrease value due to visual disturbances in a neighborhood that has already suffered significantly due to the closure of the West Seattle bridge. My comment is to prioritize underground stations - especially for the tunnel servicing the Alaska Junction (41st/42nd st stations).</p>	Arielle Pagryzinski
03/14/2022	<p>As the cost of the proposed 15th and 14th avenue stations increases, it's time to reconsider the 20th avenue tunnel again. That option best serves people who already live in Ballard, and will make trips to places that people actually want to go to in Ballard much, much easier. It will serve old town and all it's night life, cafes, and the farmers market much better. Instead of one McDonalds, Safeway, and a Firestone. You have to reconsider the 20th avenue tunnel.</p> <p>Thank you, Karl</p>	Karl Groff
03/14/2022	<p>I am in general, excited for the planned work to extend the link and increase transit and access around Seattle. However I am concerned specifically about how the construction will affect vulnerable communities. I would love to see a task force or at least some sortof plan addressing just that and showing that sound transit has worked with communities as much as possible. I am most concerned about the work that will take place in the CID, where many low-income seniors and vulnerable businesses are located - and have been really rattled and affected by the coronavirus pandemic. Thank you.</p>	Allison Ong
03/14/2022	<p>Hi there,</p> <p>I am strongly against any new stations to be built in the Chinatown-International District area.</p> <p>Many elderly folks currently reside and heavily depend on that area. The light rail will not be helping those folks but displacing them and proving that gentrification is real.</p> <p>Another reason is that there is a lot of history built within the Chinatown-International District. By building more, you will also be replacing and removing history. Instead, I recommend looking elsewhere rather than Chinatown-International District.</p> <p>There is already enough displacement and harm to the community as it is. We do not need more happening to this community.</p>	Sara L
03/14/2022	<p>I live in West Seattle and I strongly prefer the tunnel option to connect to the Junction, just like what has been provided for other urban areas of the city such as Roosevelt, University and Northgate.</p> <p>Next preference is the Skylink urban gondola which I was very disappointed to see was not even included as an option. The Skylink option is a fraction of the cost and a fraction of the carbon footprint of the other presented options, and could be completed much much sooner and with much less impact to the community than all but the tunnel option.</p> <p>Next preference is above ground rail and Last would be surface rail which would have a horrible impact on our community.</p>	Mark Olsoe

03/14/2022	Please do not expand in the CID. It's a historic neighborhood and needs the space for housing and businesses. The lives of current residents should be prioritized over expanding transit.	Atlas Rain
03/14/2022	From the chart and documents, it is pretty clear that the 14th street tunnel is the best option for the Interbay/Ballard extension. I recommend that option to be built.	Ed Garrett
03/14/2022	I urge you to adjust construction plans to avoid the mass disruption that current plans would create in the Chinatown-International District. As an Asian young person working in the CID, the neighborhood has become so special to me and its history has brought me closer to my heritage. I would be heartbroken to see so many residents and long-time businesses displaced by this construction project.	Dionica Sy
03/14/2022	From the Interbay/Ballard extension chart shown on the webpage, it is clear that the 14th Ave tunnel option is less costly and displaces less residential sites than the other options. The key differences in 6.2.2.2.4 state that the tunnel options have no effect on the Tribal treaty-protected fishing rights or access, and that the tunnel options have no visual impacts to residences on the north side of Queen Anne hill. Table 6-8. Projected Ridership and Key Impact Differences – Interbay/Ballard Segment shows the tunnel options have much less traffic impact than the bridge options, less displacement and less noise, and no shoreline impacts. As the 14th Ave tunnel is the least costly and least disturbing estimate, I recommend the 14th Ave tunnel option be built.	Anne Rose
03/14/2022	There are many elevated sections in this plan. Overall I think from SODO onwards a tunnel to West Seattle is preferred. Or at least start the tunnel from the west duwamish area. I can't actually believe a massive elevated structure is being considered. On page ES-12 and ES-13 you show elevated sections. I think you should go with a tunnel option and none of the elevated options. This is a major eyesore and seems like we're building more overhead structures that will be a burden for future generations and something we'll regret. As shown with the 99 hwy tunnel, and other cities with underground transport options, the aesthetics for people living in these areas when locating transport routes below ground is SO much better. For West Seattle Junction segment - On Page ES-21 I would prefer the longer tunnel option, not the elevated section on ES-19. This would again be a massive eyesore for the area and just provides more opportunities for homeless camps to move in below the structure.	Tim Claxton
03/14/2022	As a West Seattle resident who works in Downtown Seattle, I am eagerly anticipating the completion of the West Seattle Extension. However, I am alarmed at the potential impact that the Preferred Elevated Alternatives for the West Seattle Junction Segment and the Delridge Segment would have on my neighborhood. Finding the money to pursue the tunnel options is my strong preference and it seems that the Draft EIS has pointed out the significantly reduced potential displacement of those options. West Seattleites are not going to be thrilled with the idea of enduring further long-term road closures and detours after the awful mess of the West Seattle Bridge closure. But it would be preferable to seeing our neighbors' homes and businesses demolished and the neighborhood divided by elevated guideways.	Erin Ward
03/14/2022	I take the Link on a daily basis and I think adding new stops to different areas (e.g. Ballard, Redmond) will be helpful to move people around. However, I am concerned about the impact that the Chinatown/International District expansion will have on the local community. There is already a station present in the neighborhood, and while I understand expansions may protect against overcrowded trains and provide better access, I do not think the effect on the community would be worth it. Moving forward, it would be important to consider how construction would affect the people who live and work in CID, including things such as noise pollution and limited street access. It is also important to note that CID is a center for a lot of Asian culture and that, if construction decreases the quality of living nearby, it strongly impacts elders and people of color. In addition, possible losses or decreased access to culturally important businesses and parks would be bad. Thank you.	Allie Bilson

03/14/2022	<p>After living in West Seattle for several years, we can certainly see the benefit of a light rail. Public transit is sorely lacking, as are parking opportunities in the Junction.</p> <p>However, looking through the proposals, I can't help but feel that price was the major consideration, not keeping residents and businesses in their homes. So many of the proposed routes would eliminate housing, already in extremely short supply. Regardless of the compensation (which I doubt would be a true market value), there aren't enough homes for all of those displaced people to stay in West Seattle and benefit from this project if they choose. It sets a terrifying precedent in looking at what future transit development would mean.</p> <p>Further, if the point of a light rail is to transport more people a farther distance faster, the Avalon street station seems like a complete waste. It is so close to the others, what benefit could that possibly provide? At that point, a bus would be far more efficient and much less destructive. Hearing from so many around me, I know these concerns are widespread.</p> <p>I hope you'll spend more time finding ways to make transportation accessible without destroying the neighborhoods that make West Seattle such an amazing, warm, and welcoming community. More tunnels, more integration with existing bus infrastructure, and more considerations for traffic and pedestrian concerns.</p>	Rebecca Nuffer
03/14/2022	<p>Please consider rider experience; this will be a system that people in Seattle will be using for 100 years! Specifically, consider the effect of lengthy travel times from surface to platform!</p> <p>Please also consider lifespan of current 4th avenue viaduct before committing to a design! The 4th avenue viaduct is nearing end of lifespan and efforts to mitigate impacts to the community by building on 5th avenue do not make sense if 4th avenue must be replaced anyway. Additionally, a 4th avenue station potentially better creates a transit hub by reducing automobile lanes on 4th avenue, thus prioritizing pedestrians and using the space around Union station between Line-1 and sounder/Amtrak service.</p>	Efrain Hudnell
03/14/2022	<p>Chinatown International District is bound to so many businesses as it's historic and monumental into the culture the city has. Disrupting the area for 5-11 years AND closing five to NINETEEN business might I add local businesses is only a harm to Seattle's culture and its people. Don't disrupt the China International District with these expansions!!</p>	kiana Manzano
03/14/2022	<p>I'm concerned about the Avalon station being dropped. Please keep it. This area is so key for dense/TOD housing in the next decade and the walkability/rollability between this location and the proposed Junction locations is daunting. Indirect routes with roadways 4-lanes or more to cross, and very few signaled crossings. Missing sidewalks and no bike infrastructure between Avalon and the Junction, and the Fauntleroy Way project is at least 10 years delayed as of now. The Delridge station access from the Avalon station isn't even possible for most in a reasonable amount of time due to the topography. It's a very challenging walk to make that connection. The housing opportunities at Avalon alone should be enough to keep it, but the existing urban design of getting to other stations from 35th and Avalon without cars will be a tipping point for ridership for people who have to make connections in that area. Think of all-ages, all-abilities for accessing light rail!</p>	Krystal Miller
03/14/2022	<p>I'm really concerned that the CID expansion will negatively impact businesses that are crucial to the fabric of the neighborhood. We need to center equity and not displace more of our neighbors.</p>	Shana McCann
03/15/2022	<p>The stations seem particularly deep. How will we make sure that it's easy for users to get to them. Escalators are currently often out of order. The depth will increase cost and complexity.</p>	Aaron Lichtner
03/15/2022	<p>Please reopen study of a Ballard station at 20th to serve the Ballard core appropriately. If not, we would be missing a big opportunity to serve an existing, highly transit oriented, neighborhood center.</p>	Daniel Rowe

03/15/2022	<p>The proposed plan in CID would be devastating to the community and commuting as well. Though the plan might create an infrastructure just for trains, CID in itself is already stifled for parking. This train station and construction would only hinder this more. Also the current function bus terminal seems to be working fine. What is the current need for this?</p> <p>I would see and monetary investment into this area should go to redeveloping the building and updating them rather than demolishing and planting another train station</p>	Aaron Lim
03/15/2022	<p>I hold great concern for chapter four, Table 4.3.1-2. Number of Potential Parcels Affected and Displacements by Alternative – Chinatown-International District Segment</p> <p>Alternative Parcels Affected Displacements</p> <p>Chinatown is a historic district, serving a community that cannot afford to be displaced to the effect of 18 or more businesses. These businesses are the thriving heart of the community, and displacement without care to financially support these BIPOC who are displaced in their transition will only further marginalization and racist public architecture.</p> <p>Please, CID 1B is the only plausible option for this neighborhood.</p>	Mei'lani Eyre
03/15/2022	<p>Chinatown International District is a beautiful and historic area filled with essential restaurants and businesses that represents the rich culture and diversity of Seattle. It would be a shame to displace these businesses that so many people love. You cannot replace the history of the ID after tearing it down. We're begging you to keep Seattle's history intact and not erase the hard work and dedication Asian Americans have poured into this city. Please find another solution.</p>	Keilah Vicari
03/15/2022	<p>I would like information to be extremely clear, once analysis has been done, what the city of Seattle will do to help relocate and provide assistance to the business's that will be effected by this new construction. CID has proportionately more poc and there are cultural differences in living that I hope is taken into account.</p>	Josie Dodd
03/15/2022	<p>As a resident of West Seattle, I fully support the extension. With the bridge situation especially what it is, a light rail option would be more than welcome!</p>	Jamie Brewer
03/15/2022	<p>Ballard - why are we building light rail to Ballard if none of the options you're presenting go TO Ballard? Getting dropped off a mile from Ballard is a real waste of our time here. Pull that train up to the neighborhood so people will use it. I'm fine paying high taxes for the system we voted for which includes a train to Ballard, now make it go to Ballard instead of a parking crater next to roaring roads.</p>	James Cooper
03/15/2022	<p>No to 5th Avenue, yes to the 4th Avenue. Please do not disrupt CID. Moving it a block down for construction will preserve our community. Tapping into 5th Avenue removes one of the main bloodlines of the community, and would eventually add even more stress to the CID (on top of growing Anti-Asian sentiment, decreased parking and increasing rent). We are talking about 5+ years of construction. That is 5+ years of our culture being directly disrupted if the construction/zone is on 5th Ave. When you are part of the community, you know and understand how important every block is. We are not against change, we just do not want a repeat of history; we do not want to be displaced any further if there are other alternatives that can be done. No to 5th, yes to 4th.</p>	Han Eckelberg
03/15/2022	<p>Everyone should be able to choose where they live, regardless of race or income. Seattle city policies have historically favored the voice of the wealthy over protecting communities of color. This HAS to end. The focus of expanding public transit must be on preserving the livelihood of Asian immigrants and people of color in the Chinatown - International District, and not risk further displacement. "Stop Asian Hate" looks like protecting Asian communities, not profits.</p>	Sidney Williams
03/15/2022	<p>As a Ballard resident, I don't believe that a station at 15th and Market or 14th and Market is the best choice. As the costs have changed so radically, please consider a station at 20th and Market, or 22nd Ave. These stations would have improved ridership and accessibility. While farther from my house, they're the better choices for the community at large.</p>	Jonathan Lasser
03/15/2022	<p>We demand that Sound Transit help relocate any displaced businesses and take steps to minimize the environmental impacts on CID residents and workers. CID, its residents, culture, history, and businesses are not disposable. Treat it with the respect it deserves.</p>	Linda Vong

<p>03/15/2022</p>	<p>Hello,</p> <p>I recently read through the WSB Link Draft EIS and have provided my feedback and concerns below, starting from West Seattle and going north along the proposed route:</p> <p>WEST SEATTLE:</p> <p>Avalon Station should be cut from the project entirely, or at least pushed to a future date and the current project be built with the future station location in mind. An estimated 7,600 daily riders seems very optimistic for a station adjacent to a golf course, especially when looking at the \$1.7 billion cost. This is very excessive for one of two stations in a single segment. The focus should be put on Alaska Junction Station, planned for an area already dense and thriving enough to warrant a station. Plus, Avalon Station is about 4-6 blocks away from the Alaska Junction Station. This doesn't make sense from a walkshed perspective, especially for the price. I don't have a preferred alternative here to the inclusion other than keeping the stations close to the surface. See my following Delridge comment.</p> <p>DELRIDGE:</p> <p>We must choose the 60-foot stations. The deeper or higher we build our stations, the less likely people are to use it. We must think of it from a rider experience perspective: transit should be as easy and convenient as possible. Taking elevators or escalators to reach far away platforms worsens the overall experience. We should focus on accessibility and ease of use over cost here in my opinion. Thus, DEL-2A is the best option. This keeps the station accessible.</p> <p>DUWAMISH:</p> <p>Unfortunately, the West Seattle Bridge will be repaired rather than rebuilt, so the option of a multi-mode bridge is out. It seems we are on the hook for our own rail bridge. My concern here is cost; this is a very expensive segment to connect a lower-density region to the city. There also no stations in this segment, which is a further lack in investment. I understand there isn't much we can do other than a bridge, but I'm having troubling convincing myself the West Seattle rail bridge is needed before Ballard Link. Is there consideration for bus rapid transit instead of jumping straight to rail in West Seattle?</p> <p>If we must build rail, I honestly believe DUW-2 is the best option, followed closely by DUW-1A. If we're going to build a bridge, let's eat a slightly higher cost and do it right.</p> <p>SODO:</p> <p>I think SODO-1A is the alternative that brings the best service to all riders. It avoids two at-grade conflicts at both Lander and Holgate, something that continues to plague the MLK Jr. segment. Rail should not be allowed at grade-level ever, so this is an improvement. I'm unsure of the USPS facility surface parking impacts, but this option seems to minimize overall impact and balance cost.</p> <p>CHINATOWN – ID:</p> <p>Again, we must choose either CID-1A or CID-2A. These deep stations are extremely excessive and easily begin eating into the daily convenience and usefulness of the system, especially if a trip includes transfers. Some of these stations are 180 feet deep. Getting to and from the platform could take 5-8 minutes, which is the headway of frequent commuter buses. At that point people would just rather stay on the surface to catch a bus than deal with getting to and from a deep station. CID-2A is the best choice because it keeps the station within a reasonable access distance for a better cost. CID-1A is a close second for the less displaced businesses but a much higher cost.</p> <p>DOWNTOWN:</p> <p>DT-1 is the clear choice here. Fewer economic impacts, better costs, fewer impact intersections, and a new pedestrian plaza on 9th Avenue in the heart of our city. We certainly should not be concerned about "increases in pedestrian and bicycle activity around the stations" increasing intersection delays. This is a symptom of a healthy, functioning, safe city, something which we are striving for. However, is there consideration to cutting the South Lake Union Station? The location is poor being right next to SR 99 in both alternatives: by the ventilation shafts of the road itself. Not great for people using transit. Also, the Denny Station is closer to South Lake Union, so even moving the SLU makes it more redundant.</p> <p>I think this downtown segment shows the most promise. Very exciting, but again, I urge Sound Transit to reconsider the station depths. The further we push these platforms underground, the less convenient and accessible we make the system. Yes, I understand shallow tunneling or cut-and-cover is much more painful, but when has anything great ever come easy? We can take the cheap and easy way out, but the system will suffer long-term and never reach its full potential. This can be seen in the MLK Jr. at-grade segments, an area which is going to become the capacity and safety chokehold on the regional system. We're spending a lot of money to do this new downtown tunnel, so let's be sure to optimize the efficiency, ease of use, and user experience. Let's do it right, not quick and easy.</p> <p>SOUTH INTERBAY:</p> <p>I really recommend SIB-2 alternative, but has there been consideration to delay or cut the Galer Station? This is not a residential and high-density commercial area; it's mostly big box stores and auto shops. I'm</p>	<p>Shane Dombrowski</p>
-------------------	--	-------------------------

	<p>hesitant to “spur” growth by simply building a station, so I’m unsure why this station is being built in a “walkshed desert”. Small improvements to the RapidRide D Line could have great impacts here for less cost.</p> <p>This alternative also has lower residential and park impacts than the current Sound Transit alternative. Finally, SIB-2 is the preferred alternative because it aligns with the 15th Ave W transportation corridor. This keeps the door open for additional stations along 15th Ave W, a corridor with more existing development and the potential for more in-fill than the BNSF railyard and Interbay Golf Course. This also aligns much better with the preferred alternative for stations along 15th Ave W in Interbay and Ballard. See below.</p> <p>INTERBAY: Locating the Interbay Station at Thorndyke Ave W and 17th Ave W would be a colossal mistake. This area is even more pedestrian hostile and lacking in residential/walkable development than the Galer Station. Thus, we must build the Interbay Station along 15th Ave W. This is the major development and transportation artery of Interbay; most of the residential and commercial business is along 15th Ave W, not to mention the major transit stops as well. Putting the station on Thorndyke does not prioritize transit users in the slightest. Walkability improvements along Dravus into Magnolia and Queen Anne would help encourage the walkshed, something that would not be helped by tucking the Interbay Station into a corner of Thorndyke.</p> <p>For Ballard, we should not be building a station any further east than 15th Ave W. Thus, let’s elevate it. Ideally we’d locate the Ballard Station somewhere between 15th and 20th to align with existing dense and walkable neighborhoods and businesses. The RapidRide D Line is already frustrating enough along 15th Ave when trying to access Ballard, so putting the Link station further east would just disicnestize more folks from using it to access Ballard. 14th Ave W is mostly big box stores, parking lots, and warehouses. It certainly does not warrant heavy rail investment at this time. Let’s keep the station on 15th Ave W, preferably further east. No preferred alternative here; there needs to be an option with a station on 15th Ave W in Interbay and Ballard, elevated or tunneled. That does not exist at the moment and I urge Sound Transit to consider such an alternative from the perspective of existing development, rider experience, and ease of access.</p> <p>Overall, I appreciate the effort and time Sound Transit has taken to assemble this document. It has provided valuable insight into a project I am very excited for. If there are any questions regarding my comments, please reach out!</p> <p>-Shane</p>	
03/15/2022	<p>(1) A Ballard ship canal tunnel would be highly preferred since it would lead to faster service and since it would look nicer.</p> <p>(2) A Queen Anne tunnel & station should be explored. Though likely much cheaper, all current route variants go down through the sparsely populated Interbay Area.</p> <p>(3) Do it sooner than the intended 2037/39 target!</p>	David Wetzel
03/15/2022	<p>With the expansion plan for the CID link station, I am afraid that this would displace many businesses and negatively affect the workers/people within the neighborhood. I hope that whatever happens, SoundTransit acts with the best in mind for the people who call CID "home," relocating businesses and mitigating any environmental impacts to the area. If this plan were to go through, how does SoundTransit plan to avoid causing harm to the community in CID?</p>	Jillian Reyes
03/16/2022	<p>please save or help save blade galleys building</p>	Bradley Worthington
03/16/2022	<p>There are people clearly standing up against the CID project plan. Because it will impact and cause destruction to the core of the CID neighborhood, it’s historical center, and surrounding small businesses. The people of the neighborhood should have every say in how these updates are made. As the plan stands it does not minimize that impact and much should be done to rectify those issues</p>	Erica Hauter
03/16/2022	<p>I live in West Seattle and supportive of light rail but I don’t want to displace AAPI businesses in Chinatown so I hope that you can find a solution that reduces their burden. Losing 19 businesses in that area especially is unacceptable.</p>	Amanda Suzuki

03/16/2022	<p>Sound Transit should be transparent about which CID businesses will be displaced by the construction. Also, retaining community is important than cutting the superficial costs. It always takes time to build but only takes moments to destroy. CID is a neighbourhood that is very vulnerable to gentrification. About half of their population are seniors and cannot speak much English. Getting displaced and priced out will mean disastrous to them.</p> <p>Please also fix your puddle problems on the SW corner of the University District platform.</p> <p>Sincerely, Kwan</p>	Kwan Wah Lui
03/16/2022	<p>I would like to urge Sound Transit to seek out and heed the concerns of the International District residents and business people. This part of town has serve the rest of us as a destination, source of information and inspiration, and a vibrant community sharing it's cultures with all of Seattle. Do not make any decisions that will negatively impact this community. Ask the community for input and then listen to it. You are operating with our tax dollars and with the dollars of people who live in the International Community. Please do what's right. Thank you.</p>	Mallory Clarke
03/16/2022	<p>The expansion plans of the CID Link station is not only disruptive, but actively contribute to the displacement of Asian and non-White peoples. On top of this, losing/displacing 5+ businesses is unacceptable, especially since businesses like Oasis, Joe Bar, Seattle Best Tea are modern cultural hubs in the International District.</p>	Gaebril Min
03/16/2022	<p>ST, please listen to the CID community re: the multi-decade, \$53 billion expansion of our regional public transit system. For years, CID community activists have pushed back against ST's preferred plans for the CID expansion, stating that your plans would drive out community businesses, detour up to 30,000 vehicles per day through the CID's residential streets, and ruin life for the residents of the area with as much as ten years of highly disruptive construction.</p> <p>Community members have urged you/ST "to choose the least-impactful option to develop its new transit hub," but your refusal to publicly commit to any particular plan at this time is worrisome.</p> <p>Please listen closely to the CID community and choose work together respectfully with the CID community towards an outcome that is least impactful. After the many challenges our Asian community has had to live through over the decades, it's time for listening and partnership.</p>	Christy Bear
03/16/2022	<p>Better, more accessible transit SHOULD NOT come at the expense of people's health and livelihoods in the CID. The fact that all 5 current expansion plans would displace multiple businesses with no relocation assistance is unacceptable. The CID could lose 5-19 businesses in the historic core. This is unacceptable. And 5 to 11 years of construction—next to housing and landmarks like the Chinatown Gate and Hing Hay Park—would be hugely disruptive. It would also reroute public transit and detour up to 30,000 vehicles per day through the CID's residential and pedestrian-oriented streets.</p>	Kasey Iranon
03/16/2022	<p>I'm concerned about the impacts to the historic Chinatown International district. I haven't seen any mention of research into the racial equity effects of this project on the people who live, work, play, and eat there. The overview is very vague about any negative effects or considerations that the sound transit board made, and how community members will be affected by these plans. How were community members a part of the process? There are serious implications in connecting heavily-white neighborhoods to the city by tearing up the neighborhood where Asians and Asian Americans were forced to live.</p>	josh martinez

03/16/2022	<p>I think the current direction that we are going with having deep underground stations throughout the downtown segment are not ideal. We should be designing a system that will work best for people decades into the future, not for the decade that it is being built in.</p> <p>Using a cut and cover design with economic hardship payments to businesses that are impacted during these construction windows should be the method advanced. This will provide the best end user experience that will be felt for those decades to come.</p> <p>I understand there is much political discourse around the construction impacts of the past. Closing a block or two at a time to do cut/cover construction should allow business that need to be closed remain closed for a brief period of time while receiving payments. For the decades after construction, the reduced time to ingress/egress the stations should provide those businesses a higher opportunity to capture potential customers.</p> <p>In the end, the design should be suited to the best experience for the transit user, not necessarily the best political outcome.</p>	Ryan McCabe
03/16/2022	<p>Hello Sound Transit Team,</p> <p>I am writing to speak against the 5 expansion plans for the Chinatown-International District (CID) Link light rail station as it would displace, disrupt, and demolish the center of the CID neighborhood. The construction would cause for the loss of 5-19 businesses in the historic core and 5-11 years of construction would severely, negatively impact the surrounding businesses and residents as well. If this project is to continue, I demand that Sound Transit work to relocate any displaced businesses and take steps to minimize the environmental impacts on CID residents, workers, and businesses. I demand that your team do what is right.</p> <p>Best, A Concerned Asian-American Seattle Resident, Jacky Nakamura</p>	Jacky Nakamura
03/16/2022	<p>The Draft EIS pertaining to the West Seattle portion of the extension (which is closest to where I live) appears to have a number of negative impacts on the West Seattle community and the environment - a reduction in housing units, huge cost to build, major fossil fuel use to build, lengthy construction period impacting those living near the light rail line. I would much prefer strong consideration be given to the alternative West Seattle SkyLink project, which would be much less of an impact in all these areas I mentioned, as well as cost much less, and be much more climate friendly.</p>	Colleen Hinton
03/16/2022	<p>With narrowing cost differences between elevated and tunneled alternatives, I highly encourage the Sound Transit Board of Directors to consider tunneled alternatives that directly serve the core of Ballard on 20th or 22nd avenue. Sound Transit has already identified the area around 20th avenue as having greater potential for transit-oriented development and equitable development than the area surrounding 15th avenue, which is heavily bordered by industrial zoning. A station on 20th or 22nd avenue will make the walkable business core of Ballard more accessible to riders with mobility challenges than a station on 14th or 15th.</p>	Tariku Allen
03/16/2022	<p>Please do not repeat the mistakes of the Alaska viaduct. Keep as much of the tunnel underground as economically viable. The issue of noise pollution has been on the rise over the last few decades and the danger to the public greatly increases with aboveground rail.</p> <p>You can best serve my community with greater distance traveled between stops and a focus on going through the center of mean population density.</p> <p>Please consider the teal line a high priority for this section of light rail expansion.</p> <p>Thank you</p>	Christopher Cartmill

03/16/2022	Very concerned that it will require elevators to get to the platform, which is inconvenient for transfers and general access. Highly recommend exploring another approach where stairs / escalators are a viable option.	John Line
03/17/2022	I am writing to protest the proposed Chinatown International District expansion. I think there are better routes that do not disrupt a historic cultural core that is essential to the Chinese community. This would disrupt and impact at least 20 businesses which is unacceptable. Especially the 5th Ave option that is the most interruptive. What are the other alternatives, and what is the community saying, and what will be done to help displaced businesses and entities? None of these are communicated across these proposals which is so stressful and anxiety-inducing for the community and those who are potentially impacted.	Alyssa Chow
03/17/2022	As a Pioneer Square local, I wish this wasn't happening at all. However, since it appears inevitable, the businesses being impacted should absolutely have relocation costs & additional funds to cover any rent increases. These independent businesses make our city what it is & they should not suffer because of increased traffic.	Lynae Cook
03/16/2022	Appendix G Environmental Justice 2. 1. Your conclusion about noise, air pollution vibrations having no impacts needs to consider demolition detritus and dump trucks carrying away dirt from the tunnel. Dust from concrete deliveries? 2. Need to add in how many dump trucks per day, supply vehicles per day coming and going? And which streets? How will the dirt in the trucks affect air quality which is already very low in the CID due to being encircled by I-5, I-90, Rainier, Dearborn, Jackson and 12th. 3. Blocked streets, detours will slow emergency vehicle response to access and exit for the 1200 elderly to get to ERs. Every second counts when coming for and taking elderly for life saving care. Almost once a day an emergency vehicle goes into the CID, according to Seniors in Action. 4. The 1200 elderly have relatives coming to visit and have a meal in the CID. Must provide parking or else they take their elders out of the district to spend money outside the CID. Eliminating parking exacerbates this problem and depresses the CID economy. 5. Get working on correcting the backwards name of the current tunnel to match City Ordinance 119297	Betty Lau
03/17/2022	The following is support for selecting the 6th/ Mercer DT-2 and the Prospect Street Station/Central Interbay SIB-3 segments. According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the Prospect Street Station/Central Interbay SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground. This combination of segments should be selected to help maintain our residential communities. According to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP. Therefore, the 6th/Mercer DT-2 should be selected. According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access to the parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. This should be a consideration to proceed with the 6th/Mercer DT-2 option.	Kimberly Gonzales
03/17/2022	According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access to the parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. This should be a consideration to proceed with the 6th/Mercer DT-2 option.	Kimberly Gonzales

03/17/2022	<p>I'm very happy to see the WSBLE moving forward. This will be extremely impactful to my daily travel. I live in downtown and work in downtown and don't own a car - I rely entirely on transit to get around. Thank you for building this extension!</p> <p>I'm primarily worried about station access and about how deep some of them will be. In particular, I'm concerned about some of the alternatives of Midtown Station being elevator-only access. As someone who uses the tunnel stations on the 1-line all the time, I see a notable difference in rider experience for shallow station (like International District Station) vs. deeper stations (like University of Washington or Beacon Hill). Given that tens of thousands of people will be using these stations daily for many decades, I'm concerned about the time and difficulty for people to access the platform in many of these stations (particularly for the downtown stations, which I expect will be very busy).</p> <p>I'm very happy to see the whole line be grade separated. I've been stuck at a stoplight in the Rainier Valley on the link, so I think avoiding this problem in this alignment is a great idea.</p> <p>I'm also very excited for Westlake Station and International District Station to become major transfer points. In my experience on other stations, having extremely easy to navigate and accessible transfer stations that provide access to many lines on the system is a huge benefit for riders. I hope rider transfer between lines is prioritized to be as smooth as possible and am very excited to see these transfer stations being built!</p> <p>I'd also like to have this extension built as quickly as possible to ensure people can use it to get around our growing city promptly. However, I also appreciate this is a very complicated project and that these things take time.</p> <p>Overall, please consider making the stations less deep to ensure that rider access to the platform is as fast and convenient as possible. I'm very excited and optimistic about this extension though and am looking forward to it being built - thank you for all of your hard work!</p>	Simon Duchastel
03/17/2022	<p>For CID: As someone who lives and works in the CID, I strongly prefer the diagonal configuration for Alternative 2a (shallow 5th ave).</p> <p>This station is going to be a PERMANENT fixture of the community going forward, and hopefully will be used by residents for many decades to come. I believe the long term must be prioritized over the cost of any short-term disturbances. I understand this option will majorly mess up the CID for a few years -- I live a couple blocks away from the current station, so I understand and will have to deal with these disruptions -- but I firmly believe that it will be worth it to have a station that's easy to access, easy to use, and more seamlessly connected to the existing station.</p> <p>I typed this up really quickly outside, reach out to me if you need/want to!</p>	Reid Litkauo

03/17/2022	<p>As an avid ST rider, I want to make sure that the right decisions are made when planning a route for the Ballard extension. A few of the most important aspects of a good rail route include:</p> <p>Route efficiency (how quickly and latent trains move from point A to point B). Desire to live around elevated rail and and the possible disruptive nature above ground construction would cause to the region. Schedule accuracy. Riders don't want to take public transit options that are unreliable.</p> <p>To make this clear, I'm not opposed to an elevated rail option, but the cost difference between below and above ground is relatively small and below ground rail wouldn't disrupt the already established community or businesses.</p> <p>Below ground rail also leaves additional space above ground new businesses and a generally more friendly environment for cyclists and pedestrians who would not need to cross rail tracks. Historically, above ground railways have physically divided communities because people see large roads or rails as dividing lines—not wanting to cross them unless necessary.</p> <p>Lastly, if an elevated option is selected I would want to ensure that it is not a draw bridge. Draw bridges produce unreliable traffic conditions that would be disruptive to daily Ballard commuters. For example, the Fremont bridge is the most active draw bridge in the U.S. at an average of 34 open-close cycles per day.</p>	Taylor Lanclos
03/17/2022	A station on the east side of Fifth Avenue CID area, would be great for community development. Try not to displace too many local businesses and maintain the community feel and look of the I.D.	carl silverberg
03/17/2022	Please stop the expansion through the CID. You will be displacing and disrupting a community where immigrants live and work. Potentially 19 businesses will need to close which is unthinkable. Please think about the people and the community that will be damaged beyond repair by this project.	Aaron Mew
03/17/2022	I think Sound Transit should look for alternatives to the deep bore tunnel through downtown. If it takes someone 3 to 5 minutes to take an endless series of escalators to the platform, it becomes too inefficient to be a viable alternative to driving. Furthermore, Sound Transit isn't able to maintain the escalators it already has in existing stations due to contractor issues. The greater the number of escalators, the more likely it is there will be an escalator failure. If one of the elevators goes out of service, the station will become unusable.	Christopher Fast
03/08/2022	Your table of impacted historic district properties only lists 2 for 5th Avenue: Bank of America building and the L. Family building with retail stores. Please add in the 3rd property that will be impacted to the Table and narrative.	Betty Lau
03/17/2022	Please listen to the needs of community members who need access to important cultural institutions. Please minimize construction and consider alternatives that will allow access to the streets while under construction.	Rachel Doyle

03/17/2022	<p>I've lived in Seattle for a little over a decade now, and have seen so much amazing change and SO MANY wonderful improvements to the city's infrastructure since moving here. I've also seen rapid displacement and generally very little in the way of support for those displaced. As an artist I see resources for the arts disappear, and this concerns me greatly as future generations won't have the same support myself and my network took advantage of. This displacement has also spread to local businesses that I've grown to love, currently those in the CID, prompting me to write to you all.</p> <p>It seems to me as if decisions like the one to expand Sound Transit in Seattle's historic International District are made to support e-commerce and the growing tech industry while leaving many without support as they are forced to relocate. These small, often family owned businesses are, to my knowledge, being forced to relocate when the surrounding area is being rapidly over-developed. This surely means these businesses will all close as the price of rent in the aforementioned developments is quite unreasonable for most, let alone someone who has remained in an affordable area because of its affordability. These closures would not only mark the end of an era but they additionally mark the end of a primary source of income for a lot of families, and it really doesn't have to be that way.</p> <p>Please provide relocation services for these businesses, it's obviously too late and fruitless to ask for plans of expansion in the area to cease. As hard as it might be, try to imagine yourself in the shoes of someone that has put their whole life and/or life savings into a business just to be told to "adapt or perish". Thank you for your time, and have a wonderful week/day!</p>	Daren Means
03/17/2022	<p>The city of Seattle and its metropolitan area seem to develop vertically, spanning from south (Portland) to north (US-Canada border). That mapping effectively undermines the public transit needs of east-west regions, such as Redmond and Olympia. Given that a number of technology-led firms settle in the eastern part of Seattle, it's worth extending the reach of public system over there. The company can even partner with private firms and engage them in fulfilling corporate responsibility, while allowing employees to travel easily.</p>	James Zhao
03/17/2022	<p>I think any of the Elevated 41st/42nd, Tunnel 41st, and Tunnel 42nd are reasonable options; however, the other preferred alternative of Elevated Fauntleroy is, I think, disastrous for accessibility of the station to the West Seattle Junction, especially since California is the only place where we can currently build density and therefore is where all of the density is. We need to make certain that as many people as possible can access the station.</p> <p>However, I think given the history that Sound Transit has with vertical conveyance, I think that the tunnel stations would be a terrible mistake. Unless ST can start guaranteeing that their vertical conveyance is always working, going down 7 flights of stairs is disastrous. Additionally, going down 7 flights of escalators would also be... not great. I hope that the elevated 41st/42nd station becomes the alternative we take.</p>	Nicole Mazzuca

<p>03/17/2022</p>	<p>The Andover Street location of the Delridge station should be built because it has the fewest residential displacements, no park impacts, and is cost favorable.</p> <p>My husband and I live on Southwest Adams Street in the Youngstown neighborhood near the proposed Delridge station. The Andover Street location is the only one that will not decimate our neighborhood community. The Draft EIS determined (reference page ES-18) that this location has the fewest residential displacements. Our Youngstown neighborhood continues to advocate for this alternative as we engage in the planning phases.</p> <p>The purpose of the WSBLE Project includes the following: "Provide high-quality rapid, reliable, and efficient light rail transit service to communities in the project corridor" and "Preserve and promote a healthy environment and economy by minimizing adverse impacts on the natural, built, and social environments through sustainable practices" (reference page 1-4 of the Draft EIS). The Andover Street station location aligns most closely with this purpose because it has the fewest residential displacements and environmental impacts in the communities it is designed to serve.</p> <p>We agree that the other station locations at Dakota Street and Delridge Way would have the "greatest impact on neighborhood character due to the extent of displacements, the isolation of residences that would remain" and "these alternatives would impact the most area with sensitive viewers due to their height and location in the neighborhood" (reference page ES-18).</p> <p>The Youngstown neighborhood is currently a very quiet park-like area with beautiful old growth coniferous trees. The tallest tree top near my house, right across from the proposed Dakota Street station location is 60 feet tall, way up in the sky, and often with a brave large bird at its top. It is terrifying and heartbreaking to look toward the proposed Dakota Street station imagining so many of my neighbors gone and replaced with the station towering right above me, at least to almost double the height of that tallest old growth tree (60-110 feet [reference Draft EIS page ES-13 to ES-16]). As the Draft EIS did not include visualizations illustrating my perspective, I created one showing how even the "lower height" 60' Dakota Street station location would decimate our Youngstown neighborhood (see attached Figure 1).</p> <p>Please don't uproot all these Youngstown families from the neighborhood community you intend to serve when there is a station location at Andover with significantly fewer residential displacements. Transit Oriented Development (TOD) must minimize impacts to existing communities in order to integrate with rather than replace the community it serves. According to Sound Transit's Resolution No. R2018-10 (reference 2.4.1.c), Sound Transit identifies and pursues strategies that minimize displacement of individuals from properties impacted by Sound Transit. Please maintain Sound Transit's commitment to this approach by selecting the Andover Street station to preserve our Youngstown community.</p> <p>The tree canopy extends well above Longfellow Creek Park, including many old trees that are home to a huge variety of bird species. We always see herons, eagles, and waterbirds flying above the tree canopy between the West Seattle Golf Course and Longfellow Creek Park. This wetland includes part of the West Seattle Golf Course and Longfellow Creek Park (identified in the Draft EIS Ecosystems Technical Report Figure 3-1 as "Wetland WSE2 and WSE3") and is currently a wide open quiet area free from obstructions. Putting light rail line between the Golf Course and Longfellow Creek Park cuts right through the middle and would risk ruining this precious habitat (50-150 feet according to Draft EIS page ES-13 to ES-15). The Draft EIS Ecosystems Technical report describes the value of these WSE2 and WSE3 wetlands as, "Category II due to their higher levels of water quality functions, flood storage, and wildlife habitat. These wetlands flank the fish-bearing Longfellow Creek, to the north and south of Southwest Genesee Street. Beaver activity is evident in both wetlands WSE2 and WSE3; shrub and tree layers could provide shelter for other wetland-associated mammals and birds; and areas with seasonal inundation could provide amphibian habitat. Physical and biological restoration efforts have occurred in the creek, starting in the 1990s, and included native tree and shrub plantings around wetland WSE3 and along the forested portions of the creek."</p> <p>This alignment putting light rail line between the Golf Course and Longfellow Creek Park would newly surround Longfellow Creek Park with noise and create tall obstructions squarely in the flight path for birds. Instead putting the light rail line close to the West Seattle Bridge and the Nucor Plant at the Andover station location would be an ideal location since it is an already noisy area with tall structural obstructions. I created a visualization of the auditory impact based on my years of experience living adjacent to Longfellow Creek Park in the Youngstown neighborhood (see attached Figure 2).</p> <p>According to the Draft EIS ridership estimates, the Delridge station will service more vehicular traffic, compared to the Junction and Avalon stations. This creates unfair impacts on our Youngstown neighborhood with decreased air quality and traffic noise if the station replaces the middle of our quiet Youngstown neighborhood (Dakota Street location). The station should be placed nearest to the West Seattle Bridge and Nucor at the Andover Street Station to avoid disproportionate impacts to our</p>	<p>Barbara Arenz</p>
-------------------	---	----------------------

	<p>neighborhood.</p> <p>Please select the Andover Street station location. It is hurtful to think that our neighborhood may be disproportionately impacted by Light Rail if one of the other locations are selected. We are a quiet hardworking community. I beg you, please hear me. My neighbors matter. The community of Youngstown matters. The Andover Street station location is the only one that preserves our Youngstown neighborhood. The Andover Street station location has the fewest residential displacements of any of the station options at Delridge. The Andover Street station also has no park effects and one of the most cost favorable locations. The fair and equitable decision is selection of the Andover Street location.</p> <p>Please note Figure 1 and Figure 2 referenced above were emailed to WSBLEDEIScomments@soundtransit.org.</p>	
03/18/2022	<p>Hello,</p> <p>I just got back from two months in Thailand and I enjoyed how easy it was for me to get around Bangkok by using their Skytrain-elevated train, Metro--underground, frequent trains, boats, and buses to distant cities and towns. No need for a car there.</p> <p>I applaud the current efforts to catch up to what we had before the advent of car ownership, but we are woefully behind this third-world country, Thailand, and the city, Bangkok, that I just visited.</p> <p>With the spike in gas, public transportation is in greater need to accelerate the construction of mass transit like these plans.</p> <p>For public transit to work for more people, the train and bus schedules during daytime hours should have us travelers' wait times no longer than 7-10 minutes and the price should be about \$1 per ride up to \$1.50 with discounts for monthly or yearly passes.</p> <p>Thanks for the opportunity to comment. Richard Hunt</p>	Richard Hunt

03/18/2022	<p>This is regarding the Interbay portion. I recommend that the IBB-2a or IBB-2b over all of the other segment alternatives. This is due to the minimal disruption of the waterway during and after construction. I also recommend the tunnel alternatives because of the improved overall transit time to downtown due to less disruptions due to maritime traffic. The tunnels disrupt less historic and residential properties, construction impacts on congested streets and displace less people. Of the two tunnel alternatives, IBB-2a is slightly preferred.</p>	Teresa Osborn
03/18/2022	<p>Hi there - are we (truly!) not even examining a station in the center of Ballard? 15th would be better than 14th, but even at 15th the environment for people walking is terrible, between the parking lots, fire station (with enormous driveway), and the fact that 15th itself is 7 lanes wide and regularly driven at 40+ mph. Plus, it's a long way from the fun/accessible part of Ballard at Ballard and Market. Hopefully we can take another look at having a station in central Ballard.</p>	Adam Lee
03/18/2022	<p>Pls choose the 4th Ave option for sound transit in the Chinatown International District, because the 5th ave option is going to hurt the historical Chinatown area, business and people living there. As Asian Americans, we don't want to be pushed aside again.</p>	bu huang
03/18/2022	<p>I am commenting in favor of the 4th Avenue Shallow Alternative (CID-1a) for the Chinatown-International District segment (ES.3.1.2.2). This station serves the regional passenger rail hub for the Pacific Northwest, and it is important that this station facilitates seamless transfers between Amtrak, Sounder, bus, and streetcar routes on 4th avenue and Jackson street.</p> <p>This station will facilitate millions of inter-modal transfers in its lifetime and Sound Transit needs to prioritize making transfers as easy as possible. While this alternative includes an underground connection from the south platform of the existing CID station, I highly encourage Sound Transit to fully explore underground connections to King Street Station and Sounder platforms as well.</p>	Tariku Allen

03/19/2022	<p>I am a Seattle resident who commuted to work via bus before the pandemic.</p> <p>In general, in Seattle we want two things long term: (1) a system that is faster than driving (2) a system that will be finished in our lifetimes.</p> <p>INTERBAY/BALLARD: It good to ride elevated light rail in the sunlight, less nice in tunnels. Transit riders want to enjoy our commute. If above ground is lower cost, this is an obvious choice. Tunnels are only good when necessary. Underground, you have no sense of place, making it harder for newcomers or visitors. Therefore, in Ballard, I strongly support the preferred elevated solution IBB-1a (IBB-1b also). Definitely not the moveable bridge (in 50 years our descendants will want the capacity.)</p> <p>SOUTH LAKE UNION: DT-1 offers the best pedestrian access to South Lake Union being on the east side of SR-99.</p> <p>MIDTOWN: DT-1. The alternative is next to the freeway which is a terrible place for transit.</p> <p>CHINATOWN-INTERNATIONAL DISTRICT: Deep stations are bad for transit. These transfer minutes are precious and add up over a lifetime. Shallow 5th (CID-2a) and shallow 4th (CID-1a) are the best options. This is a long term gain for residents of north west Seattle and west Seattle. Elevator-only access is only a good idea in infrequently accessed stations.</p> <p>SODO Segment: This is a station where people will transfer. Transfer times are critical for riders of transit systems. Cross platform transfers are the easiest. At-Grade South Station Option SODO-1b is best followed by SODO-1a.</p> <p>WEST SEATTLE: The most cost effective solution that is politically feasible.</p>	George Fisher
03/19/2022	As a homeowner very near to the ID, please don't displace this area. 4th ave or 5th Avenue make so much more sense. This would have a huge impact on the International District.	Heather DEROSIER
03/19/2022	I have reviewed the lite rail and Skykink proposals. In my opinion the Skylink proposal is a more cost effective and less neighborhood invasive plan.	HOLLIS BEEBE
03/19/2022	All of the proposed elevated guideway sections in West Seattle need noise walls due to the residential density. Also, resilient track may be needed to dampen vibrations.	Pamela Hamilton
03/20/2022	Please consider tunnel options closer to the Alaska Junction. They will have less of a visual impact, be closer to stores and restaurants and provide ample space for TOD. The light rail station on Capitol Hill is a great example of this.	Kyle Phelps
03/20/2022	<p>Regarding the West Seattle - Downtown - Ballard corridor for Link Light Rail:</p> <p>I propose that monorail would be a better option than light rail, because it would cost much less, be less disruptive, could be built in less time, and could open years sooner. There are other advantages as well.</p> <p>For a much more detailed explanation, please go to my website at https://www.seattlemonorail.org/west_corridor.html</p> <p>Bob Fleming, Seattle</p>	Robert M. Fleming Jr.

03/20/2022	<p>I am a resident living in the Chinatown International District (C-ID) and a physician working in that community. I have lived here for 5 years and have cared for many patients who also live in the C-ID. I am writing to request that Sound Transit considers building an alternate route for the C-ID station, ie the 4th Avenue construction instead of 5th Avenue construction. This would limit disruption and displacement for the C-ID and minimize the displacement/closure of up to 19 businesses. Our community has been hard hit during the COVID-19 pandemic and over time has been subjected to gentrification, displacement, red-lining including the bi-section created by the I-5 and the stadiums. To build on 5th Avenue would mean to further subject my community to further damage and isolation.</p> <p>With my deepest ask, Hieu Pham</p>	Hieu Pham
03/20/2022	<p>Ease of use is a key method to encourage more transit ridership which in turn is key to alleviating congestion and improving the environment. My biggest concern for this regard is the depth of some of the stations and the required minutes-long descent/ascent. It would be great if station ingress/egress is kept within 90 seconds of the street including average wait times for elevators if such are needed. If that's possible using high-speed elevators, great, else I'd really like to see much shallower stations.</p>	Anton Babadjanov
03/21/2022	<p>I would prefer if the Ballard line went to 20th Ave NW or somewhere like that, as opposed to 14th and 15th Ave NW</p>	Jonathan Ursin
03/21/2022	<p>I prefer the route that stops on Harrison as opposed to Mercer for the SLU part.</p>	Jonathan Ursin
03/21/2022	<p>Don't make super deep tunnels. They are bad for people trying to access the stations and they are expensive.</p> <p>Any new stations built should be no deeper than UW station at Husky stadium. I have missed the Link too many times because I missed the elevator there. Elevators are slow and you have to wait for them. Walking down stairs/escalators are much faster and more reliable.</p> <p>Don't make a mistake we'll be regretting for decades. Don't build deep.</p>	Andrew Hu
03/21/2022	<p>Please consider a 20th & Market station again, as that is the heart of the Ballard commercial district and serves the most riders and businesses. We don't want the cheapest option, we want the best option!</p> <p>Thank you for your hard work</p>	Anthony Ruh
03/21/2022	<p>My name is Nick Wees, I am a resident of King County. I urge you to reconsider plans for the Int/Chinatown station. The current plan would have a significant negative impact on the community. The community is calling on you to choose the least-impactful option to develop its new transit hub. Please honor them and reconsider. Thank you.</p>	Nick Wees
03/21/2022	<p>Re: CID station expansion</p> <p>The Asian and Asian American communities in the C-ID have long been negatively impacted by city planning, ie I-5 cutting the neighborhood in half. This is a cultural hub, full of small businesses run by long-standing community members that have been severely impacted by COVID-19 restrictions and anti-Asian discrimination. I understand that a more robust transit system is important for the long-term, but we cannot keep disrupting this neighborhood (especially for years) without solid plans for the displaced businesses and traffic. It would be an absolute shame if there isn't a CID left after the station expansion. I am not versed in city planning, but I hope there is a better way forward than the current options proposed.</p>	Tina Hayashi

03/21/2022	<p>Please consider the cultural impacts of construction on 5th Ave for the second Chinatown station. These businesses are core to the culture of the Asian American community. This neighborhood has been hit especially hard by poverty and crime, including hate crimes, throughout the pandemic. I fear that closing businesses along 5th would be the final nail in the coffin for a neighborhood that desperately needs public investment. While these impacts are not measurable in time or money, they are invaluable to the fabric of our city.</p> <p>For this reason, I implore you to include significant context on the cultural value of the blocks east of King Street station vs west. Included should be analysis of the disproportionate impact on minority-owned businesses on 5th Ave, and it's importance as a gathering place for the community. It will become clear if these impacts are considered, the 4th Ave alternatives are the only viable paths forward. The shallow option in particular becomes the clear favorite for all stakeholders when vertical transport times (including conveyance downtime) are properly accounted for in impacts on service.</p> <p>Thank you, Braeden Van Deynze</p>	Braeden Van Deynze
03/22/2022	<p>Hello!</p> <p>Looking ahead to the growth that West Seattle will have in the near and far future I believe that having a Junction line that serves the western side of west seattle and an eastern line that serves the east side (delridge) is the best way to look at the future of mass transit in West Seattle. Merging the lines farther south to have a direct route to Sea Tac Airport would be a great line item to add to your future plans. In order to not have to back track and recreate the lines down the road I think the current option of Andover to Avalon makes the most since. With this route you have the opportunity to reach riders farther north to have shorter bus commute to the link (the cost and impact on our residents homes is smaller so it just makes sense). This also creates a great opportunity for a future delridge line.</p> <p>Thank you for your time</p>	Jacqueline Mallahan
03/22/2022	<p>I truly hope that Sound Transit breaks the cycle of dispossessing people in the CID from their neighborhood. The 1-5 freeway took away a significant part of Nihonmachi or Japantown from a very vulnerable population--the JAs that were incarcerated because of ex9066--and I don't have faith that you care about the Chinatown-International District as a neighborhood and its people. Because you haven't shown that CID residents could ever trust you to advocate for its interests.</p> <p>It does not make sense to shutter a vibrant corridor of business in the CID and know that it will affect the CID as a whole for many years to come.</p> <p>I hope you consider not ruining part of the city and its historic ethnic neighborhood--creating more construction space and dead zones, shutting down businesses, gutting institutions like Ping's Dumpling house and then patting yourselves on the back for saving money but leaving destruction in your wake.</p> <p>Prove me wrong and choose the 4th avenue option but to be honest I don't think you will.</p>	Marie Hayashi

03/22/2022	<p>Thank you for providing the opportunity to make suggestions. Streetcars are stupid, Subways are smart. Trains in tunnels have their own dedicated throughway and can connect with other forms of transit without having to compete and interact with other forms of transit. Please connect all the transportation dots so each station along each line can connect with all the other modes of transit in the station or immediately next to the station. Boston, New York, London, Paris, Tokyo, have all had subway systems for more than 100 years that have helped them become world class cities that are easy to navigate. The transportation choices made today will still be in place 100 years in the future. What will Seattle look like in 100 years? There are a number of Roman roads in the core of Rome, Paris, and London that are still in use today after 2,000 years. What will Seattle look like in 2,000 years? The underground subway system in Kyiv today, and in London during WW1 and WW2, sheltered many of the citizens from the bombs and artillery devastation. I would like suggest all the trains and light rail be put into underground tunnels as a contingency in case of the unthinkable such as WW3.</p> <p>Thank you for listening.</p>	Kelly Charlton
03/22/2022	Please do not expand to 5th! Protect CID businesses and choose 4th option to be minimally disruptive to local residents.	Linda Yang
03/22/2022	<p>Shallow 4th Avenue, preserve the community!!</p> <p>Julia Ramos, MD</p>	Julia Ramos
03/22/2022	The ever dwindling International District and displacement of the community is at risk for further oppression IF the light rail proceeds with plans for 5th ave. I would strongly advocate for plans to proceed for 4th Ave.	Kristin Anderson
03/22/2022	<p>I have very eagerly anticipated reading and seeing the plans to extend the light rail. As someone who recently moved to the Seattle area, I incorrectly expected the train lines to be more developed to reduce the need to drive. I very much feel the need for public transportation to reduce our reliance on cars, on fossil fuel consumption, and exacerbation of roadway traffic as population continues to increase.</p> <p>I will say that a lot of the WSBLE EIS goes into detail greater than I am able to comprehend. I recognize that there are great costs and sacrifices to expansion of light rail especially over land that has already been used for roads, commerce, and residences. However, as long as the situations are dealt in a fair market way, I see the benefits for all of greater import than the desires of the few displaced.</p> <p>As a resident of WS, I look forward to seeing and potentially taking part in public meetings on further developments in the endeavor to expand light rail throughout the Seattle area.</p> <p>Thank you for sharing this information publicly.</p>	Tim Leong
03/22/2022	As an AAPI healthcare provider who works in the CID, I am worried about the impact that building this light rail extension will have on the homes and businesses of my patients, who already have a long history of being displaced by construction and gentrification from this historic center for our community. Specifically, I am concerned about the high number of businesses that would be displaced by the 5th Avenue option (estimated ~18 per the provided comparison table), as opposed to the lower-impact 4th Ave options in terms of displaced businesses. I recognize that this may be more costly to the city, but I hope that preserving the culture and identity of the CID is worth it. Thanks!	Aisling Zhao

03/23/2022	<p>The current planned alternatives for downtown stations for the West Seattle and Ballard extensions are, in a word, absurd. All current plans have most stations so deep you are estimating minimums of five minutes to get to or from the platform. In five minutes, a person in a car going 20 mph can get 3 miles. A huge fraction of people using these stations will only be going 3-5 miles. Even for people going further, a five minute (minimum!) transfer penalty is adding substantial time to their commute. The transfer penalty will mean that people who can drive will chose that over this absurdity. Many of us, like me, cannot drive and will have no option but to deal with it. The elevators & escalators to these deep stations will, given past Sound Transit history, often be non-functioning so there will be even longer waits depending on which conveyances are working.</p> <p>However, anyone who has a choice will likely choose less environmentally friendly options like continuing to drive (even electric vehicles pollute waterways with tire and brake dust, and harm local air quality with PM2.5 particulates). By planning to build very deep stations, we are prioritizing short term impacts during construction over both the convenience and health of people using these stations for literally DECADES.</p> <p>As an example of why this matters, before the pandemic, several times a week I would take light rail from SODO to Beacon Hill to pickup my daughter at preschool. I have a strong preference (due to occasional panic attacks in elevators) to not be in crowded elevators so I often waited till the crowd cleared out. I routinely had to wait five minutes for an elevator that would only have five other people in it, instead of being shoulder to shoulder. The number of people using our stations is only going to increase so waits in stations with only elevator access will only get worse. Of course, when elevators and escalators break in a 160-190 foot deep stations it becomes an emergency and not merely an inconvenience in stations with stairs (that is, for anyone who can manage stairs). We should not plan that into these new stations! It will be hard enough to fix the ones we already have.</p> <p>Please rework the draft EIS to include alternatives that will be reasonably accessible and not impose massive time costs as well as create future risks of literally hundreds of passengers trapped 150+ feet deep.</p>	Rachael Ludwick
03/23/2022	<p>The Fauntleroy and/or Alaska Junction light rail stations displaces hundreds of residents, hundreds of employees, and a multitude of small and large businesses that currently serve the area. West Seattle residents currently enjoy a highly valued walkable neighborhood. The historic neighborhood includes charming craftsman cottages with garden greenspace, condominium owners and hundreds of renters who ALL appreciate and are involved in the community. In light of our region's severe housing shortage, it seems logical to choose an option that is the least invasive to the neighborhood's current residents and businesses by either building a mass transit tunnel OR in conjunction with a more robust bus system, locate a park and ride with train station in close proximately to the West Seattle Bridge.</p> <p>Decimating neighborhoods, displacing thousands of residents, businesses and local employees, and potentially expecting residents to live under high rise train tracks is an inhumane path to take in the name of progress when other much less harmful options are available.</p> <p>Thank you for thoughtfully considering our input.</p>	Nancy Nelson

03/23/2022	<p>I am writing to you as a lifelong resident of Seattle who has generations of family history in the Chinatown International District. At 31 years old, I have grown up with the CID and it is incredibly precious to me and my entire community.</p> <p>I know that there is a proposal to have Sound Transit run tracks through 5th Ave for the new West Seattle to Ballard light rail. I did not quite grasp how much of an impact this would have on the CID until I read about which blocks Sound Transit is planning on destroying in the plan. This is the heart of the CID! This would displace so many Asian businesses and would have major negative impacts on the neighborhood as a whole.</p> <p>After all the CID has been through just in the past couple of years (and how Sound Transit has already eaten into the CID previously) from constant broken windows to a literal open air drug market, this community cannot continue to take these heavy punches. I honestly can't believe this is even being proposed. Is the Asian community just supposed to sit back and watch while the city slowly rips our home apart?</p> <p>This 5th Ave proposal should not even be on the table. This is a historic district that is the heart and soul of our Asian community. Please go with the 4th Ave proposal. I don't think the CID can take much more abuse before it completely dies.</p>	Robin Momii
03/24/2022	<p>Hello,</p> <p>I am a longtime West Seattle resident. I have looked over the proposed plans and it seems the best option is to route the rail underground starting at Genesee and Avalon. The above ground is going to be ugly, noisy, and displace too many people. Also I don't understand why we need two stations but the most important is thing is that this light rail is NOT ELEVATED past Genesee. Thank you</p>	Tiziana Kerton

03/24/2022	<p>Dear Councilmembers and Sound Transit,</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). After two years of capital investment to their SODO location, they completed their move from Kirkland, WA to SODO in Fall 2021. Their progression from a cramped space to a larger showroom allows for elevated customer service as well as expansion of services. New services include: knifemaking, forging, culinary knife skills, and sharpening. Epicurean Edge acts as a cultural hub for the Seattle culinary community. Through the passing of knowledge, they inspire customers like myself to explore diverse regional cuisines. I recently heard their new location may be in the path of expansion for the Light Rail. Epicurean Edge is a unique business serving as a hub for the international bladesmithing community that can't be found anywhere else. Please help support a path for the Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop. The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. I am looking forward to their classes aimed at established knifemakers and beginners. These classes bridge the gap between consumers and dedicated artisans. Not only does this highlight local boutique manufacturing; it stresses long-term quality consumption as opposed to mass production churn and burn of knives. As the city of Seattle looks towards reducing it's carbon footprint, BladeGallery's classes encourage everyone to think about sustainability in non-traditional forms. BladeGallery Inc is a small business that currently supports 7 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists. During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>If you have any questions regarding BladeGallery that I as a customer can help answer, please feel free to reach out to me.</p> <p>Best Regards, Ryan Eng</p>	Ryan Eng

03/19/2022	<p>I was horrified to learn that one of the plans put forward for a Ballard-West Seattle light rail extension would cut right through the heart of our beloved CID neighborhood, displacing a huge amount of businesses. Destroying a swath of a historic Asian neighborhood in service of a Ballard-West Seattle extension smacks of white supremacy. There is a clear alternative! Go for the 4th Avenue route. It's unconscionable to go for the "cheaper" plan, the cost would still be high, and instead passed on to the neighborhood who would suffer loss and harm.</p> <p>Please reconsider.</p> <p>Natalie Walker</p>	Natalie Walker
03/23/2022	<p>Use the 4th Ave option. Do not take 5th Ave!!</p> <p>Thank you, Lily Chan 206.234.3616</p>	Lily Chan

<p>03/21/2022</p>	<p>Hello,</p> <p>The CID is a critically important neighborhood to Seattle and its many residents including me. I spend so much of my time in the CID and appreciate all of its character, people and businesses including the businesses on 5th avenue such as Joe's bar, Dough Zone, and Hood Famous.</p> <p>When I heard about the potential impact of the CID light rail expansion on 5th avenue, I was extremely worried, sad, and disappointed. This is the last thing Seattle and the neighborhood need. We need transit growth but not at the expense of our cultural centers, especially when there is another viable option. Choose the 4th street option!</p> <p>Transit must be viewed in terms of its long term aspirations--to connect the city and make it an even more culturally rich place to live. If you make decisions based on short term views, you are not investing in the city, its people, or its character. Take 5th avenue off the table.</p> <p>Thanks, Celia McTigue Seattle Resident 98144 Celia McTigue, MPH</p>	<p>Celia McTigue</p>
<p>03/22/2022</p>	<p>Hi – thank you for your efforts and for arranging this public hearing. I am a long time Seattle resident, have worked in Seattle nearly all of my professional career, and I have lived downtown for more than 13 years. I also serve on the Board of the Seattle Children’s Theatre.</p> <p>We (collectively – friends, neighbors, business colleagues, fellow board members), are very excited about ST’s planned extension through the city – from West Seattle to Ballard.</p> <p>While it is extremely important to increase access and the ease of traveling to the City and the Seattle Center, we have grave concerns about the proposed Sea Center Link Rail Station on the Preferred alternative extension line. The location on Republican potentially presents an existential crisis for some organizations housed at the Seattle Center.</p> <p>The potential 5-7 years of construction will have a serious impact on the ability of the Seattle Center’s 12 million annual visitors to enjoy the arts, culture, science, and sports that bring them to the Center.</p> <p>The Seattle Center represents the heart and soul of much of our innovation, cultural and entertainment centers, providing accessible, inclusive ways for children and families across our region enjoy these centers, and come together to honor our cultural and entertainment centers.</p> <p>The Seattle Children’s Theatre is one of two leading theatres in the country providing professional theatre for young audiences. We, along with all of the organizations housed at the Center, play an important role in the City, and the region. We have to do whatever it takes to mitigate the impact of construction and access, to ensure that our leading cultural organizations survive the development and construction period.</p> <p>We appreciate that the Seattle Center and Link light rail will be here for the next 100 years and beyond. Let’s do this project right by maximizing the benefits of light rail to the Seattle Center and the millions of people who visit every year.</p> <p>Thank you for doing whatever you can to place and develop the Seattle Center station in the most successful location, without damaging important structures and organizations beyond survival.</p> <p>Barb Larimer</p> <p>206.618.8845</p>	<p>Barb Larimer</p>

03/24/2022	<p>I am commenting today on the draft EIS covering the West Seattle & Ballard links. I have great concern for the displacement of many small businesses and residents within the International District should these plans for expansion be accepted. Having lived in a city where a similar project literally split a long-established and vibrant community in half, I have seen what this manner of "progress" often brings. While I agree our area will benefit for improved mass transit plans, I'm opposed to the particulars of this EIS.</p>	Roberta Greenwood
03/19/2022	<p>As a current resident of the CID, it's very concerning to hear of plans for the new light rail station to open in the heart of the CID and displace so many businesses. I'm writing this to urge you to commit to the 4th Avenue plan and end Seattle's history of displacing the CID. This community tolerates so much constant bombardment and intrusion already in the form of not one, but two stadiums on their doorstep in addition to a light rail station already there. The only moral and ethical choice is building on 4th Avenue.</p> <p>Thank you,</p> <p>Rueben Otero (they/them)</p>	Rueben Otero
03/22/2022	<p>To whom it may concern,</p> <p>I'm here to comment on my concerns of the destruction of historical structures and buildings in the international district, a place that I, and many others, have a place in our hearts. As a Chinese American, the international district was where I felt my culture and felt like I belonged. The buildings and structures that reminded me of my home country and people were so important to me and many other immigrants that missed home. The tall gates reminded me that I was 'going home' in a way and still stirs up that feeling to this day 20+ years later.</p> <p>I understand the plans that are set for construction to build on 5th Ave is cheaper, but at what cost? Destroying a already dwindling community? Destroying historical Seattle structures? Taking away a experience that I had as a child, for the future immigrants? Instilling that, unwanted land is not profitable until it is, from the blood, sweat and tears of POC?</p> <p>I'm not denying the fact, having better public transit in the area would be amazing. Please chose the 4th Ave option. It'll be more expensive, yes. But it will save important historic buildings and land that poc worked hard on to make desirable.</p> <p>From a concern individual in the community, Jax Victoria</p>	Jax Victoria

03/15/2022	<p>I don't believe my comment would be welcome during the current session on the Interbay/Ballard extension, so I'm putting it in this email:</p> <p>Firstly, I think we can all agree that the tunnel solution is the best one, so I'd like to voice my support for that.</p> <p>I understand there isn't much that Sound Transit can do about funding issues, but the 20-year timeline is too slow; many people watching this presentation, and even working on the project, will literally be dead by then.</p> <p>As I'm sure you know, all the benefits of this upgraded public transportation is needed urgently, for benefits ranging from helping with climate change, to greatly reducing commute times to improve quality of life for thousands.</p> <p>I realize it's ironic for me to be saying this in a public forum, but I believe the overall process is being artificially slowed more than necessary because of extraneous steps such as all these sessions for public input.</p> <p>I don't think you should care about opinions from random people - you should rely on the expert points of view of the professionals hired to work on this project. Design by committee - especially by people without any expertise in a topic - is a recipe for disaster.</p> <p>Again, I assume SoundTransit can't do anything about this, but I believe we should just take the money needed from the multi-billion-dollar corporations based in Seattle, rather than just making the rich richer via corporate welfare.</p>	Lonnie Mann
03/19/2022	<p>I don't understand why you have to put in two light rail stations within blocks of each other! Not to mention that your proposed 5th Ave station displaces so many ID businesses. This is a terrible idea!</p> <p>If you REALLY MUST do this, please go down 4th Ave. Yes, it's more expensive, but this neighborhood is historically and culturally so important to Seattle. I lived in the ID for three years and loved it, and still go back to shop and visit. Please do NOT choose the 5th Ave option!</p> <p>Sincerely,</p> <p>Ellen Kimura Eades (Secretary, 43rd District Democrats)</p>	Ellen Kimura Eades

03/23/2022	<p>Thank you for soliciting comments regarding the proposed location of the Seattle Center Link Light Rail Station. Seattle Children's Theatre shares the concerns of our peers and fellow resident organizations about the proposed location of the Seattle Center Link Light Rail station. That location potentially presents a very real challenge for many organizations housed at the Seattle Center.</p> <p>As we dig into the details of a potential 5-7 years of construction, it is clear to see that this will serious impact on the ability of the Seattle Center's 12 million annual visitors to enjoy the arts, culture, science, and sports that bring them to the Center.</p> <p>Housed on the Seattle Center campus since the mid-nineties, SCT sits in the shadow of the Space Needle and presents world-class theatre to the region's young people. A field trip to Seattle Center and an SCT production is often the first arts experience for many of our youth. Our schools and busses will be challenged to make this important experience happen with the disruption proposed by the light-rail location.</p> <p>SCT gives its full support of light rail coming to the Seattle Center, we simply ask for more consideration of the station location to allow Seattle Center organizations to survive the disruption.</p> <p>Clare Hausmann Weiland (she/her) Senior Director of Strategic Initiatives Seattle Children's Theatre Phone 206-859-4008 Email clareh@sct.org** Web **sct.org</p>	Seattle Children's Theatre
03/22/2022	<p>Hello,</p> <p>I am excited to learn that Sound Transit is considering bringing light rail near Seattle Center. The value of providing better access to Seattle Center is undeniable. Knowing the vital role Seattle Arts Programs play at the Center and in the city, I trust that Sound Transit will work with Seattle Repertory Theater and other organizations at Seattle Center to ensure programs and operations on the campus will not be disrupted.</p> <p>Thank you.</p> <p>Roslyn Schley</p>	Roslyn Schley

03/23/2022	<p>To Whom This May Concern,</p> <p>I am writing with great worry and concern about the thought of a new light rail line that may possibly run through Chinatown International District. This would not only shutter multiple businesses but also displace many people who have called Chinatown home for decades.</p> <p>The businesses that will be affected by the new line are vital to the community, many of which my family and friends consider our go-to spots. The businesses are also great for those not from Seattle and visiting CID for the first time. It leaves a lasting impression on visitors on what CID is about: Inclusion of all communities from different backgrounds. To see these businesses be sacrificed for a line that quite frankly nobody cares where it goes is extremely disheartening to me and I pray that members of the board, including Mayor Bruce Harrell, to leave the CID area out of this drastic change consideration.</p> <p>The new line will also displace members of the CID community, many of them Asian immigrants who are senior citizens, do not speak or understand English, and live in CID because it gives them a sense of home. It gives them a sense of peace, a sense of relief that they are surrounded by those who share the same stories of how they came to America and ended up in the city of Seattle, to call CID their forever home. By displacing them you are asking members of the CID community to make a huge change they aren't ready for nor do they have the means to properly execute. This new line will be pushing them out and further away from the community. Many of these members have walkers, canes, and other walking aids because they cannot stay on their feet for too long and can only go short distances. To even imagine a member of our CID community struggle to make it to the grocery store because the new line pushed them further from the one they were already within close distance to breaks every bit of my heart, and it sickens me that members of the board are not taking the CID seriously.</p> <p>As to why I am so passionate in my words about this: it is because the CID is a part of me. It's a part of my family and it's a part of my life. I was raised in Chinatown as a child and it was also home to my grandmother for over 30 years. Sadly she passed away last year at the age of 98. 5th ave evokes many childhood memories and I can smell the aroma of the fresh baked goods and blazing hot woks cooking delicious meals for those wandering in CID just by closing my eyes. This new line come into CID would be like watching somebody throw out my grandmother from her home, forcing her to find a new one at an age where it becomes an extremely challenging and emotionally draining. We not only owe it to our elders but to also anyone that would be displaced by the new line. They don't need anymore heartache, after all the community has been through these past 2 years.</p> <p>As I conclude, I write, pleading with the Sound transit board and Mayor Bruce Harrell, please do not choose 5th ave as an option. To tear apart the CID, shutter the doors of 20+ businesses and displace members of the CID community is not the right decision and an alternative must be used. I thank you for your time. Have a great day.</p> <p>Best, Jordan</p>	Jordan
03/24/2022	<p>Dear Sound Transit Board Members:</p> <p>Following up on my previous letters, I am voicing our opposition to any Sound Transit Stations on 5th Avenue. Our preference is for the locations west of the CID Historic District.</p> <p>Your 5th Avenue options post most severe impacts to our Community in terms of businesses and traffic closures, historic property ownership transfers, and interruptions to CID Community life and livelihoods.</p> <p>I appreciate your consideration and will be happy to continue a dialogue if needed.</p> <p>Sincerely, Paul Z. Wu, AIA President, Friends of Chinatown-Seattle Member, Transit Equity for All (TEA)</p>	Friends of Chinatown

03/24/2022	<p>The shallow station alternatives for International district and other stations would be great for transfer times and accessibility, especially considering empirical lack of reliability of current elevator and escalator systems for Link stations.</p> <p>A Ballard station that does not require crossing 15th ave (which is extremely busy and hostile to pedestrians) in order to get to historic ballard would increase convenience, utility, and safety.</p>	Takashi Olds
03/23/2022	<p>From: SuperSonicFish ncbaluca@gmail.com Sent: Wednesday, March 23, 2022 6:02 AM To: West Seattle Ballard Link Extension Comments WSBLEDEISComments@soundtransit.org Subject: Please don't build more rails That displace small business in international district, Seattle.</p> <p>CAUTION: This email originated from a contact outside Sound Transit. Remember, do not click any links or open any attachments unless you recognize the sender and know the content is safe. Report any suspicious email by clicking the "fish" button in Outlook. Thank you! ST Information Security</p> <p>The international district offers a diverse minority owned businesses that affordable food options offered no where in Seattle downtown anymore. Please use the 4th avenue option to build more rails instead of the 5th avenue option</p> <p>Sincerely</p> <p>Nick Baluca</p>	Nick Baluca
03/24/2022	Please use the space at and or under Union Station for the CID station site. Reduces impacts to residents and businesses while bring the historic staton site back to life as a important active place in the community.	Jack Sparky
03/24/2022	4th Ave option is best for CID!!!!!!!!!!!!	Serena Louie
03/25/2022	<p>I am huge supporter of expanding the light rail. It would be great to see the West Seattle line go even further south down the peninsula and connect to the Seatac Airport and its already established light rail line. Going from the Alaska Junction to the Morgan Junction, West Wood Village, White Center, and down Ambaum all the way to Burien and eventually terminating at either of the existing Tukwila Int. Blvd., SeaTac/Airport, or Angle Lake Light rail stations.</p> <p>This would make traveling up and down the West Seattle peninsula much easier and connect West Seattle, White Center, & Burien directly to the airport by train. I'm sure this may be costly but upzoning and densifying the corridor, more specifically the urban villages on this potential line, will bring more tax revenues and hopefully offset some of the cost.</p> <p>-Alex Coy</p>	Alexander Coy

<p>03/25/2022</p>	<p>I would favor a tunnel option over a bridge option for the Ballard Link extension, particularly if no private funding is required. The cost is comparable for bridges and tunnels, but with a tunnel, there would be less residential and business displacement as a result of construction.</p> <p>For cyclist accessibility, a Ballard station on 14th Avenue NW would work well if we also have street improvements on 14th Avenue NW. Today, this avenue is in poor condition due to its use by heavy industrial vehicles and due to the disused rails that are still present under the road surface. Given the choice between 14th and 15th Avenue stations, a 15th Avenue station would improve pedestrian access if it includes a generally accessible pedestrian passage under the street. Crossing the 15th and Market intersection today requires lengthy waiting at a noisy, heavily-polluted place. I would also encourage Sound Transit to reconsider stations located more to the west, such as at 17th Ave or 20th Ave, as these would be closer to the walkable, historic commercial district of Ballard.</p> <p>Our city is larger in population than it ever has been and it continues to grow. Should employees return to in-office work after the COVID pandemic, traffic levels will grow to become unsustainable. In addition, transportation is our largest source of pollution. Replacing car trips with transit trips needs to be prioritized as soon as possible for the sake of our mobility and our environmental goals.</p> <p>Thank you for all the great work you've done on this project! Let's build more transit.</p>	<p>Jason Weill</p>
<p>03/25/2022</p>	<p>I have happily been living in Seattle for 15 years and have continued to see city expansion efforts disrupt local communities; it has already displaced many older generations away from their homes where they have lived in for a good length of their lives. I've lived in First Hill and seen the entire neighborhood change in the course of one or two years, been pushed out of Capitol Hill after rising costs due to gentrification, lived in low-income housing behind Whole Foods in SLU... I am sick and tired of seeing good people and businesses being kicked out due to city politics and constant oversight for almost every major project that has kicked off here (namely HWY99, Big Bertha, Alaskan Way) there are just too many other factors I believe should be paid attention to such as our homeless crisis and the displacement of their camps which now has created such chaos in all areas of the city. It is a waste of taxpayers money to expand the sound transit if we haven't had a handle on our homeless/drug situation along with all of our crappy roads (fix the damn pot holes before finding other ways for techies to commute). Expansion in the CID would only increase traffic and we would lose many local businesses that have paid their dues and worked hard to stay established in the area.</p>	<p>Sean Lee</p>
<p>03/25/2022</p>	<p>I sincerely hope this project does not throw money at entirely too deep stations and tunnels with inconvenient transfers.</p> <p>The whole purpose of this project is to make a useful and reliable transit system that will move passengers throughout the city and region. Deep bore tunnels that have endless escalators or elevators to get people up and down will add time to their journey and make transfers difficult. It will reduce ridership without adding benefit to justify doing so.</p> <p>Cut-and-cover tunnels should be considered. Yes, there are downsides to them: the construction is more disruptive than tunnel boring machines and there may be issues with underground utilities. But we need to step back and take a look at the big picture. We are not building a 10-year system, it is a system that we expect to be useful for 100 years or more. Those disruptions will be forgotten, but the system left behind will remain.</p> <p>Transfers at International District station should be relatively painless. A deep station transfer will not be useful for passengers, and fewer people will ride as a result. Likewise, a midtown station that is hundreds of feet underground will not have as many passengers as a station that is just below the surface.</p> <p>You should strongly consider alternatives to deep bore stations. We have one chance to get this right.</p>	<p>Mark Abersold</p>

03/25/2022	<p>My comments are primarily focused on the Delridge station area as my current residence is located approximately 0.75 miles south of the West Seattle bridge. However, I will have a few comments that pertain to the project as a whole.</p> <p>Delridge Specific Comments:</p> <p>Any impacted services for vulnerable populations need to have the city of Seattle to commit to funding and plans to replace with equivalent or better facilities.</p> <p>Alternatives 1 and 2 will have a large impact on the residential area of North Delridge, however, I think there is an opportunity here to increase space for local shops that are adjacent to the new station areas. Plus, the construction impacts would be minimal for the main arterials compared with alternatives 3 & 4.</p> <p>Alternative 6 seems attractive because it has the least disruption, however, it does put the station into a location that is less accessible relative to the other locations.</p> <p>The bike path that connects Delridge to the Spokane St Bridge crossing needs attractive temporary routing and if possible, a new permanent alignment that ensures the safety of bike users along the temporary and permanent path.</p> <p>Overall, while there are going to be disruptions, I think this will be a net benefit for Delridge and West Seattle.</p> <p>Other Comments:</p> <p>Downtown corridor and station options need to avoid any options that create permanent bottle necks in the ability for riders to get to the station platforms. Any alternative that relies exclusively on elevators is bad for future planning.</p> <p>Station placement near the current downtown transit tunnel needs to ensure that riders can easily move from the current tunnel to the new stations in the quickest manner. Needing to go to street level requires extra time.</p> <p>The Ballard extension should avoid any bridge structure that is subject to train disruption (i.e. draw bridge) Although not an alternative, the current station alignments in Ballard are too far away from the main historical area of Ballard for convenience.</p>	Stuart Tanasse
03/25/2022	<p>Sound Transit is finalizing plans for a huge new transit station in Chinatown/International District (CID) as part of ST3, the multi-decade, \$53 billion expansion of our regional public transit system. For years, CID community activists have pushed back against ST's preferred plans for the CID expansion, stating that ST's plans would drive out community businesses, detour up to 30,000 vehicles per day through the CID's residential streets, and ruin life for the residents of the area with as much as ten years of highly disruptive construction.</p> <p>I urge you to choose the least-impactful option to develop the new transit hub. Thus far, Sound Transit has refuses to publicly commit to any particular plan at this time.</p> <p>Please do not disrupt the CID in this way!</p> <p>Yours, Michelle Mentzer 15709 SE 6th St. Bellevue WA 98008</p>	Michelle Mentzer
03/26/2022	<p>As a resident and small business owner near Alaska Junction, I believe the tunnel is the preferred option for the Junction Station. I think the newest University station is a good comparison and outcome, because it is visually integrated into the existing single story business district and less noisy as a result.</p> <p>A tunnel is definitely the best option for the Alaska Junction.</p>	Geneva Griswold
03/26/2022	<p>I think a tunnel is the best option for the junction station. An elevated rail line seems like it would disrupt the character of the neighborhood which is both high density residential / retail and single family residential along the proposed route.</p> <p>Tunneling would reduce noise and mitigate neighborhood impacts while welcoming the light rail.</p>	Aley Thompson

03/26/2022	<p>I would strongly encourage the City to continue with the practice of tunneling in our dense urban areas as has been done in Capital Hill and the U District.</p> <p>By building high rise train tracks in urban areas you will be drastically and immediately lowering the quality of life for all those who are forced to live in the shadow of the tracks (businesses, renters, home owners). Home values will be dramatically lowered and all residents will be financially and socially oppressed due to "living on the wrong side of the tracks". As soon as you decide to place high rise tracks in residential proximity you will also be negatively impacting home owners financial well being. Would you want an 80 foot track tail across the street from your house? Would you want to live under a 100+ foot tall train track?</p> <p>West Seattle has waited for light rail and has been without a bridge for two years now. We can wait until the City can afford to do the light rail project the right and considerate way which is tunneling.</p> <p>The human cost should outweigh the financial cost.</p> <p>Please don't ruin West Seattle or it's tax paying citizens with high rise train tracks.</p>	Barbara Lall
03/26/2022	<p>I am writing about the Alaska Junction Light Rail project and urge you to chose the underground tunnel option for the station and then for the subsequent track to Burien. I can imagine little that would destroy our nearly-affordable and diverse community more than putting a above ground track and station in our midst. Like as they did in the past when siting the highways through low income neighborhoods, diverse neighborhoods, an above ground light rail plan in West Seattle as opposed to an underground plan in the northend of Seattle smacks of wealthy privilege. Most importantly we do not want our neighborhood negatively impacted by above ground light rail. I want light rail to come to West Seattle and I will use it often once here but I want to live in a neighborhood that allows me to walk without the noise, pollution and disruption of above ground tracks. I urge you to put the underground station and the tracks on a current arterial (Fauntleroy) rather than on a residential street (41st or 42nd). As your EIS shows, the advantages of an underground station have merit.</p>	Karin Miller
03/26/2022	<p>I'm late to the game on commenting, but as a home owner who lives in Queen Anne right of Mercer it seems wise seemed logical to me that somehow sooner than 2037 you could get a light rail stop from the Westlake station to the Seattle Center. Now with the Kracken and so many other things happening at Seattle Center it would immensely lighten the traffic load on Mercer if people could light rail to the Seattle Center directly rather than going to Westlake and having to change to a bus, monorail or walk. I know many people who opt to just drive instead. With the number of hockey games that occur it really does create such gridlock for residents who live in the area when it could so easily be resolved by adding one additional stop.</p> <p>Thank you....</p>	Tracy Goodrich

<p>03/26/2022</p>	<p>Section 6.2.2.1.2 Duwamish Segment It seems that Alternate DUW-2 North Crossing Alternative impacts fewer residences and employees. There are no noted impacts to local wildlife for DUW-2 (Blue Herons) and there are no park impacts. I understand there is a cost impact, but the relative change from \$1.2 to \$1.5 B appear small while preserving as much of what keeps Seattle “unique” as possible.</p> <p>Section 6.2.2.1.3 Delridge Segment With the recent passing of SSB 5528 does this free up the additional funding opportunities require to achieve DEL-2a (and the subsequent tunnels for Avalon and West Seattle Junction)? I believe the lower height option station maintains the feel of the Delridge neighborhood while allowing for faster connections (from platform level to street level).</p> <p>Additionally, DEL-2a impacts the least residences of the in-neighborhood options (1, 2, and 3).</p> <p>ES.3.1.1.4. West Seattle Junction Segment For transit-oriented development I personally prefer WSJ-3b as the Alaska Junction station is as close to the already-built development along California Ave SW. With the recent passing of SSB 5528 does this free up the additional funding opportunities require to achieve WSJ-3b?</p> <p>General draft EIS Comment With the passage of SSB 5528 can the alternatives be reopened for the Ballard Tunnel to extend the tunnel to 20th street (Thorndyke tunnel option)? This brings the station into the already developed areas of Ballard and connects the neighborhood to the city better.</p> <p>General draft EIS Comment Why are all of the downtown stations so deep (when compared to the current stations only 1 street over)?</p>	<p>Alan Carey</p>
<p>03/26/2022</p>	<p>I am a 30-year resident of West Seattle. I live in a 1913 Craftsman Bungalow two blocks from the Alaska Junction on 42nd Avenue SW. My house would be impacted by versions of this light rail plan. My neighbors also have some of the older, charming homes in the neighborhood. We contribute to the character and charm of West Seattle.</p> <p>If you have spared the destruction of other neighborhoods while building the existing light rail, please avoid the destruction of our neighborhood. We deserve a tunnel just as much as Beacon Hill.</p> <p>We have just spent two years in traffic misery because of the problems with our bridge - which was supposed to last much longer than it did. We have endured traffic nightmares and further isolation from families and friends, in the midst of the pandemic.</p> <p>Elevated light rail would be an acoustical nuisance for the properties around the towers. You would decimate the character of our neighborhood. I am vehemently opposed to the elevated light rail proposed for West Seattle.</p>	<p>Leslie Hale</p>

