

Link Connections: SR 520

How could your trip improve by transferring to Link?

Trip times for Eastside transit riders going to and from downtown Seattle along SR-520 are on the rise as traffic congestion increases. The good news is Metro and Sound Transit are working together to make your trip to and from downtown Seattle more reliable. We're asking for public input on alternatives that would direct some Eastside bus routes to the University of Washington Link light rail station, where riders would transfer to light rail to complete the trip to and from downtown, bypassing congestion on the freeway and downtown streets. Any resource savings would be used to improve bus service between Seattle and Eastside communities via SR-520. This graphic shows the travel time comparisons and benefits during rush hours of connecting with light rail.