03/27/2022	<p>My original gut preference was for a bridge solution (in the IBB segment), but after reading the various pdfs, a tunnel solution just sounds all-around better.</p> <p>The tunnel paths (IBB-2a and IBB-2b) have no noise, vibration, or watershed footprint (which includes shoreline, over-water, & in-water), nor cause light pollution (unlike all the bridge-based options); and they have the smallest number of parcels of land displaced and the least number of historic properties adversely affected.</p> <p>It also is safer for pedestrians if tunnel stations are used at the Ballard terminus (with less conflict between vehicles and pedestrians), thus IBB-2a and IBB-2b are safer and more closely align with Vision Zero. Of those two, IBB-2b might be safer since it would provide station access on both sides of 15th Ave NW thus reducing the amount of street-level pedestrians racing to cross this busy street (however, this safety improvement might not be of sufficient scale to warrant the extra cost of IBB-2b compared to IBB-2a).</p> <p>IBB-2a's estimated cost is equal to the lower bound of the preferred option, so I don't see why it would require third-party funding; and overall, it seems to be clearly the best option for the Interbay/Ballard segment.</p> <p>Moreover, only the tunnel paths would not impact any aquatic plants or animals, which includes federal and state endangered species.</p> <p>Regardless of which path is finally selected, please ensure that the Sound Transit properties' grounds and respective street trees are all native vegetation. There are numerous native trees, shrubs, groundcover, and grasses that can be used for all non-impervious land. Native plants are easily and readily available (such as "Go Natives! Nursery", of which I have no affiliation but they are a great native plant nursery). There's also a wealth of information available online regarding preferred growing conditions for native plants, so there's really no longer any excuse for planting any non-native foliage. Academic research has shown (unsurprisingly) that native plants better meet the nutritional needs of native birds & bees than non-native plants (even when compared to non-native plants known for attracting them).</p> <p>I also hope that the local tribes' input (including the Duwamish tribe) has been given great weight by Sound Transit in designing this project. I do see in the Agency & Tribal Consultation Letters that the project did reach out to multiple tribes; but I only see a short reply of acknowledgement from the Duwamish Tribe and it's not clear that any of the tribes formally accepted the invitation to participate. Was the September 27, 2021 email from the Duwamish Tribe the only tribal response the project has received? If so, then I'm very worried about this project. Organizations that represent social justice, civil liberties, and/or minority communities may at times be invited to join "work groups", "boards", or "advisory groups" by municipal entities. However, if those orgs don't believe that their concerns will be heeded (and even worse may not only be ignored but then having the org's presence on the board be used to legitimize the bad outcomes), then they may choose to not participate. So the lack of tribes enthusiastically agreeing to participate makes it look distinctly like no tribes trust that Sound Trust will listen to them or work with them as the true stewards of this land. Has Sound Transit made any attempts to more personally connect with the tribes or provide any guarantees about the weight that will be given to their input?</p> <p>Lastly, as someone with an anxiety disorder, I struggle when traveling via both by tall bridges or tunnels. Yes, I do use both since avoidance is not practically possible in Seattle. But I have to actively attempt to ignore the outside. I find the center-most lanes of Aurora Ave less troubling than the lanes closer to the edge. With the bridges for IBB all being dedicated to the light rail, they won't be very wide, so the distance from inside the shuttle car to the bridge edges will be very close and very apparent how high up we're traveling. I find it easier to ignore being in a tunnel since at times the skies just get overcast, so if I'm distracted reading a book, it's easier to not notice that we just entered a tunnel. The same doesn't seem to work for me with bridges. I don't know how many people have their anxiety disorder play out the same as mine; but I also suspect few people will admit to this in the feedback due to the stigma around both mental illness and the shame of struggling with traveling along modes that other people think nothing of. Regardless, personally, I'd prefer a tunnel solution in the IBB segment.</p>	M. N.
------------	--	-------

03/27/2022	<p>Please build on 4th ave NOT 5th ave.</p> <p>Construction on 5th Avenue in Chinatown to Japantown means:</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years</p> <ol style="list-style-type: none"> 2. Re-routing cars, buses, to 6th, Maynard, 7th, 8th, 10th & 12th 3. Gas, water, electrical shut offs to businesses, non-profits and residents 4. Daily dump trucks, cement trucks, cranes, supply trucks, delivery vehicles 5. Construction workers taking parking from businesses 6. Increased noise & air pollution, dust, dirt, vibrations 7. Taking property from owners of color for demolition and resale after construction 8. Endangering lives of 1,200 elderly by blocking access/egress for emergency vehicles with street/sidewalk closures and detours 9. Permanent changes to National Register Seattle Chinatown Historic District—loss of 3 blocks in addition to prior loss of 3 blocks for Transit Tunnel <p>Thank you for your time and consideration.</p>	j Yamaguchi
03/27/2022	<p>Are you serious? This thing has so many issues! The first is we can't afford a second tunnel through downtown. We need other options that save money. Second, the tunnel is so deep that it makes entering and exiting a headache. Not only that, but it can be a safety issue. How are people going to exit during an emergency? Also, elevators and escalators at several stations are always broken down. Even in newer stations. How is it going to be with these deep stations. Third, the second tunnel does not offer anything unique. It is just following the current tunnel we have right now.</p> <p>I think we need to have the West Seattle line merge at SODO and go into the tunnel we have right now. For Ballard, have a separate line that ends at Westlake and have a transfer at that station. It isn't great, but is a lot better than what we have currently. Also, cut and cover would probably be the best method for the Ballard line.</p> <p>And finally, speed up the construction! Seattle wants this right now and waiting twenty years is not helping anyone. We have a new law that can speed up construction in Seattle right now. Use it! Right now, you are not a popular organization and the longer you wait and go through with this ridiculous plan, it will be more likely that your popularity will fall to levels you might not recover from. We don't want to have what happened to the monorail expansion that never happened.</p> <p>I am rooting for you guys, but you are making it so difficult right now to continue the support! I hope you will reconsider and look at my ideas closely! Thank you for your time!</p>	Robert DeMacon

03/27/2022	<p>Given that the Ballard tunnel alternatives (IBB-2a and IBB-2b) are nearly equivalent in cost to all the other alternatives and that they have fewer displacements and no impact to Salmon Bay and the ship canal, along with fewer impacts to historic places, the tunnel is the obvious preferred option, even if it costs more. A giant bridge like in IBB-1a/b will be an eyesore with significant impacts, and a moveable bridge like in IBB-3 is unacceptable for reliable transit.</p> <p>Of the tunnel options, IBB-2b is more reasonable than IBB-2a because it is closer to the actual walk shed of the Ballard that exists today. The area to the southeast of 15th Ave NW and NW Market St is primarily industrial. Given the difficulty of building even a bicycle path through an industrial area, (i.e. Burke Gilman Missing Link) it is unwise to assume that this part of the city will become the transit-oriented development that would make a 14th or 15th stop preferable. The Ballard station should be as close to the heart of the existing urban core in Ballard as possible.</p> <p>While the 15th location is marginally better, it is still undesirable, because it is in fact on the southeast corner of the busiest intersection in Ballard, making it effectively further from the primary walk shed that exists in Ballard today. That should be mitigated with entrances at all four corners of 15th and Market; otherwise, we are sacrificing long-term usability, and we are making transfers more difficult.</p> <p>A more ideal station would be in the heart of the urban core in Ballard. Better locations would be near Ballard and Market, Bergen Place, or somewhere within a few minutes walk of those places. It is imperative that we choose the most functional station for this project. We should focus on long-term gains instead of small differences in cost that will mean less ridership and more traffic congestion and greenhouse gas emissions.</p>	Christopher Lish
03/28/2022	<p>I live in the Pigeon Point neighborhood. I strongly recommend you DO NOT select the North Route because that would demolish the Chelan Cafe. And really, nothing good could come of that. The people there are wonderful, they are friendly, always welcoming and really they make a great breakfast!</p> <p>Keep the Chelan Cafe!</p> <p>Thank you!</p>	Rose Feliciano
03/28/2022	<p>The tunnel option is the only option. Do not ruin our beautiful neighborhood with an elevated track that would displace thousands.</p>	Joseph Lancaster
03/28/2022	<p>As a resident of West Seattle who regularly walks and bikes with my children around the Junction and Triangle areas, I strongly support the lowest height and tunnel options.</p>	Shannon Saam
03/28/2022	<p>Comment 1 - I live in Youngstown Flats, the big apartment building next to the Delridge station alternatives. I'm worried that all the alternatives have these wildly tall stations out in the stratosphere and I really don't trust that Sound Transit maintenance will manage the accessibility features for getting to the station (e.g. elevators, escalators) well. I'm in favor of whatever plan places the station at a reasonable height.</p> <p>Comment 2 - If any of the blue "other alternatives" are chosen, the cost of building out sidewalks on Andover should be considered - the road isn't exactly easy to navigate on foot. As is, those station sites are pretty terrible from a pedestrian standpoint.</p> <p>Comment 3 - I did a deep dive at the EIS at my local library branch and I just think it's really cool that yall thought to put those in libraries. Good on ya, thanks!</p>	Spencer Nilsson
03/28/2022	<p>I work at 4000 Delridge Way SW, it looks like 2 of the plans would require tearing down our office building. If that is correct I would prefer the plans that don't go through our building.</p>	Scott LaRose

03/28/2022	<p>Dear transit board members, consultants and all,</p> <p>We are Chinatown ID residents, employees and most of us don't speak English and it is hard for us to participate in the Zoom meetings on 3/17/2022. We would like to express our will for the new Growing transit project at 4th Ave. is preferable as it minimizes the impact to our community.</p> <p>The 5th Ave. S. project would greatly impact/harmful for our community as 30 of small businesses have to closed and many streets would be blocked, noises, dusty etc...would be harmful to all the local businesses, residents (around 2 thousand of residents including seniors and lost of children activities) school transportations, visitors.....according to the history that our community being cut and minimized by "New Projects" for the decades and we are really disappointed with it. We don't want to get any further cut or removed from the history due to this new project again. Our history being registered needs to be protected and respected as well !!</p> <p>As Chinese residents and employees we are working hard and fighting for a good, active and vibrant community and contribute to the city as well as the country. We love the country, love City of Seattle, love our Chinatown ID area and we don't want to see any further cuts in area/spaces at our community, our history.</p> <p>Please consider the 4th Ave. project instead of 5th Ave. which is killing our community(the 2,000 residents/families' home town), our 300 small businesses which is the good working channel for the new immigrant who is limited English speakers.</p> <p>We respect all of you and we wish you could hear our broken heart voice and respect by returning/not disturbing our peaceful life, our community, our 300 small businesses and almost a thousand of employees who are fighting hard to survive, more than 2,000 of residents as well as our contributions !! We always support all the good projects in the country, however we need to be treated fairly to be respected like others as we are a harmonious community. We don't like to fight aggressively but our voices need to be heard by you all, the decision makers. Thank you very much!</p> <p>We love your care your concern to keep our home town peaceful and harmony community. Please consider to take the 4th Ave. project/plant which is minimized the impact to our vibrant community.</p> <p>Respectfully and salute, Beth Representative for the majority of Chinese residents and employees at Chinatown ID area</p>	Beth Ku
03/28/2022	I fully support the Skylink Gondola as an alternative. This would move more people more efficiently, more effectively, at less cost, less environmental impact, less eyesore to the community, and built faster than any other alternative.	James Hoffman
03/29/2022	I'm concerned about the very deep station designs that rely exclusively on elevators and escalators. Transfers and station access should be as seamless and quick as possible, without relying on equipment with a very spotty local record. If there is no alternative to such deep stations, there needs to be major emphasis on reliable vertical conveyances. The priority for design needs to be on ensuring future rider experience is the most convenient and reliable it can be.	Brice Nichols

03/29/2022	<p>There is a lot of waste in this plan that has no clear benefits for riders or Seattle. Please look to the REM in Montreal and Canada Line/Broadway Extension in Vancouver on how to balance costs and benefits to riders and the city.</p> <p>The core section has a absurdly deep tunnel in both the preferred and alternative options. This adds years and billions to the price tag. Replacing the tunnels with shallow bored or cut and cover would significantly improve the usability and viability of this section. I know that the highway tunnel gets in the way, but with tighter tolerances seen in other countries, this is still possible. Another option is to be elevated through SLU and go over the 99. The roads are wide so an elevated guideway would be very effective. 3-5min to get to the station is completely unacceptable for a small system like Seattle's.</p> <p>Outside the core the elevated station are absolutely insane too. Use the street right of way to shrink the structure and keep the height above or below grade as small as possible. Closing streets for construction will not kill Seattle. A minor inconvenience in the short term cannot compare to the decades of pain bad stations will do to riders and the network. If there is going to be a mezzanine, there should be stores and/or bathrooms to make it worthwhile.</p> <p>The tunneled option in Ballard on 20th is the best option to connect with an existing TOD compatible area and includes the most potential development sites.</p> <p>Please look at the successes of Sound Transit and from North America and beyond. ST3 is an amazing opportunity, so let's not waste it repeating the mistakes that hampers American rail projects.</p> <p>Thanks for taking the time to read this!</p>	Christopher Addison
03/30/2022	<p>As someone who regularly uses the current CID station, Alternative CID-2a is by far the best option. It provides the best connection to and integration with the existing line. It is also the least costly, which makes it the financially responsible choice, too. This station will be the crux where line connect to each other and it is important to get it right.</p>	Erik Rundell
03/30/2022	<p>Ballard light rail itself is an expensive and unnecessary enterprise. Current bus service is adequate and easily expanded, if desired. Public transit from Ballard to downtown Seattle is easy and speedy currently. Options for new bridges and flyovers have environmental impacts that far exceed the tunnel options. Tunnel options offer a future Ballard that is not physically divided (East/West) by high-rise rail lines. Tunnel options offer the opportunity to increase the "neighborhood feel" that exists currently in Ballard. High-rise rail lines are undesirable for communities. The high-rise lines themselves and their concrete support structures create unsightly physical barriers in the community. (ie. West side of I-5 freeway North of Northgate)</p> <p>Tunnel options require the least residential displacements, the least historic property effects, and no permanent in-water effects.</p> <p>Personally, I do not want to see (more) Dr. Seuss high flyover bridges in Seattle. And I certainly don't want to pay for them. If I must pay for this unnecessary project, put it in a tunnel.</p> <p>Thank you</p>	James Scanlon
03/30/2022	<p>Please study the 20th Ave Ballard tunneled station again. Consider asking the city of Seattle for additional funding if necessary. The Ballard station needs to serve the center of Ballard, not force everyone to walk 10-15 minutes from the edge of Ballard just to access the businesses on Ballard Ave.</p>	James Pasko

03/30/2022	<p>My comment concerns the transportation study in the West Seattle Junction area. According to SDOT transportation studies, Fauntleroy has two of the top 20 most trafficked intersections in the city. The entrance to the West Seattle Bridge, i.e. Fauntleroy and 35th, is in the top 10. The other is the intersection of Fauntleroy and Alaska.</p> <p>The siting of a station in the immediate area of the WS Bridge entrance will draw pedestrians, taxis, and bikes into an already congested area. The study does not adequately reveal the deleterious impacts. The main issue is that the intersections of concern scale are already at the extreme edge of the scale that ST is using. Already rated "F", the scale is unable to describe any further degradation. ST should use a different scale that can capture the various degrees of impact that can occur within an area rated "F" already.</p> <p>Further, if those intersections become practically unusable by car, one would expect traffic patterns to shift to side streets or load fully alternative routes (e.g. south to 16th and Holden). The EIS should describe these secondary impacts.</p> <p>With these impacts in mind, special attention should be made to the mitigations on local transportation along Fauntleroy and especially in the area of the Avalon station. The EIS did not sufficiently describe potential mitigations, in my opinion.</p>	Rich Koehler
03/30/2022	In favor of the DEL-6 to WSJ-5 alternative - this seems like the alternative that impacts the least people, costs less than even the cheapest preferred alternative, and still gives good access to the Junction. I don't understand why it is not preferred.	Nicole Mazzuca
03/30/2022	As an almost 20 year resident of West Seattle and one who appreciates the community I would like to advocate for a tunnel, the WSJ option 3. This would be the least disruptive to the community, one of the oldest in Seattle. Communities such as Beacon Hill, U District, and Bellevue have tunnels to minimize the amount of disruption to business and home owners it seems in line with Sound Transits vision to do the same for West Seattle. The elevated options would greatly alter the community in a negative manner. If the only option is an elevated line I advocate for the Fauntleroy station option as the total number of businesses and homes affected is less. If the long term goal of ST would be to extend the line, it could connect with the WA State Ferry. The 42st street station would not have an option to extend without destroying hundreds of homes. In my use of the light rail, I have not experienced a train going down a purely residential street such as 42nd Ave. Again I want to strongly advocate for the tunnel option. Having just recently learned of a potential gondola option, that also seems an option to be explored. Thank you for the opportunity to comment.	Joan Peterson
03/30/2022	I'm very disappointed by the Draft Environmental Impact Statement. How did you leave out the SkyLink option? It's not a valid choice without that option. It's also clear that the choices in the DEIS are hugely expensive, will displace many residents, and offer no help in the short or medium term. Just because Seattle has invested a lot of money, effort, and time into building out the Link system doesn't mean that it's our only choice. I'm a dedicated bus rider, but the SkyLink offers me the chance to see the city from a different viewpoint. It's time we move into the future and stop adding traffic lanes.	Sue Luke
03/30/2022	<p>Few areas of concern for this plan;</p> <p>I'm a resident of 909 5th Ave - 5th and Madison. As a resident and a property owner, I'm concerned about access to the Madison Street Parking entrance if the street is vacated for the Midtown Station. I'm very excited about the stations but am also extremely concerned about the issues associated with access.</p>	Jessie Anderson
03/31/2022	It seems to me that the community is by in large opposed to the elevated train option. I've seen very little support for it and much descent. It's odd to me it's still even being considered given how much opposition it's gotten. I along many others would like to see a subsurface train, but if the funding isn't possible then we should continue to invest in buses. Building something people don't want is just bad policy, but I continue to fear that we are being given no real choice at all, these comments and questions are just being ignored.	Derek Saam

03/31/2022	I am in support of having a station on the northern end of delridge. This will provide essential access to people on the east side of west Seattle. It will also ensure accessibility for all by not requiring transport up Genesee, which is ridiculously steep and not feasible for someone in a wheelchair. I think the ideal location for the delridge station is right next to the skatepark.	Nathan Hemphill
03/31/2022	The preferred elevated alternative will be detrimental to the Alaska Junction and West Seattle as a whole. Either tunnel should be prioritized, just like they were in other areas of the city.	Nathan Buck
03/15/2022	Hi, my original gut preference was for a bridge solution, but after reading the various PDFs, a tunnel solution just sounds all around better. The tunnel paths, the IBB-2A and IBB-2B, they have no noise, vibration or watershed footprint, which includes shoreline over water and in-water impacts unlike all those bridge-based solutions. They have the smallest number of parcels of land displaced and the least number of historic properties adversely affected. It's also safer for pedestrians if the tunnel stations are used at the Ballard terminus since there'd be less conflict with vehicles and pedestrians, so IBB-2A and IBB-2B are safer and more closely aligned with vision zero. I will say of those two, I think IBB-2B might be safer since it provides station access on both sides of 15th, but I'm not sure that that safety improvement would be of sufficient scale to warrant the extra cost of IBB-2B compared to IBB-2A. IBB-2A's estimated cost is equal to the lower bound of the preferred option's cost, so at this point I don't see why it would be -- why they would require the third-party funding, and overall it seems to be clearly the best option, that is, IBB-2A being clearly the best option for the Interbay/Ballard segment. I hope that the local tribes' input, including the Duwamish Tribe, has been given great weight by Sound Transit in designing this project. Thank you.	
03/15/2022	Hi, my perspective and feedback is that we need to put the development of this mass transit in the framework of the climate crisis that we're facing. As far as looking into the future, we need to realize that mass transit is a necessity, so I urge that we need to take more extreme measures in terms of getting public support and national support behind this and not waffle around so much in terms of if the funding will be there or won't be there. We just need to make it happen.	Andy Fessel
03/15/2022	Thank you for the opportunity. Primarily, my feedback is in regard to the Interbay segments. One thing which I would like to contribute is like I prefer IBB-2 and 3 because when a project of such magnitude happens, I feel the thing we should take into consideration the most is the human element. IBB-1 is going to displace 174 residents. That is 174 lives you are displacing and moving away and asking them to like go away somewhere. I feel that should be taken into -- yes. IBB-2 and 3 cost a bit more, and like everybody has stated, they come with the technical challenges of being built on the Queen Anne slope, but I feel the human element here of displacing so many people should outweigh them. Thank you.	
03/15/2022	In addition to the considerations regarding the acquisition of property, how has the EIS taken into consideration the disruption in traffic noise in the construction as well as noise and other dislocations for properties along the line?	Gail Dykstra

03/30/2022	<p>Dear Sound Transit, Please build on 4th ave NOT 5th ave.</p> <p>Construction on 5th Avenue in Chinatown to Japantown means:</p> <p>Full closure of King Street, S. Weller and 5th Avenue for several years</p> <ol style="list-style-type: none">2. Re-routing cars, buses, to 6th, Maynard, 7th, 8th, 10th & 12th3. Gas, water, electrical shut offs to businesses, non-profits and residents4. Daily dump trucks, cement trucks, cranes, supply trucks, delivery vehicles5. Construction workers taking parking from businesses6. Increased noise & air pollution, dust, dirt, vibrations7. Taking property from owners of color for demolition and resale after construction8. Endangering lives of 1,200 elderly by blocking access/egress for emergency vehicles with street/sidewalk closures and detours9. Permanent changes to National Register Seattle Chinatown Historic District—loss of 3 blocks in addition to prior loss of 3 blocks for Transit Tunnel <p>Thank you for your time and consideration.</p> <p>Respectfully,</p> <p>-Suma</p>	Suma Kosami
------------	--	-------------

03/31/2022	<p>Hello,</p> <p>Me and my wife Charito are homeowners and tenants on 25th Ave SW, residing in a single-family dwelling that is slated to be acquired under Delridge Segment alternatives DEL-1 and DEL-2. We are writing to express preference towards the Andover Street station alternatives (DEL-5, DEL-6) and ask the Transit Board to strongly reconsider the Dakota Street and Delridge Way station alternatives (DEL-1, DEL-2, DEL-3, DEL-4) on structural environmental impact grounds.</p> <p>Youngstown is a vibrant neighbourhood with over a century of architectural history and provides affordable housing to hundreds of West Seattle residents, ourselves included. The Dakota Street and Delridge Way station alternatives will result in the destruction of properties and displacement of many of the individuals that the light rail is intended to serve. The Andover Street station alternative would mainly cut through a historically commercial corridor, and would act as a superior location in providing business opportunities through increased foot traffic.</p> <p>Thank you for hearing our comment on the West Seattle Link Extension.</p> <p>Regards,</p> <p>Julian Blair & Charito Domingo</p> <p>4127 25th Ave SW</p>	Julian Blair
03/08/2022	Your table of impacted historic district properties only lists 2 for 5th Avenue: Bank of America building and the L. Family building with retail stores. Please add in the 3rd property that will be impacted to the Table and narrative.	Betty Lau
03/22/2022	West Seattle desperately needs help due to the huge amount of traffic. Not just because the WS Bridge has been out of commission, but all of the condos built in the area.	
03/24/2022	"Please build the light rail on the 4th Ave to minimize the adverse impacts on CID."	Nancy Kwok
03/19/2022	<p>Keep the Chinese international district in tact as much as possible. Those folks deserve it! Freeways have raped neighborhoods. Not right. Do not continue such raping with light rail.</p> <p>Thank you for listening.</p> <p>Jean Amick 98105 206-601-6123</p>	Jean Amick

03/24/2022	<p>Hi,</p> <p>I would like to express my concern, as a neighbor, who will be greatly impacted by the light rail above ground plan. Mind you I am in favor of mass transit and the light rail access here in West Seattle. However, the cheaper option of an above ground light rail system makes no sense for this neighborhood, its viability, and the loss of homes (due to eminent domain). As I have noted, the above ground option has only been used when the corridor is aligned with a major highway or commercial district. As a neighbor who cares about the viability and quality of life here in the Alaska Junction area, I support the underground option, like all neighborhoods including Mont Lake. In addition, I was recently informed, that the land that is taken by Sound Transit has to be put to a community use. If affordable housing is a big concern, wouldn't a larger number of affordable residences be better served if the land above the tunneled areas all becomes affordable living spaces and businesses?</p> <p>I would prefer and underground option from the West Seattle Bridge and run the light rail right onto 35th which is a fairly wide street. Why not make the middle lane the light rail on the street level much like that of Martin Luther in Columbia City? Nobody would mind access to the light rail in West Seattle at the Avalon and 35th junction where there is already an infrastructure for the commuter buses in and out of downtown Seattle.</p> <p>I feel there needs to be a lot more discussion about the location of the West Seattle line.</p> <p>Thank you,</p> <p>Carolynne Wang (802) 310-9769 5247 42nd Ave SW, Seattle, WA 98136</p>	Carolynne Wang
03/30/2022	<p>Pigeon Hill Neighborhood residents need to know the route of the gondola. We have heard that the gondolas will be whizzing over some people's houses. We need to know. We will be united against the gondola if it will be routed over anyone's home.</p> <p>Paula Bamburg BeingPB@gmail.com</p>	Paula Bamburg
03/15/2022	<p>I also want to second the opinion of the tunnel being currently the best solution. I've always felt that it appeared to be best for a number of reasons, including the ones that were highlighted tonight, but also because I think many of us who are interested in public transit have been on the other buses or even in your car and get stuck with the Ballard Bridge up. That possibility is anathema to public transportation and trains, specifically in that we want to have a reliable timetable, and you can't have a reliable timetable if there's an unforeseen circumstance that is random like the bridge being up, so I think the tunnel is best. Secondarily, perhaps more importantly, I also agree with the person who said that the timeline should be moved up however possible. Of course, I understand this is an issue of funding and other factors, but I do personally think perhaps ironically stating this in a public forum that I think all of our opportunities for public input is perhaps slowing the process down more than it would have to be. I say that as a member of the public, and I'm not an expert. I feel that we shouldn't be relying so much on these sort of input sessions. Of course, everybody should have an opportunity to send in comments perhaps via email and so forth, but, yeah, I think climate change, et cetera, we all understand what I'm saying. I'm done, thanks.</p>	
03/15/2022	<p>I just wanted to talk about the south end of the segment. I want to state that I would prefer like the IBB-3 route because it has the lowest impact on the residents as well as historic buildings that are there. Since I live on Republican, I'm also concerned about noise levels. The tunnel corridor is going to be right outside my apartment, and I'm really, really concerned about that amount of noise that we have. Yeah, I think that's what I wanted to comment.</p>	

02/18/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). As a stay-at-home Dad, I rely on quality chef knives and goof knife handling skills to prepare food for my family.</p> <p>This last fall, Bladegallery moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear. They also offer a high performance sharpening service for home and professional chefs. I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households. BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Thank you. Sincerely,</p> <p>Joss Delage 1516 17th avenue East Seattle WA 98112 (206) 498-9854</p>	Joss Delage
03/15/2022	<p>I'd also like to add that I too would prefer in the south interface section the IBB-2 or 3, not the No. 1 that's the proposed one right now. My main concern is that given that this is a residential area and there's also the natural area with Centennial Park and Myrtle Edwards Park, my concern is also the noise because right now in the IBB-1, that's proposed to be above ground. I would prefer whatever tracks to still be underground and a tunnel in this particular area. In this area, there's already the noise from planes, from the freight trains and also from the grain terminals, and so I would prefer not to add to the noise level in this particular area.</p>	

02/18/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. 03/15/2022	<p>Hi, I concur with several of the people who would look for the alternatives that have less residential displacements both in the Smith Cove area, that section, and then the Interbay section. As a person who has received a notice of potential displacement from the proposed alternative, which is the bridge, I believe that this is a rare area in Seattle with very affordable one, two, three bedroom apartments and older apartments. It would be very hard for displaced people to actually find affordable housing outside of where they're living currently. Given the tunnel alternatives, either of them in this area would provide much less disruption for all causes, including businesses and residents and water issues. It makes sense to take the tunnel alternatives. I agree with those on the other side that if it's going to -- if 174 residential units would be displaced, that seems excessive given other alternatives for a little bit more money to spend. Thank you.</p>	
03/25/2022	<p>I live in Georgetown and have been suffering along with so many, through the impact of the closed bridge in the form of increased traffic/congestion/noise/pollution. In thinking of environmental impact, impact to the existing community, cost and time- I AM A FAN OF THE GONDOLA! Taking years and years and spending billions is totally unnecessary. I truly hope the gondola option will be reviewed and considered.</p> <p>Julie Johnson L.Ac. www.thepincushionclinic.com (I minimize screen time Fri. afternoon-Sunday, plz don't be offended if I'm slow to respond!)</p>	Julie Johnson

03/15/2022	<p>Yeah, I just want to ensure that the Helix Bridge that crosses from Elliot Avenue over to the south end of Expedia remains intact, goes over the railroad tracks and provides pedestrian access across the railroad. I want to make sure that none of the alternatives impact that, and also the public parking lot between the grain terminal and the south end of Expedia, that all of that parking is retained no matter what alternative you choose. We fought really hard for that, and that allows people to park there and access the fishing pier. The other thing I want to say is that I think the 15th Street tunnel alternative would be the most successful and the least impactful. I want to encourage that you give a lot of thought to the tunnel that goes down 15th to Market Street. Thank you.</p>	
03/30/2022	<p>Dear Sound Transit,</p> <p>I would like to provide the following comments on the Draft Environmental Impact Statement for the West Seattle segments of the WSBLE project and respectfully ask the Sound Transit Board to consider these comments when selecting the final alignment and design:</p> <p>Duwamish Bridge Segment -- View Impacts: The loss of the Rainier view from the West Seattle (auto) Bridge resulting from the DUW-1a is unacceptable. While Rainier is not visible every day from the WSB, seeing Rainier is a delight and it is a key character-defining feature and experience of travel to and from West Seattle. Strongly recommend building option DUW-1b which may be the same estimated cost compared to the high-end estimate of the preferred option for this segment.</p> <p>2. Duwamish Segment -- Compatibility with replacement auto bridge: Where is the anticipated footprint of the eventual replacement of the West Seattle (auto) Bridge? Do any of the DUW options limit the replacement of the replacement auto bridge?</p> <p>3. Delridge Segment -- Convenient Transfers to Rapid Ride Busses a Must: Convenient transfers result in the increased light rail usage. Recommend the DEL-4 option with a station directly over Delridge Ave SW which facilitates convenient and quicker transfers to/from RapidRide buses on the Delridge corridor.</p> <p>4. Delridge Segment -- Destruction of Neighborhood Units and Character: The preferred option, DEL-1a, and options DEL-1b, DEL-2a, DEL-2b all result in unacceptable removal of existing housing and destroys the character of an intact neighborhood. In a city short of housing, it does not make sense to destroy intact neighborhoods.</p> <p>5. Impact of Concrete Volumes and Embodied Greenhouse Gas Emissions: Please calculate and consider the embodied greenhouse gas impact from the increased volume of concrete needed for the high bridge options of DEL-1a, DEL-1b and DEL-3? In addition to the visual impact looming over a residential neighborhood and obstructing territorial views, don't these high bridge options use more concrete and result in more upfront embodied carbon emissions compared to the lower bridge options? How is this in alignment with ST's carbon reduction goals?</p> <p>6. West Seattle Junction Segment -- Station Location: Locate the station closest to the heart of the Junction -- Alaska and California -- (Options WSJ-3b or WSJ-1) to maximize ridership and access to the West Seattle retail core. Stations located along Fauntleroy (WSJ-2) or along 41st (WSJ-3a and WSJ-4) simply miss the mark and will be a long-term mistake. While a few blocks difference may seem inconsequential on a site plan, the additional distance from the retail center and the walk up the hill towards California will continually disincentivize ridership long term. Let's learn from Europe where they put stations in the heart of retail cores and where it facilitates convenient transfers and higher usage.</p> <p>7. West Seattle Junction Segment -- WSJ-3B Preferred Option if additional funding is secured: Recommend option WSJ-3b (tunnel with station at 42nd and Alaska) connecting with DEL-4 if additional funding is secured. If additional funding is not secured, recommend WSJ-1 due to its proximity to the retail core on California Ave SW.</p> <p>Thanks in advance for your consideration and for including this along with the other DEIS comments in the final EIS.</p> <p>Respectfully, David Walsh, Registered Architect West Seattle Resident</p>	David Walsh

03/15/2022	Hi, this is Janice's son. I actually came over to her house to listen to this hearing, and hearing everyone talk about the tunnel I think is actually the way it should go. My mom and dad have owned property in Ballard for 45 years, and it would disrupt their livelihood if they were to have to sell the property. It's on 14th, and I think going down 15th, which just seems like the more logical place to do that, I think if we did the tunnel down 15th, I think that just seems to be less impactful with all the data that was shown on the slides today. Thank you.	
03/31/2022	I live in downtown Seattle. The preferred alternative in this area, with stations on 4th and 5th Avenues is clearly better than the alternative that runs adjacent to I-5. While constructing facilities along 5th Avenue, I hope that priority will be given to preserving existing existing transit and pedestrian access around the construction. These are and should be the best means of getting around this neighborhood.	Michael Stark
04/01/2022	We are a small business that moved into the neighborhood in the middle of the pandemic at significant cost in moving fees and tenant improvements. Signing a five year lease agreement with the hopes to be in this location for at least 15 years. We simply cannot incur the costs associated with being displaced and may not be able to continue to do business if that were the case. We strongly urge you to consider an alternate route that would not leave our business with such a catastrophic financial lose. Sincerely, Hilary Young Hilary Young Design Associates	Hilary Young
04/01/2022	The blue line (other EIS alternative) is my preference, though it is not a strong preference, as the preferred alternative is also very functional to me. As someone that lives in First Hill, stations closer to the hill are more usable. I use transit mostly for non essential errands and for leisure activities, so I believe the opinions of commuters are more important in this matter.	Noe Loyola
04/01/2022	The shallow 4th option is the best one presented by Sound Transit, but needs to be much closer to the surface if it is to be successful. Shallower 4th and 5th Avenue options for the CID are needed. If making these stations closer to the surface is deemed impossible, alternatives to speed up and improve the rider experience must be included. As proposed, transfers between the two lines are extremely long and clumsy. How will people get to and from the platform, especially maximizing reliability and minimizing transfer times?	Derek Dexheimer
04/01/2022	Since sound transit decided not to run the line down delridge to burien, the delridge station needs to be as far south as possible to capture the most riders	JEROME MILLER
04/01/2022	Hello, I am a resident and owner in the 5th and Madison condominium unit. Please consider the 6th avenue location instead of the 5th avenue one. This will have a very negative effect on our community quality of life and property value for many years. Soundtransit should have considered the location of our residential building or any residential building for that matter before choosing 5th avenue as an option. There are plenty of areas in the financial district with no residential buildings that would be more feasible for this large construction project. Thanks for your consideration. Diego	Diego Martinez

04/01/2022	<p>The shallow 4th Ave station alternative for the new CID Station makes connections more convenient for riders, creates a better station location, and should allow the Midtown Station to be shallower as well. Prioritizing shallow stations and strengthening connections is of utmost importance. In West Seattle, the Medium Tunnel 41st Alternative with Lower Height Andover station is comparatively inexpensive and offers better integration into neighborhoods, including a shallow tunnel station right in the heart of Alaska Junction. The northward shift of the Delridge Station should be insignificant given that most passengers will transfer from buses, but if this alternative is chosen (as I believe it should) a bus loop should be included or at the very least the bus bays should be moved closer to station entrances. Ballard station should be underground at 15th, to provide a more centralized location, allow for better bus connections, and make easier future northwards expansions of the line. The Seattle Center Station on the preferred alternative is very close to the arena without serving the Uptown neighborhood, so shifting the station a block or two west to align with connecting bus routes on 1st Ave and Queen Anne Ave. Finally, 6 minute headways on the two extensions are going to be insufficient, so the lines should be combined with each other and, for greatest benefit, be automated. Interlining WSBLE with the existing Link system mitigates the impacts to the rest of the Link system, but compromise its frequencies and usefulness in the process. By constructing WSBLE as an isolated line, it can be optimized for the urban passengers who will use it.</p>	Charles Reynold
04/01/2022	<p>I am somewhat confused as to the proposed extension of light rail down Elliott Ave West - but I can say that any proposal that impairs or eliminates retail or other businesses along the corridor or impacts the significant running and walking traffic should not be your first choice. The businesses and pedestrians create a "liveness" that is important to that stretch of road - it would be a terrible thing to wipe all that vitality out. The idea is to integrate people and car traffic with the light rail - and just tearing down buildings on either side of Elliott just does not make sense. Plus it will eliminate current and future tax revenue for the city along what is and will become a growing mixed-use corridor. If you leave the buildings then the value of those buildings will only go up and become more valuable as the light rail provides access to that area of the city. Why not run everything along the railroad tracks? There is little there, and the street side of Elliott would then be preserved. You could even run it above the railroad tracks. Seems obvious to me -- unless you are fearful of the railroads...</p>	Eliza Ward
04/01/2022	<p>I looked at both alternatives for the extension to Ballard through Elliott Avenue West (interbay). I would MUCH prefer the alternative (non-preferred) route. It would leave the business and buildings along Elliott Ave more in-tact, and actually add to the building values and tax revenue of the city - plus leave loved and valued small business in tact. Maybe even help them. The green belt along there is too steep for anything else, and the work may actually help shore-up that slope. All in all a better alternative to tearing down buildings and displacing small businesses.</p>	Tim Mar
04/01/2022	<p>DEL-2a station is my preferred option. It removes many houses, but best serves the community. With redevelopment option around the station it could finally bring much needed improvements to this underserved neighborhood. The Dakota area stations will best serve the surrounding community into the future by bringing riders to the heart of the area, with Youngstown, the community center and playfields in close proximity. Although options DEL-5 & DEL-6 would preserve more housing units they would not best serve the community residents and limit and future development around the station.</p> <p>This project is a real chance for bringing more development and greater commercial resources to this underserved area.</p>	Ray Talbot
04/02/2022	<p>The station depths considered for the second downtown transit tunnel are far too deep. Ridership and rider experience will be negatively impacted for many decades if the draft plan is implemented. A clean sheet approach prioritizing minimal station depth for all tunnel stations is required even if that delays the project.</p>	Ian Strader

04/02/2022	<p>I would like to strongly recommend the combination of the 6th/Mercer option with the Prospect Street Station/Central Interbay SIB-3 option.</p> <p>According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground, which would be preferred for our residential communities.</p> <p>I also recommend these options because, according to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP.</p> <p>Lastly, I want to note that Table 6-6 does not acknowledge the possible 6 year displacement of over 27 indoor secure garage parking spaces in one condo building which has its access on W Republican. This should be a consideration to proceed with not proceeding with the 5th/Harrison DT-1 option.</p>	Kimberly Gonzales
04/03/2022	<p>RE: West Seattle terminus of the proposed light rail extension.</p> <p>Terminating the extension at 42nd Street makes the most sense. Depending on the option selected, it is only a block or two to the bus hub at Alaska and California. Importantly, it is level ground between that hub and 42nd Street, an important consideration for individuals with mobility limitations, particularly wheelchair users. Either above ground or underground would meet these criteria, though underground would clearly have the least impact to those living and working in the junction area.</p> <p>Terminating the extension at 41st Street is far from optimal. While only one block further from the junction that block is down a hill from the level at 42nd Street, a hill that can be slippery when wet or icy. This make access by riders with disabilities, particularly wheelchair users, at a distinct disadvantage. Many might exit the train at Delridge to transfer to the C-Line for the journey up the hill. Or avoid the rail altogether.</p> <p>Terminating the extension at Fauntleroy and Alaska makes little sense. With the high population density in the area and lack of parking facilities, riders coming by car have no place to park so they would have to come by bus. Except for riders already on the C-Line, those coming from other areas of West Seattle would have to come to the junction and transfer to the C-Line for the short trip to Fauntleroy. This just adds time and complexity to the trip and would only serve to limit ridership. It is a good climb from Fauntleroy to California and would likely be difficult for wheelchair users in particular. Today, I doubt if any C-Line riders get off at Fauntleroy and walk to the Junction.</p> <p>As comprehensive as it is, I see the EIS as still deficient in two areas. The EIS claims almost the same ridership numbers for all station alternatives. Common sense would suggest that is unlikely to be true, particularly when the weather is bad. In addition, the EIS has no statements on the impacts to users with disabilities. While I don't know what the ADA requires, common sense would suggest the alternatives have different impacts and that should be addressed at this stage to avoid potential lawsuits further down the road.</p>	Michael Boyd

<p>04/04/2022</p>	<p>Retained Cut Avalon Station (WSJ-5) Better experience (than preferred alternative) as an entrance to West Seattle. Would suggest transit oriented development above western station entrance. Best connection to bus stops on 35th. Assuming most transfer passengers will be connecting to a location to the South, this option allows passengers to get from bus-to-train without crossing a street. Preferred option</p> <p>Tunnel Avalon Station (WSJ-3a) Best pedestrian experience- because station entrances on both sides of Fauntleroy do not require crossing Fauntleroy. Best opportunity for transit oriented development around both station entrances. Would allow Avalon junction to expand to the North.</p> <p>Elevated Avalon Station (WSJ-1,WSJ-2,WSJ-4) best pedestrian connection to lower Avalon Way. But it may be creepy and dark if it's not adjacent to a road. Elevated train will create the worst experience as an entrance to West Seattle Least preferred option</p>	<p>Gina Gage</p>
<p>04/04/2022</p>	<p>I am quite concerned about the downtown segment, especially the depth of the proposed stations, and the resulting inconvenience of access and difficulty of transfers between lines. Given that the second downtown tunnel does not expand the walk shed meaningfully, and is a substantial portion of the overall budget, could ST please address whether interlining of the Ballard-West Seattle line with the existing tunnel would be possible, and the pros/cons of such a choice?</p> <p>Second, as the Ballard segment seems most likely to be tunneled, I would encourage ST to consider sites closer to the historic center of Ballard, such as 20th. 14th in particular is very far from the historic center, and in my opinion would be of little utility.</p>	<p>Keith Jerome</p>

04/04/2022	<p>Hi,</p> <p>Thank you for the opportunity to provide comment on this project. I live at 2818 SW Genesee St and I support the proposed light rail connection to West Seattle because it will improve access for my car-free family to downtown and the rest of the city. I have specific comments on the West Seattle segment.</p> <ul style="list-style-type: none"> • For the Duwamish segment, please build a fully protected bike lane with intersection improvements to provide save biking connections between the future Delridge station and the West Seattle Bridge Trail and the 26th Ave SW neighborhood greenway. And please maintain safe and comfortable bike access to the West Seattle Bridge Trail during the length of construction. • For the Delridge segment, I support Sound Transit’s analysis that the DEL-5 or DEL-6 are the highest performing options. These options minimize displacement to current residents and most displaced residents are unlikely to return to the neighborhood due to the long construction timeline. The DEL-5 and DEL-6 guideways parallel existing neighborhood transitions and barriers such as the West Seattle Bridge and Nucor Steel. I understand the topography challenges of the project, but think the tall guideways proposed along Delridge Way SW and SW Genesee St alignments will feel imposing like a freeway and will feel out of place even if more dense development is built in the future. Please also consider building a pedestrian/bike-only connection along 28th Ave SW between SW Nevada St and SW Genesee St. This will improve station access and provide a more walkable street grid in this area. • If funding is available, I support the inclusion of an Avalon station. While physically close to the Delridge and Junction stations, there are significant grade differences and natural separation between these 3 neighborhoods that warrant 3 stations. • For the Junction segment, I support Sound Transit’s analysis that the Medium Tunnel along 41st Av SW is the highest performing option. This option minimizes displacement and balances access to the main Junction commercial area and existing and future development opportunity along SW Alaska St and Fautleroy Way SW. <p>Simon Blenski 2818 SW Genesee St</p>	Simon Blenski
03/15/2022	<p>I just wanted to say that I prefer the tunnel, the 15th Avenue station option. I went to one of the initial meetings at Ballard High School in 2017. My family and I live close to 14th, and one thing that I asked one of the engineers at the time was if you were going to have the elevated option and you were going to extend it, what would you do? What the engineer told me at the time was that they would have to build a tunnel at the end of 14th where Ballard High School is. It seems kind of -- not only would it disrupt the neighborhood a great deal, but it would also not really be able to be extended. You would either have to jag over on 65th up 15th or it just doesn't make sense. I think that having the tunnel at Market and 15th would allow for extension and be closer to the downtown core of Ballard. Thank you for letting me have the opportunity to speak tonight, thanks.</p>	Brian LeBlanc
03/15/2022	<p>Hi, I'd just like to concur with a handful of other commenters that I would also prefer the Ballard and 15th Avenue station option, particularly alternative IBB-2B. That's all, thank you.</p>	
03/15/2022	<p>Hi, I just wanted to add to all the various comments I've heard tonight about IBB-2A seeming like the better option than IBB-1A. In particular, it has lower displacement across all categories of residents, businesses and employees and does not cost more than the preferred alternative, IBB-1A. I understand that there are many factors of picking a preferred alternative, but believe that minimizing displacements, in particular resident displacement, should be toward the top of your priorities. So to summarize my comments, IBB-2A's tunnel approach has lower displacement at the same cost as preferred alternative IBB-1A. Therefore, IBB-2A seems like the logical choice that will minimize drastically affecting the lives of people in this community, and I hope that your preferred alternative changes to be IBB-2A.</p>	Rafael Lopez

03/15/2022	I was wondering if there is or has been an option to move the Gaylor Street flyover option to have the portal on Republican Street moved farther down on Elliot past the Helix Bridge. Thank you.	
03/17/2022	I love rider south transit	
03/17/2022	Please make sure you do NOT disturb Hing Hay park while building your station. This is a major cultural gathering place and we need to keep this space along with small businesses in the area protected. Please put the station closer to the rail yard on the other side. Thanks. Also make sure that your construction is environmentally friendly as air quality is already poor in this neighborhood.	Monica Street
03/17/2022	Alex Ko gave me great info and made me believe in Sound Transit again! -[illegible]	
03/17/2022	Yes! I think it would be an excellent way, since this is a heavy populated area traveled. I would personally use it often!	
04/04/2022	I live in West Seattle. Why are there 200-600 residential displacements with the West Seattle options, and only 14-105 in Ballard? In the 65th/Roosevelt area the light rail tunnels under all the residences with no displacements that I noticed. West Seattleites are understandably upset and would like an explanation.	Lucia Robinson
03/17/2022	This would be a good idea for connecting West Seattle to Downtown.	Nguyen Nguyen
04/04/2022	Please respect the historical status and do not disrupt the International district that has already suffered enough during the pandemic. Look for alternative routes that would run through 1st or 2nd avenue.	Elizabeth Vigo
03/15/2022	Hello, thanks so much for your patience in taking questions, and thanks for putting on such a detailed presentation. I appreciate all your hard work on this. I wanted to voice my support for the tunnel, the 15th Avenue Station Ballard. That's alternative IBB-2B. That's because I think in addition to minimizing disruption, the construction of an underground 15th Street passage, sort of a crosswalk that didn't need to cross over the busy 15th street arterials, I think that would substantially alleviate the access and the inequity issues presented by that arterial crossing. I also want to advocate for planning that incorporates further consideration of future connections, so those might be future connections to Crown Hill or the University of Washington. I appreciate that Sound Transit has limited scope to investigate as yet unfunded routes, but I do think it's vital for the financial integrity of future projects to perform some proactive planning at the line terminus for those sorts of situations. Thanks so much.	
03/15/2022	Hi, everybody. My comment for today is that while I do appreciate all of the work that Sound Transit has done to craft such a thorough EIS process, I would love to see shallower options for the downtown light rail. From the way that I see it, if I'm a rider downtown trying to get from Pioneer Square to South Lake Union or whatnot, any sort of like downtown to downtown trips, which a lot of folks will be making like myself, it looks like I would be spending a full 10 minutes just getting from the street down to the platform in that time. That's like what's most concerning to me as a rider, and I know it's concerning to a lot of my friends and other constituents and organizations that I speak with as well as the Seattle Department of Transportation staff. I guess I would like to see some deep station tunnel options removed as well as just some more creative problem solving be considered for that. As someone who uses the Capitol Hill light rail station a lot, the escalators and the elevators are consistently down, and the TBs don't even work for the past two or three years. While that's an obvious thing that needs to be fixed, I'm unsure why it's not. I have extreme doubts as to Sound Transit's ability to handle a deep downtown station. If they could eliminate that and come up with better options for riders, that would be great.	
03/22/2022	Hi. So I know that I asked a question earlier, so I'm just following up as mentioned to make a public comment. I'm concerned about the negative impact to the racial diversity of South Lake Union and Uptown with the two routes that you guys mentioned. Could you please study the corner of Fifth Avenue North and Harrison Street which is directly in front of or the side of MoPOP, Memorial Stadium parking, or other alternatives that are removed from, SR 99, Mercer, and the heart of Seattle Center.	Jasmeet Singh

03/22/2022	<p>Thank you. First, I want to say that I fully support public transportation and realize that no solution is perfect; however, I am a bit disappointed that there aren't public forums to consider the adjoining segments together rather than just in silos. Looking at the effects of the adjoining segments together sometimes can sway the pros and cons significantly. Also, according to Tables 6-6 and 6-7, the Sixth/Mercer DT-2 option connecting to the SIB-3 option overall displaces a lower number of residences and keeps a longer distance of trains underground, which I believe would be preferred for our residential communities. Also, Table 6-6 does not acknowledge the possible six-year displacement of over 27 indoor secure garage parking spaces in one condo building which has its access on West Republican. So I believe that this should be a consideration to proceed with not proceeding with the Fifth/Harrison DT-1 option. Thank you.</p>	Kimberly
04/04/2022	<p>Hi,</p> <p>I have recently been reading a lot about the proposed second tunnel through downtown as part of the Ballard and the West Seattle Link extensions (which despite being coupled together by most commentators, should really be separate extensions). The depth of the stations seems like a significant downgrade in the functionality of the system, one which makes me regret my vote for ST3 in the first place. We don't need to be spending billions of dollars for a crap system that will result in worse outcomes for riders. We could screw it up so bad that fewer people will end up taking transit, further exacerbating traffic and climate change. While the delay to the project is unfortunate, I think that Sound Transit should scrap the current plans for Ballard and West Seattle until they can come up with an option that works for riders. If we waste billions of dollars on a terrible rail system, I will never vote for another Sound Transit initiative again.</p>	Andrew Sperling
04/04/2022	<p>There needs to be stations at the Seattle Center, under Queen Ann at parks on the top of the hill, and a couple in Magnolia near the pool and north by the park entrance neighborhood. If you want people to ride this system, you can't be expecting both neighborhoods to walk or take busses to Interbay! Since you already have a N/S line, it would make WAY more sense to run a series of E/W lines than spending all this money trying to cross the canal. Why not do a circular line just north of the canal cut that ties in Ballard to UW at Leary Way, north through the Ballard neighborhoods, past Ballard HS, east to Salmon Way that crosses the N/S line somewhere near UW?</p>	Phil Caldwell

04/04/2022	<p>Overarching comment: These stations are extremely far from the street. 15-20 feet should be the standard, which typically bears capital cost savings and operating savings (no escalators!!!!!!!!!!!!, fewer trips on elevators = less maintenance). Mezzanines should be avoided outside high traffic stations. When they're needed, low ceilings, triple loaded corridors should be preferred to decrease station height/depth. These aren't museums. We all prefer longer street closures in exchange for better functioning stations.</p> <p>2.1.2.1.3 Delridge Segment (Prefer DEL-2a) Tunnels should seriously be considered for West Seattle to bring the height of the Delridge station down. 60 feet is still too high, no mezzanine is needed for this station and the platform can easily be 15-20 feet off the ground. If tunneling is not possible, DEL-3 should be preferred for its lower station height.</p> <p>2.1.2.1.4 West Seattle Junction Segment All these options are bad. A station should be under California Ave (probably with a mezzanine) for easy transfers to buses headed north to Admiral and south to Fauntleroy. Having the station off the street makes it incredibly hard to transfer. Road closures for this are totally worth it. If these changes aren't possible (insane they're not!) WSJ-3b then WSJ-1 should be preferred. These alignments are over low traffic streets which could be pedestrianized avoiding the need for mezzanines.</p> <p>2.1.2.2.2 Chinatown-International District Segment I'm sorry but all these stations are nothing short of insane, especially the deep bore stations, which are by far the most expensive and unproven tunneling method in the world. A new CID station should be built identically to and adjacent to the existing one either by pedestrianizing 5th Ave and building a station with no mezzanine under it or by reusing Union Station for Northgate bound trains. This is important to reduce the depth of the midtown station, deliver the residents of Chinatown an actually usable station, and reduce capital costs.</p> <p>2.1.2.2.3 Downtown Segment (Prefer DT-1) These stations are also insanely deep. Anything should be done to reduce these depths and egress times even if it means road closures or disturbances to the city. New Westlake station platforms could easily be 15 feet below the existing ones without serious Link closures. This has been done across the globe!! Single boring this line is a huge mistake given how unproven and expensive it is. Denny station should be less than 50 ft below the street and should have entrances on both sides of Denny for easy transfers to the 8 bus. The Seattle Center and SLU stations are similarly way too deep. The Seattle Center/Uptown station should be at the corner of Mercer and Queen Anne Ave even if it necessitates road closures for easy connections with buses and local businesses.</p> <p>2.1.2.2.4 South Interbay Segment Again these should be short stations. Smith cove should have a pedestrian bridge over Elliot Way</p> <p>2.1.2.2.5 Interbay/Ballard Segment A tunnel should seriously be considered, especially to reduce the height/depths of other stations. Just close 15th Ave and Market and build a station beneath it. Please look to examples across the world of stations built beneath streets with few closures to surface streets at sub-seattle costs.</p>	Nicholas Sattelle
04/05/2022	<p>Please do not disrupt and diminish our community space in the ID, particularly Japantown, which has lost so much ground already. We are still healing from Covid-19 and just beginning to thrive again, and this construction and large appropriation of space would take the land and the communal space away from so many of our young community members who are looking for a way to contribute to our home. Please. AAPI Seattlites and international students really only have this one safe space in the city. It is wrong to turn here for your new development when white Seattlites have the entire city as a safe space, and will not suffer the same community and emotional loss from this development.</p>	Claire Demorest
04/05/2022	<p>Why wouldn't you go with Del-6 which has the least amount of impact on the community and is the less expensive option. Why are you trying to ruin the golf course natural habitat area and the Delridge playground when there is an industrial area that is suitable?? Also, Seattle is in a housing crisis so why would you get rid of all the lower income homes on Genesee? People can walk 3 blocks to the Delridge and Andover station--most people will connect via bus anyway. Genesee has a bus line so not really appropriate to close it for 2 years either.</p>	Kristin Huff

03/22/2022	<p>Good evening. My name is Sushma Thomas, and I am here this evening because I have a deep interest in the light rail construction project and how it will affect Seattle Center and the arts and cultural organizations housed therein. It is an established fact that there is a huge therapeutic and positive impact from engaging with the arts and cultural organizations, and no better space in Seattle provides this therapeutic engagement than Seattle Center. For the most part, this health and wellness benefit, quote/unquote, that we get from engaging with Seattle Center is generally free, accessible. It's an equitable health benefit. Whether we're walking around the green spaces, the International Fountain, whether I'm, you know, engaging in a educational experience in the museums, I have benefitted hugely from hanging out there. My personal favorite is the Seattle Rep. I volunteer there, another health benefit. I attend workshops, and I have performed in two productions. So, of course, I support the light rail construction because we want many more people to access this prescription for good health and well-being. More reliable and efficient transportation is absolutely needed. Let's be mindful and sensitive to the groups that call the Seattle Center and its environments home. Let's make sure that there is minimal impact during this construction on these groups and organizations that are housed there in a way that we, the public, can continue to access everything that the center offers and in a way that minimizes affecting the operations of this group. So, Sound Transit, please do definitely engage with these organizations and ensure the construction impacts are minimal because ultimately we want this to be a good partnership for all. And if you don't remember anything that I've said so far, just remember this: Seattle Center, hanging out there is just what the doctor ordered. Thank you.</p>	Sushma Thomas
03/22/2022	<p>Hello. We support mass transit in the area and do want Sound Transit to be successful. We do not support Preferred Route 1 or Preferred Route 2 in the South Lake Union stations identified in the draft EIS. It would, one, be removing the Civic Hotel, which has been serving the community since 1962. Due to COVID, it's still serving the community, and the local POC family that owns the hotel has converted the building into an emergency shelter with King County. Not only has it been helping to house our homeless population during the pandemic; it has also helped a number of people transition into permanent housing. It is this type of business we want to have in our community that will be displaced. Alternative options that don't displace minority-owned local businesses that help the community should be considered. It doesn't seem that Preferred Route 1 or Preferred Route 2 will serve the South Lake Union community and Uptown. During the duration of the construction, Sound Transit will be blocking main roadways and intersections on both of these options. You will be blocking SR 99 and Mercer Street, which are both very busy during peak traffic times and during events in and around the Seattle Center. To be blocking these indefinitely for a number of years will not only be detrimental to the neighborhood but to the city. Please consider different alternatives that do not directly block Mercer Street and SR 99 during construction or will affect these major traffic arterials after construction. Additionally, both preferred routes have a negative impact on the racial diversity of South Lake Union and Uptown. Please study the corner of Fifth Avenue and Harrison Street directly in front, slash, to the side of MoPOP, Memorial Stadium parking, or other alternatives that remove it from SR 99 and Mercer and the heart of Seattle Center. Thank you.</p>	Neha Nariya
03/22/2022	<p>Hi. Thank you guys for listening to us tonight. I would like to advocate for a station placement, instead of the current preferred alternative for Denny in the pink or fuchsia color, for a station at the southeast corner of Seattle Center nearest the Tilikum plaza. There's a tremendous opportunity with two large surface parking lots. Rather than having to demolish a current structure or displace other people, I do believe that this would be preferable, especially to the Seattle Center arts district community advocates that know that the current station placement is just going to be way too disruptive. I also would like to assert that Sound Transit consider the impacts to current rail investments in the area, how South Lake Union is already served by the streetcar. And, unfortunately, the historic monorail only passes through Belltown. This current alignment between Fifth, Denny, and Vine would provide both access to Belltown and Seattle Center together.</p>	Christiano Martinez

03/22/2022	Hello, everyone. My name is Nisha [phonetic spelling]. It seems that this DEIS study has not thoroughly studied the impact on local minority-owned businesses, focusing mainly on census data and then extrapolating from there. And it also seems that the study has not looked into traffic impacts, especially with Mercer and 99 being impacted. I encourage that alternate routes be considered that are away from Mercer and SR 99, like the Fifth Avenue location that has been suggested earlier. Thank you.	Nisha
03/22/2022	Hi. My name is Sugu. I just recently moved to the area being discussed today from New York. And as much as I love and support public transit, especially coming from New York and wanting Seattle to be on the same page as our East Coast partners, I think that a lot of what is proposed seems untenable, and I'm specifically concerned about the effect it will have on the existing local organizations and the diversity of those organizations and the people that they serve. It seems like the general time period proposed in this DEIS is largely untenable, and I would highly hope that we consider other alternatives. Thank you.	Sugu
03/31/2022	<p>My public school education never did give me the necessary history of my "white culture's" disservice to America's peoples of color. Seattle's treatment of our Chinese population in 1886 deserves at least a couple hundred years of apology and some continuing signs of respect for our Asian population. Tearing up 5th Avenue in the International District continues the disrespect. Please let the Chinatown/ID continue its positive development.</p> <p>Please keep that light rail expansion at least a block away from this great district.</p> <p>Sincerely, Charles Meding</p>	Charles Meding
04/03/2022	<p>Hello,</p> <p>In reviewing the West Seattle and Ballard Link Extensions Draft Environmental Impact Statement, I find no mention of the impacts to North-South or Easterly travel through Seattle resulting from separating the existing Line 1 into two separate lines: West Seattle to Everett and Ballard to Angle Lake. There does not appear to be any analysis of the additional time and inconvenience that riders will experience transferring between these lines, the increased travel times, or the decrease in ridership and resulting increase in use of alternative transportation relative to the no build alternative. This issue does not appear to be discussed under the no build alternative, impacts common to all alternatives, or the individual alternatives.</p> <p>The transfer for riders coming from the north (Everett) would significantly increase the travel times (by 10-30 minutes?) to continue to the South or to the East, and likewise in the reverse directions.</p> <p>Section 2.1.2.2.2 describes transfers at the Chinatown-International District Station occurring by a pedestrian undercrossing in one direction, while passenger transfer in the opposite direction would require passengers to go up to street level and then go down to the other station platform, which could be one block away.</p> <p>Alternatively, transfers could occur at the SODO Station (Section 2.1.2.1.1). As above, there are two stations side-transfers allowing a short transfer in one direction, but requiring passengers to walk around both stations to transfer in the other direction. Passengers traveling on the line to Everett would require an additional train transfer at Chinatown-International District Station to travel to/from Redmond (Line 2).</p> <p>The need to transfer stations is a significant impact to travelers between the No Build Alternative and the Proposed Alternatives, and should be explicitly discussed and quantified in the EIS.</p> <p>In light of the impacts to travelers heading to/from Everett, Sound Transit should consider the possibility of maintaining the existing Line 1 alignment and connecting the West Seattle and Ballard Extensions through the new downtown tunnel. Sound Transit should also consider the feasibility of aligning northbound trains in one tunnel, and southbound trains in the other tunnel, allowing easy transfers across center platforms. Finally, Sound Transit should evaluate if the increased transit mobility provided to West Seattle and Ballard areas outweighs the reduction in mobility to travelers heading to/from Everett.</p> <p>Sincerely, Bruce Nairn</p>	Bruce Nairn

04/05/2022	<p>Hi there,</p> <p>My name is Johannes Heine and I live at 4036 32nd Ave SW, Seattle, WA 98126.</p> <p>I wanted to voice my support for tunnel alternatives in West Seattle, specifically:</p> <p>Delridge Segment - Preferred Dakota Street Station Lower Height Alternative (DEL-2a) West Seattle Junction Segment - Preferred Tunnel 42nd Avenue Station Option (WSJ-3b)*</p> <p>Thank you, Johannes</p>	Johannes Heine
04/05/2022	<p>Concerning the Interbay/Ballard part of the project, I strongly support the Segment Preferred Tunnel options IBB-2a and IBB-2b over the other alternatives. Options IBB-2a and IBB-2b both have significantly fewer residential and employee displacements, as well as fewer business displacements and less impact to historic properties. The two tunnel alternatives also have no visual impacts to Salmon Bay and do not impact Tribal treaty-protected fishing rights or access. (ES-38 and ES-39)</p> <p>Since the estimated cost of both tunnel options are no longer significantly higher than the preferred elevated 14th Avenue Alternative (IBB-1a), it is clear that IBB-1a would negatively impact the Interbay community more than the tunnel alternatives.</p> <p>IBB-2a and IBB-2b would provide much needed transportation to the area, while also limiting the negative impact on the environment, the local residents, and businesses.</p> <p>Thank you for your time.</p>	Deborah Bosket
04/05/2022	<p>Please, please reconsider the Thorndyke portal option as an addition to the EIS. This location serves downtown Ballard, and is feasible engineering-wise and relatively affordable. Please.</p> <p>Stations east of 15th don't serve downtown ballard.</p>	Carson Baker
04/05/2022	FORGET WEST SEATTLE !!!!	John Baisch
04/05/2022	<p>The following is support for selecting the 6th/ Mercer DT-2 and the Prospect Street Station/Central Interbay SIB-3 segments.</p> <p>According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the Prospect Street Station/Central Interbay SIB-3 option overall displaces a fewer number of residences and keeps a longer distance of the train underground. This combination of segments should be selected to help maintain our residential communities as housing is at a premium in the city. Displacing a much larger number of residences when there is an option to not do so seems irresponsible.</p> <p>According to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater, Cornish Playhouse and KEXP. Therefore, the 6th/Mercer DT-2 should be selected.. These arts organization at the Seattle Center should be preserved without vibration or noise impact.</p> <p>According to Attachment N.1E-28, the 5th/Harrison DT-1 option will close Republican Street for 5 years. Appendix J Drawing L50-6SP104 confirms that this closure will prevent access multi unit building parking along Republican including parking garages of the Luxe Condominiums, and temporarily prevent entrance to two secured parking garages for the building, displacing over 27 parking spaces (some have lifts for second cars) for 5 years. Table 6-6 does not acknowledge these displacements. It will also prevent waste management service to the Luxe Condominiums as the waste management receptacles are one of the West Republican garages. Additional buildings on west republican will also have their parking impacted. Parking is scarce as it is. Additionally the Luxe Condominium building of 39 units will suffer permanent noise and light impact. This should be a consideration to proceed with the 6th/Mercer DT-2 option instead. Overall, the 6th/Mercer DT-2 option in combination with the the Prospect Street Station/Central Interbay SIB-3 segments seems to be the best for the Uptown (Lower QA) community.</p>	Sandra Hungerford

04/04/2022	<p>Chapter 5 Cumulative Impacts is entirely too vague and over generalized in describing displacement, demolition, construction and post construction impacts on CID residents, visitors, businesses. In order to genuinely know what possible impacts there are, the authors would have to know the community thoroughly: its institutions, its elderly non English speaking population, the family associations, tongs, social organizations, schools, youth activities. For example, the ventilation system. Who would it impact with demolition, construction and post construction venting? Where are the studies predicting the health impacts on local daycares and programs serving over 1200 elderly residents, not to mention hundreds more who come for culturally appropriate medical services?</p>	Betty Lau
04/02/2022	<p>First, I want to say that I fully support public transportation and realize that no solution is perfect.</p> <p>However, I am disappointed that there aren't public forums to consider adjoining segments together, rather just in silos. Looking at the effects of adjoining segments together sometime can sway the pros and cons significantly.</p> <p>That said, I would like to strongly recommend the combination of the 6th/Mercer option with the Prospect Street Station/Central Interbay SIB-3 option.</p> <p>According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground, which would be preferred for our residential communities.</p> <p>I also recommend these options because, according to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP.</p> <p>Lastly, I want to note that Table 6-6 does not acknowledge the possible 6 year displacement of over 27 indoor secure garage parking spaces in one condo building which has its access on W Republican. This should be a consideration to proceed with not proceeding with the 5th/Harrison DT-1 option.</p> <p>Thanks,</p> <p>Kimberly Gonzales</p>	Kimberly Gonzales

04/05/2022	<p>I strongly support the DEL-2a/DEL-4 and WSJ-3a/WSJ-3b Alternatives as outlined in the EIS. I feel that an elevated guideway would irrevocably harm the neighborhood of Alaska Junction and change its unique character forever. I have seen how the underground stations at Capitol Hill, Beacon Hill, Roosevelt, and U District have maintained the character of the neighborhoods they serve, while also promoting new development and opportunity. For me, several years of cut-and-cover construction mayhem is MUCH better than an elevated eyesore that stains the community for generations. I love what Sound Transit has done in the Roosevelt and Capitol Hill neighborhoods, with TOD on top of an underground station, while street-level life remains unperturbed. In my mind, it would be preferable to not build West Seattle Link at ALL rather than build an elevated guideway through Alaska Junction. I feel that a properly built Link in West Seattle would bring new life to the neighborhood, but only if it is underground west of Delridge Way.</p> <p>I support the CID-2a Alternative (no preference between diagonal or 5th Ave S only) as it would minimize impacts on 4th Ave S, which is a major thoroughfare. I would also support any and all proposals for direct underground connections between platforms at International District/Chinatown Station.</p> <p>I fully support the DT-1 Preferred Alternative, as it remains close to the centers of each neighborhood. The Seattle Center Station remains close to Climate Pledge Arena (the Kraken will be here for decades to come!) and the Denny and South Lake Union Stations are able to serve the SLU neighborhood well. Furthermore, I think the Midtown Station being on 5th Ave is just right, as a 6th Ave station would be too far uptown for my taste. 5th Ave serves Downtown just right, in my opinion.</p> <p>I fully support the SIB-1 Preferred Alternative, as the Smith Cove Station remains close to Expedia, the cruise terminal, and the Magnolia Bridge. Having the station closer to these important destinations will improve ridership to this area and encourage development on Elliot Ave W.</p> <p>I STRONGLY support the IBB-2b Alternative, and wholeheartedly reject ANY alternative that includes overhead tracks in Ballard. See my comments for West Seattle, but I feel that overhead tracks would harm the neighborhood and hinder development. Furthermore, if Link were to be extended further north of Ballard, the harm would be continued for blocks and blocks north. I do not want another I-5 ripping through Seattle... underground is the only alternative I accept and support. Furthermore, I would prefer an underground station along 15th Ave W versus 14th Ave W as it is closer to the center of Ballard and would allow for an underground passageway below 15th Ave W. I LOVE the passageway underneath Broadway on Capitol Hill and would want something similar for 15th Ave W, a much busier arterial road.</p>	Joelle Erickson
04/05/2022	<p>Having studied the Draft EIS Alternatives for the Chinatown/ID Station, I am strongly in favor of the 4th Avenue alternatives with top choice given to the 4th Shallow and second choice to 4th Deep alternatives. The 4th Avenue Alternative displaces far fewer businesses in Chinatown/ID. We who live and work in Chinatown have been displaced and disrupted far too long for projects such as the initial Light Rail project, I-5 construction and so on. The 4th Shallow Alternative is preferred also because it connects to all Downtown and SODO alternatives. I strongly oppose the 5th Avenue Alternatives as it will cause far more disruption for those living in the CID like myself. I have been a resident of the CID for many years and enjoy living here. I do not want years of my life so disrupted and inconvenienced as would be caused if the 5th Avenue Alternatives were selected.</p>	Donald Liu
04/05/2022	<p>The graphic design of your Draft EIS needs improvement. It does not increase the average person's understanding of the various alternatives.</p> <p>Secondly, tunnels are better than at-grade or elevated designs for light rail.</p>	Jean Schwinberg
04/05/2022	<p>There needs to be a tunnel into West Seattle. The elevated structures destroy all feel for the neighborhood and set an extremely difficult precedent for future extension to the south. The tunnel option to 41st uses existing space and is perfect for transit oriented development. It also provides a much lower bridge through Delridge.</p>	Jason Little
04/06/2022	<p>Seattle center station - republican is the way to go. Closing Mercer for an extended amount of time would kill uptown and make a nightmare for anybody living or working on Elliott magnolia queen Anne corridor. Plus Mercer is for cars there is no way to add a pleasant and functional pedestrian and bike environment along it! Both have the same bus connections really. Sound transit should be thinking about how best they can redevelop property they take from owners...developers can develop as well as sound transit</p>	Cindy Kozak

<p>04/06/2022</p>	<p>Commenting as a magnolia resident at 3535 W Howe St.:</p> <p>I am an adamant advocate of the Magnolia Bridge finally getting replaced. I hope this fits in with your plan to route the Link rail to travel from Elliott Avenue West elevated on the West side of Interbay Golf Center.</p> <p>I would oppose the elevated tracks on 15th avenue West for many reasons. One, I don't believe there would be many riders from South Magnolia. Check the Bus use and you will see. Many of us own electric cars. We are not going to Bus to the Link rail, ever. for those going to and from Ballard there is the Bus D line.</p> <p>Two, the disruption to the traffic flow would be insurmountable when I-5 is clogged. Also, The Port traffic disruption for minimal users. Smith Cove makes more sense for Cruise ship travelers and the S. Magnolia residents could walk there.</p> <p>Sincerely, Alana Morris 206-275-3445</p>	<p>Alana Morris</p>
<p>04/06/2022</p>	<p>we need to prioritize riders access to stations to make sure they are not too deep.</p> <p>The CID option for 4th Ave/ Shallow is the best. it would incorporate union station as a true transit hub and be easily accessible for riders.</p> <p>For Westlake station, it needs to be shallow for easy transfers to the existing line. the 5th ave alignment is best, but please rethink the current depth. right now it is way too deep.</p>	<p>Peter Nigh</p>
<p>04/06/2022</p>	<p>I am commenting in support of having a station in North Delridge. The station needs to be accessible on foot easily from both sides of Delridge, and should not be located any further south than Genesee. I am against any route that goes through Pigeon Point however and I think it is important that we route the line either along the north side of the bridge or across harbor island.</p>	<p>Nathan Hemphill</p>
<p>04/06/2022</p>	<p>For West Seattle: I support the "Preferred Long Tunnel Alignment". The Long Tunnel Alignment portal puts it directly into the hillside along Genesee St to the east of Avalon. ...The Long Tunnel Alignment supports businesses by not displacing them; and keeps West Seattle neighborhood of the Alaska Junction beautiful as it is now.</p>	<p>R MS</p>
<p>04/06/2022</p>	<p>I am a resident living on 42nd Ave SW near the Junction. My husband & I have lived in our home since 1997. I DO NOT want to see any lightrail coming through, or even near, our lovely neighborhood! Anything above ground is unacceptable unless you are planning it on a main arterial like Fauntleroy Way or Delridge. We deserve a tunnel! We have no bridge and have had to deal with that for 2 years. My husband & I had to pay over \$10K, to move both of our businesses, in order to get to work after you closed down the WS Bridge. This is a crazy decision, like so many City Council decisions, ruining our neighborhoods, taking away valuable lanes on our city streets, minimizing parking, allowing the homeless situation to be out of control. The number of old disgusting motorhomes are starting to pile up, between 9th Ave SW and 16th Ave SW, on SW Henderson. Get rid of them! Not fair to the homeowners that pay taxes and have to deal with this right in front of their homes. Do something good for our community for once. Make a good decision, TUNNEL TUNNEL TUNNEL! Sincerely, Shellie Nelson</p>	<p>Michelle Nelson</p>
<p>04/06/2022</p>	<p>All of these plans are expensive, disruptive and will be imposed on the North Delridge Neighborhoods unfairly. This will inevitably lead to neighborhood degradation, while the benefit will only be to those outside the area. Please reconsider the preferred route as it and the others demand too many homes be destroyed and the neighborhood split and potentially ruined. Why do other Seattle neighborhoods given tunnels and underground stations but we get 140' tall Disneyland rides? Why are Pigeon Point and North Delridge asked to sacrifice so much when other neighborhood's transit riders will just carelessly ride over our blighted landscape? All of these designs I feel strongly show a lack of imagination and a bulldozer's love for destruction.</p>	<p>Jim Sander</p>

04/06/2022	<p>I have been a West Seattle resident for over 40 Years. I have been at my current address at 4857 41st SW since March 1987 (35+Years). I have seen many changes in the WS Junction area through the years. I understand that change in neighborhoods is inevitable however, serious considerations need to be given to try and maintain the historical integrity of all West Seattle neighborhoods, particularly the Junction area.</p> <p>An elevated track would not blend into the current older architecture of this historic area. If mass transportation is a "must" why would it not make more sense to use a tunnel. / or consider a gondola concept. Tearing out blocks of established homes / business to accommodate a Monorail Terminal Station and or turn around doesn't seem to justify in itself. Once a decision is made and it becomes apparent that certain homes / neighborhoods will become a case study in eminent domain owners in these impacted neighborhoods will be severely impacted financially. Who would want to buy a home knowing they would soon have to sell ? Who would care to buy a home without understanding the noise and surrounding environmental impacts ? What is the City's plans to mitigate these situations.</p> <p>Respectfully, Sound Transit needs to implement a Transit System that blends into the current historical community not redefine a transportation system at the expense of the current established West Seattle residents affected.</p>	James Rillera
04/06/2022	<p>Thank you for the detailed information on station options; thanks also for a recent blog post detailing reasons for the great depth of several stations. I think that depth from surface is less of an issue as long as significant vertical-access redundancy is incorporated into the designs. MORE IMPORTANT is the need to make train-to-train transfers as fast as possible — would STRONGLY encourage choosing the options that will best facilitate this. Thank you.</p>	John Dunn
04/06/2022	<p>I am a resident of 909 5th Ave. I am against the proposal for Midtown station entrance at 4th & Madison. It will impact our daily life negatively. I have safety concerns about the station and it potential damage to our building. Construction-induced noise, vibrations, dust, odors, and other air pollutants are a concern as well.</p>	Lexie Chen
04/06/2022	<p>My husband and I are gravely concerned about the impact of an above ground station. We live on 42nd Ave and an above ground station would completely uproot our family as the track would go right over our house. My husband and I both work in west seattle and our children go to school here. It is home and it would be devastating to us and our neighbors to have to move especially when our property values will go down and we and others most likely won't be able to buy in the area. We support light rail coming to west seattle but would want the underground option. We also don't see the point of having three hubs in west seattle so close together. As someone who lives and works here the hub on avalon would make more sense. It's closer to the bridge and it's central to 35th, Delrige and California. The underground option is the only option we see that will not completely disrupt and negatively impact the social and economic aspect of our and our neighbors lives. We would strongly encourage sound transit to go with the underground option.</p>	KATIE BLANCHARD

<p>04/06/2022</p>	<p>To whom it may concern,</p> <p>Thank you for the opportunity to comment on West Seattle and Ballard Link Extensions. We are a group of students attending the University of Arizona studying Natural Resources and the Environment. After reading the Draft EIS, we would like to raise our concerns to the U.S. Department of Transportation Federal Transit Administration, Sound Transit, and other cooperating agencies regarding West Seattle and Ballard Link Extensions. Firstly, we see issues in the displacement of Seattle residents and businesses. Secondly, we are concerned with the critical habitat of listed salmon species in relation to the tribal treaty-protected fishing rights in the area. We know that if these issues are addressed, the project will be a beneficial addition to the citizens of West Seattle.</p> <p>Over the past two decades Seattle has experienced unprecedented growth and we are in agreement that the city would benefit from fast and reliable transportation within these densely populated areas. However, the preferred route and the other alternatives presented in the EIS will also cause long-term, perverse outcomes for local residents. An estimated 650 residences will be displaced due to the construction of this project with still more residences being adversely affected by construction due to noise, vibrations, and traffic congestion.</p> <p>It is stated in the executive summary of the EIS that “The adverse effects associated with displacement of businesses and residences would be effectively mitigated by implementation of Sound Transit’s real property acquisition and relocation policy and design measures, and best management practices would reduce the severity of potential construction impacts. In addition, Sound Transit is partnering with the community and other agencies on a community-based planning effort for the area to evaluate strategies to maintain and enhance community cohesion.” These property acquisitions and relocations will affect minority and low-income households, including the displacement of affordable housing, including Seattle Housing Authority property. Changes in bus transit operation, such as route changes, would impact transit-dependent populations for the duration of construction which is an estimated ten years. Finally, if the displaced residents are no longer in the area where the new rail system will be located, they may not experience the benefits of the project.</p> <p>In order to circumvent this large number of displacements, we would like to see additional exploration of route alternatives. We would like to propose exploration of 5th Ave North and Harrison St for the South Lake Union Station. The Memorial Stadium parking lot could be utilized as a “staging area” having minimal impact on traffic during construction.</p> <p>In the same way there is residential displacement, there is also business displacement in each of the areas the link extensions plan to build. Multiple locations in this project are on waterways that businesses depend on. Some of the alternatives in Duwamish and Interbay/Ballard area will impair the operations of waterway transportation and the shipment of products. This can result in a broader effect overall on regional jobs and incomes more so than just the jobs and businesses directly impacted by this project. In the Deldridge area, all the alternatives listed in the DEIS would displace a small business center that houses a coffee shop, a sandwich shop, and a deli mart in an area with limited neighborhood commercial uses. In SODO and Interbay, there would be a United States Postal Service Carrier and Annex buildings that would be displaced in a few of the alternatives listed. The project would be delayed in that area until a new replacement facility is built and the Postal Service Carrier is relocated, only at that point could the construction for the WSBLE. One of the last major business displacements that would take place during this project would be the relocation of the Metro’s Ryerson Bus Base in Chinatown in one of the alternatives. There would need to be an alternative location for the bus base prior to the start of construction and displacement. Sound Transit would have to coordinate with Metro about capital, routing, alternative locations, and management strategies. As mentioned above for the residential displacements, we would like to see additional exploration of route alternatives that would not displace so many of these businesses. As acknowledged in Chapter 4 of the DEIS, Seattle has been a home to many Indigenous Tribes since years before Euroamericans industrialized the area. The Duwamish River and specifically Salmon Bay has provided many resources for both the Muckleshoot and Suquamish. Because of the cultural significance of the area, the Muckleshoot Tribe and the Suquamish Tribe have treaty protected fishing rights in the Salmon Bay area. It is known by Sound Transit and cooperating agencies that placing infrastructure for Ballard Link Extensions will interfere with the treaty protected rights of the Suquamish and Muckleshoot Tribes. The EIS mentions that there would be coordination between Sound Transit and the affected tribes to mitigate this issue, including a plan for “ proper treatment of archaeological resources that may be identified during construction” (Section 4.3.16.5), while this measure is beneficial, in the Final EIS we would like to see some examples of how Sound Transit will avoid harming the areas in which the treaty protected fishing rights are, or how your agency will accommodate the loss of culture or resources the Muckleshoot and Suquamish tribes will face if Salmon Bay is made unavailable by the construction of Ballard Link Extensions.</p> <p>As well as making sure that the area mentioned before is having sufficient care brought into place, concerns of the endangered species within the area have been brought to attention. In-water critical</p>	<p>Megumi Talley</p>
-------------------	--	----------------------

	<p>habitats are to be permanently removed which impacts the endangered salmon within the area. Although this was mentioned in the EIS there were no noticeable solutions on how to help the salmon mentioned. It seemed to be skimmed over. As people who care about the endangered species we think that further science needs to be put in to reassure the people that the salmon in this area won't lose their critical habitat.</p> <p>In summary, we would like to see more focus on the displacement of individuals and businesses of Seattle, the treaty-protected fishing rights of multiple tribes in the area, and the loss of critical habitat for salmon. Again, thank you for taking the time to read over our concerns in relation to the West Seattle and Ballard Link Extensions.</p> <p>Sincerely, Krysta Cotten Megumi Talley Kaya Curry Jayden Carillo University of Arizona - Natural Resources and the Environment</p>	
04/06/2022	<p>I'm concerned about the preferred location for the Ballard station at Market and 14th. That area is notoriously unfriendly to bikes and pedestrians with lots of car traffic coming from the Ballard bridge. This is an impediment to ridership since the majority of riders will be arriving via foot / bike and some by bus.</p> <p>Another con of the proposed location is that its a far from the core of Ballard which lies 6 blocks west around Market and 20th.</p>	Ankur Dhoot
04/06/2022	<p>Hello, I live in West Seattle and my comments are focused on the W. Seattle Extension. The bias I have is reducing the impact to my fellow residents.</p> <p>Slide ES-12: My preference is ES-12 because of the low impact to the residents and slightly higher impact to business as compared to the other alternatives.</p> <p>Slide ES-14: Agreed with the DEL-2a route.</p> <p>Slide ES-23: Either tunnel option is preferred to maintain our community and it has the least impact to the community. The 3yr closure is a minor inconvenience compared to an elevated railway.</p>	Greg Deviny

04/07/2022	<p>While I support better transit my business has been displaced several times from expansion. Seattle is loosing more and more affordable buildings and loft style work spaces forcing us out of the city. I am on Elliott Ave west and had located my business on Elliott for 15 years. It seems a cleaner less destructive path would be along the already wide open North south rail tracks or raised style above street. Can you please provide more details on alternative routes not taking out several buildings and displacing our businesses on Elliott?</p> <p>Thank you Richard</p>	Richard Brown
04/07/2022	<p>I do understand why an elevated option is preferable for financial and timing reasons, however elevated rail tends to end up having "dead zones" underneath and will completely change the character of the neighborhood, not to mention creating more hardship for residents who will need to move or put up with rail right next to their homes. I strongly prefer a tunnel or gondola option for the segment of the line going through the Avalon neighborhood.</p>	Katie Kadwell
04/01/2022	<p>To the members of the Sound Transit Board:</p> <p>I am writing to voice my support to route the West Seattle & Ballard Light Rail expansions through the 4TH AVENUE & JACKSON ST OPTION.</p> <p>The proposed 5th Avenue option will destroy and displace Seattle's Chinatown and International District, a neighborhood my family and friends frequent every month via Light Rail. Did you know over 25%/9,000 of the UW's undergraduates are Asian American or from China? One of the reasons these high academic achieving students choose the University of Washington over other universities (like UMich, Cornell, Purdue) is because of Seattle's vibrant Chinatown and International District. On behalf of these students who don't have a voice, please route the West Seattle & Ballard Light Rail expansion through the 4th AVENUE & JACKSON ST OPTION.</p> <p>Thank you for your consideration. Thank you for not destroying and not displacing Seattle's Chinatown and International District.</p> <p>Sincerely, Missy Chow 1802 E John Light Rail Capitol Hill Station 98112</p> <p>P.S. The new U District and Roosevelt stations have great maps and tourist information. Good job!</p> <p>oops. type-o. 4th AVENUE & JACKSON ST OPTION my apologies!</p>	Missy Chow
04/05/2022	<p>Hi there,</p> <p>My name is Johannes Heine and I live at 4036 32nd Ave SW, Seattle, WA 98126.</p> <p>I wanted to voice my support for **tunnel *alternatives in West Seattle, specifically:</p> <ul style="list-style-type: none"> - Delridge Segment - Preferred Dakota Street Station Lower Height Alternative (DEL-2a) - West Seattle Junction Segment - Preferred Tunnel 42nd Avenue Station Option (WSJ-3b) <p>Thank you, Johannes</p>	Johannes Heine

04/07/2022	<p>The more I review the study the more I believe we need the tunnel option at 41st and Alaska. A light rail is not an invisible structure. A surface/elevated light rail will create unwanted noise and vibration, environmental concerns, impact residential housing, decrease value for adjacent homes, and social impact on the neighborhoods immediately adjacent to an elevated track.</p> <p>I still question the need for two stations (Avalon and Junction) being so close. These must be combined as one station located on the same block as Trader Joe's. Yes....this means no more Trader Joe's.</p> <p>On a different note I'm disappointed that the gondola is not being taken seriously. I've traveled in them and they're great people movers with low environmental damage and a lesser price.</p>	John McAlpine
04/07/2022	<p>The Ballard station options are at 14th and 15th Ave NW which are nearly a 20 minute walk to downtown Ballard. Sound Transit should reconsider a 20th Ave Ballard station.</p> <p>South Lake Union station is also poorly located. Let's move the station closer to the Lake Park and the dense office/housing area. Pairing a station with a pedestrian bridge over Mercer St would vastly improve mobility around SLU.</p> <p>The "Preferred alternative" for the Seattle Center station is a great choice. It's directly outside of Climate Pledge Arena and McCaw Hall and is the best option for the city.</p> <p>Downtown transfers from the Ballard line need to be quick and convenient. Make sure we're building those stations intelligently.</p>	Jacob Tukul
04/07/2022	<p>Several of us just moved to Avalon and we oppose Del-5. We would support WSJ-3a or WSJ 3-b!</p>	Tanya Hurst

04/02/2022	<p>I would like to strongly recommend the combination of the 6th/Mercer option with the Prospect Street Station/Central Interbay SIB-3 option.</p> <p>According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground, which would be preferred for our residential communities.</p> <p>I also recommend these options because, according to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP.</p> <p>Lastly, I want to note that Table 6-6 does not acknowledge the possible 6 year displacement of over 27 indoor secure garage parking spaces in one condo building which has its access on W Republican. This should be a consideration to proceed with not proceeding with the 5th/Harrison DT-1 option.</p> <p>Thanks,</p> <p>Kimberly Gonzales</p>	Kimberly Gonzales

03/27/2022	<p>Dear Sound Transit and Seattle City Counsel, Please build on 4th ave NOT 5th ave.</p> <p>Construction on 5th Avenue in Chinatown to Japantown means:</p> <ol style="list-style-type: none"> 1.Full closure of King Street, S. Weller and 5th Avenue for several years 2.Re-routing cars, buses, to 6th, Maynard, 7th, 8th, 10th & 12th 3.Gas, water, electrical shut offs to businesses, non-profits and residents 4.Daily dump trucks, cement trucks, cranes, supply trucks, delivery vehicles 5.Construction workers taking parking from businesses 6.Increased noise & air pollution, dust, dirt, vibrations 7.Taking property from owners of color for demolition and resale after construction 8.Endangering lives of 1,200 elderly by blocking access/egress for emergency vehicles with street/sidewalk closures and detours 9.Permanent changes to National Register Seattle Chinatown Historic District—loss of 3 blocks in addition to prior loss of 3 blocks for Transit Tunnel <p>Thank you for your time and consideration. Respectfully, -jim Y</p>	j Yamaguchi
03/24/2022	<p>Okay. Hi. My name is James McIntosh, and I'm with the Sierra Club, and I'm also with the Washington Council of the Blind. Well, my comment is I'm a little concerned about the depth of the some of the alternatives, that when you have a very long ways to get down, that's extra time spent on the vertical conveyance, the escalator or the elevator. That just takes time from your overall transit trip. So it may not be possible to build more at the ground level, but I'm just a little concerned about the depth of some of the alternatives of the tracks. And I'm also very concerned with pedestrian access in that area. Right now the current pedestrian access between the King Street Station, which is Amtrak and Sounder commuter rail, and the Union Station, International Station, the pedestrian access is just terrible. It's awful. It's very unsafe, especially the one crossing on Fourth Avenue. So I would suggest building an underground concourse, and I'm not sure if that's been addressed or talked about, but a very safe, clean, well-lit underground concourse connecting the King Street Station and the Sounder commuter rail, yeah, with the commuter rail. So just to put a safe, clean, visually impaired-friendly commuter, you know, pedestrian access is just really important so you are not going up escalators, down escalators, you know, up elevators, and you can find where you're going. Okay. Great. Thank you very much. Looking forward to the final plans. Thank you.</p>	James S McIntosh
04/07/2022	<p>Hi there,</p> <p>I'm writing to oppose the DEL-5 -</p> <p>Support goes for the WSJ-3a or 3b please.</p> <p>Tanya Hurst Jesus Barrientos</p>	Tanya Hurst
04/07/2022	<p>Hello. Thank you again for having this. I'm part of the Chong Wa Benevolent Association that is located in Chinatown, and we have very large concerns about the Fifth Avenue choice. If you decide to use the Fifth Avenue, you'll have the full closure of King Street and Weller and Fifth Avenue, which creates a lot of issues. And your staging area, I'm assuming that the staging area is going to be on the empty lots that the Sound Transit purchases, which cause Sixth Avenue really bad, bad traffic and bad health and bad noise and bad everything that comes with large construction projects. And if you were to, that would basically kill that area, which will kill all of Chinatown because nobody wants to come down into a construction area. Now, if you go Fourth Avenue, all that area does not touch our neighborhood, and if you don't touch our neighborhood, then we're all good. We can exist happily together. But Fifth Avenue, we're not going to be existing happily forever. And as far as -- I found out that your ventilation tubes to let the air out and into the tunnel is going to be located right there on Weller and Sixth Avenue. And there has not been mention about that ventilation to the community, and that's a big, big, big disruption. Thank you.</p>	Brien Chow

04/05/2022	<p>To whom it may concern,</p> <p>I am a long time Seattle resident and have recently heard about sound transits plan to make another train Station in the CID. I urge you to wrap this new station along fourth Avenue, Leslie disrupting fewer important businesses in the heart of Chinatown. I hope that you take the cultural importance of the international district into account and your decision making, and that you do not destroy this valuable piece of Seattle history.</p> <p>Sincerely, Lillian King</p>	Lillian King
03/24/2022	<p>Hi. I'm Meilani. I am a resident and worker here in the neighborhood, and I really have concerns about all of the alternatives presented for the CID. I want to second what Auntie Betty said around the fact that the plan does not seem community15 and people-centered, especially when you're looking at like the impacts and you see like 30,000 cars being rerouted. Well, where are those cars being rerouted? Like, they're being rerouted through the neighborhood. And I think so many people look at this neighborhood as like a business district, but really it's a residential neighborhood, and there's people that live here and especially elders. So how can we possibly compensate the gentrification, the environmental, the health impacts that the neighborhood is being subjected to? And I think this is a very clear comparison to when the 5 was cut through the neighborhood and all the impacts with that, and it seems to me that the neighborhood is getting bitten up and getting smaller and smaller without reference to the people that are here. So for the board, I would really recommend looking at the impacts to community and seeing, when you're talking about rerouting traffic, where is that traffic going, what are the community impacts of that, like can ambulances get to elders that need it, and those sort of things. Thank you.</p>	Meilani Rose Mandery
03/30/2022	<p>Before leaving office, Mayor Jenny Durkan announced a housing crisis in Seattle. Light rail will remove 400 - 600 homes in West Seattle. The DEIS claims: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." Where are these available homes?</p> <p>Let's look at the Gondola alternative please.</p> <p>Cheers, Michael West Seattle resident</p>	Michael O'Brien
03/24/2022	<p>Okay. My name is Ron. I'm a concerned citizen. I'd like to mention that much has been written about the Chinatown-International District as a cultural clump of cells, American-Asian community. Often mentioned is the Uwajimaya supermarket, the Wing Luke Asian Museum, and the China Gate located at Fifth South and South King Street. There's much more than that with its local businesses and shops, senior and low-income housing, assisted living facilities, community organization, churches, and much, much more. Seattle's first Chinatown was located in Pioneer Square. Around 1885, about 500 Chinese lived in that area. Following displacement and the great fire of 1889, the Chinese moved to what is considered the second Chinatown, which is where it is located now. It was rebuilt on reclaimed land because of the Jackson Street regrade. Many buildings erected more than 100 years ago by the Chinese community still exist and are often refurbished. I just want to mention that the China Gate was built as a gateway to this historical district in recognition of the accomplishment of these people. I believe the priority should be that the CID historical core should be given the same consideration, the same as the Pike Place Market. Thank you.</p>	Ron King

04/02/2022	<p>First, I want to say that I fully support public transportation and realize that no solution is perfect.</p> <p>However, I am disappointed that there aren't public forums to consider adjoining segments together, rather just in silos. Looking at the effects of adjoining segments together sometime can sway the pros and cons significantly.</p> <p>That said, I would like to strongly recommend the combination of the 6th/Mercer option with the Prospect Street Station/Central Interbay SIB-3 option.</p> <p>According to Tables 6-6 and 6-7, the 6th/ Mercer DT-2 option connecting to the SIB-3 option overall displaces a lower number of residences and keeps a longer distance of train underground, which would be preferred for our residential communities.</p> <p>I also recommend these options because, according to Table 6-6, the 5th/Harrison DT-1 option will have permanent vibration effects on some of the arts facilities, including Seattle Rep Theater and KEXP.</p> <p>Lastly, I want to note that Table 6-6 does not acknowledge the possible 6 yr displacement of over 27 indoor secure garage parking spaces in one condo building which has its access on W Republican. This should be a consideration to proceed with not proceeding with the 5th/Harrison DT-1 option.</p> <p>Thank you,</p> <p>David Gonzales</p>	David Gonzales
03/24/2022	<p>Hi. Good evening. My name is Kelly Brunson [phonetic spelling], and for the past 15 years, I've lived in Seattle and lived about less than a mile from the International District; however, my cultural identify is not one of the nationalities represented within the International District. So I can't really speak to what exactly the community wants, but as a resident living in this area for the past 15 years and seeing the numbers of the businesses that would be affected by this project and knowing that there are several areas around the International District that are not in the International District that are, you know, more industrial spaces and don't have as much effect, I do question the impact on the International District. And I think that what I've seen within the International District is there needs to be more revitalization and help to improve the area and improve businesses. Many of the businesses have been disproportionately affected by the pandemic, and I just think that this project would impact the losses even more. I know that Seattle values cultural spaces, and I think that we should be doing what we can to preserve these cultural spaces. As one of the speakers mentioned earlier, that the goal of these projects is to make great neighborhoods around stations, and there already is one. So I would like for people to consider that and continue to listen to those that live in the neighborhood and what they think is best. Thank you so much.</p>	Kelly Brunson

03/24/2022	<p>Hello. My name is Aya Chong Ducey [phonetic spelling]. I am a concerned community member, worker in the neighborhood, and my family has had a small business in the neighborhood for almost two decades. And I'm very concerned about the CID alternatives presented by Sound Transit, particularly the three Fifth Avenue options. As per the information shared this evening, the Fifth Avenue alternatives would displace 18 to 19 businesses, and this doesn't even include the many more businesses in the area that would be negatively impacted by the construction process. Historically, our community has already faced much challenge, including the construction of I-5 without regard for the people who live here and are part of the neighborhood community. And I'm also thinking about the construction of the Seattle Streetcar, which was a much smaller project and yet had a negative impact on local businesses throughout the construction. Several family businesses actually closed because of this. And so the CID, you know, it's an important space for the Asian-American community in Seattle, and, you know, it is a community which has also struggled amid the pandemic and the rise in anti-Asian hate which we have seen. And so I urge the board to consider this project from a social equity perspective. This is a vital neighborhood for many communities and an asset to greater Seattle. And, you know, construction of a Sound Transit project on Fifth Avenue, you know, and all the negative impacts from its construction, the displacement of businesses and, you know, potentially disruption of, you know, walkways and access to different social services would be catastrophic. So I just wanted to voice my concerns.</p>	Aya Chong Ducey
04/05/2022	<p>I'm writing to urge Sound Transit to lay Light Rail tracks under 4th Avenue, instead of 5th Avenue. If Sound Transit purports to be for racial equity and inclusion, then it needs to protect one of the most marginalized communities of color in Seattle: Chinatown International District (CID). As you now know, construction on 5th Avenue may be less pricey, but it would shut down the businesses between South Jackson and South Weller and displace community members. The CID houses not only the Asian community, but also a significant amount of elders who are immigrants and low-income. Please do what's best and protect these groups.</p> <p>Thanks, Yoona</p> <p>Yoona Lee (She/Her) Visual artist Writer www.rhymeswithrace.com</p>	Yoona Lee
03/24/2022	<p>Hi. My name is Yoram [phonetic spelling], and I'm actually a current resident. I'm still kind of processing the presentation and the information, and I guess the options presented in the presentation itself was kind of concerning to me. And many of the comments that people shared before kind of articulated some of my concerns. But I just want to state I live and I work locally, and I'd really like the Sound Transit and whoever's kind of leading these projects to examine how these kind of negative impacts continue to display the disproportionate impact on communities like us, on people that are disenfranchised historically. It just seemed like all of the options presented were bad, and it just seems like there must be a better option. I can't imagine 19-plus families or businesses not having a place to go, even if they are compensated financially. It changes the landscape of this actual neighborhood. I guess that's all I have to say today, and thank you so much for providing the translations and having it be accessible that way.</p>	Yoram

04/07/2022	<p>West Seattle Tunnel is the best option. Least impact to the community and will allow West Seattle to expand and thrive around the station. Adding above ground rails will detract from the neighborhood, add noise, and deter people from moving/spending time in the area.</p> <ul style="list-style-type: none"> – Delridge station – DEL-6, Andover lower-height option: lowest residential and traffic impact. – No Avalon station – Too expensive, too much construction in a critical location, and too close to the other stations. – Junction station – WSJ-3b: The Junction Jefferson Square Station option #6, terminating underground. – Medium tunnel option – Smaller footprint, no longer a significant cost difference, in line with Beacon Hill, Capitol Hill, Roosevelt among other stations. 	Carson West
02/19/2022	<p>In recent years, I've been a repeat customer of Blade Gallery because I am a knife collector. It is a significant hobby for me. I've become well aware of just how large a store front business Blade Gallery operates and how they have relocated and expanded. Being a retired accountant, I understand just how costly such an undertaking can be for a business the size of Blade Gallery. The payoff for their investment in expanding their business will certainly not come quickly.</p> <p>I understand there is an intention to seize their brick and mortar location via the process of eminent domain. Personally, I believe eminent domain is more often abused by government than utilized for a genuine public good. It is my observation that the idea of light rail or high speed rail for the United States is a waste of money. People don't want to give up their cars and the type of jobs people have these days just don't comport with the idea of a fixed transportation schedule. The closest thing which serves that purpose nowadays is local municipal bus companies. The investment in another competing public transportation system is basically a political boondoggle. Just look at what happened to the supposed passenger rail line which was supposed to run a great portion of the length of California. And Amtrak in the northeast has to be subsidized by the Federal government. That means I've had to pay a pro-rata share of the cost of Joe Biden riding the train back and forth daily between Delaware and D.C. when he was a senator. What is equitable about that?</p> <p>If you proceed with seizing Blade Gallery's property for a rail system which will most likely be a drain on the taxpayers of your area, your actions will probably kill their business and destroy the livelihood of the owners and their employees. My purchases from Blade Gallery have been via their online sales operation. And because of the unique mix of their inventory, I'll probably lose access to some very unique and collectible knives.</p> <p>Donald E. Rutledge; 197 Hannah Road; Pulaski, TN; 38478-6653 chderutl@hughes.net</p>	Donald Rutledge
03/28/2022	<p>To whom it may concern:</p> <p>With this debate and study on Light Rail alternative, I want to clearly state that I support the construction of the SkyLink Gondola. I believe that it will move people more effectively, efficiently, safely, with less environmental disturbance, less ugly imposing structures, less expensively and built faster than any other alternatives. Thank you</p> <p>James Hoffman 5220 SW Pritchard St Seattle, WA 98116</p>	James Hoffman

02/19/2022	<p>Dear Councilmembers and Sound Transit</p> <p>I am a customer at BladeGallery's Epicurean Edge in SODO (Seattle). This last fall, they moved from Kirkland, WA to Seattle. I'm very excited about their new larger storefront and look forward to their classes such as knifemaking, forging, culinary knife skills, and sharpening. I've recently heard that they are in danger of their new location being taken through eminent domain for Light Rail. This is a unique business, serving as a hub for the international bladesmithing community, that can't be found anywhere else. Please help support a path for Light Rail that does not force BladeGallery's Epicurean Edge to move again or close shop.</p> <p>Who is BladeGallery?</p> <p>BladeGallery Inc's brick and mortar art gallery draws guests from all over the world to their Seattle (SODO) workshop.</p> <p>The 2200 sqft showroom displays a wide selection of handmade and production knives, including chef's knives, tactical and practical knives, straight razors, and manicure gear.</p> <p>They also offer a high performance sharpening service for home and professional chefs.</p> <p>I'm looking forward to their classes aimed at established knifemakers and beginners.</p> <p>BladeGallery Inc is a small business that currently supports 7 employee households.</p> <p>BladeGallery Inc supports over 600 artisans from around the world, custom building knives. In many cases, BladeGallery is the primary sales mechanism for these artists.</p> <p>During this stressful and unpredictable time, please help support this unique business and ensure that they will remain open for many years to come. I greatly appreciate any efforts that you can make to select a path for Light Rail that does not force BladeGallery Inc to move or close down – resulting in tremendous hardship for their employees and the hundreds of artisans they represent. Furthermore, the closure of BladeGallery Inc would be a considerable loss to the broader artisan knifemaking community.</p> <p>The BladeGallery Showroom is at:</p> <p>BladeGallery's Epicurean Edge 3628 E Marginal Way S Seattle, WA 98134 (425) 889-5980</p> <p>Yours, BladeGallery Inc Customer: Yuliya Staley Home address: 2943 SW 310th St Federal Way, WA 98023 Email: Yuliya.staley@gmail.com Phone: 206 353 9768</p>	Yuliya Staley

04/07/2022	<p>Hello</p> <p>When it gets down to brass tacks, please build West Seattle Link. DO NOT SWITCH TO A GONDOLA PROJECT, does not carry enough people and does not provide the potential for expansion further south.</p> <p>All I ask is that you keep an Avalon station--a lot of people will connect by bus from Gatewood, Highpoint, Upper Morgan.</p> <p>Thanks, Peter</p>	Peter Fleetwood
03/08/2022	<p>Please include business displacements on King Street. That seems to be missing in this section 4.3.1.3.2 and explain the difference between displacement and re-location.</p> <p>Thanks,</p> <p>Betty</p>	Betty Lau

03/16/2022	<p>Sound Transit, Please listen to the CID community re: the multi-decade, \$53 billion expansion of our regional public transit system. For years, CID community activists have pushed back against ST's preferred plans for the CID expansion, stating that your plans would drive out community businesses, detour up to 30,000 vehicles per day through the CID's residential streets, and ruin life for the residents of the area with as much as ten years of highly disruptive construction.</p> <p>Community members have urged you/ST "to choose the least-impactful option to develop its new transit hub," but your refusal to publicly commit to any particular plan at this time is worrisome.</p> <p>Please listen closely to the CID community and choose to work together respectfully with the CID community towards an outcome that is least impactful. After the many challenges our Asian community has had to live through over the decades, it's time for listening and partnership.</p> <p>Respectfully, ~Christy Bear Bellevue</p>	Christy Bear
03/26/2022	<p>Hello, I submitted my comments on the website and then noticed that you can send in comments through email. My written up comments in a document will come across much cleaner and easier to read in the attachment to this email than it would on the website. Also, I couldn't keep the links and references I pulled from in the other format, which makes through email better.</p> <p>Thanks for taking the time to read and engage with my comments.</p> <p>Best, Markus Johnson</p> <p>Markus Johnson Master of Urban Planning Candidate Department of Urban Design & Planning University of Washington markusj@uw.edu he/him/his</p> <p>As part of a group class project, I used the class project as an opportunity to critically examine current plans being considered in the planning of Sound Transit's West Seattle-Ballard Link Extension (WSBLE). Sound Transit's Draft Environmental Impact Statement (EIS) is currently open for public commentary and feedback on the plan. Therefore, as part of this report, I have summarized my comments on the Draft EIS with the intention of submitting them to Sound Transit's public comment portal. I and my group are concerned about rider experience. The elevated stations seem to be unnecessarily high given that clearance is 16.5 feet and 23.5 feet for roads and rail respectively. From my own experience, when comparing to elevated highways, elevated highways seem to be generally 30-40 feet tall. Is there something stopping rail lines from getting the same treatment? If topography is a reason for this, it is not a clearly stated reason found in any of the alternatives. The same concerns are present with tunneled lines and stations. The deep station alternatives are especially concerning since Sound Transit has service issues with both escalators and elevators. Promoting as much ridership as possible to us means doing what you can to make short/shallow stations. There is a summarizing table for each segment that lists projected costs and potential impacts which is helpful to providing a full picture. I and my group think another feature that should be added as potential changes for insight is a Future Land Use Map (FLUM). There is very little commentary on TOD and broader land use implications in the DEIS. A FLUM would provide a more complete picture and help people more aptly weigh tradeoffs versus the listed displacement risks. Expected displacement of 100 homes but a zoned land use for 1000 homes can help people better understand the risks and rewards. On the Ballard station, I think there is potential for innovative change to the right of ways on and around 15th which relate to option IBB-3. IBB-3 with the addition of tall fixed bridge instead of moveable bridge is an idea inspired by Ray Dubicki and something I think Sound Transit should look into more. On the CID station, I think there is another innovative idea that could be studied. The idea is around a superstation that incorporates Union Station, King Street station, and the current CID station into the station design and connects all of them together. Similar to the CID-1a option but stronger and inspired by The Urbanist in 2018. With the news that tunneled options may be competitive. I feel the West Seattle Junction segment 3b (WSJ-3b) should be the favorite for the preferred option. I think it is important the Seattle Center station be as close to Climate Pledge Arena as possible. It is also the shallow station option of the choices. This would mean we agree with Sound Transit's preferred option of DT-1. On the Smith Cove Station, I think SIB-2 or the elevated station on Prospect St. should be the preferred alternative. Harkening back to the importance of ridership</p>	Markus Johnson

	<p>experience. The station platform under this alternative would be a comfortable 35 feet, meaning no 2 or 3 set of stairs before getting to platform. This location also hugs right up next to the greenbelt covering Queen Anne and there could be some nice pedestrian and bike connections through the greenbelt that connect Queen Anne residents to the station without using cars. Lastly, this alternative would allow for a potential car-light TOD location southwest of the station near the water. I and my group have found that the DEIS is quite dense and quite busy and wonder out loud if there are other ways of conveying the information. There is a lack of clarity on many of the images, maps, and designs depicted in the DEIS. Maps in particular were too busy and had too many street labels and other markings that deterred from the main focus. The station planning progress reports in our opinion were a lot more digestible to read and gain insight from. Though these are on the DEIS website they are after the comment section on the website and may be more appropriate to either substitute in as the main text of chapter in DEIS or linked in DEIS clearly and strongly. I and my group find it confusing why for most stations there is a preferred alternative, but there is no clear summarized or bullet point reference to why that option has been chosen as the preferred alternative. Understanding why an option is the preferred option next to each segment would give needed context.</p>	
04/07/2022	We own and operate a large building on Delridge Way and Andover, we strongly urge you to use option DEL-5 or DEL-6.	McKenzie Johnson
04/07/2022	I think stations should be less deep so people can make quick trips. Cut and cover could be used under 4th ave for level crossings between different platforms in the future.	Vincent Johnson
04/07/2022	<p>I'd like to see comparative analyses by an independent expert (not an in-house team who work for Sound Transit) of the following impacts from the Preferred Alternative compared to an aerial gondola such as those operating or in the pipeline for Medellin, Colombia; Ankara, Turkey; Bogota, Colombia; or Edmonton, Canada:</p> <ul style="list-style-type: none"> 4.1.5 Visual and Aesthetic Resources 4.1.6 Air Quality 4.1.7 Noise and Vibration 4.1.8 Water Resources 4.1.9 Ecosystems 4.1.10 Energy Impacts 4.1.11 Geology and Soils <p>The study should also compare the financial and social costs, and the projected completion dates. The results of the study should be made public as soon as they're determined. Thank you.</p>	Annie Phillips

04/07/2022	<p>Overall Overall the station locations are expensive and the compromises do not make the ridership experience better. Everything should be done to minimize having stations 100+ feet underground. This will only increase cost, reduce ridership, and make the experience worse for those who are using it.</p> <p>Sodo The preferred alignment seems to be the best option. Proceed with the preferred alignment.</p> <p>West Seattle Stations As ridership numbers are relatively low on the west seattle extension we should be prioritizing the more affordable options. An elevated station above Fauntleroy Way SW south of SW Alaska St could provide an affordable great terminus station. Whatever changes need to be made to the fire code to accommodate this would be greatly appreciated. Closing the road for construction is a short time impact that will have long term positive gains. In addition, the 85 foot optionat Delridge would have a number of negative impacts including making it more difficult to get to the station, which would impact ridership experience.</p> <p>Chinatown/International District International District Chinatown is probably the most important station in this entire extension. Prioritizing quick transfers and ridership experience here is super important. Both of the deep options should be off the table as it will drastically hurt ridership experience. Shallow 4th Avenue station or 5th avenue both have pros and cons and I'd be happy with either being chosen. If either of these "Shallow" Stations can be made even just 5 or ten feet less shallow that could have wonderful benefits to ridership experience. The idea of a retail market between the a shallow 5th station and the current ID station would be wonderful and could be a great spot to hang out before an event at Lumen Field or before catching a train at Union station</p> <p>Midtown Of the two station locations the 5th avenue choice is slightly better.</p> <p>Denny The preferred option at Denny and Westlake looks like a perfect station. Great work.</p> <p>SLU Finding a way to move this station a block away from 99 would help increase walkability, while still allowing for connections to 99 busses. We should be planning this station with a potential 99 light rail route in mind as this could make a good transfer point.</p> <p>Smith Cove The Smith Cove station will never have large ridership so we should prioritize this segment being on the cheaper end. Reducing cost by using the 15th Ave ROW could potentially be a big cost saver and improve the pedestrian experience on one of the worst sections in Seattle</p> <p>Interbay Interbay station should be all about great bus connections. The City of Seattle and the Washington State Department of Transportation must be better partners, too. The agencies have talked up collaboration, but there is no sign that these agencies have been willing collaborate by slimming down the highways and arterials near the stations in order to make way for transit space and improved accessibility for riders. Interbay's overbuilt 15th Avenue station is a testament to this — heaven forbid we redesign highway off-ramps next to our billion-dollar transit investment.</p> <p>Ballard Consider studying 20th tunnel option (as cost for a tunnel doesn't seem to be that increased) or lower the 15th street option, potentially removing a car lane. This lower ridership Interbay and Smith Cove Stations are here to service getting this station right so we should invest resources to get the Ballard light rail segment right. I currently live on 8th Ave NE and 51st street, but even I acknowledge that the Ballard light rail station should serve central Ballard. It would also be nice to have this station allow for connections to a future UW-Ballard line or an extension further north.</p>	Grant Peltier
04/07/2022	<p>buy a tram for the cost of your pathetic environmental impact statement... you could build the whole tram not a 3 billion dollar joke train</p>	nick worsfold

04/07/2022	<p>I feel strongly that the Alaska Junction station, if there is to be one, should be built underground. If we are ever to further the tracks to Burien and other areas South then we would have to destroy so many homes along the way if the tracks were built above ground. There would be many displaced families as well as destruction of property values and disruption to the peace and character of our West Seattle neighborhoods. If we are going to build this once-in-a-few-generations form of transportation it should be done the "right way" the first time with the least impact on the surrounding community. I would support eliminating the Avalon station if that meant putting more money toward bringing light rail to West Seattle underground.</p>	Karen Januto
04/08/2022	<p>I am against the WS Link Light Rail station at the Junction on 41st or 42nd unless it is underground. Above ground and/or elevated will totally ruin a very nice neighborhood with noise, vibration, and loss of property values. I am in favor of the station staying down on Fauntleroy Way. It is very close to the Junction to be able to walk to without destroying the Junction neighborhood. Also seems this option would save more properties from confiscation.</p>	Todd Kombol
04/08/2022	<p>My comments are specific to the West Seattle Junction route and stations.</p> <p>I'd like to know if ST can estimate how many affordable homes could be built using TOD for each alternative with current zoning. In the DEIS Chapter 4, section 4.2.2.5.2 only mentions that tunnel alternatives will have a higher potential use for TOD than elevated alternatives. Please give estimates on how units of affordable housing could be built above a tunnel station versus affordable housing built surrounding an elevated station for all WSJ alternatives.</p> <p>I think it is important to not only minimize displacement of current residences and business, but also evaluate future use of land to ensure the light rail is more equitable, increases ridership and maximizes affordable housing in the West Seattle Junction neighborhood.</p> <p>I hope ST Board will seriously consider WSJ-5, Medium Tunnel as it causes that least amount of displacement, has potential for more affordable housing with a tunnel station and is more affordable than one elevated option. Thank you and I look forward to seeing the FEIS with preferred alternative selected.</p>	Amanda Sawyer

04/09/2022	<p>Sound Transit must focus on improving the rider's experience in the WSBLE. There are two aspects I believe are not well considered now: 1) time/distance needed for transfers between lines and 2) redundancy of vertical conveyances.</p> <p>First transfer times at key stations proposed in the DEIS are very high due to the depth/height of proposed stations at Chinatown / International District, SODO, and Westlake. I urge Sound Transit to consider the shallow options (4th ave preferred) at CID and potentially look into making the station even shallower to be close to the grade of the existing station/platform. This would facilitate quick and at grade transfers at CID. Please consider accomplishing this by having the DSTT2 cross over the existing tunnel using cut and cover instead of tunneling under it. If this is not possible, please share risk assessments that demonstrate why it is not.</p> <p>Westlake station will be the busiest in the system and the most important transfer point. Therefore it must be the most user-friendly station. While I encourage the proposed design to be shallower, if this is not possible please consider building important redundancies in vertical conveyances. Elevators and escalators should be available to take passengers between the platforms and station mezzanines, as well as express elevators/escalators that take one from the surface to the platforms. These should be clearly separate and marked with excellent way finding. Redundancies should be built in (3 escalators per well, many elevators for wheelchair or bike users) and flexible. Escalators should be able to reverse direction if needed when another is out of service, and multiple elevators should be able to be called at once if there is a large influx of people.</p> <p>Finally, SODO station will serve as a key transfer location and has the possibility to serve riders well with quick transfer times. To accommodate this, please consider same direction cross-platform transfer so that riders can exit one train and switch lines without leaving the platform. This could significantly improve transfer times and reduce distance needed to travel.</p> <p>To emphasize the rider experience, I ask Sound Transit to publish the following data: the most common station pairs that will require transfers at the completion of ST3, the transfer volume expected, and the total trip time (with transfer and station access time indicated) expected for these station pairs in four scenarios: 1) able-bodied and best case headway alignment, 2) able-bodied and worst case headway alignment, 3) wheelchair user and best case headway alignment, and 4) wheelchair user and worst case headway alignment. Using this data, please ensure the rider station access and transfer experience is optimized to reduce the total trip time under the four scenarios.</p>	Cole Gleason
------------	--	--------------

04/09/2022	<p>The West Seattle Ballard Link Extension is critical to improve the transportation system of Seattle, but we should not assume that the completion of ST3 is the end of Link expansion. To reduce future costs and prepare for possible future expansion, new stations should include necessary infrastructure to make future proposals feasible. I am asking Sound Transit to consider future expansion in the design of the following stations: Alaska Junction, SODO, Midtown, Denny, SLU, and Ballard.</p> <p>Alaska Junction and SODO should both be built anticipating a possible future expansion to the south, and anything necessary to facilitate that construction should be implemented in the station design.</p> <p>Midtown station should include a wye-junction to support possible future expansion along a Madison alignment to Madison Park. It should also include anything necessary for a possible transfer facility to a future line.</p> <p>Denny station should include necessary facilities and junctions for a future line that would connect Belltown to the southwest with Fairview Ave or Capitol Hill.</p> <p>SLU station should include the necessary facilities and junctions for possible expansion to the north along Dexter up to Fremont.</p> <p>Finally, Ballard station should include wye-junctions and facilities needed for possible expansion both the north up to Crown Hill, as well as to the east to U-District or UW.</p> <p>When I ask for Sound Transit to consider these future expansions, I realize they are not included in the scope of WSBLE or ST3. However, we should take design steps that optimize for cost-effectiveness of Sound Transit into the future, not just over the ST3 program. This includes designing stations now such that future expansions are financially feasible, even if they are only built many decades in the future. Therefore, I am not asking for new platforms and empty transfer stations to be built, but for Sound Transit to include the necessary track wye-junctions and junction boxes in the design, as well as considering where transfer mezzanines may have to be built if future expansion is approved.</p>	Cole Gleason
04/09/2022	<p>The SLU station is very important to me as it is the station I will use everyday for commuting, as will many other people. Therefore it is critical that SLU serves the most people who live or work in SLU by being placed in the center of the neighborhood. The current alternatives are either near the neighborhood boundary (DT-1) or even outside (DT-2). Both alternatives have significant walk shed taken up by large roads and highways, and the SR-99 tunnel means these stations will have to be deep to go under the tunnel. This will lead to a poor pedestrian and rider experience.</p> <p>Instead, please consider a station alternative near the intersection of Harrison and Westlake or republican and Westlake. This station alignment would much better serve the riders who live or work in SLU, like myself, by having a walk shed that significantly covers the dense neighborhood. After this Central SLU station, the line could take a sharp turn (but less sharp than already exists on the 1-Line) and continue on to Seattle Center station. While this new station would be close to Denny Station, the walk shed would not overlap much and it would still serve more people than either DT-1 or DT-2 alternative.</p> <p>This alternative Central SLU station is not as close as desired for bus connections as DT-2 alternative, but bus transfers were already going to be challenging as there was little to no space for them to occur. Therefore, the benefit of bus transfer cannot be realized fully and we should instead improve the walk shed by centrally locating SLU station.</p> <p>If the central SLU station is not possible, the DT-1 (Harrison) alternative is preferred as it is closer to central SLU and less walk shed is taken up by highways.</p>	Cole Gleason

04/09/2022	<p>All of the proposed alternatives for Ballard station, whether 14th or 15th Ave or tunnel vs elevated, have cost estimates that are relatively close to each other (in the 1.5B - 1.7B range). Because the cost difference between elevated and tunnel options is so close, I would like Sound Transit to complete an additional study on a 20th Street tunnel alternative for Ballard station. This was discarded before the Draft EIS due to assumed cost differences between tunneled and elevated options, but now that these alternatives are so close in price, 20th Street should be reconsidered.</p> <p>Ballard as a destination for riders from elsewhere in the system, especially for non-commuters like myself who may be traveling to Ballard, is much better served by a station that is in the heart of a pedestrian-accessible and commercial area near 20th and Market. In the Pre-DEIS phase, Sound Transit indicated that this alignment would have much higher ridership, and therefore I think it is worth additional study now that more is known about possible costs.</p> <p>If a tunnel option to 20th/Market area is not possible, then choose an option that includes a fixed bridge. Mechanical issues leading to stuck bridges across the ship canal, as drivers experienced only a few days ago, has great potential to disrupt the line and sever Ballard from the rest of the network. That is a risk we should not accept for critical transit infrastructure.</p>	Cole Gleason
04/09/2022	<p>Vancouver, British Columbia, and Portland, Oregon, both have high quality rail museums that have good public transit connections, but not Seattle, a city that grew in population size by 21% between 2010 and 2020. Furthermore, Seattle was considered the fastest growing city among the 50 largest cities in the entire United States. But while that was happening, Seattle's rail history was slowly fading away with the city's modernization. BNSF Railway's Interbay Hump Yard, also known as Balmer Yard, closed for a period of time during 2020. This change was supposed to be permanent, but it later reopened, with rumors continuing to circulate that both the hump yard and its accompanying locomotive facility would be decommissioned and replaced by a new facility in Vancouver, Washington, where property prices are cheaper. Before this crucial piece of Seattle' history slips away like sand through fingers, the Interbay Roundhouse should be preserved as part of a rail museum, park, and light rail station.</p> <p>First off, construction of a light rail station at Interbay calls for restaurants and retail space, which would attract tourism in addition to commuters. If the station area is attracting tourism, why not create a railroad museum for a city that forgets what helped grow it. A museum in this area would complement the restaurants and shops perfectly, attracting more tourists and allowing them to spend both time and money in the area. If this station is to serve Interbay, why wouldn't it make sense for Interbay to serve the station as well. Furthermore, the section of the 1 Line between Seattle Center and Ballard seems to cater more to tourism rather than commuters, so why not add to that and create a museum at Interbay, which doesn't have much of a tourist interest, compared to other stations such as Seattle Center or Smith Cove. The only tourist interest near the Interbay Station are Fishermens' Terminal and the surrounding trails in the area, including the Ship Canal Trail and the Elliott Bay Trail. To put it simply, Interbay sorely lacks a tourist attraction.</p> <p>Secondly, Seattle doesn't have many museums, and, out of the museums that do exist in Seattle, only the Museum of History and Industry even acknowledges the railroads that built Seattle. I went to this museum as a young child once, excited to see what exhibits they had on railroads, and I spent most, if not, all, of my time there looking for what cool railroad exhibits they had. In the end, I discovered that the only acknowledgement of the railroad was with the Engines of Industry segment of the Seattle Journey. This segment included mere models of railroad equipment, a logo of the Great Northern Railway, who actually built the Interbay Roundhouse originally, and a display of original rail spikes used in the construction of the railroad into Seattle. Seattle needs to do better, and a perfect way to do better would be to preserve the historic Interbay Roundhouse. It would be a great museum for Seattle because it has very historical roots, being built in 1929 for the Great Northern Railway, who built the first transcontinental line into Seattle, it has ample space to be a world-class railroad museum, and can perfectly showcase the past, present, and future of Seattle railroading, especially with the construction of a nearby Link Light Rail station. It would not disappoint other young railfans, who, just like me when I went to the MOHAI in search of railroad history.</p> <p>Lastly, this entire letter may seem to some to simply be just the ramblings of a clingy railfan, but, I assure you, it is very much not. Truly, the preservation of Interbay Roundhouse is a golden opportunity for Seattle to remember what first allowed it to live. Seattle is forgetting its railroad history, and no one seems to be trying to stop that. Interbay Roundhouse can put a stop to Seattle's forgetfulness. Would you rather tear down the roundhouse and then hear the complaints of people in the future wondering why someone would even dare think about reducing such a historical piece of Seattle's history to scrap. One could argue</p>	Jayden Yu

	<p>that Seattle doesn't need to preserve its own railroad history because Portland, Vancouver, and other towns with heritage railroads are already doing it, but they are only looking at surface level information. Each of these places is preserving their own town's history, but Seattle, for once, is an outlier. Seattle doesn't preserve railroads, and that is a major mistake that requires correction. To show how Seattle is condemning its railroad history to the past and forgetting it, look at how quickly Amtrak Cascades is modernizing its equipment and forgetting what it started with. Now, there is no problem with the first part of that statement, but forgetting where it started is a huge problem. Already, most of the iconic Cascades Talgo 6 train sets have been sent off to scrap following the aftermath of the deadly 2017 DuPont accident, which I need not recap, but three cars remain. These cars need to be preserved before they get scrapped, as they were formerly part of the train set involved in the DuPont accident, and still have that iconic look of Amtrak Cascades history, even after sitting in exposed storage for years.</p> <p>The Interbay Link Light Rail station needs a good tourist attraction, and, in the bigger picture, Seattle needs a good railroad museum. Preserving the Interbay Roundhouse would solve both of these major problems. Please do not just put this off as a clingy railfan trying to be heard, and, more importantly, Seattle, do not let yourself down by forgetting your past for the future.</p>	
04/09/2022	<p>Please embrace a shallow 4th Ave alternative to the new ID tunnel as outlined in this excellent Urbanist article (https://www.theurbanist.org/2018/04/16/better-transit-hub-people-union-station-see-trains/).</p> <p>I've recently been to a few cities that have transit systems integrated with restored train stations (Denver, Boston, Philadelphia, Baltimore, Washington D.C.). This alternative would minimize impacts on the ID neighborhood and community while maximizing the use of a significant public amenity that is currently benefiting Sound Transit employees and a handful of homeless people looking for a warm and dry place to spend the day.</p>	Curtis DeGasperi
04/09/2022	<p>I prefer the OTHER DRAFT EIS ALTERNATIVE route as it does not destroy the small businesses along Elliott Avenue. This route also better served the Ballard neighborhood by placing the Ballard station at 15th and Market where there's existing transit connections.</p>	Sarah Sugarman
04/09/2022	<p>I like the preferred routes in West Seattle, with terminus at Alaska St. instead of Fauntleroy which can be served by Avalon. Also, the best stop for me personally would be directly above Delridge, making it North-South oriented or able to get oriented that direction. I am in Highland Park near Westwood and White Center and am very excited to see expansions there too!</p>	Mary Spielmann
04/10/2022	<p>Regarding the crossing of the water to Ballard, I would highly favor tunneling. The cost seems on a par with the other possibilities, and the impact to the environment is less, ultimately. In any case a 136-foot high bridge would add to an already poor visual landscape in the area.</p>	Daniel Piraino

04/10/2022	<p>Hello,</p> <p>I live right behind the LA Fitness on Fauntleroy way. We bought our house in 2021 expecting to live in West Seattle for many years. We even renovated our house. Hearing about the possibility of being forced to move because of the light rail route is very frustrating. We probably won't find a better location elsewhere than where we are now. Please don't consider the route that goes above LA Fitness we don't want to lose our house. Thank you</p>	Jeanne Gabrielle Burdeti
04/10/2022	<p>I'm a resident of Ballard living at 7048 Dibble Ave NW. I work downtown and I currently commute by bus (28 and D). All conclusions in the EIS point to the fact that a tunnel is the least negatively impactful option to all areas studied: environmentally, historically, and socially (jobs, businesses, homes). And very importantly to Tribal treaty rights. The primary, and potentially only, downside of the tunnel option is financial. Given all the various detrimental impacts funding is a poor reason to rule out the tunnel option. I support a tunnel option only with a station on 15th. The visual impact of 136' tall bridge spanning Salmon Bay will NEVER be mitigated. It's insulting to the community to even suggest that a piece of infrastructure this tall and of such utilitarian design, as we've seen in other areas of the city, will ever blend into the landscape. An overhead structure running through the heart of Ballard's transportation corridor on 15th Ave will ruin the human scale experience at the ground level. The city just tore down the Viaduct for some of these very reasons, so why are we immediately looking to build another behemoth piece of infrastructure. 14th Ave is not a primary transportation corridor, it's a back road to avoid traffic on 15th. It dead ends at Ballard High School, in a residential neighborhood, eliminating any potential to continue light rail north unless it turns onto 15th or goes underground. With these limitations 14th Ave is a poor location for a station. More importantly 15th is the main transportation corridor, so transit should be consolidated within this area not split amongst blocks, forcing riders to walk a block to access each type of transit. Focus all transit and transit related infrastructure on 15th where businesses and transportation currently exist. I do not support any of the options other than a tunnel.</p>	Jennifer Montessoro
04/10/2022	<p>Please prioritize avoiding displacement of businesses and housing -- displacement has recurred throughout the CID history to negatively impacted the community. Also, please be mindful of designing the structure in a way that does not encourage crime and is safe for passengers.</p>	John Bui
04/10/2022	<p>I am commenting on the Interbay/Ballard Segment and want to go on record that I do not support the 14th Ave options due to cost and environmental impact. I prefer the 15th Ave option because of the proximity to Ballard's business core and more optimized transit connectivity, which I support regardless if costs for a 15th Ave option becomes higher than 14th.</p>	Emily King
04/10/2022	<p>I live at 5th and Madison, which is going to be impacted by the Midtown station. I'm really excited to see this project so close to me, however I have some concerns:</p> <p>The timeline is far too long. 2039? This needs to be built much faster to enable Seattle to scale to meet demand. Other countries can do this</p> <p>The proposed construction plans for the Midtown station involve possibly multiple multi month to year long closures of the streets around my building. Such that I couldn't really get in and out of my garage. This would excessively impact my ability to live here</p> <p>This area of the city has limited street level businesses an important part about making a neighborhood walkable. Losing Bartells would further impact this. Is there enough space to maintain a hybrid station entrance+retail?</p>	Adam Jacques

04/06/2022	<p>Sound Transit Board Members:</p> <p>I am a concerned citizen of Seattle and property owner in Chinatown. I am responding to the placement of the transit station that is proposed in the Chinatown International District by the Sound Transit's West Seattle to Ballard segment. I strongly support the 4th Avenue Option 1a. This option would minimize the disruption to the Chinese community for the lifetime of the new station. Transit riders would be able to exit the tunnel west of Chinatown and therefore make less congestion in a community that has already been severely impacted over the years with public projects. Though new housing has been proposed in the other options around the new Chinatown station, the disruption to the community with the congestion of people using the tunnel would not offset the value of having additional new housing in the community. The present station on the periphery of the community causes enough congestion without an additional station being built to the east of the present one.</p> <p>Diane King 206 254 1637</p>	Diane King
04/11/2022	<p>Thank you for putting together such thorough documentation for the public to review and comment on. I am really excited for the West Seattle project to take place, but really for all of it to happen. My biggest concern is about the impact on neighborhoods where people live and to do whatever possible to have minimal impact in those areas. What I mean there is if you can tunnel under them, rather than destroy them by plowing through them, please opt for that. You've done a good job of picking already existing corridors where neighborhoods are currently divided in many cases. But the Delridge overpass area makes me wonder, why are you creating a new barrier. Travel anywhere in the world where there is light rail or rail above grade, neighborhood decay begins. Want to fast-forward into the future to see what will eventually happen here to living neighborhoods where rail goes in above grade? Visit London, Paris, D.C., New York. These areas often are rundown, low rent, high-crime areas people avoid. It is inevitable. We actually have examples of splitting living neighborhoods right here in Seattle... Aurora Avenue, I-5, 520 in the Montlake area, just to name a few. Growth will happen, mass transit should happen, but it should happen thoughtfully, so, anywhere where tunneling is an option to save a neighborhood, please do. I was born here and lived here most of my life. I love this city. But it is getting harder and harder to do so because of little care for this city's history and poor decision making, especially around transportation (look to Portland to see great examples of care for both history and installing light rail - with Fed \$\$ Seattle was supposed to have received, right?). This isn't a new problem, we had a great light rail system already in place once. Again, I'm glad this is happening, I just plead with you to do it with some thought for the future. Sincerely, Tom</p>	Tom Butterworth
04/11/2022	<p>I am very much in favor of light rail, but it must not be built in a way that destroys neighborhood's and people's homes. I have lived in the heart of Seattle since 1982. First in the First Hill neighborhood, then Eastlake, and now in West Seattle. Each neighborhood has a unique feel that makes Seattle so vibrant and livable. West Seattle has always been a diverse economic neighborhood that feels like a small town in the middle of a large city. An elevated track would destroy West Seattle. Furthermore, West Seattle does not need 3 stations, rather the proposed Alaska Junction station would be better served by a gondola. The gondola would save money, carry more people and preserve the neighborhood richness of the Junction. Please do NOT put an elevated track at Alaska and 41st or 42nd. Thank you.</p>	Catherine Roth

04/11/2022	<p>According to the Draft EIS, King County Parcel 7666704005 -- 2414 SW Andover St -- is identified as a likely acquisition for each of the eight alternatives (Appendix L4.1, Table L4.1-3). DEL-5 and DEL-6 would place a station directly within what is currently Frye Commerce Center (FCC).</p> <p>FCC is owned by the Frye Art Museum, which uses the revenue generated from rents to fund the museum and keep it free and accessible. FCC is also home to Alki Beach Academy (ABA), which currently serves nearly 130 children and plans to expand in the near future to serve around 300 children. This would make it the largest child care center in the city. Yet, despite comments made throughout the Racial Equity Toolkit report about equitable development and the need for assets like child care in communities of color, Sound Transit fails to acknowledge ABA's presence in Delridge (Appendix L4.4, Table L4.4-1). The programs that are identified (Blazing Trails and Bright Horizons) are not on potentially affected parcels for ANY of the alternatives. Bright Horizons is listed at the wrong address, and it's actual address is not impacted. Blazing Trails isn't even anywhere near the project sight.</p> <p>After ABA's planned expansion, they will make up 1 in 5 licensed child care slots in 98106 (the most racially diverse and lowest income zip code in West Seattle). Relocating this program would have tremendously negative impacts on the availability of child care for the Delridge area. Because they are the only program that may be displaced, this is the definition of disproportionate impact on communities in which Sound Transit is supposed to be promoting equity.</p> <p>DO NOT DISPLACE ALKI BEACH ACADEMY!</p>	Jordan Crawley
04/11/2022	<p>Hello, I am a West Seattle resident who lives a few blocks south of the junction. I would broadly like to suggest that the West Seattle light rail should be underground as much as it is possible, I support all tunnel options, especially WSJ-3a. If tunnels are more expensive, then so be it, avoiding the visual impacts of an elevated rail line running through West Seattle are worth it. If however an above ground line is all that Sound Transit will do, then I would suggest that the Elevated Fauntleroy Way Station (WSJ-2) is the best option. Fauntleroy would allow the train line to easily be extended southward if ST4 ever comes around, and no other alternative would seem to offer that. Fauntleroy is also a large street that can handle transit and development. My opinion based on conversations with neighbors and fellow west seattleites is that the more this thing can be tunneled the better. My discussions have also touched on one other important point, with this train line coming 10+ years from now it will likely have wildly different ridership numbers than are modeled based on the advent of self driving car technology, we all wonder how emerging technology factors into the decision making. Whoever decided that the preferred alternatives should all be elevated tracks clearly doesn't talk to the same neighbors I do, because everyone I have talked to says tunnel or bust. Put this train underground wherever possible, it will be worth it.</p>	andrew sullivan
04/11/2022	<p>I really like the consolidated Interbay and Smith cove station concept and puts the station in a better location both for future development at the Armory and for access to West Queen Anne.</p>	Denis Ogun
04/12/2022	<p>Removing the Avalon station is not a good idea. We have several new buildings coming up with 0 parking. This is means a 15min+ walk over to a station making it unrealistic.</p> <p>Not including a station even, a small one in Avalon is a terrible idea.</p>	Fransico Alejandro

04/12/2022	<p>Thank you for your extensive work on this! It's a huge undertaking and ST should be applauded for the work you've done to shape this transformational project.</p> <p>My comments are directly related to maintaining EQUITABLE outcomes for marginalized communities within the project alignment:</p> <p>(1) Please do NOT remove the Avalon Station! This station is CRITICAL for bus transfers and connectivity to the regional transit network from High Point and the larger diverse/underserved populations that are further south than the WS junction area. Removing this station strongly reduces equitable outcomes for these populations. I believe that the low projected ridership numbers don't accurately reflect this important connection, nor the massive amounts of development that is occurring and planned for this immediate watershed for this station. This is a critical station and must be kept.</p> <p>(2) The Equity concern for Delridge is NOT displacement in the station area, but ensuring that the BRT bus transfers with this station are top notch and seamless, as this is a critical connection to the marginalized populations that are further from the station area in Delridge and connecting to South Seattle College. This integration must be the top Equity-centered priority of this station citing and design.</p> <p>(3) CID Station: the Deep station alternatives should be removed altogether as they are very poorly integrated with the urban environment and the transfers from the existing modes of transit. I encourage ST and the City to boost their partnership to seek a 4th ave alternative that can be implemented along with the 4th Ave Viaduct replacement, but if a 5th ave option is required, ST and the City MUST partner to not only reduce displacement of cultural institutions, housing, and businesses, but also to ensure that there is a robust plan in place to replace these cultural, housing and business uses with opportunities for marginalized community opportunities for housing, business and economic opportunity, and community services. The Culture of the CID must be held and supported by both agencies proactively to not only preserve it, but to help amplify and increase it's reach in tandem with the new infrastructure improvements.</p>	Justin Clark
04/12/2022	<p>Dear Seattle City council,</p> <p>I hope you would consider moving the new light rail from 5th street to 4th street. This would help alleviate business activities stress on the already struggling post pandemic International District. As a responsible Asian-American citizen, please help preserve the historic districts of the small part of the only thing left within the Asian Community (Chinatown, Japantown, Little Saigon, etc..) As we know, historically Chinatown has been relocated 3 times due to racism and segregation, we hope that a light Rail would not permanently displace the people living in the already crowded Seattle area. Please reconsider some of these displeasure cry for help that only so many of the Seattleites could vocalize as many of them do not have the energy, knowledge, and privilege to to take action. I plead for past, present, and future generations for you to make this sound decisions so you yourself can sleep at night.</p> <p>Sincerely, Jacky Chen</p> <p>(P.S. This I wrote this email before, thanks for reading this again.)</p>	Jacky Chen

04/12/2022	<p>I am writing to all of you because of a major project that Sound Transit is planning that will harm the Seattle Chinatown International District.</p> <p>Construction on 5th Avenue in Chinatown to Japantown means:</p> <ul style="list-style-type: none"> · Full closure of King Street, S. Weller and 5th Avenue for several years · Re-routing cars, buses, to 6th, Maynard, 7th, 8th, 10th & 12th · Gas, water, electrical shut offs to businesses, nonprofits and residents · Traffic detours throughout Chinatown, Japantown, Little Saigon · Daily dump trucks, cement trucks, cranes, supply trucks, delivery vehicles · Construction workers taking parking from businesses · Increased noise & air pollution, dust, dirt, vibrations · Taking property from owners of color for demolition and resale after construction · Endangering lives of 1,200 elderly by blocking access/egress for emergency vehicles with street/sidewalk closures and detours · Permanent changes to National Register Seattle Chinatown Historic District—loss of 3 blocks in addition to prior loss of 3 blocks for Transit Tunnel <p>Severe disruptions to:</p> <ul style="list-style-type: none"> · 300 businesses already battered by the pandemic, higher than ever anti-Asian hate crimes, criminal violence · 30 immigrant businesses permanently closed or forced to move · Schools, daycares, programs serving thousands of children and youth · Programs, classes, recreation for 1,200 elderly non-English speakers <p>I immigrated to Seattle with my mother and father in the late 90s, and Chinatown was the one place where we felt comfortable being ourselves and we felt a sense of belonging seeing others who looked like us and shared similar cultures. I have seen the many changes over the years, specifically to Chinatown whether it was businesses closing and new ones opening up or new complexes being built, buildings that have burned down, and new ones being built in their place that do nothing for the people who live in the community. I am heartbroken that while the city wants to continue to build more transportation access, it is harming the community that was there many many years before the light rail was built, and now another station is potentially being built. I am asking you to consider moving this project to 4th because of how it will affect the members of Chinatown, the businesses, the people, and especially the elderly who call this place home.</p>	Eva Chuc
04/12/2022	<p>Are there any planning tools available to expedite this expansion to Link? 2039 is 17 years away when the system needs more lines to serve more communities not adjacent to the I-5 corridor. Are there plans to expand this line to Greenwood, then connect at Northgate for transfers, then Bitter Lake, then Westminster Triangle, then Aurora Village, then Lynwood, then Paine Field? What would also alleviate traffic is to have a line east and west of the main I-5 corridor. Many people who take I-5 will take turns east or west to reach their destinations so why not build lines to serve those destinations off our main highway.</p>	Tom Lawler

04/12/2022	<p>I grew up in Seattle. Prior to 2020 and the switch to work from home, I was an avid transit rider. I did not own a car, and my primary means of moving about the city for work or for pleasure were Metro buses and the Link light rail. When I travel to other parts of the world, I prefer to use public transit to get around. I care deeply about transit issues. I've been reading the Seattle Transit Blog for years, and I follow national discussions through outlets such as Alon Levy's Pedestrian Observations and Jarrett Walker's Human Transit. When deciding whom to vote for in local elections, both primary and general, transportation ranks among my three or four most important issues.</p> <p>Having said all that, the proposed plan for ST3's West Seattle to Ballard Link Extension is one of the worst designs I've ever studied for urban rapid transit. The stations are poorly sited and poorly designed; they do not serve the primary purpose of a transit system: making it quick and convenient for riders to get from their point of origin to their desired destination. The choice to prioritize West Seattle is, itself, highly suspect. West Seattle is a relatively low-density peninsula with no major employers. It must be reached by crossing SODO and the maritime facilities that surround Harbor Island and the Duwamish Waterway--areas where vanishingly few people live or work. The low ridership potential for this segment and the geographical constraints that will limit future extensions do not warrant making it a priority for light rail expansion.</p> <p>As for the rest of the line, the new stations downtown and in South Lake Union are way too deep. By adding additional minutes to any trip or transfer that uses these stations (by increasing the reliance on vertical conveyances for which ST has a checkered history) you reduce potential ridership. For short trips, folks will walk or hop on a bus. For longer trips, folks will drive. By making light rail less convenient than the alternatives, you ensure that potential riders will opt for other modes. You will not attract enough riders to cover your operations budget, let alone justify the huge capital expense of building the expansion. These stations should be built no deeper than the 95 feet of the UW station. If that is not possible, the WSBLE should be scrapped and voters should be given a different option for use of their public transportation dollars.</p> <p>Moreover, many of the proposed stations are poorly situated to serve the neighborhoods they claim to. Most egregious are the Ballard and South Lake Union stations. The heart of Ballard is between 20th and 22nd Ave NW. The vast majority of new housing has been built west of 15th. Why then, is the proposed location of the Ballard station on 14th where it will be far from the most desired destinations and separated by the major thoroughway that is 15th Ave NW? Again, when you add unnecessary minutes to a journey, people will opt for other modes.</p> <p>The heart of South Lake Union is along Westlake Ave N. The proposed station locations near Aurora barely even qualify as SLU. They are located in an area that is extremely hostile to pedestrians, with fast moving cars travelling along Mercer or entering/exiting SR 99. The walkshed is terrible. It almost seems like this station is being designed primarily as a bus intercept, but this makes little sense. Bus riders travelling south to downtown will stay on the bus rather than transfer to the Link. Riders travelling to UW would have transferred to the 44 if they were coming from the north and they would already have transferred to light rail downtown if they were coming from the south. The SLU station should be sited such that it is maximally convenient for the residents and workers of SLU access it on foot.</p> <p>I supported ST3, hoping that the service expansions inside the Seattle core would justify the highly suspect decision to extend light rail as far north as Everett and as far south as Tacoma (these locations should be served by regional rail service akin to the Sounder, not a 60-mile light rail line). If I had known that the proposals for WSBLE would be so shoddy, I would not have supported ST3, and I'd have sought to find new leadership for our regional transportation agencies. If this plan cannot be substantially redesigned to promote the interests of riders, I would prefer that no extension be built, and I would vote for any ballot measure that scrapped the projects. We are building a transportation system that will serve our city and this region for the next hundred years. Please do better.</p>	Winslow Johnson
------------	---	-----------------

<p>04/12/2022</p>	<p>As an architect practicing here in Seattle my primary concern is how mass transit facilitates the development of a dense urban fabric. The proposed additions should support a broad range of uses for living & working in the city. As a resident of Seattle, my current home would be most affected by the Interbay segment of the project; whereas my current office in the South Lake Union would be most affected by the SLU/Seattle Center segments. If existing today, I could easily walk from home to station to work & back. Professionally, my work would benefit indirectly (but acutely) from the increased demand for more housing density & work opportunities created by the addition of new stations along the Ballard/West Seattle lines, AKA Transit Oriented Development (TOD). TOD should be viewed as a key part of the proposed lines; surplus lands needed for construction rise in value over time and can be sold off at a premium due to their adjacency to stations; or conversely lands may be transferred at little or no cost to public or private agencies involved creating high-density affordable housing & job opportunities near stations. An example of these benefits can be currently seen in action in Shoreline, which reevaluated their zoning code to facilitate much higher density and a broader range of uses adjacent to the stations than previously allowed.</p> <p>I'm providing commentary because I am concerned about the lack of usability & access to many of the stations along the Ballard line and their ability to benefit TOD. The EIS & Station Planning Progress Report dated January 2022 provided significantly more information than has been previously available, and thus more information to critique. I am organizing my comments starting with the Ballard station & working back south along the line to Westlake.</p> <p>I want to first echo the Ballard/Interbay Working Group's commentary, who was generally supportive of 15th Ave station option IBB-2b. This option has less street impacts/road closures; is closer to the existing dense development walkshed of downtown Ballard & is closer to existing transit options to feed system. The tunnel option is a no-brainer – don't sacrifice water-dependent industry for transit if alternatives exist; maritime uses are a key part of Seattle's industrial lands.</p> <p>The Interbay station proposal offers no good alternatives. Current preferred stations along Thorndyke Ave are in a dead-end corner of land that offers no transit, no walkable spaces, and horrible TOD potential. The elevated alternatives IBB-1b, IBB-3 at 15th & Dravus are forced into an over-water bridge, which is not ideal. I can't imagine the Thorndyke station alternatives offer the same ridership potential as a station at 15th Ave, even though they are lumped into the same data set. For \$1.6B we all deserve a set of better options for this station. The layout of 15th Avenue underpass at Dravus Street offers two 3-lane roads, 3 planted medians and separated on/off ramps. The right-of-way is probably 250 feet wide at this junction, it is trenched into the earth and offers no direct access to adjacent parcels. My question is: why no alternative was made available to rebuild this intersection/overpass with a station below? Previous development documents and the Station Planning Progress Report all note the difficulty of creating pedestrian/bike connections along the Dravus Street bridge and the need for extensive signalization and roadwork upgrades at this intersection to make any of the station alternates viable. Cross-town transit lines currently use this intersection to connect Magnolia & the U-district, and the Dravus Street bridge is far easier to access from west Queen Anne than the Thorndyke alternatives, essentially doubling the realistic walkshed for this station. The tunnel option to the north could be accommodated since 15th Ave is already located in a trench at this location, offering easier access to tunnel staging operations and a much more gradual slope to get under the Ship Canal to go to Ballard. Parcels to the south include a Christmas Tree lot, a U-haul storage yard, and a landscaped entry to a golf course – vastly underutilized urban lands (even if over landfill) that could readily accommodate the transition to any of the alternatives for the Smith Cove station.</p> <p>Moving on to concerns about the Seattle Center station: I want to reiterate the concerns brought up by KEXP/Vera project in their open letter. The station will be an extreme detriment to those two organizations that just went through a prolonged construction project at the Arena. They are vital community partners that should be supported through this project. From an urban design standpoint the preferred station location doesn't make a lot of sense: it is located on a 2-lane residential street, away from transit connections, blocking the main entrance plaza to a large new apartment building. Alternative DT-2 places the station at Mercer Street, essentially right at the heart of Lower Queen Anne/Uptown. Surprisingly there are open lots for staging at this location. TOD potential is far greater, as single-story commercial buildings removed for transit construction can be re-developed with substantially more dense housing/commercial uses. Such redevelopment would not be possible in the Center. The DT-2 alternate is only one block more from Climate Pledge Arena than the preferred option, which is consistent with the current offering of transit from that location.</p> <p>The station at Mercer Street & SR 99 (DT2) has the potential for a larger TOD and the study to add an entrance at the far east near Dexter Ave would support the many new developments along that corridor. Further exploration should be undertaken to try and lid over more of Mercer Street or create a viable pedestrian/bike connection north/south. Currently, no such connection exists that doesn't require an extensive wait at a busy intersection along Mercer Street. A well-designed north/south connection over Mercer Street could support future TOD on either side of the road. A good example of this would be the University District Gateway Bridge in Spokane, which connects the WSU campus to EWU campus across the BNSF railroad tracks. The blocks at Taylor Ave & 6th Ave between Mercer & Roy Streets should also be up-zoned to allow more height/density similar to the lots further south along 7th Ave. to encourage more TOD</p>	<p>Peter Tallar</p>
-------------------	---	---------------------

	<p>development. Lastly the preferred station at Westlake & Denny is the clear choice. Locating the station uphill to the east per alternative DT-2 greatly restricts both accessibility and a clear connection to the rest of the neighborhood. The potential high-rise project at Blanchard & 8th should be made to incorporate the station entrances called for in the design.</p> <p>I hope my comments provide a perspective that maybe hasn't been considered yet in the planning of the project. Transit shouldn't be viewed simply as a means of moving people from A to B; it has the potential to transform entire neighborhoods because of the intimate connections it creates to other parts of the city and region. The Ballard line will be extremely expensive and therefore in making our choices about the design we should put significant weight on the potential for high-density uses adjacent and on top of the stations and how those stations will inhabit the neighborhoods they are placed in.</p>	
04/12/2022	<p>Magnolia / interbay area is one of the hardest areas to reach by transit at the moment, with only one bud going east and one going south. Interbay stop would be preferred, with stops in SLU and Chinatown. Thanks!</p>	Mahsa Borhani
04/13/2022	<ol style="list-style-type: none"> 1. Do not eliminate any stations. 2. Work to make stations as shallow as possible. 3. Improve transfer times wherever possible. 4. Ensure escalators and elevators are (1) fast and (2) have enough redundancy to handle game day rushes and not fail riders in the event of failure. 5. Use fast surface-to-platform elevators (no mezzanines) when stations are more than 100 feet deep and align station design so that it's possible. 6. Plan to build for future expansion in Seattle. <p>Unfortunately, Sound Transit is acting like it's planning a bus line, not the system that will be in place for 200+ years. When was the last time a subway line in New York had an infill station added or its alignment improved? Your decisions now will make a good system or a shoddy one, and cutting stations, burying them so deep that it takes 5+ minutes to even reach the platform, and cutting stations out of downtown, dense neighborhoods means we will have a system that does nothing to help Seattle and the region that has voted for ST3. We need better and strong leadership - if this cannot be done correctly now, it's time to pause the entire project and go back to the drawing board - not ram through a half-baked project.</p>	Matthew Trecha
04/13/2022	<p>If we're looking to cut costs, why not elevate the track and stations in Ballard too. If elevated is good enough for West Seattle, it's good enough for Ballard.</p>	Adam Pimley

04/13/2022	<p>I agree with the advice of Seattle Subway:</p> <p>Do not eliminate any stations. Work to make stations as shallow as possible. Improve transfer times wherever possible. Ensure escalators and elevators are (1) fast and (2) have enough redundancy to handle game day rushes and not fail riders in the event of failure. Use fast surface-to-platform elevators (no mezzanines) when stations are more than 100 feet deep and align station design so that it's possible. Plan to build for future expansion in Seattle.</p>	Andrew Hu
04/13/2022	<p>To whom it may concern,</p> <p>As a new member of the West Seattle/Youngstown community I am extremely invested in the outcome of this project. The potential benefits are clear, however some concerns should also be taken into account.</p> <p>As stewards of the environment we have a responsibility to protect the natural resources and habitats around us. Sound Transit should prefer alternatives that do the least amount of damage to the environment. The north Duwamish crossing would create the least amount environmental disruption while also avoiding the critical pigeon point area. Businesses would be temporarily disrupted during construction but would quickly evolve and find solutions. Contrastingly, the environmental impact on the habitat and ecology would be permanent. The consequences of the light rail on the habitats should be studied in more depth to ensure that it isn't out of compliance with federal and state laws protecting the environment.</p> <p>Secondly, residential displacements should be minimized. Many new developments are taking place within the current preferred route. This only adds to the importance of the light rail. The north Avalon route (Del-6) would displace the least amount of residents and businesses. Currently the DEIS does not disclose the demographics of the residential displacements. This socioeconomic and racial demographics should be studied in order to choose a route that does not displace primarily minority and low-income people or infringe upon any of the housing laws. This is consistent with the goals of Sound Transit and equity within the community.</p> <p>Thank you for reviewing my comment,</p> <p>Nicholas Gomez</p>	Nicholas Gomez

04/13/2022	<p>The north crossing alternative over the Duwamish waterway (DUW-2) is preferable because there will no loss of residential housing and minimal impact on employees with that option (EIS-ES-12).</p> <p>For the Delridge segment, the DEL-2a option best serves the community. This option is compatible with the tunnel alternatives for the West Seattle Junction segment. The cost of this option is \$200-300 M less than an elevated track. This cost savings can be used to finance the tunnel options. DEL-2a also has minimal impact on residential displacement compared to the other alternatives (EIS-ES-18).</p> <p>The West Seattle Junction segment must be a tunnel, preferably alternative WSJ-3a. The cost difference between the elevated track and a tunnel is not that much (EIS-ES-23). Cost cannot be the deciding factor in this complex issue. The negative impact of an elevated track far outweighs any perceived benefits. The West Seattle Junction and surrounding neighborhoods are a designated Urban Village. The EIS (ES-2) correctly states that "...these areas will continue to increase in residential and/or employment density over the next 30 years." (EIS-ES-2). An elevated track will defeat the gains made by this long-term urban planning by the City of Seattle, whereas a tunnel will enhance it. The Urban Village has higher density housing, including lower income housing. The EIS (ES-3) states that one of the fundamental purposes of the project is to integrate "...in a manner that is consistent with local land use plans and policies.." A tunnel best supports the Urban Village by not destroying homes, neighborhoods and businesses. Another stated purpose is to "Encourage convenient and safe non-motorized access to stations, such as bicycle and pedestrian connections..." (ES-3). The neighborhoods of 41st and 42nd Avenue SW are a Seattle Neighborhood Greenway, which provides a safe connection between neighborhoods and the Junction for bikes and pedestrians. An elevated track will destroy this and defeat a basic principle of the Light Rail project, whereas a tunnel won't. An elevated track will only make traffic congestion worse by reducing surface road efficiency. The EIS states that "Roadway congestion in the project corridor will continue to degrade transit performance and reliability..." We need to retain as much of the surface streets as possible to address this issue. A tunnel has less impact on surface roads (EIS-ES-23).</p> <p>A tunnel for the Junction is far preferable to an elevated or surface track. The EIS clearly supports this position by providing data and analysis that a tunnel has minimal impact on residential, business, and employees, and has no visual impact and no operational noise compared to an elevated track (ES-23). A tunnel is the only viable option.</p>	Jim Klaniecki
04/13/2022	<p>Please choose one of the two tunnel alternatives for the Interbay to Ballard section. Given that the cost for tunnels are lower or on par to cost of the "preferred option", why take so many low and moderate income housing?</p> <p>I live in NW Queen Anne and our building will be taken. Our building is an exceedingly rare affordable condo building. The other buildings to be taken are all lower and moderate income rentals and condos. Taking these when there are reasonable alternatives is against the principals of our city where we are trying to preserve affordable housing.</p> <p>Please apply the same logic for all the remaining segments - "Preferred" should be to take as few units of housing even if it costs more, rather than simply the cheapest option which is what has been chosen in West Seattle, Interbay, Queen Anne, Ballard. Where will people go? Much more to support them in looking for housing which simply does not exist.</p>	Laura Finkelstein
04/13/2022	<p>As discussions have started about consolidating the Smith Cove and Interbay Stations, I wanted to speak in favor of preserving any station option in Interbay (generally near 15th and Dravus).</p> <p>I live in Magnolia and the Interbay station will be the system access point for all of my neighborhood as well as Queen Anne. A station near Dravus serves Magnolia (particularly they multifamily housing just across the bridge) much better than the proposed Smith-Dravus midpoint station. Please 1) Preserve this station location and 2) Ensure there is a proper transit connection between Magnolia and the Interbay Station. (E.g. neighborhood bus loop w/10 minute frequency)</p>	Jacob Tukul

04/13/2022	<p>I live at 3646 14th Ave W. There is potential that in alternative IBB-1b that my property be acquired. I am generally in support of public transportation and have no issue working with the government should my property need to be acquired.</p> <p>My concern is with Alternative IBB-1a, which the Draft Environmental Impact Report says that our property will not need to be acquired. To me, the construction line of both IBB-1b and 1a look the exact same where it would cut by our property. Constructing an elevated platform directly across from/above our property and not taking our property would undoubtedly decrease our property value. My partner and I recently purchased our first home here in 2021. We paid market value for our home. Should our property value decrease because of this project, Sound Transit would be harming a growing family--and our many neighbors who will be equally effected.</p> <p>I would like to strongly voice my support for finding the funding to tunnel or for option IBB-1b.</p>	Allison Dolzonek
04/13/2022	Please find funding for the tunnel option or IBB-1b I literally JUST bought my condo on 14th Ave W and it would really suck for me and my family to have to move especially in the current housing market. I also wouldn't appreciate my property value decreasing either because of a lightrail right over my roof. I beg you please.	Adrianna Pizzola
04/13/2022	A superior option would be to find the funding to build a tunnel so as not to displace current residents in the proposed areas. A tunnel would be the least obstructive option for both current residents' housing and the general aesthetic and flow of the city and should be strongly considered as a good faith effort to benefit the actual residents of this area. Of the proposed options, option IBB-1b is preferable compared to all other options.	Sarah Kittross
04/13/2022	<p>I don't believe any of the Ballard Line choices are acceptable. Sound Transit MUST reconsider:</p> <p>SLU Station: Place it on 8th/9th Ave N/ Dexter - basically IN South Lake Union. Right now, the proposed station is not in SLU and closer to the Seattle Center than SLU.</p> <p>Interbay: This opens up closer connections to Magnolia, which will likely never get rail service in our lifetime.</p> <p>"Ballard" This is the most horrendous. 15th and 14th Ave's DO NOT serve Ballard whatsoever. This would be repeating the mistake of building light rail on MLK and calling the stations Columbia City and Rainier Beach. The spirit of Ballard is centralized around Ballard Ave and areas between 22nd and 24th Ave. Future generations will look back at us and exclaim "what were they thinking?!"</p>	Reyes Ojeda

04/12/2022	<p>To Whom It May Concern:</p> <p>I wish to indicate a possible constraint on future system expansion if a 14th Ave. NW alignment and station location is selected based on the current preferred routes.</p> <p>Such an alignment may reduce current acquisition costs and impacts, but I would caution that any longer term expansion into Crown Hill and beyond should be considered.</p> <p>If the alignment continues along 14th it would impact both Ballard High School and Whittier Elementary School unless it remains in tunnel. Ensuring that the current 14th Avenue alignment could feasibly return to 15th for tunnel/surface/elevated options before NW 65th St. should be evaluated to avoid such impact on the schools and other community assets such Ballard Pool as expansions occur beyond the current extension.</p> <p>Thank you for the opportunity to comment. Feel free to contact me if you have any questions.</p> <p>Jeff Raker 206-708-0512</p>	Jeffrey Raker
04/13/2022	<p>I'm writing in support of the DT-1 alternative for Seattle Center. I love the locations of the two station entrances. I love the easy access to SIFF Uptown and the rest of the QA Uptown street. I also love the how the other station entrance provides direct access to Seattle Center. We need to address some of surrounding businesses have concerns, but this is by far the better option in the long term and I strongly support it!</p>	Jacob Tukel
04/13/2022	<p>Sound Transit must reopen study of the Ballard 20th/Thorndyke Tunnel Portal option. Ballard's biggest and most productive small business strongholds are along 24th and Ballard Avenues. This station is the only Ballard station in ST3 and is likely to be the furthest west Ballard station in the system forever – Sound Transit needs to get it right.</p> <p>Reject both presented options for South Lake Union. Instead, study a Westlake or similar alignment oriented north/south within SLU boundaries and as centered on South Lake Union as possible.</p>	JD Leahy
04/13/2022	<p>Disclaimer - I am on the Lake Forest Park city council, but am speaking for myself.</p> <p>When the Ballard - West Seattle line opens, the spine will be disconnected. In other words, transit riders from North King and South Snohomish counties traveling to SeaTac Airport, Tacoma, and Pierce county will need to transfer. It is absolutely critical that Sound Transit make this transfer as easy as possible, or else fewer riders will take Link and the environmental benefits of light rail will be less fully realized. Transfers are critical!</p> <p>SODO - it doesn't get as much attention as the tunnel stations, but SODO is an obvious transfer point between the 2 spines. It is on the surface as opposed to 2 different tunnels. ST MUST find a way to have a simple transfer at this station. The mixed profile (SODO-2) option appears to have the best transfers.</p> <p>International District - the deeper the station, the harder it will be to transfer between the 2 downtown Seattle tunnels. From a rider transfer perspective, the 4th and 5th Ave deep options should be non-starters. Of the 2 shallow options, 4th Ave (CID-1a) seems to have the most promise for transfers. Further it would have a lesser construction impact on residents/businesses of the International District. However transfers of over 4 minutes should not be considered acceptable. Sound Transit really needs to spend some effort improving the transfers for ALL of the International District options.</p> <p>Westlake - similar comments to International District. The 5th Ave option (DT-1) is the obvious choice, but its utility will heavily depend on how well it connects to the existing Westlake tunnel station.</p> <p>Thank you for your attention to this.</p>	Larry Goldman

04/14/2022	<p>Congratulations on publishing 6 million words that are inaccessible to all but the most educated with the most time on their hands.</p> <p>The location in Magnolia next to BNSF is totally idiotic. Beyond that, who cares?</p> <p>Equity?</p>	Bob Bobson
04/13/2022	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.</p>	Matthew Giles

- (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
- (5) West Seattle should be built for future southern expansion to White Center and Burien.

04/13/2022	<p>Manager DEIS Comments,</p> <p>Hi, I want the The Ballard-West Seattle Link Extension to prioritize the needs of daily riders like me. I am writing to submit my comments to Sound Transit’s Draft Environmental Statement</p> <p>Do not eliminate any stations from what I voted to approve with ST3 in 2016. The region’s projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region’s voters want and need.</p> <p>The utility of light rail is reduced when stations are too deep. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for people like me who make frequent sports trips. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties. Smooth transfers between the system’s growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard.</p> <p>In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible.</p> <p>At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower.</p> <p>At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.</p> <p>In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office’s facility.</p> <p>In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. 04/12/2022	<p>Hi,</p> <p>I've read the notes of 4 different models of the Chinatown/ID segments of the Ballard Link Extension (someone graciously gave me a paper copy of the executive summary) at an outreach event.</p> <p>Option CID-1a seems like the best option with least impact in terms of displacements. The only downside I'm concerned about are the residential displacements that would occur with the Seattle Club Eagle Village Pilot Modular housing shelter. My ask is that if you choose this option that you please provide the funds and resources (relocation \$\$ and support) to all the displaced residents and guarantee housing to them before construction starts.</p> <p>I would like Sound Transit to avoid Option CID-2a and CID-2b as much as possible because of business displacements in the Chinatown/ID historic-district. While I understand Option CID-1a and Option CID-1b would also be affected by construction disruption to their historic properties (Pioneer Square), I would prioritize protecting properties in Chinatown/ID over the ones in Pioneer Square because they are minority-owned. In terms of equity, option CID-1a and CID-1b are better choices.</p> <p>Last, I've heard some chatter from my fellow residents that they want to avoid Chinatown/ID segment entirely for the Ballard Link Extension and are pushing to have a station further south as an alternative. I don't agree with this, and overall want to increase transit access to Chinatown/ID neighborhood. I'm an ELL teacher with Seattle Public Schools and work in many different schools all over Seattle, from North, Central, South, and West. Rent and parking space in Seattle is really expensive and being able to live carless has made living affordable for me and many low-income residents in the neighborhood. Please keep Chinatown/ID a transportation hub of importance!</p> <p>Sincerely,</p> <p>Teresa Dang Chinatown/ID resident</p>	Teresa Dang

04/14/2022	<p>I agree with these recommendations from The Urbanist:</p> <p>First and foremost, design the system for transit riders and the optimal rider experience.</p> <ol style="list-style-type: none"> 2. Build the system to maximize ridership. 3. Design the system to be easy to expand. 4. Station locations should unlock transit-oriented development (TOD) opportunities to the highest extent possible. 5. Construction impacts are important but shouldn't solely determine a 100-year investment. 6. Cost is an important factor, but we shouldn't shy away from big investments where there is a high return. <p>https://www.theurbanist.org/2022/04/14/best-seattle-light-rail-alignments/</p>	Andrew Hu
04/14/2022	<p>Hope to have a station around Alaska junction or Morgan junction. It's taking too long to go to downtown Seattle by bus. Thanks! Grace</p>	Grace T.
04/14/2022	<p>The following are my comments for the West Seattle/Ballard EIS.</p> <p>SoDo Station: SODO-2. It will allow the SoDo busway to eventually reopen, which is worth the extra cost.</p> <p>Delridge Station: Either DEL-2a or DEL-6. I believe the two most important things at this station are proper connections to the new RapidRide H and station infrastructure that allows for a tunnel alignment.</p> <p>Avalon/Alaska Junction: WSJ-5. While I prefer a location on 42nd Avenue SW than 41st Avenue SW, the cheaper cost of WSJ-5, as well as its minimal disruption makes it the best option.</p> <p>International District/Chinatown: CID-1a. This option provides easy transfers between lines while not disrupting the Chinatown neighborhood (less impact to businesses and residences).</p> <p>Downtown Segment: DT-1. I believe a line on 5th Avenue and Harrison Street is best, with some caveats. Stations should be put as shallow as they feasibly can, especially at Westlake since it will be a major transfer point in the system. I also believe money should be allocated for the construction of a tunnel box to the west of the South Lake Union station, as a provision for expansion north in the future. I also believe noise abatement measures should be put in outside the SLU station, since it will be right near the entrance of the SR-99 tunnel, but I also understand that Sound Transit may have to work with other stakeholders for this.</p> <p>South Interbay Segment: SIB-1, since it provides the best access to Pier 91 and the current Expedia Campus, as well as being cheaper than the other alternatives.</p> <p>Interbay/Ballard: IBB-2b. This is because it provides walkable access to both the historic core west of 15th and the brewery district east of 15th. I also believe a tunnel alignment is best for future expansion north along 15th Avenue NW. If a station is to be built on the east side of 15th Avenue though (as shown in IBB-2b), either an underground connection or pedestrian bridge should be built in conjunction, as a way for pedestrians to avoid crossing 15th Avenue NW (a very busy arterial).</p> <p>Thank you for your time.</p>	Jamie Gruenberger

03/30/2022	<p>Okay. My name is Jared Thompson. I am a property owner here on 40th Avenue Southwest. We are generally supportive of the tunnel options. The elevated options seem to have very significant social impacts, but we're also concerned about potential noise and vibration from tunnels. We didn't see any information really in the EIS, but it's also a huge document. I'm wondering if Sound Transit can provide residents with more information on what kind of issues they could expect or if not at all on those, noise and vibration, with the completed tunnel. Thank you.</p>	Jared Thompson
03/30/2022	<p>Thank you. A budget gap due partially to the increased cost of real estate was mentioned. The construction of the SkyLink alternative will require a small fraction of real estate needs than the light rail will. In concert with this, a fraction of homes and businesses will be displaced with the gondola. This, coupled with the SkyLink being a fraction of the budget and schedule to the light rail, why isn't the gondola being more seriously considered as a solution to the goals of servicing West Seattle in lieu of the rail for this project? Thank you.</p>	Jeff Norris
03/30/2022	<p>Hi. Thank you. I'm Katherine Woolverton in Highland Park. I support commissioning an external independent comparison of the light rail versus gondola technology to the West Seattle line. My comments today focus on the environmental portion of that comparison. The EIS study did not estimate greenhouse gas emissions associated with the construction of 80-to-160-foot-high concrete and steel posts, guideways, and rail stations. A proper impact evaluation should use tools such as the Embodied Carbon in Construction Calculator and fully elucidate the environmental impact of each option so that an objective environmental comparison can take place. The study should include the impact of the destruction of the Northern Duwamish Greenbelt, including the loss of carbon-sequestering vegetation as well as noise and pollution buffering for Pigeon Point. It should compare projected reduced vehicle miles traveled and associated emissions reductions between both modes considering the projected 2026 implementation date of a gondola system versus light rail's 2032 date. Finally, the study should include considerations of environmental equity within the context of historical redlining. The currently proposed light rail route runs through historically redlined neighborhoods and would displace up to 600 homes and 100 businesses in an already overburdened community. West Seattle residents deserve multimodal transportation options that fit our unique topography and make the best use of our tax dollars. What works for Northgate may not work for us. We shouldn't be forced to accept an ill-fitting system. We deserve a full and objective consideration of a gondola system for the West Seattle line. Thank you.</p>	Katherine Woolverton
04/09/2022	<p>It would be helpful to have bus #s connections available at each light rail stop.</p>	
03/30/2022	<p>Good evening. Thanks for letting me speak. As many of you now, my interest is in the Youngstown-Delridge neighborhood. I've been an advocate for the Andover route because that preserves almost 100 percent of the housing in the Youngstown area, and then the route that would follow the car, your arterial right-of-way on Avalon. There are two aspects of this routing that Sound Transit highlights as negatives. One's the station location. The other is a Nucor truck access currently on Andover. I'd like to speak briefly to each of those. If Sound Transit would consider moving the Delridge station 600 feet to the west and onto Andover, that would be a more accessible location for pedestrians. There's vacate land for a transit hub and also vacant land on which a TOD could be built. And the other is the Nucor truck access. There was a meeting that I attended with King County Metro, City of Seattle, Sound Transit, and a representative, a high-level representative from Nucor. We walked the property boundaries and looked at relocating the truck access away from the station location, placing it on the northeast corner of their property where their trucks would access in and out of the property on the lower Spokane Street roadway. That's doable. It would take cooperation principally between the City of Seattle and Nucor to make that happen. In this climate, the thing that would preserve West Seattle the most is the gondola alternative, and I agree with those who are saying that it should be studied and included now, not later. Thank you.</p>	Dennis Noland

03/30/2022	<p>Cool. So I kind of have two comments. The first one is it seems really bad to build a train that, at least to me, seems like no one will be able to use for about five years. I think it would be a serious mistake to go only to SODO and not to at least Chinatown-International District. At least getting to the CID station would mean that getting to the Eastside only requires a single transfer instead of two, as well as getting to King Street Station only requires or doesn't require any transfers. So we could get to Interurban and bus service or Interurban train and bus service. It seems very silly to have this train that goes only to SODO when we already have the 50 line and the 21 that both serve that station. The 21 is about an eight-minute walk, but it's totally walkable. The 50 is far more convenient for anyone north of the Alaska Junction. The 21 is far more convenient for anyone south of probably 35th. I just think that's really -- that would really not be ideal to just have infrastructure that we're not using for five years. And then I wanted to say a lot of people are very much in favor of the gondola. I think that the gondola would be a massive mistake in accessibility for South King County as well as for people who don't want to ride gondolas. Thanks.</p>	Nicole Mazzuca
04/14/2022	<p>Successful transit systems benefit from accessibility to stations. They also benefit from intuitively locating stations. We see this throughout the world - where stations are located at natural hubs and main arterials. This makes them easy to find, easy to access, and easily able to link up with other modes of transport. I struggle to find this knowledge applied to the preferred routes of the Ballard link in this EIS.</p> <p>To begin, DT-1 routing on Harrison goes against this logic and will confuse non-locals, reduce accessibility, and eliminate the added benefit of having 2 stations west of aurora (a prohibitive boundary) that can serve Seattle Center during large events. We see this work well at Century Link Stadium, where both the ID station and the stadium station both serve major events there. Would be a shame to miss this opportunity here.</p> <p>Again, as the route transitions into Interbay, SIB-1 and SIB-3 similarly part from this transit logic. Some of the best reasons to locate the lines along major arterials is to allow for future station additions and linkability with bus routes. SIB-1 and SIB-3 run the lines far from an arterial and along a virtual 'no man's land' between rows of railways and a golf course. In other words, this isn't even close to a hub or arterial. SIB-2 on the other hand serves a major arterial, is close to the Dravus/15th hub, and serves more housing density.</p> <p>As the route continues on (IBB-1a, IBB-2a, and IBB-2b), it is a struggle to find much density anywhere close to the Interbay station location. IBB-1b and IBB-3, on the other hand, clearly are more accessible and have a superior connection to other transit options. Further, IBB-3 stands out because it is closer to the main Ballard hub and Old Ballard.</p> <p>Finally, there seems to be some interchangeability here, whereas some of this routing looks exclusive to the preferred or alternate routing. For example, 5th Ave looks exclusive to DT-1 or 6th Ave exclusive to DT-2, but these actually seem interchangeable. Indeed, the routes touch near Virginia and 7th. Couldn't the accessibility advantages of the 5th Ave route be combined with the accessibility advantages of the Mercer route? Would be great if it could.</p> <p>To conclude, Seattle imagines itself as a 21st-century city. We should produce a transit system that looks like it - not one full of compromises. Let's do this right and choose DT-2, SIB-2, and IBB-3.</p>	Robert Ernst

04/14/2022	<p>I regularly travel from West Seattle to the University of Washington by Rapid Ride and lite rail. I was looking forward to the day when I could go by lite rail the entire distance. Now that I have seen the plans that Sound Transit is considering for the Alaska Junction station, I now hope that lite rail never comes to West Seattle. That Sound Transit's preferred option is to build an elevated line through with West Seattle, with an above ground station in the heart of the Alaksa Junction, and terminating the line in a single family residential neighborhood on 42nd Street is beyond comprehension. Sound Transit was able to find funding to build the line and stations from downtown under Capitol Hill, under the University and the University District, and through the neighborhoods just north of the U District, so claiming that right now money is the problem in building underground through West Seattle seems like Sound Transit considers the commercial and residential districts of West Seattle to be disposable.</p> <p>I mentioned Sound Transit's plans for West Seattle to a group of seven friends this morning, all of whom live in Montlake and surrounding neighborhoods. They all agreed that Sound Transit will make its decision about West Seattle without giving much weight to community input. I hope that is not the case and that the underground option will be the one selected.</p>	Richard Miller
04/14/2022	<p>I am a Ballard homeowner.</p> <p>First, this system needs to be practical to commute. Right now, the depths of many of the proposed stations seems to add needless minutes to everyday waiting on long escalators, if they are even running successfully. Major downtowns stations with 2+minute escalator rides is collectively years of Seattlites lives being wasted.</p> <p>2nd, the SLU station proposal are barely, or is not in, SLU. Don't put it all the way over on Mercer. Bring it into Westlake, in the heart of all the SLU employers. Also, don't make it super deep, again. And no one wants to walk near 99.</p> <p>3rd, Ballard. I know you will get a ton of grief here, but I'd rather have a movable bridge than something the height of the 99 bridge. That will completely change the feeling of Ballard forever, and will also cause platform access issues as well being so tall.</p> <p>But, now that tunnels aren't that much more expensive than other options (thanks, land acquisition costs), you ruled out west of 15th options too soon. 17th would have low impact to acquire parcels near the hospital, and could serve both old Ballard as well as New. You are never going to expand the system westward, so don't start too far East.</p>	Nick Kiest

<p>04/14/2022</p>	<p>I have three main questions regarding ridership projections, the elevated rail in West Seattle between the Delridge and Avalon stations, and the concept of a seamless transfer.</p> <p>Firstly, the DEIS page ES-3 footnote states, "Puget Sound Regional Council's VISION 2050 anticipates population and employment in the Puget Sound region will continue to grow over the next 30 years. The current long-range growth forecasts from Puget Sound Regional Council inform elements of the Draft Environmental Impact Statement analyses, such as ridership forecasts, projected vehicle trips and non-motorized activities. Puget Sound Regional Council acknowledges that the current pandemic may have effects on the economy that could alter long-range forecasts. Puget Sound Regional Council's next regional forecast is expected no earlier than 2023. For the purposes of this Draft Environmental Impact Statement, Puget Sound Regional Council's current forecasts are applied to the analysis."</p> <p>The pandemic has severely changed both ridership projections and peak travel times. We do not yet know what the new normal is, nor is it appropriate to try to predict ridership and peak times until the effects of work-from-home and hybrid workplace models are more settled. At this point, it appears that Sound Transit is planning transit for the past instead of the future.</p> <p>Why continue to plan with pre-pandemic numbers, when a long-range forecast this is most likely not applicable?</p> <p>Secondly, the drawings in Appendix J, specifically drawing L50-GSP824 (page 39), show that the elevated light rail line from the Delridge Station to the Avalon Station will be approximately 150 feet above street level. The topography of West Seattle is particularly difficult with its hills, and an elevated line at that height would require an enormous amount of concrete and steel for construction and maintenance. These materials are becoming increasingly scarce and expensive, and as we have learned with the West Seattle Bridge repair, they may not always be readily available.</p> <p>2) Has an analysis been done regarding the actual cost of this elevated line, as well as estimated emissions impacts of construction? How does the cost of the construction of the 150-foot elevated line compare to alternate methods, such as a gondola? If this analysis has not been done, when will it be done?</p> <p>With both of these topics in mind, my main concern is that Sound Transit is pushing forward with a costly construction that may not align with ridership in a post-pandemic world.</p> <p>According to Appendix L4.1-2 to 1-39, is it worth the destruction of local businesses: Ounces at 3809 Delridge Way SW, Skylark Cafe at 3805 Delridge Way SW, the Frye Commerce Center at 2414 SW Andover St (which is what keeps admission to the Frye Museum free!), West Seattle Brewing Company at 4415 Fauntleroy Way SW, and many more businesses and homes that will be affected by all alternatives, if ridership cannot be accurately forecast at this point and costs have not been examined and compared to alternatives that use less concrete?</p> <p>Thirdly, the concept of a seamless transfer from light rail line to light rail line has been mentioned in many meetings with Sound Transit. However, the West Seattle extension would still require most riders to take a bus to one of the proposed stations at Delridge, Avalon, or Alaska Junction before boarding a train. That train would then only go to SoDO in 2032, requiring a transfer to a new train. From there, additional transfers would be required in downtown in 2037 and beyond, for which record-deep stations are being considered. Having to ride elevator-only access several stories to the shallower downtown stations is not the same as stepping across the platform to a new line. The idea of "seamless" appears to only mean train to train, and is not at all indicative of time-saving measures for riders.</p> <p>3) While I understand the investment in a singular mode of transit (light rail), why is Sound Transit not looking at alternatives that would allow for simpler transfers at existing stations? The phrase "seamless" is quite loosely defined in this situation, where transfers between extremely deep (135+ feet) stations that are accessible only by elevators will incur additional travel time. If transfers are already required to access light rail, why is Sound Transit not pursuing alternatives that could be built both more quickly and cheaper than the elevated lines in West Seattle?</p> <p>Thank you for your consideration.</p>	<p>Mariana Huben</p>
-------------------	--	----------------------

04/14/2022	<p>I have concerns that the 14th ave alignment in Ballard would have a negative impact to the residents of the area with the elimination of the Safeway, which has been vital grocery store to the area for a long time. Multifamily complexes are also in development in the area that are planned to not include parking for the units. Elimination of the Safeway would result in a greater distances for the residents of these complexes to have go to obtain groceries. Going with the 14th ave alignment would only give a short term benefit in terms of cost cutting but would overall have negative impacts to the community.</p>	Morgan Simon
04/14/2022	<p>I am writing in support of the Preferred Tunnel 41st Avenue Station (WSJ-3a) and Preferred Tunnel 42nd Avenue Station Option (WSJ-3b) options for the West Seattle Link Extension, based on Table ES-4 in the Draft EIS.</p> <p>By comparison, the elevated options are not suitable, given the drastically higher displacement of residences and businesses, and the high noise impact. The cost to obtain so many additional residential properties will continue to increase as property values rise.</p> <p>I would also be in favor of a gondola option.</p>	Brent Christian
04/15/2022	<p>I much prefer the 14th street subway station for Ballard. 14th has become a pedestrian friendly corridor and further investment will bolster the safety and community activations for the neighborhood. 15th ave should remain an efficient mode of moving vehicular traffic through the neighborhood.</p>	Andrew Tait
04/15/2022	<p>I support the feedback that's been laid out by the Urbanist and Seattle Subway (https://www.theurbanist.org/2022/04/14/best-seattle-light-rail-alignments/) to create the best system for long term needs.</p> <p>Junction: Medium Tunnel 41st Avenue Station: Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings.</p> <p>Avalon: Retained Cut: Prefer WSJ-5 with a request to study a refined DEL-6 pairing.</p> <p>Delridge: DEL-6, with caveats: Request a study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].</p> <p>SoDo: Mixed Profile Station: Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking.</p> <p>Chinatown-International District: 4th Avenue: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than four and a half minutes.</p> <p>Midtown: 5th Avenue, Less Deep: Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>Westlake: 5th Avenue, with better surface access and transfers: 5th Avenue Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access.</p> <p>Denny: DT-1 on Westlake Avenue: Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower.</p> <p>South Lake Union: Harrison or Central SLU: Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible. South Lake Union should have a station centered in it based on all the jobs in the area.</p> <p>Uptown / Seattle Center: Republican Street: Prefer Republican Street Station</p> <p>Smith Cove: Galer Street: Preferred Galer Street Station [SIB-1].</p> <p>Interbay: Retained Cut or Slimmed Down 15th Avenue Elevated: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3].</p>	Asad Syed

	<p>Ballard: Put a station entrance west of 15th Avenue: study pairing a high bridge with an elevated 15th Avenue Station and to continue to refine all tunnel options to put a station entrance west of 15th Avenue. Jettison the moveable bridge. Open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>Lastly, consider adding in in spur tracks at SLU to allow an additional spur to be build in the future per Seattle Subway goal map.</p> <p>Thank you.</p>	
03/30/2022	<p>Hi. My name is Sue Luke, not Lake, and I am resident at Alaska Junction. And I think that it's really a huge mistake that you guys have made by not including the SkyLink in the draft EIS. I have been working with the forest service, EPA, and other organizations to do draft EISs -- well, you know, ultimately, the EIS itself. And, you know, not to include definitely an alternative is a huge mistake, just immediately. So I think that you need to not issue the EIS without including the gondola as an alternative because it's much cheaper, it's much simpler, and it's much faster. And it's going to bring us into the future rather than keeping us in the past. Thank you.</p>	Sue Luke

03/30/2022	<p>I'm Susan Oxley, founding member of the North American Climate Justice Team, the 34th District Democrats EELU Caucus, and a West Seattle resident. I too speak in favor of an aerial gondola as a viable alternative to the Sound Transit extension which would destroy multiple neighborhoods and businesses. The EIS states clearly that relocating businesses dependent on the Duwamish and Salmon Bay waterways would be difficult or impossible. Disproportionate displacement of marginalized people, communities of color, and low-income populations, especially in the Chinatown-International District, raise issues of environmental justice and echo racism. All Sound Transit alternatives would destroy historic properties and further fracture the cultural integrity. On the other hand, the aerial gondola utilizes short, slim towers and overhead transit that preserve neighborhoods, businesses, and population integrity. It's estimated to cost a tenth of the light rail extension with the environmental impact much less. It's proven to be an efficient, low-impact people-mover in La Paz and Mexico City, safe, frequent, able to move 4,500 passengers per hour. One report estimates that's a third more than the light rail can carry. It would benefit both privileged and ethnic populations without displacing as many ethnic businesses, historic sites, homes, and people. If it can be done in Mexico, it can be done here. Finally, the gondola has a smaller ecological footprint, faster construction times, less energy use, is quieter and more affordable. It's a viable alternative, simple, practical, efficient. Let's go high. Go gondola.</p>	Susan Oxley
03/30/2022	<p>Hello. My name is Marie Flake, and I am a West Seattle resident. And I'm speaking in support of an outside expert study of gondola technology. I'm a property owner and a taxpayer. I voted for ST3 because I want and I'm willing to pay for mass transit, and I want it expanded and extended. I didn't vote exclusively for light rail technology. I voted for transit, the most effective, efficient, modern options available. There are other modalities that might be a better fit for connecting some locations and geographies like West Seattle to the main -- I'm going to put in air quotes -- trunk line of the light rail. These other modalities may be less destructive to communities, more accessible for passengers, faster, and way less expensive to construct. Please commission an outside expert study of gondola technology. Thank you.</p>	Marie Flake
04/15/2022	<p>Hello. My name is Mark Hergert, and I believe that the uncertainty of the eminent domain for those homeowners that may be affected by property purchase. Some people, such as ourselves, have planned for many years to sell our home that is possibly one of those to be purchased within the next six months, and I believe that the property value would be significantly diminished by having the uncertainty of whether that home will still be standing two years or one year from now. I hope that that is being considered and that it's -- I just think the property value would be highly diminished by that uncertainty for someone that is selling their house in the near future. That's my statement.</p>	Mark Hergert
03/30/2022	<p>Hi. I'm Annie Phillips. I co-chair the environmental caucus of the 34th Legislative District Democrats. Most of our members live in West Seattle and work downtown around the Eastside. Thank you for letting us tell you how we feel about the light rail options in the draft EIS. Actually, there's about 20 variations on the light rail theme for the West Seattle Link. Since the voters approved the big idea in 2016, the budget and timeline have both been stretched, and now that we see the expected losses of our homes, our businesses and jobs, and the disruption in our neighborhoods, we're wondering if there isn't a better idea. With any of the light rail choices, environmental impacts would be major. The loss of urban forest: Trees provide beauty and relaxation, homes for wildlife, stormwater control, carbon sequestration, air purification and cooling. Increased impervious surfaces and noise pollution, which all I can see is this is the only one of the impacts that the draft EIS even mentions. Well, it turns out there is an alternative, an aerial gondola. Urban gondolas are successfully moving as many as 4,500 riders per hour in cities such as Mexico City; Ankara, Turkey; and La Paz, Bolivia. A gondola is uniquely suited to West Seattle terrain with Pigeon Point and the Duwamish inlet, and it can be built six years sooner, taking more gas-burning private vehicles off the road much sooner, helping put a stop to climate change. With fewer, smaller towers, the gondola is much more environmentally friendly than the light rail, and it would cost about a tenth as much. Please hire an independent consultant to compare a gondola system to the light rail options in the DEIS. From what we've learned, it's by far our preferred alternative. Thank you.</p>	Annie Phillips

03/30/2022	Hi. This is Julianna Carlson. I am a resident of West Seattle and a small business co-owner that also works in the building at Delridge and Andover, and my family is a co-owner of that building. It was built to last 100 years-plus. We have been there about ten, and we would really like to keep it for the small businesses of the owners. There's three partners, and all of the businesses are in that building. All of the options but the Andover Street station, DL-6 and DL-5, would force us to demolish that building, which we had planned to keep for our families for generations. We try hard to keep that street corner safe and pick up all the trash and deal with all of the bus stop issues at that corner, and we're happy to keep doing it as long as we can stay in our building. So from the draft EIS, it appears that the Andover Street station, the DL-6 option and DL-5 options, either one of them appear to be equal, if not less, in cost and significantly less impacts as far as parks and historical as well as less residential displacement. Thank you.	Julianna Carlson
03/30/2022	Hi. My name is Tommy Swartz, and I'm a West Seattle resident, right off of Delridge. I too am advocating for the Andover Street lower-height option. As the previous commenter outlined, it clearly meets all the criteria, and it's the highest performing. It's the lowest cost, displaces the fewest residencies, businesses, and has zero park effects. I am a strong advocate for this option and believe this is the best option for residences and people who've worked hard to save up money for these residences in a difficult city to buy homes in. Thank you.	Tommy Swartz
03/30/2022	Thank you. My name is Randy Litzenberger. I'm a West Seattle resident, and along with Annie Phillips, I am the co-chair of the 34th Democrats Environment, Energy, and Land-Use Caucus. I would echo the points as I heard from many of my friends and neighbors here this evening. The reality is that in terms of Sound Transit's planned light rail extension to West Seattle, there is a viable alternative, one that brings it in at a much lower cost, a fraction of the cost to be sure, as well as a much smaller environmental footprint. And when we consider even that light rail is certainly in the long run, hopefully, better for the environment and greenhouse gas emissions than automobiles, we have to understand the construction of this light rail to West Seattle would imbed pillars of concrete into our community, lead to relocation of neighborhoods and the like. It would do great damage to the heart of our community. And I would also call on Sound Transit to consider that in a moment when they should be considering the flexibility necessary to make a gondola viable as an alternative, they have precedent for this before. Several years back, when they were faced with escalating costs for a Capitol Hill light rail station, they ended up abandoning that and going to an alternative; so we do have precedent for this. We know that across the planet, as we have heard, gondolas are viable in many different parts of the world. It should be here as well. I very much endorse an aerial gondola for West Seattle. It'll bring it sooner, it'll make it better, and it'll be something we can be proud of. Let's say yes to gondola. Thank you for your time this evening.	Randy Litzenberger
03/30/2022	Great. So I would like to be an advocate specifically for the Andover station and the tunnel entrance for it, advocate for it being a tunnel at the Andover station and then specifically the tunnel entrance being on the south side of the Genesee Street. I want to prioritize not pretty much tearing down people's homes and building on the golf course right there instead. I think it just should be taken into consideration the amount of land that golf courses hold in urban spaces and just emphasize to the Sound Transit Board that that alternative would be preferred if the tunnel is on the south side of the Genesee Street. That is it.	William Green
03/30/2022	Hello. Thanks, Chris. My name is Nancy Woodland. I live on 42nd Avenue Southwest in the West Seattle Junction area, and my comment's going to be very short. I just want to advocate for the tunnel options in the event that the stations that end up in the Jefferson Square area end up winning out with all of the studies. We have a significantly settled neighborhood vibe here. We're part of the heart of the West Seattle Junction and would really love to consider that alternative to try to maintain some parts of that neighborhood area. And, also, a very big fan of the idea of having the light rail coming in, and now, tonight, interested in the gondola option. Thanks for listening.	Nancy Woodland

03/30/2022	<p>Yes. I'm actually Bette Levins [phonetic spelling], and I've been a resident of West Seattle now for like 37 years in our current home, which is typical of most Seattle residents. And I would really like to advocate for the gondola. I know the gondola is a different way of approaching the solutions of traffic. I would like it to be considered because I think it's a really good thing to do. I also think that a lot of times that the things that West Seattle tends to contribute like, for instance, the bridge or the tunnel under the West Seattle Bridge are often the things that have never really been considered. So I feel like we have kind of been like the stepchild, and our ideas have not been considered. And I would really like you -- I'd like Sound Transit to sincerely consider it in a fair, equitable, and justifiable way. So when you do consider it, please let us know how you have considered it, what you have done to research this. And if it's not better, as good or better than what you are proposing, I would like to know why. Thank you.</p>	Bette Levins
03/30/2022	<p>Hello. My name is Shelby Skeena [phonetic spelling]. I'm a West Seattle resident. Like many people, I supported the West Seattle light rail extension; however, now that I'm able to see the plans and envision the devastating impact to our community, I feel it would be a huge mistake. I support the gondola as a far superior option regarding in relation to the environmental impacts, including the blue heron reserve on Pigeon Point and the Duwamish Greenbelt; also, the impacts of all of that concrete and carbon emissions that it would release into our environment. I support it for the cost savings, the smaller impact on homes and businesses, and the ability to have transit here in West Seattle much quicker than with the light rail option. So please consider or please implement a commission, an independent study for the SkyLink gondola. Thank you.</p>	Shelby Skeena
03/30/2022	<p>Okay. My name's Joe Fuller. I'm a resident of West Seattle. I reside on 41st Avenue Southwest, very near Jackson Square or, I should say, Jefferson Square. And I just want to advocate for the tunnel option. I just want to be on the record. I think that's going to be the best option for the very least displacement of businesses and houses in West Seattle, and I just want to be on the record. Thank you.</p>	Joe Fuller
03/30/2022	<p>Thank you very much. My name is Frank Immel. I'm a West Seattle resident and property owner, and I encourage you to look at the gondola option and to commission an outside review for that. I have a hard time understanding how, if you're looking at options, you would not look at a viable option versus kind of going down the path of what you are continuing to go down. There's so many benefits that have been stated tonight: you know, environment, speed, delivery, cost, all of these things. And I think this is just a very -- I highly encourage you to look at that significantly and seriously. Thank you very much.</p>	Frank Immel
03/30/2022	<p>Yeah. I would just like to have it on the record that I have lived in West Seattle for the last nine years. My wife is a frequent commuter on buses, on the RapidRide buses. My family also commutes on those RapidRide buses during the weekends, and we do not find it to be an adverse amount of time; in fact, it's 15 to 20 minutes, average. And I'd just like to have it on the record that I'm opposed to the Link light rail.</p>	Marc

<p>04/15/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	<p>Margaret Anthony</p>
<p>03/30/2022</p>	<p>Thank you very much, and thank you all for being here and putting on all of these public input sessions. I appreciate all the work that you guys have done. In lieu of any further comments from the community about this particular segment, I'd just like to suggest that Sound Transit put further consideration towards cost-saving measures with some of the stations themselves. I also think that it's worth considering, given the number of comments about sort of the character and interruption that some of these elevated options to pose to the neighborhood, to think about how best to esthetically integrate those elevated options. On the larger note, just speaking to the WSBLE extension as a whole, I think I just want to add further voice to the notion that there should be shallower stations and cheaper construction costs kept in line with that. I know the community impacts can be significant and politically difficult, but if cost-saving is the intention and rider experience is a priority, having shallower stations all along the line, I think, is vital. Thank you so much.</p>	<p>James</p>

04/15/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for. Violate this and I will help sue you back to the stone age (just kidding, but you get extra credit for reading this) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	John Anthony
04/15/2022	<p>Seattle Center station: preferred alignment under Republican Street (which includes an east station entrance in the heart of the Seattle Center campus) is the best rider experience for the 12M visitors to Seattle Center each year! The other alternative (Mercer Street) is too far and inconvenient. Also, please help mitigate construction impacts to the campus organizations to make this preferred alignment a win-win for everyone!</p>	Randy Cote
04/15/2022	<p>Hi -- I live on 22nd Ave SW between Andover and Charlestown. My property is outside any of the build corridor options, but we still imagine that we will be affected by noise, view obstruction, traffic from all the cars that will be trying to park in the neighborhood because you are overly optimistic about people taking the bus to the light rail. When my neighborhood met with your team in March, they were still entirely unprepared to give us information on these issues. I don't understand why you are unable to provide this info since there is plenty of info from Sound Transit's experience as well as from light rail experiences elsewhere. I imagine I will be able to easily see the faces of the people on the train or in the station as they pass by -- I am that close to where you are planning to put this. However, after several years of our community repeatedly asking these questions, the team continues to come unprepared to answer anything more than in the first meeting. They have made some progress in answering to directly impacted homeowners, but it is concerning that they can't respond to these very standard questions and concerns.</p>	Ann Stedman
04/15/2022	<p>Please build a tunnel to Ballard or Nothing. We don't need another viaduct that will block out the sun and be torn down someday. We have a bus system that works great lets just keep using it until we can build a real system underground.</p> <p>Thanks, John</p>	John Walters
04/15/2022	<p>A tunnel under the ship canal to Ballard is the only efficient long term alternative, and should be chosen over a bridge.</p> <p>The alternative chosen for the south lake union to Ballard segment should not reduce traffic lanes or capacity on 15th Ave W.</p>	Richard Piacentini
04/15/2022	<p>I feel that the transit board should require the West Seattle link to be under ground like it is in Beacon Hill. Otherwise it will unsettle too many West Seattle businesses and the businesses have enough issues with COVID and the West Seattle Bridge outage.</p>	Michael Hootman

04/15/2022	<p>I would greatly prefer to be choosing from, and commenting on, the alternatives presented in the DEIS. However, after seeing the initial design fleshed out into a more concrete form, I find that approach to be largely futile. The alternatives outlined in the DEIS are too costly, the stations are too deep or too high and often poorly located, and the line-to-line transfers are very inconvenient. Ironically, some measures which would drastically reduce costs should also provide a much better transit experience while mitigating many of the disruptions necessarily caused by a project of this size.</p> <p>Please reconsider running three lines in the current tunnel. Individual lines could operate at 6–9-minute headways (2-3 minutes when combined.) Some advantages include:</p> <ul style="list-style-type: none"> • Large cost savings. • Far fewer surface disruptions during construction. • A much better system for riders with trivial transfers. • Possible preservation of the SODO busway. • Better service for all three stadiums. • Immediate utility for the West Seattle line, with a flyover junction south of SODO station. <p>Two options should be studied for the Westlake to Ballard segment. The first is a burrowed junction north of Westlake station. The second is terminating the line at the 5th Ave, extension of Westlake station, level with the existing platform. This option will require a non-revenue connection to the rest of the system, possibly at the old Convention Place tunnel. Although slightly less convenient for riders from Ballard, the second option may be less disruptive and allow for more future branching, such as north from SLU to the 99 corridor, and/or east from Ballard to the University. Driverless trains may also be a possibility with this option.</p> <p>Both options will require capital improvements to the existing tunnel, as well as reliability improvements to the at-grade section in SODO and MLK. These are improvements that should be made anyway.</p> <p>As noted in ST’s own cost-cutting proposal, the Denny station can be removed with little harm to the system. The SLU station should be relocated to the south, ideally along Westlake. (The proposed Dexter solution, while a little better than either DEIS alternative, still misses the heart of SLU.) The new SLU station can be shallow. This station, along with Westlake, will easily serve the walkshed of the eliminated Denny station. The line should turn sharply onto Mercer and provisions for a junction to the Aurora corridor should be considered. The LQA station should be shallow and on Mercer.</p> <p>The Ballard station must be moved to the west, ideally somewhere near 20th. The Thorndike portal option needs to be brought back for consideration. The current alignment choices do not serve the Ballard core.</p> <p>In West Seattle, eliminate the Avalon station, locate the Delridge station to the north near Andover, and tunnel to the terminal station at the Junction, preferably on 41st. If possible, the route should follow Andover to a portal under Avalon Way. The cost of this alignment will be similar to the other alternatives but comes without many of the permanent disruptions to neighborhoods due to an elevated line with insufficient right-of-way.</p>	Roy Hirshkowitz
04/15/2022	<p>I am writing in favor of the Andover Street location of the Delridge station because it has the fewest residential displacements (ES-18), no park impacts, and is cost favorable. The Andover Street location is the only one that will not destroy our neighborhood. Please choose the Andover Street location.</p>	John Arenz
04/15/2022	<p>I’m in favor of a tunnel from the proximity of Delridge.</p> <p>The raised alternative is a massive structure winding through neighborhoods. It’s hard to imagine a superstructure 70’ tall in the Avalon area.</p> <p>Building an elevated structure contiguous to an industrial area or open space is much different than an elevated structure casting a shadow over a dense newbie hood area like West Seattle.</p>	Richard Kettlewell
04/15/2022	<p>Putting an above-ground section of rail on the water view side near the Alaska Junction makes no sense. While hard to quantify in dollars, the impact would by far outweigh any cost savings. Do something right for once Seattle.</p>	Brian O’Brien
04/15/2022	<p>Waste of money. Just a free ride for the homeless to ride m, smoke narcotics and commit crimes.</p>	Mika Harmon

04/15/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes.</p> <p>I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following: 1) The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives</p> <p>This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Oliver Rutz
04/15/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following: 1) The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down 10) the Genesee route would require columns 150 feet tall. because of how steep Genesee is. That seems totally ridiculous and dangerous.</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Paddy Walls
04/15/2022	<p>In regards to the Junction Alternatives, I myself and others in our community would wholeheartedly prefer the tunnel options. West Seattle is a tightknit community and believe the elevated options would tear up and divide important communities of color in this area. I also believe the stations on the tunnel near the actual Junction area will bring more commerce to the vital area of the Junction.</p>	Parker Dre
04/15/2022	<p>The two Ballard tunnel options appear to have the least impacts on the waterway, businesses, structures, and views. Furthermore the 14th Ave tunnel option (IBB-2a) is one of the least expensive. However, the 15th Avenue tunnel option (IBB-2b), although the most expensive by 13%, has the best alignment for servicing the businesses and high density housing already existing on 15th Avenue NW in Ballard. The 14th Ave. NW option (IBB-2a) would drag or spread commercial development from 15th over to 14th towards residential areas. The alignment on 15th NW (IBB-2b) could in the future follow the business corridor up 15th, and then along Holman Road and meeting up with the light rail station at Northgate. Long term this option makes the most sense to me, even if it would take longer to build due to being more costly, because it has the least impacts, and the best alignment with existing business and high density housing.</p>	Chris MCMULDROCH
04/16/2022	<p>The location looks good for the light rail. I think for all the neighborhood has dealt with, the construction on delridge, the bridge being down, etc, we should get this approved and going. West seattle should be a priority for sound transit .</p>	Keane Ng

04/16/2022	<p>I live on Pigeon Point next to the West Seattle Bridge. The project will NOT impact my property personally. However, I have some concerns about the options you are pushing forward as the preferred routes. It occurs to me that you may be putting business ahead of property owner displacement and that really bothers me a lot. Your primary focus should be placed on displacing as few residences as possible. And from what I've seen on your proposals, there are methods to displace very very few residences, and sometimes even at a lower cost in doing so. So it perplexes me why you are choosing a more expensive option and needlessly displacing longtime residences instead of displacing business or not displacing at all. It makes me think that this project is corrupt. That Business has more influence in this process than tax payers. That Environmental impact is being used as an excuse to bolster Business objectives. People on the End of Pigeon point who have been here and who's families have been here for decades are going to be displaced, and you have options that would avoid the point altogether. Your primary route basically levels the entire west end of the Andover to Genesee neighborhood. And that doesn't seem to bother you. Your reply is that your compensation will somehow give them the funds they need to replace their loss, and we all know that isn't true. There isn't an affordable residence in this city these days and what you compensate will not even remotely come close to making things right. I'm disappointed in you all. I expected better from you. I expected you to prioritize people over money and business. And if any of these people start any kind of legal action, even though I'm not impacted directly, I'll sign on to it.</p>	Randy Sampson
04/16/2022	<p>Thank you for all your work on this.</p> <p>ES.3.1.1.2 Duwamish Segment: I support DUW 2 because of its lower impacts on park area, including the heron colony, and greater distance from homes in the Pigeon Point neighborhood. I assume that engineering solutions could be found to mitigate impacts on Port operations; I don't think the same could be said for impacts on park area.</p> <p>ES.3.1.1.3 Delridge segment: I support proposed alternatives that have station locations further south (not DEL 5 or 6), and prefer the lowest guideways possible, transitioning to a tunnel.</p> <p>ES.3.1.1.4 West Seattle Junction segment: I support removing the Avalon station, and I support the tunnel alternatives. The longer the tunnel, the better, and I prefer the alternatives on 41st Ave SW.</p>	David Hancock
04/16/2022	<p>I write to STRONGLY encourage you to put the West Seattle station and light rail tracks underground. The purpose of light rail is to make Seattle more livable. Putting light rail underground will accomplish this goal. Putting light rail above ground hurts available housing, the environment and a vital, affordable neighborhood. Sound Transit found the money to build light rail underground in the more affluent and less diverse neighborhoods of Montlake, Capital Hill, First Hill, the University District. It is imperative to make the same decisions about below ground tracks in West Seattle. Other cities with mass transit systems have all found that underground trains are best for the longterm viability of the area. Do not be 'penny wise and pound foolish' by saving money to build above ground while destroying a lovely and livable neighborhood for generations to come.</p>	Karin Miller

<p>04/16/2022</p>	<p>Regarding the West Seattle Route; Avalon Station. As noted on the website link "Stations / Avalon". Regarding: All route options under Stations in the Avalon Station plans (As shown in items WSJ-1; WSJ-2; WSJ-3a; WSJ-5)</p> <p>PLEASE REMOVE THE RIDESHARE AREAS FROM SW GENESSEE ST. Suggest moving this onto Delridge.</p> <p>SW Genessee St. between 32nd and 35th, as well as Andover between Avalon and 32nd are critical access point for the homeowners on 32nd, and SW Avalon Way.</p> <p>REASONS: This block has been up-zoned and high-density projects are already planned and permitted. There will be construction off of SW Avalon Way for years to come.</p> <p>The EIS fails to provide details about traffic volume projections for the Rideshare area through our neighborhood.</p> <p>The EIS fails to explain how the road design will be adjusted to increase the capacity of Genessee to handle ride-share traffic.</p> <p>The current street on Genessee can only be accessed coming North from SW Avalon Way, or North up Andover and through the residential neighborhood on 32nd.</p> <p>The design implies that the design is to encourage ride-share traffic to drive up SW Genessee St., through the neighborhood to enter, then it would need to turn around, and drive back down SW Genessee St. to exit. (b/c the road does not go through).</p> <p>This design fails to understand that SW Genessee is a narrow residential street, that leads to the Alley behind SW Avalon Way.</p> <p>SW Avalon Way is, again, up-zoned, and increasing in density.</p> <p>The alley between Genessee and 32nd is where the block's waste removal is serviced.</p> <p>The EIS fails to provide a plan to the neighborhood about how Trash service will be maintained, during and after construction.</p> <p>The EIS fails to provide evidence that increased traffic volumes compared to needs for local access to the Alley and 32nd street have been assessed.</p> <p>The EIS fails to explain what local street parking options will be maintained/removed on SW Genessee St.</p> <p>Proceeding with the design as-is will make the area "unlivable". Happy to partner with designers to walk the area and discuss recommendations.</p>	<p>Jennifer Zielke</p>
-------------------	---	------------------------

<p>04/16/2022</p>	<p>It is hard to be uprooted from a place you've lived for 27 years. One that you thought you'd be taken out of wearing a toe tag [grim yes, but you get the point]. This location has been so convenient [except this "living through the bridge down" years] and as we know with any living situation LOCATION, LOCATION, LOCATION is key.</p> <p>When I am "Placed" in a new home will I get the same interest rate I am paying now or will there be adjustments made for that { We are going to need someone to figure out that story problem}. Also my house is small, getting a similar house in a location that is comparable is not going to be easy. That can all be worked out but these are some of my thoughts.</p> <p>I am in the path of the preferred route, right over the station location to be exact. As you can surmise I am also a stones throw from the less desirable plans so I have been detaching myself emotionally from this house for a long time. There are things I would have done to the house to "keep it up" but it hasn't made sense to put MORE into a landfill so am making due with what I have as is [it's all livable and safe, just in case you were wondering. For example: Do I need to put in new counter tops in a kitchen that is going to be destroyed? NO]. Investing in my property has been scaled back as it doesn't make sense. I hope you take that into consideration when you are assessing my property.</p> <p>I understand there will be a buyout / eminent domain that includes help with relocating and such. It seems a real estate lawyer will be needed for me to feel at ease. One of my other concerns besides WHERE AM I GOING TO GO is what appliances can I take with me? What in the house in general can I take? My on demand water heater is not that old for example and am not sure the next house will have one, not a cheap replacement and as funny as it may sound "the kitchen sink" it's a vintage sink with connecting drainboards on either side on a free standing metal cabinet, that I just love. I just don't know what kind of wiggle room we're going to have.</p> <p>When I called about these concerns I am told that it will be decided on an individual basis. What does that mean? that the demolition guys will see if it's something they want to take home or not?</p> <p>When I call, everyone is very nice but the more I talk to them the more I realize their only job is to keep us calm. I have been patient for several years now since this was laid at my door and wonder when you do get around to giving us concrete answers? what kind of time will I have to respond? perhaps I just have to be patient a little longer.</p> <p>I do appreciate you keeping the door open to communication, and listening to us is important but I have yet to hear of an individual plan that me and my neighbors can sink our teeth into. We are getting weary of doing the talking and perhaps I've missed some info from you but we need a better timeline . At any rate, thank you for listening yet again, I may have more thoughts but this is all I've got right now.</p>	<p>T Neinas</p>
<p>04/16/2022</p>	<p>SDOT, Please do not run an above ground light rail track down the middle of our residential streets. The north-south street that is 42nd Ave SW, running south from SW Edmonds St is populated by families, proud Seattle homeowners who enjoy a nice neighborhood with sound views. Placing a above ground light rail track on 42 Ave SW is unacceptable. Instead, the track should be located on Fauntleroy Ave SW, running south from Alaska & Fauntleroy, to the ferry dock. Fauntleroy is already a main arterial and has an extra lane right in the middle! This is a no brainer. Come on SCOT, use your brains and make the right decision. Do not needlessly destroy our neighborhood.</p> <p>I support and underground rail system to avoid destroying our cherished West Seattle neighborhoods. Place the station at the Fauntleroy & Alaska junction, current site of Les Schwab or the Shell station,</p>	<p>John Douthwaite</p>

04/16/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives (along Genessee) that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>Here are several more reasons for my support of Andover/Yancy/Avalon routes.</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, \$1.6 B/ \$1.5 B. Saving \$100 million seems very prudent!</p> <p>The business disruption is similar for both of these options</p> <p>The private property disruption is less for both Andover/Yancy alternatives, from 607 for DEL1a down to 201 or 487</p> <p>The Genessee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for</p> <p>The loss of revenue and loss of recreation opportunity could impact over 60,000 golfers each year</p> <p>The Parks Department supports the Andover/Yancy alternatives</p> <p>Longfellow Creek would have less risk of damage to the fish or the creek</p> <p>The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Andover/Yancy/Avalon routes.</p> <p>Thank you!</p>	Edward Irwin
04/16/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Andover/Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course on Genessee.</p> <p>The best reason to go on Andover & Yancy is to save \$100 million.</p> <p>It also avoids precious park property. The golf course is a vital recreational option for Seattle citizens, and a thriving business, and would be damaged by the impact of construction long term.</p> <p>Thank you</p>	Charles Irwin
04/16/2022	<p>Hello,</p> <p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property. Even if you are not a golfer, it is a beautiful green space in the middle of important area surrounded by land already taken for the bridge.</p> <p>I would ask that you consider the following reasons for not destroying the West Seattle Golf Course:</p> <ol style="list-style-type: none"> 1) The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genessee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for - this is a very important fact! This is the second time that destroying a park property in the form of golf courses has come up and there is no reason to violate the City ordinance. 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year - who are voters and taxpayers too. 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>For all of the above reasons, please adjust the preferred alternative to either of the Yancy/Avalon routes.</p> <p>Thank you</p>	Caisa Wasbrekke

<p>04/16/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	<p>Eric Christianson</p>
<p>04/16/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Andover/Yancy/Avalon routes.</p> <p>I oppose any of the alternatives along Genesee that impact the West Seattle Golf Course.</p> <p>And I strongly oppose tunnel alternatives that are unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>Some of the reasons for supporting Andover/Yancy Avalon routes include: Estimated budget is the same or cheaper for Andover/Yancy/Avalon routes at \$1.6 B or \$1.5 B. (Any reasonable option at \$100 million less cost should be preferred) The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes likely violate Seattle City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The Parks Department supports the Andover/Yancy/Avalon alternatives The West Seattle golf course has served the citizens of Seattle with excellent recreation, community fabric and vibrancy as a business for over 80 years. While respecting the need for light rail, the alternative routes that do not impact this unique use of parkland are preferred.</p> <p>Thank you,</p>	<p>Wendy Gapp</p>
<p>04/16/2022</p>	<p>Regarding the Ballard station alternatives, as a local resident I strongly support placing the station at or west of 15th Ave NW, because walkability to Ballard's dense core is only really possible if the station has pedestrian access on the west side of 15th.</p> <p>A station at 17th or 20th Ave NW in Ballard would achieve this goal more effectively so I would suggest it be one of the alternatives.</p> <p>Additionally, I support the tunnel options over a movable bridge, which strikes me as having serious delay issues that would deter ridership.</p> <p>Nonetheless I am very excited that light rail will be coming to Ballard!</p>	<p>Brian Henn</p>

04/16/2022	<p>Dear Sir/Madam, We are non-English speaking folk and we have more than 1000 seniors and few hundred employees at the Chinatown ID community. Our community has been register as historic heritage. We all love Seattle love our community. It is our home town.</p> <p>The new Sound Transit project on the 4th Ave. which is good that minimized the impact of our community our peaceful life. Since the 4th Ave. Viaduct/bridge is going to pull down or rebuild can do it together with the new Sound Transit at 4th Ave. it will save time and save the cost. This is a good plant and we all strongly support it.</p> <p>The project on the 5th Ave. will occupy/Estimate the land from our community again. According to the history the discrimination of Chinese expulsion happened on 1886 -2-7, For the last decades the Chinese community have been pushed and moved around for few times due the new construction projects. It has been pushed and moved from Waterfront to 2nd Ave./Washington, then moved to 3rd. Ave/S.king St. After the Metro Tunnel we lost 3rd Ave. St. Now Chinatown and Japan town is between 4th Ave. and 8th Ave.(5 blocks) If anyone of you living at the community, your small home down your house the new construction project has to take your front yard and partly of your house you will understand how painful and upset we are. I believe you will against it and say NO.</p> <p>Furthermore the 5th Ave construction is almost at the center of our community, our residential buildings due to the mess of the construction like loud noises, dusty, truck in and out, block/close streets, bus diverts, stop gas, stop water etc...It will seriously impact and creates lots of headache to our residential buildings, dismal another 300 business for more than few years.</p> <p>Any project that disturbing/impact people is a failed/lost project and should not consider ! It is bad to take the advantage take the space from people from our community. We beg you all take the 4th Ave. project please DO NOT take the 5th Ave. project !! Thank you very much !</p>	Beth Ku
04/16/2022	I live in Magnolia and am writing in support of the Preferred Elevated 14th Avenue (IBB-1a) option. While I also support both preferred tunnel options (Preferred Tunnel 14th Avenue- IBB-2a and Preferred Tunnel 14th Avenue- IBB-2b), the cost and disruption seem too high compared to Preferred Elevated 14th Avenue (IBB-1a).	Emily Matheson
04/17/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail section. I support the Andover / Yancy alternative - I do not support any of the preferred options on Genesee. As the studies suggest; the benefits of an Andover / Yancy routing far outweigh the preferred options:</p> <ol style="list-style-type: none"> 1.) Save \$100 Million 2.) 487 Fewer displaced residence / apartments 3.) No impact to Green Space / Golf Course / Fish Bearing Creek - up to 3 acres of green space lost in preferred alternatives. <p>Thank you for considering my comment, Colin Gants</p>	Colin Gants

04/17/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Andover/Yancy/Avalon routes.</p> <p>I oppose any of the alternatives along Genesee that impact the West Seattle Golf Course. And I strongly oppose tunnel alternatives that are unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>Reasons for supporting Andover/Yancy Avalon routes include: The estimated budget is the same or cheaper for Andover/Yancy/Avalon routes at \$1.6 B or \$1.5 B. (Any reasonable option at \$100 million less cost should be preferred) The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes likely violate Seattle City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The Parks Department supports the Andover/Yancy/Avalon alternatives The West Seattle golf course has served the citizens of Seattle with excellent recreation, community fabric and vibrancy as a business for over 80 years. While respecting the need for light rail, the alternative routes that do not impact this unique use of parkland are preferred. Thanks</p>	kim adams

04/17/2022	<p>Hi,</p> <p>I strongly feel we need to move forward with below-ground options only. There is already unhealthy traffic noise from 15th Ave NW and installing an elevated track will likely set Ballard residents and Sounds Transit up for noise violations exceeding Federal safety standards, as well as associated health effects like stress and cardiovascular effects. Topographically there are no hills or earth to protect us from the sound. From my home on 17th I can hear trains along the water, fog horns now - pleasant enough as they are infrequent and mirror our industries. If light rail is above ground on 17th, it's going to be nothing other than unnecessary noise. Learn from the mistakes made in Tukwila and do the right thing to preserve Ballard's charm and property values for the people trying to live here.</p>	Susan Turner
04/17/2022	<p>P.S. 17th Ave NW residents are already dealing with increased traffic congestion, hit and run on vehicles etc. This is a solid vote no for aboveground solutions. Go underground.</p>	Susan Turner
04/17/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following: 1) The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you.</p>	Noah Van Loen

<p>04/17/2022</p>	<p>Avalon station is redundant and not worth the cost. A large chunk of the Avalon neighborhood gets bulldozed in every alternative except the longer tunnels. The “medium tunnel” option is actually the worst of all for property acquisitions and impacts in our neighborhood, the above-ground Genesee options are also significant. The main reason the longer tunnels are more expensive is the 2nd underground station. The ridership estimate is only 1,200 daily boarding at the Avalon station because it is located in the walkshed of the Junction Station and people can simply use the other station that is closer to the urban core of the Junction. Additionally, this station has no bus service approach and not planned or access to parking to increase any ridership. Apartments and Condominiums in the area are counted as a single property not multi-unit residences to provide accurate count of property acquisitions. Additionally, some of these multi-unit properties include multiple generation residences per unit – so actual people displaced is not counted or assessed accurately. No options without the Avalon station have been considered. Where this may provide the option of a less impactful tunnel option to a more central location or lower cost implementation to mitigate over-runs already realized. Even as planned – any of the options presented – there is next to know reasonable access for the Delridge neighborhood or anywhere south. This is notably a growing neighborhood the city is trying to gentrify - that ST is not serving or running over and the most under-served by mass transit option. Run the train up Myers Way where transportation options are needed. And there are less densely populated neighborhoods to evict/slash/burn. The ‘voter approved ST3 stated 3 stations would be built in WS so they put 3 stations in the plan’ argument, about a notional cartoon attached to a vote ballot, in haste to make a deadline, for possible unplanned West Seattle line – is better described as a money grab for taxes and a professional example of zero planning and dysfunctional management. This indefensible position is not a valid reason. And with no actual threshold defined for approval the utilization of this proposed station demands to use our brain and review an option without this station. To ignore this obvious boondoggle and continuation of the bush-league approach to manage this project. With the only data analysis provided it has been projected that Avalon station is worthless this close to Junction. Longest tunnel possible into west seattle from north side of the west seattle bridge - under the hill - to junction. Two stations only, eliminate Avalon station from the plan as it is overkill and waste of time and money all around. Enhance bus service between Delridge and Alaska junction stations as well as further south. Sound Transit go back, sharpen your pencils and review options that do not remove housing or flyover as a disruptive ugly concrete obstacle to actual transportation. I would also be satisfied with NO Stations in west seattle as this is an over developed community already thanks to no strategic planning by the city council. Our neighborhoods are not a free-for-all and should not emulate a ‘New York’ cityscape, for those who have not contributed to developing community.</p>	<p>A Hamilton</p>
<p>04/17/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Andover/Yancy/Avalon routes. 04/17/2022	Please no elevated tracks in West Seattle. Just because the area between Avalon and the Alaska Junction doesn't seem as nice or as affluent as the other areas of the city that get tunnels, doesn't mean that this area should be further burdened with blight inducing monumental eyesores so that you can save a few bucks to spend in wealthier neighborhoods.	Chris Luthi
04/17/2022	I'm completely against any above ground tracks we can put everything in a tunnel above ground will ruin west Seattle.	Mike Kniazuk
04/18/2022	I am a resident of West Seattle and would like to voice my preference for the light rail system to be built underground, similar to its set up in Capitol Hill and beacon hill areas. It will be extremely disruptive and destructive to homes and roads. Please consider preserving the community as it is now and build the light rail tracks and stations below ground. Thank you.	Cyn Clarfield
04/18/2022	West Seattle must protect its views. For this reason I fully support maximizing the tunnel option where possible. We are too 'hilly' to think otherwise	Ron Sprinkel
04/18/2022	One of the options is to build stations and tracks above ground. To do this, they would destroy homes and businesses; the noise during construction and operations will be significant; there will be a very negative environmental impact. CAN YOU IMAGINE WHAT IT WOULD BE LIKE TO HAVE AN ELEVATED TRAIN ZOOMING PAST YOUR STREET EVERY FEW MINUTES? Alternatively they can build the stations and tracks underground and keep our neighborhood intact. Sound Transit has built underground in most neighborhoods in the City thus far. I encourage Sound Transit to do so in West Seattle. West Seattle is a peaceful, quiet group of neighborhoods-Please help keep West Seattle livable!	Cathy Stegman
04/18/2022	Please reconsider building West Seattle LR above ground. The traffic and density already create significant noise, and above ground tracks will only make it worse. Please respect WS residents as you did on Cap Hill by building underground stations. Thank you.	Audrey Lincoff
04/18/2022	I want to express my preference for the underground tunnel option in West Seattle. We have a vibrant and quiet residential community that would be industrialized by the above ground train. It will significantly reduce property value by this industrialization with noise and vibration for the long term. It would take away much needed housing and negatively impact neighborhood community businesses. I believe that two underground stations would be better than 3 elevated stations. I believe that the shorter term building underground vibrations will be far outweighed by the long term benefit of the underground tunnel. The underground tunnel leaves the community intact, preserves the beauty and value of the neighborhood, the housing and businesses.	cara figgins
04/18/2022	For the West Seattle / Alaska Junction (2032) plans - PLEASE DO NOT move forward with above ground trains. Please ONLY move forward with the tunnel options coming into Alaska Junction (2nd and 3rd options on the map). I am referring to this map: https://oohwsblink.blob.core.windows.net/media/Default/images/west-seattle-ballard.pdf	Mary-Pat Beattie
04/18/2022	I am a west seattle dweller. I reviewed the plan and much prefer the primary alternative to be one that is underground as much as possible and that displaces as few residents as possible. I believe there is an option that doesn't require 3rd party funding that does this, where all the considered factors were listed as "high performance ". I realize this is a more expensive option. However, I beleive that for infrastructure such as this, with which we will be living for 100 years or more, more investment now is well worth it. Please consider changing the preferred route in West seattle. I am very much against any elevated tracks through neighborhoods.	Jenava Sexton
04/18/2022	Hi - Would prefer least neighborhood impact. Is it possible to go underground? Very glad to have light rail and want to be as careful about environmental impact. Let's get as many cars and non-electric busses off the road as possible! Thanks, Sara	Sara Williams

04/18/2022	Public transportation connecting West Seattle to downtown and other neighborhoods is vitally necessary. Please consider the many residents and businesses owners who will be impacted and construct underground.	Sheila Strobel
04/18/2022	All stations and rails for all light rail MUST be underground in West Seattle. We don't want vagrants and crime that is present currently under all the overpasses and under all above ground rail systems in Seattle area	Barbara Szczachor
04/18/2022	As a regular user of Seattle transit, it's disheartening to see plans that don't adequately prioritize riders. Several of the stations are far from the cores of the areas they're meant to serve (Ballard and SLU, particularly), and too many of the options require incredibly deep stations that Sound Transit has demonstrated they are incapable of adequately caring for given the record of elevator and escalator breakdowns (even at just-opened stations like Roosevelt and the U District). Please listen to the users of the system and design it in a way that will be accessible and useful. It's not too late.	Travis DePrato
04/18/2022	I oppose any alternatives that impact the West Seattle Golf Course. I support either of the Yancy/Avalon routes. The tunnel alternatives are unacceptable due to the loss of over 3 acres of the golf course which is Park property. The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for. The loss of revenue and loss of recreation opportunity would impact over 60,000 golfers each year. The Parks Department supports the Yancy alternatives.	Sherie Patano
04/18/2022	I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Andover/Yancy/Avalon routes. I oppose any of the alternatives along Genesee that impact the West Seattle Golf Course. And I strongly oppose tunnel alternatives that are unacceptable due to the loss of over 3 acres of the golf course - which is Park property. Some of the reasons for supporting Andover/Yancy Avalon routes include: Estimated budget is the same or cheaper for Andover/Yancy/Avalon routes at \$1.6 B or \$1.5 B. (Any reasonable option at \$100 million less cost should be preferred) The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes likely violate Seattle City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The Parks Department supports the Andover/Yancy/Avalon alternatives The West Seattle golf course has served the citizens of Seattle with excellent recreation, community fabric and vibrancy as a business for over 80 years. While respecting the need for light rail, the alternative routes that do not impact this unique use of parkland are preferred.	A. Grant Lingg

04/18/2022	<p>I am commenting on the Delridge section of the W. Seattle Light Rail project DEIS. I support either of the Andover/Yancy/Avalon routes.</p> <p>I oppose any of the alternatives along Genesee that impact the W. Seattle Golf Course.</p> <p>And I strongly oppose tunnel alternatives due to the loss of over 3 acres of the golf course, which is Park property.</p> <p>Some of the reasons for supporting Andover/Yancy routes include: Estimated budget is the same or cheaper for Andover/Yancy/Avalon routes. The business disruption is similar for these options. The private property disruption is less for both Yancy alternatives. The Genesee routes likely violate Seattle City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended. The Parks department supports the Andover/Yancy/Avalon alternatives. The West Seattle Golf Course is a much loved community business and recreation facility. I want light rail in W. Seattle, just not impacting our golf course.</p>	Sherry Haggbloom
04/18/2022	<p>Please choose an alternative that is underground, versus above ground options for the West Seattle Expansion! We have chosen to live in this neighborhood for over 30 years specifically to avoid the sound pollution of living in other centralized communities. As a person with inside knowledge of the route change I have seen the impacts in Bellevue, and the construction on that route for as long as it was considered by the city council. If you can build a tunnel there and completely change the route (into much needed wetlands of the Mercer Slough) to appease a few rich and powerful individuals, surely you can do the same for many, many West Seattle residents, some very influential in Seattle politics. Tunnels not an above ground route is what this community desires. Make the right decisions now, go underground and keep our community free from your invasive sound pollution and unsightly above ground tracks.</p>	Victoria Hollerbach
04/18/2022	<p>Based on proposed routes, the view that light rail is a higher importance than keeping the integrity of the West Seattle neighborhoods and history is concerning. Please proceed with having an underground rail system. This allows for the least impact on the West Seattle history and environment. Many other locations have an underground system and West Seattle should not be an exception.</p>	Longtime Resident of WS Longtime Resident of WS

04/18/2022	<p>As a West Seattle resident, I strongly support the tunnel alternatives WSJ-3a or WSJ-3b (ES-20). In fact, if these cannot be built on the planned schedule due to funding constraints, I would favor terminating the line at Delridge Station based on the Minimum Operable Segment specification until tunnel funding can be secured. Elevated lines:</p> <p>Disrupt neighborhoods. Are visually obtrusive. Consume high value real estate and in consequence can harm urban development. Consume space that would better be used for other purposes, including pedestrian, bicycle, and auto traffic.</p> <p>At-grade lines have the above disadvantages and can also result in slower service, higher labor costs, and higher accident risks.</p> <p>Tunnels, in contrast, preserve neighborhoods, real estate, and urban space, do not create unsightly visual barriers, and do not entail the cost and potential delays of acquiring surface properties and having to temporarily or permanently alter surface traffic patterns.</p> <p>It is also critically important to have a strategic vision. West Seattle's growth is likely to continue for the next thirty years or more. The tunnel alternatives will set the area up for better future light rail options and will enhance the development of the urban village at West Seattle Junction as well as future urban clusters. It is notable that many communities are now seeking to dismantle elevated roadways, as detailed in the following:</p> <p>https://www.archpaper.com/2021/06/explore-removing-elevated-highways-with-federal-infrastructure-funds/ https://www.theb1m.com/video/america-interstate-highway-system-teardowns</p> <p>Let's learn from these and make the right choice</p>	Matthew Beattie

04/18/2022	<p>I am a West Seattle resident. The light rail (or similar) transportation alternative has long been in a planning phase. I'm 43 years old and recall voting on monorail twenty years ago. There are many new voices in the city and property values have increased substantially since then as has the city's population. We need this as soon as possible. I know there are a lot of differing opinions about the best possible route and approach (e.g. above or underground etc.). In an ideal world, underground is my preferred option, however, given how long this is taking, I ask that you prioritize the timeline and speed of getting this constructed over the style of the system.</p> <p>Thanks, Kerry</p>	Kerry Meade
04/18/2022	<p>I think the smith cove option makes the most sense because it is aligned with the existing rail footprint and infrastructure. Pro that land is already public so less cost and less displacement. Traffic wise it also will be less intrusive to go along this route than along 15th.</p> <p>Curious about impact to magnolia bridge traffic during construction? Would it come with a bridge upgrade?</p> <p>I live off of Thorndyke looking towards interbay so I'm excited about this coming to the neighborhood! Slightly worried about about the noise.</p>	Christi Beckley
04/18/2022	<p>As a West Seattle resident I believe it is critical that the alignments and stations be underground, particularly as the alignment moves into the West Seattle Junction. Anything above ground will be unreasonably disruptive, not only during construction, but during long-term operations. Above ground rail in West Seattle is not in the character of the neighborhood and would unfairly displace home owners permanently in an area that is trying hard to build density.</p>	John Laplante
04/18/2022	<p>I live in West Seattle and want the light rail to be underground. My preferences are: #1 Tunnel 41st Ave Station / Dakota St Station Lower Height #2 Tunnel 42nd Ave Station/ Dakota St Station Lower Height</p> <p>Please NO elevated tracks through our neighborhood.</p> <p>Thank you.</p>	Catherine Gibson
04/18/2022	<p>I live in West Seattle and prefer the Tunnel 41 or Tunnel 42 option</p>	Joyce Karlinsey
04/18/2022	<p>I am thrilled that light rail is coming to West Seattle and feel that the alternatives that include tunnels would be less disruptive overall. Thank you</p>	Cristina Pacheco
04/18/2022	<p>Please let's keep light rail off of the street. Please consider designs with tunnels. Please consider designs raised above the street.</p>	Larry Langlais

04/18/2022	<p>Dear Sound Transit,</p> <p>I am submitting this comment regarding the Delridge section of the West Seattle Light Rail Project DEIS. After reviewing that document's description of the impacts resulting from the various alternatives under consideration, I strongly urge you to select one of the Yancy/Avalon routes. There are a number of reasons I, and many of my West Seattle neighbors and friends whom I've talked with, oppose any of the routes that would impact the West Seattle Golf Course (WSGC).</p> <p>As a long time West Seattle resident, I have benefitted greatly from the recreational and social activities provided at the WSGC. During the restrictions of COVID, and all the traffic issues while the West Seattle Bridge has been shut down, the WSGC was an especially welcome outdoor option. I have seen how this recreational resource is enjoyed by so many people of all different age groups and ethnic backgrounds. Over 60,000 golfers play at WSGC each year, and even many non golfers use its restaurant and banquet facilities. SW Genessee routes would impact at least 6 of the WSGC's holes and make it a less desirable location for future users of the course.</p> <p>The Delridge Segment Andover Street Station Alternatives (DEL-5 or DEL-6) would cost less than other routes that impact the WSGC; would displace fewer residences and historic properties, and would not impact Park and Recreational property. I believe this is an important consideration because there is a Seattle City Ordinance that prohibits using park property for other than its intended purposes. There should also be liability concerns that could arise from golf balls hitting trains if they were routed along SW Genessee. I wonder too if any consideration has been given to the risk of damage to fish or Longfellow Creek itself if any but the Yancy/Avalon routes are chosen.</p> <p>For all of the foregoing reasons, and others I am sure fellow citizens who share my concern will point out, I urge you to adjust the preferred Delridge Segment Alternative to either of the Yancy/Avalon routes. Thank you.</p>	Janet Gaunt
04/18/2022	I ask that any light rail extension into West Seattle be built underground in order to keep our neighborhood intact as much as possible.	vicky hall
04/18/2022	<p>Given the West Seattle Bridge closure (how long?), during COVID, I for one am a West Seattleite that is weary of everything being non-functional. It feels assaultive.</p> <p>There seems little awareness of what a given neighborhood can tolerate (in real life, rather than on a sketch book or in a planning meeting). Urban planners used to be more aware of the neighborhoods they served, I think.</p> <p>The rush and greed here to expand and expand is a sorry site. Apologies; but you asked for feedback.</p>	Janette Beiwn
04/18/2022	Please only have one west Seattle location with onsite parking available for people to be able to park and ride the rail. This should not go into neighborhoods for many reasons that are so very clear it would be ignorant to ignore. I truly don't think many people who have lived here longer than 5 years want the light rail even out in west Seattle but especially not in the junction area. We need to keep some parts of Seattle with the unique small(er) town feel. Please please don't turn West Seattle into what has happened in the Roosevelt neighborhood- so awful.	Ashley Cling
04/18/2022	I think the West Seattle line is a great idea. I just wish the building of light rail could be sooner. With more people moving into the area, we need to think of the best way to decrease car usage. Traveling by car has been a nightmare since the defunct West Seattle bridge and with road rage being such an accepted way of driving.	Kathleen Tracy

03/17/2022	<p>Okay. Well, first of all, it's -- it's a good thing that's really late. So far, my experience has been very convenient. It's helped me mediate more time in my journey, getting me quicker to where I want to go. I'm glad to see the expansion is where they have gone to. And I would like to see them expand more in the other metropolitan areas like further north towards Issaquah, Olympia, and expansion sections for Tacoma, Puyallup, and areas like that also. It would be nice to see them expand towards -- of course, they're going to Everett, but when they get to Everett, Marysville and Snohomish, you know. That's -- what else would I say? Oh, I had been stopped a couple of times by transit police when I didn't have fare, and they were very considerate. They didn't fine me. I think what they could possibly improve on is more places where you can load your ORCA and -- oh, one other thing, increase the availability access for bicycles. Oh, one other thing - - and I don't know if this is part of their plan, but I know that it is the plan for our domestic and international flights, SeaTac will turn into SeaTac South and Sea-Ev North. In other words, Everett will become an international airport, and it will be nice to have that link for light rail go to that airport in Everett. Oh, yes. Also, it would be nice to have a link that goes from Tukwila east up 405. That will be -- and all the way up the 405 corridor through Kirkland, Totem Lake, and all the way connecting to the Lynnwood and -- yeah, connecting to Lynnwood and connecting to Mill Creek and on that route towards Everett. I think that's about what I have to say. Are you getting all that?</p> <p>It would also be good if they can make a connection link route to the ferry terminal at Kingston-Edmonds, so that when people come off the ferries, they would have access to the link. I think I'm done.</p>	Merle Kivijarvi
04/14/2022	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower</p>	Peter Beels

station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.
In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.
In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.

Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.

In order to future proof our growing system, we must design for expandability in four locations:

- (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).
- (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
- (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
- (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
- (5) West Seattle should be built for future southern expansion to White Center and Burien.

<p>04/18/2022</p>	<p>I favor the medium tunnel 41st option for West Seattle.</p> <p>The cost is one of the lowest with low impact to existing buildings and no impact to parks. An elevated rail should be downgraded for visual and noise pollution. It is easier to maintain rails if they are covered from the weather which a tunnel provides as a side benefit.</p>	<p>James Kamischke</p>

	<p>340 NE 89th St Seattle, Washington 98115</p>	
<p>04/18/2022</p>	<p>The SkyLink Gondola option needs to be considered as a viable alternative to current Sound Transit proposals.</p> <p>As a homeowner in West Seattle, this issue is of paramount importance to my neighborhood. Current options for transit will take years and extreme expense to implement. The gondola option costs far less and will require a fraction of the installation time and construction. Please do not dismiss this unconventional option on the basis of Board member opinion.</p> <p>I want the Board of Directors to seek an outside accredited firm to report on the latest installations and developments in urban gondola technology. BEFORE DECIDING ON THE BEST OPTION, PLEASE SEEK AND OBTAIN an expert-driven study about the possibilities of the SkyLink for West Seattle.</p> <p>Thank you so much for your time. Please do not skip over this unique and forward option for transit in Seattle.</p> <p>Kelley J Leigh</p>	<p>Kelley Leigh</p>

04/18/2022	I highly prefer one of the 2 tunnel options with stations either on 41st Ave SW or 42nd Ave SW. I have lived in West Seattle since 2000 in a variety of locations, and with all of the hills, noise travels and reverberates a long way. I do not want the added noise of elevated stations. Also, the UW Stadium and University stations are great. We need to do this right and underground stations especially on the ridge of WS is the way to go. I am not a golfer, but I would think WS golf course could rearrange some of the holes and that the loss of 'park space' would not cause it to close. Incorporating Junction Plaza Park into a station would simply be a great use of that space. Residential displacements are sad, but the loss of apartments concerns me less as that area seems overbuilt though I do not know vacancy rates. There are several beloved businesses at both of those intersections; there will definitely be some pain, but for the incremental added cost, below ground stations is so clearly the way to go. All the best mass transit subways/light rails have underground stations. Seattle wants to be one of those cities.	Shireen Khan
04/18/2022	The release of the Gondola Feasibility Report is an embarrassment to the City and a slap in the face to those that are seriously pushing for this option. I'm proud to say that I spent 29 years working as a licensed civil engineer. That study is not serious. They deserve better. You need to hire an outside firm to prepare another one.	John McAlpine
04/18/2022	You have not done a thoughtful and thorough review of the sky link proposal your review was done in 2014, without any input from experts in gondola technology. This unsatisfactory review shows that you have made up your mind on this project and are not willing to fully look at other alternatives, that could possibly be a cost savings	William Skelly
03/17/2022	Yeah. I'm really against this because I live one block off of 15th Avenue. And it's going to be at least 60 feet high, so I'll be looking at all of this stuff. I don't want to be looking at all of this stuff. So I'm really against it. I was here like five years ago, too. And I don't want to be looking at all of these -- all of this stuff. It's going to block my view, what little I have now. So I'm really against it. So is it a done deal? Well, I went out to Northgate where they got one completed, and it's a disaster if you ask me. And so is Bellevue a disaster. So now they're doing it in front of me, it's going to be a disaster. So it's like where I live, so I'm not happy. I probably should sell out before they start working because I don't -- I don't think it's going to do anything to the value of your property when you're looking at this train. I guess that's it. There's nothing, I suppose, that I can do. Come here. Okay. Thank you.	M Kalash
04/18/2022	With the future of office work being a mix of WFH and in office and the Duwamish river and Avalon hill being major impediments for rail, why are we not looking at an aerial tram in West Seattle?!	Mike Dempsey

04/18/2022	<p>All right. So I just -- embarrassing. I just wanted to have a comment recorded about the Triangle Park that's going to serve as a serving station for the preferred SP3 from Westlake where it -- where Westlake is a street downtown, and then it turns into Westlake Avenue North, which is actually street and south like Union. And so the second stop on the streetcar route is the Seventh Avenue stop, which is close to the park, so those are both things that were concerning to me, because I used to park a lot, and I moved to South Lake Union -- actually, the Cascade neighborhood part of South Lake Union -- about eight years ago, and it's really in high density -- yeah, high density -- or housing market population thing, which I have really comfortably enjoyed because we do need more affordable housing, and we need regular housing for people. Regular housing probably isn't very good thing to say, but hopefully you'll understand what I mean by that. So anyway, so -- so there isn't a lot of green space in the neighborhood. There are a lot of really great, like, corporate green spaces. I say that because like Facebook and Amazon and Google have created -- planting some trees and some really nice spaces on their campuses, but in terms of parks, we don't really have a lot. We do have Cascade Park, which is closer to my neighbor -- my apartment, but in terms of Westlake area, around the Denny Triangle area and, of course, there's Denny Park. That's huge, too. But my point is that the triangle area park is real small. It's a really important resource for the neighborhood, and lots of families use it. I use it a lot. I walk up there a lot. I see a lot of kids playing on -- running down the hills and playing on the small sculptures, and then there are some tables where you can like sit out in the nice weather. So even though it's a really small park, I think it's a really necessary park of the neighborhood in terms of green space. So I do understand now that it won't be permanently closed, but I also just want to raise the issue that it's a really important component of the neighborhood. So hopefully, even though it's closer to four years, there will be -- Sound Transit will be able to open it, and it will be available to be used by the people again. So that's the rest of what I want to say. Anyway, this is verbatim, and I really sort of feel like I didn't come across as eloquently as I had hoped, but in any case, I got it in, so yay.</p>	Elizabeth Archambault
04/18/2022	<p>The West Seattle Skylink Team has provided compelling information that cost-saving and time-saving alternatives should be included in the Environmental Impact Assessment in order to minimize the environmental impacts of the final solution for connecting West Seattle to Seattle via a rapid transit option. Please invest in a expert analysis of these options. In addition, the GHG and climate impacts of the project as described in the DEIS are inadequate.</p>	Dee Wang

03/17/2022	<p>The only thing I care about is the Chinatown station. That's the one that I use the most frequently. I just came by here, and I saw that this was here, and I'm just like, okay, I'm just going to go. I live like three blocks from here, and I come by here basically every single day. So I've read the proposals. I've gone over all of the alternatives for the Chinatown station only. Again, I don't care about any of the other ones. Do whatever the heck you want with the other ones. Get opinions from other people. You type really fast. Get opinions from the people who live near those stations. But for here, I prefer the diagonal alternative to -- the diagonal alternative to alternative 2A, I think it was, the shallow Fifth Ave. option. There's no reasoning for that. This station is going to be used for a long time, a very long time, decades maybe. Maybe even longer. Maybe like over a hundred years. My kid is going to use this station to get to the playground, to get to their friend's house, to get to school maybe, and that's -- I mean, they're still a year old, so it's probably not going to happen for a minute, but I guess that's something that they're going to have. That's going to be nice is once they're old enough to use the light rail, then it will be available for them. So the reason that I prefer this is since it's going to be such a big investment into the community, we're already breaking ground. We're already going to be causing problems. We may as well get in there as much as we need to in order to provide the best possible solution to the light rail problem that we're facing. I understand we can't use the existing station. It's too small. It's too weird. And we're going to have way too many trains coming through here, way too many lines, and that's fine, so I get that we're going to need to have two stations, and we're going to need to connect them somehow. So if we're going to have two stations and we're going to need to connect them, we may as well connect them as best as we possibly can. I selected the diagonal version of 2A specifically because I think it looks cool. But 2A specifically -- because if we put something underneath Fourth, then that's going to be quite a bit farther away for people who are trying to connect between lines to get to. And putting something under Fifth, especially shallow under Fifth, is going to make it way easier for people to get to Chinatown -- the new Chinatown station from the old one and the new one from the surface. I understand that there are businesses nearby that are going to be disrupted and maybe will need to find new homes for them. If there's some sort of fund that I can contribute to or something, I have my email address listed in other comments, so go ahead and send me as necessary, I guess. But we need to fuck this entire -- we need to fuck up the whole street, just rip up the whole street. I know it's going to suck. I live here. I drive down Fifth. I bike down Fifth. I bus down Fifth. I walk down Fifth all the time, and I know it's going to suck. We're going to have to rip up the whole street for years, maybe. But I seriously think that the upfront cost, the upfront investment is going to be worth it for us to have a station that's easy to connect to, easy to use, easy for people walking around to get into without having to take really deep elevators to get underground and all that sort of nasty stuff. Plus, this solution offers the greatest flexibility for people for the SODO option and I think it was the Midtown option, the one that's going to be right over there. So if somebody wants to do something really weird over there, then we have a nice shallow station to where they can go super deep or super shallow if they want to, and it doesn't matter because the connections allow for it to happen. It's not too -- the light rail won't have to go up too steep of a slope. I like the diagonal solution most because that means that there's the possibility -- I don't know if this is actually possible. I hope that maybe someone will look into this if they're bored or something. There is a parking lot right there at the corner of King and Sixth. King and Sixth, the southwest corner, I believe. I'd love it if we could get a sort of like elevator or like a -- like one of those really small entrances like the one that you see off of Pioneer Square off of, I think it's Third, the one that's kind of always closed down. An entrance like that where it's just really small, but it would increase the walk shed by a little bit. My partner has a hard time walking around, so that extra block of difference might actually be relevant. I don't know if the city can work out a deal with whoever owns that parking lot to maybe buy, like, five or ten spaces from there and convert it into a really small elevator/stairwell. But that would be really cool if y'all could look into that, please. Thank you. That's basically everything, I think. Again, I know this is going to really screw with a lot of the businesses nearby, and I'm sorry that I'm going to be screwing with Chung Chun probably. I know that you're in a building that's basically falling over. I can see where the building fell over and where it was patched up. But I promise I'll still go to Chung Chun even if you have to move somewhere else, okay? And I'll still go to the tea shop next door and maybe even the collectible shop that's right there. Yeah, okay. I think that's everything.</p>	Reid Litkavo
04/18/2022	Please create an underground system.	Patrice Donohue
03/17/2022	<p>Okay. Okay. I would like to -- the new line use the same Chinatown, like, station here, like a shelter, I think. Because it still lies east of transfer and connect. But not the -- the -- the spot like behind the gate because I don't want all businesses gone for a while. I like the Fuji bakery. That's why. And also the Chung Chun place is good, too. It will -- I'm sure that the business -- the small business will affect and especially now pandemic. You know, that's a lot small businesses gone, and I feel sad to see that for some live in this community for six years almost. Yeah.</p>	Finna Wu

03/17/2022	So I just want to make sure that your construction is environmentally friendly to the neighborhood because it already has very poor air quality down here, which -- And I also want to make sure that the Hing Hay Park is protected because I have a major gathering space for a lot of the elders in this community. And even six months of construction would really decimate the community here. So I also want to protect the small businesses in the area, so just make sure that we would like the construction to be on the other side of the railyard where there's less business. Okay? Thank you.	Monica Street
04/18/2022	you have failed to meet the needs of West Seattle by dismissing the Sky Link. This is a relatively inexpensive project that would address the immediate transportation problems faced by those of us living in West Seattle. The Sky Link could easily hook-up with Light Rail in SODO as well as downtown Seattle. You have been very dismissive of this whole Sky Link project without giving it much thought. I think it deserves careful review by qualified engineers.	Louise Green
04/18/2022	To whom it may concern: I am writing with my concerns regarding the proposed elevated light rail at Alaska Junction in West Seattle. Myself and neighbors strongly feel the station and tracks should be kept underground. The reasons for this are many and include the disturbance of the noise and vibrations of an above ground train. The environmental impact of an elevated track, including the impact of the Heron Rookery. The vast and destructive impact on residential housing in the area. Homes being demolished and the very real impact this will have on property values is staggering. I very much approve and agree that mass transit options need to be expanded but the impact of an elevated train is far too detrimental when we have a viable option of a below ground train that will meet both the transportation needs and the needs of the Alaska junction community. I and many others in our neighborhood feel very strongly that an elevated train would be a devastating addition to our community.	Christy Gunter

<p>04/18/2022</p>	<p>West Seattle Link</p> <p>STATION ALIGNMENT</p> <p>3 stations are aligned too closely aligned. Spread stations out more. PLEASE.</p> <p>SERVE PROPER DELRIDGE</p> <p>Include proper Delridge.</p> <p>Delridge and servicing the future of an underdeveloped community- The Delridge station is not truly serving the larger population of Delridge.</p> <p>North Delridge, pop. 4k people is slightly south of the proposed Delridge station site. South Delridge with 10K people is more than a mile south of the station and would not be 'walkable' to the station.</p> <p>How can ST3 board and the county realign to consider improving support of business infrastructure and better serve the broader Delridge community by putting a station near 5950 Delridge Way SW school site in South Delridge where there is more density and open areas for development? With a South Delridge station people would not have to transfer from the bus to a train. Important to note that a South Delridge station would support future development of parks and businesses and infrastructure. It would support our whole peninsula, by truly being a 'COMPREHENSIVE PLAN' with an eye on the future. https://statisticalatlas.com/neighborhood/Washington/Seattle/North-Delridge/Population</p> <p>Station COMMENTS</p> <p>North Station (Delridge) Sorry, DEIS study route does not service the majority of our Delridge neighbors, who are disenfranchised from the current route plan. Please be authentic. North station should "humbly" be renamed 'Bridge Station' or 'Spokane Bridge Station' as it will be vital and servicing all of Admiral and north admiral and Pigeon hill residents, but not the majority of Delridge residents who live a mile south. Care should be taken to provide both bus and vehicular drop offs and consideration of park and ride for bikes, wheels and cars here.</p> <p>2. Avalon Station (Genesee) A. Align underground next to the West Seattle Freeway to mitigate impact to the flow of traffic - -B. Or move this Avalon station site instead to the submerged West Seattle Stadium 'vacant west field' which stretches north south parallel 35th AVE SW. (why was this not considered? It is expansive, vacant and unused. It also aligns with C line bus flow. And it is not a park serving the public and sits fenced off !) The 3295 building on the corner (that the City of Seattle once owned for the monorail station and later sold) could be purchased and annexed. Purchasing the 3295 building on the SE corner of 35th AVE SW would benefit the neighborhood. 3295 SW Avalon Way -- was not built to comply with SDOT sidewalks requirements and currently sits dangerously too close to the corner for pedestrians to feel safe. (Who approved that?) Tear it down and annex it together with the gated west side of the stadium land-- site Genesee station here - it must have been studied previously for the monorail plan - 15 years ago. You will improve public safety (horrible pedestrian corner at 3295) and activate more public space utilizing the West end of the stadium property (which sits fenced off and dormant).</p> <p>3. Junction Station West seattle has some of the best views and most engaging community of all kinds of people. The junction lacks parks and a library. Please make it good, and not ugly. What ever you do - this is the core of the neighborhood. Underground station preferred as it would be provide more light situated on the darker east side of the terrain. Alignment along Fauntleroy Way /Whole Foods - preferred if route is to be above ground - as high rises are already in place and looks very dark like canyon similar to Fifth AVE monorail line downtown.</p> <p>I hope the experts will consider my comments. I have lived in the neighborhood for 30 years and raised a family here. Great community. Let's grow strong, have good vision and planning and not muck it up - 'just because' it was funded.</p>	<p>Rene Commons</p>
<p>04/18/2022</p>	<p>I think the light rail AND stations should be underground to minimize adverse impact on neighborhoods.</p>	<p>Virginia Binbs</p>

04/18/2022	<p>As a West Seattle resident I understand that connecting the community is vitally important especially without having a bridge for two plus years and having to sit through obnoxious traffic and revisions that don't work.</p> <p>I understand the light rail project is important but I don't believe that light rail is what West Seattle needs when there could be far better options for this community that could easily connect to the other light rail stations in the city, be cost effective and won't put citizens and businesses out from where they currently reside. A transportation option should not be a one size fits all as each community is different, etc.</p> <p>I believe there are cons to the light rail project for West Seattle. It doesn't make sense to move those from their homes or businesses to make this project work, will there be more homeless people on the street and longtime businesses shut down and don't come back. The current fix to the West Seattle bridge is temporary and not meant to work for years to come so why would a light rail project coincide with a bridge that would encounter more issues and more money to fix or redo down the road.</p> <p>I believe there are other options that should be looked into and given thought before going through with another project that will encounter a ton of issues and be way over budget.</p> <p>Why not look at other options that could work just for the West Seattle community? An example the gondola project, which could easily connect to other light rail stations in the city, be a tourist stop, would be far less expensive without displacing peoples homes and businesses, could be a stream to generate revenue for the city of Seattle.</p>	Billieann Foster
03/17/2022	<p>Phoebe Wu (Interpreting for Shek Hung Lau):</p> <p>So Mr. Lau read -- there's an article online saying that center's going to -- going to build the station on the Fifth. So because there's construction and in the past - - sorry, in the past, the city and also Sound Transit building the King Street station and it's -- you know, the impact is that it's strained the Chinatown and the International District. So if Sound Transit is going to build the station on the Fifth, it will bring a really handful or disruptive impact to the neighborhood who lives in the Chinatown. Okay. Okay. So if the project is going to close down the Fifth Avenue during the construction, then it will like -- it will pose -- or the street -- car surface is already -- is also going to be impact as well. And what about the seniors? For example, he himself, there's no way for him to adapt the change, and it's going to impact the people, especially the seniors left here to, you know, walk around or they don't know where to go. Okay. He said if -- let me think. If -- if you guys are going to close down the Fifth Avenue, it just nowhere to go. So if the options or the stations going to build on the fall, it's fine. But on the Fifth is -- is not good for the seniors and who lives here. Okay. That's his comments. Thank you so much.</p>	Shek Hung Lau
04/18/2022	<p>I've been following this project closely for several years now and I am over the moon excited to see light rail expanded around the city. That said - I was disappointed when the first designs over-indexed on elevated trains. I want light rail - I don't want an elevated train running through the neighborhood.</p> <p>I was pleasantly surprised on the DEIS to see that the medium tunnel option was not only comparably affordable but also a better plan overall.</p> <p>I support the WSJ-5 option with a request to study better DEL-6 that are compatible with WSJ-5.</p> <p>Please do not build elevated trains in West Seattle.</p>	David Weidner
03/17/2022	<p>Last name is Uli, U-l-i. And the whole comment is basically like it's better to build a new station on Fourth Avenue. Yeah. Not that close to Chinatown. Yeah. With future development in mind, maybe you build more line -- light rail lines, and use that station so that people can go everywhere. Yeah.</p>	Lihu Uli

03/17/2022	We've got some comments from the community, and it's a (inaudible), so -- so most of the people in the community wants the station be on the Fourth Avenue because Fifth Avenue is too close to Chinatown and the national heritage of the culture. Yeah. But if the project is located on Fifth Avenue, Chinatown will be eliminated. However, long-time closure, detour, noise, and thousands of elderly people living here. That's a lot of -- yeah, a lot of damage to the community. That's -- yeah. Thank you.	Xiaoyuan Su
03/17/2022	All right. All right. Yeah, so I think I just have two comments for the Chinatown - International District station, I think I'd prefer the Fourth Avenue station just because of the impact to local businesses as well as sort of keeping some of the traffic -- foot traffic away from like congesting this area too much. I also -- on the other side in Ballard, I would -- I think I would prefer the 15th Avenue station just because it seems like it's already kind of like a hub, and I think it probably would impact less people just with the construction than the 14th Avenue. Yeah. I think that's it.	Jake Scott
03/17/2022	Okay. Go ahead. I think it would be great what you guys just stated that the light rail has a public transportation back and forth to downtown, along here, especially for some of us who live so much farther away and have to come every day. It would cut down on the timeframe, which is a big problem I'm facing right now of utilizing my time. So I can't wait for it to happen. That's all. Thank you.	D Gerstamarler
03/17/2022	The people here are real nice, and I hope I'm not insulting anybody by what I say. Okay. Don't smile after you hear what I have to say. Okay. Sound Transit, you know, has a great idea. We're having an environmental crisis in this country and the world. And you're a fast typist. I tend to speak quick. And I think rail transit is the way to go, of course. But Sound Transit has made a lot of bad mistakes. It's really messed up in a lot of situations. I think even Sound Transit is aware of all the things that are wrong. Fortunately, it still works because rail -- light rail, heavy rail is such a good thing, but it could have been a lot better. Well, that said, I think that this plan, which I've been reading about in the papers and elsewhere, was very poorly conceived and wastes a lot -- and wastes a lot of money unnecessarily. And I think the worst thing about it -- well, two bad things. One is I'm a long-time resident of -- I am a long 25 time resident of Chinatown here, and there -- they may be tearing down the Chinatown, but remember, if they don't tear it down, there would be a big disruption to business. We in Chinatown, our businesses have suffered so much from the building of this station and the building of the streetcar. We don't need any more of that or transportation place. If they have to build a station underground, put it somewhere else, like over on the other side of this station like on Fourth. That's everything. Am I talking too fast? You're amazing. Now, one of the -- kind of the worst thing about this, in addition to recommend our beloved Chinatown and the neighborhood, which we can't create anywhere else, the worst thing is the underground section. This is very deep underground. Number one, extremely costly. Number two, it's very inconvenient to people. Transit should be convenient. Nobody likes to take a ride just from a neighborhood and get stuck way down in the station way below the ground, and they'd have to wait for an elevator, an escalator, which don't work half the time. Even if they worked all the time at Sound Transit, it still is very inconvenient. One of the nice things -- this is probably the best station on Sound Transit because you just come up -- for an escalator, you're right here on the surface. But with that, it's just way too deep. The only good use for it is a bomb shelter. Now, the Russians are threatening us, you know, make a big bomb shelter. What they should do is what I've seen in Europe so much. They should run the line on the street. Just put the tracks in the street. Much less disruptive, much -- far more convenient for the riders. And because it's not a high-speed rail line like a bullet train, no need to put it so deep. You know, if there were a line all the way from here to Vancouver or to Portland, I can understand that. But it's a local line. Just run it on the streets. And we can put tracks in on the street. Very convenient, go block by block and not disrupt any businesses for so long. And that is really the way to go. Save a lot of money. This money can be used for other Sound Transit projects. Sound Transit is having financial problems. People don't pay the fares and is causing some problems. So this is my suggestion. And again, it's what I've seen in Europe transit systems all over the place run their lines in their downtown on the streets. When you get out of downtown, of course, you can go in the tunnels and all that. And your fingers are getting sore. I probably said enough. I will never forget this. And I'm so unimportant in -- like, I have trouble even walking and breathing at the same time. But you should get some kind of bonus. Sound Transit has the money for that. So anyway, this has been great talking to you. I'm sure nobody will pay any attention to my opinion. They never do. But that's -- it should be said. And I'm hopeful other people have similar comments.	

03/17/2022	<p>Okay. Thank you very much. My name is Christiano Martinez. I live in Belltown. The comments I wanted to make mostly regard the alignment which passes through my neighborhood. I wanted to point out that the Belltown neighborhood is the densest neighborhood in all of Seattle. It has over 50,000 inhabitants per square kilometer, or mile. At that density, that's pretty much exactly what we're looking for with transit ridership and the conditions that we would like. I would like it recorded that I find it to be disappointing that Belltown is being bypassed altogether. I noticed that the pink alignment seems to be the closet to getting to Belltown; however, I would prefer an alignment that would come a bit west of Highway 99. And in fact, I think in doing so, there's a tremendous opportunity in a triangle of surface parking lots between Denny Way, Vine Street, and, I believe, Fifth Avenue. These surface parking lots should be more than sufficient to build a light rail station while getting as close to Belltown as possible. Also, surface parking lots in downtown Seattle are very rare to come by, and this is a tremendous opportunity not only to get closer to Seattle's densest, most walkable neighborhood and all the amenities it provides, including Seattle's biggest concert halls like the Crocodile, Jupiter, and others. But I also think that it's going to get a larger catch of transit ridership given the population density. The other concern that I have has to do with the alignment itself of the Midtown station or the proposed Midtown station and Stadium and what is called the International- Chinatown District station. Rather than a redundancy in two identical stations, I think the alignment should propose a station a bit southward in the Little Saigon neighborhood. I think in doing so, this would not only promote tourism to a very neglected part of town that is facing a lot of violence and insecurity but also provide economic opportunity. The third and final piece I would like to comment is being echoed by The Urbanist.org and other transit advocates, that the Midtown station is far too deep. I'm not sure whether Sound Transit is creating an elevator to a platform or an anti-gravity elevator to the other side of the Earth. There's really no need for it to be that deep, even when taking into consideration utilities and subterranean parking garages. This has been echoed on the YouTube channel RMTransit and also on The Urbanist.org that make similar supporting arguments. And that is it. Thank you for your time.</p>	Christiano Martinez
03/17/2022	<p>Cool. I would like to see either more transit security officers or some alternative accessible routes to get to and from the train. Because especially like at Westlake, there are three elevators that I can use. One is always down. And two of them are always have people using the elevators that are just kind of standing there, and they won't let me use them. So that's just been something that I keep struggling with, access to the train.</p>	Sarah Phillips
04/18/2022	<p>Overall, I think there is a lot of good in the Draft EIS. Here are my thoughts after reading through the material:</p> <p>In Ballard, open an additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment</p> <p>At Seattle Center, prefer Republican Street Station to make more convenient for riders. Hopefully work to mitigate impacts to surrounding businesses as much as possible.</p> <p>For SLU, I don't like either option, as it doesn't serve South Lake Union well. Study a Westlake or similar alignment oriented north/south within SLU boundaries and as centered on South Lake Union as possible</p> <p>For Midtown, make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>For Chinatown, I'd prefer 4th Avenue Shallow Alternative (CID-1a) alignment but it needs to be as shallow as existing station, study a shallow cut and cover option over existing Downtown Seattle Transit Tunnel.</p> <p>Overall, I'd like the stations to be as shallow as possible and that these options are made to be added to for future use.</p>	Matthew Phillips

03/17/2022	<p>Okay. Cool. I just wanted to express my deep disapproval of expanding in Chinatown and specifically taking down neighborhoods or houses or businesses in order to expand this area. I feel like Chinatown has been through a ton, particularly in the last couple years, and not only that, but like they went through all the stuff that came with building the new arenas, and I just don't want this culture and this community, my neighborhood, to be pushed to the side again and to be demolished. And I also want to give my two cents on the West Seattle expansion. And I would love to see something underground rather than something that's going to also knock down neighborhoods and houses and culture in part of what is West Seattle as well. I love light rail. I use it almost every day. I live downtown. I think it's essential for businesses and people like me, but we need to value our neighborhoods and our communities and prioritize those instead. Build around what is already here.</p>	Vanessa Kinsey
03/17/2022	<p>Yeah. She prefer -- he prefers the idea, the plan of -- the diagonal plan office. Yeah. And so it takes shorter time, less cost. So he feel it's better to make -- for this community, you know, to recover from the construction. Yeah. So cost efficiency is his major concern and the time efficiency is his major concern. Yeah. Thank you.</p>	Ben Chen
04/18/2022	<p>The West Seattle part of the ST plan shows the option of a tunnel route only at W Alaska Junction. As a resident I prefer a tunnel route all through West Seattle - including Deleodge, Avalon and Alaska junction. The noise level of an elevated train through residential areas would affect the noise and nuisance level. Please provide a tunnel route for all of West Seattle branch and stations..</p>	Zerelina Mukherjee
03/17/2022	<p>Okay. So I'm here to actually not speak for myself but speak for the parents of some of my friends. Those senior people that live in the senior apartment in Chinatown, but most of them, they either cannot walk very well or, you know, they are not so comfortable speak English. They don't know that their translation provided, so that's why they say, oh, can you go and speak for us, make sure you leave something back there. I say, okay, I will, yeah. So their worry is that they -- they don't want the -- okay. They don't want the location to be Fifth Avenue and Jackson Street because they think it's too close to the Chinatown. And then if it starts to build, it will turn this whole area a big construction site, and then people's life will be seriously affected. Maybe a lot of small business or stores they have to shut down, and because the pandemic already stroke them very, very hard, so a lot of people already lost much business, and you see a lot of stores already had to shut up. So they don't want the building of the light rail, make the situation worse for those small business owners. And also, they don't know if the construction starts, will it just let out some dust or noise or all these things, then they affect their life because they -- they literally live here all day long, and they can't -- you know, they are not so energetic to walk around, so they have to stay in the apartment building like from daytime to nighttime, so they don't want the air to be worse or noises keep coming, coming up. So they just so kind of worry, become very worry, and so the most important thing is they are afraid that if the construction start on this street, it might just kind of destroy the landscape of Chinatown. Like, part of the street will be lost. Chinatown will be smaller. And then maybe a lot people have to be relocated so that they will - - the community will, like, you know, be torn away, like some people have to go live in different cities or different places. They cannot really connect to each other like they used to be, or they get comfortable to be with, so they just want to make their voice heard. Like, there are more than 100 senior people living in this area. They hope that the maybe preferable location can be on the Fourth Street -- Fourth Avenue, sorry -- Fourth Avenue and Jackson Street. Whether it's shallow or deep, that don't really matter much, but they just don't want it to be on the Fifth Avenue. That's too close to Chinatown. Yeah, so -- yeah. They also don't want any cultural symbols in Chinatown to be pulled down because of the construction or affected by the construction. Yeah. They just don't want to see all these things. Uh-huh. They didn't know about the impacts of building the light rail to their life maybe last year or the year before. Yeah, they know the company started to reach out to all the people living in this area, but at that time, they had barely no knowledge. They had no knowledge of the impact. So they may be in their written survey the answer Fifth Avenue and Jackson Street. But now they regret because they kind of start to understand there are a lot of impacts, so now that's why they say, oh, we will prefer Fourth Avenue and Jackson Street, yeah, whether shallow or deep, yeah. But also, they care about the accessible facilities like they want it to be very convenient for senior people to use like ramps for people who need to use wheelchair, elevator, enough elevators or -- yeah. Just those accessible facilities. Yeah.</p>	Dandan Chen

04/18/2022	<p>Hello,</p> <p>As a member of the West Seattle neighborhood I and my wife are totally in favor of putting the train UNDERGROUND. The noise and displacement of people would be significant and is easily removed by an UNDERGROUND train.</p> <p>So when you count the vote remember this household want the train to be UNDERGROUND.</p> <p>Thank you,</p> <p>GA</p>	Gary Andolina
04/18/2022	Any solution that requires above ground tracks at the West Seattle Junction is in my opinion an unacceptable damage to the neighborhoods it serves. I strongly prefer any tunnel option in West Seattle.	Steve Aykens
04/18/2022	<p>West Seatte cannot survive the years if traffic disruption that will happen during construction of light rail. No route that has been proposed will serve the majority of people who would consider riding b a cause there is no way to connect riders on ghe East side of West Seattle to an Admiral area link, and no way to move large numbers of riders drop an Admiral or Juncation drop point to a Link line running on Delridge. The geography of West Seattle prohibits peoples' ability to get to Link from multiple directions. The Link Line does not provide a significant means to transport the majority of riders - it's merely another means to travel a short distance to connect to another mode of mass transit. And that's not a good enough reason. To spend so much money. Additional buses on C, 21, 21X, 125, and 120 Lines and another Water Taxi with support buses would improve mass transportation for far less money, AND could be implemented more quickly than a Link Lite Rail line.</p>	Ann Hoesley
04/18/2022	<p>As a West Seattle resident, I strongly support the tunnel alternatives WSJ-3a or WSJ-3b (ES-20).</p> <p>Elevated lines: Disrupt neighborhoods. Are visually obtrusive. Consume high value real estate and in consequence can harm urban development. Consume space that would better be used for other purposes, including pedestrian, bicycle, and auto traffic.</p> <p>At-grade lines have the above disadvantages and can also result in slower service, higher labor costs, and higher accident risks.</p> <p>Tunnels, in contrast, preserve neighborhoods, real estate, and urban space, do not create unsightly visual barriers, and do not entail the cost and potential delays of acquiring surface properties and having to temporarily or permanently alter surface traffic patterns.</p> <p>It is also critically important to have a strategic vision. West Seattle's growth is likely to continue for the next thirty years or more. The tunnel alternatives will set the area up for better future light rail options and will enhance the development of the urban village at West Seattle Junction as well as future urban clusters.</p>	Terri Martensen

04/18/2022	<p>Support 4th Ave project and respect the historic heritage</p> <p>I am representing the majority of non English speaking Chinese residents and employees at the Chinatown ID area. I got many of neighbors , senior folks and employees' support and some people called me lately as they care about the Sound Transit new station would impact badly to our community.</p> <p>There is a senior who is 87 years old and worked at the community for decades. He requests me to voice out again. He sees the changes of the community including the Metro Tunnel how impact our community.</p> <p>Chinatown ID community registered as historic heritage and it is hard to believe that nowadays in Seattle the 5th Ave. proposal doesn't respect/care about the historic heritage and going to destroy it, destroy the vibrant and enterprising community.</p> <p>We beg you all respect the historic heritage as well as our peaceful life and never take the 5th Ave. project which occupy our limited space again, the worst is destroy one of the important historic heritages in Seattle. It is a failed and lost project that despised the historic heritage.</p> <p>The 4th Ave. is the best and respectful no harm to the historic heritage also minimized the impact to our community and we all support it. Thank you very much !!</p>	Beth Ku
04/18/2022	Keep the Avalon station.	Radha kerzan
04/18/2022	<p>West Seattle deserves to have a low impact public transportation system. Lower impact, I.e. noise reduction, environmental impact, aesthetic impact.</p> <p>Underground seems a good option, as other parts of the city have access to this standard.</p> <p>Nancy Adams-Leonard West Seattle resident</p>	Nancy Adams/Leinard
04/18/2022	<p>We seek accessible service platforms that are low to the grade or below grade, providing a safe means of egress in case of seismic and other emergencies, and minimizing the impact to the environment. I am a townhouse resident in Magnolia / Interbay. The guideway at Interbay would best be a retained cut 17th Ave W Station (IBB-2a/2b), which is partially below-grade station on the west side of 17th Avenue West north of West Dravus Street. This will lead to a tunnel under the Ship Canal to Ballard. From the Smith Cove Station at Galer Street to 17th Ave Retained Cut Station (IBB-2b), the elevated guideway would cross over the Magnolia Bridge and continue north along the east side of the BNSF Railway tracks, lowering from elevated to at-grade along the Interbay Athletic Complex to continue under West Dravus Street to the 17th Avenue Station in a retained cut north of Dravus, between 17th Avenue West and Thorndyke. The station entrances will be from the Nickerson flyover on the north side of the station and on 17th Avenue West and West Bertona Street. Continuing below the Port Authority water frontage to Ballard at 15th Avenue NW (IBB-2b) is a tunnel station beneath east side of 15th Avenue Northwest south of Northwest Market Street or farther west of 15th. From 17th Avenue Station to Ballard Station, the route enters a tunnel portal between 15th Avenue West and Thorndyke Avenue West. The tunnel would travel northeast then curve north where it would head under Salmon Bay and continue in a tunnel east of 15th Avenue Northwest to the Ballard Station. The station would be east of 15th Avenue Northwest and south of Northwest Market Street, with access from both sides of 15th Avenue Northwest. An underground walkway beneath 15th Avenue Northwest would provide access from the west side of the road.</p>	David Moehring
04/18/2022	<p>My preference is for the Tunnel 41st Ave Station, Dakota Street Station Lower Height Route, as a cost savings I propose the Avalon Station be eliminated. An elevated guideway west of the West Seattle Golf Course will impact existing residential and business structures and be an eyesore in the community; it will also do the same if a southern extension is added in the future. A future tunnel extension will not impact our neighborhood as much as an elevated route.</p>	Garry Lund

04/18/2022	<p>Hi, I live in West Seattle and would love it if you would be open to considering the gondola option! It will save Sound Transit a ton of money, is environmentally friendly and will provide much needed transit alternatives to/from West Seattle in a much timelier manner than what is currently being proposed. I think it would be helpful to get a 3rd party firm with aerial experience to evaluate the option and showcase how other world-class cities are including gondolas in their transportation planning efforts.</p> <p>Thanks, Eric</p>	Eric Galioto
04/18/2022	Please do not displace current chinatown businesses. There are plenty of options nearby for improved light rail such as pioneer square or closer to the stadium.	Yuqian Li
04/18/2022	It would be best to have the rails and stations underground. This is best for the local economy and tourism, environment, aesthetics and well/being of residents. Thank you for your work on this.	Sharlene Cardoza
04/18/2022	I would like you to take into account I would like any stations and tracks for sound transit built underground. I think it would be horrible to displace people and their homes for mass transit, if there is a way to build underground.	LINDA DUTCHER
04/18/2022	More rail to West Seattle!!!	ASHTON WILTZ
04/18/2022	Above ground light-rail will be too disruptive to the West Seattle community ! It is not worth the cost !!! PLEASE Improve our existing transit system , especially to North Admiral, as a link to light rail or consider the gondola option.	Dorinda McClure-Payne
04/18/2022	This light rail project needs to be as close to Alaska & California, to make transfers as easy as possible. The tunnel is also the best option, to keep the impacts as low as possible to businesses and the neighborhood character. Option WSJ-3b, going with a tunnel, is the best option. It also puts the station at 42nd and Alaska, the closest option to the bus bays on Alaska.	Jeremiah Griswold
04/19/2022	I believe the WSJ-3b option for the west Seattle junction station makes the most sense to me and is close to existing bus lines and the junction as a whole.	Chloe Kuhar
04/19/2022	Build the West Seattle station underground as you have in the majority of neighborhoods, for the same reasons you've built the stations underground in those neighborhoods. Thank you.	Tierza Clerc
04/19/2022	Please obtain a technical engineering study by gondola experts to compare the option of a gondola to light rail to connect West Seattle and SODO. The recently released report is not a technical engineering study by expert. Thank you.	Janet Lenart
04/19/2022	I have personally felt the negative affects the light rail brings to the community. The light rail is ment to connect the city but is detrimental to the Community. it connect commuters to there destination but severly detaches those people from the places they are passing by. I grew up on MIK amd Kenyon st. I would hear the light rails ding ding ding every time it passed that intersection. the quality of life for the people in my neighborhood and so many others dimminished significantly when the light rail came. not to mention the countless flat tires we got from long construction period. I moved to west seattle because it was the last neighborhood in seattle that actually felt like home. I understand the need to progress, change things up, and expand. However Seattle has expanded so much it is almost no longer recognizable to people who have grown up here. My grandmother has sold her house and moved away along with so many of my family and friends. I hold out becuase I love this city so much. But if you bring the light rail to the last Seattle feeling neighborhood. My bags will be packed. What is sad is there are so many people who feel the way I do. people who felt this way on MIK but had no option but to stay as their way of life and quality of life changed for the worse. Do not bring the light rail to west seattle!	Moriah Williams

04/19/2022	<p>I am a resident of Roxhill, and use the C-line bus.</p> <p>The West Seattle Link is too costly and underfunded to proceed! Additionally, this Link project will mostly serve construction companies, residents of only hundreds of apartments and homes near the West Seattle stations, and extra folks on game days. It's highly unlikely that the majority of the thousands of folks, many economically disadvantaged, that already ride WS, WC, and Burien buses bound for downtown will transfer to the LINK</p> <p>Additionally, it's going to drive up home prices even more.</p> <p>One alternative to the WS link project is to construct a NEW BUS ONLY bridge from West Seattle, across the Duwamish all the way to the SODO busway, which would be a vastly less costly alternative that would strengthen the regional transit system that already serves thousands of West Seattle, White Center, and Burien residents daily, and importantly, give the bus lanes on the WSB and 99 back vehicle and commercial traffic.</p> <p>With the time and money saved from building a new bus only bridge vs a costly link, we could electrify the entire Sound Transit and King County Metro buses.</p>	Anthony Beas
04/19/2022	<p>We do not want a rail system in West Seattle. Too many businesses are impacted by this. I say NO to the light rail.</p>	Liz Linville
04/19/2022	<p>Please build West Seattle stations and tracks underground. Aside from having less of a negative impact on quality of life in the long term for the neighborhood and wildlife, they can serve as safety corridors in the case of an attack.</p> <p>Thank you, Gabriela</p>	Gabriela Diaz
04/19/2022	<p>Please build stations and tracks underground. These provide a more sustainable footprint for density and happier neighbors.</p> <p>Thank you, Pete</p>	Peter Smith
04/19/2022	<p>My family's home is under threat of demolition. We bought this house because of its location yet that benefit is not considered when our home would be appraised. Our investment would be a lost opportunity for us to capitalize on, not to mention the neighborhood school where two of our children are involved. Our low interest rate at time of purchase will become null and will have to adopt a higher one, no doubt. I read that there was a buzz about doing away with the Avalon station, which this neighbor supports. Most neighborhoods in the city have only one stop, and I think WS can do with only two. The Avalon stop would be close in proximity to the new and improved WS bridge anyway.</p>	Shannon Saulter
04/19/2022	<p>I urge Sound Transit to stop considering CID 2a and 2b as options for construction. The closure of S King and Weller for any extended amount of time will drastically and fundamentally change the fabric of the Chinatown-International District. Not only do these plans lead to the highest loss of historic and local businesses, but they also put the individuals, including the over 1,000 elders and youth who will be negatively impacted by construction on 5th ave, at further and longer risk.</p> <p>Implying that taking longer to get to Lumen Field and the stadium district (as has been noted in the impacts of CID 1a) is at all comparable to the displacement of businesses and harming the elders of a historic neighborhood of color is not only one of the biggest false equivalences I have ever seen in my life, but it is also flat out disrespectful to the hundreds (if not thousands) of individuals who stood up in the 60s and 70s to combat the construction of that very stadium district knowing that somewhere down the road, the city and its arms would prioritize those stadiums over the lives, histories, and memories that have been forged in the Chinatown International District.</p> <p>This neighborhood is precious. Treat it with the respect it deserves.</p>	Emily Halladay

04/19/2022	<p>Please seriously consider eliminating the Avalon Station to allow more funding for any of the tunnel options.</p> <p>The "triangle" neighborhood is a better location than Jefferson Square for the Junction Station. Less disruption and congestion in the triangle, compared to the already busy/congestion near Jefferson Square.</p> <p>Way too much concrete, which will be a blank palette for graffiti artists.</p>	Jen Shaughnessy
04/19/2022	<p>Hi! I love the idea of having light rail to Alaska junction! Much needed here in WS.</p> <p>I'd be happy to see it above or below ground depending on what works. But I don't live right at Alaska junction.</p>	Nadine Blinn
04/19/2022	<p>First, let me say that I am very much in favor of public transportation. I live in West Seattle on the C line. When light rail is added I will still bus to Junction station. I am very much in favor of having many tracks and stations underground to maintain WS as it is. My preference for the Avalon and Junction area are the options on page 31 and 32. WS is already pretty compacted and adding a large elevated station and rails will make it worse. I would rather not have light rail and use the rapid ride bus to get downtown than support large structures in WS that simply do the same thing as the current C line.</p>	Tracy Randle
04/19/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Andover/Yancy/Avalon routes.</p> <p>I oppose any of the alternatives along Genessee the impact the West Seattle Golf Course.</p> <p>I also strongly oppose tunnel alternatives that are unacceptable due to the loss of over 3 acres of the golf course which is Seattle Parks property.</p> <p>Some of the reasons for supporting Andover/Yancy/Andover routes include: Estimated budget is the same or cheaper for Andover/Yancy/Avalon routes, 1.6 B and 1.5 B. The business disruption is closely similar for both of these options. The private property disruption is less for both Yancy alternatives, from 607 for DEL 1a down to 201 or 487. The Genessee routes likely violate Seattle City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for. The Parks Department supports the Andover/Yancy/Avalon alternatives. The West Seattle golf course has served the citizens of Seattle with excellent recreation, community fabric and vibrancy as a business for over 80 years. This is the only golf course that serves the community of West Seattle. While respecting the need for light rail, the alternative routes that do not impact this unique use of parkland are preferred. The loss of revenue and loss of recreational opportunity would be significant for over 60,000 golfers each year if the West Seattle Golf Course were impacted in any way by any of the proposed routes.</p> <p>Thank you for your consideration of this request.</p>	Beth Jackson
04/19/2022	<p>I am dismayed that so many small businesses are being obliterated for this West Seattle link of the light rail. You note a long list of small businesses that are essential in the area and need to be worked into the plan.</p> <p>Very troubling is that you are demolishing some of the few older storefronts left in West Seattle that still have character. The 1920's buildings along Fauntleroy holding Buda Ruska, the BBQ shop, and a martial arts center. Please incorporate these fine old buildings in your design rather than raise them.</p>	Claudia Levi
04/19/2022	<p>Hi, I live in a townhouse behind the LA fitness on Fauntleroy (4536A 40th Ave SW). We just bought our house a year ago planning to live in West Seattle for many years. We also put lots of money to make our house comfortable and nice looking (hardwood floors, new exterior doors, new stairs for accessing the roof). Please don't take it. We value our home and would like to keep living there. Thank you</p>	Jeanne Gabrielle Burdeti

04/19/2022	<p>I strongly prefer Medium Tunnel 41st Ave Station for Alaska Junction (WSJ-5) with a request to study a refined DEL-6 pairing, based on comparable cost, minimum impact on neighborhood (maintaining its integrity and character) with least displacement of businesses and residents.</p> <p>TUNNEL TUNNEL TUNNEL please! No elevated tracks!</p> <p>Thanks!</p>	Gloria Jia
04/19/2022	<p>I love the West Seattle neighborhood for its character and charm and would like to preserve it with underground tunnel instead of elevated tracks.</p> <p>The tunnel option WSJ-5 with Medium Tunnel 41st Ave is a clear winner!</p> <p>It is cheaper without third-party funding compared to elevated option and more environment-friendly and easier to maintain and build on for future development.</p> <p>Absolutely NO ELEVATED TRACKS please! It is disruptive and will be more expensive to build and maintain. And it will change the character of the Junction neighborhood for worse forever.</p>	Y Jia
04/19/2022	<p>North-to-South >>></p> <p>Ballard Bridge: Do not consider a movable bridge option; go either for high-bridge or tunnel. Mass public-transit cannot be effective or reliable if conflicts are built into the system.</p> <p>Interbay: Cost-saving station elimination and amalgamation should only be done when all else fails, this includes cost-cutting on park-and-rides at suburban stations, and any and all associated development rights on ST acquired parcels. It becomes near impossible to add stations later in heavily urbanized areas. Stations and their expected locations also informs current and future TOD development.</p> <p>SLU Station: Place as close to Westlake and Republican as possible. This better serves the core of SLU, West- and Eastlake.</p> <p>Cost-Saving Dexter Ave (Denny + SLU) Station: Absolute no! This neither effectively serves the core of Denny Triangle, Southern SLU, Belltown, nor Eastlake or Westlake. It's a cost-save that drives a dagger into the heart of Seattle's (if not the USA's) fastest growing community. This also upends Transit 101, Rule 1: Connect modes. This amalgamated station cost-cutting measure would orphan the Seattle Streetcar. Redundancy in transit is a good thing. This is simply not the place to value engineer transit and access.</p> <p>Westlake Station Cost-Saving: Having one street-level egress point for the new downtown tunnel line, at the busiest station in the network, completely out-of-sight from Westlake Plaza, seems woefully insufficient.</p> <p>Midtown Station: Woefully too deep – having elevator-only egress at a busy downtown station is incomprehensible and is just not international best-practice in station design.</p> <p>International Chinatown Station: Much prefer a shallower 4th Ave option and make sure transfer are quick and easy. Engineer for user-experience and rider efficiency. Attempt to integrate with Seattle Streetcar, Sounder, and AMTRAK (hopefully: Future Cascadia HSR) – Jackson/2nd Ave Ext. is one of the most pedestrian-hostile intersections in Seattle.</p> <p>All-Subterranean Stations: Shallower! We need to construct the best and most cost-effective transit system for Seattle. If American engineering solutions are lackluster and pricey, look to tunneling engineering expertise from Europe and Japan, where they're adept at boring and excavating in proximity to existing constraints.</p> <p>SODO: Mixed-profile station preferred as losing the busway could substantially impact other modes of transit. Grade-separation of Link Light-Rail will always win over at-grade, conflict-prone options that have long-term capacity and reliability implications.</p> <p>West Seattle: The 41st Medium Tunnel option is preferred with a retained Avalon Retained-Cut Station. Delridge is in an awkward area and is likely to remain a transfer station. Eliminating Avalon as proposed cut-</p>	Andres de Wet

	<p>cutting seems to orphan a lot of recently constructed TOD east of Alaska Junction. This also signals to future developers that proposed stations cannot be relied upon, thwarting efforts to proactively attracting TOD development to future ST extensions.</p> <p>Overall: NIMBYs are almost always louder than their absolute numbers suggest. A flourishing city cannot function or grow without effective transportation. Part of living in a city is expecting a city to evolve. To believe everything will remain static is being unreasonable. Calibrate outside voices in promulgating a NIMBY agenda that frustrates future transit to the demographic makeup of a given community – if all complaints come from a single population group of a single cohort, seek out other voices to calibrate the real support or opposition accordingly.</p> <p>Thank you for considering my commentary and continue to good work of bringing the Sound closer together and striving towards making the Seattle-metro the best transit city in North America.</p>	
04/19/2022	<p>Please build the tracks under ground. West Seattle is small with limited land. We do not want houses and businesses removed for tracks.</p> <p>Thanks!</p>	Gale Menicke
04/19/2022	<p>The area that I would like to focus on is the Chinatown-International District Segment Alternatives. Our family moved to Seattle in 1985. My mom worked in the area and I spent a fair amount of time in the neighborhood. In 2010 we moved our business into the area and have had two different location on Main St. between 5th and 6th Ave. I've seen a lot changes in the CID over the years and would like to see the neighborhood and unique business not get displaced. I believe that either option CID-1a or CID-1b would best to help preserve the CID and not displace these business. These two options would also help with the game day traffic stress to the stations. Having the new station separate from the existing station would help spread the user traffic during these high peak spikes. I know there would be additional cost and a few extra years added to these two options but I believe the neighborhood is absolutely worth preserving for our future generation.</p>	NHON TRUONG

04/19/2022	<p>I want to encourage you to explore the DEL-5 and DEL-6 options for the West Seattle Link Extension. I am a resident of 25th Ave SW. My husband and I are first-time home buyers and have worked very hard to save and buy a small townhome in this competitive market. We would not receive compensation or a buy-out from the city if the extension were built on our street in the preferred alternative draft. This is extremely concerning and frustrating. I encourage the city to disrupt as few homes as possible- going with DEL-5 and DEL-6 impacts much fewer homes than the other alternatives. There is another Subway location minutes away, as well as another Uptown Espresso- there is no other home for me and the other residents of Delridge. I am afraid that the city doesn't value the homes in Delridge as highly as they would in other more expensive neighborhoods in West Seattle. I encourage you to consider the economic impact this would have on the Delridge community- many of us simply can't afford to live anywhere else in this expensive city.</p> <p>Thank you for your time,</p> <p>Taylor</p>	Taylor Gall
04/19/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Alex Morgan

<p>04/19/2022</p>	<p>Hello,</p> <p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. <p>04/19/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	<p>Jacob Polwarth</p>
<p>04/19/2022</p>	<p>Hi There!</p> <p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <p>The business disruption is closely similar for both of these options</p> <p>The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487</p> <p>The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for</p> <p>The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year</p> <p>There would be no risk of golf balls hitting the trains</p> <p>The Parks Department supports the Yancy alternatives</p> <p>This is the only golf course that serves the West Seattle community</p> <p>Longfellow Creek would have no risk of damage to the fish or the creek</p> <p>The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes.</p> <p>Thank You!</p>	<p>Maxden Regalado</p>

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Greg Hurlman greg@98.codes</p>	<p>Greg Hurlman</p>

In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Taylor Cramer musicmaniacct@gmail.com</p>	<p>Taylor Cramer</p>

04/14/2022	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>If stations are eliminated, please be sure that bus line stops cover those areas.</p> <p>Make stations as accessible, and reliable as possible. Use high quality escalators and elevators, and put them behind turnstiles so they don't become homeless toilets. Consider adding turnstiles to all stations (San Francisco has managed this with 200,000 riders a day on their BART).</p> <p>In Ballard: consider how 14th terminal station with consideration for building for extension north in the future, or build on 15th pathway.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: Ballard station must be built to allow for expansion toward the north (Crown Hill) and ultimately up Holman to connect with the main transit line).</p> <p>Thank you for your review of these comments.</p> <p>Leila El-Wakil leilanadja@gmail.com 7742 19th Ave NW Seattle, Washington 98117</p>	Leila El-Wakil

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p>	<p>Jacob Cyriac</p>
-------------------	--	---------------------

- In order to future proof our growing system, we must design for expandability in four locations:
- (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).
 - (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
 - (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
 - (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
 - (5) West Seattle should be built for future southern expansion to White Center and Burien.

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. <p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>As a resident of Delridge in West Seattle we are very excited for the new extension, but nervous of the negative externalities a bad design may bring.</p> <p>Sound Transit should be prioritizing stations that occupy existing ROW and displace as few existing homes as possible. They should also not be considering very tall or very deep stations as these will create access issues and create much lengthier transfer times (which will be very important for those in the neighborhood who will be transferring by bus and bike).</p> <p>Please choose the options that displace cars more than people.</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Lacey Pierce gir.doom@comcast.net</p>	<p>Lacey Pierce</p>

<p>04/14/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Garrett McCulloch garrett.mcculloch@gmail.com</p>	<p>Garrett McCulloch</p>

04/15/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative.</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott Station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge. Would love then route west of the train tracks.</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access. There is the proposal for the new urban shopping village and potentially a location for a new bridge over to Magnolia- I would love to see these locations align so the infrastructure can be built simultaneously. I would love for a stop west of the tracks.</p> <p>Ballard station: Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p> <p>Beth Mikulka</p>	Beth Mikulka

<p>04/18/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). <p>04/18/2022</p>	<p>The DEIS falls short on Social Justice, Environmental Justice and the human costs. It needs to include a cost-benefit analysis of the CID economy by neighborhood, CID environment by neighborhood, and societal costs by neighborhood.</p>	<p>Brien Chow</p>
<p>04/18/2022</p>	<p>Hello,</p> <p>I live in West Seattle 98116 and I prefer the tunnel option to connect to the Junction, just like what has been provided for other areas of the city such as Roosevelt, University and Northgate.</p> <p>Next preference is the Skylink urban gondola which I was disappointed to see was not even included as an option. The Skylink option is a fraction of the cost and a fraction of the carbon footprint of the other presented options, and could be completed much sooner and with less impact to the community than all but the tunnel option.</p> <p>Next preference is above ground rail and</p> <p>Last would be surface rail.</p> <p>Thank you,</p> <p>Diana Johnson</p>	<p>Diane Johnson</p>

04/18/2022	<p data-bbox="261 100 505 128">F.2 Agency Coordination</p> <p data-bbox="261 159 1305 239">Appendix G, Environmental Justice, provides more information on specific targeted outreach that Sound Transit has done to date to reach people with limited English proficiency, communities of color, and people with low incomes.</p> <p data-bbox="261 333 1310 533">Keep in mind the DEIS is way too difficult and technical to send limited English speakers to Google Translate. And depending on Google Translate can be frustrating in its inaccuracy. While outreach in English is pretty impressive, a way has not been found by ST to engage the limited English speakers regarding the DEIS so they cannot meaningfully participate in making comments. Meetings with simultaneous interpretation is one way with scribes to record their feedback. Or have participants write comments immediately in the target language to turn in. Such a meeting would be similar to CAGs but focus on presenting CID info from the DEIS.</p> <p data-bbox="261 569 1310 737">The lack of transparency in CAG and other meetings only hurts ST's attempts to get its message across. When people are not informed, they tend to magnify rumors and wrong information, much like a horror movie holds the audience in suspense about info they don't know yet. For example, the flip answer that the ventilation shafts building is not new info; that it's in the DEIS and all one need do is read it. Well, I've read it and found there are not one but TWO ventilation shaft buildings proposed for CID 2a, plus what looks like a very large bike storage structure and a maintenance structure.</p> <p data-bbox="261 772 1310 852">Withholding information like that is not conducive to trust building, especially if the community is supposed to be a "partner. " And what about those who don't read English? How are they supposed to find that ventilation building info in a 2,000 page document?</p> <p data-bbox="261 888 537 940">Betty Chong Wa Benevolent Assn.</p>	Betty Lau

04/18/2022	<p>Hello!</p> <p>I am a West Seattle resident and was looking at the West Seattle Junction Segment 3.1.1.4 in the Draft EIS. The elevated rail is very concerning to me. This option would severely impact the business area of West Seattle. It seems strange to me that the light rail would run to this part of town specifically because it is the business center, but it would cause disruption to a large portion of the businesses there. I am strongly in favor of the tunnel options, so we can maintain a central, walkable shopping junction.</p> <p>Thank you so much for reading this,</p> <p>Jovan Johnson</p> <p>Sent from Motorola car phone</p>	Jovan Johnson

04/18/2022	<p>DEIS Appendix L4.2 Land Use, Policies & Goals</p> <p>CID Goal ID-G1: Support the thriving businesses, organizations, and cultural institutions of the Chinatown-International District and recognize the neighborhood's rich and vital history as home to and center of many of the city's immigrant communities including the Chinese, Filipino, Japanese, and Vietnamese communities and as a historic center of the Native American and African-American communities in the city.</p> <p>[Goal name wrong, should be CID-G1; goal not properly written; needs to be Specific, Measurable, Achievable, Relevant, Time-bound. If not an author error, add [sic] after the error to indicate it's a quote that includes an error, e.g., Goal ID [sic]-G1]; also, "recognize" is not measurable. If not measurable, how do we note progress or know when the goal is achieved?]</p> <p>Policy ID-P4: Encourage new business development and location within the neighborhood.</p> <p>[Goal name wrong, should be CID-P4 or if not ST error, add [sic] to indicate not author error, e.g., ID [sic]-P4. In addition, seems like there should be goals other than Encourage business, such as Set up incentive program for building owners who keep tenant and commercial rents low. Since organizations, and cultural institutions are mentioned in G1, they should get a mention along with businesses in COD-P4 or maybe there should be a P1-P3 that include family, tong, geographic and social organizations and cultural institutions]</p>	Betty Lau

Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Charles Cardinaux charles.cardinaux@gmail.com</p>	<p>Charles Cardinaux</p>

04/19/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <p>Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand</p> <p>Minimize transfer time from transit to platform</p> <p>Avoid transit plans that require pedestrian crossing of major thoroughfares</p> <p>Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures.</p> <p>Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW</p> <p>Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Smith Cove (SIB-1):</p> <p>Approach station by tunneling under Elliott</p> <p>Station on West side of Elliott</p> <p>Minimize size, if elevated station, over Galer flyover/Magnolia Bridge</p> <p>Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b):</p> <p>Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures.</p> <p>Bruce D. Carter</p> <p>3012 West Eaton Street</p> <p>Seattle, WA</p>	Bruce Carter

<p>04/19/2022</p>	<p>Hi there,</p> <p>I am strongly saying/voting NO to any light rail in West Seattle. No to taking out Jefferson Square, no to taking out LA Fitness, Trader Joe's, Starbucks, Taco Time, Peco's and countless other businesses (42 I believe) along with NO to taking out any of the housing! Already a housing shortage and I did not just spend \$300,000.00 for a small condo on Avalon to now endure constuction and noise for the next 10 years so have my new neighborhood taken away due to an eyesore light rail!!!!</p> <p>The C bus line is already in place and is about 20 minutes to downtown. I did the commute for 13 years and it's very convenient and accessible for all. Why add 6-10 years of construction and congestion to the already suffering West Seattle?</p> <p>We've already been forced to commute around due to the bridge being out. I vote NO to any raised light rail!!! No more construction in WS!!!</p> <p>Thank you,</p> <p>Tanya Hurst</p> <p>206-576-1767 Direct - 866-230-MOJO x1767 Main - 206-767-8010 Fax</p> <p>tanyah@gotomojo.com</p>	<p>Tanya Hurst</p>
<p>04/19/2022</p>	<p>I am writing on behalf of my grandmother who owns a home at 4823 42nd Ave SW, Seattle WA 98116. Extending the light rail to West Seattle, particularly the WSJ-1 alternative would have a significant negative impact for her. She has owned her home and paid taxes on that home for over 40 years. Not only would it create a hardship for her, but it would destroy what is one of the few remaining family friendly neighborhoods available for moderate income families. The number of small family owned businesses in the area would also be impacted, if not forced to lose their livelihoods.</p> <p>Those who live in this community understand that it is not only a walkable community but one that fosters good neighbor relations and a wholesome environment. It would be unfortunate to destroy that in exchange for this project. There are plenty of industrial areas at the foot of the west side of the bridge to accommodate this project, there is no need to destroy family neighborhoods to accommodate it.</p> <p>Kim Shugart on behalf of Lola E. Shugart 4823 42nd Ave SW, Seattle WA 98116 509-947-6887</p>	<p>Kim Shugart</p>

04/19/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none">2) The business disruption is closely similar for both of these options3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 4874) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year6) There would be no risk of golf balls hitting the trains7) The Parks Department supports the Yancy alternatives8) This is the only golf course that serves the West Seattle community9) Longfellow Creek would have no risk of damage to the fish or the creek10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Phil Charles

04/19/2022	As an owner of a fourplex in the Delridge neighborhood, I would like to voice my support ideally in favor of Delridge Way station alternatives DEL-5 or DEL-6. I prefer these alternatives due to their minimal impact on the residential homes in the area and minimizing displacement of existing residents and historic fixtures. This is preferable to alternatives DEL-1a, DEL-1b, DEL-2a, DEL-2b, which have significant impact on the residents of the neighborhood, and DEL-3 and DEL-4, which have the maximum impact. While there is no perfect location or solution to transit locations and construction, minimizing the impact on housing is a critical aspect of the optimal station location. Thank you.	Michiel Zuidweg
04/19/2022	The West Seattle golf course is an institution of West Seattle and a community draw. I have not lived in West Seattle for 8 years and still make very regular pilgrimages to play the course, see old friends, enjoy the views of the city, and enjoy the mens club community. It is a wonderful place with history, great people of all ages and backgrounds, and provides a significant community benefit that cannot be ignored. It would truly be loss for the area of West Seattle to lose the golf course that I, and so many, cherish. If a route is selected it must be the route with no impact to the golf course.	Matthew Bourne
04/19/2022	Please use the Yancy/ Avalon plan for the light rail in West Seattle. This will avoid a heavy, negative impact on our treasured West Seattle Golf Course and Park. Thank you.	Alison Judd

04/19/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <ol style="list-style-type: none"> 1). The budget is the same or cheaper for Yancy/Avalon routes, 1.6 B and 1.5 B. 2). The business disruption is closely similar for both of these options. 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487. 4). The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for. 5). The loss of revenue and loss recreation opportunity would not be impacted for over 60,000 golfers each year. 6). There would be no risk of golf balls hitting the trains. 7). The Parks Department supports the Yancy alternatives. 8). This is the only golf course that serves the West Seattle community. 9). Longfellow Creek would have no risk of damage to the fish or the creek. 10) The mature trees all along the North edge of the golf course would not be cut down. 	Catherine Sue Johnson
04/19/2022	<p>If you are going to bring light rail to West Seattle, put it underground. If you can't put it underground, then don't come to West Seattle.</p> <p>limit the number of stations to two. Having three so closely spaced, as some plans call for, makes no sense.</p>	Richard Petters
04/19/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. 04/19/2022	<p>I prefer the Yancy Street alternative as it will go along established bus stops, higher density areas for use and is the least disruptive of the West Seattle Golf Course, which is considered by many a "jewel" in Seattle and being a park, should not be disrupted by noise from overhead rail traffic. Compared to most other golf courses, it is quiet with few residences abutting it. Thanks.</p>	Frank Jose

04/19/2022	<p>As a Seattle resident and a residential property (4-plex apartment) owner in the Delridge neighborhood, I would like to voice support specifically in favor of Delridge Way station alternatives DEL-5 or DEL-6. These alternatives are preferred due to their minimizing impact on the residential housing stock of the neighborhood, ensuring minimal displacement of existing residents and historic fixtures. This is preferable to alternatives DEL-1a, DEL-1b, DEL-2a, DEL-2b, which have significant impact on the residents of the neighborhood, and DEL-3 and DEL-4, which have the maximum impact. While there is no perfect location or solution to transit locations and construction, minimizing the impact on housing is a critical aspect of station and line choice.</p>	Kelly Jewell

04/19/2022	<p>am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. 04/19/2022	As a West Seattle home owner I have major concerns around the impact of the light rail track and stations on our neighborhoods. Would prefer to see a proposal to build the stations and tracks underground to keep our neighborhood intact. Sound Transit has built underground in most neighborhoods in the City thus far and I hope the same can be done in West Seattle.	Rachel Spence

Thank you</p>	Gary Wieder
04/19/2022	<p>The West Seattle tunnel option is the only option I support. It's the least disruptive and the only option that allows us a chance to maintain at least some of the businesses and housing potentially impacted by this project. See appendix section L4.1</p> <p>I am disappointed that Sound Transit did not work more closely with the city to prevent some of the recent development that has occurred on the proposed light rail paths through West Seattle. A huge chunk of new housing as well as important businesses may be lost - what a waste of money not to mention environmental impacts, exacerbating housing issues, etc. Why did we allow so many apartment buildings to go in if they will be impacted by light rail? (again, referencing appendix section L4.1)</p> <p>I strongly encourage Park and Ride options. Buses from Arbor Heights to the WS Junction take about 25-30 minutes during rush hour (upwards of 50 minutes outside of rush hour). Tack that onto time to board light rail downtown, and I'm looking at a much longer commute if I use light rail.</p>	Kacie Baldwin
04/19/2022	<p>I support the Avalon/Yanecy routes and oppose any route that impacts West Seattle golf course. I also oppose any thought of another tunnel that may take any land from the golf course</p>	Rusty Flook
04/19/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p>	Rodger Ferron
04/19/2022	<p>Please consider any/all viable options that do not involve disrupting or demolishing parts of the beloved West Seattle Golf Course. This park has provided joy and entertainment for all manner and walks of life for over 7 decades. As I understand it, the other options are cheaper and less disruptive to both private and park land, particularly considering that park land has been legislated to remain just that. The golf course (during and post pandemic) has been a great source of revenue, as well. The course weathered a similar proposal involving a driving range addition that also would have scarred the property. Shame if that would have been for naught. Thank you</p>	Mark Sullivan

<p>04/19/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. 04/19/2022	<p>For the West Seattle extensions, the residential and operable noise impacts over the span of the usable life of the line are significantly reduced in the tunnel options, and render the elevated alternatives as considerably inferior when considering long-term residential land-use of the area this extension aims to serve.</p>	Patrick Dellerba
04/19/2022	<p>I support a link light rail to West Seattle, but I don't want to see the north side of the golf course and Longfellow Creek impacted by a route up Genesee Avenue. The Yancy/Avalon route is preferable.</p>	Charles Sanders

04/19/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes as opposed to any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Seattle Park's property.</p> <p>I believe the following reasons demonstrate why the project should favor the Yancy/Avalon routes -</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would impact over 60,000 golfers each year and employees of the facility 6) There no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This West Seattle Golf course is the only golf course that serves the West Seattle community and surrounding areas. Additionally given the reputation the golf course has acquired, many golfers from all around the Seattle-Tacoma area choose to play at the course even if they do not live in West Seattle 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes.</p>	Spencer Goldberg
04/19/2022	<p>After reading the EIS statement there are several reasons to prefer the Andover alternative to Delridge or Dakota. I have lived in West Seattle for 35+ years. Looking at Figure ES-22 there are several points that favor the Andover lower height alternative in the the route would traverse a commercial steel plant rather than a city park. Our city parks need to be protected. The route would about what is now the current arterial, impacting less.</p> <p>That steel plant can be very noisy so the train would not affect anyone or thing. I was a member of the West Seattle club there across the street and that route makes much more sense.</p> <p>Table ES-3 points out the cost for the Andover lower alternative would be one of the least costly, construction interruptions would be approximately the same or a little less disruption. The Andover route displaces the least amount of people and about the same number of businesses. There would be a lot less visual and noise impacts than the other routes. The Andover route does not impact any historical properties as the others all do and it impacts a city park, West Seattle Golf course. Please, we must protect our parks.</p> <p>Keep this project near the current arterial that will provide less impact overall. I prefer the Andover alternative to Delridge or Dakota.</p> <p>Please adjust the preferred route to Yancy or Avalon. It makes much more sense.</p>	Thomas Fehlen

04/19/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. 04/19/2022	<p>While I do like the idea of light rail in general, I do not think it feels like a good fit for West Seattle, because of its odd geography/location.</p> <p>I feel our community is already well connected to public transit to downtown, via busses and water taxi, and I feel that it would be more economical and practical to increase bus/taxi routes and further incentivize those options. Additionally, I tend to be skeptical of plans that would make traveling across the bridge we barely have now even more restrictive during construction.</p> <p>If you do push onward with this project, I would much prefer the tunnel option, as every single person I've talked with about this issue has strong negative feelings about the elevated option. In addition to being an eye sore, it seems unideal if it were to be stalled to be above ground, and as someone with slight claustrophobia, I'd be hesitant to take a trip on an option that would keep me enclosed as such above ground.</p> <p>Most specifically, the thing I dislike most about the plan is that it feels like we'll be unnecessarily removing housing options in a neighborhood already suffering for lack of housing. Why remove so many homes, apartment complexes, and businesses — the components of a community — in the area that draws people to West Seattle? Why pay taxpayer money to build an expensive and superfluous transportation system to travel to/from a community, when the very act of doing so would remove the businesses that were the main attraction? Why would people want to pay more to live in West Seattle (because of lack of housing) when the quality of life is also removed (because of loss of businesses or neighborhood appeal) all so you can take light rail in addition to the bus?</p> <p>All to say, I feel that the proposed options would be expensive, superfluous, and add to the already problematic housing shortage. Please do consider instead investing in our bridge and in better bus conditions and increased water taxi routes, so that it's actually convenient rather than cute.</p>	Bekah Sandy

04/19/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <p>2) The business disruption is closely similar for both of these options</p> <p>3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487</p> <p>4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for</p> <p>5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year</p> <p>6) There would be no risk of golf balls hitting the trains</p> <p>7) The Parks Department supports the Yancy alternatives</p> <p>8) This is the only golf course that serves the West Seattle community</p> <p>9) Longfellow Creek would have no risk of damage to the fish or the creek</p> <p>10) The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Timothy Crawley
04/19/2022	<p>Find another route I love the businesses in my community that this plan will destroy. Not enough people use the light rail transit system.</p>	Symone Taylor
04/19/2022	<p>This is directed towards the plan for the Link Extension in West Seattle.</p> <p>Please do not destroy the Trader Joes. Maybe have it nearby with a stop? Out of the current list of potential businesses impacted, this one is the most impactful in my opinion.</p> <p>Thank you for your time.</p>	Emilie Barnard
04/19/2022	<p>I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <p>The business disruption is closely similar for both of these options</p> <p>The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487</p> <p>The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for</p> <p>The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year</p> <p>There would be no risk of golf balls hitting the trains</p> <p>The Parks Department supports the Yancy alternatives</p> <p>This is the only golf course that serves the West Seattle community</p> <p>Longfellow Creek would have no risk of damage to the fish or the creek</p> <p>The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	David Herrick

04/19/2022	<p>West Seattle Golf Course is a benefit to the community. It is unconscionable to even consider removing any piece of this historical gift to the West Seattle residents. The property owners in WS contribute to the King County tax base, despite being underrepresented and having limited access to The city.</p> <p>Our parks are what make this area so special. Do not cut into them when there are several other viable options for this project.</p>	Janet Folley
04/19/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Nate Ward
04/19/2022	<p>I would like to add my voice in support of either of the Yancy/Avalon routes. I am opposed to any alternative that would impact the West Seattle Golf course, truly one of the Seattle Parks and Recreation Department true gems. Further, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>Please protect one of the most wonderful, and widely appreciated pieces of the Seattle Parks Department's properties</p>	Arkell M. Burnap

<p>04/19/2022</p>	<p>Aravita Condominiums (“Aravita”), situated at 3045 20th Ave W, Seattle, WA, 98199, is a 41-unit building near the proposed Interbay station.</p> <p>Impact 1: Air Pollution</p> <p>One impact to Aravita residents from the Project is the projected increase in noise, vibration, dust and other air pollution.</p> <p>While the BNSF freight rail yard is already located in the same area as the preferred alternative for the light rail project, noise and vibration from freight rail operations is intermittent and there is an embankment. Current Sound Transit light rail transit operates from 4:44 am to 1:23 am with a train running every 12 to 15 minutes. The preferred alternative is an elevated guideway for light rail at approximately 80’-90’ above ground level.</p> <p>Impact 2: Traffic</p> <p>The Project, regardless of the final alternative, is projected to result in increased pedestrian, cyclist, and vehicle traffic in the Interbay area.</p> <p>Potentially adverse impacts to Aravita residents include difficulty with access to parking, traffic congestion, and pedestrian safety.</p> <p>Some potential changes to the area associated with the new Interbay Station are:</p> <p>A) Redirecting the Magnolia bus route to 20th Ave W, and B) Creating new bike lanes along W Dravus St.</p> <p>Impact 3: Visual Aesthetics</p> <p>The Project may result in additional light pollution during construction and operation, particularly for Aravita units that are North facing and/or East facing.</p> <p>Question: How will potential adverse air pollution, traffic and visual aesthetic impacts be mitigated?</p>	<p>Lindsey Taylor</p>
<p>04/19/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. 04/19/2022	<p>Hi, Underground pls.</p> <p>And move ur comment box towards the middle, whew!! I had to scroll all the way to the bottom just to sign, ppl will bail Best!</p>	Tori Damianas
04/19/2022	<p>Please do not build the light rail through the dusty strings Harp building. This is the United State’s best lever harp maker, and likely the best in the world, especially at their company size class. Any interruption to their services will cause major impacts to the traditional music industry. Individuals will not be able to obtain new instruments, get repairs, place string orders, etc. The harp industry has already been majorly impacted by COVID and supply chain issues. Any further impacts to the harp industry would be devastating to musicians. Moving such a unique manufacturing operation would cause years of delays in harp production. Please route the light rail around their business. You are destroying an important musical landmark and massively injuring a small musical economy.</p>	Kara welch
04/20/2022	<p>I’m excited for better/faster transportation options to and from west seattle. Please consider a more thorough third party feasibility study of a gondola possibilities.</p>	Bradley Curran
04/20/2022	<p>Please consider the comments below on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. This would spare the home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder and are vital to the music community. Many depend on their instruments and of particular note are those who work in music and harp therapy. Harp music has been shown to aid in the recovery from illness and these instruments are of vital importance. Please consider a route that will avoid disruption - it’s important to so many!</p>	Linda Browning
04/20/2022	<p>This is the last thing we need in our community with mass transit being such a magnet for drug use and criminal activity not to mention homeless people with no agenda other than partaking in the two above. We seen what this did to the South End i.e. Rainer Valley forcing business to shut down families out of homes increasing disparity when the truth is we the community feel safer within our own vehicles. Stop forcing mass transit down our throats wasting billions in tax payer money that has nothing but negative impact on society economically environmentally. These systems take up way too much space are not favored by most middle class working tax payers(majority flipping the bill) creating way more headaches slowing down motorist causing far more havoc for commuters. Spend billions just to witness the demise of more historical landmarks demolishing more homesteads just to give drug addicts and criminals a free ride to create chaos. The transit in place is more than enough in fact too much! This will kill West Seattle and we won’t allow it not ever. We will do whatever it takes at any extent to curb this community killer</p>	Brandy McWilliams

04/20/2022	<p>From Dusty Strings, 3450 16th Ave W, Seattle, WA 98119 I have heard that the building of their production company may have to be demolished for the new light rail. I would like to point out the wonderful family business that is Dusty Strings. They are valued for their beautiful musical instruments. I myself have a harp shop in the Netherlands, Europe. I have been selling the Dusty Strings harps and hammered dulcimers since 2002. Dusty Strings has put Seattle on the map as a city where the most beautiful harps and dulcimers are built. It would be a disaster for Dusty Strings if they had to leave their relatively new building. The building was built just 20 years ago exactly according to their wishes. Another location within Seattle is not easy to find. If the building has to be demolished, it will have enormous consequences for their production process. That has major consequences for my shop in the Netherlands as well. My shop can hardly survive if no more harps and dulcimers can be built by Dusty Strings. These instruments are highly regarded here. I sell them all over Europe. Obviously the light rail will be necessary. I request that you explore all possibilities to preserve the Dusty Strings company for Seattle, its employees, its suppliers and all musicians in the world. And if demolition is the only option, please offer this wonderful company a good alternative with as little disruption to the production process as possible. I rely on sensible decision-making taking into account the importance for Dusty Strings.</p> <p>Zingende Snaar BV Koningin Elisabethplantsoen 5A 3911 KT RHENEN The Netherlands www.zingendesnaar.nl</p>	Jeanette van Nieulande

04/20/2022	<p>I grew up in Seattle and played on the Nathan Hale golf team- 87' grad. When I was a kid we had three full size courses. We have three full size courses now and our population has grown substantially. Golf is a healthy activity for the whole family. The green space is home to wildlife. Please do not put the light rail line on the golf course. I understand we have two plans that leave the course untouched. Thank you for your consideration.</p>	David Frasch
04/20/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property. I would think as a progressive city, the impact on the environment is as important as well. Parks provide that and should be preserved. In addition, reasons for opposition is as follows.</p> <p>The budget is same or cheaper for Yancy/Avalon routes. I would like to think the city is fiscally responsible. Private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487. I believe there is a city ordinance driven by citizen initiative that park property cannot be used for the purposes other than what it was intended for.</p> <p>Loss of revenue for the city and impacting over 60,000 golfers each year.</p> <p>Risk of golf balls hitting the trains.</p> <p>City Parks Department supports the Yancy alternatives.</p> <p>Environmental impact on Longfellow Creek to fish and other wildlife.</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes.</p> <p>Thank you.</p>	Shari Lewis

04/20/2022	<p>Please, please, please, no elevated rail line through our neighbourhoods. NO ONE wants their home destroyed or to look out onto an ugly rail line, much less be subjected to the constant noise. Build a tunnel or don't build it. The noise, light and aesthetic pollution is not worth it. Ask every other major city in the world (NYC, Paris, Chicago, San Francisco) that have slowly replaced their ugly, noisy 19th century "L's" with underground systems. If we can't afford a tunnel, don't build it.</p>	Katharine Crick

04/20/2022	<p>Thank you for the detailed draft EIS clearly laying out all the options.</p> <p>Opinions:</p> <p>Dropping the avalon station seems like a short-sighted choice without a clear benefit. It does allow easier access to the light-rail for a significant population and particularly at a common bus transfer point. The junction and delridge stations would not satisfactorily replace this. The 21, for example, runs up and down 35th, which is a common bus, and you would have to transfer to the C to get to the junction to use the light-rail, which would be one bus too many for a lot of people. We should build for the system we want in the future, expecting larger ridership over time.</p> <p>I support tunneling in the junction area, as it would make it much less disruptive and also, if you are visioning for possible southern expansion in an unknown future, any line that proceeds south from the junction would be best tunneled as otherwise it would severely disrupt a huge swath of residential neighborhoods.</p> <p>Please prioritize routes that disrupt the least amount of parkland and wildlife habitat. These are things that we can never get back or reclaim. While I feel that disruption to homes and business also need to be minimized, parkland and wildlife habitat are irreplaceable.</p> <p>Please pick one of the delridge station locations that is more central, and less northerly. Even an extra 5 minute walk can be a deterrent to someone using transit, and making it as easy as possible to transition from bus to light rail will really benefit the system over time.</p> <p>Thank you,</p> <p>Shawnti Rockwell</p>	Shawnti Rockwell
04/20/2022	<p>would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>First: Thank you for building this section of light rail! I am a Seattle native and 30-year Ballard homeowner, and I worked in Interbay for much of my working life. As such, I very much appreciate the need for this project.</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration. All the best Kristine</p>	Kristine Warmhold

04/20/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Kyle Russell
04/20/2022	<p>Dear Sound Transit Board,</p> <p>I am a professional musician and the uninterrupted service of Dusty Strings helping me maintain my instruments is critical to my profession, with the key word being "uninterrupted." Therefore I respectfully request that the transit line proposed option to go through their facilities be rejected.</p> <p>Dr. David E. Knauss Ph.D. in Music Education, Penn State University Doc. of Humane Letters, The Wesley Synod International, Canterbury, England</p>	Dr. David Knauss

04/20/2022	<p>Dusty Strings has had a huge impact on my life these past 30 years. I play their harps, and refer my students to them when they're ready to purchase their own harp. I've learned how to care for and make minor repairs on my harp from the owners and staff at Dusty Strings. Making harps and dulcimers is a very specialized business and they not only take great pride in creating a high quality instrument, but spend as long as it takes to perfect their instruments. I have been to their shop and know first-hand that they have spent years building and crafting a workplace that supports them in keeping a high quality, and in turn providing the same to the harp and dulcimer communities. To have to move and re-create a new shop with the same high standards would not be an easy task, to put it mildly. Respectfully, on behalf of everyone that plays, loves, and will play and love their instruments, I ask that another route be chosen for the light rail. Thank you for your time.</p> <p>Sincerely, Aedan MacDonnell</p>	Aedan MacDonnell

This course is very popular and busy year round.</p>	Beau Gants
04/20/2022	<p>I am writing to request that the light rail system non be allowed to go through the Dusty Strings workshop/factory and that it not interrupt the building of Dusty Strings harp's. They are a globally-respected instrument builder and a part of the worldwide harp and hammered dulcimer communities. I have personally purchased several of their beautiful, expertly crafted harps over the years as have many of my friends. They are a family owned business with the highest of integrity and unparalleled customer service.</p>	Janice Mineer
04/20/2022	<p>My main concern is on the major displacement of businesses and tax base in West Seattle with several of the proposed routes. From what I've seen most of, if not all of, the elevated rail options will have a massive impact on West Seattle as a tax producing area for the next 20+ years. A tunnel system although more expensive initially, is the better way forward in my opinion.</p>	Dustin Venske
04/20/2022	<p>please reconsider the path of the light rail system as it will disrupt the operations of the manufacture of Dusty Strings. we need music, now more than ever. we are currently healing from hard times and this would be a devastating blow to the local musical community as well as to musicians worldwide. they craft superb instruments. sincerely, Dan Benson</p>	Dan Benson
04/20/2022	<p>As a 41st Ave SW resident of the West Seattle Junction I am disappointed to see the extreme displacement numbers on my street as well as 42nd Ave. I agree with removing the Avalon station to offset cost and would be in favor of the Fauntleroy station shift as it is significantly lower in displacement and acts as a middle location between Avalon and the junction.</p> <p>I do not want my home taken from me by the city for this project.</p> <p>Best, Kellie Langan</p>	Kellie Langan
04/20/2022	<p>We agree with : Ray and Sue's proposal that a modification of route that keeps the Dusty Strings Building: "the proposed track revision submitted by Ray Mooers to Alexis Lair on April 2nd"</p>	Gail Cohen

04/20/2022	<p>I strongly support the Elevated 14th Avenue Option (fromProspect/15th) also known as IBB-1b in consideration for the Dusty Strings Company at 3450 16th Ave W,they are globally respected harp and hammered dulcimer makers and proud members of Seattle's dwindling manufacturing community which is important to business diversity in an increasingly tech-dominated city.A move would displace approx 60-70 workers in this custom designed owner occupied model of a building that houses Dusty Strings as well as 4 other small businesses. Thank you for your consideration Deborah Everitt</p>	Deb Everitt
04/20/2022	<p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44. I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE.</p> <p>While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>I write to you as a colleague and friend of the Dusty Strings Company and its family owners, Ray, Sue, and Christy Mooers. I have known this family and company professionally for over twenty-five years. They have remained dedicated to building high quality musical instruments in the United States. On their behalf, and on behalf of over sixty employees of their company and others who work in the building, I ask you to consider the IBB-1b alternative route, which would allow their facility and business to remain in place.</p> <p>Their manufacturing facility, which would be impacted by the other route options, was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. Given the realities of building costs in Seattle, rebuilding could be unworkable, and Dusty Strings Company would be forced to relocate. In a time when local, regional, and federal governments are actively seeking ways to keep good manufacturing jobs in their communities, displacing a company that has committed itself to keeping high quality jobs in Seattle is a step in the wrong direction.</p> <p>While I support light rail and understand that some individuals will be impacted no matter which route is selected, I want to speak up for this company, which I have long known and admired for their commitment to outstanding craftsmanship as well as for their commitment to their community and employees.</p> <p>Best Regards, Steve Moss Moss Harp Service</p>	Steve Moss

03/17/2022	I think it's very important to get more translation out, translation -- translators to different languages to the community here, to get more of residents and visitors more people that can engage. And I think it's very important for the company and the government to consider about appraisal -- how to preserve the culture and the building, to help the small business owner here. Yeah. I think that's my concern just like this. Thank you.	Run Zhun
03/17/2022	I was just looking at the map, and I was thinking you guys are thinking about even having a tunnel or a bridge. I think you guys should have a bridge, you know, like the bridges over there in Ballard or the bridge going across Aurora, you know, a bridge for the light rail. And yeah, I think that's a good place to have a stop, too. Maybe right across the water, over there by Fred Meyer, you know? A lot of people live over there by -- you know, going back to Gasworks and University District and stuff. You know, they might want to get off there and park their car. I don't know if you guys are going to have a parking spot, but maybe a parking spot where people can park. It's kind of crowded over there, though, isn't it? So I don't know how that would do. But if you're by the water, I think there's a lot of places around the water where you could probably put parking spots for people that drop off their car and ride into town. So that's all I got to say.	Eugenia Curley
03/17/2022	I just think transportation is too limited. Transportation here is too limited. We should expand. A lot of people go a lot of places. Help them get there. And make some more income to pay more taxes. That's how I feel about it. But you know, I sleep at the VA Hospital in a tent out in the woods. If I don't catch a certain bus there at a certain time, I can't get there. That ain't cool. I'm a senior citizen, disabled vet. Help me get to where I got to go. That's all I got to say. Cool. Thank you.	Juan Rivera
03/17/2022	Oh, this is so weird. Okay. Okay. Hi. I'm a community member of the Chinatown-International District. My family has had a business here in the neighborhood for about 18 years. I'm very concerned about this project, the Sound Transit project. Our community has already faced a lot of challenges with different developments over the years such as the streetcar, which my family's business personally suffered impact from. The construction of the streetcar, it definitely affected business and was challenging for us, and so I'm concerned about the Sound Transit project and its effect on the Chinatown-International District. Historically, the construction of I-5 as well as the King Dome also negatively impacted our community. And then most recently with the pandemic. With Asian hate, our community has struggled a lot, and so I'm very concerned about this project and how it could affect already struggling local businesses in our neighborhood. So to me, when I look at these options, the -- and I see that some of these options will lead to the displacements of 18 or 19 businesses in our neighborhood, that's very concerning to me. And I know that even though it says 18 or 19, the number of businesses affected by construction will be much larger. So I -- I support the Fourth Avenue shallow or deep option as opposed to the Fifth Avenue options in the Chinatown-International District as these would displace fewer businesses and not have as catastrophic of an impact on the Chinatown-International District. Additionally, I think it's important that the businesses that will inevitably be affected by this project are adequately supported and compensated for these impacts. To be displaced by such a project, for me, seems unimaginable as my family's had a business, you know, in the same place for almost 20 years. We also have a business in Capitol Hill that's been there over 20 years, and so to, you know, be displaced from the location where your community is, is catastrophic, and it's very concerning to me. While the Fourth Avenue projects are perhaps more costly, I think that our local businesses and the Chinatown 13 International District is an invaluable asset to the city, and so if we have to choose between these five options presented in front of me for the Chinatown- International District stations, I would advocate for the Fourth Avenue options -- Fourth Avenue shallow or Fourth Avenue deep options. That's it. Thank you.	Aya Bisbee

<p>04/20/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. 04/20/2022	<p>I prefer either the Avalon or Yancy routes</p> <p>The cost is the same or less than the preferred routes One third the amount of businesses and residential units would be displaced. No park land would be lost. It is against a city ordinance to use any park land other than for its original intent.</p>	Christine Mason
04/20/2022	<p>I have comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE because it will avoid the removal and potential destruction a unique and well known harp business that has world wide ties: The Dusty Strings Company at 3450 16th Ave W. This is a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. I am a harp owner since 2012, in Austin, Texas, and I have and use their Ravenna harp, string replacements, repair, expertise, harp maintenance tools, and more from Dusty Strings. With the loss of the company, I and many, many harpists in the world would find it impossible to keep playing without significant disruption. We depend on Dusty Springs to be able to continue to play our instruments. In addition, all their expertise would be either lost or dispersed. I would think that Seattle would find it important to support manufacturing companies that employ skilled craftspeople and invest in the city, and which represent the city well in the world. I think the the IBB-1b alternative would be a good compromise.</p> <p>Thank you for your consideration.</p>	Elaine Sanchez

04/20/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. Thank you</p> <p>Mr. Peter Umbach</p>	Peter Umbach
04/20/2022	<p>I prefer the Yancy or Avalon options for the light rail. It would displace a lot less residents and newly opened businesses than the Genesee option in West Seattle. It would also not destroy the West Seattle Golf Course back nine that is under the jurisdiction of the Parks Department. Changing park land is illegal according to city of Seattle bylaws. When this idea was put on the ballot the brutal repercussions to local businesses and new residential housing were not even mentioned.</p>	Robert Mason
04/20/2022	<p>The Dusty Strings building address: 3450 16th Ave W, Seattle, WA 98119 could be impacted and eliminated by Sound Transit.</p> <p>Dusty Strings is a unique family owned business, not known for producing millionaires and billionaires, but rather for enriching our city with culture and music. Dusty Strings has become a Seattle destination by folks all over the country and the world. What happens in that shop touches the hearts and minds of folks in significant ways. It is a place producing life and joy in very significant ways, and may not survive as a Seattle institution if forced to move. Please see the place as a monument to the city, not just another building standing in the way of progress.</p>	Pete Daigle

04/20/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. Thank you</p>	James Bluhm
04/20/2022	<p>Small businesses are vital as tax payers to any community. These couple years has hit small businesses even more than usual. If we remove or upset the small businesses, we remove the revenue. Please consider another path. Dusty Strings has been on your tax base for ages. We are considering having them move to our state, we would love to have them, their exceptional customer service and their tax base.</p>	Martha Solent

04/20/2022	<p>I would like to voice my support for the recommendations presented by Seattle Subway and The Urbanist during a webinar on April 7th. I want to see Sound Transit prioritize transit riders in the development of the West Seattle and Ballard links. Furthermore, I hope to see planning for future expansion.</p> <p>Specific comments</p> <p>Medium Tunnel 41st Avenue Station: Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fautleroy Station that would reduce residential displacement and costly property takings.</p> <p>Avalon Retained Cut Station: Prefer WSJ-5 with a request to study a refined DEL-6 pairing.</p> <p>Delridge: Request a study of improved DEL-6 options that are compatible with the Medium 41st Avenue Tunnel [WSJ-5].</p> <p>SoDo: Choose Mixed Profile Station [SoDo-2] and study siting further north at the existing SoDo Station location to avoid costly post office taking.</p> <p>Chinatown-International District: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than four and a half minutes.</p> <p>Midtown: Make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>Westlake: 5th Avenue Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and find ways to speed up transfers and surface access.</p> <p>Denny: Westlake Avenue Station [DT-1]. Update vertical conveyances and aim shallower.</p> <p>South Lake Union: Prefer Harrison Street as the less bad option included, but study a Westlake Avenue or similar alignment centered in South Lake Union as much as possible.</p> <p>Uptown / Seattle Center: Prefer Republican Street Station and work to mitigate impacts to arts organizations to the extent possible.</p> <p>Smith Cove: Preferred Galer Street Station [SIB-1].</p> <p>Interbay: Advance and refine Thorndyke Retained Cut [IBB-2a/IBB-2b] and a slimmed down 15th Avenue Elevated Station [IBB-3].</p> <p>Ballard: Study pairing a high bridge with an elevated 15th Avenue Station and to continue to refine all tunnel options to put a station entrance west of 15th Avenue. Jettison the moveable bridge. Open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p>	Philip Greene
04/20/2022	I live in West Seattle (for 50+ years) and would strongly like to see the station/stations underground instead of above ground destroying the neighborhoods they go through.	Penny Mulligan

04/20/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. 04/20/2022	<p>I am just one of the many satisfied customers of Dusty Springs Harp manufacturing company located at 3450 16th Ave W. Seattle. WA 98119.</p> <p>I really treasure supporting family businesses who manufacture fine musical instruments. Your city is fortunate to have had them located in their current location for so many years. Please consider allowing them to stay in their home location. Thank you</p> <p>.</p>	Linda Galbraith
04/20/2022	<p>I'm writing on behalf of Dusty Strings, a business that would be severely impacted by the light rail route. I've toured their manufacturing facility, and I've never seen such a clean, well-thought-out and beautiful place to build their beautiful instruments. Dusty Strings is the underpinning of the folk music community in Seattle with their lines of instruments, as well as a major supplier of folk instruments around the U.S. and internationally. If the light rail MUST go through their factory, I beg you to go beyond a minor compensation and truly help the Dusty Strings Company relocate and rebuild. Seattle needs Dusty Strings.</p> <p>Thank you for your time.</p>	Avis Cawley

<p>04/20/2022</p>	<p>I've been reading Chapter 2, sections 2.1.2.1.3 on the Delridge segment, and 2.1.2.1.4 on the West Seattle Junction segment of the light rail. I would like to endorse alternative DEL-2a for the Delridge segment, and alternative WSJ-3b for the West Seattle Junction segment. The main reason is that I'm opposed to elevated guideways for the rail. They are unsightly and block natural light and decrease the distinctive feel of any neighborhood that they pass over. I feel that they are used in poorer neighborhoods where the residents will not object. So far they are in no other neighborhood in Seattle. For DEL-2a the guideway will be significantly lower (60 feet) than for DEL-1a (70-150 feet). This would be a much more human scale for the guideway. Alternative WSJ-3b does the best job of preserving the neighborhood feel of this part of West Seattle, and also has the closest station to the West Seattle Junction. This makes the most sense for businesses and transfers with Metro Transit, which has its stops at the Junction. WSJ-3a would be acceptable because it is also a tunnel, but the station is one block farther away from the Junction than WSJ-3b, so it is not as good a choice. I hope that third-party funding can be found for the tunnel option so that West Seattle can be treated fairly when compared with the north end of Seattle, and so that the beauty and livability of the Delridge, Avalon, and Junction neighborhoods can be preserved. One need only look at the Roosevelt Station neighborhood and imagine an elevated guideway there and the effect it would have had on the feel of the neighborhood. One additional point is that WSJ-2 should not be considered at all, as the station is much too far from the center of commerce in West Seattle. Thank you for the opportunity to comment.</p>	<p>Sharon von Wolffersdorff</p>

<p>04/20/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. <p>04/20/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS and representing both myself and my business. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property. I feel the light rail must be built in such a way as to address the impact it has to the landmarks well established in the West Seattle area. As a preservationist, local historian, and small business owner I am well aware of the price of progress. However when we have options we must be thoughtful of their long term consequences.</p> <p>There are many reasons to avoid taking away public lands, but to put it simply- there is no NEED to do so, thus we should opt for keeping developed infrastructure within boundaries already established over the years. I know I will see an impact to my business during construction. I know it will be impossible to please everyone. I also know that one of Seattle's biggest core values is the outdoors. By taking away any part of the nature that still exists in our community you are furthering Seattle's concrete footprint. I feel this is our chance to avoid mistakes that cannot be taken back.</p> <p>I hope you will consider my opinion on this and I look forward to the development of the light rail through West Seattle.</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	<p>John Bennett</p>

04/20/2022	<p>Dear people,</p> <p>I am writing in support of the IBB-1b alternative for the Ballard light rail extension. Unlike other options, IBB-1b would not destroy Dusty Strings' custom-designed state-of-the-art 2002 manufacturing facility which employs dozens of people in the highly specialized field of fine musical instrument manufacturing. This multi-generational family business has employed hundreds of Seattle residents since 1979, who have together produced tens of thousands of world-class harps and hammered dulcimers which are sought after by professional performers as well as dedicated amateurs on every continent (except possibly Antarctica). I personally feel lucky to own three Dusty Strings harps, and have been proud to showcase these amazing instruments during my 29-year performing and recording career. Dusty Strings instruments have been featured on the cover of numerous national and international publications including The Harp Column and Fine Woodworking; Dusty Strings has made Seattle a destination for people seeking these exquisite instruments which are made with such meticulous attention to detail in every aspect of production. In addition to its top-tier manufacturing, Dusty Strings has been a strong supporter of local music and musicians (including The Seattle Folklore Society, and the Folklife Festival) for decades. Dusty strings also created and continues to present the Seattle Folk Harp Symposium (now called Harp Seattle) which has brought world-class performers and teachers to their facility for concerts and classes for decades. It would be a major hardship for this rare jewel of a Seattle business to move its manufacturing operations; because of high costs and the limited availability of suitable building sites for the complex needs of high-end musical instrument production, any Sound Transit option other than IBB-1b would likely require the company to leave Seattle in order to build a comparable replacement to its (only 20-year-old) custom designed and built manufacturing facility. I urge you to choose IBB-1b, to support rather than distrust this thriving and world-renowned Seattle business, and to avoid destroying a state-of-the-art specialty facility when Sound Transit has other options which would have less impact on fewer businesses. Thank you for your consideration.</p>	Harper Tasche
04/20/2022	<p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Dusty Strings has been in business since 1979. I have been a customer of their amazing harps since 1985. To disrupt a globally recognized business when there is a VIABLE alternative shocks me.</p> <p>Thank you for your consideration.</p>	Kris Snyder

04/20/2022	<p>To whom it may concern;</p> <p>Congratulations to Seattle area on the new light rail line under construction. I've been watching its progress each time I drive south on the I5 from British Columbia, Canada to pick up harps and dulcimers from Seattle business, Dusty Strings.</p> <p>Dusty Strings is THE premier lever harp and hammered dulcimer manufacturer in the world. Founded in 1979, they are a family business with both a retail and a manufacturing location. The latter is a 20-yr old custom built which also houses 4 other small businesses. This building is right in the path of some of the proposed routes of the Light Rail!</p> <p>60 - 70 workers would be displaced as well as a successful, established and profitable business that ships unique Seattle-made products world-wide. I am the only dealer that drives down to pick up my orders and I would not be in business in Canada if it wasn't for this high-quality and most reliable supplier of fine instruments.</p> <p>Dusty Strings is a key player in the luthier (instrument making) world and I write this to emphasize their importance and plead for an alternative route so their production and exporting is not impeded.</p> <p>Thank you for reading this submission Alison Vardy West Coast Harps Nanaimo, BC Canada www.westcoastharps.co</p>	Alison Vardy
04/20/2022	<p>I would like to give my full support for any and all improvements and extensions to the light rail. I also would like to advocate for more stations at all costs rather than less. More access=less cars</p> <p>I would like Sound Transit to budget in BETTER ESCALATORS moving forward.</p> <p>I would also like Sound Transit to advocate for affordable housing and affordable spaces for local businesses in order to make areas around stations safer and more vibrant/livable. Of course whenever possible. For example the Mt. Baker station is a prefect example of an area that could use more development. If every station that has the space could be mirrored after the Capitol Hill Station then living in the city would be a breeze. I would encourage Sound Transit to purchase more property around potential stations and then incentivize developers to build affordable housing.</p> <p>Love the light rail</p>	M. Seamus Loftus
04/20/2022	<p>For acoustic musicians (amateur and professional), Dusty Strings has put Seattle on the map. As a small, family-owned business, Dusty Strings struggled to maintain their skilled instrument-making efforts during the two years of the pandemic. With those challenges finally beginning to end, they're faced with an even bigger threat: having the proposed transit line routed right through their property. Please consider an altered route. Thank you!</p>	Patricia McCloskey

04/20/2022	<p>Greetings:</p> <p>Please see the below comments regarding the WSBLE Draft Environmental Impact Statement. We implore you to please consider selecting DEL-5 and DEL-6 for the West Seattle Sound Transit route.</p> <p>We are longtime West Seattle residents and own a small Architecture Consulting firm that employs ~20 people many of whom live in West Seattle. Furthermore, we are co-owners of the 4000 Delridge Way SW property, which would be directly impacted by four of the West Seattle Link Extension route options being considered. We purchased this property on the corner of Delridge and Andover in 1999 and then helped design and construct the building, which our business, along with another of the building's co-owner's business, has occupied since 2004. We adore this space and it has been home to our business since it was built. We plan to continue to run our business out of this space for many years; however, all but two of the proposed options would impact our office and force us to leave.</p> <p>In reviewing the Draft EIS Executive Summary Delridge Segment (ES.3.1.1.3, page ES-13 – ES-18), it appears that the proposed options DEL-1a, DEL-1b, DEL-2a, DEL-2b, DEL-3, DEL-4 all impact the corner of Delridge and Andover. Not only would they force our office building to close they would essentially demolish the surrounding neighborhood. When we built our building at 4000 Delridge Way the city encouraged us to make it as nice as possible and required us to add the parking structure so as to improve the visual appearance of the Delridge/Andover corner. We have been good neighbors and helped to keep that part of the Delridge corridor a thriving business district. There are very few commercial buildings that would fit our needs and it would be devastating for our business and employee morale to have to leave West Seattle.</p> <p>It seems DEL-5 or DEL-6 are superior options generally, due to less neighborhood impact. Specifically, these options would allow us to remain on our corner and prevent any disruption to our thriving business. Options DEL-5 and DEL-6 would disrupt the fewest amount of residential and a similar number of commercial properties – both of which are limited in West Seattle. Our business would face great hardship if we had to leave West Seattle. DEL-5 and DEL-6 seem to be a more logical route for Sound Transit as per the table on Executive Summary ES-18 – the noise and visual impact would appear to be significantly less if DEL-6 was chosen above all other options. Furthermore DEL-5 only impacts 2 historical buildings and DEL-6 impacts 0, furthermore DEL-5 and DEL-6 have zero impacts on park and recreational resources, whereas the first four options impact a park and golf course. Additionally, the DEL-6 option is cheaper than the others making it a great choice since construction costs are rising at a dramatic rate. We disagree with the predicted ridership rates as maintaining the business district near the Delridge/Andover corner and adjacent buildings would increase ridership. The traffic impacts may be challenging and we will be prepared for those; however, a year or three of traffic inconveniences is a small sacrifice for being able to keep our building, particularly since we just went through a major upgrade to Delridge Way and have dealt with the more than two year closure of the West Seattle Bridge. The 4000 Delridge Way building is home to our family business and has provided hundreds of folks jobs over the years, forcing us to sell this property would be devastating as this building was designed and built to be a long-term investment with the highest quality of materials, including locally source wood siding and interior beams, as well as copper cladding. It is designed and built to last even in a changing climate. We have no intention of selling this property and would like to maintain it for generations to come.</p> <p>We implore you to please consider selecting DEL-5 and DEL-6 for the West Seattle Sound Transit route. Thank you.</p>	Martha Carlson

Thank you</p>	Ryan Meneely
04/20/2022	I'm in favor of the above ground options if they are faster to build AND if money is provided to nearby residents to improve sound-proofing. Funds for these improvements need to come from Bill Gates and Elon Musk. They built their fortunes in Seattle while planing games with the tax codes so that they didn't have to reinvest in Seattle.	Shannon Gray

04/20/2022	<p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. This neighborhood is in dire need of good childcare - and it would be detrimental if this establishment no longer existed. Please do not force them to relocate. If that is not possible, please provide adequate relocation fees for them to successfully relocate and stay open.</p> <p>The Draft EIS needs to be updated to include Alki Beach Academy as a social resource (Appendix L4.4, Table L4.4-1). At the time of relocation, Alki Beach Academy will care for nearly 100 more children than the largest center currently listed in the Draft EIS (Table L4.4-1 and Table L4.4-2).</p> <p>Based on the most recent assessments of the local child care industry, utilizing pre-pandemic numbers, current providers can only provide care for 46% of children at or below the age of 5. This number will only grow over time. Alki Beach Academy is the only child care program on the peninsula that may be impacted by the project and is the largest child care provider in the Delridge corridor. The Delridge corridor (98106) is the lowest-income zip code, the most racially diverse zip code on the peninsula, and includes some of the lowest opportunity areas in the city. Removing ABA from this community would impose a disproportionate impact on these communities.</p> <p>The alternatives that would require the program's relocation need to include this impact in their descriptions where appropriate. The Draft EIS needs to include a detailed description of the barriers to relocating a program of this size (20,000 square feet). The Draft EIS needs to include a detailed description of the impact on child care supply in 98106 if the program is relocated. The Draft EIS needs to include language acknowledging that the program's relocation would conflict with the environmental justice and racial equity goals of Seattle, King County, the Puget Sound Regional Council, and Sound Transit.</p> <p>Sound Transit is only required to pay \$50,000 in reestablishment expenses, which is about 3% of the estimated construction costs to reestablish Alki Beach Academy -- excluding moving expenses (Real Property Acquisitions and Relocation Policy, Sec. 9.4).</p> <p>The Delridge corridor desperately needs facilities like this to support its families and youth. Thank you for your attention, and your support of these public comments.</p>	Natasha Morris
04/20/2022	<p>Hello,</p> <p>I'm sure that increasing public transportation lines is an excellent decision for the city of Seattle. I would like to add my voice to encourage you to pursue an alternative route to the one that is proposed to go through the Dusty Strings Building at 3450 16th Ave W, Seattle, WA 98119.</p> <p>Dusty Strings is an internationally known and loved supplier of high quality music instruments for students to professional musicians. They employ local craftsman and have had many in their employ for decades. Having to relocate may cause them to lose quality and talented employees thus impacting their ability to provide these instruments. As a Certified Music Practitioner I utilize my two Dusty Strings harps to play prescriptive music for people who are ill or dying. As a Clinical Social Worker I use them to work with individuals who are mentally ill. I share this to demonstrate the ripple effects of disrupting this business. It is not just about whether they can manufacture and sell harps/dulcimers it is about what the people world wide do with those instruments. Their instruments are hugely popular, I am certainly not alone in what I do. Please reconsider disrupting this business and the local craftsman that work there.</p> <p>Respectfully,</p> <p>Donna Bennett, LCSW-C CMP</p>	Donna Bennett

04/20/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Andover/Yancy/Avalon routes.</p> <p>I oppose any of the alternatives along Genesee that impact the West Seattle Golf Course.</p> <p>And I strongly oppose tunnel alternatives that are unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>Some of the reasons for supporting Andover/Yancy Avalon routes include: Estimated budget is the same or cheaper for Andover/Yancy/Avalon routes at \$1.6 B or \$1.5 B. (Any reasonable option at \$100 million less cost should be preferred) The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes likely violate Seattle City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The Parks Department supports the Andover/Yancy/Avalon alternatives The West Seattle golf course has served the citizens of Seattle with excellent recreation, community fabric and vibrancy as a business for over 80 years. While respecting the need for light rail, the alternative routes that do not impact this unique use of parkland are preferred.</p>	Ruth Winter
04/20/2022	<p>I prefer that the West Seattle light rail route be a tunnel option (best one is WSJ-3a). But if a tunnel option cannot be secured, my preferred route is WSJ-2 (elevated Fautleroy).</p> <p>Choosing WSJ-1 would cause the demo of many historical homes that are likely to contain lead and would be released into air and soil.</p> <p>That ridiculous Maris apartment building on Fautleroy is inflating the number of residences impacted for Fautleroy elevated station without having any occupants. They built there knowing the eminent domain plan. Disregard that building.</p> <p>We should choose a route that survives earthquakes the best. I did not see that mentioned in the DEIS but I think it's very important.</p>	Danielle Sullivan
04/20/2022	<p>I don't believe a single station in Ballard would best serve the neighborhood. I believe having three stops spread out between Ballard and Fremont before cutting south over the ship Canal would best serve the area making an actually usable line for the people who live there, connecting the parts of the community people need for doing errands.</p>	Ryan Mahan

04/20/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Christie Rousso
04/20/2022	<p>for the ballard segment sound transit needs to open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. We need a station in Interbay so I support Thorndyke Retained Cut [IBB-2a/IBB-2b]. I prefer Galer Street Station/Central Interbay [SIB-1]. For Seattle Center station, the one closest to me, I prefer Republican Street Station and think Sound Transit should work to mitigate impacts to arts organizations as much as possible. I especially think that we need to be examine shallow stations whenever possible, this is a major flaw of the 1-line. For south lake union I think both stations are bad, and fail to serve the area. I think we need to examine a station in a more central location that can serve more riders. For the Denny Ave station I think Westlake Ave Station [DT-1]. is perfect, but we need to update vertical conveyances and once again aim shallower. For Midtown, make the station as shallow as possible, design the station with surface to platform elevators in mind, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. For the CID/International District I prefer 4th Avenue Shallow Alternative (CID-1a) alignment but it needs to be as shallow as existing station, study a shallow cut and cover option over existing Downtown Seattle Transit Tunnel. Shallow stations slow down transfer times. For SODO: I like Mixed Profile Station [SoDo-2], but I think sound transit should study construction further North at the existing SoDo Station location. For the West Seattle stations, I like WSJ-5, but i request sound transit study better DEL-6 that are still compatible with WSJ-5.</p> <p>In general I think: Do not eliminate any stations. Work to make stations as shallow as possible. Improve transfer times wherever possible. Ensure escalators and elevators are (1) fast and (2) have enough redundancy to handle game day rushes and not fail riders in the event of failure. This is a major flaw at the moment. Use fast surface-to-platform elevators (no mezzanines) when stations are more than 100 feet deep and align station design so that it's possible. Plan to build for future expansion in Seattle.</p>	Bryce Ridley

04/20/2022	<p>for the ballard segment sound transit needs to open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. We need a station in Interbay so I support Thorndyke Retained Cut [IBB-2a/IBB-2b]. I prefer Galer Street Station/Central Interbay [SIB-1]. For the West Seattle stations, I like WSJ-5, but i request sound transit study better DEL-6 that are still compatible with WSJ-5.</p> <p>As a daily commuter on Sound Transit, I think that in general the stations are far too deep, and the time it takes to descend into many of the stations is far too long. I think there needs to be a greater emphasis on accessibility, as many stations have few to zero accessible options depending on the time of day.</p> <p>In general I think: Do not eliminate any stations. Work to make stations as shallow as possible. Improve transfer times wherever possible. Ensure escalators and elevators are (1) fast and (2) have enough redundancy to handle game day rushes and not fail riders in the event of failure. This is a major flaw at the moment. Use fast surface-to-platform elevators (no mezzanines) when stations are more than 100 feet deep and align station design so that it's possible. Plan to build for future expansion in Seattle.</p>	Kalena McKinnon
04/20/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Sarah Stival

04/20/2022	<p>I am, and always have been, a strong proponent of light rail and other mass transit options, so I applaud the expansion of Seattle's transit system. I am writing to support the "Elevated 14th Avenue (from Prospect/15th)," IBB-1b Alternative of your proposed light-rail project, as it is the only route that will not impact the Dusty Strings instrument manufacturing company at 3450 16th Avenue W, Seattle 98119.</p> <p>I owned the largest harp store in the world in the Los Angeles area for over 25 years. I started selling Dusty Strings harps when they first started making them in the early 1990s, and they have been a major part of my business ever since. In 2013 I moved myself and my business to Hawaii. At that time, I stopped selling harps made by eight other harp makers, and only kept Dusty Strings' harps because they are the BEST!</p> <p>And so, even though I live on Kauai, almost 3,000 miles away from Seattle, any disruption of Dusty Strings' manufacturing will have a direct impact on my business, and on many other small harp businesses worldwide.</p> <p>As I understand it, all of the proposed routes except for the IBB-1b Alternative will cause Dusty Strings to have to relocate their manufacturing facility, which will cause major disruptions to their operations for many years and may force them to move out of the Seattle area.</p>	Sylvia Woods
04/20/2022	<p>Please consider putting stations and tracks underground like it has been done in nearby Seattle cities. Please focus on timeline. West Seattle Community has had its share of inconveniences!</p>	Mimi Smith
04/21/2022	<p>My brothers and I run a family business in France after our parents retired several years ago. We have worked with Ray and Sue for over 15 years now in a very trusting, professional and friendly relationship I must say. We sell their harps in our shop in the centre of Paris and consider them to be of great value, unique, and give us an incredible edge in a very competitive French market. Dusty Strings harps are of unsurpassed quality and offer musicians a unique instrument.</p> <p>We fully understand the need to develop urban projects and that these can have collateral damage, and although we are well aware that we do not have the legitimacy to criticise such decisions, we would like to alert you to the consequences that such a project in its current shape would have for an economic sector that has already been very challenged for several years.</p> <p>We hope that a solution can be found that will not disturb the activity of Dusty Strings too much.</p> <p>Thank you, Nicolas BUDIN</p> <p>Our business informations are: Le Magasin de la Harpe 3, rue du Général Lanrezac, 75017, Paris, France https://www.harpebudin.com/</p> <p>The property I'm referring to in Seattle is: Dusty Strings Company 3450 16th Ave W. Seattle WA 98119</p>	Nicolas BUDIN
04/21/2022	<p>It is my hope that consideration will be given to routing the proposed light rail to avoid disruption of a Seattle treasure - the Dusty Strings company, a locally-owned, small musical instrument maker. In an era when big corporations are defeating small, local businesses, such consideration presents an opportunity to carefully examine the destructive effects of installing light rail at the expense of unique and valuable contributors to the local economy and cultural life. Dusty Strings has a national presence in the harp and dulcimer world from coast to coast. It is the kind of business that lends itself to the artistic vibe of Seattle, and it would be a shame were it to be forced to bear the cost and disruption of relocation. Please go back to the drawing board and explore alternative routing to prevent what could be a tragic outcome for this fine company. Thank you.</p>	mark higgins

04/21/2022	<p>Please consider 1BB-1b as u determine the Sound Transit Light Rail. Save Dusty Springs,a family owned & operated hand made Harp & Dulcimer Company (1979) who employs 60 to 70 employees at3450 16th Ave. It's disruption would significantly impact its production. BC of DS I know & love Seattle. Thank u for this consideration.</p> <p>Sincerely, Georgia Zimmerman St. Louis, Mo.</p>	Georgia Zimmerman
04/21/2022	<p>Please do not destroy our neighborhood in West Seattle. Please build underground.</p>	Sandra DuBuque
04/21/2022	<p>Do not destroy Chinatown-International District by putting more stations here. SODO Industrial District is a wasteland. Underground stations could only improve it. Go back to the drawing board and leave the C-ID alone!</p>	Janet Brown
04/21/2022	<p>The Yancy route is similar in cost and less disruption for the golf course. You don't need to disrupt the financial revenue of the City golf receipts and the favorite city golf course. Over 60,000 golfers play this course.</p> <p>Please think about the alternative!!!</p> <p>Thank you John Okorowski</p>	John Okorowski
04/21/2022	<p>Dear Directors,</p> <p>Please do not disrupt the Dusty Strings building at 3450 16th Ave W, Seattle, WA 98119. It is a unique family owned business that cannot be easily moved. The light rail can avoid it and preserve a precious art making establishment.</p> <p>Thank you.</p> <p>Sincerely, R. Bennett</p>	R Bennett
04/21/2022	<p>I am a long time resident of Pigeon Point with 2 kids who attend Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy (ABA) is an exceptional child care facility. I feel incredibly lucky to have my kids there, receiving better quality care and education at a lower price than any of the other families I know in Seattle. We have actually cancelled a planned move to a different area in Seattle because we feel so strongly about our kids remaining in ABA until they start kindergarten. ABA is a true gem. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As a long time Pigeon Point West Seattle resident, I can assure you that the northern Delridge station plans (DEL-5 and DEL-6) are inconvenient and less likely to be used, even by those of us living in Pigeon Point, the closest neighborhood . I live a block East of Delridge and would continue to take the bus rather than walk all the way over there. I walk my kids to school at ABA on occasion on warm summer days and am quite familiar with the amount of time it takes to get there vs just taking a bus on Delridge.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Alyca Amerson

04/21/2022	<p>Hi!</p> <p>I'm grateful that a light rail is being considered and for your efforts in making that happen. As a nationally-ranked dulcimer player, I am concerned that the proposal goes straight through the Dusty Strings factory in Interbay. Dulcimer and folk music is an endangered yet important part of our American heritage and depends on builders such as Dusty Strings to keep this tradition alive. As the grandchild of individuals who faced domicide and displacement from the creation of ill-placed TVA lakes, I understand firsthand the long-lasting effects of these types of decisions. I would hate to see such an integral part of the National dulcimer community disrupted because of this proposal and would urge decision makers to consider alternatives that would spare this integral piece of an important part of our National heritage.</p>	Michele Gourley
04/21/2022	<p>I vote for DEL2a & 6; WSJ 3a, 3b, 5. All other options would lead to an elevated station right on Genesis, that's only going to worsen the parking situation and longer constructions in my front yard. As a homeowner, I ask you to consider our input, we're long term residents of this community & want what's best for the area.</p>	Sina Kassaw
04/21/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS.</p> <p>I support either of the Yancy/Avalon routes.</p> <p>I oppose any of the alternatives that impact the West Seattle Golf Course. <p>04/21/2022</p>	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city.</p> <p>The childcare shortage in this country, and specifically King County is already a huge detriment to this city, and does not need to be enhanced by this initiative. 31.7% of children in this country under the age of 5 cannot access a child care slot.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success. If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106.</p> <p>Alki Beach Academy is the only child care program on the peninsula that may be impacted by the project and is the largest child care provider in the Delridge corridor. The Delridge corridor (98106) is the lowest-income zip code, the most racially diverse zip code on the peninsula, and includes some of the lowest opportunity areas in the city. Removing ABA from this community would impose a disproportionate impact on these communities.</p> <p>The Draft EIS needs to be updated to include Alki Beach Academy as a social resource (Appendix L4.4, Table L4.4-1). The Draft EIS needs to include a detailed description of the impact to child care supply in 98106 if the program is relocated. The Draft EIS needs to include language acknowledging that the program's relocation would conflict with the environmental justice and racial equity goals of Seattle, King County, the Puget Sound Regional Council, and Sound Transit.</p> <p>Thank you for your consideration. Our community would be absolutely gutted if this were to take place as proposed.</p>	<p>Lauren Starkey</p>
<p>04/21/2022</p>	<p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>First: Thank you for building this section of light rail! I very much appreciate the need for this project.</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. All of the harps I own and play in healthcare as a Certified Music Practitioner are manufactured by Dusty Strings. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration. Hoping you can work with the IBB-1b ALTERNATIVE.</p> <p>Cheryl Zabel, Certified Music Practitioner</p>	<p>Cheryl Zabel, CMP</p>

04/21/2022	As a parent of multiple children that attend Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.	Carmen Knox
04/21/2022	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p>	Jaclyn Martin

<p>04/21/2022</p>	<p>Ballard Station: Prefer option IBB-2A, primarily because it is a tunnel option under the ship canal and the station entrances are located on both the north & south sides of busy Market Street (for safer pedestrian access). Unfortunately, having the proposed station options located so far east of the historic center of the urban village is a disappointment; however, if Sound Transit can incorporate planning and design of these options for connectivity to a future east-west line that includes a station at 24th Avenue NW can offset this.</p> <p>Interbay Station: I believe the possibility of consolidating the Interbay & Smith Cove stations to save costs would be a prudent step and would improve the efficiency of the line and service, in coordination with significant transit & pedestrian access improvements (on par with those at UW/Husky Stadium station). Otherwise, IBB-2a would be the preferred station design for Interbay, because it interfaces with the tunneling options to Ballard under the ship canal.</p> <p>Smith Cove Station: I believe the possibility of consolidating the Interbay & Smith Cove stations to save costs would be a prudent step and would improve the efficiency of the line and service, in coordination with significant transit & pedestrian access improvements (on par with those at UW/Husky Stadium station). Otherwise, SIB-2 would be the preferred station design for Smith Cove, with significant enhancements to the design for pedestrian access to the west side of Elliot Ave W.</p> <p>Seattle Center Station: DT-1 is my preferred option, as it locates the station entrances to serve both the Uptown/Lower Queen Anne area and Seattle Center. However, the station entrances should not impact the footprints of the vital arts organizations along the northern perimeter of the Seattle Center. I also like the cost-savings proposal to shift the Republican station further west to minimize impacts to Seattle Center, better-serve LQA/Uptown, and as long as one of the new station entrances directly faces 1st Ave N/the arena and making it easier for tourists to find the Seattle Center.</p> <p>South Lake Union Station: I believe the possibility of consolidating the SLU and Denny stations to save costs would be a prudent step and would improve the efficiency of the line and service to the core of the SLU neighborhood. Otherwise, DT-2 would my preferred option, but with improved pedestrian access to the area east of Aurora Ave N and Dexter Ave N.</p> <p>Denny Station: Either options being studied can work, however, station entrances on BOTH the north and south sides of Denny Way are vital to significantly improve safety for riders to reach the station as pedestrians in the area.</p> <p>Westlake Station: Either options being studied can work, however, transfers between to the two light rail lines must be as quick & direct as possible. Also, redundant elevator, escalator and stair options must exist to the station mezzanine and platform.</p> <p>Midtown Station: DT-1 is my preferred option because it's the closest to First Hill and the Madison St Rapid Ride; however, the pedestrian access from the surface needs to be improved greatly and/or numerous redundant elevator, escalator and stair options must exist between the surface entrances and platform.</p> <p>Chinatown-International District Station: CID-1a is my preferred option, but but it needs to be as shallow as the existing station to improve the transfer experience. Please study a shallow cut and cover option under 4th Ave.</p> <p>SODO Station: SoDo-2 is my preferred option, but with a shift further north to preserve the busway (transit redundancy is good) and keep the station entrance at Stacy Street from another option.</p> <p>West Seattle section Duwamish Waterway Bridge option: Please select the option that runs on the NORTHERN side of the West Seattle Bridge, to minimize the impact to resident of Puget Ridge, the impact to parks & environment and significantly reduce the potential for future damage by landslides in the event of an earthquake. Also, the impact to business by routing on the north side can be mitigated much easier than the aforementioned impacts.</p> <p>Delridge Station: I am open to any of the station locations proposed for the Delridge area, however, the pedestrian and transfer experience will need to be on-par with what was designed for the UW/Husky Stadium station in order to ensure an equitable transfer experience for the under-served communities to the south of this area.</p> <p>Andover Station: I have a strong preference to have this station eliminated/postponed from the West Seattle line in order to save costs and serve the Alaska Junction area by a tunneled option. At the very least, perhaps only the "footprint" or "box" of the station & its entrances can be installed/constructed at this time and fully-completed in the future. Otherwise, WSJ-3a would be my selection for the station, as it is a tunnel option and straddles/provides entrances for both the north and south sides of Fauntleroy Way SW for</p>	<p>Isak Lopez</p>
-------------------	--	-------------------

	<p>much safer pedestrian access.</p> <p>Alaska Junction Station: Any of the tunneled station options would be preferred for this location, as long as station entrances were available on both the north and south sides of Alaska Street. If the Andover Station is eliminated or postponed, the 41st Avenue locations would provide slightly better access for pedestrians to the east who would've used the Andover site. Also, please plan for future extensions of light rail to the south.</p>	
04/21/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <p>The business disruption is closely similar for both of these options</p> <p>The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487</p> <p>The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for</p> <p>The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year</p> <p>There would be no risk of golf balls hitting the trains</p> <p>The Parks Department supports the Yancy alternatives</p> <p>This is the only golf course that serves the West Seattle community</p> <p>Longfellow Creek would have no risk of damage to the fish or the creek</p> <p>The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p> <p>Scott Haag</p>	Scott Haag

<p>04/21/2022</p>	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	<p>Joseph Mangan</p>
<p>04/21/2022</p>	<p>Hello,</p> <p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support the Avalon route and I oppose any of the alternatives that impact the West Seattle Golf Course.</p> <p>In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Avalon routes, 1.5 B</p> <p>2) The golf course is a huge recreation opportunity for a huge neighborhood in Seattle already impacted by a transportation disaster</p> <p>3) This is the only golf course that serves the West Seattle community</p> <p>9) Longfellow Creek would have no risk of damage to the fish or the creek</p> <p>10) The mature trees all along the North edge of the golf course would not be cut down</p> <p>Thank you, Eliza Webb - golfer, wife of golfer, mom of aspiring golfer, community member, public transportation enthusiast.</p>	<p>Eliza Webb</p>

<p>04/21/2022</p>	<p>March 28, 2022 Aidan Kavanagh, Alyssa Drake, Jeri Wilcox, and Kate Richter The University of Arizona Environment and Natural Resources 2 1064 East Lowell Street Tucson, AZ 85721</p> <p>Mark Assam U.S. Department of Transportation Federal Transit Administration, Region X 915 2nd Avenue, Suite 3142 Seattle, WA 98174</p> <p>RE: 20220008, West Seattle and Ballard Link Extensions Draft EIS</p> <p>To Whom It May Concern,</p> <p>Thank you for the opportunity to comment on the draft EIS of the West Seattle and Ballard Link Extensions project. We are a group of students at the University of Arizona with experience regarding natural resource policy and law. Our group has evaluated the Draft EIS for the West Seattle and Ballard Link Extension policy, and would like to take the opportunity to comment on it. Firstly, we wanted to commend you on the clear amount of effort that was put into creating this Draft EIS and engaging with the community. However, we still wanted to alert you to some potential areas for improvement. More specifically, we have concerns about this project regarding inadequate response to community concerns to noise impacts for arts groups and the impacts on Tribal treaty-protected fishing areas.</p> <p>Our first major concern is centered on project construction and operation within Tribal treaty-protected fishing areas. The Environmental Justice section of the Draft EIS acknowledges that the Suquamish and Muckleshoot tribes have treaty-protected fishing rights in the Duwamish Waterway, within which there is planned project construction, and that alternatives could have long-term impacts on Tribal treaty-protected fishing. Option DUW-1b of the Duwamish segment, in particular, could impact fishing more than the other alternatives listed. The only mitigation strategies identified within the Draft EIS in response to this issue is that Sound Transit and the FTA would coordinate with affected Tribes to mitigate for economic impacts from fishing disruption. While construction effects would be temporary, there would be permanent effects from guideway columns in the water for elevated alternatives. Chapter 4 of the Draft EIS also acknowledges that some bridge types may interfere with Tribal treaty-protected fishing rights and access to the Usual and Accustomed Areas of the Muckleshoot and Suquamish Tribes. There 2 is also potential for cumulative impacts on the aquatic habitat in the Duwamish Waterway, for which no additional mitigation was deemed to be necessary.</p> <p>Fishing is important to the livelihoods of members of the Muckleshoot and Suquamish tribes, and their ability to do so in Puget Sound is protected by the law. It is essential that impacts to this crucial aspect of these tribes' way of life are thoroughly explored and communicated to these tribes. Further, it is of the utmost importance that the fishing rights of these tribes be respected and every effort is made to mitigate impacts of the West Seattle and Ballard Link Extension. We suggest that further analysis of the impacts of this project on Tribal fishing be provided in the Final EIS, and that preference be given to alternatives that have the least impact on Tribal treaty-protected fishing areas.</p> <p>The second point we wanted to raise is a lack of acknowledgement and genuine effort to remediate concerns which have been brought up by local artists. A coalition of art groups which reside under the Seattle Center Foundation, have written to the Seattle Mayor, Bruce Harrell, to inform him of the difficulties that this project will pose as it is projected to be under construction for 5-10 years, which will have detrimental impacts on the surrounding arts district and community. Specifically, the position of the Uptown station is drafted in a way that will cause major disturbances for this group in terms of noise pollution, vibrations, construction eyesores, and inconveniences. These impacts are likely to threaten the existence of these cultural and arts centers themselves and could have major detrimental impacts on the community as a result. The currently drafted construction methodology does not sufficiently address these issues and the alternatives provided do not properly delve into the options that could be done to avoid these negative impacts on the community.</p> <p>In conclusion, the Draft EIS should not be accepted in its current form due to these unaddressed concerns. We suggest that a new alternative be explored where the noise and vibration pollution be lowered, or at least the time period where these impacts will take place be minimized. We also propose that alternatives featuring guideway columns in the water of treaty-protected fishing areas not be selected as the preferred alternative, due to their permanent impact on Tribal treaty-protected fishing areas. Thank you for taking the time to consider our comments.</p> <p>Sincerely, Aidan Kavanagh Alyssa Drake Jeri Wilcox Katherine Richter</p>	<p>Alyssa Drake,Aidan Kavanagh,Kate Richter,Jeri Wilcox</p>

04/21/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Randall Berg
04/21/2022	<p>To Whom It May Concern,</p> <p>Thank you for listening to the voices of the Seattle community. I understand that the current lightrail expansion for Ballard/West Seattle is considering a track through Interbay that would destroy the manufacturing building of Dusty Strings, a small local business that has been making stringed instruments in Seattle for the last 43 years. I am a big proponent of lightrail, and I understand that a track anywhere will be disruptive, but I hope to convey how important Dusty Strings is to the unique culture of this city and why I hope you may choose to move the track to a different route and spare this building.</p> <p>Dusty Strings is a legend, one of those places of magic, and every time someone who lives in Seattle or has come to visit speaks of the shop in Fremont, their eyes light up with wonder. Dusty Strings has a distinct and long-lived place in the heart of Seattle's acoustic music scene, and provides classes, instrument repair, and community as well as incredibly fine-crafted instruments. The building in question is the manufacturing portion of Dusty Strings business, in Interbay, which is where all the behind-the-scenes magic happens. This is where harps and hammered dulcimers are birthed, where shipments get sent, and where business is handled. I am deeply concerned that if Dusty Strings were to lose this building, which they had built exactly to their needs for manufacturing years ago, it could really hurt this local business, and especially their ability to keep building instruments here in Seattle and keep enriching this music metropolis with their cultural contributions. Please consider the importance of this irreplaceable business to the many musical communities of Seattle, and consider a path that could spare this building, so they can stay put and keep making magic!</p>	Carey French
04/09/2022	Excited for Ballard route, hoping that there are no delays since it is planned so far out.	Will Herring
04/09/2022	I prefer the route with third party funding. Public-private partnerships often allow for improved services with less cost burden on public money.	

04/21/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. 04/21/2022	<p>My home will be taken down if this project proceeds at the current proposed location on Pigeon Pt. I have two high schoolers who will also be displaced. I am opposed to the proposed location for this project.</p>	Dragana Miljkovic
04/21/2022	<p>Hi, I live in one of the buildings affected by the alternatives that use 41st Ave SW. I was wondering if you've considered acquiring the Jefferson Square property instead of the properties on the eastern side of 41st Ave SW? Jefferson Square is an older property than the two residential buildings on the eastern side of the street and has more transit-oriented development potential (the site is very auto-oriented with a lot of parking and not really a good fit with a new light rail station). The site also does not have good pedestrian access from 41st Ave SW (the split sidewalk is very unsafe). Acquiring that property would also impact fewer residents. In addition to the reasons above, the property has not been under good management and attracts loiterers (skateboarders, homeless) in the mid-level parking and individuals who do illicit activity in the bushes alongside SW Edmunds St (e.g., drugs). Thank you for considering my comment.</p>	Kyle Taniguchi
04/21/2022	<p>Please make room for DustyStrings to keep going! It is a very special company and it would be a tragedy to lose it!</p>	Lia Falls

04/21/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Adam Horton
04/21/2022	<p>Avoid knocking down the dozens and dozens of new builds on the Avalon alternative that have just been completed or are still under construction. Keep the Delridge/Genesee path as that is already downwind of a steel foundry, not to mention Youngstown. The city hasn't even registered our property with some county services after a year of living here, I hope you are aware of the permits granted.</p>	Jensen Vance
04/21/2022	<p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>First: Thank you for building this section of light rail! I am a Seattle native and 30-year Ballard homeowner, and I worked in Interbay for much of my working life. As such, I very much appreciate the need for this project.</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration.</p>	Saunda Thomas
04/22/2022	<p>Please protect the family-run harp and dulcimer makers Dusty Strings from the cost and disruption that a relocation of their business would cause. They are located at 3450 16th Ave west. They are a valuable resource to the local community as an employer and a great resource to the music community world-wide. Thank you.</p>	Andra Denslow

04/22/2022	I hope that you will be able to reroute the transit line so that you can avoid the Dusty Strings factory. Harp making is a very specialized field and there are only a few lever harp makers in the entire country. Although transit is certainly important, so are the musical arts and it would be a shame if this fine instrument maker would have to relocate or shut down entirely. Thank you for your consideration. Sincerely, Dr. Joyce Schemanske	Joyce Schemanske
04/22/2022	Any of the light-rail options being considered along 14th Avenue in Ballard would be devastating to the work of Ballard Food Bank, not allowing them to provide desperately needed food and services to the community. I do NOT support any options (below or above ground) along 14th Ave. Instead please move forward with one of the options along 15th Ave. Thank you.	Deborah Sunoo
04/22/2022	I am writing in opposition to the 5th/Harrison preferred alternative for the Downtown portion of the Ballard extension noted in the draft EIS. This alternative places the new Seattle Center station under and adjacent to the current locations of SIFF, the VERA Project, and the KEXP radio station and community gathering space it provides. Light rail tunneling and station construction would be a detriment to the continued operation of these facilities. As a listener and as one of the Superconductor financial donors to the relocation of KEXP to the Seattle Center, it is unacceptable to proceed with with the preferred alternative. The radio station has endured Covid and the reconstruction of the adjacent Climate Pledge Arena. It's time to move past disruptions to this corner of the Seattle Center. Therefore, I am advocating for the choice of the 6th/Mercer alternative for the Downtown portion of the Ballard extension.	James McDonough
04/22/2022	I am in favor of placing the light rail along 15th in Ballard rather than 14th, due to the negative impacts placement on 14th would have on our community members who rely on the services provided by the Ballard Food Bank.	Liane Smith
04/22/2022	Do not build the new light rail on 14th Ave. NW. It will interfere with the operations of the Ballard Food Bank, making it impossible for several years for the organization to serve low-income residents in Ballard. Instead, put it on 15th Ave.	Susan Helf
04/22/2022	Ballard Food Bank asked I write in support of 15th Ave alternative. I looked at data to make informed choice. I agree. 15th Ave is best choice based on least amount of impact to humans. Thank you for considering our thoughts. Joyce N. Chase	Joyce Chase
04/22/2022	Please choose the 15th tunnel or elevated option. The 15th tunnel has the least impact to homes, humans and environment. It may impact traffic in the short term but will be better long term.	Jill Kranz
04/22/2022	After looking at the draft. 15th avenue would be best.	Steven H
04/22/2022	As an active volunteer and supporter of the Ballard Food Bank on 14th Ave NW, I request that you consider other alternatives rather than 14th for the Ballard Light Rail construction. The food bank is a crucial hub for food and social services and just moved into their brand-new building. Demand for food bank services has more than doubled during COVID and remains very high. Three years' closure of the facility during construction would be extremely disruptive to a critical piece of the safety net for hundreds of needful folks.	Polly Freeman
04/22/2022	I am so excited for the light rail to come to Ballard, however, I have concerns about building on 14th. 14th has too many small local business that would benefit from the light rail being near but not on those businesses. This would negatively impact the Ballard food bank, Reuben Brews, and a number of other Ballard-loved buildings. Please consider building in 15th to avoid as much disruption to small businesses on small streets as possible. Thank you!	Jamie Lepper
04/22/2022	Not in favor of Light Rail options along 14th -- a 3-year closure/disruption would significantly negatively affect ability for residents and businesses to avoid backups on 15th	Anna Oldre

04/22/2022	<p>I am in favor of having the light rail follow the 15th Ave route. The street is wide enough to allow continued access to the existing businesses plus do the work involved. 14th would also be able to be used as a thoroughfare.</p> <p>If you close 14th many new business will be hurt and they are some of the new heart blood of Ballard. Plus the food bank, which serves so much of the greater community, is a valuable neighbor would be terribly impacted. Thank you.</p>	Diana Friend
04/22/2022	<p>I am commenting about the Ballard light rail options. I prefer the 15th Street option as I believe that it will be less disruptive for small businesses along 14th and Leary Way, due to the anticipated 3-year construction schedule.</p>	Kathleen Weber
04/22/2022	<p>I strongly prefer the 14th or 15th avenue tunnel options. They would have the smallest impact on the displacement of residences and would help maintain the neighborhood character during and after construction. 15th avenue make the most sense since it is already the main transit route in the neighborhood, and the majority of riders will be going to downtown Ballard. It make sense for the train to be closer to the old Ballard downtown grid.</p> <p>-Boaz</p>	Boaz Levi
04/22/2022	<p>I love the light rail but I do not want an elevated system coming into West Seattle. I would prefer a different option.</p>	Nancy Tyler
04/22/2022	<p>I am a long term resident of the area just north of Ballard. I am also a long term supporter of the Ballard food bank that has recently opened their new home on 14th avenue. If the proposed light rail project that could run up 14th Avenue and cause a complete shutdown of that street for essentially 2 years would be a huge hardship on the community that utilizes and spends on the Ballard food bank. Other options are much preferred than those that would deprive a significant group of needy folks in the area from food and services provided by the Ballard Food Bank. Brad Harris</p>	Brad Harris
04/22/2022	<p>I am a volunteer at the Ballard food bank. They recently moved from Leary way over to 14th, and the new location is extremely fabulous for many reasons! It's bigger, better able to serve clients, more accessible, and has an amazing grocery store. The light rail on the 14th would interrupt this incredible process of providing services to residents in need. Closing a Food Bank for three years to do the light rail on 14th would be devastating. 15th Ave. is a much better option for the light rail. We support the light rail of course, but the interruption of the food bank would be devastating to the community.</p>	Monique McFadden
04/22/2022	<p>I am in support of tunneling no matter the route. My preference would be routing along 15th. or west, 16th. Tunneling would in my mind preserve more of what a number of us live in Seattle and the Puget Sound area appreciate, the views. As I look at the impacts to businesses, i see a greater impact to the industrial area along the Ship Canal. Some may say that the Marine Trade is withering in the area, but why? The cost of doing business for these businesses because of the encroachment of Shopping (Ballard Blocks), Bike Trail, and the growth of small customer centric businesses (brewery's and restaurants). And now a shut down of some of the adjacent areas for 3-4 years during construction will mean their death, exactly what some property developers want. There is also an impact, it may be solved by then, to the homeless and low income people who live in the area because of the lack of access to medical providers (UW, Swedish, etc.), Ballard Food Bank, and others. Once a route it determined I would expect that ST would do their BEST to mitigate the impact.</p>	David Thornton
04/22/2022	<p>I'm strongly in favor of options along 15th in Ballard, as any option along 14th will hurt the Ballard Food Bank's ability to provide service to the community. As the food bank supports 5,000 people each month through food and community services, this impact would be too devastating to too many.</p>	Colleen Martinson

04/22/2022	<p>As a Ballard resident I strong oppose the light rail being put in on 14th Ave. Along with businesses suffering for the proposed three years of construction, the Ballard food bank would also be taking a hit. The food bank is vital to our community and those in need. I understand the need for more efficient transportation in the city but Ballard is a relatively small community and it is unique in a myriad of ways. Please consider who will be displaced by the disruption of construction. Please don't allow it to be those who are largely marginalized by the city as is, those who depend on help from the food bank. Please consider how vital the food bank is to too many in our community.</p> <p>In addition as a resident who lives between 14th and 15th I have noise concerns. 15th is already a busy and noisy street. To have that on both sides on the block with the light rail on 14 is just unimaginable. Help keep Ballard residential. Don't split it up by adding a light rail to the middle of a residential neighborhood. Larger streets such as 8th and 15th can handle the construction and noise and different traffic much better.</p> <p>I understand that disruption of some kinda is bound to find its way to Ballard but I hope it doesn't find its way to 14th.</p>	Genevieve Keckemet
04/22/2022	<p>I am excited to see light-rail come to Ballard; however, I am standing with Ballard Food Bank, and am only in favor of options along 15th Ave NW. The options along 14th Ave NW will harm our community's access to food and services, due to construction closures that will limit public access and delivery options to the food bank.</p> <p>Please help our most vulnerable retain the access they need now while you plan for the future.</p>	Leah Hagan
04/22/2022	<p>Being a local resident of Ballard for a year now I would be in favor of the lightrail traveling down 15th Street and not 14th. 15th is already a major thoroughfare and would be more convenient for the neighborhood than a 14th St line. Most, if not all, public transit in the area already uses 15th so that would definitely be my strong preference.</p> <p>Thanks for listening, -Adam</p>	Adam Taylor
04/22/2022	<p>Placing Light Rail on 14th NW is a TERRIBLE IDEA, a TERRIBLE PLAN!!!</p> <p>The newly built home of the Ballard Food Bank borders 14th NW and is an essential entryway for clients, staff, volunteer supporters, and guests. We have been active financial supporters of Ballard Food Bank ever since moving into Olympic Manor in 1982. We have been making a \$250 monthly pledge. We also contributed generously to their Campaign Fund to build their current new home which is finally meeting the needs of the Food Bank and its clients. DON'T DISRUPT A COMMUNITY AREA NON-PROFIT WHOSE FOCUS IS ON THE COMMON GOOD. Its current home has been envisioned and needed for years.</p> <p>BUILDING LIGHT RAIL ABOVE OR BELOW THE GROUND ON 14TH AND CREATING A 3-YEAR CONSTRUCTION ZONE THERE WOULD CAUSE GREAT HARM FOR BALLARD FOOD BANK AND FOR THOSE WHO ARE FOOD COMPROMISED AND IN NEED OF BFB'S SOCIAL SERVICES. Please do not cripple Ballard Food Bank's operations.</p>	Krista Harris
04/22/2022	<p>I am very excited about this extension! I would love to see denser housing developed around the stations, particularly in Ballard. I also prefer underground stations in general but particularly in Ballard since I think that would allow extensions to this line to also be underground and I think that would be ideal.</p>	Zoe G
04/22/2022	<p>I support light rail development along 15th and not along 14th because of the high impact on the Ballard food bank</p>	Dave Ellgen
04/22/2022	<p>Regarding the Ballard line, please keep any proposals to 15th ave. 15th ave. is our main arterial and should stay that way. Moving outside of 15th ave. will create a disruption to Ballard that will not have a cure.</p>	Andrew Singer
04/22/2022	<p>I am strongly opposed to any 14th Ave light rail alignment. It need to go on 15th.</p>	pat Delaney
04/22/2022	<p>I do NOT support any alignment along 14th Ave. It will be further from the Ballard core, with the additional crossing of 15th a burden. It will not be amenable to northern extension.</p> <p>My first choice would be a tunnel as it will prevent delays caused by bridge opening. It would also not tie up real estate in the neighborhood that could be otherwise used for housing, other transit and improved biking and walking.</p> <p>Second choice is an alignment along 15th.</p>	David Raible

04/22/2022	<p>Hello - I have been volunteering at Ballard Food Bank and the options proposed that would cause 14th Ave NW would cause issues for us in serving our clients well. The Food Bank is critical to many and impacting it's availability would cause additional hardship for many of those already in need.</p> <p>thanks Maureen</p>	Maureen Kamali
04/22/2022	<p>I am commenting on the various proposals for bringing light rail to West Seattle.</p> <p>As a resident of West Seattle for over 50 years, I have watched the community grow. There has been extended growth of housing and commercial endeavors, not all of which has been pleasant to the eye. We have become overcrowded and traffic has become a real problem, notably with roads and streets being reduced in carrying capacity to accommodate bicycles. As a result we are badly in need of the light rail system to extend to West Seattle.</p> <p>One thing West Seattle has is an extensive network of beautiful parks and recreational sites. The latter of which needs to be preserved to counter the rather unsightly building expansion we have endured. We need to preserve our green spaces. One of those beautiful green spaces is the West Seattle Golf course. Therefore I am opposed to any light rail alternatives that would impact that green space. It is park property and should not be affected. I understand there is a City ordinance that park property cannot be used for purposes other than what it was intended.</p> <p>I strongly feel that the Yancy/Avalon routes would best serve the citizens of West Seattle.</p>	Michael Winter
04/22/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you.</p> <p>Sincerely, Anna Coghill</p>	Anna Coghill

<p>04/22/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes.</p> <p>Sincerely, Mark Lindblom WS Resident</p>	<p>mark lindblom</p>
<p>04/22/2022</p>	<p>I am opposed to light rail in Ballard along 14th - the impact to people using Ballard food bank would be inhumane, unconscionable and truly a result of poor planning. I urge consideration of a plan constructive rather than destructive to people. Taxpayers may think they want light rail in Ballard but I do not believe anyone would favor a plan with such a horrible impact on people who depend on the food bank for life. Shame on you for not presenting the human impact of the 14th avenue plan. It's really a disgrace and indefensible.</p>	<p>Julie Hiebert</p>
<p>04/22/2022</p>	<p>The options presented by Sound Transit along 14th will harm the ability of the Ballard Food Bank to provide food and services to our community.</p> <p>Two of the alternatives on 14th, both the "Preferred Elevated 14th Avenue Alternative" and the "Elevated 14th Avenue Alignment Option" will require a full closure of 14th Avenue Northwest for up to 3 years during construction. In addition, the "Preferred Tunnel 14th Avenue Alternative" closes 14th Avenue NW between 52nd and 58th for 3 years.</p> <p>The options on 14th Ave. will potentially close this street for up to 3 years which puts the services that the Food Bank provides at risk by reducing access to the facility and hindering the ability of trucks to deliver needed food and supplies.</p> <p>I am in support of the light-rail options along 15th Avenue.</p>	<p>Lisa Jilk</p>

04/22/2022	<p>I am a resident of QA, & so will be directly impacted by the decisions re: Interbay/Ballard. The tables comparing the options & impacts speak clearly & loudly, particularly impacts on nature (in-water & biodiversity). Furthermore, the elevated options make zero sense, as pretty much same costs, but much more significant & negative impacts.</p> <p>Based on your information, I strongly support: The Galer Street Station/Central Interbay option; and either the Tunnel 14th Ave Option (#1 choice) of the Tunnel 15th Ave Option (#2 choice).</p> <p>Thank you</p>	Laura Trimingham
04/22/2022	<p>I agree with the Ballard Food Bank that the Ballard light rail option along 14th Ave NW is a bad option. Please place the light rail on 15th Ave NW.</p>	Marilee Fuller
04/22/2022	<p>I would like to write to support the Preferred Tunnel 15th Avenue Station Option (IBB-2b)* light rail extension between Ballard and Interbay. I reviewed the EIS draft, and given the tradeoffs listed, this option seems like the least disruptive. Additionally, it would allow the Ballard Food Bank to be less disrupted by the construction. As someone who lives in Ballard, I am very excited about the light rail project, and look forward to having this resource in my neighborhood!</p>	Melissa Hendershott
04/22/2022	<p>As a resident of the Ballard/Phinney Ridge area and user of 14th and 15th Avenues NW and their businesses, I prefer the IBB-1 alternative for the Ballard Segment. I don't think you should plan on tunnels that need 3rd party funding, besides it is more pleasant to ride light rail that is not underground. Furthermore, IBB-3 has the greatest's negative effect on water, shoreline, and historic properties. IBB-1 is the best choice in my opinion.</p>	Jacqueline Miller
04/22/2022	<p>Thank you for the opportunity to comment on the Ballard Extension. I am a 25 year Ballard resident and supporter/volunteer of the Ballard Food Bank. I am very concerned that the alternative routes being considered along 14th Ave NW will harm our community's access to food and services via the Food Bank. The light rail will best serve the Ballard community by sticking with the proposed route on 15th Ave. Thank you.</p>	Mary Beth Lambert
04/22/2022	<p>As a volunteer at the Ballard Food Bank, I see first hand the enormous negative impact situating the Light Rail on 14th Ave NW would have on the acesibility to vital, life-changing services provided by the Food Bank.</p> <p>The food bank is an essential part of the lives of thousands and thousands of individuals with little to no resources.</p> <p>The years of construction will be a gigantic obstacle to reaching these essential services. At the same time, it will greatly obstruct the Bank's transportation grid meaning food and other goods will not reach clients at all or not in the necessary time.</p> <p>Long term, these options will make it so much more difficult for the thousands and thousands and thousands of people with food insecurity, housing insecurity, health insecurity from easily accessing the services they so desperately need.</p> <p>Thank you</p>	Emily Bader
04/22/2022	<p>Simply put...</p> <p>Light rail in Ballard, ABSOLUTELY! Light rail on 15th Ave in Ballard, ABSOLUTELY! Light rail on 14th Ave in Ballard, ABSOLUTELY NOT!!!!</p> <p>Put mass transit along commercial routes where people are used to accessing it and where the infrastructure supports it.</p> <p>Do not put mass transit along residential and small business streets where quality of life and ability to operate successfully will be seriously impacted and forever disrupted.</p>	Cindi Forslund

04/22/2022	<p>am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following: The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <p>2) The business disruption is closely similar for both of these options</p> <p>3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487</p> <p>4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for</p> <p>5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year</p> <p>6) There would be no risk of golf balls hitting the trains</p> <p>7) The Parks Department supports the Yancy alternatives</p> <p>8) This is the only golf course that serves the West Seattle community</p> <p>9) Longfellow Creek would have no risk of damage to the fish or the creek</p> <p>10) The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes.</p> <p>Sincerely, Dolores Coghill WS Resident</p>	Dolores Coghill
04/22/2022	<p>I strongly oppose all of the 14th Ave NW options for the light rail expansion into Ballard. All of these options put at risk the services provided by the Ballard Food Bank. They would reduce client access to the BFB facility and hinder the ability of trucks to deliver needed food and supplies.</p> <p>Instead, I support the 15th Ave NW option, which makes the most sense because of 15ths already established role as a traffic corridor.</p>	Melissa Riesland
04/22/2022	<p>I support any option that reduces the volume of car traffic down 15th. The urbanist had an option to add a new vehicle bridge with the light rail bridge and make Ballard bridge a public amenity / new park.</p> <p>Construction should make the appropriate considerations for the ballard food bank to ensure it can remain in operation during construction.</p> <p>I want this.</p>	Andrew Rhodes
04/22/2022	<p>I favor the 15th Ave alternative for the light rail route in Ballard. The 14th Ave alternative would be too disruptive for too long.</p>	Roger Willsie
04/22/2022	<p>Closing 14th Ave NW would be devastating to everyone who uses the Ballard Food Bank for food and other services! Please think of those in our community that depend on the food bank. Making it nearly impossible for food deliveries or clients to gain access for that long is unacceptable. Build on 15th Ave NW NOT either option on 14th.</p>	Heidi Osborn

04/22/2022	<p>With regards to the Ballard light rail extension the 20th Ave NW extension, via tunnel, is clearly highly valuable to serve the Ballard urban core. This region of the city is heavily populated but poorly served by current transit options.</p> <p>15th Ave NW already has substantial North/South bus prioritization and good service.</p> <p>The 20th Ave NW tunnel also helps avoid the major challenges of procuring space around the heavily built up 15th Ave NW corridor.</p>	JOSHUA VERBURG-SACHS
04/22/2022	<p>I have been a volunteer at Ballard Food Bank for the last year and know firsthand the huge impact and support this organization provides to the community, Ballard and beyond. Choosing one of the options for the Ballard light rail extension along 14th Ave. would have detrimental implications for our most vulnerable citizens and would put significant burden on a critical organization for Seattleite community health. Given that one of the major aims of increasing public transportation city-wide is to provide benefit to the community at large, and in particular lower-income residents, this move to build along 14th would be contradictory to Sound Transit's mission.</p> <p>Sincerely, Madeline Sheldon</p>	Madeline Sheldon
04/22/2022	<p>Please consider routes along 15th only. Routes on 14th would hamper The Ballard Food Bank's ability to serve the community throughout the extensive period of construction.</p>	Margaret Lewis
04/22/2022	<p>Hi there,</p> <p>I'm extremely concerned about the negative impact that the 14th Street options would have on the Ballard Food Bank. In addition to preventing delivery trucks from dropping off much needed food and resources, the closure would also create unneeded barriers for people to access the Food Bank. Ballard Food Bank operated solely as a drive-thru food bank for much of the COVID pandemic, making car access very important to their participants.</p> <p>Please explore options on 15th Street to avoid unnecessary disruptions to such a vital community hub.</p> <p>Best, Kirby Lochner</p>	Kirby Lochner
04/22/2022	<p>Please consider making the North Alternative for the Duwamish segment the preferred alternative. As it has no impact on residential or park spaces, this should be a prioritized plan which will protect homes, blue herons, and green spaces</p>	Sarah Boye
04/22/2022	<p>Ballard Food Bank recently opened their new facility on 14th Ave and they provide critical services to many people. Constructing the light rail route on 14th would make accessing this critical support more difficult for the most vulnerable population in the city. Please consider routing the light rail on 15th.</p>	Maura McCulloch

04/22/2022	<p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>First: I am not a resident of Seattle. I am a harp player living near Washington DC. The route that displaces Dusty strings will cause issues with the National body of folk harp players. Many are vocal and the disruption to the manufacture of Dusty Strings Harps and other instruments could well put them out of business. It's a bad idea and will tarnish the image of Seattle nation wide.</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration.</p>	Jaque Davison
04/22/2022	<p>Dear Board Members:</p> <p>Please do not destroy Dusty Strings! People all over the world travel to Seattle to buy their instruments. Especially harps! They are famous in music circles! They are also a small family business who may find it difficult to remain in Seattle if their building is destroyed. Preserve and protect Dusty Strings!!</p> <p>The light rail is a great project. Run it somewhere other than through Dusty Strings!</p> <p>Thank you, Valerie Wedel, Harper</p>	Valerie Wedel
04/22/2022	<p>I agree with the Ballard Food Bank's opinion that it makes more sense to have the light rail move through Ballard on 15th Ave NW. Closer to center of Ballard Pedestrians necessarily won't have to cross 15th. Easier to stop off at the local stores for shopping. Many buses already skip Ballard stops because they are already full. Ballard High School would greatly benefit, not only for normal school hours, but extended opportunities for after-school activities and sports.</p> <p>I thought that years ago, one of the times we voted to approve a tax for rapid transit, it was supposed to be on 15th Ave NW. Some agency or another forced many small businesses to sell their property. Then (once again) when that plan was canceled the properties were sold and the original owners had to pay MV to repurchase them. Instead the real estate developers stepped in to build multi-unit housing, in anticipation of the light rail being built, so they would not need to provide parking.</p>	Margaret Matthews
04/22/2022	<p>Please consider building the light rail along 15th Ave. Having the light rail on 14th (whether it's elevated or not) will most likely have ramifications for Ballard Food Banks clients and operations during the construction. It is a great institution that help a lot of people in need.</p>	Jeanette Dannaher

04/22/2022	<p>The 14th Ave options in Ballard cause more housing displacement, more employee displacement, more historical building displacement and water issues than the comparable 15th ave options. I am against the 14th Ave options. Thank you.</p>	jonathan BRITELL
04/22/2022	<p>Greetings Sound Transit Board of Directors,</p> <p>I very much support the IBB-1b ALTERNATIVE for transit upgrades in the area. Reasons for the case of Dusty Strings Harp Manufacturing to be permitted to remain in its current location, are as follows:</p> <p>The culture of what this instrument company has built, is unique, of great cultural value and importance locally, and internationally even. The particular place they are in is a part of their history, it is a living community, place-based vibrant culture. They have grown up in the close proximity of Folk Life Festival, near where Ray and Sue, the founders first built and sold their handmade instruments. Dusty Strings serves both to a local, state, national and a world wide community. For me, it is a big part of what makes Seattle. Their current physical location of what they have built and invested in over the decades, is a paramount factor in their success story. Harp luthiers are far and few between, yet Dusty Strings has made it work by cultivating and training these skilled people, and because of that their harps are in demand world wide.</p> <p>I truly believe their success is part of their strong local community base, they give fantastic customer service and support, and I really believe it is because they love their neighborhood and they love what they do! I would LOVE to work for Dusty Strings and I even considered moving to Seattle to ask them for work in the sales department to be part of their culture and team. Instead I remain in Portland, Oregon as the Harp Consultant for Artichoke Music, where we are the official suppliers of Dusty Strings harps in Oregon.</p> <p>I feel if they had to relocate and re-tool and workshop and separate from the close distance to their retail store, it would change the culture, they could lose very specialized staff, it could decrease efficiency, increase costs and really hinder a community that reaches far beyond monetary cost. Music related businesses have been hit really hard by the pandemic, yet this business has persevered and kept going. I believe a mandated location change for Dusty Strings Manufacturing would be quite unfavorable at this time, or anytime in the future. Also, there are other wonderful small businesses in the area who provide valued services and jobs in the area, and I hope they are able to continue operating their businesses.</p> <p>Many thanks,</p> <p>Tracey Rose Brown,</p> <p>Harp Consultant, Artichoke Community Music, music educator and previous harpist for Royal Caribbean Cruise Lines Portland, Oregon</p>	Tracey Rose Brown
04/22/2022	<p>To the Sound Transit Board of Directors:</p> <p>I would like to preface my remarks with a firm commitment to light rail as a much needed transportation alternative. My concerns lie specifically with the Interbay/Ballard segment and the alternatives under consideration. In that respect, I want to express my support for IBB-1b. I understand that each of the alternatives will have major impacts along their respective routes, but I want to draw attention to Dusty Strings, a musical instrument manufacturing business at 3450 16th Avenue W. Among the options presented, only IBB-1b will avoid the disruption of this business which is renowned internationally for its production of harps and hammered dulcimers. The business is housed in a building designed and constructed specifically for this purpose by the owners, and provides employment to a large number of highly trained craftspeople. Given the cost of property currently in Seattle it isn't reasonable to assume that Dusty Strings could simply relocate elsewhere within the city, which means the loss of a significant number of their employees who would find it difficult to relocate to a new locale.</p> <p>I would add that Dusty Strings is more than a manufacturing facility--it is an institution that has played a significant role in Seattle's musical culture for more than 40 years, and as such I believe it deserves your consideration as part of the decision process. In truth, its loss would have an impact far beyond the local or regional--their instruments are appreciated worldwide both for the quality of design and construction, and the commitment of all who work there to ensure customer satisfaction. Thank you.</p>	Richard Jones-Bamman

04/22/2022	I would like to have underground trains in West Seattle. Raised trains would ruin the character of West Seattle.	Barbara Wright
04/22/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Terry Donaghe
04/22/2022	<p>As an employee in the Chinatown International District, I do not like the 5th Avenue Shallow and 5th Avenue Deep options. Businesses in the Chinatown International District suffered from the I5 overpass construction and trolley construction over many years. The District is now not fully recovered from the effects of the COVID-19 pandemic with many businesses still boarded up. Any further destruction of businesses in this neighborhood will further degrade the livability, historic character, and economic viability of the neighborhood.</p> <p>Julie Salathe</p>	Julie Salathe
04/09/2022	We need these routes. Rail should have been started back when originally proposed with I-5 construction.	Brad Buven

04/22/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that give to those in need, I strongly urge the committee to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Kathleen Mcgrath
04/09/2022	<p>Both are nice options [SODO], excited for more public transit reach for more residents!</p> <p>The blue route appears to broaden the coverage area compared to current routes of buses etc. Also please consider more transit services for the Central District. Thanks!</p>	

04/22/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Executive Summary: If those proposals are implemented, one of Seattle's most effective organizations helping people with serious mental illness stay safe, healthy and housed will have its support services seriously disrupted. The organization is Transitional Resources. Offering housing, health care and professional support to hundreds of individuals, using several properties (many of them shared homes clustered around the main building from which staff work), Transitional Resources is able to deliver services to these vulnerable people that make the difference between their falling into deep trouble, and having a stable and often productive life. The proposed routes DEL-5 and DEL-6 will affect three TR properties and put physical barriers between buildings in this community, disrupting services. It would be a devastating blow. This would affect not only the clients of TR, but also the greater Seattle community where services like those TR provides are sorely needed.</p> <p>Please Read On Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Lynn Adams

------------	---	-----------------------

04/22/2022	<p>Thank you for recording my comments on Sound Transit's Draft Environmental Statement.</p> <p>My request is that Sound Transit's Ballard-West Seattle extension will choose alignments that prioritize both quick transfers and less construction and subsequent-development impacts on BIPOC and less-affluent communities.</p> <p>Station locations should prioritize ease of transfer to other Link lines and other multimodal options. Deep stations, served by broken escalators, and located many blocks from desired destinations will together depress ridership and provide rhetorical fodder for opposition to future investment in public transit.</p> <p>Prioritizing BIPOC communities will be one small step in halting the pattern of our public institutions accommodating the financial convenience of the wealthy at the expense of the lived experience of BIPOC and poor communities.</p> <p>The proposed stations at Midtown, Westlake, Denny and Seattle Center are too deep and will suppress Link's values for short trips within the city center. Sound Transit's track record of serving deep stations with escalators and elevators also does not warrant optimism that such stations will be operationally successful.</p> <p>In Seattle Center, I support the Republican Street Station. Sound Transit should also do whatever is required to mitigate construction impacts to nearby arts and cultural organizations (short of not building a station at all).</p> <p>In South Lake Union, I support Seattle Subway's proposal to further study a Westlake option that is actually within South Lake Union, and a Westlake Ave station at Denny that would align with such a station.</p> <p>In Chinatown, I support additional study of a shallower station on 4th Avenue. This area will be critical for transfers, and Sound Transit should allocate whatever resources are required to build an effective station and protect-in-place the ID businesses and residents who are already there. If Seattle is willing to give money to support renovation of sports stadiums owned by billionaires, we should be willing to spend money to float ID businesses through construction closures, and then advertise the hell out of them once construction is over.</p>	Nicholas Mirra
04/22/2022	Why Renton of course!	Jennifer Canas
04/22/2022	For Ballard I prefer a route along 15th avenue. All options along 14th Ave NW will harm our community's access to food and services especially for those most vulnerable. It will block access to the Ballard Food Bank for three years.	Julien Goulet
04/22/2022	<p>I am commenting on the DEL5&6 of your proposals for transportation on Avalon St in West Seattle. DEL5&6 proposals would be devastating for Transitional Resources the the several hundreds of individuals now living and receiving services at Transitional Resources on Avalon St. and the neighboring areas. Transitional Resources is very special ad offered housing and services for members of our city who would have NO WHERE ELSE to live if DEL 5&6 are passed. Transitional Resources provides housing and oversight to a special population poorly served in other geographic areas of the city and county. Transitional Resources provides services NOT AVAILABLE anywhere else.</p> <p>PLEASE as a mother and a grandmother of loved ones who live and thrive with the services Transitional Resources offers. My husband and I will be devastated if these services and housing are lost! Please do nothing that will diminish or eliminate these services. Vote NO! on DEL 5&6.</p>	Cathy Rouyer
04/22/2022	<p>For the Ballard stop, I support light rail options along 15th Ave. I am strongly against options on 14th Ave, as this would disrupt the new Ballard Food Bank, built within the last few years.</p> <p>I'm a former resident of Ballard and Interbay/North Queen Anne, and I currently ride Link light rail in Seattle.</p>	Alicia Brown

04/22/2022	I think that it is important to not disrupt the families and businesses in the Delridge and Alaska Junction areas of West Seattle. Overhead light rail lines would completely change the look and feel of these neighborhoods. Many businesses would be eliminated in the Alaska Junction because of an overhead light rail line, including a West Seattle destination, the West Seattle Bowl, which has been around for almost 70 years. Why can't West Seattle be treated the same as other neighborhoods, like Capital Hill and the U District, and have a tunnel for the light rail. We are just as important, and more diverse than those areas.	Jenny Murray
04/22/2022	Please move forward with the plan that eliminates the Avalon station and has the medium tunnel option. This has the best service and is the least disruptive to existing housing, but still provides great ridership.	C Patterson
04/22/2022	I strongly want light rail into the Alaska junction to be underground. Elevated tracks are so ugly. We only have one chance to get this right. Thank You. Jeff Johnson.	Jeff Johnson
04/22/2022	The name "Ballard Link Extension" implies a promise to serve the commercial and residential neighborhood commonly known as Ballard. None of the current proposed alternatives do that especially well. East of 15th Avenue NW, there are some current low-density industrial uses, likely to be displaced with rising land values, and there is some current redevelopment activity, razing single-family homes and building new apartment buildings. To the extent that there is an urbanized neighborhood known as Ballard, that neighborhood is west of 15th Avenue NW. The alternative considering a tunnel route with a station near 20th Avenue NW should be resurrected.	Thomas Auer
04/22/2022	I was very disturbed that the supposed study of the gondola option relied on out-of-date data and examples, used a consultant tied to Sound Transit's existing approaches with no expertise in the area, and didn't base its numbers for timelines or cost on current real-world examples. And who seemed to treat a gondola system as a competitor rather than complement to the existing light rails system. I've lived in the Admiral area for 34 years. The opening of the West Seattle light rail continues to be delayed and delayed. The gondola offers an opportunity to jump start connection to the light rail in a near-term time frame that will have an immediate impact on transportation access and carbon reduction, while leaving other options open. The supposed study did not seriously study it--you need to have a consultant with expertise study it seriously, drawing on the lessons from major cities around the world (and more nascently in the US) that are successfully using these technologies.	paul loeb

04/22/2022	<p>Hello there,</p> <p>I'm a home owner at 42nd & Edmunds in West Seattle, and have been actively keeping up with the West Seattle Junction Light Rail project since 2018. I have attended multiple CAG meetings and been involved with individual sessions with Sound Transit as it pertains to my particular property and its involvement with the West Seattle Extension.</p> <p>After reviewing the Draft EIS, as well as receiving correspondence that my residence may be acquired as part of the West Seattle extension, I'd like to offer my input in aims of informing the Board's decision on a final preferred alternative to the project.</p> <p>As a homeowner in West Seattle for the past 7 years, my strong conviction is that an elevated alternative such as WSJ-1 or WSJ-2 would negatively impact our neighborhood in a dramatic and profound fashion. The elevated alternatives are incredibly disruptive to a main thoroughfare, Fauntleroy, and both would prove to displace hundreds of more households should ST3 continue further south to White Center or Burien. In addition, the elevated alternatives WSJ-1 and WSJ-2 create a considerable physical divide in our community, especially for the residential community along 42nd. In particular, razing multiple supermarkets and local businesses will detract from the accessibility and historical character of the West Seattle Junction. A tunnel option would retain the current character of the neighborhood while enabling travel and accessibility.</p> <p>Furthermore, both WSJ-1 and WSJ-2 are comparatively more expensive than other alternatives, and much more impactful in displacing residential and commercial properties. Other alternatives, especially tunnels are by far more desirable than elevated alternatives. WSJ-5 in particular looks intriguing, and appears to allow for the most configurability with upstream stations while being the most affordable and least impactful.</p> <p>Additionally, in multiple CAGs, it has been mentioned that an Avalon station has lower projected ridership numbers than other stations, so low that it might not necessitate a station at all. I encourage the board to forgo an Avalon station and recoup the funds to realize a tunnel alternative.</p> <p>Please do not consider WSJ-1 or WSJ-2. A tunnel option is vastly preferred, and especially WSJ-5, as it is clearly the most performant and affordable.</p>	Kelly Dunn
------------	--	------------

04/23/2022	<p>It is critical in making plans for this LINK expansion that we consider the future of the network and design this expansion accordingly. Not only will we be stuck with the choices we make now for at least a few generations, but continued expansion will indeed be necessary as the region grows in population and public transit becomes an ever-more important tool in fighting worsening climate change. The pennies we save now just to get something quickly and merely acceptable could cost us big in the long run. It's worth it to design the system that truly serves people now and in the future and to present that option, costs and all, to the people.</p> <p>Regarding the Ballard Station, two things in particular are most critical: 1) Planning for extension of the line North, likely to Crown Hill, Greenwood, Northgate. 2) Possible connection to a future East-West route from Ballard to U-District (and possibly further to Kirkland, Bellevue?) I had previously been in favor of a fixed bridge West of the Ballard bridge with an elevated station at 15th (IBB-3), mostly because this seemed the best option to allow for a future extension North along the wider 15th Avenue, and because 14th was just way too far from the core of Ballard. But with the recent determination by the Coast Guard it seems that any bridge option is no longer practical. A fixed bridge would be too high and a movable bridge absolutely kills speed and reliability (and this will eventually be the 1 Line to the Airport!) I now believe that a tunnel option is the best solution. And if it's going to be a tunnel, then it might as well go to 20th Street, closer to the core of Ballard, instead of 15th (or worse, 14th!). Yes, tunnels are expensive, but so are bridges and displacement compensation. I believe the improved walk shed of a 20th street station will make a tunnel worth it and would generate the will for extra funding if needed and requested from the taxpayers. However, in designing any tunnel station, please make considerations for good connections to a future East-West line, possible in an additional tunnel running perpendicular. If such design considerations are made now, it can avoid not only costs, but bad transfer connections and super deep tunnel stations.</p> <p>Thank You!</p> <p>As for the alignment alternatives.</p> <p>Please put the 20th street tunnel station back on the table, with tunnel entrance by just north of a trench Interbay Station at Dravus st. I was formerly in favor of</p>	Chris Champagne
04/23/2022	<p>Before you expand the Light Rail, cleanup and fix the existing line. The car interiors are disgustingly filthy. The stations are dirty with piles of human feces and urine in corners and elevators. Most of the elevators and escalators are out of service. You have a class action lawsuit just waiting to happen from the disability crowd.</p>	Joyce Chris
04/23/2022	<p>I oppose the DEL5 and DEL6 proposed routes, I'm a healthcare provider and many of my most disadvantaged, high risk patients struggle with severe mental illness. These patients are literally being kept alive by the services provided by Transitional Resources, and the aforementioned proposed routes would devastate this amazing and integral organization. Please reconsider.</p> <p>Rachael Robins PA-C</p>	Rachael Robins

04/23/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides critical services to people living with disabilities.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward. They will lose their housing and the critical behavioral health services that support them in staying safe, stable, and housed.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about increased public transit as well as the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Monica Allen
04/23/2022	I prefer IBB 1a or 1b less environmental impact and disruption during construction.	Edward miller
04/23/2022	I am internationally performing professional musician and harpist and I have been playing a Dusty Strings manufactured harp for my entire professional career. Dusty Strings is amongst the finest Celtic harp and dulcimer manufacturers in the world; sought after by musicians both professional and amateur around the globe. A disruption to Dusty Strings manufacturing shop would be devastating to the folk music, harp and arts community, not just in Seattle but throughout the world - a community that has already been deeply impacted by COVID pandemic and is just now recovering. I urge the Seattle Sound Transit light rail system seek an alternative route for West Seattle/ Ballard Link extension to minimize any possible impact to the Dusty Strings manufacturing shop.	Aryeh Frankfurter
04/23/2022	Honestly, you need to forget about the second tunnel. This new tunnel doesn't really add much right now and is just going to be more time consuming and expensive. I think the best bet is to link the West Seattle line with the current downtown tunnel and create a separate line for Ballard that ends at Westlake station. Come back to the second tunnel later. When you do, then change it to go a little bit further from the current downtown line. That way, it serves more people and neighborhoods, than the current design. The current design is just awful with deep stations and does not add much, in terms of stations. Not to mention that it is very expensive and time consuming to build it. The project is already delayed right now and will continue to get worse as time goes on. Seattle is sick to death of the slow planning for this project and wants this built now. I believe the above is the best option for now. Come back to the second tunnel later.	Robert DeMacon
04/23/2022	I oppose the elevated version due to the the high number of families that it will displaced.	Jerry Adona
04/23/2022	I support light rail on 15th. It is already set up to cross the water. 14th is more quiet and has housing and small businesses that would be ruined by construction.	Christine Nielsen

04/23/2022	<p>All this depends on how the light rail is to be used. If it is a way to get to SeaTac it might be of some but little use. It would be easier with luggage and maybe cheaper to take a cab or uber by the individual than to buy by taxation/tickets an expensive system that will have limited use.</p> <p>The bus system on 15th is great to get to downtown (if more bus patrols were provided to keep the drunks and druggies off) and I doubt if the light rail will save much or any time for the rider. Quieter busses on the interior would also be better. So maybe skip the light rail to Ballard.</p>	Mark Quam
04/23/2022	<p>I feel the Ballard station should be at 15th and Market so that it creates a transit hub with easy transfers from bus to light rail. By having the station at 14th it creates a significant hassle for travelers who are taking the bus down from the northern and western parts of Ballard. If the station is on 14th, it will also be even further from the major population areas of Ballard making it less popular to use. This hassle will reduce the number of folks who will use light rail from Ballard.</p>	Aaron Kraemer
04/23/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would severely impact, Transitional Resources, a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. 04/23/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p>	Joyce Lingg
04/23/2022	<p>I am and LIFE LONG Seattle resident and involved community leader commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property. This would be a loss for the entire community since other options are clearly available.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Thank your consideration to our community and not ruining our best Seattle gold course in the process.</p>	Alan Bernahl

04/23/2022	Your preferred route for the Ballard extension appears to be the most expensive and most disruptive of alternatives in terms of residences and businesses. As the owner of a business on 14th NW at NW 50th Street it will displace us and possibly put us out of business. The tunnel to 14th NW and Market will be less disruptive to the businesses and the residences and less expensive according to your impact table.	Robert Brown
04/23/2022	I wanted to voice my support of the 15th Ave proposals for the Ballard station over the 14th Ave proposals. Ballard food bank just moved to a new space on 14th and their work for our unhoused neighbors would be deeply impacted by either light rail station proposal along 14th Ave. I want light rail to our neighborhood but it cannot come at that cost.	Abbie Bowen
04/23/2022	I do not support having the light rail be on 14th ave. It does not make sense, when compared to either of the 15th Ave options. 15th is already the central conduit into and out of Ballard, 14th makes an already long walk from downtown ballard to the light rail even longer. On top of that, it will further alienate people with disabilities who require transit into and out of ballard. They cannot access 14th easily, and at 15th there are bud routes that would leave them directly at the station. 15th makes the most sense.	Tanner Kalstrom
04/23/2022	Hello! The current planned location for the 5th Ave S station in the International District will displace more than 19 small businesses in a crucial area within the neighborhood. As a member of this community I implore Sound Transit to consider alternatives on 4th Ave S that won't disrupt businesses within this neighborhood. Thank you!	Holly Chan
04/23/2022	As a supporter and regular transit rider, PLEASE do not build the light rail extension on 5th Ave S in the CID. PLEASE do not displace more businesses in a neighborhood that has had to fight so hard to survive gentrification. Build on 4th Ave instead, where no local small businesses will be displaced.	Megan Rupert
04/23/2022	Please only consider the CID extension options on 4th St. Many businesses on 5th St will be severely impacted by their locations becoming demolished unless only 4th St options move forward. Please minimize the harm to the historic C-ID area!	Irene Rexwinkle
04/23/2022	Please build the light rail in West seattle underground and not above ground. Above ground will destroy neighborhoods and contribute to noise pollution. Thank you	Tiffany Tessada
04/23/2022	Please consider an alternate route for the link extension that currently is planned for 5th Ave s which will harm 19 small businesses in the Chinatown international district. As a community member I recommend the board consider moving the route to 4th Ave s.	Amy Van
04/23/2022	The 4th Ave S alternative is preferred on the West Seattle-Ballard Link extension. This will not impact any businesses in the neighborhood. If the light rail is built on 5th Ave S, it will displace up to 19 small businesses. Small businesses have already been impacted enough by the economic disparities caused by COVID. Seattle needs to preserve AAPI businesses in the International District.	Lexi Coyle
04/23/2022	Please reroute planned transit lines from 5th to 4th street so you don't displace 19 businesses in the CID. Thanks!	Saiyare Refaei
04/23/2022	Hi there, Excited to see our transit system grow and connect our neighborhoods better. However, it should not come at the expense of small businesses. Especially those that belong and service people of color. Progress includes inclusivity and equity in its decisions. Seattle will not accept the displacement of our community that already face systematic racism in the pursuit of gentrification. Please reconsider light rail plans to support our communities, not push them out. Thank you, Allie Novoa	Allie Novoa

04/23/2022	<p>I will be moving to the Seattle area later this year, so I have been tracking the changes that are happening in the community, including the new light rail track. Although I am a huge supporter of public transportation and the light rail, I am asking the city to reconsider the placement of the rail so that it disrupts as few businesses as possible, especially those that have been locally owned for decades. Dusty Strings is one such business whose manufacturing facilities are in the way of the proposed location for the new light rail, which would not only force them to relocate but it would place incredible financial burden on them as they rely on manufacturing and selling instruments to make a living. As a professional musician myself who has bought instruments from Dusty Strings, I cannot fully underscore the importance of having access to an incredible manufacturer who creates beautiful instruments that spread beauty and joy to those who have the privilege of hearing music played on them. Please reconsider placement of the light rail so that it does not disrupt a locally owned business of 43 years like Dusty Strings that is native to the Seattle area. Dusty Strings' reach extends beyond the Seattle area---they provide instruments for amateur AND professional musicians all over the country and world. They are family-run business and may not be able to bounce back as easily as a huge corporation would be able to. We musicians rely on them for making our own livings as well! Thank you so much for your time and consideration.</p>	Ashley Wells
04/23/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Bradford Lovejoy
04/23/2022	<p>For section 4.3.1.3, CID station, I prefer alternative CID 1a 4th Avenue shallow, because it will displace the fewest businesses. Many residents in the ICON building will be displaced, but it will be temporary.</p> <p>After all that the CID small businesses have suffered during the COVID19 pandemic, I hate to see them strained by new construction on the light rail system. Sound Transit should at least preserve as many businesses as possible.</p>	Charlotte Thompson
04/23/2022	<p>I'd like to see "Buckets" put in . . . like they have in Portland, OR. This would cost considerably less money, would not require tunnels or destroying homes or re-routing streets. It could be put in much faster.</p> <p>Why is this not listed as an option? It seems far superior</p> <p>Thanks Jane Donald</p>	J Donald

<p>04/23/2022</p>	<p>Hoo boy, where to even get started. I mean, considering ST's stellar elevator and escalator performance - let's not only minimize their use, but maybe eliminate as many DEEP stations and elevated stations, eh? I can't imagine being a disabled person and using the portions of the system that are literally brand new and are broken, let alone the disrepair Metro allowed to happen for the DSTT. So, yeah, if you could maybe rethink this Westlake and Midtown connection so they aren't deeper than the core of the earth, that'd be great.</p> <p>Let's also, for once, maybe be forward thinking instead of the dumb-dumbs we tend to be. Plan for interlining, transfers and splits at the SODO and SLU station. I mean, let's be honest, the system today and what is planned will never really work for the future of a world without cars, which is coming sooner than later. Let's maybe allow for that thought, you know? Maybe even the option to interline/split in Ballard, too. I could see future generations wanting to head to Holman, but a HELLUVA lot more wanting connections across town to north fremont/woodland park, wallingford, UW, childrens, and, heck, why not magnussen (a lidded OMF could be a great resource there and do the opposite of Hudson yards and build affordable housing above instead of the elite's playground). The fact that future-proofing this system has never been a consideration is really short-sighted and why we keep doing dumb things like debating destroying the ID again or splitting the spine because we didn't think we'd ever need to. Think ahead.</p> <p>I just can't even begin to start with the Coast Guard and their new guidance of bridge heights higher than 99 now and how idiotic it would be to put a drawbridge in salmon bay. Do a tunnel, and for goodness sake, do it to ACTUAL Ballard. Behind the Safeway 4 blocks away (nearly the edge of the actual walkshed for the station, mind you) is just not gonna cut it. First off, it should be no where else but 17th near the hospital, because that's good/smart policy. If you have to move it away, 20th should be the secondary option at worst, 15th and 14th are laughable, just stop. Do the tunnel or bust, this shouldn't even be a discussion.</p> <p>Interbay/galer...boy, that's a tough nut to crack, good on you for this, not sure I could think of a way to make either of these work well. Let's consider that interbay probably isn't going to change too much...so anything really works there, I suppose. Galer, well, you have expedia and cruiseships now, but the Armory has potential to also become a new larger development. Maybe moving that station north in the preferred alignment makes the most sense for all.</p> <p>Okay, serving Seattle Center and SLU should be a huge priority, I don't mind the siting at Seattle Center, I just fear another 4 years of disruption on the north side after the arena could be tough. Is there a way to cut/cover or cap over the work area? I've seen it done in Seoul and in LA right now on Wilshire where the whole station box was cut, covered and traffic/ped access was re-enabled. This has to be an option here. SLU, I'd like to see a station not under the busiest non-freeway roads in Seattle. I mean have you ever walked near Mercer/Aurora today? Imagine that with a station and coming out the wrong entrance or being unsure of your wayfinding. It messes with the walkshed and actual access to the station to do that, is there a way to have a north SLU station that is perhaps a stacked interline option like downtown Oakland? This way we could run lines north along aurora and use this existing tunnel capacity and still have transfer options. I honestly couldn't care less about disruptions to Amazonia and the surrounding businesses here - it has been an assorted pedestrian/bike nightmare for the past 20 years, I see no need to be worried about tacking on more here - don't worry about disruption, dig my friends, everyone else did. Denny station - I'd just like to see some access to the streetcar and 8-line optimization, I'm a little worried about streetcar disruption and if the city could figure out if the center city connector would ever happen I'd be more worried about disruptions to the street car, but if they don't bother, this toy is fine to have disruptions in my mind.</p> <p>Westlake and Midtown - boy if your performance on current maintenance of stations isn't a red flag to rethink both of these stations, I don't know what else is. If we're worried about grade from ID to midtown to Westlake, sure, but another way to solve that grading issue ... creep up first hill away from a freeway station to a hospital station - more hill to go under for sure, but also more distance to perhaps change your depths. Also, for goodness sake, let's not make these so dang deep, I mean is there not an option to go above the tunnel east of westlake, seems that longer connections via a tunnel are better options that elevators and escalators that break - a flat or sloped floor don't break.</p> <p>ID Station - just stop with 5th, just stop. Do 4th, to hell with cars, make a detour above for transit only, build the box away from ID and do ACTUAL connections to King Street Station, Union Station and ID station. This seems like a no brainer - but let's make this simple for you - STOP WITH 5th, connect the stations at or below grade, no more car dodging. I see no reason to change much with Stadium station, seems like a whole lot of rearrangements to optimize for a tunnel have room to make work. Sodo, whatever works here - I think the only thing to think about is eliminating as many if not ALL at-grade crossings. The mixed traffic for light rail in seattle is clearly a failed concept, don't give the dumb-dumb drivers here an option to keep driving into the path of oncoming trains. They'll never learn that trains don't swerve or stop on a dime, so just eliminate the option to hit them. Again with the future-proofing, allow for future interline for express</p>	<p>Stephen Savage</p>
-------------------	--	-----------------------

	<p>through georgetown/boeing to connect to the existing rail south past the deferred boeing station - could be a nice addition to the spine and serve georgetown and long walks to south park.</p> <p>Is the duwamish crossing a settled item? I feel like I heard, but never went in-depth on the lifespan of the existing high car bridge and light rail timing. Will the existing bridge need replaced by the century we decide to start building light rail? Maybe there is a cost-savings option of designing and building in tandem a replacement here with side-running light rail. I'm sure it'd be easier to redesign a space shuttle and launch it considering the Seattle process, but maybe I'm wrong?</p> <p>West Seattle - Avalon, Delridge and Junction...I guess I don't have strong feelings about Avalon and Delridge other than who gives a flip about a golf course over existing homes in the area. Carve out what you need from that, does the station need to go there, no, but maybe consolidation saves some cash. I saw the ridership loss at Avalon was nearly non-existent, so that could be useful. I just would like to see walkshed optimization for those stations (or that one station). Dodging traffic at fauntleroy/35th/Genessee is probably why Avalon would not affect ridership and I don't blame anyone from not wanting to walk near that speedway and bad pedestrian options. Optimize completely over them/under them or away from them all together. The junction - again - futureproofing so connections could go down to white center/burien/etc. I'd really be disappointed if this wasn't a tunnel from about 35th into the junction and while we're on that discussion, why is it again we're talking about a station nowhere near the junction. Same as Ballard, go TO the junction, and if not, don't bother with anything less than one block from it, so 42nd.</p> <p>Just stop with the half-hearted design and service of our population. Build it where people are, to hell with the NIMBY bullspit, they'll get over construction or die before it's done. This is an investment in future generations and the current ones clearly don't care about our future, so ignore them. Build it fast, build it sooner, build it cheaper, build it right, build it where we are, and do it now.</p>	
04/23/2022	Prefer route Del 2a for the following reasons: lower cost, high ridership, 1 intersection impacting traffic/construction impacts on SW Genessee only on nights/weekends, and most importantly fewer residential and business displacements.	JESSICA VU
04/23/2022	Hello, sending in my support for moving the light-rail to 4th! Small businesses are important to the community !	Claire Chidsey
04/23/2022	Building on 4th should be a consideration because the station on 5th will cause many historic businesses to close	Indira Dahlstrom
04/09/2022	Thanks so much to the volunteers and staff on adding stops and stations to service our neighbors in under accessible neighborhoods! Stefan S.	Stefan S
04/09/2022	Very happy to see you will extend to West Seattle! I rarely visit my friends over there because it takes so long and parking is terrible. But if I could jump on light rail to visit - I would all the time! Thank you.	
04/09/2022	I use the Link on a regular basis.It save me time and money.	
04/23/2022	Please do not displace the already struggling business in the international district. It's so important to the community to keep those places alive and well. Please choose the option for Link that have the lowest impact to the businesses and community. It may not be the cheapest, but it's the best one for the people. The community there is strong and those small businesses are wonderful. I would hate to see the International District loose valuable business space when another option is available.	Katrina Keller
04/09/2022	I don't have a preferred alternative to W. Seattle, although our household encourages and supports light rail expansion to as many neighborhoods as possible.	Matthew Falcon

04/23/2022	I'm against running the light rail along 14th Ave NW.. Closing 14th Ave NW during construction will severely impact the Ballard Food Bank's ability to provide services to the community. Ballard Food Bank's services are always valuable but the rising costs of food and housing due to inflation following the pandemic are creating an even greater need. Please consider whether the benefits of having this transportation mode run along 14th NW instead of 15th NW outweigh the harm to the community. Thank you.	Kathryn Ramos
04/23/2022	Please reconsider building the station on 5th Avenue. This is an historic Downton Seattle neighborhood that has weathered many changes from gentrification and the pandemic. Construction on 5th will affect up to 19 businesses that make up the beloved CID neighborhood who may not be able to bounce back and relocate. Please consider 4th Avenue instead as that will have much less of a negative impact on this historic neighborhood.	Carlye Nyte
04/23/2022	<p>I am a resident of the Youngstown neighborhood in North Delridge. Our home is on 26th Ave SW - right where Dakota street runs into it from the east. My comment is in regards to "ES.3.1.1.3. Delridge Segment". Having listened to several presentations from ST and having reviewed the DEIS, I would like to put in a strong vote of favor for the Andover Street Station Alternatives (DEL-5 or DEL-6). Table ES-3 on page ES-18 says it all for me: less cost, less noise (DEL-6), less disruption to historical properties and to parks/rec. Fewer street closures, fewer miles obstructed for vehicles.</p> <p>And the fact that DEL-5 and DEL-6 pose far smaller impact to our residences in this small neighborhood is hugely significant. So much housing density has been created in our tiny neighborhood in the last 10 years since I've moved here. I can't believe that this vision for urban density would be so easily disregarded in the demolition for the light rail, when a viable alternative exists.</p> <p>I realize that a greater number of businesses would be impacted with DEL-5 and DEL-6. As a business owner in Seattle myself, my opinion is that disruption to a business is a much less stressful thing than disruption to a home and a community.</p> <p>I understand that there is some thinking that the Andover alternatives are too far north to make sense for commuters. But I don't see how moving the station 2 blocks south, into the heart of the neighborhood, makes a significant enough difference to warrant all the other disadvantages to DEL-1, 2, 3, and 4. With the bus lines going right down to Andover street, there is a pretty seamless transit connection.</p> <p>I sincerely hope it's not too late to seriously consider DEL-5 or DEL-6. Thank you.</p>	Anne Bradfield

04/23/2022	<p>I'm very disappointed in many of the preferred alternatives listed here.</p> <p>The Ballard end point is very far from what most people consider Ballard. 14th Ave NW is almost as close to Fremont as it is to Ballard.</p> <p>The West Seattle Junction preferred alternative which stops on Fauntleroy is at the bottom of a very large hill. Asking anyone who is mobility impaired to get off a train at Fauntleroy and climb the hill that is Alaska at that point is a bad idea. The stop should allow passengers to get to the junction without climbing a large hill.</p> <p>I understand that these projects are expensive, and compromises need to be made, but this is too much. These fatal compromises will make these very expensive lines much less useful. This is an opportunity for us to make our city much more accessible to people who cannot or chose not to drive a car. Stops in Interbay, Ballard, and West Seattle that will require a transfer to get to places where people live and work misses the mark. It feels like the Southcenter mistake all over again. Imagine a Link that instead of dropping you at an elevated station far from anywhere you want to go, it dropped you at Southcenter mall where many people work and shop. Let's not repeat that mistake and place a Ballard stop almost a mile out of central Ballard, and a West Seattle Junction stop at the bottom of a mountain.</p> <p>Let's think a little bigger and build the pedestrian-friendly Seattle we all want to live in.</p>	Paul Brown
04/23/2022	<p>I support the light rail options along 15th Ave.</p> <p>I oppose the options along 14th Ave as this is where Ballard Food Bank's new facility is located, and the multiyear closure of 14th Ave would harm the ability of Ballard Food Bank to provide food and vital services to our community.</p>	Jean Edelhertz
04/23/2022	<p>I have resided in West Seattle for 25 years. I am excited about the possibility of light rail coming to West Seattle. However I am very concerned about the Del-5 and Del-6 proposals. These proposals would have a devastating impact on a critical nonprofit in our community. Transitional Resources operates several residential programs for adults with severe, chronic and persistent mental illness. Their programs are located on this route.. Their services are so important! This is not a population that could easily receive services in another location. Routine, consistency and Quick access to mental health providers is critical to individuals safety and recovery. Thank you for your time and effort and I appreciate you taking another look at these two routes. Thank you so much- Dani Flanagan</p>	Dani Flanagan
04/23/2022	<p>Hi. I don't like the idea of the light rail going down 14th Ave. NW. I feel it is too far away from where people really want to go to in Ballard which is west of 15th street closer to 22nd NW. Also, several improvements on 14th have been made and would be greatly disrupted, lose their ability to serve and destroy the flavor of the neighborhood; Gemenskap Park, Ballard Food Bank (which would be greatly kneecapped in serving the community if the 14th option was put in), a pea patch. Putting light rail on 15th or farther west towards Old Ballard's denser living and commercial areas makes the most sense.</p>	Ann Rodak

04/23/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Leo Vasaitis
04/23/2022	<p>The CID neighborhood and community is a culturally rich neighborhood of Seattle and essential to be preserved. Building on 5th Ave S will displace and impact many small businesses and families. Please build the new light rail station on 4th Ave S alternatives instead because they will not impact any businesses in the neighborhood.</p>	Joyce Lin
04/09/2022	<p>We would love the light rail to travel from Ballard to SODO so we can go to the flea market every Saturday!</p>	
04/23/2022	<p>The actual light rail infrastructure alone does not take into consideration the impacts associated with how people will get to and from stations. In an increasingly dense city that is struggling to reduce carbon emissions, it is essential the stations connect to the Seattle bike network.</p> <p>As we have learned with current stations, it is important that plans for bike route connections be completed early and be very specific. This is especially needed considering the need to coordinate with SDOT and, sometimes, WSDOT. Specific bike impacts need to be considered.</p> <p>Since people who bike and use transit often need their bikes on both ends of the light rail ride, please consider how to make it easier for people to bring bikes on trains.</p> <p>Please study the impacts of people using bike to get to/from trains as well as on trains now. Seattle is a growing city in which people are increasingly biking for transportation. Plans for bike should be integrated into studies and plans.</p>	Inga Manskopf
04/09/2022	<p>I'd prefer to move forward with the pink one.</p>	Juanjo Pedro
04/23/2022	<p>For the CID station location, the 4th Ave S alternatives are strongly preferred! They will have a much smaller negative impact on small businesses in the neighborhood, compared to the 5th Ave proposal. Please choose one of the 4th Ave site locations!</p>	Ada Otter
04/09/2022	<p>In West Seattle there is no transit on W Marginal so if buses could be rerouted when light rail goes in to serve that road it would be great.</p>	Kathleen Gantz
04/09/2022	<p>I like to use the rail but after 12 am I often get stranded DT. I think one train an hour or so would make me use it more. As it is now I do not use it knowing that I do not have a timely way home.</p>	

04/09/2022	I support Sound Transit. I ride weekly. Please build affordable housing near your stations. I am a community college teacher who uses ST to get to work. I pay 40% of my monthly salary on rent . Please [illegible] 50% and of your housing partnerships for the renting class. Or else I will be forced to move from Seattle, and out of reach of my beloved light rail, within the next 3 years. Median rent is \$1600/month. Please help.	
04/09/2022	Ildefonso Joe Eustaquio 14424 51st Ave South Tukwila. Your shaking my house. Same as always. Since opening day 2008 your metro service is intentionally trying to make me miss work timed routes. No way to track missed routes. Wasted tax levy dollars. Strange how somebody today put a black mask in my front driveway. Same as what is in the room today. Harrassment by stakeholders = STLR. I am consistently being followed = harrass [illegible] marijuana supporters who light up - upwind while I am downwind [illegible] to give me an airborne illness/contact high/I am outnumbered and harrassed daily! Slips/sinkholes 1/2 or more caused by Sound Transit light rail consistently since opening day.	Joe Eustaquio
04/23/2022	Sound Transit has tough choices to make. Dusty Strings is a unique business in Seattle that is one of the largest manufacturers of folk harps and hammered dulcimers that are well respected worldwide. They fill a particular niche in the music world. As currently proposed, the only route that would not force Dusty Strings to move is the Elevated 14th Avenue Option (from Prospect/15th), also known as IBB-1b. Other routes could possibly be adjusted in order to spare our building and five other buildings, and follow a public street instead. Dusty Strings was founded in Seattle in 1979 and has remained a family-owned and operated local business for the past 43 years. They make globally-recognized musical instruments have been handcrafted in Seattle since the beginning. As manufacturers of high-quality harps and hammered dulcimers, they are a critical member of Seattle's dwindling manufacturing community, which is important to business diversity in an increasingly tech-dominated city. They employ local skilled craftspeople, many of whom have made Dusty Strings their lifelong career. Approximately 60-70 workers would be displaced from this building alone, which houses Dusty Strings as well as four other small businesses. If they are forced to relocate, it could be very difficult to find another space within Seattle that will meet their needs as a unique manufacturer and small business. Their custom-designed building and owner-occupied model have made it possible to stay in Seattle as the costs of operating in Seattle have driven other manufacturers out of the city. Having to move outside of Seattle would certainly mean a major disruption to their instrument-building operations. It could also mean losing 20 to 30 years of instrument building expertise if their longtime employees are forced to leave their chosen careers in order to stay close to their families in Seattle. Dusty Strings has connections with instrument owners around the world, and many of them know of Seattle because that's where their harp was made. Dusty Strings instruments are an important part of the livelihood of local, independent music stores all across the country, as well as in the UK, Europe, Asia, Australia, Canada, and New Zealand. Thank you for considering how this decision will potentially impact this business that supplies highly sought after musical instruments to the world. Thank you for considering their employees and the potential loss of a unique skills that the employees possess. As currently proposed, the only route that would not force them to move is the Elevated 14th Avenue Option (from Prospect/15th), also known as IBB-1b. Other routes could possibly be adjusted in order to spare their building and five other buildings, and follow a public street instead.	Steve Schack
04/10/2022	The current routes don't prioritize transfers for link rail [illegible]. How will you think about were realistic transfers from under-served communities.	
04/09/2022	My concern is how many housing and apartments will be destroyed. Choose the path with the least amount of disruption.	
04/09/2022	I would love expansion.	Jack
04/09/2022	Prefer red route.	
04/23/2022	Please move the lightrail project to 4th Ave to protect the loss of 19 International District businesses!	Aubrey Nepomuceno

04/23/2022	<p>Hi there!</p> <p>I live at 7th and Lane and would be deeply saddened if some of my favorite establishments in the CID had to close because of this Ballard/West Seattle link extension. Musashi's has been a staple for decades, and Fuji Bakery makes some of the best baked goods I've had in the city. Please consider building this extension on 4th as fewer businesses would be impacted.</p> <p>Thank you, Nat</p>	Nat Bentley
04/09/2022	<p>I love the light rail and wish I lived closer to a stop. When I am able to catch the train I appreciate the cleanliness of the stations I visit and the frequent stops. I wish my trip to the airport could be quicker. Maybe a few speed trams? I also appreciate the light rail expansion and would like more information and transparency about why it will take so long to add more stops. Does the city need more funding? Or are infrastructure projects just slow in general?</p>	
04/09/2022	<p>SEATTLE NEEDS TRANSIT!!!</p> <p>Clearly we can see West Seattle gets cut off easily by bad infrastructure. More multimodal connections are necessary for North and West Seattle. I would like to see links with the 1 and 2 line. Also, this needs to happen sooner than 2037. Take my money away from cops and [expletive] and spend it on making this happen ASAP.</p> <p>In addition, please serve neighborhoods like deeper N Seattle and more important with a racial lense. KENT, RENTON, AUBURN, DES MOINES, FEDERAL WAY. These neighborhoods need transit and TOD. Death to the suburbs!</p>	Ameya Majmudar
04/09/2022	<p>I don't have a car and being able to get to Ballard from Cap Hill without 50 min and 2 buses would be incredible! Then I could more regularly shop and support businesses there. I work in SLU so being able to take the train there would also be amazing.</p> <p>Thank you for investing in public transit!!</p>	Emma Fallone
04/09/2022	<p>I like how convenient light rail is and how frequently they come as well as accessibility because not everyone can drive. We like how the light rail goes like that [a single line with arrows on either side of it] and the buses go like that [two lines with arrows at each end perpendicular to each other].</p>	Desmond Mack

<p>04/23/2022</p>	<p>?I would like to comment on the Interbay/Ballard Light Rail Segment (EIS pages ES36 to ES44) and support the IBB-1b alternative.</p> <p>Several of the proposed routes will severely impact a unique business currently located at 3450 16th Ave W. The small family owned business that resides here is called Dusty Strings. The business has been in Seattle for the past 43 years and has operated out of this current customized manufacturing building since 2002. Over the years, Dusty Strings has grown to be a world leader and innovator in making handcrafted Lever Harps and Hammered Dulcimers. The skilled employees have built over 36,000 instruments that are owned by musicians around the world. The Mooers family owners treat their employees as family members and give their valued customers exceptional service.</p> <p>My connection to this small Seattle business is as a customer and proud owner of 2 Dusty Strings harps. I am not a resident of Seattle, but instead live in rural Montana.</p> <p>I believe the Dusty Strings employees use the Sound Transit light rail system and also support it's extension, even with the dire consequences to their own business. Their manufacturing building sets in the Interbay district, exactly in line of 2 proposed routes. It will be a difficult challenge to replace this customized manufacturing building into another Seattle location and a major disruption to their operations.</p> <p>Lots of hard decisions and compromises need to be met as Seattle must adjust to the future. However, it is heartbreaking when these adjustments so negatively affect those that have been so generous to others. With that in mind, I ask you to consider the alternate proposal IBB-1b; the elevated 14th Avenue (from Prospect/15th). This route does not impact Dusty Strings. Hopefully, it might save more businesses that just might have their own special stories to tell.</p> <p>Respectfully April Barnes Manhattan, Montana</p>	<p>April Barnes</p>
<p>04/23/2022</p>	<p>I am writing to comment on the route alternatives for the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>I fully support the Sound Transit Ballard Link extension! It's a very exciting prospect, and I was happy to vote for it. However, I am one of many people who work for a company that will be extremely adversely affected by two of the proposed routes. I would like to express my support for Route IBB-1b.</p> <p>I have been an employee of Dusty Strings Company (3450 16th Ave W, Seattle 98119) for over twenty years, and as their harp specialist, I have experienced firsthand the positive impact this company has had on both Seattle and the worldwide music community. As you will have heard from various other commenters, Ray and Sue Mooers (the founders of Dusty Strings) designed and built our 16th Ave W residence from the ground up in 2002, specifically to meet the needs of a growing, innovative manufacturer of high quality musical instruments. I myself work in our Fremont retail store, which is where the company used to build our internationally renowned harps and hammered dulcimers; the lack of space to expand, and unsuitability of the basement for a lacquer finishing operation, was what prompted the move, and they decided to make a very large investment (and take a very large chance) and create a facility that would address their current needs and allow the company to grow. It would be a major blow to both the instrument building workshop and the Fremont retail side of the business for the headquarters of the company to relocate, especially as rising costs would probably dictate that they move outside the city limits. Please consider choosing Route IBB-1b so that this family-owned Seattle institution, which has brought music and joy to people all over the world, can continue to do so. Thank you for your consideration!</p>	<p>Molly Bauckham</p>

04/23/2022	<p>This comment is regarding the WSJ-5 medium tunnel down 41st ave SW. This is not a great option. The WS junction is a hub of commercial activity but this places the tunnel onto quiet single family homes on 41st. I prefer the options that bring the light rail tunneled however possible. If it comes down 41st and ruins this relatively quiet street, the remaining neighborhood nearby should be rezoned for commercial if it is going to disrupt what are mostly kids and families.</p>	Carmen Mikacenic
04/23/2022	<p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>First: Thank you for building this section of light rail! I am a Seattle native and 30-year Ballard homeowner, and I worked in Interbay for much of my working life. As such, I very much appreciate the need for this project.</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration. Janelle Lake</p>	Janelle Lake

04/23/2022	<p>Sound Transit,</p> <p>For ST3 Draft EIS, I agree with the suggestions provided by Seattle Subway on how the Ballard to West Seattle line can be improved. There needs to be changes to the preferred alignment to increase reliability, expandability, and accessibility. In general the stations are too deep. The current preferred stations are too deep and not located for easy use and future expansion. Sound Transit has had a problem maintaining escalators so we need to minimize the entrance and exit travel times. This light rail will be serving a lot of future riders and needs to be convenient to become an alternative to automobile travel.</p> <p>For the Ballard station, Sound Transit must reopen study of the Ballard 20th/Thorndyke Tunnel Portal option. The 14th and 15th Ave stations fail to serve the central commercial district of Ballard.</p> <p>For the Seattle Center station, I prefer Republican Street Station and work to mitigate impacts to arts organizations like KEXP as much as possible as they are very valuable to Seattle..</p> <p>For South Lake Union station, reject both presented options, study a Westlake or similar alignment oriented north/south within SLU boundaries and as centered on South Lake Union as possible. South Lake Union is an economic and entertainment hub for the city that had to be served well.</p> <p>For Westlake Station, I prefer the 5th Ave Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>For Prefer Chinatown station, I prefer the 4th Avenue Shallow Alternative (CID-1a) alignment but it needs to be as shallow as the existing station, study a shallow cut and cover option over existing Downtown Seattle Transit Tunnel.</p> <p>General DEIS recommended feedback</p> <p>Do not eliminate any stations. Work to make stations as shallow as possible. Improve transfer times wherever possible. Ensure escalators and elevators are (1) fast and (2) have enough redundancy to handle game day rushes and not fail riders in the event of failure. Use fast surface-to-platform elevators (no mezzanines) when stations are more than 100 feet deep and align station design so that it's possible. Plan to build for future expansion in Seattle.</p> <p>Thank you</p>	Tom Griga
04/09/2022	<p>Pink route - but whatever is cheaper - blue almost equals pink.</p> <p>[illegible]</p>	

<p>04/21/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: I STRONGLY RECOMMEND you reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard.</p> <p>In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1].</p> <p>At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible.</p> <p>At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower.</p> <p>At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub.</p> <p>In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility.</p> <p>In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations:</p> <ol style="list-style-type: none"> (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station MUST be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien. <p>Thank you for your review of these comments.</p> <p>Michael Gillenwater</p>	<p>Michael Gillenwater</p>

04/21/2022	<p>To Whom it may Concern:</p> <p>Did you know that Dusty Strings is known internationally? Did you know that the people there are highly trained one of a kind, not easily found or trained individuals? Did you know that the building has to build specific for its needs? Did you know that there are over 19,000 Dulcimers and 17,000 harps that bare a quality signature label inside of each instrument that has the address of your proposed route? Did you know that there would be over 19,000 people that would use your rail such as visitor, employees, sales etc. just keeping Dusty Strings in its present location? Did you know that there is a historical value to you keeping Dusty Strings in their location? I am submitting one of over 36,000 plus pieces of proof. The names and many more names since are, hard to find people, many new people would have to retrain from these people who would not be able to relocate, and that take many years. These instruments are made by hand one at a time. The value of this family owned business puts Seattle on the map for many institutions, globally.</p> <p>Sincerely, One of many Connie LoPorto -</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Sincerely, Connie LoPorto</p>	Connie LoPorto

	2037 nw 65th st seattle, Washington 98117	
04/23/2022	Hello! We love sound transit and fully support the expansion of the lightrail. However, the current plan for the West Seattle Ballard link to be on 5th St in the ID is not good. It will displace 19 small, minority owned businesses. Businesses that are historically and culturally significant to the ID. A link at 4th St would be better as it won't displace any of these businesses and in proximity is equally convenient. Please reconsider the placement of this link and save small, minority owned businesses.	Augusta Butlin

<p>04/22/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Joe Reilly joe.reilly206@gmail.com</p>	<p>Joe Reilly</p>

<p>04/22/2022</p>	<p>Manager DEIS Comments,</p> <p>I live in Ballard and I don't have a car. My family depends on transit to get around. The situation here is already close to untenable due to the poor planning and leadership from Sound Transit. You have ONE SHOT at getting the light rail right. I'm begging you on behalf of all of us who have to live with your decisions—don't screw it up! Make stations as shallow and easy to access as possible. Put them in convenient locations, even if small business owners complain. It's time to prioritize your passengers instead of business interests!</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. 04/22/2022	<p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general: Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures. Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements</p> <p>For Smith Cove (SIB-1): Approach station by tunneling under Elliott Station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections</p> <p>For Interbay Station (IBB-2b): Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead to Ship Canal Tunnel No pedestrian crossing at Dravus for bus connections. Design so all buses and passenger car pick-up and drop off on north side of Dravus or on 17th Ave. W</p> <p>Ballard station Re-examine and complete study of Ballard 20th Avenue Tunnel-Thorndyke Portal to recalculate right of way and real estate costs, benefits transit-oriented development, and increased ridership from Ballard Urban Village</p> <p>Re-examine and study of Ballard 20th Avenue Tunnel-Thorndyke Portal to assess BIRT study plans for retrofit or reconstruction of the West Dravus Street and West Emerson Street bridges</p> <p>Thank you for your consideration.</p>	Sound Transit Board, Virginia Klamon, Andrew Lewis, Sara Maxana
04/22/2022	<p>Please open for consideration an option for a tunnel and station for Ballard at 20th or 22nd Ave, including a Thorndyke Tunnel Portal alignment. The assumed cost advantages of the bridge and eastern station locations now appear faulty.</p> <p>Sincerely, Michael Gillenwater</p>	Michael Gillenwater
04/23/2022	<p>Please don't disrupt the businesses on 5th in the international district in order to build the link extension. These businesses are important to the cultural landscape of the neighborhood and should be protected. Consider other less disruptive options. Thank you.</p>	Eileen Lai

04/22/2022	<p>Manager DEIS Comments,</p> <p>As someone born in Seattle and a long-time taxpayer in the North King RTA district, I'm writing to insist that the Ballard-West Seattle Link Extension prioritize the needs of riders and increased ridership. Here are my comments about Sound Transit's Draft Environmental Statement:</p> <p>Keep all stations approved by voters. Make stations as shallow as possible to promote shorter connection times. The options so far are all far too deep.</p> <p>In Ballard, reopen consideration of a 20th Ave. station on a Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Erik Heino eheino@gmail.com 19118 94th PI NE Bothell, Washington 98011-2217</p>	Erik Heino

--	--	--

<p>04/22/2022</p>	<p>Manager DEIS Comments,</p> <p>Hello,</p> <p>It is CRITICAL that the Ballard-West Seattle Link Extension put riders and increased ridership first. I submit my following comments to Sound Transit's Draft Environmental Statement</p> <p>Overarching criticisms:</p> <p>We cannot afford to eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations at this stage contradicts what the region's voters chose, and stands as in direct opposition of the projected transportation needs.</p> <p>Stations should be as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, for the following in particular: Midtown, Westlake, Denny, and Seattle Center, will increase travel times to the point they will not be useful for short trips. Making short trips easy by rail is essential for the large number of riders who are not suburban commuters. All of the deep and high-capacity stations also call for excellent vertical conveyances, which very clearly has not been a priority in the past (memes about how often you station escalators are broken is awful even if you are entirely able-bodied!) If these types of stations are pursued, it must be ensured that escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes, and not fail riders in the event of mechanical failure. Elevators should go from street level straight to the platform level, without additional stops to get passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Building systems that provide smooth transfers between the growing transit lines is paramount to promoting a healthy rail network. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. The current options will make further expansions off of these options impractical and not useful. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. Having more transit at this hub should mean a much more robust and solid infrastructure, not worse than current. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations, this will do nothing but burden this already essential and heavily used station. Open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. Please keep in mind that for many businesses and residences in this area, displacement would mean having to leave Seattle proper for good. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. Also keep in mind how important having access via Lander is to those who went without it over the past 4 years. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).</p>	<p>Alex McGuire</p>
-------------------	--	---------------------

- (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).
- (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.
- (4) Midtown must be designed to accommodate future expansion to the east along Madison St.
- (5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

04/22/2022	<p>Dear Sound Transit,</p> <p>We urge Sound Transit to change the Preferred Alternative from the 5th/Harrison route leaving Seattle Center back to the original Preferred Alternative, 6th Ave/ Mercer.</p> <p>Much of our opposition to the 5th/Harrison alternative is admittedly personal. We live in a 2nd floor condo that faces south onto Republican. With the 5th/Harrison route we would look directly at Sound transit trains as they daylight on their way to or from Elliott. Whatever ST does to soften the wall we will look at won't obscure the fact of trains coming and going or the noise and vibration that will be created. The apartments and condos now across the street on Republican would be obliterated along with many mature trees. We moved to our condo with the expectation that it would be our "forever" home. At age 80, turning our lives upside down is an unpleasant prospect--assuming that we could sell our condo for anything like its present value. ST is mandated to buy and pay for property that it claims under eminent domain, but doesn't pay a penny for those that are impacted for years by noise and congestion or permanent loss of value due to Light Rail's proximity.</p> <p>Five years or more of construction is simply brutal. Sound Transit "expects" that we would maintain access to the cars in our two garages but doesn't guarantee it. Loss of access is simply unacceptable. Already there is little parking within a reasonable distance of our condos at 500 5th Ave W. Tossing our garages' 27 cars out onto the surrounding streets would be disastrous.</p> <p>ST's own figures show that 174 residential displacements would result from the present preferred alternative vs. five from the 6th/Mercer alternative.</p> <p>As a performing arts photographer I have spent much of my professional life at the Seattle Center on behalf of Seattle Repertory Theatre, Seattle Opera, Seattle Children's Theatre, Intiman Theatre and Cornish Theatre among others. The performing arts community has been devastated by the pandemic. The last thing it needs is additional disruption and/or displacement. Seattle Center is the heart of the arts in Seattle, and the arts are one of the city's defining features. Putting a Light Rail station in the heart of the Center would be a major mistake.</p> <p>When the switch was made naming the 5th/Harrison route as the preferred alternative, the reason given was pollution on the 6th/Mercer route (at Elliott, I believe). That reason has never appeared again in any of ST's literature that we have seen. We would love to know how pollution went from being the justification for a major change to not playing any part at all.</p> <p>We realize that Sound Transit is balancing a multitude of conflicting agendas. Thank you for asking for community input. We hope you are listening carefully to the concerns and opinions that you asked for.</p> <p>Very truly yours,</p> <p>Chris & Tessa Bennion 500 5th Ave W--Unit 204 Seattle 98119 (206)200-9938</p>	Chris Bennion,Tessa Bennion
04/23/2022	Save the small businesses on 5th and do NOT place the light rail there. Save CID ??	Kilie Steel
04/23/2022	<p>Hello,</p> <p>I am a resident in the Central District and i frequent the CID about once a week. Several of my favorite businesses, a few of which draw a lot of people to the neighborhood, will be displaced with the 5th ave S Link expansion. I would strongly prefer the 4th ave S option.</p> <p>Thank you, Melinda</p>	Melinda Lai
04/23/2022	<p>To Whom this may concern,</p> <p>I believe the 4th Ave shallow station will cause the least amount of harm to our historic buildings and community. There are many small business that operates on 5th Ave S than 4th Ave. It will be a better option to move the plan to a location that will least affect the CID community.</p>	Linda Zheng
04/24/2022	The most central and least disruptive route in the long run for Ballard area is to put the Lightrail on 15th Ave. It is already a major commuter route with established expectations without damaging new establishments such as the Ballard Food Bank that has recently concluded a three year construction project at 14th Ave NW and Leary Way. To disrupt this essential service disregards policies that should be taken into account when making the decision establishing where to lightrail.	Melissa Knapp
04/24/2022	Please adjust the street from 5th to 4th. Small businesses in the CID will be displaced in the current plan. Moving to 4th will not displace any small businesses.	Catherine Watkins

04/24/2022	Hi, writing to ask that you consider adding the light rail stop to 4th Ave instead of 5th so that local businesses in the CID aren't displaced. Between the pandemic and Asian hate crimes rising, we need to do all we can to support our Asian communities and keep them intact. Thanks for your time!	Kika Westhof
04/24/2022	I believe the 4th st options should be the only ones considered. The businesses in the CID are incredibly important to preserve our history and culture. The 5th st options are projected to displace 18 businesses which is devastating to our community.	Kirsten Ma
04/24/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes.</p> <p>Thank you, Andrew Coghill</p>	Andrew Coghill
04/24/2022	I have attended all the public outreach events, and have asked a lot of questions, but continue to get the same responses--that they cannot answer my questions. The West Seattle community has tried to make it clear to Sound Transit that most of the proposed alignments are NOT what we voted for in 2016. We have stressed to Sound Transit at all the outreach events that Options DEL-2a, or DEL-2b + WSJ-3a or WSJ-3b, are the only options we are in favor of. We have offered suggestions of removing the Avalon station due to the low projected daily boardings (1,200), and spending the resources on the tunnel instead. The areal/at grade options will be tremendously invasive of the built environment especially WSJ-4 and WSJ-5, that would displace Transitional Resources; have many housing displacements; create accessibility issues for remaining residents; create construction impacts to residents from the retained cut; and have operational visual/noise impacts to residents along 32nd Ave. We have asked if there is anyone at Sound Transit that is specifically responsible for figuring out how to find the funding for the long tunnel option, but again it is a question that remains unanswered. Again, to be clear, the residents and businesses in West Seattle are only in favor of the long tunnel options. Please hear us.	Mike Mizell
04/24/2022	Hello, I am a frequent sound transit rider, and looking forward to riding even more with more and more options opening with the expansions. These expansions need to be the best they can be for the present and future. This is why I support stations that aren't as deep, actually serve the neighborhoods they need to serve, and don't displace businesses. This is especially concerning in the CID where businesses MUST be protected at all costs which is why I support the 4th Ave alternative. Ballard and South Lake Union alternatives must be centrally located to the commercial and residential walksheds too. Not next to urban highways that are dangerous and farther from the amenities people will be traveling to and from. Thank you for your time.	Anders Wennstig

<p>04/24/2022</p>	<p>Hello,</p> <p>This is a another attempt I've taken as a local Architect to plea with the city for more conscientious urban planning. I seriously hope that the decision changes to move the proposed link rail location from 5th to 4th Ave. S. Putting the light rail on 5th will destroy a cultural fabric of seattle that has been preserved in the families and communities that have served Seattle for generations.</p> <p>All options will cause road closures and impact the CID in a significant way. However, the 5th Ave S options will close or displace up to 19 local businesses. The construction in this area will seriously impact the entire neighborhood.</p> <p>The 4th Ave S will cause road closures and displace only 5-8 businesses. I believe the 4th Ave shallow station will cause the least amount of harm to our historic buildings and community.</p> <p>As an architect, I pray my voice and the voices of fellow Seattlites will be heard. Thank you for listening.</p>	<p>Jilian Carlo</p>
<p>04/24/2022</p>	<p>I am writing in regards to the route you have proposed through Interbay that would mean the destruction of Dusty Strings Dulcimer company. This company started in the basement of a home in the Ravenna neighborhood then moved to Fremont where it was located in a basement. The second location was not suitable for manufacturing in terms of loading/unloading tools and supplies and a number of other constraints of the space. In time they raised enough money to custom build a location that met their precise needs for tool layout, dust collection, layout for assembly and so on, at great expense and time commitment. If they had to move because of the proposed light rail route it would be a massive hit to their continued operation and employment of many fine people, it would be like asking Boeing to relocate their Everett location (but on a smaller scale) and nothing like asking a storage company to move from one warehouse to another or a coffeeshop moving down the street. I would respectfully request that you alter your route slightly in that zone to consider which businesses could more readily move with minimal impact to continued operations versus those like this instrument making business. Visit them and get a tour to see just how complex the setup and you'll realize how this could destroy their ability to continue.</p>	<p>Doug Hayman</p>
<p>04/24/2022</p>	<p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>I am an East Coast customer of the Dusty Strings company (3450 16th Ave W.), and am writing in support of the IBB-1b alternative, which would avoid the company's facility. Dusty Strings has become one of the finest folk harp builders in the world; they are operating out of a building which they own, and which was custom-built for their needs only 20 years ago. Having to relocate and rebuild would be enormously disruptive to their operations and production schedule (which are still recovering from the COVID lockdowns). The company is also an asset to Seattle, both as a destination and as an employer, and has managed to stay in the city even as other manufacturers have left due to rising costs; if they cannot afford to rebuild in the city, they are likely to lose highly skilled lifelong employees who cannot relocate. In short, the company, its global customer base, and many local skilled craftspeople would be very seriously affected by a move; it would take years for the company to recover. The IBB-1b alternative will avoid causing this disruption.</p> <p>Thank you very much for your attention.</p>	<p>Catherine Madsen</p>

04/24/2022	<p>please consider the 4th st shallow option and add additional funding to expedite the process to a comparable 5-6 years. It disrupts fewer local businesses than any 5th Street option. if 5th street is selected, adequate relocation must be provided to these long-standing community gathering spots. Seattle Best Tea and others cannot become sacrifices for the long needed public transit.</p> <p>in any case, this must be a shallow station. a deep station flies in the face of project goals with regard to public transportation. elevators make travel times inconsistent and unnecessarily extended, and transfers become impossibly unreliable.</p>	Xen Eldridge
04/24/2022	<p>I urge Sound Transit to proceed with the CID-1a or CID-1b option. The Chinatown-International District has experienced enough displacement of businesses & closures after COVID-19, increasing gentrification, & racism. Increased fracturing & negative impact on the local Asian community that calls this district home will occur under the CID-2a & CID-2b options. Impact to local businesses & cutting into the heart of a very culturally-relevant space should be prioritized over price tag, Metro employee relocation, & length of construction. Needing to raise more funds for a viaduct reconstruction & taking a bit longer to complete should come second to the community. Weigh the voices & livelihoods of CID businesses more heavily than anything else being considered here! Disruption of 18 businesses is not acceptable. We want to preserve the integrity of our CID community! We want our voices heard! Thank you for your consideration.</p>	Helen Potter
04/24/2022	<p>A Link extension to West Seattle and Ballard is much needed and anticipated, but I have concerns about the placement of the new Link station. I lived on 5th Ave in the historic Publix Apartments for several years. 5th Ave is such an iconic part of Chinatown/International District, and building a new station along 5th Ave would disrupt and displace businesses as well as tear down historical buildings. Station options along 4th Ave should be the only options considered, as this location would have the least negative impact on the community. Please preserve the historic Chinatown/International District as much as possible.</p>	Melanie Good

04/24/2022	<p>Sound Transit has tough choices to make. Dusty Strings is a unique business in Seattle that is one of the largest manufacturers of folk harps and hammered dulcimers that are well respected worldwide. They fill a particular niche in the music world.</p> <p>As currently proposed, the only route that would not force Dusty Strings to move is the Elevated 14th Avenue Option (from Prospect/15th), also known as IBB-1b. Other routes could possibly be adjusted in order to spare our building and five other buildings, and follow a public street instead.</p> <p>Dusty Strings was founded in Seattle in 1979 and has remained a family-owned and operated local business for the past 43 years. They make globally-recognized musical instruments have been handcrafted in Seattle since the beginning.</p> <p>As manufacturers of high-quality harps and hammered dulcimers, they are a critical member of Seattle’s dwindling manufacturing community, which is important to business diversity in an increasingly tech-dominated city. They employ local skilled craftspeople, many of whom have made Dusty Strings their lifelong career.</p> <p>Approximately 60-70 workers would be displaced from this building alone, which houses Dusty Strings as well as four other small businesses.</p> <p>If they are forced to relocate, it could be very difficult to find another space within Seattle that will meet their needs as a unique manufacturer and small business. Their custom-designed building and owner-occupied model have made it possible to stay in Seattle as the costs of operating in Seattle have driven other manufacturers out of the city. Having to move outside of Seattle would certainly mean a major disruption to their instrument-building operations. It could also mean losing 20 to 30 years of instrument building expertise if their longtime employees are forced to leave their chosen careers in order to stay close to their families in Seattle.</p> <p>Dusty Strings has connections with instrument owners around the world, and many of them know of Seattle because that’s where their harp was made. Dusty Strings instruments are an important part of the livelihood of local, independent music stores all across the country, as well as in the UK, Europe, Asia, Australia, Canada, and New Zealand.</p> <p>Thank you for considering how this decision will potentially impact this business that supplies highly sought after musical instruments to the world. Thank you for considering their employees and the potential loss of a unique skills that the employees possess.</p> <p>As currently proposed, the only route that would not force them to move is the Elevated 14th Avenue Option (from Prospect/15th), also known as IBB-1b. Other routes could possibly be adjusted in order to spare their building and five other buildings, and follow a public street instead. I hope that you will please find an alternative which would preserve this valuable resource. Thank you, Carol Kappus</p>	Carol Kappus
04/24/2022	<p>I am writing regarding the proposed light rail route that would impact Dusty Strings, located at 3450 16th Ave W, Seattle Wa 98119. I am a huge supporter of light rail in Seattle and know it is challenging to find a route. But this small business is of special import, and loss of this building would be devastating to it. Dusty Strings has been a small family owned manufacturing business over 43 years, with a huge reach in the Seattle community and the global musician world, it employs 60-70 skilled craftspeople and workers. The building itself was constructed just 20 years ago when they had to leave Fremont, built to exact specification around its unique manufacturing needs, with built- in massive woodworking machinery - it is not easily replaceable anywhere in Seattle. Loss of this location would mean they may have to move from Seattle, which would be a tragic loss to the community and its diversity of businesses. This small business is an incredible example of success that brings benefits to the city in community, culture, taxes, and diversity of work. I urge someone from Sound Transit to go to Dusty Strings, tour the building, learn about the business-- and you will see what a tragic loss this would be.</p> <p>I strongly urge you to consider another route that would not mean the devastating impact or demise to this beloved Seattle treasure-- I understand there is a route IBB-1b that would not destroy this building, and I strongly support that choice. Thank you for the challenging work you are doing bringing light rail to Seattle.</p>	Elizabeth Nichols

04/24/2022	<p>I have been a harpist for over 30 years and relied on Dusty Strings to be there for me for structural changes to my harp!, troubleshooting many things and I know how hard they worked and how long they worked to have their building factory in the inter-urban area of Ballard. Please consider changing the route so that this building may be preserved for many years of continued production. Dusty Strings is one of the leading harp makers in the United States. They have an amazing record of receptivity and care for their clients.</p> <p>Having to leave the Seattle area would be devastating for this family and break up autonomy and availability of their retail store in relation to where they work to make the Harps and dulcimers.</p> <p>Thank you very much, Claudia Walker</p>	Dia (Claudia) Walker
04/24/2022	<p>I would like to comment on the preferred W Seattle light rail option. I see that it goes right up against the golf course, and that will inevitably impact the course greatly. There is 4-5 holes that would be impacted and inevitably change the way the course is played.</p> <p>West Seattle Golf Course is a gem in Seattle with a great club atmosphere, and the best public golf course in Seattle limits, hands down. I understand there is a need to build a light rail line, but impacting something that is used by thousands yearly is not desirable.</p> <p>Ideally, one of the alternate routes would be chosen to not impact a public land, used by so many. West Seattle Golf Course is a great course and a place where golf can flourish in the city. The team at the course has worked tirelessly to become a miles better course than Jefferson/Jackson, and it would be a shame to impact that hard work with the light rail extension.</p> <p>I urge the team to consider a different route.</p> <p>Thanks Chris Okroy</p>	Chris Okroy
04/24/2022	4th ave S is the path you should take as it wouldn't displace 19 small businesses like 5th would. Thank you!	Araya Casey
04/24/2022	Please move the CID station to 4th Ave S instead of 5th ave S. It is not a huge move, and would prevent the destruction of 19 small businesses.	Julia Lewicki
04/24/2022	Hi I am a CID resident and light rail commuter so this topic is pretty important to me. 5th ave s is not the ideal location for the new light rail station. 19 neighborhood businesses being displaced, destruction of historic Seattle buildings and further destruction of the Chinatown neighborhood/community can easily be avoided by simply moving this project west just one block. 4th ave S makes so much more sense. As someone who loves their neighborhood very much please don't make it smaller.	Evan Desiderio
04/24/2022	Please do not build the light rail on 5th Ave South in the CID, as it will displace small businesses. Please build it on 4th ave instead. Thank you!	Jill Denkmann
04/24/2022	Please extend the link on 4th Ave S instead of 5th Ave! Displacing small businesses like Best Tea and others affects the community. Building on 4th Ave is such a simple difference to save people's livelihoods!	Tansy Huang

04/24/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>This is a 'jewel of land" that can be enjoyed by so many - both young and old. It helps with keeping many active and engaged in a recreational activity that is available almost year round. It helps build a community pride as well.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p> <p>sincerely, Phoebe Mendes</p>	Phoebe Mendes
04/24/2022	Don't expand into the CID! Protect small businesses!	Michi Vergara
04/24/2022	<p>As a parent of two children at Alki Beach Academy(ABA), I am asking that you pursue options that would not require a forced relocation for the West Seattle Light Rail Extension. ABA is a gift to the community and has welcomed me and many parents who were in need of high quality child care in our community. We simply could not afford many other options in the vicinity. ABA is truly important to enabling the financial stability of our family, and the early learning opportunities that all children should have.</p> <p>In addition, I have learned that ABA serves an important role in creating more equity in our community. It is the only child care program on the peninsula that may be impacted by the project and is the largest child care provider in the Delridge corridor. The Delridge corridor (98106) is the lowest-income zip code, the most racially diverse zip code on the peninsula, and includes some of the lowest opportunity areas in the city. Removing ABA from this community would impose a disproportionate impact on these communities.</p> <p>Thank you.</p>	Christina Kitson

04/24/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. As a West Seattle resident who loves transit I am excited, but I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals. Transit is necessary but please please please take into consideration Transitional Resources and the vulnerable populations they serve! We must have transit based on a lens of equity for the entire community.</p>	Selene Russo
04/24/2022	<p>I believe that the best alternatives for Chinatown (CID-1a, 4th avenue to not displace businesses), Midtown and Westlake stations (DT-1, the preferred alternative) are the shallowest, as those will be the closest to existing stations and the surface. Both CID-1a and DT-1 would be better if they were even shallower, to align with the existing Chinatown and Westlake stations for faster transfer times. Also, please further review and try to mitigate the impact of DT-1 on arts organizations around Republican street, such as McCaw Hall.</p>	Ryan Zhang
04/24/2022	<p>Please make this extension happen as soon as possible. The closer it is to a built up area, the better.</p>	Nelson Lowhim
04/24/2022	<p>I'm a long-time Seattle resident with cultural ties to the CID. My parents used to bring me shopping in the neighborhood since I was 8 years old and now my partner and I find the most cultural connection in the neighborhood too. Please limit impacts to the beloved businesses by choosing the 4th Ave S option for Ballard/W Seattle light rail. Other options would displace our most cherished businesses and we don't want to see these mom and pop restaurants and shops disappear. These businesses and business owners are the heartbeat of the district. Thank you for choosing the 4th Ave option which is best for those most impacted - the community members who live there and the business owners to rely on their current spaces to survive. Thank you!</p>	Vera Hoang

04/24/2022	<p>I am a West Seattle Junction resident. My comments:</p> <p>TUNNELING: West Seattle, Avalon and Delridge should use as much tunneling as possible. Best Practices for a once-in-a-century project dictate that - especially given the significant elevation change in the area - underground options increase neighborhood livability and offer a better long term solution.</p> <p>STATION DEPTH: Downtown stations should be as shallow as possible and surface to platform elevators should be the preferred option when feasible.</p> <p>STATION LOCATION: The Ballard and South Lake Union station need to be built in and to the communities they serve.</p> <p>SPEED: Fast connections are critical. Ensure there are backup options to account for mechanical failure.</p> <p>SYSTEM GROWTH: Favor options that make inevitable growth of the ST network frictionless.</p>	Caanan Reiersgaard
04/24/2022	<p>The Ballard Food Bank is one of the few positive developments in Ballard addressing increasing hardships resulting in growing poverty and homelessness in our community. To ignore negative impact on this institution is to display a complete lack of concern for the social needs of the poor and homeless, a growing population in Ballard. Closing 14th Ave for years and disrupting access to the Food Bank is foolish and callous. The supporters of the Ballard Food Bank did not contribute money and time only to have it shut down so people with jobs and money can get to work more conveniently. Build the light rail on 15thAve, leave the Food Bank alone.</p>	Brian Watson
04/24/2022	<p>Please do not use the current route which will call for Dusty Strings to move. A much loved and respected harp maker for so many!</p>	Bonnie Rose
04/24/2022	<p>I would like to see the Denny station built on Westlake Ave. I understand it will be more impactful to the SLU Trolley and bus traffic during construction, but it is the right long term approach to tie together all the transit when finished in a cohesive area. Unless we can provide covered people movers or some other solution to move people between the Terry location and the rest of transit at Denny & Westlake, we should not consider that.</p>	Faizal Kassamali
04/24/2022	<p>Please move the light rail station to 4th Ave instead of 5th Ave. This project will significantly impact the small businesses in the CID and its community. The pandemic and the rising Asian hate crimes have already affected the community negatively. Please reconsider this project, going further with it not only will damage the historical buildings around, but also the livelihoods of the people in it.</p>	Ana Bungag

04/24/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Karen Armand
04/24/2022	<p>I think the sound transit board should propose having just 1 light rail station for West Seattle, the centrally located one at Fauntleroy. That would minimize housing and job displacements and lower the costs. It doesn't make sense to have 3 stations so close to each other. And the Fauntleroy station would be better positioned for the line to extend to the south eventually. I believe if they polled the West Seattle populace on that choice, they could change to this option.</p> <p>If they won't go down to just one station, Fauntleroy would take out less jobs than the 41/42nd Avenue choice, and again, would be a better choice for turning south later.</p> <p>I am also concerned that if the 41st/42nd options are built the 2 most affordable grocery stores in the area, Trader Joes and Safeway, would be displaced. Grocery prices have been raising very fast. There is senior housing at Alaska house. Not everyone who lives near the West Seattle junction can afford to shop at Whole Foods.</p>	Shirley Dimbirs
04/24/2022	<p>Please make it on the 4th Ave. I care about so many of the businesses, after covid the spread, we couldn't risk sitting inside which hurt so many small businesses in the ID, let's not do more damage to this community.</p>	Brandi Pellegrino
04/24/2022	<p>Please don't kill the businesses in internation district. I've enjoyed going to the restaurants on 5th, and the toy store after eating with friends. It holds a lot of memories for many members of the Asian community. Please use 4th instead so people would still have those businesses to visit after the project is complete. Thanks.</p>	Tina Choi
04/24/2022	<p>I am strongly in favor of the 15th avenue options in Ballard. Construction along 14th avenue would decimate access to the Ballard Food Bank, a service that benefits thousands of residents in the area. Please consider the 15th avenue options rather than the 14th avenue options in Ballard.</p>	Kathryn Donlin
04/24/2022	<p>Protect the CID neighborhood and its people! We are disappointed by and reject the proposal for the light rail to be built on 5th Ave S. It will displace up to 19 POC-owned small businesses.</p> <p>Please move forward with the 4th Ave S alternatives instead.</p>	Jordan Faralan

04/24/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably negatively impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p>	Sandra Melo
04/24/2022	Ballard Food Bank is in support of the light-rail options along 15th Avenue, NOT along 14th Avenue. I support Ballard Food Bank!	Elizabeth Gray
04/24/2022	<p>Hi!</p> <p>I am urging Sound Transit to choose the 4th Ave S alternative for the West Seattle Ballard Link extension because they will not impact any business in the CID neighborhood. One of your other options could displace up to 19 small businesses. Please do not ruin peoples' livelihoods. Seattle is already far too gentrified- we need small businesses owned by communities of color.</p>	Cassie Haas
04/24/2022	<p>1.2.2.2 For building a second transit tunnel, while agreed that a second guideway through downtown is needed for the additional capacity, choosing a deep bored tunnel isn't the only alternative. An elevated approach through downtown along 1st or 5th avenue could work just as well for a fraction of a cost as well as much cheaper stations. If it was a shallow tunnel/moderately deep, then perhaps the high cost would be worth it for the easy transfers, however with the required deep tunnels, the difficulty in constructing them causes long construction times, high costs and correspondingly expensive stations.</p> <p>6.2.2.1 Sodo prefer Mixed Profile Station (SODO-2). Allows busway to be kept open eventually. If cost is too high then second preferred is at grade staggered station.</p> <p>6.2.2.1.2 Duwamish Prefer South Crossing (DUW-1a) much cheaper and easier to construct.</p> <p>South Cross South (DUW-1b) edge costs too much for around the same impacts</p> <p>North Crossing Alternative seems unacceptable for the Army Corps</p> <p>6.2.2.1.3 Delridge Prefer Dakota Street Station Alternative DEL-1a as being the most cost effective, and easy expansion south on Fauntleroy Way. Second would be Medium tunnel 41st</p> <p>6.2.2.1.4 West Seattle Junction Prefer Elevated Fauntleroy via Dakota (WSJ-2) both for it's low cost and easy expansion further south. Though the removal of the apartment is unnecessary -- mainly caused by the avoidance of removing any car lanes. The station should be place within the ROW of Fauntleroy Way SW (north of the SW Alaska St) with perhaps some property acquisition from shell/highline West Seattle Urgent Care.</p> <p>6.2.2.2.1 Chinatown Segment Prefer the international district 4th avenue shallow station (CID-1a) The deep station would impose too great of a transfer penalty for riders especially as being the main transfer station for the 3 lines.</p> <p>Any deep station should be heavily contested if an alternative is available, the high cost and transfer penalty for decades is not worth saving the short term construction impacts. (And trying to avoid construction impacts with more tunneling can length construction times -- causing more impact than just doing a normal cut-and-cover station. Just look at the San Francisco chinatown station debacle, or San Jose's BART switch from cut-and-cover stations to mined stations)</p>	Wesley Lin

6.2.2.2.2 Downtown Segment

No real preference besides connecting to shallow alternatives in Chinatown.

More importantly, the depth of these midtown / Denny stations are too deep. Even accounting for having to traverse under the existing Westlake station, the midtown station depths of 140 feet are ridiculous and greatly increase construction cost and rider transfer times. The tunnel clearance against the existing Westlake station's are far too large compared to other European countries train stations. And additionally look into removing the mezzanine station style for midtown station to decrease the depth -- any time savings from the having the mezzanine are greatly outweighed by the additional depth it adds.

6.2.2.2.3 South Interbay Segment

None of the alternatives greatly change in ridership from 2,600. Given that Galer Street Station/ Central Interbay Alternative SIB-1 is preferred.

6.2.2.2.4 Interbay/Ballard

For Ballard prefer the elevated 15th avenue alternative or elevated 14th avenue. Much faster to construct than the underground alternatives and allows for easy expansion north. Against any tunnel approach for their high cost and inability to extend north.

Note given the recent Coast Guard letter requiring a 205 feet bridge, then preferred to have a high movable bridge. While it may need to open a couple times a year -- it is greatly desired over a deep tunnel. Again as already noted above, adding a deep tunnel will greatly inflate the cost of building the light rail and building a Ballard station will cost a lot more than necessary as well.

Regarding cost cutting measures:

Shift faulteroy station (-200 million), while shifting faulteroy station should definitely be studied, moving it onto 38th avenue means that further extensions south past Fairmont park elementary school aren't possible. What should be done is moving the station onto the ROW of Faulteroy Way SW itself.

Eliminating Avalon station (-325 million), should be studied and it seems the community is in alignment with it, but am not for using those savings for tunneling. It is a waste of money to spend transit money on visual impacts, one could fund decades of RapidRide busses or say extend southwards to Morgan street.

Consolidate Denny and south lake union stations (-575 million), should be briefly studied, the loss of an entire station shouldn't be taken easily though. But more importantly looking into ways to lessen the depth of the tunnels would greatly decrease cost. There should be investigations into moving the section crossing the 99 north to lessen the tunnel depth again toe decrease the station depth cost.

Lastly, am heavily against using any cost saving measures if those funds are going to be used for visual or construction impacts. Those funds should only be used for actual transit benefits. If one tries to maximize construction/visual impacts you're going to end up minimizing transit benefits per dollar. And it is impossible to remove all construction/visual impacts.

<p>04/24/2022</p>	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS.</p> <p>I support either of the Andover/Yancy/Avalon routes.</p> <p>I oppose any of the alternatives along Genesee that impact the West Seattle Golf Course.</p> <p>And I strongly oppose tunnel alternatives that are unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>Some of the reasons for supporting Andover/Yancy Avalon routes include:</p> <p>Estimated budget is the same or cheaper for Andover/Yancy/Avalon routes at \$1.6 B or \$1.5 B. (Any reasonable option at \$100 million less cost should be preferred)</p> <p>2) The business disruption is closely similar for both of these options</p> <p>3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487</p> <p>4) The Genesee routes likely violate Seattle City ordinance against using Parks for anything but their intended use.</p> <p>7) The Parks Department supports the Andover/Yancy/Avalon alternatives</p> <p>8) The West Seattle golf course has served the citizens of Seattle with excellent recreation, community fabric and vibrancy as a business for over 80 years. While respecting the need for light rail, the alternative routes that do not impact this unique use of parkland are preferred.</p>	<p>Lionel Tamez</p>

04/24/2022	<p>I strongly oppose the plan of building transit station near 5th Ave South (plan CID-2a, CID-2a Diagonal and CID-2b). Our restaurant is located on S King St, near the neighborhood around 5 Ave S in the International District. We will be seriously impacted by the construction of the station and the street closures necessary for the construction for many years. Covid already mad out lives hard enough, making our business extremely fragile. The construction plan near 5th Ave South will be deadly disruptive and will be death sentence equivalent to our business .</p> <p>Per recommendation from the board of the Seattle CID Preservation and Development Authority, while all alternatives are harmful to CID businesses and residents, the shallow station option for 4th Ave S is LESS harmful (CID - 1b on the maps)</p> <p>Please help preserve and protect small businesses in ID and reconsider the entire construction plan. If it absolutely has to be one of the 5 plans, please choose CID-1b to help reduce the damage.</p>	Dun Liu
04/24/2022	<p>Don't take away from the international district to expand the light rail. The CID is such an important place of history for the city and an area that provides space for us Asian-Americans in Seattle. It would really be doing the whole community a devastating disservice to displace so many local small POC/Asian businesses. Please relocate the light rail to 4th avenue instead.</p>	Samantha Chan
04/25/2022	<p>The Sound Transit DEIS needs to be revised or re-drafted in order to address key gaps in the findings presented as well as lazy research presentation and bias.</p> <p>In presentations focused on the Duwamish Segment, aside from the gimmick of highlighting the cells which project managers thought would get the best reaction, it fails to adhere to the mitigation of impacts on residents (displacements to residential and employees) while also failing to justify or disclose any methodology for calculating the costs cited.</p> <p>While I don't presume to know the best option, it has so far been impossible to get an answer for how Sound Transit is defining this projects success other than fulfilling a mandate from voters in 2016. As a stakeholder in this project, I expect to understand what priorities Sound Transit (and Seattle's leadership) are evaluating when making decisions for these "preferred" options. Is it the cost per rider? The total capacity specifically during rush hour traffic? Meeting a weekly capacity or percentage of population including growth?</p> <p>Without clarifying the definition of a successful project, we'll find ourselves in a position where more and more people leave this city because of policies which don't make sense to them, which cost too much, with zero accountability or visibility into the decision-making process.</p> <p>I also find it completely disingenuous and laughable that the DEIS proposes literally no alternatives or evaluations for whether building the Link extensions is even feasible or advantageous for the city and community. It's strange to see discrepancies in the data as well, with slide 18 of the Inf 2038 Presentation concluding that there would be "residential displacement in all alternatives" whereas the West Seattle Ballard Link Extensions DEIS specifies that there would not be any residential displacement for some options of segments. This has the optics of rolling suboptimal options together to give voters, stakeholders, and decision-makers a chance to pick the lesser evil.</p> <p>To summarize, this draft fails to present a convincing, well-researched, and holistic appraisal of options for moving forward. It struggles to address community concerns. There is no assessment of how the project intends to get back on track (no pun intended) with its 73% cost bloating. The team further seems unwilling or unable to evaluate any options (I was especially disappointed and humiliated by how dismissive this team conducted their guestimates after the proposed SkyLink option).</p> <p>Take more time to sort out these fundamentals, provide a pessimistic (or at least more realistic) estimate of your budget and timeline given financial constraints, build in some accountability to meeting and communicating progress, and come back with revisions for feedback.</p>	Kyle Novak

04/25/2022	<p>I offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44. Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. I understand that there are many impacts you are considering, I'd like to address one in particular: The manufacturing facility of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. We are a long time dealer and representative for Dusty Strings. I am aware that they have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs 20 years ago, and if it were removed, a replacement structure would also have to be custom-built to accommodate their innovative instrument manufacturing. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. I support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration.</p>	Brandden Lassells
04/25/2022	<p>The options on 14th Ave would close access to the Ballard Food Bank where I get my food and volunteer. Please build the new light rail system on 15th Ave! Do Not Build on 14th!!!!</p>	Ellen Jablow
04/25/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS.</p> <p>I support either of the Andover/Yancy/Avalon routes.</p> <p>I oppose any of the alternatives along Genesee that impact the West Seattle Golf Course.</p> <p>And I strongly oppose tunnel alternatives that are unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>Some of the reasons for supporting Andover/Yancy Avalon routes include:</p> <p>Estimated budget is the same or cheaper for Andover/Yancy/Avalon routes at \$1.6 B or \$1.5 B. (Any reasonable option at \$100 million less cost should be preferred)</p> <p>2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes likely violate Seattle City ordinance against using Parks for anything but their intended use. 7) The Parks Department supports the Andover/Yancy/Avalon alternatives 8) The West Seattle golf course has served the citizens of Seattle with excellent recreation, community fabric and vibrancy as a business for over 80 years. While respecting the need for light rail, the alternative routes that do not impact this unique use of parkland are preferred.</p> <p>Apologies to those who are already on top of this threat and have sent in their comments. I'd rather overcommunicate on this topic than suffer the consequences of inaction. Thank you!</p>	Craig Tarrant
04/25/2022	<p>Please do not displace so many CID restaurants and build on 5th ave</p>	Thu Le
04/25/2022	<p>Last message was confusing. Please build on 4th ave and not 5th to keep CID as is/protected</p>	Thu Le

04/25/2022	<p>Hello,</p> <p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Andover/Yancy/Avalon routes. I oppose any of the alternatives along Genesee that impact the West Seattle Golf Course. And I strongly oppose tunnel alternatives that are unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>Some of the reasons for supporting Andover/Yancy Avalon routes include:</p> <p>Estimated budget is the same or cheaper for Andover/Yancy/Avalon routes. The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes likely violate Seattle City ordinance against using Parks for anything but their intended use. The Parks Department supports the Andover/Yancy/Avalon alternatives The West Seattle golf course has served the citizens of Seattle with excellent recreation, community fabric and vibrancy as a business for over 80 years. While respecting the need for light rail, the alternative routes that do not impact this unique use of parkland are preferred.</p> <p>With gratitude James</p>	James Braunstein
04/25/2022	<p>Please select any route in the Delridge area that avoids the tunneling and /or affecting parkland like the golf course along Genesee Street. Isn't the route up Andover/ Yancy to Avalon also the least expensive for taxpayers as well?!? That should definitely be a preferred route. Thank you</p>	Charles Irwin
04/25/2022	<p>I'm writing to support the IBB-1b alternative route for the light rail. My main consideration for this is sparing the manufacturing facility for Dusty Strings in Ballard. I purchased my first harp from them 30 years ago - before we'd even moved to Seattle. I consider them a treasured and integral part of Seattle and one of the main reasons I still visit that part of town.</p> <p>I now live in Lynnwood and I'm excited for the light rail to reach here to make travel to the city easier, and I know that there will need to be compromises, but I consider Dusty Strings iconic, and if their facility is impacted by the construction it is unlikely they could remain in Seattle.</p> <p>Thank you for your consideration</p>	Karen Corey
04/25/2022	<p>The Interbay/ Ballard option should be the 15th Avenue route. This would benefit the Ballard Food Bank with their services/ customers. They just built this new place and the 14th Ave option would be detrimental. Thank you,</p>	SUSAN ULRICH-ANGELL

04/25/2022	<p>The Ballard Station needs to be located below ground at 15th Ave and Market St, or further west (17th Ave or 20th Ave). Placing the station at 14th Ave will negatively impact our industrially zone businesses and breweries by putting too much transit oriented development pressures on those businesses/property owners.</p> <p>Not to mention that the density is west of 15th Ave and the ability to absorb more density is still west of 15th Ave. By placing the station at 15th Ave, or west of there, you will be putting the station into the heart of the neighborhood, where everyone already is and where future riders will want to go.</p> <p>Plus, the cost to allocate all the needed properties along ST's preferred alternative, and the new high bridge requirements put forth by USCG (high bridge now has to be at least 205 feet high) will undoubtedly bring the preferred above ground alternative closer to the cost of a tunnel, and the Ballard community wants a tunnel with a below-grade station at 15th Ave and Market St, or further west (17th Ave or 20th Ave).</p>	Devin Reynolds
04/25/2022	I am concerned about the proposed route's destruction of 3450 16th Ave W, Seattle, WA 98119. For long-time establish small local businesses, good operating locations are not fungible, especially in Seattle's increasingly competitive market. I hope that an alternate route can be chosen that understands small business to be as much a part of Seattle's long-term future as the big corporations are.	Thena Seer
04/25/2022	<p>Public transportation is essential for Washington to achieve clean energy goals, reduce carbon emissions, supply affordable transportation options to those in needs, and connect our communities. However, given the sordid history of large scale highway and transportation projects dividing Seattle into differing income areas and undemocratically displacing low-income, minority peoples, imposing construction burdens on cultural and low-income neighborhoods, and continuously impacting business areas with construction, it is time for Seattle to re-think how we made transportation decisions and who is disproportionately being affected in those decisions.</p> <p>The West Seattle/Ballard Link extension should not be constructed in the International District/Chinatown station. This area was cut through by I-5 and has become a transportation hub largely without the consent and buy-in by this community. They are heavily burdened by transportation pollution and see the impacts to their business and the erosion of their rich cultural identity by the decisions that are being made above them. Seattle has a commitment to incorporating racial justice and equity into their agencies decision-making and I urge Sound Transit to take that into consideration as they work through their DEIS. The South Downtown area is something that make Seattle unique and special. These neighborhoods offer an experience you won't find in the rest of the city and are an essential part of our history. Continuing to ignore the concerns of these neighborhoods while prioritizing the voices of rich, white neighbors is not a precedent we should continue. Seattle needs to show these communities that they are of value and not disposable, as we have done time and time again.</p> <p>If not to protect the culture of these people and our city, to combat the pollution that these additional transportation projects with bring with them.</p> <p>Please listen to the people. There are other options for the Link extension--let's honor this community before it's too late.</p>	Samantha Tarvin
04/25/2022	the 5th avenue plan displaces too many small businesses in id. use the 4th ave alternative	Aspen Yap
04/25/2022	I think the options that include the line going up Genesee street would not be ideal due to the height of the track. I would prefer to see the Andover street options, it locates the line closer to Nucor and seems to preserve the residential areas a bit more compared to other alternatives. The Andover options also minimize the displacement of houses and businesses. I also would like to see one of the tunnel options for the Junction station, an elevated rail section would detract from the character of the neighborhood at that location.	Chris Keenan
04/25/2022	Please no elevated sections if possible. I like the preferred alternatives with a station at Alaska Junction.	Steve Ramels
04/25/2022	Current plans for light rail extension will displace 19 businesses in CID. I'm urging you to look at options along 4th ave s instead to avoid disrupting small businesses as the CID thrives due to small businesses in the area.	McKenna Haley

<p>04/25/2022</p>	<p>Dear Sirs and Madams,</p> <p>we write to you on behalf of the planned expansion of the Sound Transit light rail system and its effects to our business regarding harps. We are located in Germany and can't say what the best solution for Seattle might be, but we'd like to offer a point of view to the unique business of Dusty Strings, which is located at 3450 16th Ave W, Seattle, WA 98119 - on one of the possible routes of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>We trade with several brands in our Harp-Store in Germany, Dusty Strings being one of them. They are among the four biggest harp-building companies in the world, their instruments are renowned and loved all over the world. Covid has already left its impact on the availability of their harps, a further interruption of their business would tighten the situation even more, and it would be a great loss for the harp-playing-world, as there simply is no equal in sound and durability to the so well manufactured instruments from Dusty Strings.</p> <p>As we are also crafting harps, we have some insight view into this business. Harp building is not a business where you can move 100 machines and 65 employees into a factory hall and start the process. For the building of fine-crafted musical instruments you still need a wide range of manual work, and a clever way of connecting the work-space of machine-work and manual work. To build up those chains of drying wood, the right ambience for milling, glueing, stringing, storing, etc. is not easy and needs certain circumstances:</p> <p>Dusty Strings (as we learned by visiting them in Seattle) has a unique, perfect and highly effective way to build harps at a reasonable price, thanks to a tailor-made building for their business, they built in 2002.</p> <p>A lot of musical instruments are built in Asia in these times. To interrupt a "grown to perfection" production, that can compete on the world-market, with really perfect instruments, could endanger this business.</p> <p>Dusty Strings might not be among the biggest companies that you have to deal with when you realize your railway, but for sure among the finest and of worldwide importance for a huge community of harp players.</p> <p>If you have alternatives for the trail, we would be very glad if you considered and preferred them. As we understood it, that would be the Elevated 14th Avenue Option (from Prospect/15th), IBB-1b.</p> <p>Thank you! <p>04/25/2022</p>	<p>I live at 909 5th Avenue, Unit 1003, Seattle, WA and we remain very concerned about the impacts of the transit project including noise and access to our parking garage from Madison and Marion Streets and our designated delivery/loading area on Madison just west of 5th Avenue. We need our current designated delivery/loading area for move-ins/outs, furniture and other deliveries, etc. as we do not have an alternate loading dock/area. Potential designating and offsite delivery/loading parking area is simply untenable.</p>	<p>Aaron Wilson</p>

04/25/2022	<p>The existing options being shown for the West Seattle connection are far too impactful on low income communities in West Seattle. We can absolutely not displace that many families. We need to focus on tunneling as much of this infrastructure as possible and not locating stations on existing residential areas as we can.</p> <p>The Delridge location is particularly problematic. The north option is the only one that is legitimate at all and would be able to serve an existing functional neighborhood without fully disrupting an area that has a unique character and history.</p> <p>We cannot further impact our lower income communities for the sake of those literally on top of the hill who already have so much more.</p> <p>Covering a neighborhood with giant concrete pilings is not reasonable. This project needs more focus on long term implications of the urban design challenges and compromises. Place these massive stations and their tracks in areas that are already compromised by infrastructure, don't spread that impact further into communities.</p> <p>A north located station is the only way we protect a community and serve those who most need these transportation options.</p>	Erica Bush
04/25/2022	<p>As a Seattle resident I am willing to pay more for the best long term solutions. In my opinion the best solution on the Ballard end is a tunnel to the 15th street area. Or an elevated option that builds a new Ballard bridge for vehicle traffic and rail to the 15th & Market area. In the elevated scenario the new bridge should be built higher to significantly reduce bridge openings.</p> <p>I would like to see the preferred alternative, including all stations as proposed. (With the exception of the Ballard end) Reducing stations should not be considered.</p>	Charles Mika
04/25/2022	<p>I strongly urge the planners to adopt a tunnel route for West Seattle. The pillars which support the tracks cast giant shadows on the neighborhoods they travel through, are unsightly, diminish the environment and property values. A tunnel is the obvious best choice from a design, noise containment and beautification of the junction triangle area.</p> <p>If the planners cannot be persuaded adopt the tunnel version, then the shortest route - along Fautleroy - makes the most practical sense. The Alaska Junction is already traffic-choked and a large rail station or platform will destroy the small-town, classic neighborhood feel that draws pedestrians to the area to live, shop and patronize shops. Again, the large, ominous shadows not only harm property values, but diminish the experience of living and walking in the Alaska Junction area. A mass transit project in the Alaska Junction would mean death to many small businesses and is an unnecessarily expensive idea considering it only saves a traveler 5 minutes of walking - WHICH IS PARAMOUNT TO GOOD HEALTH, ANYWAY.</p>	Patrick Manley
04/25/2022	<p>While I'm annoyed that the Sound Transit reps supposed to conduct an in-person presentation at Delridge Library Apr 20 simply walked around the neighborhood and wasted my time, I do have a more important request.</p> <p>It is my experience as a former news photographer that neighborhoods in the way of public projects (freeways) experience higher rates of crime and misfortune, such that land speculators can buy up properties and profit when eminent domain kicks in to buy up properties.</p> <p>I'm am asking for a Human Impact Statement that researches the longevity of prior owners and heirs of valuable property in the way of Sound Transit's projects. Thank you.</p>	STEVEN RICHMOND
04/25/2022	<p>I have lived in W Seattle since 1990. I have used and appreciate the bus service to our area. I do not see the cost benefit of building mostly elevated tracks to Alaska Junction. The plan to run over the W Seattle High Bridge bears a high risk and running to the Alaska Junction will forever change the local character of the neighborhood</p>	Paul Dorvel

04/25/2022	The Tunnel routes are obviously the best and most practical. The bridge options should not include an opening span as that would be dangerous for an automated train and impractical as a dependable transportation option. The new Coast Guard standards for fixed spans is 200' clearance to accommodate super-yachts but the Aurora Bridge clearance of 167' makes that unnecessary. Still a fixed span as high as that would be needlessly expensive. A tunnel under the ship canal is the only practical way to go. The biggest problem with this line is that it comes so late in the game. Ballard has needed this line since the monorail was discarded and yet, communities already served by freeways have somehow pushed themselves to the head of the line. Ballard needs this built sooner not later.	Paul Kahle
04/25/2022	If a tunnel option is competitive in terms of cost estimate, then let's go with the tunnel. Preferably on 15th or 14th and upzone the area after the required land is acquired.	Derek Armstrong
04/25/2022	The ballard station options are all disappointing as they do not serve the heart of Ballard, but instead a neighborhood that we hope will grow some day. A location on 14th or 11th would be great for an ST4 package going to Fremont, but not what is useful now. Please please please please reconsider the Thorndyke portal option as a route that serves the heart of ballard with reasonable feasibility and affordability.	Carson Baker
04/25/2022	I believe Sound Transit should use the route that would save the west seattle golf course	David Meyers
04/25/2022	Hello, All of the options for a station on 5th Ave will greatly affect the Chinatown International District. As a long time community member of the neighborhood, it is sad to see long time small businesses being displaced and residents of the neighborhood having to live in years of construction that would affect their daily lives. Please look more into the options for a station on 4th Ave. Sincerely, Feng Ying Yuan	Feng Ying Yuan
04/25/2022	I am a resident of the International District since 2017. I am commenting in opposition to both of the 5th avenue routes described in ES.3.1.2.2. Those routes are extremely disruptive to the CID community, which would lose many great small businesses on 5th avenue, alongside the residents that would be displaced during construction. This is a very active and great Seattle neighborhood that deserves as little impact as possible from city planning, especially considering the historical treatment of the community. If this expansion goes ahead, please prioritize the livelihood of the International District community and opt for one of the 4th Avenue routes.	Caryn Livingston

04/25/2022	<p>I am really excited about a West Seattle-Ballard light rail extension. I have several comments after reviewing the plans.</p> <p>New downtown tunnel must connect with as many existing light rail stations as possible to both avoid congestion of transfer from one line to the other following sporting events and connections to the airport - see my comment about the stadium station below.</p> <p>Stadium station should be a shared station for both lines. Currently the stadium station and int'l district station serve as locations to access both stations, and are extremely congested. The ability to take the next available train would ease congestion if this was a shared station at grade. Maybe that means moving the existing station a bit South.</p> <p>Perhaps an alternative to this is to ensure that the existing SODO station becomes a shared at grade station, so that bus transfer can occur along the bus line to transfer to the stadium easily. Perhaps begin the tunnel between SODO and the Stadium station so that there is minimal disruption to the existing light rail line.</p> <p>Priority should be access to Climate Pledge Arena, as this will only add congestion as the Kraken, Storm, and Sonics (we can hope right?!) all will play at the arena. Along with connection to the existing SLUSC line at the Denny station (or Westlake)</p> <p>Plans down with minimal impact to historic buildings and businesses in the int'l should be favored.</p> <p>The West Seattle bridge needs to be replaced and should be built with Light Rail in mind. The current bridge should be demolished and a new bridge built simultaneously with light rail in mind. Failure to do so will only create more cost later. This should have been done with the SR520 bridge, and was not, and the NIMBYs should have been ignored for the better of the good of the people.</p>	Matthew Brewer
04/25/2022	<p>The tunnel option seems the least disruptive and is not much more cost-wise. It seems more disruptive environmentally to do any of the above ground options.</p>	Chandra Hicks
04/25/2022	<p>As much as can be underground should be underground. Not only are elevated tracks eyesores, they prevent the beneficial utilization of real estate in the city. This is particularly true along south Queen Anne and Elliot Avenue. Elevated tracks are unsightly and will provide more area for homeless encampments rather than used for residences and businesses that pay taxes. To say that current businesses that will be displaced will go elsewhere misses the point. It is the property itself that provides revenue regardless of which business is currently there. Thus not only is the cost to purchase such prime real estate high, there is the additional cost of deprivation of future revenue. Ridership will not counter that cost as the ridership will be the same regardless of whether it is elevated or a tunnel. There is the additional cost of the extreme and lengthy disruption while elevated tracks are installed. Look at any city with elevated trains, they are a blight. It is inconceivable that such a system would be intentionally put in place in Seattle in prime real estate.</p> <p>The projected ridership is not based on current projections. Fewer and fewer businesses are locating in downtown Seattle. More and more are allowing for work at home, thus the need for the lightrail is much less than originally projected. Ridership will never cover the cost of the light rail. Further, while the time from Market Street to downtown may be reduced (by a few minutes) from what current bus service provides, this does not factor the time for riders to get to Market Street. For example, if a rider takes the D bus to get to the Market Street station in Ballard, then has to wait for the light rail to get downtown, it would be easier and quicker to stay on the D to downtown. There will be little, if any, benefit to taking a bus to the light rail and then to take the light rail, unless one is going much further than downtown Seattle.</p>	Jeanette Brinster
04/25/2022	<p>I wanted to express strong preference for tunnel stations at the Avalon and Alaska Junction Stations of the West Seattle Junction segment (WSJ-3a, WSJ-3b).</p>	Ethan Grossman

04/25/2022	<p>I live in Magnolia and will comment only on the Ballard project. I prefer the tunnel option to keep -5th open to vehicular traffic. Please consider moving the terminal away from the -5th and market intersection. This is a highly traveled route and congestion should be avoided. The location of the present bus stop should have been located north of market to facilitate free right turns from 15th to market. There is no reason to block traffic at that bus stop with transit when it could have been located north of market. Keep vehicular traffic in mind when locating the new light rail system. Cars continue to move most people and sitting at traffic lights does nothing to reduce our carbon footprint or improve efficiencies. Thank you.</p>	Tim Washburn
04/25/2022	<p>Ballard Link Extension - two general comments:</p> <p>Westlake to Seattle Center - focus on population centers</p> <ol style="list-style-type: none"> 1.a. - Use preferred alternative Westlake Station and (red) line 1.b. - Provide a station central to Amazon Land (between Pine and Denny) and transition the route to the blue line alternate 1.c. - Provide a station serving South Lake Union, located generally in the 8th and Harrison area 1.d. - Drop the station at 99 and Mercer - saves \$ 1.e. - Keep the station at 1st N and Mercer - serves Uptown more and reduces congestion in the middle of the Seattle Center. 1.f. - Return the route to the preferred (red) line at a station on Elliott between W Galer and W Prospect <p>2. Interbay to Ballard - focus on good ped/bus connections</p> <ol style="list-style-type: none"> 2.a. - Keep the preferred line just east of the BN rail yard but locate the Dravus station closer to 15th W and the rapidly growing "Dravus Village" and bus connections along 15th W. and to the Magnolia area. 2.b. - Tunnel under the 'cut' along 14th W - simplest in the long run. <p>Thanks for the opportunity</p>	Mark Spitzer
04/25/2022	<p>I would like to express my desire for a formal study on the Gondola option. I encourage Sound Transit to give this option serious consideration and the reach out to a knowledgeable source to evaluate the plausibility of this option. Factoring in the cost, the impact to the various neighborhoods and the time it will take to deliver light rail I believe the Gondola to be a viable option. The amount of housing and businesses that would be effected by the various proposed light rail options are significant and not to be easily discounted. Please perform a through investigation into this option. If it does not pencil out then so be it, but please do not discount it with the limited information that you have shared to date. We as taxpayers deserve better than that!</p>	Frank Immel
04/25/2022	<p>Page 2-28: The DUW-2 does not impact any private homes. It does not impact the steep slope of north pigeon point. It does not impact nesting great blue herons. It will build over the port facilities and will not have a significant long term impact on port activity. This seems like the best approach.</p>	Scott Morgan

04/25/2022	<p>Hello,</p> <p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. When I was working downtown, pre-pandemic, I rode the light rail to work every day from the time it opened, and also rode it for personal trips whenever possible. It is without question a vital part of our larger community, & I believe in & support public transportation.</p> <p>However, I oppose any of the new route alternatives that negatively impact the West Seattle Golf Course, & support any route/project that maintains the course as part of the Parks system.. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>My reasons:</p> <p>The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for; and, the Parks Dept supports the Yancey alternative. Presumably the budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B? Almost certainly costs will increase over the years of the project.</p> <p>The private property disruptions & business disruptions are similarly less, or close, for both Yancy alternatives, (from 607 for DEL1a down to 201 or 487) ?</p> <p>The loss of substantial Parks/City revenue, & loss of recreation opportunities for tens of thousands of golfers - City Parks users - each year would not be impacted.</p> <p>Not only does the golf course serve the West Seattle community, it serves all of Seattle & much of the larger region. (it has also been lauded in at least one national golf publication as one of the best municipal experiences, & courses, in the country).</p> <p>Longfellow Creek would have no risk of damage to the fish or the creek.</p> <p>The mature trees all along the North edge of the golf course would not be cut down.</p> <p>In planning for the future of the region, and the well-being of all, we must choose options that preserve good things. The City parks are without doubt good things, and should be maintained (and, please see #1 above!). This particular part of the Parks, West Seattle Golf Course, is an important, & historical, part of our City, and must be kept.</p> <p>thank you, all, Sincerely, Forrest Schofield</p>	Forrest Schofield
04/25/2022	<p>Page 2-36: The DEL-5 option seems to be the least impact to the north Delridge neighborhood. It allows the full NW corner of Delridge and SW Andover to allow better truck access to Nucor, to create great bus transfer flows since the entire area will be rebuilt. Most riders will be accessing this station via bus, so why move it further south and wipe out a neighborhood and getting rid of those possible walk up riders.</p>	Scott Morgan
04/25/2022	<p>Page 2-42: If we are going to tunnel, select WSJ-3b. This puts the station nearest to the heart of the Junction and separates the Avalon and Alaska Junction stations to their own rider shed areas.</p>	Scott Morgan

<p>04/25/2022</p>	<p>Hello,</p> <p>As a longtime resident and property owner in West Seattle I am excited by the prospect of mass transit/light rail connecting our community to the downtown core and other regional transit hubs. It is a necessary change to help manage the growth in population and the need for reliable, environmentally conscious transportation.</p> <p>My comments here center on the West Seattle extension and the alternatives for the Alaska Junction station specifically. First and foremost I want to convey strong opposition to the two preferred alternatives proposing an elevated track (PINK, WSJ-1 and WSJ-2). An elevated track would have significant negative impacts on the noise, aesthetic, and feel of our community. An elevated track would also cause the highest number of residential displacements at a time when housing is in short supply and prohibitively expensive for many in our region. Comparatively, the PINK preferred alternatives scored lower than the remaining alternatives in performance with the Elevated 41st/42nd option (WSJ-2) receiving the lowest overall performance rating of all the alternatives proposed.</p> <p>I strongly support the selection of a tunnel alternative. There are several tunnel alternatives proposed (BROWN and BLUE), and the opinions and impacts to residents along the routes should be given the most influential consideration. As a resident most impacted by the Alaska Junction station, my preference among the tunnel alternatives is WSJ-5 (BLUE, Medium Tunnel 41st). This option received the highest possible performance rating (darkest blue in every category) and displaces the fewest number of residential units. Further, this option would be least disruptive to other street level transit (bus, bike, car) and place a station at the heart of the junction business district, supporting local economic activity as well as connections to other transit options (RapidRide, bike lanes, etc.).</p> <p>In closing, an elevated track to an Alaska Junction station is NOT a good choice for our neighborhood and our residents. Please preserve the beautiful, above ground aesthetic of our neighborhood and choose a tunnel alternative. Preferably one that displaces the fewest number of residents and offers the highest possible performance.</p> <p>Thank you.</p>	<p>Dana Harrison</p>
<p>04/25/2022</p>	<p>I am reading with increasing concern that Sound Transit may actually spend valuable time and resources considering (or, at least, make it look they are considering) the ludicrous West Seattle gondola alternative to light rail which is being heavily promoted by a small band of activists: (https://www.westseattleskylink.org/).</p> <p>This is such a plainly ridiculous and not fit for purpose plan that it would be an egregious and offensive waste of taxpayer money studying this to assuage a small band of clueless activists who must have no idea how a mass transit system actually works because they probably have never used one.</p> <p>Please do not humour these people, or try to fend off their campaign, by offering to spend time and money considering it. It should take ST about 5 minutes to set out half a dozen reasons why the gondola is a terrible transit "solution", from its poor capacity at rush hour (when it matters) to the fact it takes longer than cycling the same route, to the fact it requires so many multi-modal changes to apply to a normal commute to downtown (bus, gondola, transfer to already-full light rail train in SODO).</p> <p>ST would get far more respect and support in the community it serves if it would definitively and firmly reject stupid ideas instead of pandering to them.</p> <p>Respectfully, Mike Tanner - West Seattle resident</p>	<p>Michael Tanner</p>

04/25/2022	<p>I am one of the many people who work at the intersection of Delridge Way and Andover Street that would be impacted by the creation of a new Sound Transit Link in this area. Every Delridge Segment option identified in Section ES.3.1.1.3. (pages ES-13 to ES-18) except for DEL-5 and DEL-6 would "displace" our company's office building at 4000 Delridge way and have severe negative impacts on the company as well as the numerous others in this area. Additionally, I do not understand why your preferred options are the ones that displace the majority of residences. Options DEL-5 and DEL-6 may displace a few more businesses, but would displace a comparable amount of employees at those businesses and would displace far fewer residences. DEL-6 displaces 3.5 times less residences than DEL-1a; costs \$300 Million less; does not impact any parks; does not impact any historical properties; is the least visually-impactful; and has the least construction transportation and noise impacts.</p> <p>To be frank, I do not like any of these options and do not think this is a prudent use of public funds, particularly since by the time construction on this project is complete, the West Seattle Bridge should be available for use and the majority of West Seattle residents will be using it for transportation; and the greatest need for alternative transportation into and out of the area will be gone. Please recognize that every option except for DEL-5 and DEL-6 will displace our business with absolutely no guarantee that a new office building can be found that meets our needs. The 4000 Delridge Way Building was constructed with our specific business needs in mind, at great financial risk to the building owners, and losing it would be devastating.</p>	Riley Montemayor
04/25/2022	Stop displacing our beloved community businesses and catering to the white rich folks of Bellevue. We've worked hard for this country and have a right to keep this place as our own. If you will continue on with this project, we will mobilize and we will not be afraid to push back.	Noelle Evangelista
04/25/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <p>The business disruption is closely similar for both of these options</p> <p>The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487</p> <p>The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for</p> <p>The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year</p> <p>There would be no risk of golf balls hitting the trains</p> <p>The Parks Department supports the Yancy alternatives</p> <p>This is the only golf course that serves the West Seattle community</p> <p>Longfellow Creek would have no risk of damage to the fish or the creek</p> <p>The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Geoffrey Croghan

04/25/2022	<p>I am curious why if the first preferred Tunnel option is the same est. price as the bridge why we would go with the bridge option. The bridge option displaces many more people, businesses and disrupts much more than the tunnel option.</p> <p>I am also very interested to know what the plan is after the Ballard ext. is built. Is the plan to continue it further north at some point? I don't see how the elevated option has a great route going north or East. In light of that wouldn't the Tunnel give us more options in the future?</p> <p>I recognize we cannot know all the factors for the future or what we 'might' want to do etc. but I don't see any projections in any of the studies on if we want to connect this somewhere and what that would look like if we choose this option vs another option.</p> <p>We are already planning this for approx. 15 years out but I wouldn't want us to have created a dead-end that then creates more work for Seattle down the road.</p> <p>I would push for the first Tunnel option since the cost is projected to be equal to the elevated bridge and I think it leaves Ballard with better options and less negative impact.</p>	Amber Isaac
04/25/2022	<p>from 1980 on I have rented then owned property in West Seattle! Nothing but promises of better bridges, water taxi, monorail, gondola and now light rail. The broken and under repair high-level bridge was the only real improvement in "40 years". I have sat on public transportation busses in traffic for hours to see that the bus lanes only partially work. Still cannot reliably designate an arrival time downtown with less than a 45-minute window, often it is more. Considering the entire off hour trip by car or bus takes less than 20 minutes My point start building something to actually free the West Seattle 80,000+ and finish it in my lifetime!</p>	Nolan Koreski
04/25/2022	<p>I would like to submit a vote for either the Tunnel 41st or Tunnel 42nd options for West Seattle. These are the least disruptive, most forward-looking alternatives.</p> <p>Thank you.</p>	Rusty Welch
04/25/2022	<p>I am a long time west seattle resident and metro bus commuter.</p> <p>I support the alternative that places a station terminating at Fauntleroy. It would avoid having such a large impact on the existing Alaska Junction community and neighborhoods. Both the elevated and/or tunnels that would be needed to place a station just a block or so west seem excessively and unnecessarily intrusive and expensive.</p> <p>The Fauntleroy location is already a hub for commuters and is a much wider street.</p> <p>If for some reason that I am missing the station farther west is required - than I support a tunnel and taking the time needed to find third party funding.</p>	nancy craver

<p>04/25/2022</p>	<p>I am writing to advocate against using 14th Street in Ballard as the new light rail route.</p> <p>I live between Northgate and Roosevelt stations and am a huge proponent of public transit and its expansion in Seattle.</p> <p>However, I'm also a Ballard Food Bank volunteer and supporter and know how devastating the significant construction along 14th Avenue would be for their service model and their clients..</p> <p>They exist to connect some of the most vulnerable in the city with food and critical resources - and public transit also seeks to connect those same populations with work, services, recreation, and loved ones. Along with the other benefits it provides.</p> <p>Please do not use the proposed 14th Ave route for light rail expansion; use 15th instead..</p> <p>Thank you for hearing me out.</p> <p>Mary Evans</p>	<p>Mary Evans</p>
<p>04/25/2022</p>	<p>Greetings:</p> <p>Please see the below comments regarding the WSBL Draft Environmental Impact Statement. We implore you to please consider selecting DEL-5 and DEL-6 for the West Seattle Sound Transit route.</p> <p>In reviewing the Draft EIS Executive Summary Delridge Segment (ES.3.1.1.3, page ES-13 – ES-18), it appears that the proposed options DEL-1a, DEL-1b, DEL-2a, DEL-2b, DEL-3, DEL-4 all impact the corner of Delridge and Andover. Not only would they force our office building to close they would essentially demolish the surrounding neighborhood. When we built our building at 4000 Delridge Way the city encouraged us to make it as nice as possible and required us to add the parking structure so as to improve the visual appearance of the Delridge/Andover corner. We have been good neighbors and helped to keep that part of the Delridge corridor a thriving business district. There are very few commercial buildings that would fit our needs and it would be devastating for our business and employee morale to have to leave West Seattle.</p> <p>It seems DEL-5 or DEL-6 are superior options generally, due to less neighborhood impact. Specifically, these options would allow us to remain on our corner and prevent any disruption to our thriving business. Options DEL-5 and DEL-6 would disrupt the fewest amount of residential and a similar number of commercial properties – both of which are limited in West Seattle. Our business would face great hardship if we had to leave West Seattle. DEL-5 and DEL-6 seem to be a more logical route for Sound Transit as per the table on Executive Summary ES-18 – the noise and visual impact would appear to be significantly less if DEL-6 was chosen above all other options. Furthermore DEL-5 only impacts 2 historical buildings and DEL-6 impacts 0, furthermore DEL-5 and DEL-6 have zero impacts on park and recreational resources, whereas the first four options impact a park and golf course. Additionally, the DEL-6 option is cheaper than the others making it a great choice since construction costs are rising at a dramatic rate. We disagree with the predicted ridership rates as maintaining the business district near the Delridge/Andover corner and adjacent buildings would increase ridership. The traffic impacts may be challenging and we will be prepared for those; however, a year or three of traffic inconveniences is a small sacrifice for being able to keep our building, particularly since we just went through a major upgrade to Delridge Way and have dealt with the more than two year closure of the West Seattle Bridge. The 4000 Delridge Way building is home to our family business and has provided hundreds of folks jobs over the years, forcing us to sell this property would be devastating as this building was designed and built to be a long-term investment with the highest quality of materials, including locally source wood siding and interior beams, as well as copper cladding. It is designed and built to last even in a changing climate. We have no intention of selling this property and would like to maintain it for generations to come.</p> <p>We implore you to please consider selecting DEL-5 and DEL-6 for the West Seattle Sound Transit route. Thank you.</p>	<p>Scott Vlotho</p>
<p>04/25/2022</p>	<p>The alternative routes with a tunnel near Fauntleroy/38th Ave SW area would help preserve more of the neighborhood in my area. We have good neighbors.</p> <p>Not sure how to suggest the page chapter etc.</p> <p>Thanks again</p>	<p>Jeremy Normann</p>

04/25/2022	I'm writing to ask that Sound Transit please reconsider the route (for the West Seattle Ballard light rail) from 5th Ave to 4th Ave. Moving to 4th Ave is preferable to the CID neighborhood because it will not impact small business, whereas the current plan for 5th Ave will displace about 19 small businesses. Thank you for your time.	Anny Hunt
04/25/2022	I own property on 13th ave west. I am very much in favor of the 15th ave (blue) alternative. Placement at Dravus and 15th would give access to more people who could walk to the station, whereas Magnolia is hill separated and primarily individual residences. Queen Anne has more renters and more cars competing for parking.	jim klavano
04/25/2022	<p>What good does this do to just run the light rail into The Junction? Why not down 35th Avenue SW, or Fauntleroy to the ferry, or Delridge through White Center (16th could use the economic benefit) and into Burien? Crosstown options would be helpful, too, somehow connecting to Sodo, Georgetown, and Southcenter.</p> <p>Businesses and residents being displaced should receive benefits that include new homes and businesses, and free travel for life on the system.</p> <p>Bad enough the scam that bought property and then the project was canceled years ago.</p> <p>And... given that I'm old, I expect I won't be here when this thing is finally finished more than a decade from now.</p>	michael flynn
04/25/2022	Please retain the Avalon Station in West Seattle. The Alaska Junction is already very crowded and retaining an Avalon Station will take pressure of the Alaska Junction station. Additionally, an Avalon Station will be uniquely located to gather riders from the south travelling up 35th Ave SW.	Scott Ryan
04/25/2022	I strongly object to the versions of the West Seattle line that allow elevated rail above West Seattle Junction. It will destroy the center of our community. It is worth a year's delay to pay for the additional cost.	Candace Sullivan
04/25/2022	<p>Hello, I am a frequent transit user and bike commuter from Northgate, where I own a home, and Fisherman's Terminal, where I work. I am very invested in sound transit developing an ST3 extension that works for generations of transit riders for years to come and better connects our city.</p> <p>For the Ballard station, I would like Sound Transit to follow the guidance laid out by Seattle Subway and study tunnel options that place a station closer to the core of old Ballard. A station West of 15th Ave would mesh so much better with the neighborhood and connect an already dense and lively neighborhood with the rest of the city. I can just imagine a Ballard station functioning like the great station in Capitol Hill that so many people have come to rely on and love.</p> <p>For the downtown stations, in general please do what it takes to make those stations less deep. Transport times from grade to platform need to be as short as possible to make it easier for more people to use this service.</p>	Simon Krauter

04/25/2022	<p>Hello, myself and my fiancée are proud West Seattle home owners. We are an LGBTQ+ couple that finally was able to reach our dream of owning a home in 2021. As you may know, in our LGBTQ+ community, this is not something that is common. Our dreams are in jeopardy with the light rail plans. We worked hard to have our home and own our home. For that reason, I would like to see the Preferred Elevated Fautleroy Way Station Alternative (WSJ-2) be the route that you go. The other route (Preferred Elevated 41st/42nd Avenue Station Alternative (WSJ-1)) would cause us to lose our home.</p> <p>The Fautleroy Way State Alternative is the way to go. It is the most cost effective for our tax dollars, effects a similar number of residents, but effects less employees and less businesses. It also has less effects on historical properties. We rely on many of these businesses and the number of businesses that would be effected by the 41st/42nd Avenue route would be horrible. Also, the number of employees put out of work would be horrible and devastating as well. There is a similar number of residents, and residents will be displaced either way. But if we can cause less harm to businesses and less employees to lose their job, that is what is better. We fought for our dream, and do not want to lose our home. Also, the Fautleroy Way station has far less operational vibration, while maintaining a similar amount of noise. As a homeowner and taxpayer, I feel the Fautleroy Way station is the most appropriate way to go, has less environmental impact, and is a cheaper, but effective option. I would like to see the Fautleroy Way option implemented.</p>	Victoria Hester
04/25/2022	<p>We live at 4134 36th Ave SW, about .5 blocks from the proposed Avalon station. My neighbors and I all agree that we want a station nearer to us than Delridge or the Junction. Short-term savings are less important than long-term convenience and availability for both commuting and personal transportation.</p>	Michael Monteleone
04/25/2022	<p>Comment referred to section 4.2.2.2</p> <p>We have lived in the Delridge area for nearly 30 years and can honestly say that a no build policy makes the most financial and environmental sense of all of the proposals.</p> <p>Displacing any more residences or small businesses in and around this area would devastate far too many people compared to the 'benefits' of a new transit system, especially since our current Metro and Sound transit systems are not being used nearly to capacity. It would be better to improve the Metro system here and avoid so much unnecessary expense and trouble to the local citizens and businesses.</p> <p>Thank you for your time and consideration.</p>	Kanti Selig
04/25/2022	<p>I do NOT support any options (below or above ground) along 14th Ave NW. I am in favor of options along 15th Ave NW. I support Ballard Food Bank and their ability to provide food and services to the community; the options on 14th Ave NW would be devastating.</p>	Cari Morales

04/25/2022	<p>Open additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment.</p> <p>For Interbay I support Thorndyke retained cut [IBB-2a/IBB-2b].</p> <p>For Smith Cove I support Galer street station/central Interbay [SIB-1].</p> <p>I prefer Republican street station and for work to mitigate impacts to arts organizations as much as possible.</p> <p>Please study a Westlake or similar alignment oriented north/south within SLU boundaries and as centered on South Lake Union as possible.</p> <p>Westlake Ave Station [DT-1]. Update vertical conveyances and aim shallower.</p> <p>5th Ave Station [DT-1]. Update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access.</p> <p>For Midtown state, make the station as shallow as possible, design station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use.</p> <p>Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but it needs to be as shallow as existing station, study a shallow cut and cover option over existing Downtown Seattle Transit Tunnel.</p> <p>For SODO the best is the Mixed Profile Station [SoDo-2] and please study construction further North at the existing SoDo Station location.</p> <p>I prefer WSJ-5, but please study a better DEL-6 that is compatible with WSJ-5.</p> <p>Do not eliminate any stations. Work to make stations as shallow as possible. Improve transfer times wherever possible. Ensure escalators and elevators are (1) fast and (2) have enough redundancy to handle game day rushes and not fail riders in the event of failure. Use fast surface-to-platform elevators (no mezzanines) when stations are more than 100 feet deep and align station design so that it's possible. Plan to build for future expansion in Seattle.</p>	Jon Wright
04/25/2022	<p>After the federal approved funding last week this would be the perfect opportunity to move the area into a cleaner transportation future.The jobs and money that go back into the economy will be a much needed boost after a tough recovery from COVID-19.Sky Link does not seem to be a replacement for the amount of jobs that will be created for decades to come.</p>	Donald K Vardy
04/25/2022	<p>I would like more information how the streets around my condo on Queen Anne will be affected during construction. I see that my building will be okay for the choices given but the noise and streets will be affected.</p> <p>Ballard link Newell Square 3609 14th Ave. W Seattle, 98109</p> <p>I also want to comment on the China Town construction of using 4th or 5th Ave. Please be very mindful of the fragile Asian population in the Area. Use 5th Ave. Two years is a long time for construction and business will not survive. This happened during the Construction of the station near Franklin high and many Asian businesses just closed.</p>	Heidi Yamamoto

04/23/2022	<p>Project funding/cost</p> <p>Chapter 2.8.2.1.1 lists the many alternatives contemplated in the DEIS and the associated total costs between \$3 billion and \$4.7 billion which is about double or triple the amount approved by voters in ST3 (\$1.7 billion). Before the pandemic, three West Seattle buses (RapidRide-C, #121, #21) already provided 25,500 trips daily. The DEIS projects 27,000 trips on light rail by 2042, only 1500 more than buses were providing in early 2020.</p> <p>*The light rail is all ready way over the original voted on budget(\$1.7 Billion) and based on all the other project history will likely be far greater than the \$4.7 Billion by the time it's actually completed.</p> <p>Table 2-9 of App. N indicates Sound Transit estimates light rail to reduce 400 vehicle trips on the West Seattle Bridge by 2042. At a light rail cost of almost \$10 million per additional daily trip (plus the building of additional OMF capacity and train acquisition) and an annual operating cost of \$35 to \$40 million this investment does not seem worthwhile – and that’s without considering the cost to the environment of greenhouse gases emitted during construction.</p> <p>Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the “Least Harm Analysis” test in 4.2.18.5.</p> <p>Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore.</p> <p>Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin practically shows NO available home inventory in West Seattle, the DEIS just says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify for a new home based on current social status / credit rating.</p> <p>Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRide-H. Now all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) will be impacted by multi-year construction and related detours. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours.</p>	Tim Kappenman
------------	---	---------------

04/23/2022

I would like to stress that Sound Transit consider the gondola solution as a feeder form of transportation to reach our goals in West Seattle. Please review the information below.

Transit Time

If you live south of the N. Delridge light rail station and want to take the light rail to Bellevue, you would take a bus to the North Delridge station, get in line to ride up 2-3 escalators or 2 elevators, wait up to 12 min for a train to SODO, get up and down stairs/escalators at SODO to get to the platform for the 1 Line light rail, wait for a train to the International District (ID) transit hub, and walk and traverse escalators to get to a tunnel platform to wait for a train to Bellevue. The average wait time in chapter 3.4.3.3.1 does not accurately reflect any of this. The average, total travel time may be longer than using buses and driving a car and certainly less convenient. If the West Seattle light rail is extended beyond SODO in 2037, using it versus a bus may take about the same time. The travel times in Appendix N.1-3 are not realistic and seem to only reflect idealistic "best case" scenarios.

Aerial engineering consultants have told us that it appears West Seattle gondola stations could be one story high. Therefore, if you took a gondola to go to Bellevue, you might take a bus to the N. Delridge

gondola station, walk or take the escalator/elevator up one story, board one of the always available cabins, ride it all the way to the ID, go down one story to the tunnel entrance, take an escalator/elevator down, and wait for a train to Bellevue. It would be a much easier and more convenient process and may therefore attract more drivers to public transit.

Pedestrian and Bicycle Trails

The Alki and Delridge Connector trail is a major walk/roll corridor to connect West Seattle with the rest of Seattle via the lower bridge. Chapter 3.7.3 lists the Alki and Delridge Connector trail, but the mitigation (on 23rd Ave SW) is not clear and fails the assurances in 3.7.4.

Waterway Impact

Chapter 3.9.3 mentions some impacts to fishing rights, but still contemplates new in-water columns. The tribes have traditionally been disenfranchised, and the failure to address the impact of water columns is a major oversight. The chapter also does not mention that the West Seattle bridge will need to be replaced at some point. ST should coordinate space requirements for that with SDOT and the DEIS should be updated to cover these requirements.

Acquisitions, Displacements, and Relocations

Chapter 4.2.1 relates to the devastating impact of various light rail alignments on residences, businesses, parks, and wildlife. Sound Transit is obligated to minimize such (mandated by DOT section 4(f) for example, see chapter 4.2.18). SkyLink would avoid most of the impact listed in this chapter and therefore the current DEIS fails the "Least Harm Analysis" test in 4.2.18.5.

As stated previously, a 2014 Sound Transit paper on mode choices for the regional transit network said: "Several of the technologies that have moderate to high HCT capabilities, but are generally less suitable for Sound Transit, could be considered for some service if that service would operate on principally exclusive rights-of-way and is not intended to interline (i.e., share the same tracks) with the light rail 'spine,' which extends from Everett to Tacoma, and from Seattle to Redmond." When Sound Transit issued the April 7, 2022 Gondola Feasibility Report, it reiterated this statement in dismissing "SkyLink's" proposal from consideration. SkyLink is proposing a gondola to serve not as the primary mode of the regional network but as a feeder from the ST3 designated station locations to the main spine of the light rail system. An urban gondola could provide the capacity needed, could be constructed with minimal disruption, displacement, and damage to the environment and established community. Specifically, it would avoid the following problems caused by proposed light rail alternatives:

Chapter 4.2.1.3: More than a thousand people may have to find new homes, just as many employees will have to find a new place of employment, many current stores and services may not be available in West Seattle anymore.

Chapter 4.2.1.7/8 misrepresents the housing situation in West Seattle. While Redfin practically shows NO available home inventory in West Seattle, the DEIS just says: "research indicates that there are adequate opportunities for most residents and businesses to successfully relocate within the project vicinity." It promises relocation assistance but fails to mention that no assistance can help if the renter or homeowner cannot qualify for a new home based on current social status / credit rating. Commercial real-estate is very limited in

West Seattle which mean displaced businesses may have to relocate causing them to lose their customer base and West Seattle residents may have to travel longer distances to get services.

Chapter 4.2.3.3 includes several pages of huge impacts. It talks about the fact that light rail will destroy businesses, reduce the city's tax base and may affect tribal fishing rights. It fails to address the social impact for the employees and owners affected by this destruction, many of them small businesses whose livelihood is affected. It does not address the strain

	<p>on the social services. Even more importantly it does not address the impact to the community which has grown around these services and the businesses and families which will be impacted indirectly. Alki Beach Academy for example provides daycare services to 300 children; affected parents may need to quit their jobs or move elsewhere if they lose affordable daycare.</p> <p>Chapter 4.2.4.3 and 4.2.5 fail to address the visual impact of the light rail bridge. No accompanying special renderings other than architectural drawings are provided. Instead, it claims it is “consistent with existing views.” While the existing West Seattle freeway is already an eyesore, it only rises briefly above the West Duwamish waterway whereas the southern light rail bridge alignments will rise up high from the SODO station to cross the freeway and stay high until they meet the top of Pigeon Point. The norther bridge alignment will be only slightly lower. This huge structure will be visible not only from Pigeon Point but all along the Duwamish, Beacon Hill, Georgetown, SODO and even T-Mobile Park. No renderings of this have been provided. The impact to the Youngstown neighborhood may be even greater. At one point, the elevated guideway will be as high as 150 ft, about twice as high as any existing building in the neighborhood. Due to the height of the structure, rail noise will travel even farther.</p> <p>Chapter 4.2.4.4 does not address the fact that West Seattle has already suffered the last two years from the closure of the West Seattle bridge and the construction required for RapidRide-H. Now all major arterials and transit ways to enter the center of West Seattle (see App. N.1-4 Fauntleroy Way partial closure by up to 1.5 years, 35th Ave by 3 years, and Delridge Way by 3 years) will be impacted by multi-year construction and related detours. While tunneling may help reduce the destruction of some homes and businesses, the excavation required for station construction will require very large construction sites with applicable detours.</p> <p>Figure 4.2.5-4 does not show any coverings over the station therefore making it appear lower than it is. It only shows the destruction of homes directly adjacent to the station, but not along the guideway which again provides a distorted impression of what will happen.</p> <p>Chapter 4.2.5.3.3 fails to mention that Olmsted already suggested to preserve the view from Pigeon Point which any of the southern alignments would destroy, for details: Pigeon Point - West Duwamish Greenbelt – Friends of Seattle’s Olmsted Parks (seattleolmsted.org)</p> <p>Ecosystems</p> <p>Chapter 4.2.9 provides a long list of impacts on the ecosystems, habitats, and many threatened and endangered species, some with potential impact and others with very specific impacts, in both Longfellow Creek and the northern portion of the West Duwamish Waterway. The alignments related to the two suggested southern bridge crossings would be detrimental to the Osprey nest and Great Blue</p>	
--	---	--

04/23/2022	<p>Dear Sound Transit,</p> <p>Please consider a gondola to hillier northern parts of West Seattle and more light rail to flatter southern parts of West Seattle.</p> <p>Sound Transit evaluated multiple possible alignments in South King County in 2014, and the Board selected a few alignments in 2019. For example, Need #4 (relating to serving low income, BIPOC communities – Chapter 6.1.4) was not even considered when stations and alignments were selected. The pandemic showed that lower income riders and people of color rely more on transit than more affluent populations. The current ST3 stations (N. Delridge, Avalon, Alaska Junction) serve West Seattle neighborhoods in high-income areas.</p> <p>ST3 includes funds to plan high-capacity transit to reach lower income and BIPOC neighborhoods like White Center, Westwood, and South Park in the future. But the DEIS fails to even mention those needs and evaluate how proposed alignments may accomplish this. Another measure would have to be put before the voters to finance construction. If Sound Transit pauses to assess needs and priorities, it should consider building the light rail line to include neighborhoods where a greater percentage of the population depends on public transit. One of the possible routes for that would be along the Duwamish where the terrain is flatter and provides wider existing rights-of-way than the hillier northern area of West Seattle. It's possible that building such light rail in combination with a gondola to serve the Alaska Junction, Avalon, and N. Delridge could cost about the same as building light rail to the Junction, Avalon, and N. Delridge alone.</p> <p>Thanks,</p> <p>Jim Little Seattle, 98105</p>	Jim Little
------------	--	------------

<p>04/23/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit’s Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region’s projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region’s voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system’s growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office’s facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region’s mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Sophia Keller keltiawind@gmail.com</p>	<p>Sophia Keller</p>

	<p>851 SW 127th Street Seattle, Washington 98146</p>	
--	--	--

04/22/2022	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement. As a Ballard resident I especially urge you to reopen study of the Ballard 20th/Thorndyke Tunnel Portal option. 20th Ave NW is a much more central location for a station and this would also avoid potential bridge restrictions. Ballard is crying out for better transit options - please do this urgently!!</p> <p>Additionally I agree with the following:</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016! The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility! We demand and deserve more coverage of the city and surrounding areas in the future!</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. ------------	---	-------------

04/25/2022	<p>I am writing in support of CID-1a and CID-1b only because they are the options that propose the less displacement of businesses than CID-2a and CID-2b (4.3.1.3.2). As an employee of Wing Luke Museum, and like other people who work or live in CID and are involved in its community, I do not want to see any businesses displaced at all. The businesses in the areas affected by construction of the extension are vital not only to the immediate area, but youth around the Greater Seattle Area. When I worked with youth at Wing Luke Museum, many of whom were from South Seattle, they shared with me that places like Oasis cafe were one of the few places they could go to spend time together late at night that were safe and welcoming. As a teen I too looked forward to making the trip from Bremerton (30 minutes by car, 1 hr by ferry, then taking the bus from Colman Dock to the CID) to the businesses around 4th and 5th Ave to patronize small businesses and enjoy food and drink that I could not find in my majority white hometown. The businesses affected by Sound Transit's proposals are not places that should vanish to make commutes easier (and I speak as someone who commutes from Tacoma by public transit.) They are beloved destinations for Asian Americans around the state. I see that Sound Transit is taking the historical context into account (5.4.5.1) and I'm hoping they make the right call to protect the CID.</p>	Heather Chan
04/25/2022	<p>I am writing to advocate that DEL 5 or 6 NOT be the routes in the West Seattle Light Rail Extension. In particular, Transitional Resources, a community mental health agency, is at 2970, 2980, and 2988 SW Avalon Way. If those buildings are torn down then they will have to move their agency elsewhere. Transitional resources serves people with Severe and Persistent Mental Illness. The clients are vulnerable adults, with permanent disability due to their mental illness. The agency's clients are in close proximity; almost all live within walking distance. If the agency had to move elsewhere, it would not be integrated with the clients and it would make it much harder for them to get needed services and medication. Tearing down Transitional resources profoundly impact the clients whom they serve, as well as the surrounding community who depend on TR to serve those most impaired and vulnerable. The current preferred route that does not affect TR is highly recommended for the reasons stated above.</p>	Julia Watkins
04/25/2022	<p>I have read the draft EIS and the racial equity lens reports. While I currently live in North Seattle I will be using Sound Transit in the CID. My hope is that this historic and precious neighborhood is kept as unimpaired as possible. Therefore I would recommend either of the 4th Ave options. Too often this area of Seattle has been seriously disrupted with highways and stadiums. Be kind to this area for a change.</p>	Linda Julien
04/25/2022	<p>I wish to call attention to issues associated with the preferred Ballard line extension (purple). My hope is that due consideration will be made to avoid displacement of the Dusty Strings musical instrument manufacturing facility. Dusty Strings is a unique, family owned, community centric business that brings people and communities together through music. Further, they have fostered international recognition for their products as well as being a business that Seattle is proud to have. Small businesses like this are a fragile enterprise that could be irrevocably damaged by displacement. This is a treasure that should be safeguarded, please consider any alternative that could spare damage and displacement to this special business. My sense, from looking at the maps/drawings/explanations, is that the 15th Ave elevated variation would avoid that. I am saddened by the amount of displacement incurred, in all of the options and wonder why there was not an alternative utilizing the Interbay golf course. Surely reducing the impacts to homes and businesses is more important than an open space that benefits such a small percent of the population. Please reconsider your thinking. Respectfully</p>	Eric Hardee

04/25/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project.</p> <p>I support either of the Yancy/Avalon routes.</p> <p>I oppose any of the alternatives that impact the West Seattle Golf Course! This is an amazing city park, and it would be a travesty to negatively impact this park in any way when there are options that do not do so.</p> <p>Thank you, Raelene Jeffery Seattle City Resident</p>	Raelene Jeffery
04/25/2022	<p>The Ballard line & station should go along 15th instead of 14th. 15th is closer to downtown Ballard and residential areas in the west.</p> <p>15th is something of a dividing road in Ballard due to its size, making people cross it to access light rail would be something of a barrier.</p> <p>Any future extensions north would most likely run along 15th anyway since 14th effectively ends at Ballard High School so any route along 14th would have to detour in order to proceed north anyway</p>	BJ Last
04/25/2022	<p>I am writing to reply to section ES.3.1.2.2. Chinatown-International District Segment of the Draft Environmental Impact Statement (EIS) of the West Seattle and Ballard Link Extensions project. I am a lifelong resident of Seattle, having lived in both in both Beacon Hill and the International District. I am a second-generation Filipino American resident with intimate ties to the International District, a neighborhood created due to a history of systemic racism in Seattle. I am also a Public Servant, an Epidemiologist at the Washington State Department of Health. I am an avid supporter of comprehensive public transportation, but I am opposed to all options of expansion on 5th Avenue (CID-2a and CID-2b from the Executive Summary and the third option proposed on the Sound Transit website). I am opposed to these three options because they are at its core corrosive to the identity, safety, and wellbeing of the community within and connected to the International District. For residents, the negative impact on air quality and noise pollution are unacceptable for a neighborhood filled with elders and others who are marginalized in our already confusing and expensive health care system, which results in poor health outcomes. The closure of the 19 small businesses will have a negative impact on community cohesion because these businesses represent the International District's history of perseverance and resilience. I am writing to demand Sound Transit see the Internal District as a neighborhood worthy of preservation and protection, not simply as land to build and expand through. It would be grossly irresponsible for Sound Transit to move forward with any of the 5th Avenue expansion options.</p> <p>Finally, I'd like to provide some feedback for the materials presented by Sound Transit. While the construction proposal shows that these would be "quickest" choices for expansion, these options also come with lifelong consequences to the residents and business owners of the International District, as described earlier in my comment. Furthermore, the presentation of the five options compared side by side are clearly biased to show negative impacts for the 4th Avenue options. Specifically, slide 20 of the CID/SODO Virtual Public Meeting and Hearing hosted on March 24, 2022 show that 120 Residential Units are will be displaced. However, upon reviewing the Executive Summary of the EIS, we learn that it is the ICON Building that is affected but will not be closed during construction. To add to this, there are also residential units on 5th Avenue, including the 125 Residential Units in the Publix. I am concerned the 125 Residential Units of the Publix are considered or presented in either the online presentation or the Executive Summary. The Publix, built in 1927, represents the history and resilience of the Asian diaspora living in this city. The ICON Building, at the opposite end of the spectrum, was built in 2016 and provides little to no historical importance to the International District. In fact, it is a fixture of the rapid gentrification of the International District. The Publix also offers affordable housing options while ICON offers zero affordable units. It is disappointing to see that Sound Transit is, by design, omitting this information from the Executive Summary. I am urging the reader of this comment to decide against all three 5th Avenue expansion options.</p>	Maryjane Bermudez
04/25/2022	Please keep the small businesses in mind and do not run the light rail though 5th Ave!!!	Shandi Jones

04/25/2022	<p>Hello,</p> <p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>Thank you for building this section of light rail! I very much appreciate the need for this project.</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE.</p> <p>While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option.</p> <p>This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives.</p> <p>While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Thank you for your consideration.</p> <p>Melissa Sherrow</p>	melissa sherrow
04/25/2022	<p>I am not thrilled that this will degrade rider service for just about all users, forcing a transfer, often to a deep station that will take 3-6 minutes to access, without providing substantial benefits. Please consider interlining with the current tunnel, and investing the savings into improvements in rider experience. Don't prioritize minimizing short-term impacts during construction at the expense of a degraded, low-ridership, poorly located, and difficult to access service for decades to come.</p>	Cam Solomon
04/25/2022	<p>I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. The Dusty Strings Company at 3450 16th Ave W. is an organization that is known worldwide through its exceptional and beautiful musical instruments. They were founded in Seattle and their harps are played by professionals around the world. We need this company to be spared the disruption of moving to a new location. The impact would be great on the company and its employees, and if there is a way to avoid losing this company in Seattle, I hope you will seriously consider it.</p>	Anna Jenkins

04/25/2022	<p>First and foremost, design the system for transit riders and the optimal rider experience. Traveling between the station platform and the surface should be quick, straightforward, and reliable. Transferring between transit lines should also be quick and easy, especially at the major transfer points at Westlake Station and International District/Chinatown Station.</p> <p>2. Build the system to maximize ridership. Design a good rider experience and ridership should follow. Still, even the most elegant station will struggle for riders if it's in the middle of nowhere, with few homes, jobs, activity centers, or transit connections nearby. Preliminary ridership projections aren't the be-all end-all, but all things being equal, the station alignment projected to get higher ridership does have a leg up.</p> <p>3. Design the system to be easy to expand. Ideally, West Seattle Junction will not be the southern terminus long as the line extends south to White Center and Burien. Likewise, Ballard should not be the northern terminus long as the line extends north to Greenwood and perhaps east to Wallingford and the University District. Meanwhile, a future Aurora rail line may link up with the new Downtown light rail tunnel near South Lake Union Station. Planning with expandability in mind could save billions of dollars and numerous headaches down the road.</p> <p>4. Station locations should unlock transit-oriented development (TOD) opportunities to the highest extent possible. A station isn't just a transit stop, it can be a catalyst for neighborhood development and housing growth, both market-rate and affordable. Alternatives more favorable to TOD deserve an edge, and they will help the system attract more riders down the road by allowing more people to live in close proximity to light rail.</p> <p>5. Construction impacts are important but shouldn't solely determine a 100-year investment. Construction-related road closures weigh heavy on the mind of policymakers, but it is crucial we pick the right station for the future. Closing a busy road for a few years is a small price to pay to add a light rail line that will last centuries. The priority in mitigating construction impacts should start with prioritizing pedestrian access, transit operations, and bike routes.</p> <p>6. Cost is an important factor, but we shouldn't shy away from big investments where there is a high return. Mostly we are worried about building this right, but we can't dismiss costs, especially since some high-ticket items will require third-party funding, which could be difficult to secure. Controlling costs is also key to avoiding delays to these much-needed transit lines.</p>	Stephanie Gough
04/25/2022	<p>Burien needs reliable transit and should be considered for a light rail stop. The current bus routes to downtown all get stuck in traffic on SR509 in the morning or leaving downtown in the evening. The future expansion of SR509 is only going to make this much worse. The alternative route of taking a rapid ride and light rail via Tukwila takes even longer than the bus stuck in traffic. This is unacceptable considering the distance travelled. Why is Burien not being considered?</p>	Sam Ostrander

04/19/2022	<p>Dear Comments Committee and Alexis,</p> <p>I've read the history of the CID in the DEIS Appendix Attachments N.5C1 Historic Context and found several inaccuracies in the section on the CID. The author supports their version of events with an over abundance of quotes from the National Register nomination form that Larry Kreisman filled out. Although he is not a historian per se, he did write the history of the buildings proposed for inclusion in the Chinatown Historic District documentation. The community history he wrote of in a general way provided background for the construction of the historic buildings in the nomination form. I know this because I interviewed Mr. Kreisman by phone early in the pandemic on his work on the National Register nomination form for Chinatown.</p> <p>Since at least one of the events provided in N.5C1 occurred in my lifetime, I can provide primary documentation and oral history as support for correction. In addition, I have researched the City Archives and have copies of additional documents in order to give readers a fuller understanding of Mayor Devin's proclamation of an "International Center." Brien is on the cc because his late mother, Ruby Chow, is the subject of the documentation from City Archives.</p> <p>In order to help Sound Transit with making corrections, I will send you a more accurate version of the article, based on overlooked documents from the City Archives, lived history and oral history that I wrote up for Seattle Histories, Front Porch Blog "Chinatown Childhood" published on Dec. 1, 2021.</p> <p>I don't think my sending in a list of where CID history falls short would be helpful.</p> <p>I will do my best to get history corrections done and sent in by April 28.</p> <p>Betty</p>	Betty Lau

<p>04/20/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Scott Percival scott.m.percival@gmail.com</p>	<p>Scott Percival</p>

<p>04/20/2022</p>	<p>Manager DEIS Comments,</p> <p>Don't sell us short on transit. We approved the ST3 so build it. We need more rail lines to get around the city especially as Seattle continues to grow. If you take away stations you drop functionality and people won't use it as much. Make it good so people use it.</p> <p>Below are detailed notes provided my Seattle Subway which I support in full.</p> <p>Thanks. Colin Ernst, Ballard resident</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. <p>04/20/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Joseph Pirtle pirtlj@gmail.com</p>	<p>Joseph Pirtle</p>

<p>04/20/2022</p>	<p>Below is the canned Magnolia Community and I agree with it. I also want to add a comment. For a light rail to be convenient for Magnolia, we're going to need a station somewhere near/on the flats bordered by the Magnolia Bridge, Thorndyke Avenue on the lower rise up the hill, Furman Street bordering Fisherman's Terminal, and 15th Ave. W. The car overpass near Fisherman's Terminal is a dangerous trip for pedestrians trying to get off Magnolia and make the transfer to Transit bus 31 and over to Ballard. It involves passing under 15th on a hidden path, coming up on Nickerson, crossing three lanes of traffic to get to the Rapid Ride island facing west on 15th Avenue. For light rail to be convenient for Magnolia residents, there needs to be a station somewhere in the flats east of Magnolia hill....Bonnie McDonald 3823 23rd Avenue W. near Furman.....</p> <p>Greetings,</p> <p>In order for the Interbay-Ballard segment of ST3 expansion to be successful, it must be located where residents and businesses can access it, and it takes us where we need to go. A tunnel under the Ship Canal is imperative, and a Ballard tunnel station at 17th, 20th, or 22nd Ave NW makes sense.</p> <p>In general:</p> <ul style="list-style-type: none"> Metro circulators must run at frequencies to connect with light rail schedule, and respond to demand Minimize transfer time from transit to platform Avoid transit plans that require pedestrian crossing of major thoroughfares Minimize size of stations for cost saving. We don't need huge mezzanines or massive structures. Plan for Ballard station by re-opening study of a tunnel station at 17th, 20th, or 22nd Ave NW Consider continuation of tunnel route from Seattle Center through Smith Cove, Interbay to Ballard to avoid avoid construction, traffic, park, noise, view corridor impacts, and residential and business displacements <p>For Smith Cove (SIB-1):</p> <ul style="list-style-type: none"> Approach station by tunneling under Elliott Station on West side of Elliott Minimize size, if elevated station, over Galer flyover/Magnolia Bridge Ensure that buses pick up and drop off on west side of Elliott - no pedestrian crossing at Elliott for bus connections <p>For Interbay Station (IBB-2b):</p> <ul style="list-style-type: none"> Station must be proximate to Magnolia peninsula for emergency access in event of bridge failures Station must lead 	<p>Bonnie McDonald</p>

Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Kyle Berquist kyleberquist8@gmail.com</p>	<p>Kyle Berquist</p>

	<p>400 Boren Ave N. Seattle, Washington 98109</p>	
04/25/2022	<p>Some of the businesses at risk are the main reasons why I love visiting Chinatown and Seattle in general. People don't deserve to go out of business and lose their main source of income because of a transit system. I live an hour away from Seattle but go there often because of how much I enjoy the businesses in Chinatown. It's a beautiful community and co-culture. Chung Chun Rice Dog is the best place to get a Korean corndog, and all the workers there are so sweet.</p>	TeAirra Lawson

04/25/2022	<p>This is a historic investment in our city and I think we need to avoid shortcuts so that this infrastructure is actually functional for the next 100 years. Spend the money and do it right. I would so much rather we pour money into this than countless other things we insist on spending money on. Good transit is what creates a vibrant, attractive, accessible, healthy city. Let's continue to lead the country by example and put down good rail. Employ creativity and fortitude against difficult budget shortfalls and be courageous against politically difficult choices - money will be tight and people will be angry no matter what. So let's just do it right.</p> <p>First of all, AVOID THE VERY DEEP STATIONS at all costs. This is absurd. It should not take 6 minutes to enter a station. High traffic downtown transit stops should NOT be elevator-only. We are smart enough to figure out proper business and traffic mitigation for a cut-and-cover tunnel. Do not take the politically easy option by destroying the practicality of this transit. It should be quick and easy to enter these stations and to transfer between lines at ID and Westlake. Otherwise there is no point in the second downtown tunnel.</p> <p>Second, DO NOT consolidate Denny and South Lake Union stations. These are stations at the core of our city. They will serve tens of thousands of people. South Lake Union is a huge place and will already be under-served by the one station. Denny is adjacent to the downtown core and extremely dense. Consolidating them into a location not near either of those neighborhoods is criminally lazy and shortsighted. Cut a station in West Seattle, sure, but NOT AT THE MOST DENSE AREA OF OUR CITY. An infill station is not possible here, we will be stuck with that stupid mistake forever. Find the funding.</p> <p>Third, Ballard is one of the most prominent and busy neighborhoods in our city, and is one of the most notoriously difficult to access. We should absolutely be considering a station at 20th to be actually in the center of the neighborhood. The ridership would be so much higher. It would be one of the busiest stations in the system. So often we have stations so far from the actual neighborhood core and it's incredibly frustrating. At the very least, there needs to be a station entrance on the West side of 15th so we are not required to cross a dangerous huge vehicle thoroughfare, after walking a half mile from the actual neighborhood, to reach this station. And build a tunnel because a giant bridge will be effectively the same cost and it will look ridiculous with the height requirements. If we are going to spend the money, do it right.</p> <p>If we need to trim project scope the clear answer would be West Seattle. This is an area that barely wants light rail, will probably only ever be a sea of single family homes, and the logistics of getting up the severe slope is insane considering the low ridership it will get. Cut a station or two to find your savings. In the dense areas where we really need good transit, such as downtown, SLU, Seattle Center, Ballard, provide the stations we need. Do not create yet another example where in 20 years we look at what we have and ask how we were so shortsighted.</p>	Nils Hostage
04/25/2022	<p>I'm writing to recommend opening back up the 20th Ave tunnel option for the Ballard light rail extension. Putting the Ballard station at 20th Ave would benefit a multitude of small local businesses as well as pedestrian safety/access, as opposed to putting the station at 15th or 14th Ave. Putting the station at 15th or (especially) 14th Ave creates an unsafe environment for pedestrians entering/exiting the station, as 15th Ave is basically an urban highway with high speed traffic from both cars and buses. Plus, a tunnel as opposed to raised bridge would nullify the height issue that would be prevalent for boat traffic. Thank you for your consideration!</p>	Thea Condxis

04/25/2022	<p>FWIW: I'm an avid supporter of Link and love riding it. I got up early on the first day it opened to Northgate just to take the trip. I want more Link to more destinations as fast as you can build it.</p> <p>With that said:</p> <p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Samuel Herschbein
04/25/2022	<p>PG 41 Comments West Seattle and Ballard Link Extensions (WSBLE) Project, Chinatown Section</p> <p>As a member of the Seattle Community, and someone who works next to the International District and walks to work through the ID every day I feel strongly about prioritizing the AAPI businesses in this area. Businesses in this area have suffered enough during the pandemic. Further disruption and closure to 19 businesses would have a detrimental effect on the community, neighborhood, and individual families. We have to prioritize people over money. For this reason I strongly support the 5th Ave Shallow or Deep Alternative (CID/2A or CID/2B).</p>	Kelly Stewart
04/25/2022	<p>Regarding the Key Environmental Impacts of the Chinatown-International District Segment Alternatives on Page 41 of the Draft EIS, proceeding with the 5th avenue route (CID-2a/2b) instead of the 4th avenue route (CID-1a/1b) would not only threaten the livelihood of many small business owners in the International District, but would continue to threaten the cultural core of this area, which is a unique and important safe haven for our city's AAPI and indigenous cultures and communities—in a time where Asian hate crime rates are extremely high, without care for this area, the city will continue to be taken from this community one street block at a time. It is crucial to keep the International District intact and give it the resources it needs to thrive.</p> <p>If the City of Seattle cared for the residents and business owners of the International District, a neighborhood with the city's majority of AAPI and Indigenous residents, the city would not move forward with construction on 5th avenue and instead proceed with the 4th avenue expansion.</p>	Colton Weinman

04/25/2022	I live at: 3709 20th Ave SW Seattle WA 98106 and have been here since 1984. I'm worried that the route of the new West Seattle light rail will/could affect my property. Can anyone clarify this for me?	Lawrence Flynn
04/25/2022	Just Bild the Damn thing.....	Dale Gavey
04/25/2022	Hi, my friend lives in Delridge in the path of the Preferred Alternative for the Dakota Street station. I strongly prefer either the Andover or Delridge Way options to minimize the impacts to residents.	Kian Bradley
04/25/2022	Dear Sound Transit, I have lived at 5043 41st ave SW for 26 years. I have a home business frequented by clients 6 days a week for 24 years. I have lived in West Seattle my entire life. I'm sure you have heard all the sob stories about what a terrible idea it will be to build an above ground light rail system in my neighborhood. I'm here to confirm the notion that this light rail taking down so many single family homes and businesses is truly devastating for so many. We already struggled through the bridge being down and that impact. So many of us will not be able to afford or find another house that is suitable or even close to what we have now. Even if some of us get to keep their homes, the staging and building of the light rail in its entirety will be agonizing for daily life. The above ground option will decrease the value of every neighborhood it touches. For many of us, our home is our lifeblood and source of income. Not to mention our place of sanctuary. Please please remember we are not just addresses on paper. We are people with so much at stake. Thank you for your consideration.	Blythe Simmons
04/25/2022	The 5th Ave S option will close/displace up to 19 local businesses, so the construction in this area will seriously impact the entire neighborhood compared to the 4th Ave S option - which will cause road closures and displace only 5-8 businesses. We believe the 4th Ave shallow station will cause the least amount of harm to our historic buildings and community.	David Zhang
04/25/2022	Hello, I would prefer an alternative that includes a tunnel for the portion that goes into the Alaska Junction area. This is a vibrant, historic, local neighborhood shopping and entertainment district with a welcoming feeling and vibrant businesses that I feel would be lost to an above ground track and station. It's a small area that would be overwhelmed by an above ground option, and I would hate to see short term money concerns overrule what is best for this neighborhood in the long term. We should find a way to make public transit and light rail a meaningful and appreciated development for this little West Seattle Urban Village for generations to come, not just do what is expedient in this moment. Seattle has waited a long time for adequate public transportation, let's do it right! Thank you!	Felicia Egelman

04/25/2022	<p>Thank you providing this opportunity to share input! I live in Ballard, so my comments pertain to the Interbay/Ballard Alternatives.</p> <p>I would like to share my preference for the Tunnel 15th Avenue Option.</p> <p>I recognize that this is the most expensive option and will require additional funding beyond ST3, but I think it's the best option in terms of community impact because ...</p> <p>It has the second lowest number of residential displacements, which is important given the housing crisis in Seattle.</p> <p>It does not impact the Ballard Food Bank, which is a vital resource for our community.</p> <p>It does not impact our maritime businesses, which are an important part of Ballard.</p> <p>It does not have any in-water effects and does not impact Tribal treaty-protected fishing rights or access.</p> <p>My one concern with the Tunnel 15h Avenue Option is that it will displace people who are living in a Seattle Housing Authority low-income housing building. I believe we need to prioritize this group and ensure there is another housing option available in Ballard. Perhaps part of the project could include building 25 additional affordable units in Ballard so these folx can remain in their community?</p> <p>Thank you for your time and consideration!</p>	Willow Russell
04/25/2022	<p>Please seriously consider putting the stations and rails to W.Seattle underground! It has already become overcrowded with all the newer high rise condos, etc. that have been jammed in over then past 10 years or so. Adding the rail and platforms would not only detract from the still 'almost' quaint atmosphere, but the noise pollution and crowded look would do more to drive folks away. PLEASE do the BEST thing. Thank you for the opportunity to comment.</p>	Sharon Chafin
04/25/2022	<p>I'm copy/pasting my spouse's comments, since I share the same thoughts:</p> <p>I would like to share my preference for the Tunnel 15th Avenue Option.</p> <p>I recognize that this is the most expensive option and will require additional funding beyond ST3, but I think it's the best option in terms of community impact because ...</p> <p>It has the second lowest number of residential displacements, which is important given the housing crisis in Seattle.</p> <p>It does not impact the Ballard Food Bank, which is a vital resource for our community.</p> <p>It does not impact our maritime businesses, which are an important part of Ballard.</p> <p>It does not have any in-water effects and does not impact Tribal treaty-protected fishing rights or access.</p> <p>My one concern with the Tunnel 15h Avenue Option is that it will displace people who are living in a Seattle Housing Authority low-income housing building. I believe we need to prioritize this group and ensure there is another housing option available in Ballard.</p>	Karen Myers
04/25/2022	<p>For the new CID station, I'd like to advise against option 2, on 5th Ave. I think the adverse impacts on disrupting and displacing many right in the heart of the International District outweigh the benefits of connecting to 5th Ave as opposed to 4th Ave. Thank you.</p>	Sierra Ohlsen
04/25/2022	<p>Please locate the light rail construction on 4th and not on 5th. Preserving the small businesses that keep the CID vibrant, create jobs and keep people coming to shop and live here is crucial. Prolonged construction will create a streetscape that resembles 3rd Avenue and will seriously damage the heart of our community if it is on 5th. At least on 4th the damage will be lessened. We want the area to come back after so much damage and neglect during the pandemic and destroying its heart basically telling us that we don't matter.</p>	Karen Maeda Allman
04/25/2022	<p>I strongly prefer the Preferred Elevated 41st/42nd Avenue Station Alternative (WSJ-1).</p> <p>Chris Miller</p>	Chris Miller

04/25/2022	<p>Hi,</p> <p>I'd like to note two things:</p> <p>Please consider a tunnel under Fauntleroy similar to WSJ-2. I believe this would help prevent high density residential building displacement and make a future extension easier.</p> <p>If WSJ-3a, WSJ-4 or WSJ-5 alignments are selected, use the Jefferson Square block (between 41st and 42nd similar to WSJ-3b) for station entrances and construction instead of the current plan to prevent displacement. This block will be in need of redevelopment for transit-oriented development after the Light Rail is constructed anyways. It would also prevent the displacement of multiple other high density residential buildings.</p> <p>Overall, I strongly urge preventing the acquisition of high-density residential buildings and I believe that the tunnel options would help in this endeavor.</p> <p>Thanks, Nigasan</p>	Nigasan Ragunathan
04/25/2022	<p>I believe the alternatives involving 5th Ave S should not be moved forward. 5th Ave is the main thoroughfare N/S through the International District and is full of buildings and businesses that would be displaced, in fact it would lead to the highest number of businesses displaced as shown in the public presentation. The small businesses are the heart of the international district and without them there would be no community. The SCID and its residents and community members have already been shown to be an afterthought with the construction of the navigation center and constant neglect from the city and resources. Those who have the softest voices are often forced to carry the largest burden, and in this case a soft voice may not even be heard because of language barriers or lack of outreach to the affected demographics. To add the new line on 5th would be social injustice to a population that has minimal, if any, representation or advocacy in the development of this plan.</p>	Alex Johnson

04/25/2022	<p>Firstly, I'm concerned with the accessibility of the draft EIS. As you're publicly advertising it with QR codes throughout communities, and making it clear that you want community input and feedback, I was surprised by how difficult it was to get simple, clarifying information on your plans. If you actually want feedback, make a centralized, simplified pdf with all the information, as well as links to additional information if so desired. Trying to form an opinion regarding these link extensions took digging through 10-tabs worth of documents, google maps, a decent dictionary, and an engineer explaining schematics and concepts to me. Maybe I'm too young, and my attention span has been too demolished by technology and phones, but it was really difficult to understand this information. And if you don't actually want feedback and want to get past this stage of the process and just build the darn thing (which, fair), then that's great. perfect. doing it's job. But if you genuinely want feedback from different voices (from disabled people who'll be using this station, from low income people, from anyone who isn't an old white retiree with lots of time on their hands to express their opinions), then you have to make this easier. Also I think it's funny that you asked me to cite the page numbers for my opinions- what is this, English class? If you want me to comment on the specific pages, make an interactive version of the document. Anyway....</p> <p>I'll mostly be commenting on the West Seattle extension plans, as this is my community, and where I have the most invested interest. So here are some miscellaneous thoughts:</p> <p>I get that the port is a brat, so they're gonna try to prevent the North of the WS bridge, but that route makes sense to me- less houses gone, less green space gone (aren't we not allowed to take park space?), seems like a win. I get that's not gonna happen.</p> <p>2. Uhh I don't really care about where you put the Delridge Station. Just please, dear god, get some logical bus connections, look at an elevation map, and build a local infrastructure to support the station wherever it is.</p> <p>3. I get it, we can't take parkland (unless it's pleasing to the port). Well and good. Does the golf course on Genesse really count? Yes, I know it does. You can't just go up to the city and say, "Seattle government, I know we love green space, but this is a space exclusively used by old white guys and smoking teenagers that requires a lot more resources and water than it provide good to the community, and wouldn't we rather take up five little feet of a golf course than wiping out entire blocks of houses on the other side of Genesse?" But really? nothing else to say there.</p> <p>4. I like the idea of having a tunnel in this next section, and I also like the idea of having a shorter (height-wise) elevated path in the earlier section of the path. I understand that tunneling is more expensive than an overhead track, but with rising property costs, it's make more sense to not take a bunch of homes and businesses, and make a tunnel.</p> <p>5. From here, I'd campaign for the 'Tunnel 42nd Avenue Station Option.' It gets close to the heart of West Seattle on California, without wiping out the crucial hub of business and homes that is Jefferson Square. That path brings me joy, and seems to make objective sense.</p> <p>6. I don't think I have anything else constructive to add; If you're doing a Fautleroy station just combine it with the Avalon Station.... I think y'all are pretty clever and smart, and can think of all these engineering and optimization and environmental and transportation things on your own. In fact, I expect you to, as it's your job. (I was gonna drop a relevant meme here but your comment box won't allow that... Have a good day, best of luck trying to get through all this red tape!)</p>	Leah Morgan
04/25/2022	4 Ave S preferred to lessen the impact on local businesses.	Katie G
04/25/2022	I think that Seattle has lost way too much affordable housing in the last 20 years to give up even more affordable housing along 14th Ave West (Northwest slope of QA), even though it is for transit. We need to keep as much affordable housing as possible in this city. The preferred transit solution for connecting to Ballard should work around the affordable housing on 14th Ave West.	Leah Klein

04/25/2022	<p>I frequently make use of the Roosevelt Station and use the North entrance. This means I am familiar with the station depth of 90'. That climb is already punishing and long; and we should avoid creating similar depths where possible in high use areas. So, this means I have a preference for CID-1a(/CID-2a)(Although the Seattle Subway proposition would be better). We should also make the rest of the downtown stations as shallow as feasible.</p> <p>These projects should not be done without planning for future expansion, and so we should be planning for the long term. This means leaving ourselves open for extensions of the Ballard and West Seattle lines, designing our downtown tunnels to support high throughput of trains, and not letting short term costs make us settle for a less than ideal option. SLU (where I currently work) is not well served by either option presented, and the SLU waterfront is completely unserved by the light rail. Ballard is made much more accessible for all with a 20th Ave station. The Light Rail would be a more viable option for getting to the airport if we planned for an express line (with stops at South Park and Georgetown) to get to the Airport without the detour through Beacon Hill, Othello, etc.</p>	John Lestina
04/25/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B</p> <ol style="list-style-type: none"> 2) The business disruption is closely similar for both of these options 3) The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 4) The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for 5) The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year 6) There would be no risk of golf balls hitting the trains 7) The Parks Department supports the Yancy alternatives 8) This is the only golf course that serves the West Seattle community 9) Longfellow Creek would have no risk of damage to the fish or the creek 10) The mature trees all along the North edge of the golf course would not be cut down <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p> <p>Alfred</p>	Alfred DeBlasio

04/25/2022	<p data-bbox="261 100 824 128">To Whom That Decides the Fate of Our Home and Future,</p> <p data-bbox="261 159 1308 533">I am writing to you from the perspective of a concerned third-generation Seattleite, husband, father, single-income earner, regular voter, enthusiastic lover of most things Seattle and as a person who now finds his home threatened by eminent domain. My wife Shannon and I purchased our home in West Seattle in December 2020 and were ecstatic to be able to move back to the city of Seattle, where we were both born and raised. Even better, we were able to find a home in West Seattle, where we have deep roots (some of mine: I was born in West Seattle, I was baptized at St. John's Episcopal Church, my mother's ashes are buried at St. John's Episcopal Church, I lived in West Seattle as a young man when Shannon and I met, dated and over time got engaged at St. John's Episcopal Church, my 82-year old father lives on Harbor Ave and is now a walking distance, the list goes on). A myriad of memories flood my mind as I sit down to comment on this project. I learned how to swim at the Fauntleroy YMCA in the early 1980's (our children are learning how to swim there now). I watched my first movie at the Admiral Theater. My most formidable early years of life were spent in West Seattle. Now we find ourselves potentially in the path of this project and facing eminent domain relocation.</p> <p data-bbox="261 569 1308 884">Having read the relocation hand book front-to-back multiple times, participated in the public meetings, applied to join the community committee (unsuccessfully), earnestly tried to participate in as much of this process as possible, to understand all the details, I continually find myself asking 'why is this happening?' We love our home and have no intentions to sell it. We quite literally saved our whole lives to buy this home and ultimately fought for the right to own it at one of the most difficult times to buy a home in Seattle. Our children go to Lafayette, love the school, and are thriving in the environment. Our son plays in West Seattle Little League, our older daughter sings choir at St. John's Episcopal Church and practiced ballet at West Seattle Performing Arts. We have every intention of continuing to invest in this community, and live positive change. As a family we routinely pick up trash in the neighborhood and take meticulous care of the shared land enclosing the sidewalks. We have ties to small businesses in West Seattle and have built our life here with every intention for it to be our permanent home.</p> <p data-bbox="261 919 1287 1115">Now I sit at my computer, not entirely sure of what to 'comment.' Feeling a mix of emotions. Feeling like I need to pour my heart out, to somehow justify our worth, our legitimacy to be able to just stay in our home. What will ever be enough to convince a group that is tasked with the 'greater good of the community' by picking an alternative to move forward with for this project? What about our lives could ever compare to the 'greater good?' My sincere hope is that our story will contribute to a sum of potentially displaced lives, that will be enough. I list our attachments to West Seattle, our generational investments, because I have an optimism that it will be enough to save our home.</p> <p data-bbox="261 1150 1308 1436">We sincerely hope that the group deciding our fate will remove the Avalon stop from the project's plans altogether. How much is the convenience of the stop worth compared to the displacement of so many families? From what I can tell, the other two stops' plans appear to have reduced residential impacts in comparison. Whereas the Avalon stop alternatives all look to have significant negative residential impact; almost exclusively in comparison to commercial displacement. Some of the Avalon alternatives look like, if chosen, would leave us in our home, but still displace other families in the neighborhood. People we've come to know and like. People that also invest in the community, have children, go to the schools in the neighborhood, love their homes. So ultimately, no alternative is the choice we want to see come to fruition. I write this knowing that this was a voter-approved decision and there are laws to support its purpose and actions.</p> <p data-bbox="261 1472 1287 1556">I am commenting now to share our family's truth, and to ask for the group to reconsider the need for the Avalon stop. If not for an overall project cost-savings, then to spare families like ours that have sacrificed, invested, taken care of and ultimately chosen to make this neighborhood our home.</p> <p data-bbox="261 1591 816 1619">We appreciate your consideration for our circumstances.</p> <p data-bbox="261 1675 427 1728">Sincerely, Jeremy J. Saulter</p>	Jeremy Saulter
------------	---	----------------

04/25/2022	<p>I am commenting regarding the Delridge segment of the West Seattle Link extension. I oppose any alternatives that require the relocation of Alki Beach Academy in the Frye Commerce Center (2414 SW Andover St). Alki Beach Academy is a large child care center with plans to grow exponentially in the near future, becoming the largest child care program in the city. With the child care shortage as it stands, worsened by the pandemic, the last thing we should be doing is displacing the programs providing the type of high-quality early learning opportunities our children desperately need.</p> <p>In terms of meeting the Delridge community with the light rail service it needs, stations further south on Delridge would provide a much more accessible transit system than DEL-5 or DEL-6. Retaining a large child care provider in the vicinity of light rail is also in line with the equitable transit-oriented development goals, which Sound Transit and local/regional governments are supposed to emphasize (North Delridge Action Plan, Equitable TOD Policy, VISION 2050, Seattle Comprehensive Plan, Growing Transit Communities Compact). As Seattle continues to grow, it is vital that we maintain -- or, better, improve -- access to certain core services and amenities, including employment and education opportunities. Especially high-quality early learning services that help our young children develop the social and academic skills for future success.</p> <p>If required to relocate, Alki Beach Academy will be a 20,000 square foot facility serving at least 300 children at the time of its move. A move of this size, cost, and complexity is not one that is financially feasible for the program, will guarantee they move out of West Seattle, and would have tremendously detrimental impacts on the provision of child care in 98106. It would also cost at least \$1.5 million and require 24-30 months to engineer, design, plan, and renovate any replacement location. At its future size, Alki Beach Academy will provide nearly 1 in 4 slots for infant care and 1 in 5 overall child care slots in our zip code at a rate 10% below the median cost of care in Seattle.</p> <p>As a parent of a child at Alki Beach Academy, I am asking that Sound Transit allow this program to continue serving our community as they have for nearly a decade. Please do not force them to relocate.</p>	Matthew Hafermann
04/25/2022	<p>I live on the west side of Queen Anne and travel over Ballard Bridge several times a week. I also kayak Salmon Bay. I know several families who live or rent along 14th Ave West. This is an area filled with apartment buildings and affordable condominiums. I am opposed to the elevated option for the Interbay/Ballard segment for several reasons:</p> <p>It would displace several households and affordable housing. Housing is costly in Seattle especially in the Queen Anne/Ballard areas. There are very few apartment buildings on the west side of Queen Anne. New construction is usually costly condos. This could potentially add to the homelessness issue in Seattle. It has greater environmental impact compared to the tunnel options. it would be visually unsightly.</p> <p>The tunnel options (IBB-2a or IBB-2b) are equal in cost to the elevated option and have least environmental impact and would not mar the skyline.</p> <p>Please take this into consideration.</p> <p>Sincerely, Marivic Borromeo</p>	Marivic Borromeo

04/25/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following: The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p>	Monty Schilter

Please do not force them to relocate.</p>	Brandy Fouts
04/25/2022	Please eliminate the Avalon station and use the money saved to tunnel from the Delridge station to the junction.	Kathryn Vitelli

04/25/2022	<p>I would like to offer comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>Regarding the route: I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. While I understand that there are many impacts you are considering, I'd like to speak to one in particular: The home of Dusty Strings Company at 3450 16th Ave W. They are a company founded in Seattle that has grown into a globally respected harp builder. They have been committed to hiring local people and staying in Seattle over the decades, even when that has been the more expensive option. This manufacturing facility that would be impacted by the other route options was custom designed and built specifically for Dusty Strings' needs only 20 years ago, and if it were removed, a replacement structure would also have to be custom built. It would cause massive disruption to their operations for some years. It appears that the current preferred alternative (pink line) impacts significantly more businesses and employees than the alternatives. While I support light rail, I also support manufacturing companies that employ skilled craftspeople and invest in the city, and advocate the IBB-1b alternative as a good compromise.</p> <p>Dusty Strings is one of the finest harp builders in the world. They ship their harps around the world. Their relocation would have global repercussions.</p> <p>Sincerely, Sunita Staneslow (professional harpist)</p>	Sunita Staneslow
04/25/2022	<p>I wish the ballard segment would serve Ballard Hospital and the Ballard Business District at 20th and Market. Instead of creating another dense area at 14th. I feel it should build on the density already on Market St between 20th and 24th.</p>	Carolyn Davis
04/25/2022	<p>We should learn from history especially from our errors and from racist actions that we find ways to justify. The division and disruption of communities of color by large infrastructure changes has been cited repeatedly as morally wrong and evidence of our racist way of viewing these communities. Already divided by I5 and again damaged by the building of the Kingdome, this time we must choose to treat Chinatown/ID with the respect and honor it deserves as a valuable and historic community. For that reason the 4th Ave option which is somewhat less disruptive to this community should be selected. Government needs to stop repeating the pattern of destruction and disruption on Chinatown/ID</p>	Ellen Kahan

<p>04/25/2022</p>	<p>I am a resident of the North Delridge/Youngstown neighborhood and am grateful for the opportunity to comment on the DEIS for WSBLE alternatives. I am strongly opposed to the DEL-5 alignment and the associated Andover Street Station, which in my view do not adequately serve the North Delridge community in which they will be located nor the neighboring underserved communities who are expected to connect to the light rail by bus at this station. Particular concerns include:</p> <p>The highest number of commercial displacements, including the loss of a highly valued Health Club (Section 4.2.3.3.4). This Health Club has three floors of wellness facilities including the only swimming pool in the area. It is highly unlikely that this business would be able to relocate to an equivalent site or facilities locally resulting in a significant and permanent loss to the community.</p> <p>2) DEL-5 has the highest potential for noise and vibration impacts (Table 6-3) and offers very little benefit to residential displacements compared to the preferred DEL-2a alternative (Table 6-3).</p> <p>3) Displacement of supportive housing services (Table 6-3).</p> <p>4) The DEL-5 alignment along SW Avalon Way will be extremely disruptive for important bike and bus infrastructure (e.g. C line) both during and after construction. Furthermore, SW Avalon Way has a high residential density, which will be heavily impacted by the elevated light rail passing so close to their windows (highest noise and vibration impacts Table 6-3)</p> <p>5) Any deviation of the alignment of DEL-5 or DEL-6 to the south (e.g. off Nucor-owned property, to the south side of SW Andover Street, or closer to SW Yancy Street) would be devastating for the local community, including the important wildlife refuge of Dragonfly Park, which is part of the Salmon run and has a resident beaver population. It is vital that any such deviation is not considered at this late stage. This makes the DEL-5 and DEL-6 alignments incompatible with any station options located south of SW Andover Street.</p> <p>6) The location of the SW Andover Street station proposed for the DEL-5 and DEL-6 alternatives reduces walkshed use by 33% (Table 3-6), has reduced transit-oriented-development (TOD) opportunities compared to the preferred Dakota St alternative, and is adjacent to the Nucor steel plant, associated rail roads, and the West Seattle Bridge on ramp, which reduces accessibility by bus and other modes of transport. These factors reduce the likelihood of high quality TOD development at SW Andover Street. High quality development potential is a vital need for the area, especially considering the almost complete commercial displacement that will be caused by the WSBLE project. A station location north of SW Andover Street was a reason for the rejection of previous alternatives not carried forward to DEIS review (Appendix M).</p> <p>7) Poor compatibility with racial equity objectives. Delridge has the second highest proportion of People of Color for the segments in this extension (Table 4.2.4-1) and is designed to be a point of access for other historically underserved populations via bus. These communities deserve proper investment with a well-planned transit hub and associated TOD, rather than simply being treated as an afterthought or cost-saving option when routing the Light Rail to wealthier communities in West Seattle. The Andover Street station associated with DEL-5 and DEL-6 insufficiently serves the local community given the low walk/bike access (Table 3-6), inhibited bus accessibility and reduced TOD opportunities in comparison to the preferred SW Dakota St alternative.</p> <p>8) It has been commented (by people not residing here) that the residential area of North Delridge adjacent to Nucor is “more industrial” and therefore it is implied that the impacts of the Light rail may be felt less here than in other areas. This is factually incorrect. Impactful noise or disturbance from the Nucor plant is very rare and certainly less than traffic and plane noise experienced in the SW Delridge way corridor, which is the route of the currently preferred alternatives.</p> <p>I support selection of the “long tunnel” or elevated preferred Delridge alternatives (DEL-2a, DEL-1a), which offer a station solution that better serves the Delridge community and connect to tunnel options that have the lowest impact on West Seattle. In particular, the preferred SW Dakota Street station offers considerable potential for the development of a community hub central to North Delridge, adjacent to the playfields and community center, which would be of great benefit to the North Delridge community. The DEL-2a and DEL-1a alignments that use a small amount of the golf course land would be most appropriate as they dramatically reduce residential displacements (Table 6-3) and it is notable that the golf course is inaccessible to the majority of the Delridge community (indeed all sides of the golf course facing Delridge are fenced off with no access points). If cost-saving measures are necessary to achieve the DEL-2a long tunnel alternative then greater consideration should be given to a two station alternative (Delridge and Alaska Junction) and removing the Avalon station requirement from the Sound Transit 3 Plan.</p> <p>If the Board decide that the preferred DEL-2a or DEL-1a alignments are no longer suitable then DEL-6 is</p>	<p>Andrew Johnson</p>
-------------------	---	-----------------------

	<p>clearly a vastly better alternative than DEL-5. DEL-6 has by far the fewest commercial and residential displacements, preserves the SW Avalon Way traffic corridor, has the fewest noise, vibration and historical residence impacts, and connects to the WSJ-5 medium tunnel. Again, were the DEL-6 alternative to be selected it is imperative that this alternative is not modified to the south of SW Andover Street, because even a minor line alteration would be devastating for Dragonfly park and the surrounding community.</p> <p>Thank you again for the opportunity to comment.</p>	
<p>04/25/2022</p>	<p>First and foremost, design the system for transit riders and the optimal rider experience. Traveling between the station platform and the surface should be quick, straightforward, and reliable. Transferring between transit lines should also be quick and easy, especially at the major transfer points at Westlake Station and International District/Chinatown Station. Opportunities to save money that I support include putting station entrances in the vehicle ROW.</p> <p>Chinatown-International District - 4th Avenue: Prefer 4th Avenue Shallow Alternative (CID-1a) alignment but please make it shallower. Study making it as shallow as the existing CID station by using a shallow tunnel over the existing Downtown Seattle Transit Tunnel to reach Midtown. The transfers must be quicker than 4.5 minutes.</p> <p>Junction - Medium Tunnel 41st Avenue Station: Prefer Medium Tunnel 41st Avenue Station [WSJ-5], but study a refined Elevated Fauntleroy Station that would reduce residential displacement and costly property takings.</p> <p>Open additional study of the 20th Avenue Station/Thorndyke Tunnel Portal alignment. If not make sure an entrance is west of 15th in Ballard so pedestrians do not have to cross that busy street.</p>	<p>Jessamine Anderson</p>

04/26/2022	<p>Please consider my comments on the route alternatives of the Interbay/Ballard segment, EIS pages ES36 to ES44.</p> <p>I am generally in favor of light rail and how efficiently it can transport people. Construction impacts are bound to occur, and it is important to consider the consequences of particular route choices.</p> <p>Of the proposed route options, I STRONGLY SUPPORT THE IBB-1b ALTERNATIVE. This route is the only proposed route that will spare the site of Dusty Strings Manufacturing at 3450 16th Ave. W. Dusty Strings is world-renowned among musicians for uniquely designed, high-quality musical instruments and great customer support. Musicians of all ages and all levels, from beginners through professionals, have found and shared joy through instruments (both harps and hammered dulcimers) made by Dusty Strings. I purchased my first harp from them and now own two of their harp models. When one of my harps needed repair, I took it to Dusty Strings Manufacturing and was well taken care of. I would hesitate to take my Dusty harps anywhere else for repair. Dusty also makes accessories, such as harp strings, that are needed for the routine maintenance of their instruments. If they are forced to move, the impacts will be felt by many people all over the world, not just in the Seattle area. Losing their current building would be very disruptive to their business for years, not just weeks or months, because of the special building requirements. Their current building is only 20 years old and was built to Dusty Strings specifications. It will be extremely difficult for them to find a suitable alternative in Seattle, where they would very much like to stay. Family owned and operated, Dusty Strings has made some 40,000 instruments in Seattle during the 43 years they have been in operation. Their strong reputation and association with Seattle are robust. They also contribute to business diversity in Seattle, since they have always been committed to employing local skilled craftspeople. Because of Dusty Strings' commitment to Seattle and the positive impact the company has had on people worldwide, I urge you to choose a route that will keep their current manufacturing building intact. Thank you.</p>	Tara O'Brien Pride
04/26/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following:</p> <p>The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you</p>	Tim Nuse
04/26/2022	I would prefer an alternative that displaces the fewest number of CID residents and businesses, thank you.	Deanna Ren

04/26/2022	<p>Hi, my name is Victoria Urias and I live in Seattle.</p> <p>A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park.</p> <p>I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options.</p>	Victoria Urias
04/26/2022	<p>Hi, my name is Velocity Rose Haigh and I live in Seattle. A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options.</p>	Velocity Haigh
04/26/2022	<p>I am commenting on the Delridge section of the West Seattle Light Rail project DEIS. I support either of the Yancy/Avalon routes. I oppose any of the alternatives that impact the West Seattle Golf Course. In addition, any of the tunnel alternatives are completely unacceptable due to the loss of over 3 acres of the golf course which is Park property.</p> <p>The reasons are the following: The budget is the same or cheaper for the Yancy/Avalon routes, 1.6 B and 1.5 B The business disruption is closely similar for both of these options The private property disruption is less for both Yancy alternatives, from 607 for DEL1a down to 201 or 487 The Genesee routes violate a City ordinance driven by a citizen initiative that park property cannot be used for purposes other than what it was intended for The loss of revenue and loss of recreation opportunity would not be impacted for over 60,000 golfers each year There would be no risk of golf balls hitting the trains The Parks Department supports the Yancy alternatives This is the only golf course that serves the West Seattle community Longfellow Creek would have no risk of damage to the fish or the creek The mature trees all along the North edge of the golf course would not be cut down</p> <p>There is a way to have the best of both worlds, please make the right decision. Please adjust the preferred alternative to either of the Yancy/Avalon routes. Thank you.</p>	Alexander Allen
04/26/2022	<p>I've owned a house in Ballard since 2009, but I've also lived in cities with world-class mass transit: Zürich, Switzerland and NYC. The utility in rail-based transit is the consistency and reliability of its schedule, as well as having it be convenient for all users. The proposal of having the Ballard link go over a drawspan bridge would greatly compromise the reliability of the schedule (will it take me 10 minutes to get downtown? Or 20? That matters a lot for my connection), cause trains to "choke", and if the reliability of the Ballard Bridge is any indication, possibly cause unpredictable major delays. Moreover, the proposals to include very deep stations can easily cause a 10-minute journey to become 20 once you get to the station, especially given Sound Transit's poor track record with the reliability of elevators and escalators. Finally, while a 14th or 15th avenue station would be somewhat convenient for me, it's only because I live at the east end of central Ballard, and Sound Transit should strive to make stations as central to the population core as possible. Thank you for striving to optimize for the human utility of the light rail to Ballard, versus simply optimizing for cost or building convenience.</p>	Arthur Patterson

04/26/2022	<p>I am writing to comment on the proposed Delridge segment of the West Seattle Link Extension plan. I strongly oppose the DEL-5 and DEL-6 proposals of Sound Transit's light rail plan, as it would devastate a nonprofit that provides services to our community's most vulnerable people.</p> <p>Transitional Resources is a community behavioral health agency located in West Seattle on SW Avalon Way. They serve vulnerable adults from all over King County who are living with serious mental illness and provide them with behavioral health treatment and supportive housing services, ensuring these folks remain safe, healthy, and housed. Transitional Resources has multiple properties and serves a multitude of people who live in various parts of West Seattle, but a majority of whom are within very close proximity to their offices located on SW Avalon Way. Many of the people Transitional Resources serves will be irrevocably impacted by the proposed alternative routes outlined in DEL-5 and DEL-6 if these options move forward.</p> <p>The planned route for DEL-5 and DEL-6 would directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings—would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to reject both the DEL-5 and DEL-6 alternative proposals.</p>	Ann Morrell
04/26/2022	<p>The planned route for DEL-5 and DEL-6 would negatively and directly impact three of Transitional Resources' properties and would devastate the vital services TR provides to the community. We're talking housing and services for chronically homeless folks with serious mental illnesses! Without these services or programs, the people who live in the buildings—as well as those who receive services from the buildings--would be displaced and/or disconnected from the services they need. The loss of these critical services in our community would be devastating to not only the clients they serve, but to our larger community, as finding alternative housing and services that address the unique needs of the populations they serve in the same way TR does would be challenging. Our son lives with us now, but we are looking to TR housing for the future for him.</p> <p>As someone who cares deeply about our community and the nonprofits that provide support to those in need, I strongly urge Sound Transit to REJECT both the DEL-5 and DEL-6 alternative proposals.</p>	Patricia Horne-Brine
04/26/2022	<p>Hi, I am Andrea Faste and I live in Ballard. I share concern that a multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options. Please use the 4th Ave. S. option.</p>	Andrea Faste
04/26/2022	<p>Hi, my name is Kara. A multi-year construction project of a new Link station along the Chinatown-International District's 5th Ave S would be hugely disruptive to the neighborhood and community. Up to nineteen businesses in the historic core of the C-ID would be at risk for displacement, not to mention a disruption of access to landmarks like the Chinatown Gate and Hing Hay Park. I urge you to protect the cultural and historical importance and CURRENT COMMUNITIES in the Chinatown-International District by staying away from 5th Ave S options.</p>	Kara Chabot

04/26/2022	<p>I am a Delridge resident and wanted to comment on section 2.1.2.1.3 related to the Delridge portion of the West Seattle link. Specifically, I wanted to express my support for the preferred alternative, DEL-1a. The alternatives appear to me to be more disruptive to the area (both to residents and to the environment) and more expensive (such as the tunnel option), while not serving the area as well as the preferred. For example, DEL-1a appears easily accessible to both the 50 and 120 bus lines, making that station more accessible and useful to the rest of West Seattle. On a related note, I would like to express my strong opposition to the Andover alternative. This option seems almost completely divorced from any accessibility and usefulness to the Delridge residents of West Seattle by forcing them to travel to the Nucor commercial areas near the West Seattle Bridge.</p>	Cassandra Hewlings
04/26/2022	<p>As much as I utilize public transportation for my own needs, I am more concerned about the potential impact of the small businesses being displaced for the sake of this project. Even though it may be beneficial to expand our public Seattle link rails, this is detrimental to the families and communities of color residing in Chinatown-International District. I highly suggest that the route be relocated to where these businesses wouldn't be as affected. Please consider moving the construction to 4th Ave S, where less of the businesses and community will be impacted. Thank you.</p>	Graciela Flores
04/13/2022	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement</p> <p>Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need.</p> <p>Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties.</p> <p>Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel.</p> <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p>	Kelsey Rote

Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.

In order to future proof our growing system, we must design for expandability in four locations:

(1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line).

(2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW).

(3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton.

(4) Midtown must be designed to accommodate future expansion to the east along Madison St.

(5) West Seattle should be built for future southern expansion to White Center and Burien.

Thank you for your review of these comments.

At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. In Midtown: build the station as shallow as possible, design the station for surface to platform elevators, build in ample elevator redundancy, and use modern interfaces to ensure nearly seamless elevator use. In Chinatown/International District: throw out deep stations and open additional study for a shallower station on 4th Avenue, similar to option CID-1a, to improve transfer times at this critical regional transportation hub. In Sodo: choose the Mixed Profile Station [SoDo-2] and study construction further North, at the existing SoDo Station location to save the SoDo busway and avoid the Post Office's facility. In West Seattle, Avalon, and Delridge: build WSJ-5 and study a better Avalon station to allow better options than DEL-6 next to a cement plant but connect Delridge to WSJ-5.</p> <p>Finally, the DEIS should position Sound Transit to plan for future expansion in Seattle. ST3 is a fantastic addition to our regional system, but will not be the end of rail expansion in Seattle. In fact, the state legislature just passed SSB 5528, which will allow cities like Seattle to expand the rapid transit network, benefiting our whole region's mobility.</p> <p>In order to future proof our growing system, we must design for expandability in four locations: (1) South Lake Union must be designed to accommodate future expansion to the north (up SR-99/Aurora) and to the east (replacing the King County Metro 8 line). (2) Ballard station must be built for expansion toward the north (Crown Hill/Greenwood/Lake City) and to the east (Ballard/UW). (3) The new SoDo station must allow for future expansion south to Georgetown, South Park, SeaTac, and Renton. (4) Midtown must be designed to accommodate future expansion to the east along Madison St. (5) West Seattle should be built for future southern expansion to White Center and Burien.</p> <p>Thank you for your review of these comments.</p> <p>Michaela Barrett michaela@rose-labyrinth.com</p>	<p>Michaela Barrett</p>

<p>04/13/2022</p>	<p>Manager DEIS Comments,</p> <p>The Ballard-West Seattle Link Extension must put riders and increased ridership first. I am writing to submit my comments to Sound Transit's Draft Environmental Statement.</p> <p>I've been following this progress for a while, and while my recommendations take guidance from others, it's not out of automation that I boost these efforts. (For what it's worth)</p> <ul style="list-style-type: none"> • Do not eliminate any stations from what voters approved with ST3 in 2016. The region's projected growth and increasing carbon emissions from the transportation sector mean we must build the most comprehensive rail network we can. Eliminating planned stations is in direct opposition to what the region's voters want and need. • Make stations as shallow as possible to promote shorter travel times, accessibility, and reliability. The proposed station depths and access plans, especially for the Midtown, Westlake, Denny, and Seattle Center stations will increase travel times too much to be useful for short trips, which are essential for the large number of riders who are not suburban commuters. Any deep and high-capacity stations also call for excellent vertical conveyances, which has not been a priority in the past. Ensure escalators and elevators are (1) fast and (2) have enough capacity and redundancy to handle game day rushes and not fail riders in the event of mechanical failure. Such elevators should go from street level straight to the platform level, without any mezzanines in order to deliver passengers to trains as quickly as possible without creating additional time and accessibility penalties. • Smooth transfers between the system's growing lines is paramount to promoting a healthy rail system. In order to make transit the primary mode of transportation for all members of our communities, we need quick transfers that feel effortless. Wherever possible, plan for shorter transfers that minimize walking time and vertical travel. <p>In Ballard: reopen additional study of 20th Avenue Station/Thorndyke Tunnel Portal alignment. In Interbay: build Thorndyke Retained Cut [IBB-2b] for a tunnel to Ballard. In Smith Cove: build the preferred Galer Street Station/Central Interbay [SIB-1]. At Seattle Center: build the Republican Street Station and work to mitigate impacts to arts organizations as much as possible. In SLU: Reject both presented options, study a Westlake or similar alignment oriented north-south within SLU boundaries and as centered on South Lake Union as possible. At Denny: build Westlake Ave Station [DT-1] to line up with a SLU station on Westlake further north, but update vertical conveyances and aim shallower. At Westlake: build 5th Ave Station [DT-1], but update the elevator and escalator plan to improve ease of use and redundancy and additional find ways to speed up transfers and surface access. 04/13/2022	<p>Manager DEIS Comments,</p> <p>The burgeoning Seattle light rail system is great. It vastly improves connectivity around the city and it's such a categorically great substitute for driving that I taken it whenever I can.</p> <p>I'm concerned, however, that currently considered alternatives for the West Seattle and Ballard expansions are compromising too much on the quality of the new stations. Extremely deep stations, or inconveniently elevated stations like the West Seattle plan, or eliminated stations as is currently being proposed, seem to me very short sighted.</p> <p>I'm concerned, in particular, about stations that are so deep that access will be limited in the event of escalator failures (which happen with reasonable regularity in the current system).</p> <p>I'm also concerned about the locations of stations in Ballard and South Lake Union. Walkable neighborhoods need good transit, and that transit needs to be located such that it's a good first alternative to driving and clogging up the roads. 14th Ave in Ballard is the edge of the existing heart of the neighborhood. Any plan that would move the station west, even just to the west side of 15th Ave, would vastly improve the utility of the station.</p> <p>We aren't going to build another subway system in the lifetime of anybody currently, so it's worth getting it right.</p> <p>Zachary McKinney zach.w.mckinney@gmail.com 5228 33rd Ave S Seattle, Washington 98118</p>	Zachary McKinney
